Libyan Vocabulary. By F. W. Newman. (Trübner.) Age seems in no way to have diminished Prof. Newman's power of work and love of philological research. He has returned once more to those Libyan or Berber studies to which, nearly half-a-century ago, he was among the first to direct the attention of scholars. The *Libyan Vocabulary* he has now published, notwithstanding its modest form, is a work of high value. It contains lists of words from the four leading Libyan languages—the Kabail, the Shilha, the Ghadamsi, and the Tuarik. The Kabail, spoken in Algeria, may be regarded as the representative of the ancient Numidian; the Shilha, of the mountains of Morocco, takes the place of Mauritanian; while the Tuarik, or Tarkieya, now heard beyond the Atlas, seems to be the ancient Gaetulian. It is only of Kabail and Tuarik that we have much knowledge. Our acquaintance with Shilha, and still more with Ghadamsi, is but scanty. What is known about them has been put together by Prof. Newman, who has made use of MS. sources of information as well as of published works. We learn from him that there are at least three sub-dialects of Tuarik, and that the language of the Beni Menasser is an old and corrupted Kabail. It will be seen that what Prof. Newman has given us is a good deal more than a mere vocabulary. It is the first attempt at a comparative dictionary of the Libyan tongues, and an endeavour to reach back to that mother-speech out of which they have severally sprung. Its importance to the Semitic philologist need hardly be pointed out. It has long been admitted that the general resemblance between Semitic and Libyan grammar is too great to be the result of accident, and it has even been proposed to term the North African languages sub-Semitic. But with all this grammatical similarity there seemed to be a lexical diversity for which it was difficult to account. Have the words of the Libyan vocabulary, it was asked, been borrowed from unallied African languages, or are they the changed and disfigured descendants of the same roots which we find in the Semitic family? It is only a comparative Libyan dictionary that can give an answer to this question, and solve, at the same time, the problem of Semitic trilateralism. Prof. Newman has prefixed to his lists of words a comparative Libyan Grammar, which the student will find very serviceable. One of the most striking facts it brings to light is the agreement between the forms of the Libyan verb and those of the Semitic parent-speech as revealed by the monuments of Assyria. Just as in Assyrian *isakun* is "he made," *isakkin* "he makes," so in Libyan *ifren* is "he chose," *ifrenen* "he chooses." The forms are practically identical. Prof. Newman has been careful to give his authorities for each word that he records. His work may accordingly be used with confidence by scholars, who will everywhere find in it the marks of years of patient labour and conscientious research.

Linguistic Essays. By Carl Abel. (Trübner.) The greater part of the essays included in this volume have already formed the subject of an article in the ACADEMY (November 15, 1879). We there drew attention to the attempt of that author to approach the study of language from a point of view hitherto too much neglected by scholars. Dr. Abel maintains, with justice, that sounds do not constitute a language until sense and meaning are breathed into them, and that, consequently, in linguistic investigation we must have regard quite as much to psychology as to phonology. Language is the mirror in which the ideas and beliefs of a people are reflected, and in dealing with it we cannot afford to forget this fact. Dr. Abel

views on the origin and growth of speech are best exemplified in an essay which is now published for the first time. Taking Old Egyptian as his text, he argues that language began with the confused and indistinct, with words that denoted many things, and were at once homonyms and synonyms. Gradually, as the mind of man developed, his ideas, and therewith the words which expressed them, became clearer; homonyms and synonyms tended to disappear; and grammar and vocabulary alike grew definite and exact. The attractive style and admirable English of Dr. Abel give his views an unusually good chance of being heard.

Ueber den Geist der indischen Lyrik. By H. Brunnhofer. (Leipzig: Otto Schulze.) Dr. Brunnhofer has given a pleasant and popular account of the Vedic and lyrical literature of ancient India. His enthusiasm for the subject rises at times to a high pitch of eloquence. He has introduced into his "Essay" a number of excellent translations into German verse, which give a good idea of the spirit of the original. Weber's recent publication of Hâla's Anthology has furnished him with the materials of his remarks on Hindu lyrical poetry. We cannot, however, follow him as regards the high antiquity he would assign to the hymns of the Veda.

Kurzfassende Geschichte Babyloniens und Assyriens nach den Keilschriftentexten. By F. Würdter. (Stuttgart: D. Gundert.) We can thoroughly recommend this History of Babylonia and Assyria, in which the writer, though not himself an Assyrian scholar, has put together the leading facts of Assyrian decipherment. The value of the book is increased by some additional remarks by Prof. Fr. Delitzsch, who gives an account of Mr. Rassam's recent discoveries, and corrects certain misstatements of the text. The book has been written with special reference to the Old Testament, and contains several well-chosen illustrations.

SCIENCE NOTES.

THE Council of the Parkes Museum have acquired new premises in Margaret Street, Cavendish Square, to which the collection will be removed from University College as soon as the necessary alterations have been completed—probably by Christmas. The new building will consist of a central hall, a library, and corridors, all lighted from the top, and well suited for exhibition purposes. Meetings and lectures on matters connected with the health of the people will henceforward form a permanent feature of the institution. Mr. Thomas Twining, of Twickenham, has given £100 towards the expenses of removal. The work of adapting the new house is being done under the direction of Mr. Mark H. Judge, the secretary and curator of the Museum.

MR. SULLY's *Illusions*, in a French translation, will be the next volume to appear in Germer Baillière's "Bibliothèque scientifique internationale." The title is modified to *Les Illusions des Sens et de l'Esprit*.

THE Musée royal d'Histoire naturelle de Belgique has just published three new volumes of its *Annales* (Brussels: Hayez). These are (1) the first part of an elaborate monograph by the late H. Nyst on the shells of the Tertiary beds of Belgium, treating specially of the Pliocene shells of the Scheldt valley; (2) the third part of M. L.-G. de Koninck's monograph on the fauna of the carboniferous limestone of Belgium—the Gasteropods; and (3) the third part of M. P.-J. van Beneden's description of fossil bones from the neighbourhood of Antwerp—the Cetacea.

PHILOLOGY NOTES.

MR. W. G. RUTHERFORD, author of *The New Phrynichus*, is now passing through the press an edition of the Greek fabulist Babrius. It forms the first volume in a set of two entitled *Scriptores Fabularum Græci*, and is an attempt to clear away, without any sacrifice of learning, the obstructive erudition which has hitherto obscured the merits of this simple and charming writer of doliambics. The text is based upon a new collation of the Athoan MS., and upon the recent discovery by Pius Knocell of the long-missing Vatican codex, which contains some of the fables wanting in the mutilated Athoan MS. It will be furnished with critical foot-notes in Latin and philological annotations in English, and will be preceded by introductory dissertations on Babrius, on the history of Greek Fable, on the diction of Babrius, and on textual questions. The book will also contain a complete "Index Græcitatibus Babrianæ." Messrs. Macmillan and Co. will be the publishers.

In their "Classical Library," Messrs. Macmillan announce, besides Prof. Sayce's edition of the first three books of Herodotus, the *Annals of Tacitus*, edited with Introductions and notes by Prof. G. O. Holbrooke, of Trinity College, Hartford, U.S.

In addition to the volumes in Messrs. Trübner's collection of "Simplified Grammars" which we have already announced, Mr. J. W. Redhouse has undertaken Turkish, Dr. Parker Malagasy, Mr. H. Jenner Cymric and Gaelic, M. Torceanu, of Bucharest, Rumanian, and Prof. Otto Donner, of Helsingfors, Finnish.

DR. LEITNER has given to the Indian Education Commission the following list showing the proportion in which different languages and dialects are spoken in the Punjab:—Hindustani, 4,211,499; Bagri (Hissar and Sirsa), 118,755; Punjabi (miscellaneous dialects), 14,210,854; Jathi, 1,604,769; Baluchi, 25,748; Pushtu, 903,818; Pahari, 1,376,789; Kanauri, 12,209; Lahauri, 10,303; Tibetan, 5,000; Kashmiri, 49,534; Sindhi, 5,128; Persian, 6,145.

DR. A. HOLDER will shortly publish (Freiburg-i-B.: Mohr) a critical edition of Caesar's *Bellum Gallicum*.

AMONG the new announcements of Teubner, of Leipzig, are the two following works on Homer:—*Homeri Iliadis carmina, dejecta, discreta, emendata, prolegomenis et apparatu critico instructa*, ed. W. Christ; and *Kunst und Gewerbe im homerischen Zeitalter*, by Wolfgang Helbig.

FINE ART.

ART BOOKS.

Indo-European Porcelain: an Essay; with Descriptive Catalogue. By W. Watkyns Old. (Hereford: James Hull.) Indo-European porcelain—or, more correctly speaking, Chinese porcelain decorated by Chinese artists with European designs—though of little artistic beauty, is of much interest. Owing to its ugliness in comparison with even the most ordinary ware of China, it has been little studied. Most writers on ceramics either omit all reference to it, or describe it with a mixture of contempt and ignorance. One of M. Jacquemart's numerous blunders was to ascribe it to Japan—a blunder the more extraordinary as made by a man who was well acquainted with Oriental porcelain, and who should have been able to distinguish as Chinese the colours of the enamels employed, even if he were puzzled at the paste. He was probably misled by the known fact that the Roman Catholic missionaries had once obtained a footing in Japan,

and had been thence expelled or there massacred. So many of the pieces are decorated with Christian subjects that the name of "Jesuit china" has been given to them. They are, nevertheless, comparatively rare, and none are of recent date, so that the theory that they were manufactured in Japan during the "Christian period" was not without plausibility. Thanks principally to Mr. Franks, who may be said to have finally exploded the theory which ascribed this description of porcelain to Lowestoft, we know more about this and other kinds of Chinese porcelain than our fathers did; but it has remained for Mr. Old to make a special study of this curious attempt by the natives of the Celestial Empire to imitate the designs of the West. The talent of the Chinese for imitation is proverbial; but in this enterprise they singularly failed. Given an engraving of the Crucifixion, they could indeed copy the cross-hatching with great patience; but their attempts to give the shape and expression of the human figures were ludicrous. Scarcely more successful were their efforts to reproduce the resemblance of European leaves and flowers. Europeans have, however, no right to laugh at their incapacity. Their failure was not more ridiculous than that of those artists trained in Gothic conventions who attempted to copy the antique in the thirteenth century. In M. Muntz's *Les Précurseurs de la Renaissance* will be found facsimiles of two such futile endeavours. Not at once can artists of any country cultivate their eyes and hands to see and draw facts unfamiliar and beauty that is strange. Objects which furnish such a convincing proof of this fact are not wholly without artistic value; but it is, as Mr. Old points out, "from an antiquarian, historical, and philosophical view that Indo-European porcelain deserves attention." The subject is not one of absorbing interest, even when so considered, and we should perhaps be all the more grateful to Mr. Old for devoting himself to it. In knowledge every little helps, and this pleasant monograph on "Jesuit china" shows that even the barrenest spots will repay careful cultivation. Mr. Old may be said to have established its claim to this title. Though much of it bears groups secular and profane, Mars and Venus, as well as the Virgin and Child, Lord Portman as well as Potiphar's wife, and even descends to heresy in a portrait of Martin Luther, Mr. Old avers that "the most ancient specimens are invariably those with sacred subjects, and some of them evidently date from the sixteenth century." Such ancient examples are, however, very rare; and Mr. Old gathers from his examination of collections abroad as well as at home that, "prior to the eighteenth century, very little was manufactured," and "that the bulk of the designs must have been furnished by the Dutch and French traders in the seventeenth and eighteenth centuries." "Nine-tenths of the specimens that have come under my notice," he adds, "show evidence of their connexion with France or Holland. Our own East India Company introduced latterly pictures of shipping, hunting scenes, and armorial bearings. Denmark and Spain also appear to have contributed; but their examples are few and far between." Of the numerous European engravings copied by the Chinese, Mr. Old has strangely enough found only one—an illustration engraved by Gribelin to a French edition of *Télémaque*, published in England by J. Tonson. Not the least interesting part of the pamphlet is the descriptive catalogue of Mr. Old's collection of "Indo-European," which appears to contain interesting specimens of the four classes into which he divides it—viz., sacred, classical, historical, and domestic.

Beautiful Houses. By Mrs. Haweis. (Sampson Low.) This is an example of real "too too" in

literature, and we doubt whether some of our modern Della Cruscas of art will be able to refrain from tears as they read some of its most precious passages. It is for them alone, and not for us, to feel the joy of a *coup d'œil*, concentrated by an Indian brassen font, or cauldron, burning like a flame; for them, and not for us, to feel their flickering pulses leap at the sight of the sun sweeping the rainbow purples of a stuffed peacock's drooping tail; for them, and not for us, to fully appreciate the necessity of Egyptian jugs of red copper to mark the balance of form or accentuate an angle. As we read page after page of this (to us bewildering) eloquence, we cannot help being struck with the comparative dullness of our own senses when we visited some of these very houses. We must confess, for instance, that it never occurred to us when we saw the gold and silver ceiling of Sir F. Leighton's passage that it was meant to represent "the shining lake above" the little bronze figure of Narcissus below. There is indeed something "poetic and original" about this notion of the water looking down on the youth; and, though we don't quite know what she means by the phrase, we are willing to believe that Mrs. Haweis is right in thinking that this version of the old myth is "not repeating *point-blank* the hackneyed tale." "There is undoubtedly here," continues the authoress, "an imperial stateliness and strength of flavour, and the silence is like a throne;" and again, "the impression given is purple, like a Greek midnight, circling round a point of softest green (the bronze boy), and falling into a warm gray on the floor." In the Arab hall is "a fountain that patters and sings in its pool of chrysolite water—most perfect colophon to all the colours and the outer heat." These extracts will show but imperfectly Mrs. Haweis' supreme power of description; but she not only describes, but reflects. "The fly in amber," she tells us in words that linger in the memory, "cannot be called happy, because he is dead; but if we could conceive a live fly in such a bright and glowing home, it is impossible but he must enjoy himself, given a door and food." Ah! what might he not enjoy thus happily provided? If we ourselves may be allowed to indulge in a little dream, might he not realise the bliss (given a door and food) of listening to "the twitter of spring birds and the colours of spring buds during the pleasant process of toasting his toes" in Sir F. Leighton's drawing-room? Nay, more than this (given a good education and an exquisitely sensitive temperament), might he not even enjoy Mrs. Haweis' book? Perhaps—we only know that we have done so greatly, though our pleasure has been of a quality quite different from that intended by the authoress.

The Hall-marking of Jewellery practically considered. By George E. Gee. (Orosby Lookwood.) This book contains, in a brief and clear form, a large amount of useful information on the subject of hall-marks. Mr. Gee is in favour of voluntary hall-marking and the simplification of the stamps, and supports his views with practical arguments. There can be no doubt that the employment of different marks at the different assay offices in the United Kingdom produces needless difficulty, and that compulsory marking is often a hardship to the silversmith and a discouragement to the production of new designs. The duty once paid is irrecoverable, and those makers who wish to introduce novelties and improve taste are severely handicapped in the struggle for existence. After employing labour and capital in the production of an expensive piece of plate, if the design does not suit popular taste, or, in other words, if the piece does not sell, not only is the money spent in design and labour wasted and the rest of the capital employed idle, but they suffer the extra loss of the amount of duty paid. This is an argument

against compulsory hall-marking which might have been mentioned by Mr. Gee.

Art Instruction in England. By F. H. Hulme. (Longmans.) Like everything which Mr. Hulme writes, this book is to be recommended. It commences with an interesting sketch of the progress of art teaching during recent years, continues with a comprehensive survey of the different schools and systems of art education now existing in England, and concludes with some eloquent words on the mission of art and its educational value. We are not aware of any other work which contains so much information on the subject of which it treats. It will be of service to the student as well as the teacher, and to all who are interested in art and education.

AUTUMN EXHIBITION OF THE GLASGOW INSTITUTE.

SINCE the commencement of its autumn exhibitions in 1880, the Glasgow Institute of the Fine Arts has done more for the art instruction of the Scottish public than present it with a view of the progress of contemporary painters. It has aimed to exercise a wider and perhaps more valuable educative influence by bringing together the collected works of eminent deceased artists—works of acknowledged and, in some sense, standard excellence. There have accordingly been displayed in their rooms interesting collections of Bough and Chalmers in painting, and of Turner in the entirety and sequence of his *Liber Studiorum* prints; and this year the directors have been enabled, through the liberality of Mr. B. B. Macgeorge, to enrich their exhibition with his valuable collection of Méryon etchings, which includes many treasures from the cabinets of M. and Mlle. Niel, and of M. Burty and the Rev. J. J. Heywood. The prints are all but as numerous as those included in the Burlington Exhibition of 1879; and the interest of their carefully described successive states has been increased by the large number of original pencil sketches which accompany them, and render possible a full study of the gradual growth of the designs in the artist's mind. It would be manifestly out of place here to enter on any critical examination of this great series, which is already sufficiently well known to the art world of the metropolis, but to not a few of the Scottish visitors to the exhibition the display will disclose a new and fascinating personality.

Among the other designs by deceased artists may be mentioned a series of slight, but very delicate, pencil-drawings by George Manson, some of which were shown in the exhibition held at Messrs. Dowdeswells' in the beginning of the year. The most important of the subjects in black and white by contemporaries come from Dutch and French artists, who are largely represented on the walls. Among such Continental works may be mentioned the masterly charcoal drawings of interiors of Lhermitte; the large and excellent landscape etchings of Van Gravesande, so simple and direct in their execution; those of M. Lalanne; the dainty renderings of still life by F. Buhot, which recall and almost rival the work of Jacquemart; and, among reproductive etchings, the minute book-illustrations by Los Rios, Champollion's admirable rendering of Orchardson's "Hard Hit," and A. Blanchard's transcript of Tadema's "Torch Dance." The last-named painter is represented by a clever pen-sketch of a head; and from M. Legros come a large number of subjects of widely varied method, including some very striking portraits executed in a combination of etching and mezzotint. Of French caricature we have brilliant examples in the "Monsieur Gambetta" and the "Congrès

Anarchiste du Havre" of Paul Renouard. The most telling of the works by Englishmen are those contributed by the illustrators of the magazines and weekly papers. We have characteristic drawings by Du Maurier, Gregory, Small, and Hopkins; and R. O. Woodville shows a design full of impetuous motion and power, "Saving the Guns at Maiwand," which formed the subject of his Academy picture.

Turning to the works by the Scottish Society of Water-Colour Painters, which, as usual, occupy two rooms in this autumn exhibition, we find much that is interesting and excellent. The display is certainly an advance upon those of former years; there seems to be a general gain in quietude and delicacy, less of the crude and forced colouring, which was formerly only too noticeable. Especially original and striking are the subjects contributed by Mr. D. Murray. The distance in his "Haunt of Oot and Hern" is very beautiful, with its space of quiet water and soft masses of opaline cloud; and in "Calling the Ducks" we have a charming glimpse of brick roofs and tiled gables, with their shapes, grown softer and rosier, reflected in the depths of a glassy stream. The powerful handling and colour of Mr. Lockhart is seen to advantage in an "Interior of the Courtyard of Greyfriars Hospital, Coventry." Mr. M'Taggart has several of his boldly painted coast scenes; Mr. B. W. Allan, in his "Market-place of Seville" and his "Fish Stall in Venice," revels in the rich hues and splendid tinting of the South. From Mr. Tadema, an honorary member of the Society, comes one of his accomplished, quietly complete studies of old Roman life, "Counting the Passers-by"—a girl reclining on a couch and looking from a window. Sir W. Fettes Douglas and Mr. R. Herdman show some excellent landscape work; and Messrs. Waller Paton, J. Smart, Hugh Cameron, and Colin Hunter are all represented. J. M. Gray.

NOTES ON ART AND ARCHAEOLOGY.

A DISCOVERY of the highest interest is reported from Holland. Two old MS. lists have been found, each affixing the prices to several masterpieces of Dutch painting. The one is a Catalogue of a State lottery held at the Hague in 1649; the other is an inventory of the pictures bought by some unknown person about the middle of the eighteenth century, with the prices that he paid. For the lottery in 1649 Teniers' "Alchemist" was valued at 25 florins; a group of peasants by the same painter, also 25 florins; "A Great Battle," by Cuyp, at 52 florins; five other works by Cuyp, from 45 to 52 florins; a Jan van Goyen, 25 florins. In the middle of the eighteenth century the following prices were actually given:—A sea piece by van de Velder, 400 florins; a battle piece by Wouverman, 44 florins; "A Lady at her Glass," by Gabriel Metsu (measuring eight inches by seven inches and a-half), 105 florins; a group of peasants by van Ostade, 70 florins; "Peasants at Home," by Teniers, 70 florins.

ACCORDING to the *Courrier de l'Art*, Mr. Ruskin's little Meissonier, which recently sold for £6,000, has become the property of Defoer Bey, whose house on the Boulevard Haussmann already contains a very valuable gallery of modern pictures.

MESSRS. SONNENSCHEIN will publish immediately a *Short History of Art*, by Mr. Francis C. Turner, illustrated with a large number of wood-cuts and reproductions of famous pictures.

THE eleventh annual exhibition of the Kirkcaldy Fine Art Association was opened last Monday, September 4. This is always one of the best of the minor exhibitions in Scotland.

THE last number has just appeared of the *Dictionary of Needlework*, by Miss Oaulfield and

Miss Seward, which Mr. Upcott Gill has been publishing as a serial. We understand that the Queen has been pleased to accept a copy of the complete work.

THE London Institute for the Advancement of Plain Needlework opens for the winter term on September 9. The next examination for certificates will be held at 2 Connaught Street, Edgware Road, in December.

THE Musée Carnavalet in Paris is growing rapidly. Formed but a few years ago, its library already needs enlargement, and an annexe is now being built to it running from the public reading-room to what is known as the Hôtel des Drapiers. This museum is especially devoted to memorials of old Paris; and in the new annexe will be placed a large number of sepulchral and other monuments, with inscriptions of interest in connexion with the history of the city. An immense plan of Paris in 1734 has lately been placed on the staircase leading to the library; and a large gallery on the first floor is filled with pictures and engravings of Paris in all stages of its development. One room, assigned to the Revolutionary epoch, has had its treasures augmented lately by twelve views of the Seine, signed by the Revolutionary painter Ragnuet. Altogether, the Musée Carnavalet affords a rich store of information for all students of their country's past history and culture, and it is pleasant to see that full use is made of it.

A NEW room has been opened in the Exposition des Arts décoratifs at Paris, to contain the collection of engravings illustrative of costume lent by M. Victorien Sardou, who has himself drawn up the catalogue.

THE death is announced at Munich of Johan Helbig, Professor of Sculpture at the Bavarian Academy of Fine Arts. His most celebrated work is perhaps his group of "The Crucifixion" at Oberammergau, which was presented to the village by the King. But his statues are to be seen throughout Germany and Russia, and even in the United States.

At a recent meeting of the Société nationale des Antiquaires de France (now reported regularly in the *Revue critique*) M. d'Arbois de Jubainville read a paper upon certain vitrified forts which he had visited in the North of Ireland, similar to those in France, Scotland, and, we may add, England. He was disposed to attribute them to the Picts. At the same meeting M. Schlumberger exhibited some seals of the Byzantine governors of Bulgaria which have never been published.

In some recent excavations at Mainz, on the bank of the Rhine, at the south end of the town, a considerable number of Roman remains have been found. Two of the latest discoveries are a bronze statuette of Mercury, and an iron dagger-scabbard, inlaid with silver, and bearing the inscription LEG XXII. PRIMI (i.e., primigenia, the name of the legion). Both have, unfortunately, passed into private possession.

M. HEUZEY, keeper of Oriental antiquities at the Louvre, has just published (Paris: de Mourguet) the first volume of his Catalogue of the terra-cotta figures in that museum. It treats of those that come from Assyria, Babylonia, Phoenicia, Cyprus, and Rhodes. It is announced that M. Ravaisson-Mollien, keeper of Greek and Roman antiquities, has almost ready for publication his Catalogue of Greek sculptures in the Louvre.

L'Art is enriched this week by an etching from Julien Dupré's pleasant Salon picture called "Au Pâturage." It represents a determined young peasant girl trying to pull back a refractory cow who wishes to join his peaceful companions. The etching is by E. Yon, and

the effect of wind is sought to be conveyed by a somewhat blurred, blotchy appearance. It does not seem to us quite successful.

THE current number of the *Zeitschrift für bildende Kunst* contains a striking portrait of Prince Bismarck, reproduced from a chalk drawing by Leubach. The character of the man is well seen in it, though the high lights and shades are somewhat too recklessly contrasted.

A NEW quarterly, devoted specially to the history of the fine arts, is to be published this month by Fr. Muller, of Amsterdam. Its title will be *Oud Holland*, and the editors are A. D. de Vries, keeper of the prints, and N. de Roever, keeper of the archives—both of Amsterdam. The special object of the editors is to do for their own city what Dr. van der Willigen has done for Haarlem. The first number will contain information hitherto unpublished upon the life and etchings of Rembrandt, and a new portrait of the old Dutch sailor Willem Barents.

THE STAGE.

OF a sudden the theatrical world has shown signs of revival, though, after this week, again for a few weeks there will be a time of quietude. On the whole, however, it is noticeable that, as in the world of art, so in the world of the theatre, the period of cessation of activity gets year by year shorter; and enterprises, if not of great pith and moment, yet at all events worth the playgoer's attention, are to be chronicled now and then even in the month of September. Mr. Henry Irving has, during the last week, re-opened the Lyceum; Mr. Charles Wyndham has brought out, at the Criterion, a new and skilful adaptation from the French by Mr. James Albery; and the Globe has re-opened with a revised and distinctly improved version of "The Vicar of Bray." There are but two changes in the cast of "Romeo and Juliet," Mr. Benson, who acted and looked so agreeably in the Oxford performance of the "Agamemnon," having now assumed the part of the Count of Paris—a being of whom, though he is recommended to Juliet as a very proper man, but little is seen in the course of the drama. Miss Pouncefort plays with discretion no doubt, but without distinction, the part of Lady Capulet, of which a somewhat colourless rendering was given by her predecessor. In the Mercutio there is no change, an announcement in the papers to the effect that Mr. Irving was to play the part instead of enacting Romeo having been at the least premature. Mr. Irving will, we understand, play Mercutio for a few nights some time or other before the withdrawal of the piece; but, though he will thus afford gratification to the intellectual curiosity of a few, he will best consult the wishes of the large public by continuing to appear as Romeo. And his rendering of Romeo, with whatever disadvantages may attach to it, has distinct value. We are nevertheless anxious to see him in Mercutio. He will be more unconventional than Mr. Terriss—more of a poet, less of a hearty sportsman. The delicate and fertile fancy of Mercutio demands delicate interpretation.

At the Globe "The Vicar of Bray" must be accounted fair provision for an evening of light entertainment. If the newer work of Messrs. Solomon and Grundy has no one thing quite so "etching" as the "We're all brought up on charity" of their earlier piece, it has an abundance of what is, at all events, tuneful, exhilarating, or droll. The main defect of the piece is that it wants story—wants even that modest measure of dramatic interest which belongs generally to a play of its kind. The fortunes of the Reverend William Barlow and of his

curate, Mr. Sandford, cannot deeply engross us; and the laudable anxiety of the emancipated ballet girls to introduce a wise toleration into the habits of mind of Evangelical clergymen, though amusing, is hardly of sufficient importance for the scenes in which it is portrayed to give much support to the piece. But Mr. W. J. Hill is admirably comic as usual, without seeming to know it, and Miss Lizzie Coote is pleasant to see and to hear. Nor is the dialogue without humour. Likewise the little bit of ballet is really graceful, which is more than can generally be said for the dance in England.

MUSIC.

THE BIRMINGHAM MUSICAL FESTIVAL.

II.

LAST week we were only able to notice briefly the production of Mr. Gaul's "Holy City." The cantata possesses merit, and the scholarship of the composer deserves recognition. At almost any other time or place we should probably have spoken of the work in more laudatory terms; but it did not seem to us quite up to the level of a Birmingham Festival.

On Thursday morning the favourite "Messiah" was performed. There is now nothing new to say about a work which has stood the test of more than a century, and which will certainly last as long as art itself. The oratorio, first given in aid of a charity, naturally finds a place in this Festival programme. The hall was well filled; but, after all, the two novelties, the "Redemption" and "Psyche," attracted the largest audiences of the week. The numerous and important works which occupied the time and attention of performers and conductors, and which necessitated two general rehearsals instead of one, may perhaps have caused the popular oratorio to be somewhat neglected. Certain it is that one or two of the choruses were not quite up to the usual standard of excellence. The vocalists were Mmes. Albani, Trebelli, and Patey, Mr. J. Maas, and Sig. Foli, and their rendering of the solos left nothing to desire.

In the evening, in spite of most unfavourable weather, the Town Hall was crowded in every part. When Herr Gade appeared on the platform to conduct his new cantata he received an ovation which plainly showed that the great and well-deserved success of his "Crusaders" six years ago had not been forgotten; and the applause during the performance, and at the close, of "Psyche," that he had again won the good opinion of a critical assembly including many of England's best musicians. Opinions will probably differ as to the intrinsic value of the Danish composer's latest contribution to musical art. We are not disposed to think it quite so full of character and spontaneity as the "Crusaders;" but no one can fail to be charmed with the flowing, graceful, and clever writing, and with the delicate and picturesque orchestration to be found in it. "Psyche," a dramatic poem translated from the Danish of Lobedanz, has been well translated by the Rev. J. Troutbeck. The ancient story is as follows:—Psyche, a beautiful maiden, having excited the wrath of Venus, is condemned by that goddess to wed a fearful demon. An invisible Chorus, however, informs her that she is destined to be the bride of a god. Eros then calls to her, and tells her he wishes to espouse her; but she must never ask who he is. She, however, fearing lest the mystery of the god may be some evil scheme of Venus, demands from the Chorus the name of her husband. Like Elsa in "Lohengrin," her happiness is now at an end, for she is doomed to die and to descend to Hades. She

is, however, permitted to revisit earth to obtain from her husband forgiveness of her fault. Eros not only pardons, but transports her with himself to the celestial abodes of the gods. Psyche is a type of the human soul, purified by trial and fitted for real and perennial happiness.

The work consists of an introduction and four parts. The introduction is a chorus, "In Hellas, a country of sunlight," in which the happy childhood but subsequent sad fate of the maiden is described. Nothing could be more agreeable and attractive than this opening number. A characteristic phrase is heard when the rising up of the demon "in mist and in storm" is mentioned; and it occurs several times as a leading theme in the course of the work. In the first part we have a short solo of Psyche, followed by a very charming trio of Zephyr and Genii. The music is perhaps not quite original, but it is exceedingly pleasing and tasteful. It is a piece that will often be heard at concerts. The long *scena* between Eros and Psyche is not one of the most interesting numbers; but in the following chorus, "There comes, with waving dusky robes," we have one of Herr Gade's happiest inspirations. The composer too often reminds us that he is an ardent admirer of his former friend and adviser; but in this chorus he manifests a style quite peculiar to himself. Part two opens with a graceful instrumental movement, depicting the "birds in playful throng," and this leads to a trio and chorus. The *scena* between Psyche and the Genii is not equal to other portions of the work; and when Eros announces to the ill-fated maiden her doom, the music becomes very Mendelssohnian. We pass over two solos, and next notice an exceedingly spirited chorus, "Thou art mighty, O Eros," which concludes the second section. It was loudly applauded at the performance, and Herr Gade, after some hesitation, yielded to the demand for an *encore*. He first, however, drew out his watch, showing it to the public, as if to remind them that the programme was a long one, and that it included other and important novelties. Part three, "In the lower world," is very interesting, and the most characteristic part of the cantata. The orchestration, with its ingenious use of brass and percussion instruments, is highly effective. Part four contains a very charming air for baritone. The concluding chorus, though pleasing, can scarcely be regarded as the most striking number of the work. The best ought to come last; but such is not, we think, the case here.

The performance of "Psyche" was extremely fine; the choir sang with much spirit and refinement, and evidently enjoyed the music. The soloists were Mmes. Marie Roze and Trebelli, Miss Eleanor Farnol, and Messrs. Lloyd and Santley, and they all contributed greatly to the success of the cantata.

The second part of the concert was miscellaneous, and commenced with a symphony in G major by Mr. C. H. H. Parry. The composer has written a great deal of chamber music—an overture for orchestra performed at the Crystal Palace in 1879, a pianoforte concerto played both at the Palace and Richter Concerts; and his setting of Shelley's "Prometheus Unbound" was produced at the last Gloucester Festival, in 1880. The symphony is one of his latest and, we may add, best works. It contains excellent ideas, and the workmanship is of a high order. The first movement is very bright and clear in form; the second very graceful. The *scherzo* with its two trios is full of vigour, but the *finale* appears to us laboured. On a first hearing it seemed to be the least interesting of the four movements. The symphony, conducted by the composer, was well received; and a work which reflects great credit on Mr. Parry and on English art will certainly soon be heard in London—

most probably at Sydenham. The only other pieces to be noticed in this concert are a new song, "The Golden Thread," sung by Mde. Patey, and a nuptial march for band and organ, both by Gounod. Neither of these two novelties is likely to add to the composer's reputation. The reception given to both was moderate.

On Friday morning the concert commenced with Mozart's symphony in G minor. How clear, how bright, how beautiful, is every movement of this noble work, which was admirably played under the direction of Sir Michael Costa. The last movement was repeated. The audience showed marked signs of approval at the close, but they were actually applauding the performance of the whole symphony; the repetition of the *finale* was, in our opinion, an artistic mistake. The next piece on the programme was Brahms' great Hymn of Triumph for bass solo, double chorus, and orchestra. This work was written to commemorate the great German victories in the war of 1870-71, and in it the composer has put forth his full strength. He has combined something of the grandeur of Handel and the learning of Bach with modern modes of expression. The choruses are very grand, but, owing to the complexity of the parts and the difficulties of intervals and modulations, cannot be successfully attempted by ordinary societies. The singing at Birmingham was a perfect triumph for the choir. The baritone solo was well rendered by Mr. F. King. We may mention that this composition was first performed in England at a concert given by Herr Henschel at St. James's Hall in 1879. Cherubini's sixth Mass in C, revived last year at Manchester by Mr. O. Hallé, was rendered in a most efficient manner. The solo parts were undertaken by Mde. Albani, Miss A. Williams, Mmes. Trebelli and Patey, Messrs. Maas, Cummings, and King, and Sig. Foli. At the last Festival, in 1879, the magnificent Requiem in C minor by the same composer was given. The Mass chosen this time is not so profound and striking; yet every page bears the stamp of genius. There is plenty of counterpoint in it, but it is not in any way dry or tedious. It is full of graceful melody and beauty, and, since the composer wrote with due regard to the capabilities of the human voice, as grateful to the performers as it is to the listeners. The morning concert concluded with Beethoven's "Mount of Olives;" the solo vocalists were Miss A. Williams and Messrs. Maas and King. In the evening Gounod's "Redemption" was given for the second time. The hall was crowded, and the composer well received.

The results of the Festival have been in every way satisfactory. In 1879 11,185 persons attended the performances, but this year 18,507. The total receipts from sale of tickets and donations amount to £15,011 3s. 8d., the nearest approach to the grand total of 1873—viz., £16,097. The expenses connected with the performances just concluded have been unusually heavy, so that the sum to be handed over to the Hospital will not be quite so large as might at first be imagined. The artistic, in connexion with the financial, success of this Festival is noteworthy. In 1879 the novelties were not of great importance, and the only English work produced was a concert overture by Dr. Heap; there was then a decline in the receipts as compared with the five previous Festivals. This year the novelties have been most important, and native art has been well represented by Mr. Parry's symphony, Mr. Stanford's orchestral serenade, and Mr. Gaul's "Holy City;" and there has been a large increase in the receipts. The committee will therefore know what course to adopt to ensure the success of the next Birmingham Festival, in 1885.

J. S. SHEEDLOCK.

PUBLISHED BY BLACKIE & SON.

A HISTORY OF THE BRITISH EMPIRE.

By EDGAR SANDERSON, M.A., late Scholar of Clare College, Cambridge. With Numerous Pictorial Illustrations, Genealogical Tables, Maps, Plans, &c. Fcap. 8vo, pp. 444, cloth, 2s. 6d.

"A better manual than this for schools need not be wished; it is an excellent basis for the more advanced and scientific study of history."—*Scotsman*.

A HISTORICAL READING-BOOK.

Consisting chiefly of choice extracts from Macaulay, Froude, Scott, Robertson, Carlyle, Clarendon, and others.

Part I. From the Earliest Times to the Death of Richard III. Illustrated. Pp. 224, cloth boards, 1s. 6d.

Part II. From the Accession of Henry VII. to the Battle of Waterloo. Illustrated. Pp. 224, cloth boards, 1s. 6d.

PRAXIS PRIMARIA.

Progressive Exercises in the Writing of Latin. With Vocabulary and Notes. By the Rev. ISLAY BURNS, D.D. Revised by the Author of "The Public School Latin Primer." Fifth Edition, Revised. Fcap. 8vo, cloth, 2s.—KEY (to Teachers only), 3s. 6d.

DESCHANEL'S NATURAL PHILOSOPHY.

An Elementary Treatise, translated and extended by J. D. EVERETT, D.C.L., F.R.S., Professor of Natural Philosophy in Queen's College, Belfast. Illustrated by 700 Wood-Engravings and Three Coloured Plates. Sixth Edition, thoroughly Revised and Extended. Medium 8vo, cloth, 18s. Also, separately, in 4 parts, limp cloth, 4s. 6d. each. Part I.—MECHANICS, HYDROSTATICS, PNEUMATICS. Part II.—HEAT. Part III.—ELECTRICITY and MAGNETISM. Part IV.—SOUND and LIGHT.

ELEMENTARY TEXT-BOOK OF PHYSICS.

By Professor EVERETT, Translator and Editor of Deschanel's "Natural Philosophy," &c. Illustrated by numerous Woodcuts. Fcap. 8vo, cloth, 3s. 6d.

MYTHOLOGY.

The Myths and Legends of Ancient Greece and Rome, for Schools and Private Students. By E. M. HERENS. Illustrated from Antique Sculptures. Cloth, 3s.

ENGLISH GRAMMAR.

ELEMENTARY. Based on the Analysis of Sentences. Cloth, 1s.

ADVANCED. For Intermediate and the Higher Schools. Cloth, 2s.

STUDENT'S ENGLISH DICTIONARY.

Etymological, Pronouncing, and Explanatory. By JOHN OGILVIE, LL.D. With about 300 Engravings on Wood. Imp. 16mo, half-roan, 7s. 6d.; half-calf, 10s. 6d.

OGILVIE'S SMALLER DICTIONARY.

Etymological, Pronouncing, and Explanatory. Abridged from the "Student's Dictionary" by the Author. Imp. 16mo, cloth, red edges, 2s. 6d.; or, half-roan, 3s. 6d.

ANIMAL PHYSIOLOGY.

Illustrated by Coloured Plates and Diagrams, with the names printed in red on the actual parts.

Book First—4d. paper; 5d. cloth.

" Second—5d. paper; 6d. cloth.

" Third—5d. paper; 6d. cloth.

A COMPLETE ARITHMETIC.

For Secondary Schools. Pp. 192, cloth, 1s.; or, with Answers, 1s. 6d. The Answers separately, 6d.

ALGEBRA.

Up to and including Equations of the first degree. By JOHN G. KERR, M.A., Lecturer on Mathematics and Physics, formerly Snell Exhibitioner in Mathematics, Balliol College, Oxford. Cloth, 1s. 3d.—KEY, 6d.

ALGEBRAIC FACTORS.

How to Find them, and how to Use them. By W. T. KNIGHT, F.R.S. 1s. 6d.

EXAMINATION ARITHMETIC.

Containing upwards of 1,200 Arithmetical Problems and Exercises (with Answers), selected from Oxford and Cambridge Local Examination Papers, and from the Examination Papers of the College of Preceptors, and the Government Examination Papers of Pupil Teachers, and Candidates for Queen's Scholarships and Certificates, Classified and Graded by THOMAS S. HARVEY, F.R.C. Lond. Cloth, 2s.—KEY, 4s. 6d.

London: BLACKIE & SON, 49 and 50, Old Bailey.

SATURDAY, SEPTEMBER 16, 1882.

No. 541, New Series.

LITERATURE.

DR. KUENEN'S HIBBERT LECTURES.

National Religions and Universal Religions.

By A. Kuenen, Professor of Theology at Leiden. (Williams & Norgate.)

THESE lectures are fine examples of a discussion, at once scientific and popular, by a ripe scholar who has not forgotten the art of easy and graceful exposition. Dr. Kuenen plays the part of lecturer as one to the manner born. He gives the results of his special studies in language which has no taint of scholasticism, and in a style which the cultivated reader can thoroughly enjoy. Much, no doubt, is due to the skill of his translator, who has manifestly done his work with equal intelligence and sympathy; but far more is due to the knowledge and labour of the author himself, who has spared no pains to realise the ideal of a lecturer—one who presents to the educated in lucid and elegant language the fruits of his own researches, or the principles and conclusions of his philosophy.

Dr. Kuenen has been very happy in the choice of his subject, though he himself will be the first to confess that it was, and has proved itself to be, much too large for his limits. The inconvenience caused by the size of the subject and the limits of the discussion becomes manifest in the opening paragraphs. The problem is over-simplified; the statement is much too general. We are plunged at once *in medias res*, without any adequate preparation for determining the relations and proportions of all we have to see there. The discussion starts from the familiar division of religions into two classes—the national and the universal. The national religions are “in every case confined to a single people or to a group of nearly related peoples, whereas the universal religions seem to know no such limitations.” The national religions are as multitudinous as the nations possessing them; the universal religions are three—Buddhism, Christianity, Islam. Dr. Kuenen’s subject is to examine “the connexion between the universal and the national religions as furnishing the explanation and the measure of their universalism.” Now this is one of the last, but it is also one of the most vital and complicated, problems in the science of religion. There are innumerable national, but only three universal, religions, and two of these three are so related as to be really offshoots of one stem. The universal elements in Islam are, as Dr. Kuenen shows, not Arabian, but mainly Jewish, though also partly Christian. But this means that only

two national have produced universal religions; in other words, our universal must be explained by two national religions, Brahmanism in the one case, Hebraism in the other. Yet, if this be so, these creative national religions are themselves the subjects that pre-eminently need explanation. Dr. Kuenen well says:—

“The genuine universalism” of the universal religions “is not external and accidental,” “but is very closely connected with their origin and the nature of their connexion with those national religions out of which or on the soil of which they have been developed. That which is destined to penetrate and inspire every nationality must not have been evolved in the study. It must have been tested and matured in the life of a people.”

Precisely so; but what we need is the discovery of the process which produces the elements that have to be so “tested and matured.” Since only two out of all the national religions of the world have produced universal religions, science must go to work to trace the causes that made these national the mother of universal faiths before it can discuss to good purpose their connexion. No man has seen this better than Dr. Kuenen. In his own special department he has before now laboured, as he again does here, to show how universalism was developed in the religion of Israel. But if one really observes what the process means he will see that long before the universalisms were born the maternal religions had become something quite other than national.

In truth, “national and universal” is a convenient distinction for popular use, but not a classification adequate for scientific purposes. It does not recognise or describe the distinctive character of those religions that have generated, or seem capable of generating, universal religions. These are not in the proper sense national, have changed too much in essential contents to be so described. Dr. Kuenen speaks of

“the contrast between those forms of religion which seem, as it were, spontaneously to rise, to grow, and to disappear with particular peoples; and those others, known as personal or historical religions, which have their special founders, or at least their sacred literatures.”

Here he touches a distinction whose full significance ought to have been made more apparent. The religions contained in the former class are alone national, properly so called; the latter have transcended this standpoint—are instituted or personal religions, impregnated and transformed by some great spiritual idea, which may have come through the people, but stands above the people. National religions are products and possessions of the universal consciousness, as much so as the common language and laws; but the instituted are products of the personal consciousness, the spirit or reason which is never so universal as where it labours to realise the idea posited in its very nature. These religions can rise only under the condition that the religious and rational consciousness of the people remain a unity, such a unity as compels thought to seek to embody itself in religious forms and expressions. Where this unity is not maintained religion remains national, becomes with the growth of the nation a “used or confused multitude of local

cults, while thought, secularised as were, occupies itself with the interpretation of its problems in the terms of logic and science. Greece, with its distinguished and strongly contrasted religion and philosophy, illustrates this latter process. Zoroastrianism may be used to illustrate the former. The one represents to us a religion with so much that was universal in it that it wanted, one may say, only the favourable opportunity to be universalised; but the other represents a religion so radically national as to be quite incapable of generating universalism. Even as it is, Zoroastrianism must be regarded as one of the most efficient factors in the evolution of two universal religions; while in Hellenism the factor efficient in the same direction was philosophical, not religious.

When we pass from the preliminary statement to the historical criticism and exposition, we find Dr. Kuenen, for the most part, on ground where he moves with the easy step of a master. He deals successively with Islam, Christianity, and Buddhism in connexion with their historical antecedents. His treatment of Islam is slight, but suggestive. It is but an outline, yet it is the outline of a master, where no point that can illustrate his thesis is forgotten, and every point is made to tell. The sources whence Islam was derived, its relation to these, the mechanical, and often violent, way in which its borrowed and even heterogeneous material has been put together, the extraordinary and creative force of Mohammed’s personality are all succinctly exhibited. The conflict of the local and universal elements, the relics of Arab heathenism incorporated with Judaic monotheism, the immobility, the incapacity for change and progress, the ease with which it can be adopted without being really assimilated, the way, in short, in which the limitations cancel the universalism in Islam, are well, though briefly, illustrated. It is summarily described as

“a side branch of Christianity, or, better still, as we should now say, of Judaism; a selection, as it were, from Law and Gospel, made by an Arab for Arabs, levelled to their capacity, and further supplemented—or must we say adulterated?—by national elements calculated to facilitate their reception of it.”

If we miss anything in this outline, it is the recognition of the place and action of the Mohammedan State alike as fact and idea in Islam. The attempt at a theocracy so common to the Semitic religions re-appears in Mohammedanism, in a form, too, the least suitable to a universal religion. The apostle of God was both prophet and king, and his kingdom, which he realised through his prophethood, was perhaps the most thoroughly localising and limiting influence in his religion.

The lectures ii.-iv. really constitute a whole; they are an attempt to trace the rise and growth of universalism within the religion of Israel, the development of Judaism, and the way in which it occasioned and conditioned the birth of Christianity. They are thus intended to show how a national religion became a religion generative of a universalism. It is this purpose that gives them their interest, and it is by their success in fulfilling it that they must be judged. Though Dr. Kuenen is here dealing with material that

he has often handled before, yet his treatment is most fresh and interesting. We have space to notice only one point—the action of the ethical element in the character or conception of Yahweh. When first made apparent, we are told that “to this one trait belongs the future” (p. 91); then

“it was in those prophets it had most deeply impressed, who were most completely penetrated by the stern and inexorable character of Yahweh’s moral demands, and had, therefore, become the preachers of righteousness, that prophecy reached its full dimensions and bore its ripened fruit” (p. 103).

This ethical element makes Yahweh more than a national god, universalises him, because it sets moral claims above the claims of his people.

“As soon as an ethical character was ascribed to Yahweh, he must act in accordance with it. The Holy, the Righteous One might renounce his people, but he could not renounce himself” (p. 116).

The inevitable result was absolute and universal monotheism.

“If Yahweh the Holy One was God, if he was God as the Holy One, then the others were not. In a word, the belief that Yahweh was the only God sprang out of the ethical conception of his being. Monotheism was the gradual, not the sudden, result of this conception” (p. 119).

So far very good, but the main matter is the genesis of this ethical element or idea. Was it contained in the primitive conception of Yahweh? or does it represent an earlier or later accretion or addition to his attributes? Dr. Kuenen does not here renew the attempt he so skilfully made in his *History* (i. 231–40) to sketch the primitive character of Yahweh, the fierce nature god. His constructive interpretation of the religion begins at too late a date to admit of it. But the question as to whether the ethical was an original or primitive element in the conception of Yahweh is one really determinative of the character of the religion, whether it was ever a mere national religion—which is always in its ultimate and primitive elements a mere naturalism—or whether it was a national religion with ethical and ideal contents—i.e., a religion which has, by the action of the creative religious consciousness, been made to transcend simple naturalism. If it was the former, then the evolution of the ethical element was equal to the birth of a new religion; if the latter, then the absolute and universal monotheism of the greater prophets was but the legitimate and logically operated development of the original living germ. And many things seem to indicate that the latter is the truth. The Ten Words, the judicial functions of the Yahwistic priesthood, the moral severity and elevation of the most eminent and distinctive of the early prophets of Yahweh, along with other points too numerous and minute to be here specified, are explicable only as the ethical was a determinative element in the primitive conception of him. But, if it was so, the religion was at no moment of its actual history without an ideal purpose—without an ideal of worship and its object which, as it lived, could not but struggle towards the universalism which was ultimately realised. The end was given in the beginning;

Moses involved the prophets, the ethical deity of the Ten Words, the God and Father of the Lord Jesus Christ.

One always has, in reviewing a book like Dr. Kuenen’s, an unsatisfied feeling. So much less has been said than one had meant to say and would like to say. He has certainly here put before the cultured reader his construction of the religion of Israel in a very skilful and attractive form. The questions he handles in his fourth lecture, which concerns Judaism and Christianity, are very delicately touched. Every line is vivid with insight and suggestive of thought. His fifth and concluding lecture is remarkable as a lucid presentation of the latest researches and speculations as to primitive Buddhism, its relation to, and connexion with, the pre-existent Brahmanism; and a presentation skilfully adapted to bring out the kindred relation of Christianity to Judaism.

As regards the relations of Buddhism to Brahmanism, it would be easy to show that the latter can as little as Hebraism be described as a national religion. It has travelled too far from the naturalism of the Aryan tribes, been modified by too many native tendencies, absorbed too many foreign elements, been too thoroughly penetrated and transformed by thought, to be so described. Like Hebraism, Brahmanism was the religion of invaders; like it, too, it borrowed much from the older settlers, yet remained throughout governed by its own native character or immanent idea; like it, too, it elaborated an extensive sacerdotalism which had at once its counterpart and contradiction in a school of thinkers and teachers which loved knowledge and immediacy of spiritual relation; like it, too, its development was throughout regulated by the presence and action of a great transcendental idea—Yahweh in the one case, Brahma in the other. And the difference between the two cannot, perhaps, be more truly or summarily described than by saying that the normative principle was in the one case ethical, in the other metaphysical. The moral deity of Israel was the parent of the distinctive universalism which Christianity incorporated and realised; the metaphysical deity of Brahmanism was the creator of the ideals which inspire Buddhism. Christianity owes its sane ethical spirit to its parent; Buddhism its sickly asceticism to the religion which at once preceded and produced it. The differences of the sources are thus reflected in the differences of the streams.

We have found Dr. Kuenen’s book throughout instructive and suggestive, and we lay it down with the hope that other and later Hibbert Lecturers may deal as worthily with their subjects as he has done with his.

A. M. FAIRBAIN.

Social Equality: a Short Study in a Missing Science. By W. H. Mallock. (Bentley.)

THE subject is introduced, with the author’s usual felicity, by a charming little scene in an English country town:—

“The central group in the drama is the large barouche with its occupant (a local magnate). All the passers-by turn to it for at least a moment, and acknowledge, either by their looks or salutations, the importance of the principle

that is embodied in it. The solicitor squints at it; the farmer touches his hat to it; the rector waves his hand to it.”

Mr. Mallock goes on to describe the feelings with which such instances of inequality are regarded by democrats. He quotes from the programme of the German labour party:—

“Labour is the source of all wealth . . . hence the aggregate product of labour belongs to all the members of society, each member having a right to an equal share.”

He quotes also words addressed by Mr. Bright to an audience of working-men:—

“Just now, as I was on my way to this place to speak to you, I watched in the street a magnificent carriage pass me; and in that carriage were two splendidly dressed ladies. Who made that carriage? You did. Who made those splendid dresses? You did. Have your wives any such carriages to drive in? Do your wives ever wear clothes of that kind?”

It is unfortunate that Mr. Mallock has not selected as the object of his attack some more measured and philosophical statement of the democratic principle. His contention that English Liberalism logically abuts in Continental Socialism is not likely to command general assent. It certainly need not be admitted by Utilitarians. It suffices to advert to Bentham’s scathing denunciation of “anarchical fallacies.”

The sentiments of his opponents having been exhibited in a very unfavourable light, Mr. Mallock proceeds to propound his own substitute for “the pseudo-science of modern democracy.” His theory rests mainly upon two arguments—that equality in the sense of equal distribution of wealth is neither desirable nor attainable. It is not desirable: for, whereas

“material civilisation is a desirable thing for one reason only . . . because and in so far as it increases human happiness,”

equality is no constituent part of happiness.

“It is in no way a sad thing that one man should be dining off turtle and ortolans, and another man off a plate of beans and bacon.”

Here we have certainly, if not a “missing science,” at least a question of scientific interest which may seem to have received from philosophers less attention than it deserves. Mr. Mallock does well in calling attention to it. But he does not present it very clearly. He obscures the subject by adopting the unqualified proposition that riches and poverty have no necessary connexion with happiness and unhappiness, instead of the law which has recommended itself to many accurate thinkers—Buffon, Laplace, Bentham, Senior, Sidgwick, Fechner, Jevons—the so-called “law of diminishing utility;” roughly speaking, that a man is (tends to be) happier for each additional guinea he has, as Sydney Smith said, but that these additions of happiness are continually smaller. Bentham employed this law to deduce equality from greatest happiness. Bentham’s deduction of the principle of equality, Mill’s assumption of it as axiomatic, the bearing of Darwinism upon it, ought not to have been ignored by the discoverer of a missing science.

It is, however, upon the second of the arguments above distinguished that Mr. Mallock rests most weight. Equality is un-

attainable, because incompatible with the rise, progress, and maintenance of civilisation. For wealth is not produced without the motive of self-interest; either the "desire of inequality" or the desire of a bare livelihood.

"Does he [the man who thinks otherwise] suppose that an engine-driver on the Great Northern Railway is consumed with a desire that Cockneys should see Edinburgh? or that the captain of a Cunard steamer is an apostle of international commerce? or that telegraph clerks have any feeling but apathy with regard to the benefits arising from a quick transmission of messages?"

In order to excite the desire of inequality, conspicuous inequalities must exist. To quote from one of the articles which are tributaries to the book under consideration:—

"Through all the causes [of the efficient desire of wealth] there is one common cause working, and that is the wealth that is already in existence. This is the one motive-power that produces all civilising industry. It is the great electro-magnet that moves the whole intricate machinery."

Also, in order to make the desire of livelihood as efficient as possible, the masses who are actuated only by that desire must be dependent upon "the power and the desires of a minority." In this line of argument the first point coincides with the familiar first postulate of political economy. Almost all that Mr. Mallock contends for has been conceded by Mill.

"Competition may not be the best conceivable stimulus, but it is at present a necessary one, and no one can foresee the time when it will not be indispensable to progress" (*Pol. Econ.* vii. 7).

What remains is not commonplace, yet not new to the student of political economy. There is a similar train of thought in MacCulloch, alluding to some of whose remarks Mill speaks of "the portion of truth recalled by them" (*Pol. Econ.* v. ix. 2). Nor has it escaped the attention of Mr. Mallock's predecessors that a people may have no motive to produce more than necessities. Thus Mill of such a case:—

"There would be little motive, while the numbers of the family remained the same, to make either the land or the labour produce more;"

adverting, it may be observed, to an important consideration which does not seem to enter into Mr. Mallock's political economy. It may, however, be admitted that neither Mill nor MacCulloch, nor any other writer who has treated of the relation between demand for labour and demand for commodities—the philosophy of consumption—has hit the happy mean between asceticism and improvidence. Mr. Mallock, if he has not advanced beyond others, is no doubt on the right track when he perceives that

"it would be a most wholesome exercise for students of social questions if they would consent for a time to say nothing about human action at all, and to talk and think of it only in terms of motive, or, in other words, of efficient desire."

Before passing on, we may observe of this whole argument that it does not lead very directly to Mr. Mallock's presumable conclusion—conservation of existing social inequalities—but rather to what has been called the equality of opportunity.

These general reasonings are supported by a contention, directed more particularly against Mr. Herbert Spencer, that generalisations about human character are possible. We venture to think that this portion of the "missing science" might have been omitted without being missed. It seems quite unnecessary to instance generalisations like George Eliot's "Emotion is obstinately irrational." We feel sure that any sensible opponent will allow Mr. Mallock to employ as many generalities beginning with "The man who . . ." as Joseph Surface himself could muster. On the particular points at issue between Mr. Mallock and Mr. Spencer we will not attempt to decide. Speaking generally, it should not be a matter of surprise, nor perhaps of regret, that humour and the literary sense should be able to harass the march of philosophy and, at least, prevent its straggling. Mr. Mallock, therefore, may seem injudicious when he abandons his proper method of attack in order to imitate that of his adversary. The cumbrous arms of the giant are unsuited to the slinger. Here is part of the polemic against Mr. Spencer:—

"George Eliot asserts a fact [above quoted] with respect to human emotion. That is evident; but with respect to the human emotion of whom? Not the emotion of John, or Jack, or Mary—of any particular persons, or of any particular group of persons—but the emotion of men generally. Her assertion either refers to that, or else it refers to nothing. It is therefore a scientific generalisation."

So again, when the "great man theory" is being defended against Mr. Spencer, the insinuation that upon that theory Mr. Spencer himself is reduced to insignificance—"not in any important sense the author of his own volumes"—might have been a good repartee, if it had not been carried through several pages with Spencerian elaborateness.

Upon the whole, the "missing science" appears to contain much that is science, but little that was missing. The student will find in it many valuable suggestions, yet few that have not been made by standard writers. The superficial reader will find much agreeable instruction, yet not so much as is afforded by Miss Martineau's and other illustrations of political economy. If Mr. Mallock would study those standard works, he could improve upon those illustrations. That would be a legitimate employment of literary power and a popular style.

F. Y. EDGEWORTH.

Notes on Dignities in the Peerage of Scotland which are Dormant or which have been Forfeited. By W. O. Hewlett. (Wildy.)

THE recent Report of the Select Committee on Claims of Peerage, &c., with the Bill founded thereon, following closely on Lord Crawford's *Earldom of Mar*, has brought the subject of the Scotch peerage once more into prominence, and rendered the moment opportune for the appearance of Mr. Hewlett's book. There is a great want of some trustworthy work on the extinct and dormant dignities of the three kingdoms, the difficulty of separating the former from the latter rendering it needful

that they should be treated of together. For England we are fortunate in having Court-hope's *Nicolas*, a sound and useful epitome. For Ireland, Lynch's *Feudal Dignities*, an ignorant and partisan compilation, is still quoted as an authority in default of any better. For Scotland there would seem to be nothing later than the well-known Wood's *Douglas*, a work by no means free from errors. We are thus, at least for modern cases, driven to Ulster's volume, a work which it would not be decorous to criticise, but of which the shortcomings are well illustrated by the case of "Aston of Forfar," Mr. Hewlett's opening article.

There was a great mass of unassorted material in the printed cases on Scotch claims which Mr. Hewlett has been enabled, by his professional knowledge, to utilise. And yet, though very creditable to an English lawyer, the work, as a whole, is disappointing to the initiated, though it would perhaps be unfair to describe it as merely a *pièce de circonstance*. The study of the peerage law of Scotland is essentially microscopic, involving most delicate niceties. And, even as with the microscope we have to allow for the aberration of the object-glass, so, in this intricate and specialised study, has the truth been too often warped by the personal bias of the observer. Nay, more; if we confine ourselves strictly to the light which legal decisions have thrown upon the subject, we may at times be as much deceived as were microscopical students till a purer light had, for instance, resolved the linear striae of Pleurosigma, and proved that they were only due to a non-natural and deceptive illumination.

In the Introduction we have a lucid and accurate *résumé* of the main outlines of the case; but, as a *comitatus* has been constructively determined not to carry the dignity, it is safer for those who follow Lord Mansfield to keep to the original word, instead of rendering it "territorial earldom," a term of ambiguous denotation. The distinction between the *caput*, or "principal chemys," and the *parcellae* might also have been alluded to, and the fact that the fief was divisible (unless precluded by the provision "without division") although the dignity was not. "Of the said heir male" is hardly an accurate rendering of "*dictorum suorum haeredum*" in the celebrated Polwarth patent; and when Mr. Hewlett tells us that

"the Sinclair case proceeded upon the ground that a person claiming under a substitution, which would, according to the law of England, have been a remainder, could take . . . following the decision in the case of Gordon of Park" (p. 12),

we submit, with due deference, that in thus disposing of this very abstruse point he fails to perceive the full bearing of the great case of Gordon of Park. A true "remainder" would have been saved *per se*, under the English law (then ruling), as in the Northumberland case of 1572 (*Cruise on Dignities*, p. 122, &c.). But in the opinion of the best Scotch authorities their "substitutions" were *not* equivalent to our "remainders over" (though the common form, "whom failing," gave them a superficial resemblance), the whole scheme of entail being different, and the

"substitution" only constituting a *spes successionis*—a purely contingent right, and not, like the English "remainder over," an independent vested right at the instant. The importance of this decision lies in its constructive identification of the two. The Sinclair case was merely the application of that principle to honours; and, indeed, the "substitution" being here *nominativum*, the principle was not, in this case, pushed to its full extent.

Among the dormant dignities there would seem to be some omissions. The "Peers-ages," always amiable in these matters, assign to the Dukes of Hamilton the ancient Earldom of Angus; but their petition in 1762, though referred, like those of their opponents, to the Lords, was never followed up. Another typical case is that of Forfar, with its limitation to "heirs male." We should have been glad of Mr. Hewlett's opinion on the present condition of this dignity; also on the Earldom of March, &c., presumed to vest in the Earl of Wemyss as heir of tailzie to the Neidpath estates, founding on that faculty of nomination so mysteriously inserted in the warrant. Turning to Baronies, we find no mention of the curious Sinclair question. It has been held by the best authorities that, abstracting from a resignation, the 1677 patent could not bar the *jus sanguinis*, latterly, but probably wrongly, asserted to vest in the heir of line. We should have liked to see Mr. Hewlett discuss the unique case of Barret of Newburgh, and to learn whether he omits Colvill of Ochiltree as extinct. On the Duffus case Mr. Hewlett is mistaken. It was not till the heir male had assumed the title, and attempted to vote (1830), that the heir of line moved in the matter (1832); and the action thereupon of the former is wholly omitted in the text, and erroneously entered in the Appendix as a claim referred by the Crown to the Lords, whereas both parties petitioned the Lords *direct*—a point of great importance, and one on which Lyon King of Arms himself has displayed some ignorance in his recent evidence (*Minutes*, 213), as also on the previous Duffus claim (*ibid.* 380). It is, however, on the Mordington case that Mr. Hewlett has been specially unfortunate. When he tells us that his accounts have been "prepared from Douglas' *Peerage and Baronage of Scotland* and other authors on Dignities," we are reminded of what Riddell wrote forty years ago:—

"Erroneous withal as they [*i.e.*, Douglas and Wood] so often prove, certain London solicitors have by no means been indisposed largely to draw upon and to borrow from them. . . . Our Peerage writers, Douglas and Wood (whom, however, some English lawyers, not to say solicitors, depend upon as authorities), have, after their very frequent fashion, grossly mistaken and misrepresented the Mordington pedigree" (*Peerage Law*, pp. 870, 948).

It is to be feared that these words are still too true, for Mr. Hewlett has fallen headlong into the pit prepared for him of old. He follows blithely the erroneous pedigree, which hopelessly obscures the point at issue, and reduces the plea of the heir male to a meaningless maze. There is also a curious confusion in the Appendix on claims to peerages and claims to vote issuing from the contested election of 1790. Under the latter

we find "Hopetoun, Kinnaird, Selkirk, Dumblane." But the votes of Kinnaird and Dumblane were only objected to for technical informality, while Hopetoun and Selkirk, far from having to "claim," figured as objecting to the votes of others!

There is little attempt to trace the descents of probable heirs to the dignities; and as to the "two younger sons—Ralph Constable of Bursniew Northpark and Christopher of Westead, both of whom married and left issue" (p. 41), it is easy to ascertain that Ralph left no male issue, and that he never had a brother Christopher. There is a curious instance under "Lennox" of the worth of monumental inscriptions. Esme, the fifth duke, died August 10, 1660, which date was discovered on his coffin plate. But according to his (erroneous) monumental inscription he died August 14, 1661. Mr. Hewlett, apparently unaware of the discrepancy, has neatly, however, split the difference, and (on what grounds we are not told) makes him die on August 14, 1660. J. H. ROUND.

Chronograms, 5,000 and more in Number.

By James Hilton. (Elliot Stock.)

THE study of chronograms, we may say once for all, is a dry one; and, contemplating this stout quarto of near 600 pages, we do homage to the patience and toil which Mr. Hilton has devoted to his self-imposed task. To collect these 5,000 monuments of human ingenuity—we must not say of human folly—assuredly required no small fund of enthusiasm; and we may congratulate the compiler on his success in bringing together so much to illustrate a curious subject.

A chronogram "has been defined as an inscription in which a certain date or epoch is expressed by numerical letters," such letters being generally made larger than the rest, in order to assist the eye in selecting them. The idea appears to have come from the East, the oldest specimens here given being one in Hebrew of the year 1208 and another in Arabic of A.D. 1318. If the one printed on p. 12 be a true chronogram, an Englishman contrived one of these literary puzzles as early as the fourteenth century. But England was not the soil on which the chronogram was to flourish. Mr. Hilton tells us that specimens are rare both in this country and in France, and are scarcely to be found in Italy; but in Germany and Holland and Belgium they lie thick. The rage for them in Germany moved the scorn of Addison. "The laborious German wits," he says,

"will turn over a whole dictionary for one of these ingenious devices; you would fancy, perhaps, that they were searching after an apt classical term, but instead of that they are looking out for a word with an M or a D in it. When, therefore, you see any of these inscriptions, you are not so much to look in them for the thought as for the year of our Lord. There are foreign universities where this kind of wit is so much in vogue that, as you praise a man in England for being an excellent philosopher or poet, it is an ordinary character among them to be a great chronogrammatist."

While these words are none too hard to apply to absurd pedantry, the fact still remains that the chronogram had taken up a position in respectable society, and had increased and

multiplied. For, as Mr. Hilton reminds us, chronograms not only occur on buildings and monuments, but are found on countless medals

"struck to commemorate the birth, coronation, career, or death of princes and potentates; battles, sieges, and wars which their subjects have fought and endured for them, as well as the treaties made and alliances formed on the establishment of peace; social and local events, the founding of universities, and the like.

As an attendant, then, upon history, the chronogram may be entitled to respect; nor can we refuse some admiration to the ingenuity which could neatly construct a sentence in which every letter representing a Roman numeral counts to make up the required date. But, alas for the narrow bounds of human intellect! The Flemings found their awkward language so full of d's that they were forced to break the rules of the game. So, in calculating their dates, they anticipated the practice of the gallant captain of the "Pinafore," and eschewed the use of the big, big D. But if we can find even beauty in a neatly turned chronographic sentence, we sternly refuse quarter to the monsters who could deliberately sit down to write whole books in chronograms. A chronographic imitation of the *De Imitatione Christi*, in which "each line throughout the book, from the title-page down to p. 87, with the exception of the preface, is a succession of chronograms giving the date 1658;" the *Decas Mariana*, ringing the changes on the year 1673; the *Conceptus Chronographicus*, which "contains altogether 713 chronograms on one and the same subject, and repeating the one date, 1712;" the *Annus Sexagesimus* of 1660, consisting of "2,068 hexameter and pentameter lines composed entirely in chronogram;" the collections of tracts entitled *Franconia plaudens* and *Franconia lugens*, and *Fulda plaudens et plangens*—all these, and many more, are gems unearthed and described by Mr. Hilton, the contemplation of which has filled us with the amazement which he admits, veteran as he is, to have possessed even him when he first turned up these treasures.

E. MAUNDE THOMPSON.

PADRE FITA'S SEVEN SPANISH COUNCILS.

Actas inéditas de Siete Concilios Españoles.
Por el R. P. Fidel Fita y Colomé.
(Madrid.)

THE Seven Spanish Provincial Councils, the inedited acts of which are here, for the first time (with the exception of the Fifth Council), given to the world, are (1) Valladolid, May 4, 1282; (2) Benavente, May 9, 1283; (3) Toro, May 27, 1310; (4) Salamanca, October 21, 1310; (5) Zamora, July 20, 1311; (6) Zamora, July 11, 1313; (7) Valladolid, July 8, 1314. The text is enriched by most valuable notes and comments, in addition to an Appendix of fifty pages of contemporary documents illustrating the subjects treated of.

The main interest of these Councils consists in the light which they throw on the obscure subject of the suppression of the Templars by Pope Clement V. in the Council of Vienne, 1312, and on the acquittal of the

Templars of Castille by the Spanish Council of Salamanca, 1310. The subsequent interest is the question of the toleration of the Jews debated at Zamora, 1313.

The composition of these Councils seems to have been very restricted; those summoned, according to Canons IV., V., VI., Valladolid, 1282, are only the archbishop, bishops, abbots, priors, and the chapters of cathedral and conventual churches represented by their proctors. Their attitude towards the Crown is one of freedom and dignity. At Benavente, 1283, Canons V.—X., the Council does not hesitate to make remonstrances to Don Sancho on his default of justice; it bids him cut down the expenses of his Court to the limit of that of his grandfather; and lectures him on his conduct towards the Church, and on the choice of his councillors. The same Council shows considerable jealousy towards the Dominicans and Franciscans, "who daily trouble the churches and monasteries and clergy by unduly usurping their privileges." Matter of deeper importance is the brotherhood, "unio et fraternitas," of the bishops for mutual protection against the civil power (the persons of the royal family alone excepted), who enforced sentences of excommunication given by any one in the dioceses of all, and taxed themselves up to one-third of their income for the purpose of paying fines, or of supporting any one of their number who may fall under the royal displeasure. Canon IV., Salamanca, 1310, orders "the Feast of the glorious Conception of the Blessed Virgin to be solemnly celebrated throughout the province of Compostella yearly on December 8." Canon III. of the same Council shows how long a quasi-marriage prevailed among the clergy of Spain. The Archbishop there charges his suffragans "districte compellant clericos ne de caetero in suis domibus vel alienis teneant publice concubinas." It is probably about the same date that the Abbot of Oña granted the Fuero de Cellaperta, in which he says, "Concedimus ut clericus qui filium non habuerit manneriam non pectet"—a singular inversion of the Lex Poppaea of ancient Rome. Somewhat later, in 1380, Juan I. complains in the Cortes of Soria "that the sons of the clergy *que ovieren en sus barraganas* inherit as if born in lawful matrimony." The term Barragana is defined as "Mujer legitima, aunque desigual y sin el goce de los derechos civiles." This state of things seems not to have been finally suppressed until nearly the time of Card. Ximenes. Another curious Canon is V., against cathedral dignitaries who talk during service, or leave their stalls to walk about the church in conversation. The Spanish bishops, in face of the Bull of Clement V. averring that the Grand Master and other Templars had freely confessed before him the crimes attributed to the Order, entirely acquitted the Templars of Castille at Salamanca, 1310. The evidence of the witnesses does not at all bear out the repute of the great wealth of the Templars—at least in Spain. Some excuse themselves from appearing before the Council on account of poverty, and of their inability to procure either a horse or other provision for the journey. The returns, too, from the dioceses speak of very little property, except in Catalonia, and in some cases of none at all.

The question of the Jews in Spain is met with in the Council of Eliberis, 305, and occurs in nearly every subsequent one down to that of Zamora, 1313, and is there decided in almost identical terms with those of the earlier Councils. The grievance which the bishops, supported by a Papal Bull, especially urge is that, while the evidence of a Jew against a Christian is valid, that of a Christian, alone and unsupported, against a Jew is not received in the civil courts; this, they say, should be "e converso." Fernando IV., however, strongly repudiates both Bull and Canon against his Jews—"míos Judios," "bien sabedes que todos los Judios y lo que han es mio;" and the bishops were obliged to yield before the royal fury—"la saña del nuestro Señor Rey tan grant." In the Appendix Padre Fita prints instances of toleration on the part of the bishops, especially in the matter of rebuilding synagogues and permitting cemeteries. We do not, however, think that, on the whole, he makes out his case against Menendez Pelayo and Vicente de la Fuente, who, like Canon Stubbs, treat the fourteenth century as one of retrogression; or that the action of the Spanish Church as a whole was really tolerant. The tone of the Councils towards Jews and Moors is very different to that of the early capitulations and Fueros granted them by the Crown, especially in Aragon and Valencia. Difference of opinion on such points does not detract from the great interest of this work.

We trust that Padre Fita may be able to fulfil the promise which he makes of publishing the inedited "Acts of the Templars," and, still more, to collect materials for an "España Semitica" from authentic monuments. They who have read his contributions to Hebrew and Arabic epigraphy published in the *Revista de Ciencias Históricas* and other periodicals know how well qualified he is for such a task.

WENTWORTH WEBSTER.

NEW NOVELS.

Jobson's Enemies. By Edward Jenkins. In 3 vols. (Strahan.)

Daisies and Buttercups. By Mrs. J. H. Riddell. In 3 vols. (Bentley.)

For Old Sake's Sake. By the Hon. Mrs. Fetherstonhaugh. (Bentley.)

Leone. (Boston, U.S.: Osgood; London: Trübner.)

No Longer a Child. By Maud Jean Franco. (Sampson Low.)

THERE is a good deal of human nature in Mr. Jenkins's new novel, and we do not know that we can give it higher praise than this, or, indeed, that a novelist should desire more. The dramatist and the novelist alike achieve their highest success when they have placed upon the canvas the verisimilitude of real men and women; and this, as it seems to us, Mr. Jenkins has done in *Jobson's Enemies*. It is a little curious, however, that the best character in the book should be not the eminent barrister and political writer who furnishes the title, but his aunt, Bertha Jobson. Rarely have the "infinite passion and the pain" which attend the love of woman been de-

scribed with more genuine pathos than in the early stages of this novel. And the description is all the more graphic because it is so simple. We feel for the suffering soul whose happiness is, in a moment of time, out to the root; and, if similar examples have not come within our own knowledge, we can quite believe that the record of her subsequent life, with its temporary insanity and final recovery, is a true and faithful picture. But *Jobson's Enemies* has many other claims besides this. The pictures of Canadian life—the electioneering experiences, the political revelations, the social glimpses, &c.—are evidently drawn at first hand. The only difficulty we felt was that the first part of the narrative, while not in the least tedious, was so full and Dickens-like in its detail that we did not see how the life of the hero was to be compressed within reasonable limits. Mr. Jenkins brings Thaddeus Jobson to London, where he not only becomes one of the brightest ornaments of the Bar, but, by the knowledge and *verve* he displays in dealing with public questions, attracts the attention of Lord Melbourne, the Prime Minister, whose identity will easily be recognised. The dealings of authors with publishers have been subject to remark from the earliest times, and Lord Byron's epigram on this subject is well known; we shall therefore pass by Mr. Jobson's grievances on this head with his own observation: "When you kick against a publisher, you kick against the pricks." Of course, publishers might retort that authors themselves are sometimes unreasonable. But "Taddy" Jobson has worse enemies than the publishers, and these are determined to run him to earth. He has a soul honest and upright as the day; and it is scarcely surprising in this age—when the world will do anything to thwart such a man, who works in dead contradiction to its principles—that he finds the fight a very uphill one. He is apparently succeeding admirably, and is actually named for the Solicitor-Generalship, when the machinations of his foes, domestic and legal, prevail, and he dies broken-hearted. The story is a sad one, and all the sadder, probably, that it has found many a counterpart in this heartless and relentless London. We congratulate Mr. Jenkins upon the genuine power displayed in his novel. To our thinking, he has never written anything better, if, indeed, so good. Certainly his reputation will be well sustained by it.

Mrs. Riddell's *Daisies and Buttercups* is a readable story enough, but it lacks definiteness and individuality of character. It would also have borne compression, for each volume consists of upwards of three hundred pages. But, while we mark these *desiderata*, we must at the same time observe that Mrs. Riddell is a far more agreeable writer than most lady novelists. Her books are at least never inane; there is always something in them. So with the present novel; it is certainly well worth perusing, though it is not equal to the first which Mrs. Riddell published. But the secret is well kept, and there are one or two personages in the story who are quite familiar to us from their prototypes in real life. The stern practicality of one character is very manifest

from his observation: "Science is all very well at these institutions; but what can a shopkeeper want with science unless how to teach him the best way of adulterating his goods?" Society at Reedbourne-on-the-Thames is tolerably well described, and so also are the natural beauties of the place; but Mrs. Riddell ekes out some of her dialogues and descriptions with anecdotes of a very ancient flavour, which were well known to us in our boyhood. Still, coming back to the novel as a whole, there is a good deal of interest in the character of Cheyerley, a quiet clerk who comes into a legacy of ten thousand pounds, and in his friend John Smith, round whom, indeed, centres the chief interest of the story. In two volumes *Buttercups and Daisies* would have been admirable.

The Hon. Mrs. Fetherstonhaugh has gracefully anticipated any charge of plagiarism which might have been brought against *For Old Sake's Sake* by her prefatory note. She there states that her sketch was originally suggested by Mr. W. S. Gilbert's "Sweethearts," the author of which kindly sanctioned this prose version of his ballad. But, apart from this, no apology is needed for what is really an attractive little story, agreeably told. There are many touches of local colour, and many little snatches of emotion, which are entirely the author's own, and for which she ought to receive due credit. We cannot say that Ned Dundas is as attractive a being or a lover as Lady Margaret Lisle, the daughter of the Earl Palatine, and this not entirely on the ground of the old saying, *Place aux dames!* The truth is that Lady Margaret is more vividly and naturally drawn than the dashing soldier. But, notwithstanding, their mutual adventures are well worth following, and there is nothing forced or strained in them. The lovers are, of course, brought together again at last, after a very long separation, but in what way we must leave our readers to discover for themselves. Though slight, as such a sketch must necessarily be, *For Old Sake's Sake* has its excellent points, and is never tedious. Indeed, it is rather remarkable that with such scanty materials the author should have succeeded in being so distinctly interesting.

There may not perhaps seem much at first sight in the love story of an Italian artist and an American girl, which is the groundwork of *Leone*; but then piquancy is added to the narrative from the artist's supposed relationship to the most notorious brigand in the Papal States. Leone is the terror of the whole country, and Silvio di Montalba, the lover of Edith Norman, is believed to be his son. We shall not reveal the plot of the tale, nor the stratagems whereby Leone endeavours to compel the marriage of Miss Norman with Silvio. Leone is a brigand with a large idea of his vocation, and when taunted with it he triumphantly says:—

"What was Napoleon but a Corsican brigand on a larger scale? I reign over the Roman Campania [sic] and the [sic] Apulia. If I succeed in extending my sway over the Neapolitan States [sic], who knows but that I might overthrow that puny king and proclaim myself in his place?"

Who was Masaniello? Who was Cola di Rienzi?"

The time of the story is fixed in the days of the Papal Government, when the most disgraceful laxity prevailed on the part of the authorities; indeed, it is asserted as an historical fact that no famous brigand was ever arrested in the city of Rome or Naples, or, indeed, in any city during the Papal and Bourbon Governments. *Leone* illustrates how the thing was managed. We meet, too, with some pleasing descriptions of Italian scenery, and there is obvious truth of local colour, though the book, we presume, is written by an American. It is published in the "Round Robin Series" of Messrs. Osgood & Co.

We are not acquainted with Miss Franco's previous works, but the graceful little story she now presents us with, *No Longer a Child*, is calculated to create a favourable impression. It is descriptive of German life in South Australia, and the natural aspects of the country are evidently familiar to the writer. She describes them with a facile pen. The human interest of the sketch centres in the love story of Lena Hartmann, who, having reached the age of "sweet seventeen," is no longer a child; hence the title of the novel. She sees an Englishman named Lindsey, and the two are immediately seized with a genuine passion for each other; but as everything does not end happily in this world, so the death of one of the lovers in England results in the death of the other at the Antipodes from grief. There is not much opportunity for character-drawing, but the author, having wisely chosen a small canvas, has not uncreditably filled it in.

G. BARNETT SMITH.

RECENT SHAKSPEARE LITERATURE.

Outlines of the Life of Shakespeare. By J. O. Halliwell-Phillips. Second Edition. (Longmans.) This is an enlarged edition of the *Outlines* printed last year "for the author's friends." The student of Shakespeare's life who desires to have copies of original documents before him will find it a most valuable possession. "The remains of New Place," says Mr. Halliwell-Phillips, referring to a sketch of some broken lines of stone and mortar almost level with the ground—"the remains of New Place are typical of the fragments of the personal history of Shakespeare which have hitherto been discovered." It is his object to lay bare these fragments with exactness, in their bald poverty, not to reconstruct an imaginary edifice on their suggestions; and he has done his work carefully and well. In Mr. Halliwell-Phillips' distrust of certain kinds of criticism, less positive, perhaps, and yet, perhaps, as profitable, as that by which he sets chief store, there may be a touch of a spirit which, when carried to excess, has been classified by the author of *Natural Religion* as a form of atheism.

"Wisely distrustful of any knowledge that is not precise, they [the "atheists"] avert their eyes instinctively from everything which cannot be made the subject of such knowledge. In all their transactions with Nature they make it a rule to be unambitious. . . . They avoid, as it were, meeting the universe in front, and endeavour to overcome it in detail."

And the writer of *Natural Religion* adds:—

"For its immediate purpose this plan is the best that can be pursued; . . . they win an endless series of small victories; there is no reason why

this cautiousness should necessarily degenerate into little-mindedness."

It is certainly most valuable for one who would meet the universe of Shakespeare's mind in front, and receive the vivifying shock of his genius, to have a reserve of ascertained facts, details however petty, on which he may fall back for a time to recover himself. It is impossible in a brief notice to mention the many matters of interest connected with Shakespeare, his life, his localities, his neighbours, his theatres, his companies, his property, the editions of his writings, which are set forth by Mr. Halliwell-Phillips. We gladly observe that the Davenant scandal grows more mythical than ever. The author begs correspondents to give him their opinions upon his interpretation of lines in the ballad on the destruction of the Globe Theatre, his inference being that it was not Shakespeare's "Henry VIII." which was being enacted when the theatre took fire. The date of the fire was Tuesday, June 29, 1613.

"The riprobrates, though drunk on Monday, Pray'd for the Foole, and Henry Condyne."

"The meaning appears to be," says Mr. Halliwell-Phillips, "that Condell was so admirable in the part of the clown, probably either Will Summers or Patch, that even those who were intoxicated on the previous day fully appreciated the performance." We venture to suggest that the reprobate haunters of the Globe were alarmed at the possible loss of their favourite actors; and that the point is not that they were sufficiently recovered from their intoxication to appreciate the performance, but that they were drunk on Monday and praying on Tuesday—praying for the safety of their favourites Condell and the Fool (without any special reference to Tuesday's performance), for could reprobates pray as suitably for any other character as for the clown? This volume deserves commendation for its uncommonly moderate price as well as for its very valuable contents.

Occasional Papers on Shakespeare: being the second part of "Shakespeare, the Man and the Book." By C. M. Ingleby. (Trübner.) We have delayed too long to notice this interesting miscellany, vainly hoping to find time to submit Mr. Fleay's table of metrical tests, which occupies a large place in the volume, to a careful examination. It doubtless represents much painful work; and yet no results deduced from it can be wholly relied on until a second worker or a counting committee of the New Shakespeare Society (as proposed by Dr. Ingram) verifies or corrects its figures. This is said not to detract from the distinguished merit of Mr. Fleay, but as a needful caution. Thus we find the total number of lines in "Henry V.," act III., sc. iv. set down by Mr. Fleay as 144, whereas the number is actually sixty-six; and in his total of lines in act V., sc. 2 of the same play an error of one hundred occurs in consequence of heedlessly accepting a misprint in the *Globe Shakespeare*. Used with due caution, we believe Mr. Fleay's tables may prove a most important aid to Shakespeare study. The reader of his essay will, perhaps, be willing to allow a little more of intelligence and good feeling to Mr. Fleay's fellow-students than the writer seems disposed to acknowledge. No doubt the counting of lines and syllables must put a strain upon one's temper. Had afflicted Job taken to compiling a table of verse-tests he must have yielded in some unhappy moment to the bitter counsel of his wife. No wonder Mr. Fleay has not always "retained his integrity." Dr. Ingleby's papers, slight as some of them are, afford pleasant reading. They are the "play-work" of a keen-minded critic. Sometimes in his exegesis he entangles himself in the web of his own ingenuity, but he seldom fails to quicken the intelligence of his reader. He will especially sharpen the countenances of those of his friends

who dabble in textual emendation. An interesting chapter is devoted to "the literary career of a Shakespeare forger"—that is, of the younger Ireland. In his paper on "The Elegy on Burbadge" he is again upon a forger's track. Could we make appointments in the realm of Shakspeare study, it would be our pleasure to name our trusty and well-beloved C. M. Ingleby chief of our literary detective department.

We are sorry to find, from Mr. O. E. Flower's "Memorial-Theatre edition" of Shakspeare's three delightful Middle-Period comedies—"Much Ado," "As You Like It," and "Twelfth Night"—that in the great dramatist's own town, and in his own Memorial Theatre, his scenes are not given in the order in which he wrote them, but are changed to suit the notions of the modern manager as to "unities," as he pleases to call them. Thus, in "Twelfth Night," the first scene—in which the key-note of this romantic and touching play is so well struck by the Duke's beautiful lines on Music—is torn from the place where the supreme artist, Shakspeare, set it, and acted after so. ii.—the Sea-Coast scene—which fails to give, and was never meant to give, the leading note of the play. Again, Shakspeare's intentional relief of one portion of the story by another is violated by the Stratford Committee, so that they may get each division of the play acted in blocks. Act II, so. ii., for instance—in which Malvolio gives Viola Olivia's ring—is played as a fresh so. vi. to act I., "thus avoiding the interruption in the progress of that portion of the plot which is unfolded in so. v." And so on all through. This sacrifice of Shakspeare's art to the stupid fancies of the scene-shifter and the modern ignorant is a simple scandal in Shakspeare's native town, and a bitter reproach to the Memorial Theatre Committee. If they cannot act, without this mangling, the works of the man they profess to honour, they had better let the performances alone till they have learnt to regard him with more reverence than their property-man. It is only consistent with the disregard of scholarship shown in the treatment of "Twelfth Night" and "As You Like It" that the committee and Mr. Flower should not have perceived, or heard of, the well-founded objections of a critic of the rank of James Spedding to the wrong division of the acts of "Much Ado" in the First Folio by Heminge and Condall. The Quarto, which contains the real text of the play, makes no confusion, leaves the division to the manager; but the Folio makes the mess. James Spedding showed how it was to be remedied (New Shakspeare Society's Transactions, 1877, p. 24); and Mr. Edmund Routledge, in his edition of the play this year and the acting of his amateur company, rightly adopted Spedding's suggestions (see ACADEMY, June 17, 1882). We only hope that Mr. Routledge's example will be followed henceforward by Mr. Flower. In Mr. Flower's edition of the three comedies the only point we can praise is his printing those parts of the play in small type which are left out in the acting. He bowdlerises the text, turns "God" into "heaven" in exclamations, and misses the point of Malvolio's "play with my"—("chain," he, as steward, was going to say, but checks himself, and substitutes) "some rich jewel," as Dr. B. Nicholson has well noted. Mr. Flower cuts out Shakspeare's "my."

We regret the waste of money and time in Mr. Allan Park Paton's "Hamnet Shakspeare," of which we ought to have noticed before the appearance of Part vii.—"The Tragedy of Julius Caesar." To modernise the Folio is bad, to print from it and not correct its mistakes is worse, and to put forward the theory that all its capitals are given to emphatic words is worst of all. Yet these three evil things does Mr. Paton. Had Shakspeare, like Milton with

his "Paradise Lost," passed the first edition of his plays and poems through the press, then we might have trusted the emphatic-capitals theory as we do in Milton's case, even though these capitals are so scarce in the First Quarto of Shakspeare's "Venus and Adonis"—only three in the first 144 lines:—Nimphs, 9; Eagle, 55; Altars, 103. But, as it is, we can only allow that in Folio 1 many emphatic words have capitals and many have not. The proportion Mr. Paton gives us no figures to determine. He has worked diligently, and several of his results are curious. Others have value, like those on the punctuation of the First Folio print of "Julius Caesar." But on the whole Mr. Paton's labour has been misapplied.

Hints for Shakspeare Study exemplified in an Analytical Study of "Julius Caesar." By Mary Grafton Moberly. (Cambridge: Bell.) A useful lesson in the art of profitably reading Shakspeare, designed for students in their preparation for the Cambridge Higher Local Examination for Women. It aims at making the student think and feel, as well as learn the meaning of words and the structure of verse.

Queen Mab; or, Gems from Shakspeare. (Griffith and Farran.) This is a little book, for the waistcoat-pocket, whose contents are better expressed by the second title than by the first. It consists of a collection of Shakspeare quotations—somewhat after the birthday-book order—arranged under such headings as Faith, Love, Humility, &c. The editor but imperfectly conceals his name under the initials "C. W." The book is creditably printed and got up.

The Shakspearian Myth: William Shakspeare and Circumstantial Evidence. By Appleton Morgan. (Cincinnati: Clarke.) A lawyer's argument against Shakspeare's authorship of the plays which bear his name, not without cleverness and ingenuity. Such heretics as Mr. Morgan we would not answer. Were they not in *partibus infidelium*, America and Australia, we would have them conveyed away, secretly tried by a tribunal of the orthodox, when, unless reconciled, they might look for the *san benito* and the faggots. Mr. Morgan cannot have revised his proofs, for his book is a treasury of oddities in the spelling of proper names.

M. BIKÉLAS, who in 1876 published translations of "Romeo and Juliet," "Othello," and "King Lear" into modern Greek, has now followed these up by "Macbeth" and "Hamlet" (Athens), thus completing the task he set before him of presenting to his countrymen Shakspeare's five greatest dramas in their own language. To translate Shakspeare at all, a mastery of the two languages and of the author himself is required, together with taste, judgment, and vigour of expression; all these qualifications are combined in M. Bikelas, whose long residence in England has given him a thorough knowledge of our language, and whose cultivation and literary talent are abundantly shown in his story of *Lukis Laras*. In the present translations, as in the former ones, he has used the long "political" verse for the dialogue; and the dialect is a refined form of the old Romainic, which has become the poetic language of the modern Greeks. The original has been expanded throughout, and we cannot say that Shakspeare does not lose by expansion, but from the character of the language this is almost unavoidable; at all events, without it the meaning could not fail to be obscure, while, as it is, the rendering is both clear and accurate. The diction is forcible, and the choice of words good; among these we may notice the compound Greek epithets as specially effective; for instance, *χλωμόκαρδον* for "pale-hearted," *αμαρτοκυλισμένον* for "blood-boltered," and *σιδεροφορεμένος* for "in complete steel." The lyric passages, too, are gracefully

rendered. "Hamlet" and "Macbeth" are undoubtedly plays which present great difficulties to the translator, though in somewhat different ways. In the former these arise from the subtlety of meaning and the possibility of varieties of interpretation; the latter is comparatively free from these perplexities, but yet the way in which the plot gains strength at every turn, and increases in intensity up to the final consummation, renders the danger greater of falling below the level in translation, or, rather, of not rising to a higher level as the play advances. An additional strain, also, is put on the translator in the case of Macbeth by the great number of familiar quotations which are to be found in it—greater, probably, than is the case with any other of Shakspeare's plays. It must have been after reading "Macbeth," we should think, that the American said that he was disappointed with Shakspeare, because he found so little that was original in him; most of his best sayings he had met with elsewhere. We are glad to learn, from the publishers' advertisement prefixed to the translation of "Hamlet," that there is a prospect of that drama being put on the stage at Athens in place of the very ordinary plays which have hitherto been popular there. Certainly, no version could be better fitted to introduce it than that of M. Bikelas; and, as we read some of the scenes in his translation, we find it hard to think that they can fail to produce an immense impression on an imaginative people such as the Greeks.

Ricardo III. por Guillermo Shakspeare. Version al Castellano de Guillermo Macpherson. (Madrid.) Señor Macpherson's excellent translations of "Hamlet," "Macbeth," and "Romeo and Juliet" were noticed in the ACADEMY, No. 457, February 5, 1881. He has here tried his hand on one of the historical plays, and we think with even greater success than before. The subject admits of a closer translation without hindering the flow and rhythm of Spanish verse; no omission of phrases which shock the delicacy of modern ears is necessary. The only drawback—and this is perhaps inevitable—lies in the intractability of the harsh consonants of English proper names to the exigencies of the softer music of Spanish verse. Sora for Shore, Hastines, Klia, Ursiquio, Vogan, Tuxburia, seem strange to ears familiar with the native sounds; but the English words would seem stranger still to Spanish ears, and would utterly mar the harmony of Spanish metre. It is impossible to read a play of Shakspeare rendered into Castilian without involuntarily comparing some of the characters with similar ones in the great Spanish tragedians. In this play the vengeful predictions of Queen Margaret suggest the character of Tamar in "Los Oballos de Absalom" and the prophetic speeches of "La Sibila del Oriente." There is an air of mystery, heightening the supernatural, in Calderon, which is wanting in Shakspeare. Queen Margaret's predictions are too crude, and approach too nearly to scoldings, and we almost forget in them the lady and the Queen; but in Calderon the tone of mysticism clothes the characters of Princess and of Queen with almost superhuman dignity. This is one of the few instances in which we deem the Spaniard clearly superior to the English dramatist.

NOTES AND NEWS.

We are glad to hear that Mr. Griggs' facsimiles of the Shakspeare Quartos are so far advanced that twenty-five are already in the "negative" state (photographically speaking). The price is very low; and there must be a goodly number of scholars, both in England and America, who will eagerly embrace the opportunity of subscribing for the set. The enterprise is so praiseworthy, and its results

are so valuable, that all Shakspeare-students ought to give it their hearty support. Each play has a critical Preface by a competent editor; but the texts themselves are reproduced with such absolute fidelity as to render any reference to the originals unnecessary. We observe that Mr. Griggs has taken care to avail himself of an energetic commercial *aide* by making Mr. Quaritch his agent.

LORD SPENCER has been kind enough, at Mr. Furnivall's request, to send his unique copy of Caxton's *EnglISHED Foure Sons of Aymon* to the British Museum, in order that Miss Marx may copy it, and Mr. Sidney L. Lee, of Balliol, edit it, for the series of "English Chaucerian Romances" that the Early-English Text Society is issuing, of which Mr. Herbage has edited several volumes, and Mr. Lee is now editing the *Huon of Bordeaux* by Lord Berners. For this last book the society hopes to engrave the only authentic portrait, by Holbein, of the fine old translator of Froissart's *Chronicles* and so many other wonderful books "into our maternall Englyshe Tonge." This is at Keythorpe, in Leicestershire; and, if a good photograph of it can be secured, it will be engraved by Dawson's typo-etching process for the Early-English Text Society's volume.

MR. WHITLEY STOKES will probably add to the Old-Irish text he is editing for the Oxford Press *Anecdota Oxoniensia* a fifteenth-century English Life of Adam, differing from the Vernon MS. Life that Dr. C. Horstmann printed; and also a Latin *Vita Ade prothoplausti*—"Life of Adam the Protoplast," as it has been irreverently Englished—from a MS. at Queen's, whose text is somewhat better than that published at Munich by Meyer in 1878. (With regard to "prothoplausti," the scribe is answerable for this variation on the *protoplastos* of the Septuagint and Clemens Alexandrinus: see Liddell and Scott.)

DR. J. J. JUSSEURAND will be in London for ten days, about September 20-30, to carry on his Chaucer and other researches.

MR. HALL CAINE is to deliver a course of six lectures on Shakspeare at the Liverpool Free Library in November, under the auspices of the Library Committee of that city.

We hear that the Dublin University Press will shortly publish the first volume of a Life of Sir W. Rowan Hamilton, by the Rev. A. P. Graves. Hamilton is best known as the inventor of quaternions, but in many respects he was a remarkable man. The forthcoming volume will give some interesting details of his childhood, which was no less precocious than that of J. S. Mill, but at the same time strong and joyous.

THE second volume of Mr. O. A. Fyffe's *History of Modern Europe* is nearly ready for publication. It covers the period from 1814 to 1848.

IN addition to the books we have already announced, Messrs. Sampson Low will shortly publish *Conversations and Journals in Egypt and Malta*, by the late Nassau Senior; and *The War between Peru and Chili*, by Mr. Clements R. Markham.

We understand that Canon Farrar's new work, *The Early Days of Christianity*, will be published by Messrs. Cassell, Petter, Galpin and Co. next week. It will be in two volumes, uniform with *The Life of Christ* and *The Life and Work of St. Paul*, by the same author.

DR. GEORGE MACDONALD will shortly publish, with Messrs. Sampson Low, a volume of essays, chiefly on literary subjects, to which he has given the not very pleasing title of *Orto*.

We hear that an English translation may be expected shortly of the *Salon de Madame Necker*,

by the Vicomte d'Haussonville, to which we recently referred as based upon a good deal of unpublished material preserved at Coppet.

MR. ST. JOHN-BRENON, author of *The Tribune Reflects*, will shortly publish a novel bearing the ominous title *His Royal Highness*. It is politico-social, and treats of some phases of life in English and foreign Courts.

A new novel by Mrs. Parr, the author of *Adam and Eve*, entitled *Robin*, will shortly be published by Messrs. Bentley.

MESSRS. HODDER AND STOUGHTON's forthcoming works include the following:—*Gesta Christi*: a History of Human Progress under Christianity, by C. Loring Brace; *A Study of Origins*; or, the Problems of Knowledge, Being and Duty, by E. de Pressensé; *Egypt, Palestine, and Syria*: a Visit to Sacred Lands, by Felix Bonet, translated by the Hon. and Rev. Canon W. H. Lyttelton; *Parabolic Teaching of Christ*, by the Rev. Prof. A. B. Bruce; *William Penn, the Founder of Pennsylvania*: a New Biography, by John Stoughton; *Oliver Cromwell and his Contemporaries*, by Paxton Hood; *Wesley's Designated Successor*: a Life of Fletcher of Madeley, by the Rev. Luke Tyerman; *The Author of "Stepping Heavenward"*: a Biography, by her Husband, the Rev. Dr. Prentiss; *James Burn, the Beggar Boy*: an Autobiography; *Faithful to the End*: a Biography of Emile Cook, with a Preface by the Rev. H. Webb-Peploe; *Andrew Fuller*, by his Son, a new volume of "Men Worth Remembering"; *The Book of Koheleth*, Considered in Relation to Modern Criticism, by the Rev. O. H. H. Wright; *The City of God, and other Sermons*, by the Rev. Principal Fairbairn; *The Epistle to the Ephesians*: its Doctrine and Ethics, by the Rev. B. W. Dale; *The Epistles to the Corinthians*: a Commentary, by J. Agar Beet; *The Foundations of Morality*, by the Rev. Prof. Stanley Leathes; *The Falls of Niagara, and other Famous Cataracts*, with numerous illustrations; *A History of the Jews in Rome*, by E. H. Hudson; *A Short History of the People called Methodists*, by the Rev. W. H. Daniels; *Outlines of Sermons on the Old Testament*, a new volume of "The Clerical Library"; *The Great Memorial Name*, by P. W. Grant; *In Christ*, by the Rev. A. J. Gordon; *Student's Handbook of Psychology*, by B. F. Cooke; and *Evidences of Religion*, by C. McArthur.

THE same publishers also announce the following works for the young:—*James Braithwaite, the Supercargo*, by the late W. H. G. Kingston; *The Cruise of the Snowbird*: a Story of Arctic Adventure, by Dr. Gordon Stables; *Friar Hildebrand's Cross*, by M. A. Paull; *Daisy Snowflake's Secret*, by Mrs. G. S. Reaney; *Joë and Benjamin*: a Story of Jerusalem in the Time of the Herods, by Prof. F. Delitzsch; *The Westons of Riverdale*: a Temperance Story, by E. O. A. Allen; *Launching Away*; or, Roger Larksway's Strange Mission, by the Author of *The Pioneer of the Family*; two American stories—viz., *Yensie Walton* and *Nettie and Kate*; and a cheap popular edition of *From Log Cabin to White House*: the Story of President Garfield's Life.

MESSRS. GRIFFITH AND FARRAN's announcements of children's books include *St. Aubyn's Laddie*, by Miss E. C. Phillips; *Dolly Dear!* by Mrs. Gellie ("M. E. B."); *The Golden Curl, and other Fairy Tales*, by A. E. A.; *The Adventures of the Pig Family*; and also a new and cheaper edition of *Fairy Gifts*, illustrated by Kate Greenaway.

UNDER the title of *The English Municipal Code*, Messrs. Waterlow and Sons will publish shortly an annotated text of the Municipal Corporations (Consolidation) Act, passed in the recent session. The editors are Mr. J. W. Hume Williams, barrister, and Mr. J. B. Somers

Vine, author of *English Municipal Institutions—their Growth and Development*, which we recollect to be a valuable book.

THE successful celebration of the Preston Guild Merchant, held during last week, has induced several local authors to write on the subject. The most important work is from the pen of Mr. Wm. Alexander Abram, historian of Blackburn, and editor of an interesting feature in the *Preston Guardian* entitled "Sketches of Local History." It is entitled *Memorials of Preston Guilds*, and presents a carefully prepared account of the manner in which the ceremony has been performed from the earliest to the present time. The facts are drawn from guild rolls, order books, and other records of the Preston Corporation, and from private MSS., scarce printed tracts, &c. Mr. Abram also gives full English abstracts of all the Royal Charters granted to Preston, and personal and genealogical notes respecting many of the guild mayors and their families. A bibliography of the guilds is included, which must prove useful to writers on this subject. The work is reprinted from the well-conducted columns of the *Preston Guardian*, and is in every respect a valuable addition to historical literature.

MR. SAMUEL MARGERISON, of Calverley, near Leeds, will shortly issue to subscribers the second volume of his *Registers of Calverley Parish Church*, of which the first volume appeared two years ago.

MR. WILLIAM SMITH, the indefatigable editor of *Old Yorkshire*, of which the third volume has just reached us, already announces that he intends to issue another volume next year.

MR. ALEX. G. MURDOCH, author of several successful stories dealing with the history, manners, customs, and social life of North Britain, will commence at an early date a new Scotch novel in the *Glasgow Weekly Mail*. Dr. George MacDonald will also write a new story for the same paper.

AN address on "The Need of a Public Library for Hull," delivered in the Royal Institution, Hull, by Dr. A. K. Rolit, has just been issued in a booklet.

MR. GOSSE may like to know that the American edition of his *Gray* in the "English Men of Letters" series has the following delicious misprint:—

"Her lion-foot, her awe-commanding face."

By-the-way, it is noticeable that these reprints, which are issued by Messrs. Harper and Bros., of New York, sell for sixpence more than the English originals.

THE *Home Journal* of New York, which, since September 1879 has taken the lead among American newspapers in introducing a reformed spelling, has issued a special supplement, on a very large sheet, giving the opinions of a great number of academical authorities in favour of the change. It appears that nearly 200 journals and periodicals in America have now adopted more or less modification of the established spelling.

We regret to learn that the publication of the *Revista de Ciencias Históricas* has been discontinued.

A CORRESPONDENT writes from Switzerland: "May I be allowed to point out that the description of *Ludwig Pfiffer und seine Zeit*, by Herr Segesser (on p. 134 of the ACADEMY, August 19, as a 'new book on the Massacre of St. Bartholomew') is inaccurate? It is the second volume of the Life of Pfiffer, the famous chief of the Swiss mercenaries in the pay of France, and later the leader of the Roman reaction at Luzern. It does, indeed, contain a most interesting chapter on the Massacre written from the standpoint of a moderate Romanist; but this is merely an episode. Her

von Segesser is the well-known historian of Luzern and Swiss politician; and the concluding volume of his *Life of Pfyster* is eagerly awaited by many persons."

NEW EDITIONS.

Messrs. MACMILLAN have opportunely issued a fourth edition, revised and enlarged, of *The Soldier's Pocket-Book for Field Service*, by Sir Garnet J. Wolseley. We observe that the passages about newspaper correspondents at the seat of war remain unaltered. A close study of this book will probably throw much light upon the events now passing in Egypt. Sir Garnet adheres to his opinion that the effect of artillery fire is rather moral than physical. This opinion, though recently doubted, was entirely confirmed by our experience in Afghanistan.

We have received from the Clarendon Press new editions of Prof. Holland's *Elements of Jurisprudence* and of Sir William R. Anson's *Principles of the English Law of Contract*. Though the latter of these is as popular in treatment as the former is scientific, we venture to think that the two are the most important contributions to the study of jurisprudence that have recently appeared in this country. It is gratifying to observe that a new edition of each of them has been called for within little more than two years. There are, we believe, two professorships in law now vacant at Oxford. We trust that their occupants, whoever they may be, will hand on the torch. It is from the universities, rather than from the inns of court, that the advancement of jurisprudence in England must be looked for.

Messrs. KEGAN PAUL, TRENCH AND Co. have added to the number of sixpenny reprints by issuing Mr. Henry George's *Progress and Poverty* in this popular form. The work was only written in 1879, and it has now passed through twenty-one editions in America and four in this country.

The next volumes in the series of "Low's Standard Novels" will be Mr. R. D. Blackmore's *Christowell* and Mr. Thomas Hardy's *A Laodicean*.

FRENCH JOTTINGS.

M. MIGNET, the veteran historian, who is now in his eighty-seventh year, has intimated his intention of resigning the office of permanent secretary to the Académie des Sciences morales et politiques. It is thought that M. Jules Simon will probably be chosen as his successor.

At a time when complaints are being heard of the delay in printing the British Museum Catalogue, it is curious to find a French scholar complaining that he can never find what he wants in the Bibliothèque nationale, nor in any of the other Paris libraries; but that he always finds it best to cross the Channel and betake himself to the British Museum, where he can do in a week what would take a month at Paris.

"La bibliothèque anglaise est elle plus riche que la nôtre, les employés plus complaisants ou le public moins nombreux? Nullement, nullement. Et tout cela, voyez-vous, n'est qu'une question de catalogue. Celui du British Museum est merveilleux."

The total amount assigned to the Bibliothèque nationale in the budget for the current year is 1,174,000 frs. (£47,000), of which 230,000 frs. is for binding and 500,000 frs. for cataloguing. In addition, no less than 6,650,000 frs. (£266,000) has already been voted as compensation for the land and buildings required to effect the isolation of the library.

The following are some of the other grants included in the budget of the Ministry of Public Instruction:—Ecoles des hautes-études, 300,000 frs.; Institut nationale de France, 720,000 frs.; Collège de France, 484,000 frs.; Enseignement des langues orientales vivantes, 156,000 frs.; Ecole des chartes, 71,000 frs.; Ecoles françaises d'Athènes et de Rome, 148,000 frs.; encouragements et secours aux savants et gens de lettres, 200,000 frs.; voyages et missions scientifiques, 222,000 frs.

A MARBLE slab has been placed in the house in Paris, at the corner of the rue des Jardins-Saint-Paul, in which Rabelais is reported to have died.

Le Livre gives expression to a complaint that the business of the Imprimerie nationale, which is increasing year by year, unduly competes with private printers. It is suggested that the public institution should limit itself to fostering progress in printing as a fine art, and to issuing only such documents as have permanent value. The rest might be managed by contract.

THE second volume of M. Leroy-Beaulieu's important work—*L'Empire des Teurs et des Russes*—has just been published by Hachette. It is concerned with the Political Institutions, with a special chapter on Nihilism. A third volume will be devoted to Religion.

A NEW word has been added to the French language. This is "interviewer," used as a verb, not as a noun, which has been called into existence by the press in connexion with M. de Lesseps.

ACCORDING to *Le Livre*, the first journal published in Europe dates from the Neapolitan expedition of Charles VIII. in 1494, when the *Journal à un sou*, *Bulletin de la grande Armée d'Italie*, was hawked about the streets of Paris. It ceased to appear in 1495, and the proof-sheets are said to be still preserved in the town library at Nantes.

LOCAL BALLAD LITERATURE.

H. FREMUTH has published, under the title of *Aachens Dichter und Prosaisten* (Aachen: Sterken), the first portion of a local anthology, with biographies and portraits. The extracts are confined to works written by natives of the old imperial city. Many dialectic pieces are included. M. Schollen's *Volkstümliches aus Aachen* (Aachen: Jacobi)'s is still more interesting. It is a rich collection of children's rhymes, folk-songs, weather rules, proverbs, verses for round games, and other matter, exclusively in the local "Mundart" of Aachen. The editor intended originally to print only the dialectic "Kinderlieder," which he gathered at first hand from children in the streets. He requests all who have the fortune to hear any hitherto unknown song or rhyme used by children in their play to procure a copy of it, so as to save it from being lost. Herr Schollen came upon so many proverbs and curious forms of speech that he determined to include them in his interesting collection. Some of the proverbs are new to us, as, for example, the somewhat questionable assertion—

"Beister en Fleg gefange
Als mössig gegange."

Others are the common property of Christendom, as

"Baut me Örgens en Kerch
Selzt der Düvel e Kapelle derbei;"
"Et es net alle Dag Kermess;"
"Luhs met de Zong
Es jedder domme Jong."

We find "oht" for "old" (*alt*), and "Wiev" for "wife" (*Weib*). "Where the Devil cannot

go, there he sends his ambassador [*en oht Wiew*], an old woman."

HUBER, of Frauenfeld, will shortly publish, as the fourth volume of the "Bibliothek aelterer Schriftwerke der deutschen Schweiz," a collection of Swiss ballads, entitled *Schweizerische Volkslieder*, some of which have never before appeared in print. The editor is Herr L. Tobler, who will give an introduction upon the history of popular poetry in Switzerland, and a bibliography. Another forthcoming volume in the same series will be an edition of the Swiss Minnesingers by Herr Bartsch.

UNDER the title of *Schweizerdösch*, there has appeared at Zürich (Orell and Füssli) the first part of a collection of poems in Swiss dialect. This part is devoted to the canton of Zürich.

THREE SONNETS OF CAMOENS.

As the first and the second stanzas of "The Lusads" are, perhaps, the most difficult to translate in the whole poem, so it is with the Sonnets. I have already printed No. I, and now I offer you No.

II.

Eu cantarei de amor tão docemente, etc.
(A Proemium to the love-songs: Petrarch, No. 101.)
My song of Love I will so sweetly sing,
In such fair concord of concerted phrase,
That twice a thousand chances Love displays
Shall breathe unmoved with emotion wring.
I'll so do Love new life to all shall bring,
Limning nice secrets in a thousand ways,
Soft angers, sighs that yearn for bygone days,
Foolhardy daring, Absence and her sting.
Yet, Ladye, of that honest open scorn
Shown by your aspect, rigorously bland,
I must content me saying minim part:
To sing the graces which your gest adorn,
Your lofty composition marvel-plan'd,
Here lack me Genius, Lere, and Post-art.

The next is a specimen of one of his "Echo-Sonnets":—

LXX.

Na metade do Ceo subido ardia, etc.
(The first mention of "Natercia.")
Flamed on the midway firmamental hill
The Shepherd genial-clear, what time 'gan stray
The Goats from greeny meads, and sought the way
To grateful freshness of a coolly rill.
Under the treën leaves and shadows chill
The Birds took shelter from the burning ray;
Their modulate psalmody they fain must stay
And air heard nothing save hoarse chirp of gryll.

When Shepherd Liso, lone on grass-grown lea,
Sought where his cruel Nymph, Natercia, wone'd,
Wailing with thousand weary sighs his lot;
"Why flee the lover who fares lost for thee
To one who loves thee not?" (This wise he moan'd);
And Echo answered (moaning) *loves thee not*.

And, lastly, here is one of his Amœbeans on the death of Princess Dona Maria:—

LXXXIII.

Que levas, cruel morte! Hum claro dia, etc.
What takest thou, cruel Death? A day all-splendid.
At what hour diddest take it? At dawn of day.
Dost thou intend thy prize? Intend it? Nay!
Who willed thou take it? HE that it intended.
Who 'joys her body? Clay-cold Earth that pen'd it.
How quenched was her light? Night o'er it lay.
What saith our Lusie? She must say her say.
What say? Great Mary my deserts transcended.
Slewst him that saw her? He lay dead before.
What now saith Love? He durst no word let fall.
And who doth silence him? My will be done.
What to the Court remained? Love-longings sore.
What there remains to see? No thing at all.
What glory failed it? This lovely One.

RICHARD F. BURTON,

ACKNOWLEDGMENTS.

WE have on our table the following German books, &c.:—Johannes Turmair's *genannt Aventinus Sämmtliche Werke: Bayerische Chronik*, Buch I. (München: Kaiser); Die *Verfassung des Fränkischen Reichs* von Georg Waitz: *Deutsche Verfassungsgeschichte*, dritte Auflage (Kiel: Homann; London: Williams and Norgate); *Sartor Resartus* von Thomas Carlyle: Uebersetzt und zum ersten Male mit Anmerkungen und einer ausführlichen Biographie Carlyle's versehen von Thomas A. Fischer (Leipzig: Wigand); *Der Pessimismus und die Sittenlehre*, von Hugo Sommer (Haarlem: Bohn; London: Nutt); *Der deutsche Gewissenskampf gegen den Vatikanismus*, von Konstantin Schlottmann: *Erasmus Redivivus*, Kap II, ins Deutsche uebersetzt, von A. J. J. Jacobi (Halle-a-S.: Buchhandlung des Waisenhauses); *Deutsche Litteraturdenkmale des 18. Jahrhunderts* in Neudruck herausgegeben von Bernhard Seuffert: *Hermann*, von C. M. Wieland (Heilbronn: Henninger); J. M. R. Lenz *Der Waldbruder*: ein Pendant zu Werther's Leiden. Neu zum Abdruck gebracht und eingeleitet, von Dr. Max von Waldberg (Berlin: Kühl); *Die Philosophie als Descriptive Wissenschaft*: eine Studie; und *Zur Religionsphilosophie*: eine methodologische Betrachtung, von Dr. Alex. Wernicke (Braunschweig: Goeritz); *Hartley und Priestley die Begründer des Associationismus in England*: Inaugural-Dissertation von Bruno Schoenlank (Halle-a-S.: Hendel); &c., &c.

OBITUARY.

MR. HENRY KENDALL.

THERE are doubtless some few persons in England, old Australians and others, who are acquainted with the writings of Mr. Henry Kendall, the Australian poet. These will hear with regret of his death at the early age of thirty-nine. Mr. Kendall occupies the first place among the comparatively small band of those who have wooed the muse in the Antipodes. He possessed distinct poetic genius, and a conspicuous power of describing the scenery of his native land. The poets of a new country have generally been content to follow European models both in themes and treatment, and it is greatly to Mr. Kendall's credit that his poetry is in its colouring strictly and almost entirely local. His earlier verse was marked by very considerable mannerism, but of this he shook himself free in his later writings. He sought for subjects in the wild legends of the aboriginal natives, or in the heroic deeds of Australian explorers—themes which he often treated with an unusual amount of vigour and originality. The "Fate of the Explorers" is a poem full of fine descriptive touches, as well as genuine pathos; while such ballads as "Ghost Glen" exhibit a weird power of realistic description not often surpassed by writers of modern ballads. Only those who are acquainted with the characteristics of Australian scenery—much of which is exceedingly striking and picturesque—can fully appreciate the fidelity and vividness of Mr. Kendall's descriptive poems; but there is much of his poetry that may be enjoyed by any reader. Though Mr. Kendall had not reached his fortieth year, it seemed probable that he had done his best work. His poetry is unequal in merit, but it is nevertheless such as a country so young in literature of any sort as Australia may justly be proud of. Mr. Kendall's many friends and admirers in New South Wales, of which colony he was a native, will deeply regret his early death.

ROBERT RICHARDSON.

MAGAZINES AND REVIEWS.

IN the *Cornhill* for this month G. A. writes on "The Philosophy of a Visiting Card;" taking the name of Mr. Edgar Baxter Ohadwick for a text, he spreads a little thinner the instructive information which he has already given on the subject of names. J. A. S. discourses, after his wont, on "The Palace of Urbino," though he has hardly made as much as was to be expected from so rich a subject. An article on the "Literary Restoration, 1790-1830," says, rather dully, that the restoration of imagination to literature is the key to the literary revival of the present century. A paper on "Great Men's Relatives" is pleasant reading. The most original paper is one on "Moslem Pirates in the Mediterranean," which recalls a phase of history generally disregarded.

Macmillan's contains a continuation of "The Little Pilgrim," a curious picture of life after death, delicately worked in many places, though the merits of the entire production would admit of much controversy. A paper by Principal Shairp on "The Hades of Virgil" emphasises the seriousness and religious character of Virgil, which is receiving ample recognition at present. The article by Mr. F. Pollock on "The History of the English Land Laws" is excellent for the clear and accurate way in which many knotty questions are stated for the edification of the layman.

THE most important paper in the *Antiquary* is the continuation of "The Domesday of Colchester," by Mr. J. H. Round. This is a careful study of Domesday in its relations to one of our most interesting towns which is well worthy of careful study. We hope Mr. Round will reprint these papers in a volume. "The Scandinavian Thing in Dublin" adds another link to the chain of evidence which is being forged by historical students to prove that the earlier Norse invasions of Ireland were not, as we are sometimes told, mere piratical expeditions in search of plunder. They were attempts at colonisation, several of which were successful. Mr. Brinsley Nicholson contributes a paper on "Every Man in his Humour," and Dr. Hayman another on "Agrioola's March from the Clyde to the Dee." This latter gives evidence of much learning, but the conclusions arrived at are highly speculative. Mr. Edward Peacock has a short article on "Michaelmas." The reports of the meetings of learned societies are executed with the thoroughness which is a characteristic of the *Antiquary* under its present management.

THE *Revista Contemporanea* of August 30 continues Narciso Page's "Study of Municipal Government in Spain under the Romans" the materials for which are taken chiefly from the Digests and Odes of the Empire. Becerro de Bengoa begins some "Studies in the Iberian or Euskara," dealing exclusively with the province of Alava. A few topographical remarks give a certain value to the paper; but the treatment is otherwise wholly unscientific. The writer commits himself to the strange assertion that Bascos "se formó de Baso-oo (*Baso*, bosque, y co del) es decir, del bosque ó de las selvas." It is historically certain that Basque, Bascos, and Gascon are all three forms of *Vascones*, the development of the first being, perhaps, influenced by the term *Vaccasi*. The name *Aramayona* we believe to be long anterior to the introduction of Maize (*maiz*), from which Señor Bengoa would derive it. The statement that burial-places are found in all localities terminated in Mendi is not true for the rest of the Basque country, even if it be of Alava.

IN the *Deutsche Rundschau* Dr. Haeckel continues his letters from India, and gives an account of his sojourn in Ceylon. Prof. Leo calls attention to the last Roman poet, Venantius

Fortunatus, whom he wishes to bring back to literature from the domain of history. Herr Louis Ehlert gives a summary of Wagner's "Parsifal," in which he remarks that "Wagner is the least naive of all great artists; his works become more and more wonders of dialectic."

WE have received the first number of *Timbre*, the journal of the Royal Agricultural and Commercial Society of British Guiana. The editor, Mr. E. F. im Thurn, discourses pleasantly for the general reader on "Tame Animals among the Red Men of America" in a style which recalls the late Frank Buckland. Other articles of interest are those on "India-rubber and Guttapercha" by Mr. G. S. Jenman; on "Cacao Cultivation," by Mr. A. H. Hensen; and on "Encouragement of the Lesser Industries," by Mr. J. S. Blake. These and other contributions, written by men who have a practical knowledge, as well as a keen interest, in their subjects, have a freshness of tone which is not usually found even in the best compilations. To all seeking trustworthy information on the colony this publication will be welcome. The paper and print are excellent; and the articles promised for the next half-yearly volume, to judge by their titles, will be of even more interest than those in the present. Among them will be an illustrated paper on "West Indian Stone Implements," by the editor.

THE CAMBRIDGE MEETING OF THE LIBRARY ASSOCIATION.

THE Fifth Annual Meeting of the Library Association was held at Cambridge on Tuesday, September 5, and three following days, under the presidency of Mr. Henry Bradshaw, librarian to the university, who occupied the chair from the beginning to the end. Among the members of the university who attended the meeting were the Vice-Chancellor, Dr. Swainson (Master of Christ's College), Prof. Humphry, Prof. J. E. B. Mayor, Dr. J. B. Pearson (of Emmanuel), the Rev. S. S. Lewis (of Corpus Christi), Prof. Colvin, &c., &c. All the leading members of the association were present, and the total attendance was over 100 members, beside associates and visitors.

The President welcomed the members of the association to Cambridge in a very suggestive and interesting address. He proposed definitions of the terms "library," "librarian," and "library association," and indicated the utility of an association of librarians. He proceeded to trace the successive stages of the history of a library from the time when it exists in the simplest form of a circulating library to the higher stages when the antiquarian element appears, and when, finally, the books, apart from their purely literary value, become the objects of more or less scientific investigation. He concluded by briefly describing the twenty-nine libraries of Cambridge and directing the attention of the visitors to those points which deserved their consideration. The association passed a resolution expressing their regret at the loss which they had sustained by the death of Dr. W. Stanley Jevons, on the motion of the Treasurer (Mr. R. Harrison) and Chancellor Christie. After some formal business, Prof. Mayor read a paper on "Cambridge Libraries in 1710." The paper consisted of an account of the visit to Cambridge of Zacharias Conrad von Uffenbach, as published in his *Reisen* (Ulm, 1753-54), which abounds in interesting information about the condition of the Cambridge libraries and the scholars of the university. He also visited the libraries of London and Oxford. Prof. Mayor concluded by a practical suggestion for an interchange between librarians of local books. At the afternoon sitting Mr. Garnett read an excellent paper on "The Printing of the British Museum Catalogue," in which he

traced the history of the Museum Catalogue since 1834. The Museum had been forced to print its titles by the patent impossibility of finding space in the Reading Room for a MS. catalogue. It was calculated that by printing the titles the present space would suffice for a catalogue of 18,000,000 volumes. The terms of subscription for the printed titles are very low, and it is hoped to print special articles of importance separately. At the present rate the entire Catalogue would be in print in forty years; but Mr. Garnett hoped that such an acceleration of the rate of progress might be secured as would enable the twentieth century to start with a practically complete register of the most valuable literature of previous centuries. The reading of the paper was followed by a long discussion. After Mr. Magnusson's paper on "The Spread of Books in Early Times," which was treated with special reference to Iceland, the members adjourned to Trinity College Library, when Mr. Sinker's account of the library was read in his absence by Mr. W. White. In the evening the president received the association at King's College.

On Wednesday morning Mr. Cornelius Walford read a paper entitled "Some Account of Early Book-fairs," in which he discussed the sale of books at Stourbridge, Bristol, and other fairs, and also the early German book-fairs. Dr. Seligmann, Mr. H. Stevens, Dr. Hessels, Chancellor Christie, and others took part in the discussion which followed. Mr. R. R. Bowker, of New York, late editor of the *Library Journal*, read a very stimulating paper on "The Work of the Nineteenth-Century Librarian for the Librarian of the Twentieth." Mr. Peter Cowell, of Liverpool, read a paper on "Electric Lighting in Public Libraries," in which he gave the results of the experiments at the Liverpool Public Library. A long and animated discussion followed. At the afternoon sitting, Mr. James Yates, of Leeds, in a paper on "Public Historiography and Printing"—the somewhat ponderous title being adopted from Mr. Edwards' well-known chapter on the subject—urged strongly the claim of the larger rate-supported libraries to share in the distribution of the historical works and public documents printed at the national expense. In the long discussion which followed, Mr. Bullen, Mr. Wheelhouse, Q.C., Mr. Tonks, Dr. Pearson, and others took part. Mr. Thomas moved, and Mr. Yates seconded, a resolution referring the whole subject to the council, with instructions to take action. Visits were paid to various institutions, and in the evening a soirée was given by the committee of the Free Library at the Guildhall.

On Thursday morning a report was received from the committee on the training of library assistants, in which they unanimously recommended the adoption of the report of the committee of last year, advising that a scheme of examinations should be instituted. Mr. H. B. Tedder read a paper on "Librarianship as a Profession." He pointed out that, as the need of the proper organisation of libraries is more and more recognised, and as the standard of a librarian's duties is raised, the necessity of a thorough professional education will probably lead to an authorised system of training and examination. A discussion followed, and the report of the committee was adopted. Mr. Henry Stevens then delivered an entertaining discourse on the question of "Who Spoils our New English Books?" in which he distributed censure very freely upon everybody concerned in the mechanical production of a book, from the author to the consumer. An amusing discussion followed, in which Messrs. Wyman, Blades, and Edmond defended the printer and binder, and maintained that good work can be had if the consumer is prepared to pay for it. It was generally admitted, however, that books are not, what they might

easily be made, really artistic products. Mr. Barrett read a paper on "The Manner of Binding adopted by the Mitchell Library, Glasgow," and a discussion on binding followed. Mr. Ernest C. Thomas gave an abstract of his paper on "Some Recent Schemes of Classification," and a discussion followed, in which Messrs. Bullen, Nicholson, Dr. Pearson, Chancellor Christie, and Messrs. Garnett and Tedder took part. Mr. Barrett proposed, and Mr. Thomas seconded, a motion "That the council be requested to draw up for the consideration of the annual meeting of 1883 a scheme for the classification of books in a library." The resolution was carried. In the evening the members of the association entertained Mr. Bradshaw and the Vice-Chancellor at dinner.

On Friday morning, in consequence of the claims of private business upon the time of the meeting, it was necessary to take as read the remaining papers on the programme. It was also agreed to postpone to next year the consideration of the Report on Size Notation. Upon Mr. Nicholson's motion in favour of the Sunday opening of libraries, &c., which was seconded by Mr. Sutton, of Manchester, Chancellor Christie moved the previous question, and this was carried by a large majority. Mr. G. L. Campbell moved, and Mr. Axon seconded, a resolution that "The Library Association of the United Kingdom hereby respectfully urges upon her Majesty's Government and the members of the Legislature the importance of consolidating and amending the law relating to free public libraries," which was unanimously agreed to. On the invitation of Mr. Cowell, the association agreed to meet next year at Liverpool, and elected Sir James Picton president. After a vote of thanks to those members of the university and municipality who had contributed to the success of the meeting, a very hearty vote of thanks was tendered to the president, who was most enthusiastically cheered. The members then adjourned to the University Library, when Mr. Bradshaw explained many points of practical interest.

This concluded the proceedings of what may be fairly said to have been the most successful of all the annual meetings of the association. Nothing could exceed the kindly and graceful hospitality offered by the town and the university; while Mr. Bradshaw approved himself as the very ideal of a genial and hard-working chairman.

TOMBS OF BRITISH OFFICERS AT ALEXANDRIA.

Alexandria: Sept. 4, 1882.

I HAVE this morning visited the Greek convent of Saint Saba, in the eastern part of this city, not far from the Ramleh railway station, and have there seen the well-preserved memorial tablets of four British officers who fell in or near Alexandria at the beginning of the century.

As these monuments, which have fortunately escaped the general destruction of the European quarters of this city, will be especially interesting at the present moment, now that another British army is in Egypt, I have copied them for the information of your readers.

I.

Tablet in black marble, laid horizontally in a niche in the outer side of the wall of the church.

H. S. E.

Arthurus Brice, anno ætatis suæ XXXIII, peditum Britannicorum subpræfectus, legionis de Coldstream e prætoris in Aegypto dux, stationes jacentes viarum pridie idus Martias de via cum decessisset nocte errabundus in hostem improviso incidit: continuo glande plumbea emissa petitus, captus mortuus decimo sexto Kal. Martia, anno salutis humanæ 1801.

Hoc marmor vidua ejus maerens posuit.
APOTTE ZHCAIEN OGI.

II.

White marble slab, placed upright, embedded in the wall within the same niche at the foot of No. I.

In hoc tumultu clauditur quod potuit mori Henrici Goali, Britanniarum regis exercitus apud Aegyptos pharmacopolæ, Obiit vi ante Kalendas Aprilis anno Christianæ salutis MDCCCVII et ætatis suæ circiter XXVII.

Ossa quæta precor
Tata requiescere in urna
Et sit humus cineri
Non onerosa tuo.

III.

Tablet in white marble, embedded opposite No. II. at the head of No. I., all within the same niche or recess.

Memoriæ sacrum
Thomæ Hamilton Scott

Britanniarum regis 78^æ sive Monticolarum Scotticorum legionis præcenturionis et præfecti adjuti. Miles vere honoratus, vir magnopere dilectus, antiquæ morum simplicitati mentem disciplina cultam scientia ornatam religione elatam addidit. Heu! mors improvisa sodalibus moestis eripuit Alexandriæ xv Kalendas Augusti anno salutis humanæ MDCCCVII et ætatis suæ XXIX.

Vitæ summa brevis spem nos vetat inchoare longam.

IV.

A white marble slab in the pavement of the court, nearly opposite the above-mentioned niche.

Sacred

to the memory of Captain John Fergusson late commander of His Britannic Majesty's ship *Tourelle* during the memorable expedition to Egypt, who departed this life on the 3rd day of December 1802, aged 56 years.

It is possible that in the present expedition may be found some relative or descendant of one or more of the above gallant officers whose remains are under the protection of the Greek community in Alexandria. E. T. ROGERS.

CORRESPONDENCE.

"EUSKARIAN" OR "NEOLITHIC."

Lyme Regis: Sept. 13, 1882.

A writer in the ACADEMY has twice, lately, done me the honour to animadvert upon my use of the word "Euskarian" to designate the dark short stock which forms one element in the mixed population of the British Isles. As this friendly opponent seems to think that my opinion upon the subject may be of some importance to somebody or other, somewhere, I hasten to assure him that I do not share in that flattering belief. It is impossible for any one man to be a specialist in every known department of science; and, where he is not a specialist, the only thing he can do is to take the opinion of competent authorities on the questions in dispute. Now, I myself have never seen a Basque, nor measured a neolithic skull; so that, in these matters, I am compelled to accept the word of those people whom I believe to be trustworthy and capable in this particular line. Dr. Broca and Prof. Boyd Dawkins, both of whom have studied the question at first hand, declare that the Basque skulls agree exactly with the neolithic skulls; that the true living Basques are small, dark, black-haired, and dolichocephalic; and that the other elements in the so-called Basque population are really due to Celtic, Gothic, and English intermixture. Accepting these statements at the hands of such distinguished anthropologists, I merely borrow the name Euskarian as a general ethnical designation for the dolichocephalic people who in the neolithic age spread over all the peninsulas and islands of Western Europe. It is obviously desirable to have some such general name, so as to avoid speaking of the people themselves as "neolithic," a term which ought clearly to be confined to their implements alone. Certainly, it is very awkward to have often to refer to a race, and yet to have no ethnical title by which to describe them. I have therefore usually adopted the word Euskarian, not from any deliberate personal conviction of its fitness, but simply because I found it made ready to my hand by the master workmen. If my kindly critic wants to fight the question out at length, why does he not attack Dr. Broca and Prof. Boyd Dawkins, instead of turning his arms against a mere member of the ordinary rank and file like myself? The rest of us will be glad enough to stand by and see fair play done on either side. If it can be shown that the true Basque is really light and brachycephalic, while the dark intermixture is due to Gypsy blood, then we will all immediately give up using the word Euskarian to designate the neolithic Europeans. But at present we are told the contrary by constituted authority, and we who know nothing about the question ourselves would like to hear the arguments on the other side.

GRANT ALLEN.

MERTON COLLEGE AND THE JEWS.

London: Sept. 9, 1882.

A brilliantly written paper on the early development of Merton College, from the pen of the Warden, appears in the current number of the *Nineteenth Century*. At a time when comparatively little is published on mediæval Oxford history, such a contribution may be certain of a warm welcome from Oxford men. But the article has no pretension to be regarded

as exhaustive, and an omission in the early pages would lead us to conclude that its author has limited his investigation to a somewhat restricted area. It is impossible to examine ever so cursorily the works of the early Oxford antiquaries or documents relating to mediæval Oxford, whether in the college muniment rooms or in the national Record Office, without failing to remark the important place held by the Jews in the early history of the city and university, or the peculiar influence they exerted. As early as the days of William Rufus their presence was commented on by the chroniclers. Throughout the twelfth and thirteenth centuries they crowded into the city, coming, as their names would indicate, from Italy and France, and with students, barons, and townsmen they drove a thriving trade in money-lending. But they did not confine themselves to this commerce. As at Paris, they established their Talmudic schools, and threw their doors open to all comers. Many of the Jews could boast the distinction, rare for those days, of possessing books of their own; and, from several lists found among inventories of their property, they would seem to have studied Greek and the sciences as well as the Bible and the Talmud. But Mr. Brodriek, in his sketch of Oxford in the thirteenth century, makes no mention of the Jews; and the omission is worthy of remark because in the early history of Merton College the Jews on more than one occasion played a somewhat prominent part.

In 1262, as Mr. Brodriek tells us, Walter de Merton made his first provision for the support of scholars "residing at the schools" (*in scholis degentium*); but he does not inform us that five years later he purchased houses on the present site of Merton College for the use of his students, or that the persons with whom he effected a strangely ceremonious sale were a Jew named Jacob and his wife named Hannah. The document detailing the transaction is still preserved, I believe, among the Merton College archives, and is certainly one of the completest records of its kind. It was printed at length for the first and only time in 1738 by Tovey, the learned Principal of New Inn Hall, in his *Anglia Judaica*. At the foot of the roll is the Jew's seal, appended to an affirmation in Hebrew attesting that Jacob and his wife understood all the Latin that precedes it, and that it is true throughout. The Jewish owner is described at the time as of London; but he is mentioned, together with a brother, in a Magdalen College document of 1262, and he had probably recently removed from Oxford. He was the son of a London Rabbi, and his full name is given as Jacobus Filius Magistri Mosi Judaei Londoniae. The first paragraph of the parchment runs (according to Tovey) briefly thus:—

"Solatis nos [i.e., Jacobus et Hanna] ad instantiam discreti Viri Domini Walteri de Merton . . . pro triginta Marcis . . . dedisse . . . Scholaribus et Fratibus Domus Scholarium de Merton quam idem Dominus Walterus fundavit apud Meandon in Comitatu Surr . . . ad perpetuam sustentationem Scholarium in Scholis degentium domos nostras cum pertinentiis in parrochia S. Johannis Baptistae Oxoniensis infra Muros."

Lower down appear the names of the witnesses of the sale. They include that of Adam Fetteplace, the Mayor of Oxford, and Moses, the warden of the Oxford synagogue. Thus Merton College, like St. John's Hospital, the precursor of Magdalen College, obtained its earliest home at the hands of the Jews. And it was not only at its first establishment that the college came into possession of Jewish property. Among other early deeds still preserved in the muniment room at Merton is one testifying to the grant by Edward I., to the college authorities, of other forfeited Jewish houses at the intercession of Queen Eleanor, about 1290.

Nor was it merely in this connexion that the Jews came into direct relationship with

the college. In 1268, as the readers of Anthony à Wood, or of the writers from whom he borrowed his material, will remember, the Jews came into serious collision with the university authorities. They broke into a procession of scholars and teachers passing to St. Frideswide's Abbey on Ascension Day, snatched a cross from its bearers and trampled it under foot. As a punishment for this strange transgression, which has several parallels in mediæval Jewish history (*vide, inter alia*, Walter Mapes *de Nugis curialium*, p. 217, Camden Society), the Jews of Oxford were ordered to erect at their own expense an elaborate marble cross, and also to present the university with a portable cross of silver and a mace such as was carried before archbishops. The documents connected with this episode, which are to be found printed at length in Tovey's *Anglia Judaica* (pp. 167 et seq.), inform us that much difficulty was found in selecting a suitable site for the erection of the large cross. It was at one time suggested that it should be placed before the entrance of the Jews' synagogue, which stood, I believe, on the spot where Blue Boar Street now meets St. Aldate's. But finally—perhaps at the request of the college authorities—the King ordered that the monument should be set up by Merton. "Volumus," runs the writ, "quod praedicta crux marmorea erigatur in placea Scholarium de Merton juxta ecclesiam suam S. Johannis Baptistae in Villa praedicta." At the same time an order was given to entrust to the scholars of the college the smaller cross and the university mace. The decree, however, was withdrawn two months later, and St. Frideswide's Abbey finally received them. The marble cross, according to Ross, the fifteenth-century antiquary, remained standing at Merton College till his own day, when it fell down and was not re-erected. The Latin verses he found engraved at its base have often been reprinted. The last words are inaccurate:—

"Quis meus auctor erat? Judaei. quomodo? sumptu.

Quis Jussit? Regnans: quo procurante? Magistra. Cur? Cruce pro fracta ligni: quo tempore?

Festo

Ascensionis Domini: quis erat locus? hic ubi sisto."

Doubtless, the part the scholars of Merton played in this curious business added greatly to their reputation and position at Oxford. The fact that the college was at first ordered to take charge of the small cross proves that it was placed on the same level as St. Frideswide's Abbey, the chief religious foundation of the town, to whose care it would naturally have been handed over. Such circumstances are worth recalling, for they throw light not only on the history of the college and the university, but on that of the city and mediæval Judaism in England. Under every aspect, in fact, they present points of interest, and they are essential, I should have imagined, to any full account of the origin and first development of Merton College.

S. L. LEE.

"-Y FINAL" IN SHAKSPEARE.

Walditch, Bridport, Dorset.

Collating, the other day, Heyes's Second Quarto of "The Merchant of Venice" with Roberts's First Quarto in Griggs's Facsimiles, I noted, among other differences, how much oftener the Heyes Qo. (which I have shown ought to be looked on as the representative of Shakspeare's revised text of the play) had -ie final for the Roberts -y, and *an* for the Roberts *an*. Wishing to see how far the Qo. of "Venus and Adonis" bore out the Heyes Qo. on these points, I turned to Mr. Griggs's photograph of it, and found on the *an* point only three

instances—"daunce," 148; "commaunder," 1004; and "alaunder," 1006; but on the -ie final the poem's evidence was conclusive that either the writer, copier, or printer of it—or all, or two, of them—liked -ie better than y. He followed the general practice, I take it, and not any special fancy of his own.

I add lists of the "Venus" -ie and y words, as well as the adverbial -ly ones. The only other "Venus" spellings that seem to call for notice are cease for our "seize," l. 25, 158; societe, 19, for our "satiety;" and "Mermaid" for our "Mermaid;" l. 429, 777. "Hamlet" Q. 2 has "Mermaide" too; but the first two quartos of "Midsummer Night's Dream" spell "Mearmaide."

ugly, 931.
unlikely, 989.

If we now turn to the substantives, we find that fifty-eight of these are in -ie against three in -y:—

beastie, 70, 119, 130, 130,
141, 164, 434, 575, 638,
735, 746, 934, 938,
1019, 1020, 1132.
berrie, 460.
bodie, 757, 1145.
chastitie, 751.
cric, 889.
cunt'sie, 888.
discoverie, 828.
dittie, 836.
dutie, *Dedic.*
enemie, 887.
extasie, 895.
fabrie, 146.
fantasie, 897.
trie, 526.
furie, 318, 554.
harmonie, 781.
inorie, 363.
lealousie, 449, 649, 657.
lillie, 362.
linerie, 1107.
maiestie, 278.
miserie, 707, 788.
mutinie, 651, 1049.
obscuretie, 760.
pitie, 95, 577, 1000.
plentie, 20, 545.
societie, 19.
scarcitie, 753.
akle, 153, 485.
spie, 655.
stillitorie, 443.
storie, 716.
subtiltie, 675.
varietie, 21.

Against these are to be set only *beauty* twice in 167, and *duty* in 168. "Attorney," 335, and "palfrey," 384, 385, belong to a different class.

The few -y verbs are all in -ie:—

burie, 758.
erie, 95.
dallie, 106.
die, 1074.
drie, 966.
fie, 304, 894.
prophecie, 671, 1185.

Paises, 622; praies, 578; saies, 583, 611, 1173, cannot be claimed.

The adverbs are all in -ly, except two which are adjectival also: *illie*, 1151; *verie*, 531:—

advisedly, 457.
equally, 1139.
flee, 463.
frankly, 1059.
heartily, 404.
nimble, 38.
quickly, 520.
sharply, 470.
stedfastly, 1063.
wittily, 471.

F. J. FURNIVALL.

DR. BRINKMEIER'S "TROUBADOURS."

London: Sept. 8, 1881.

There are so few elementary books from which solitary students can learn anything of the Provençal language and literature that we should not feel inclined to judge harshly any honest attempt to produce a popular introduction to this most interesting branch of literary and social history; but this only makes us regret and condemn the more emphatically the publication of such a work as Dr. Brinkmeier's.* The author has a not inadequate conception of the scope and bearings of the Provençal literature, but, unhappily, he is worse than totally ignorant of the Provençal language, and has not taken the pains to supplement his defective information by appeals to the masters at whose feet he ought to have sat before putting himself forward as a teacher. The consequence is that his numerous translations teem with the grossest blunders. They are like the attempts of a fairly intelligent child, with no knowledge of the grammar of the language (or of grammar in general), attempting to decipher the Provençal literature on the strength of some acquaintance with cognate dialects. One or two instances will suffice as specimens. Guillem de Cabestaing, lamenting and excusing to his lady-love the necessity under which he finds himself of assuming an air of indifference towards her, exclaims:—

"Pus greu martire
De mi nuls hom no sen,
Quar vos qu'ieu plus envoy
D'antra qu'el mon estey,
Desampar e mesorey,
E dezam en parvensa."

This Dr. Brinkmeier translates

"Kein Mensch empfand wohl schwerere Marter,
als ich, weil Ihr, die ich mehr ersehne, als irgend
eine andere auf der Welt, mich verlässt und
versachtet. Aber ich sage offen u.s.w."

The man who can take "desampar" and "mesorey" for second person plurals can do anything, though the process by which he gets "Aber ich sage offen" out of "E dezam en parvensa" remains obscure.

After this, it is a trifle to find Dr. Brinkmeier so totally misconceiving the whole drift of Giraut de Bornell's exquisite *Alba* "Reis glorios" as (regardless of genders) to transform the knight into the lady, and make the watching friend's appeal to the knight, to come out of the lady's bower before daylight, into the knight's appeal to the lady to let him into it!

Enough has, perhaps, been said to serve as a warning to the incautious, and to say more would be waste of time.

PHILIP H. WICKSTEED.

THE LATE JAMES THOMSON.

Leicester: Sept. 8, 1882.

It is proposed to erect a memorial in the Secular Hall, Leicester (lately erected at a cost of £4,000, and on the opening of which Mr. Thomson wrote a dedicatory poem), to the author of *The City of Dreadful Night*. It will take the form of either a mural tablet or a bust of the deceased poet. Subscriptions may be sent to Messrs. Reeves and Turner, publishers, London; Mr. P. de R. Holyoake, 12 Gower Street, W.C.; Mr. Larnier Sugden, architect, Leek; or Mr. J. W. Bams, Forest Edge, near Leicester.

JOHN W. BAMS.

* *Die Provenzalischen Troubadours als lyrische und politische Dichter.* Mit Proben ihrer Dichtungen. Von Dr. Eduard Brinkmeier. (Göttingen: Vandenhoeck und Ruprecht; 1882.)

SCIENCE.

Introduction to the Study of Language. By B. Delbrück. Authorised Translation, with a Preface by the Author. (Trübner.)

EVERY student of language will welcome this translation of a work that does credit to the series of "Indogermanische Grammatiken" of which it forms a part. The history of the foundation of a science was never more clearly, more thoroughly, or more succinctly written than in this history of comparative philology in Germany by Prof. Delbrück. Bopp's work is reviewed and criticised; and full justice is done to the contributions made to linguistic science by his contemporaries and successors down to Schleicher, who marks a new era in its history. After Schleicher, as Prof. Delbrück points out, the progress of the science is characterised by tendencies rather than by individuals; and it is with these tendencies, accordingly, that he next deals. The three last chapters are occupied with an account of the agglutination theory and the arguments of its friends and foes, with the views at present held as to the invariable action of phonetic laws and the influence of analogy in language, and with the theories put forward concerning the relation of the several Indo-European languages one to another. Throughout, however, the author's eyes are never turned away from Germany; Germany was the birth-place of scientific philology, it was for German readers that his book was composed, and it is therefore with German comparative philologists alone that he concerns himself.

The most striking characteristic of his book is its impartiality. Even in dealing with the vexed question of agglutination—where his sympathies, as is perhaps natural in a Sanskritist, are on the side of those who hold that Aryan flexion has grown out of a previous stage of agglutination—he fairly states the arguments on the opposite side, and allows, in conclusion, that the agglutination theory is not verified in individual cases. He only claims that, out of the different attempts that have been made to explain flexion, "the principle of agglutination is the only one which furnishes an intelligible explanation of the forms."

But a good deal depends on the sense which we give to this word "intelligible." It is certain that some forms can be explained in no other way. But the opponents of the agglutination theory maintain that these are late forms in which the agglutinated element is assimilated to the general inflectional character of the language. For other and older forms they find a more intelligible explanation in Ludwig's adaptation theory. According to this, as the grammatical relations of words to one another in a sentence came to be distinctly conceived, pre-existing suffixes were set apart to denote them. Thus the suffix -(e)s, which in *πόδες-ες-οι* and *ποδ-ες-ων* (*ποδών*) has no grammatical meaning, came to symbolise the nominative plural in *πόδες* and the second person of the verb in *ἐρύπες*. Prof. Delbrück's sole reason for rejecting this theory is that Ludwig has not demonstrated the independent origin of the personal pronouns and the person-endings of the verb.

I confess that this reason seems to me inadequate. Elsewhere I have urged that the flections of the verb are later than those of the noun, and that the reduction of the personal pronouns into flections was due to the general inflectional character of Aryan grammar. They followed the general analogy, and became flections, like the *-ly* of English adverbs. But, though this hypothesis is quite sufficient to turn the flank of the agglutinationists, further study has convinced me that the resemblance between some of the person-endings of the verb and the first and second personal pronouns is a mere accident, with which assimilation in a later period of the Indo-European languages may have had something to do.

I can here only indicate briefly a few of the arguments which have thus made me change my opinion. There is, firstly, the fact that it is only in the case of the first and second persons singular that this resemblance exists. The third person plural, more particularly, has been a puzzle which the adherents of agglutination have never been able to solve. And even the two forms of the second person singular, *-si* and *-tha* (*-θα*), can only be reconciled with the primitive form of the second personal pronoun, *tu(m)*, by violating all that we know of Indo-European phonetic laws. If, too, as is probable, the final *-i* is due to the analogy of the third person, the so-called secondary ending (*ε*)s will be the original one; and this can only be the nominal suffix (*ε*)s, not an imaginary form of an otherwise unknown personal pronoun. As for the first person singular, Brugman has shown that the form in *-o*, which has become the predominant one in Greek and Latin, goes back to a primitive suffix *-a*. Whatever likeness, therefore, there may be between the form in *-mi* and the first personal pronoun, there is none between the latter and the form in *-a*.

But, secondly, the form in *-mi* may owe its final vowel to the analogy of the third person. In any case we cannot dissociate it from the "secondary" ending *-m*. That this is simply the accusative and neuter suffix of the noun is clear when we remember that the termination of ἔχοντα presupposes a sonant *m* as much as does the termination of πατέρα. Indeed, whenever the person-endings readily lend themselves to comparison, it is with the suffixes of the noun that they seem to claim relationship. Thus λέγοντι is the locative of the present participle; λέγει is a stem, like φάτι-ς; *-θε*, in the second person plural, is the noun suffix *-θε* or *-θεν*; and *-μες* by the side of *-μεν* and *-με* (as in *-μεθα* or the Sanskrit *-ma*) finds its parallel only in *-θεν* and *-θε* by the side of the Sanskrit *-thas*. How little the person-endings can originally have had to do with the conception of persons may be seen from the fact that in *-μεθα*, *-θα* represents the first person, while in *οἶσθα* it represents the second. Whatever may be thought of Fick's theory of infixes, it is evident that he is right in considering the first person singular of the Sanskrit middle to be an old infinitive—that is, the dative of a verbal noun.

It seems to me, therefore, that the single reason Prof. Delbrück allows there is for preferring the agglutination theory of Bopp

to the adaptation theory of Ludwig breaks down. On the other hand, the arguments against the agglutination theory are so strong as to make its acceptance a matter of great difficulty. It implies that the roots of the philologist's workshop were once actual words, so that, to use Prof. Delbrück's expression, "what was once an actual word appears [now] only as an ideal centre of meaning." That is to say, as Bréal has observed, the root *roul*, "to go round," in *rouler*, *roulette*, *roulage*, &c., was an actual word in Latin, which stands in the same relation to the Romanic languages that the parent-Aryan does to the Indo-European languages. Unfortunately, however, we know a little more about Latin than we do about the parent-Aryan, and are thus enabled to discover that *roul* is merely the creation of the philological analyst; the "actual word" underlying this group of words was *rotula*, "a little wheel." But this is not the worst fault of the agglutination theory. It goes beyond our evidence, and, what is more, contravenes it. As far back as our materials allow us to trace the history of Aryan speech, we find only inflections and an inflectional grammar. If we would pass beyond them, we are forced to violate the phonetic laws with which we are acquainted, and to invent new ones. The position of Johannes Schmidt is the only scientific one; we must be content with tracing the forms of grammar as far back as a strict attention to phonetic laws will allow us, and there leaving them. We cannot get behind our facts. It is, of course, quite conceivable that in some remote age the parent-Aryan had a predecessor which may have been agglutinative or isolating or even polysynthetic; but there is no proof of this, and, from the nature of the case, never can be. Moreover, it is with the parent-Aryan only that we are concerned, not with its conceivable predecessor.

In parting from a book from which the student will derive the best possible idea of the present position of comparative philology, I ought to add that the task of the translator has been performed in a way that leaves nothing to be desired. A. H. SAYCE.

SOME BOOKS ON CHEMISTRY.

Elementary Chemical Arithmetic. With 1,100 Problems. By Sydney Lupton. (Macmillan.) About half of this book is given to the stating of problems or examples, and about one-tenth of it to answers. A few pages of tables are added. But there are two very valuable characteristics of this volume which demand special recognition and approval. These features are the well-ordered sequence of the problems and the peculiarly exact introductory chapters treating of arithmetical processes, of physical and chemical terms, and of the reduction of experimental results. A few examples from these introductory chapters may be cited to illustrate the unusually careful explanations of terms and operations which Mr. Lupton gives. The first page furnishes us with some sound advice on "approximation," and very properly condemns as useless, and even misleading, the too common practice of calculating the results of chemical workings to a large number of decimal places when the second or third place may be incorrect owing to experimental error. We should have extended this

reproof, in some cases at least, even to the first place of decimals; and yet how common is the practice, even among accomplished analysts, of carrying and printing per-centages to the third place! The explanations and definitions of mass and weight, and of density and specific gravity (pp. 21–30) are uncommonly clear; the subjects of heat, thermometric measurements, and volume of gases are also adequately treated. The sections of Mr. Lupton's work referring to the reduction of experimental results include the discussion of the sources of errors, of the method of least squares, of the graphical method, and of interpolation. Of the very numerous problems in this volume, we need but say that they are judiciously chosen, systematically arranged, and stated in a great variety of instructive forms. The Appendix of twelve tables includes the list of atomic weights as drawn up by Prof. F. W. Clarke from the results of the best experiments, and a most useful set of constants.

Catechism of Modern Elementary Chemistry. By E. W. v. Volckxson. (Kegan Paul, Trench and Co.) Here are some four hundred questions set during the years 1844–82 at the Matriculation Examinations of the London University. These are classified and arranged according to a definite plan, and they are accompanied by answers and solutions drawn up in concise and exact language. If we allow the desirability of constructing books of this sort for the aid of examinees, then the special features of this specimen justify, to a great extent, its existence. The volume may, in fact, be called a chemical catechism of the non-metals. And, doubtless, there are many teachers as well as students who prefer to use a system of question and answer, as lightening the tasks of teaching as well as of learning.

Experimental Chemistry for Junior Students. Part II. "Non-metals." By J. Emerson Reynolds. (Longmans.) This part fully sustains the character for freshness, clearness, and accuracy which belonged to the first section of this little text-book of chemical practice. Indeed, the operations and experiments described and illustrated in the pages now before us possess, generally, an advantage over some of those given in the first part of this little manual, for they offer no peculiar difficulties in their performance by classes of beginners. There may be a few exceptions to this statement, but they are of small importance, and the teacher may omit or modify any of the troublesome or tedious processes given in these pages without impairing the value of the system of instruction. We commend Dr. Emerson Reynolds' little manual to all chemical tutors.

Dyeing and Tissue Printing. By W. Crookes. (Bell.) This is one of a series of technological hand-books designed to meet "the needs of students preparing for the examinations of the City and Guilds Institute." Whether viewed in connexion with the examination-room or the dye-house, the volume is one which deserves a word of welcome. Although it consists mainly of practical recipes and practical directions, yet descriptions of materials and explanations of processes have not been forgotten. These are partly interspersed through the work, partly gathered into special introductory chapters. But a detailed account of the contents of an industrial handbook such as that before us could scarcely be prepared for general readers, who are not expected to be familiar with the technical terms crowded into each page. So we must refrain from quotations involving such directions as "make up a jiggr," "enter in the dye-beck," "sadden with 2 oz. of copperas."

Household Chemistry for the Non-Chemical. By A. J. Shilton. (F. V. White.) Mr. Shilton, in avoiding the introduction of the attractive, if

sometimes gossip, details which helped to ensure the popularity of Johnston's *Chemistry of Common Life*, has written a dull book, in no way remarkable for freshness of material or treatment. Let the reader see what Mr. Shilton says of tea, coffee, and chicory, on pp. 153-64. The quotations he makes, the order in which the statements of fact and opinion succeed each other, and the very phrases themselves in some places will be found in the work of Johnston (pp. 116-169) which the author criticises unfavourably in his Preface. It should, however, be stated that Mr. Shilton discusses some subjects (soap, candles, gas, disinfection, bleaching, glass, and pottery) which are not included in the work of Johnston.

ORIENTALIA ANTIQUA.

UNDER this title M. Terrien de La Couperie has undertaken a most arduous enterprise, to which all scholars must wish success. Many and varied as are the founts of type now possessed by some of our London printers, it is obvious that ordinary printing will never be able to represent adequately the multifarious requirements of Oriental learning. In the case of Egyptian texts, lithography is already resorted to. But the main difficulty is not so much the publication of texts as the reproduction of inscriptions, and the tabular presentation of characters, &c., which supply the materials for the science of epigraphy. No branch of learning is more full of promise than that which is now trying to reconstruct the prehistoric past by means of the written records it has left. The interpretation of the hieroglyphs of Egypt, of the wedge writing of Chaldaea, and of the inscriptions of Asoka constitutes, perhaps, the most extraordinary achievement of human ingenuity, and certainly the most striking evidence of the truth and value of linguistic studies. So far as Greek and Roman inscriptions are concerned, they merely enable us to fill up gaps in a history that has always been tolerably known. Classical epigraphy is but a handmaid to classical literature. But in the East (including Egypt) the case is different. If we except the books of the Chinese and the Sanskrit literature that has been mainly handed down by oral tradition, the early history of the East is entirely based upon epigraphy. In order to roll back the veil and behold the secrets of the earliest civilisations of the world, we must avail ourselves of the laborious processes of decipherment. The art of decipherment—and indeed the very conception of such an art—is the work of the nineteenth century. Though much has been done, much yet remains to do. What has been definitely learnt seems but to push back still farther the problems that enshroud the origin of civilisation.

It is to promote this form of Oriental research—which, unfortunately, has not yet acquired a name of its own—that M. Terrien de La Couperie has founded the *Orientalia Antiqua*, the subtitle of which is "Documents and Researches relating to the History of the Writings, Languages, and Arts of the East." For the annual subscription of one guinea, he hopes to bring out a series of bi-monthly parts, each consisting of about 100 pages, to make one volume for the year. The form is crown quarto, excellent paper with a wide margin. The fundamental feature of the scheme is to publish, by lithography, texts, &c., which cannot be printed (conveniently or at all) by common type. The publishers are Messrs. Trübner.

The first part, now before us, contains two contributions. One is a translation, with notes, of "The Calendar of the Hea Dynasty," by Prof. R. K. Douglas, of the British Museum; the other is a paper on "The Origin of the Phoenician Alphabet," recently read by M. G.

Bertin before the Royal Asiatic Society. We do not here propose to criticise, or even give a summary of, these articles. Both of them are good examples not only of the necessity of using lithography, but also of the progressive character of Oriental research upon which we have dwelt above.

In this age of societies founded on all sides to print texts and "sources," it is to be hoped that M. Terrien de La Couperie's single-handed undertaking will not fail to meet with the support it deserves.

ETRUSCAN JOTTINGS.

THE new volume of the *Etruskische Forschungen und Studien* (part iii.), by Dr. Pauli, forms a distinct stage in advance in the decipherment of the Etruscan inscriptions. In the first part of the volume, Dr. Pauli proves once for all the utter impossibility of regarding Etruscan as an Indo-European, much less an Italic, language, and refutes, one by one, the comparisons lately made by Dr. Deecke between the Etruscan and the Italic numerals. In the second part, Dr. Pauli shows that he possesses all the qualifications of a successful decipherer. His most important discovery is that there was no verb, properly so called, in Etruscan, no distinction being made between the suffixes of the verb and noun. He also demonstrates that the "case" in *-si* is an older form of the genitive in *-s*, and not a dative, as has been usually supposed. Another discovery which he has placed beyond question is the name of the Etruscan numeral for "ten." This is *nurth*, the ordinal being *nurthai*. *Nurth* was Latinised into *Nortia*, the name of the Etruscan goddess into whose temple the nails denoting the ten months of the old Etruscan year were driven, and of whom the Latin *Decumia* is the equivalent. Dr. Pauli has further shown that *avil* means "year," and not "age." This conclusion has been strikingly confirmed by the inscription (referred to below) found at Magliano since his book was written. There are many other suggestions and conjectures in the volume, some of which are probable, others possible, while others, again, must be wholly rejected. Throughout, however, Dr. Pauli displays not only a great and intimate acquaintance with the inscriptions, but a happy power of divination without which no decipherment is possible.

ONE of the most important discoveries ever made in Etruria has lately taken place at Magliano, in Tuscany. Here a leaden plate has been found in the Pian di Santa Maria, with an inscription on either side the length of which rivals that of the famous Cippus Perusinus. Prof. Teza, who vouches for its authenticity, communicates it to the *Rivista di Filologia e d' Istruzione classica*, x. 10-12. The inscription on the obverse, which has the shape of a heart, reads backwards, and is, according to Prof. Teza, as follows:—

cauthas . tuthlu . avils . LXXX . ez . ohimthm .
caethialth . laoth . hevni . avil . nenl . man .
murinas'e . fal tathi : aseras . in . eos . men .
mialthocemarni . tuthl . tiu . ohimthm . caethialthl .
ath : maris'line nitha . afis . ci . alath . ohimthm .
avilath . eca . cepen . tuthlu . thuch . iohuterv .
hes'ni . mulveni [or mulven] . eth . tuci . am .
ars .

The text on the reverse runs thus:—

mialthoan . caluso . eonia . avil . mimenicao .
marcaluroao . ethtuthiunel . man . rivach . les'oem .
tucacal . s'arises . teis . evithuras . mulale . mialch
ilache . tins . lursth . tev
 avuthun
 lursthail
 efis . nac

Letters in italics are doubtful. The inscription seems to be the record of a lease of land for eighty years; and the mention of *tins*, the

genitive of *Tina*, the Etruscan Jupiter, in the last clause indicates that it concludes with the usual curse against the violator of the contract.

OBITUARY.

THE Swiss papers report the death, at Geneva, on September 7, of Prof. Emil Plantamour, the Director of the Public Observatory in that city. The deceased was born at Geneva in 1815; studied at Königsberg, in Prussia, where he took his degree in 1839; and afterwards became Professor of Astronomy and, finally, Director of the Observatory in his native city. His scientific writings procured him the membership of many foreign scientific societies, including the Astronomical Society of London; and since 1865 he has been corresponding member of the Institut de France. Beside his annual publications on his astronomical and magnetic observations, Prof. Plantamour has obtained some repute by his independent studies—*Mesures hycométriques sur les Alpes* (1860), *Du Climat de Genève* (1863), *Expériences faites à Genève avec le Pendule à Réversion* (1866 and 1872). In connexion with Dr. Hirsch, the Director of the Observatory at Neuchâtel, he published between the years 1867 and 1875 the *Nivellement de Précision de la Suisse*.

NOTES OF TRAVEL.

MESSRS. SAMPSON LOW will publish immediately an important contribution to our knowledge of Central and West Africa by Messrs. Capello and Iwens, who, it may be recollected, were the companions of Major Serpa Pinto at the outset of his adventurous journey across the continent. The book will be entitled *From Benguela to the Territory of Yacca*. It will be in two volumes, with more than 130 full-page or text illustrations.

SCIENCE NOTES.

An Examination of the Structural Principles of Mr. Herbert Spencer's Philosophy is the title of a new work which will shortly be published by Messrs. Longmans. The writer accepts the evolution hypothesis, admits the justice of the opinion of Profs. Tyndall and Huxley that the chasm between the inorganic and the organic cannot be regarded as scientifically impassable, and then argues, from Mr. Spencer's own statements, that the existence of mind—separated from matter by the whole diameter of being—is a truth transcending all others in certainty. Mr. Spencer's dictum, that the power manifest in the universe is unknowable, means nothing more than the truism that man is mentally inferior to the originator of all things. It is then urged that the evolution hypothesis, as presented by Mr. Spencer, has a distinctly teleological aspect, and that benevolent purpose and high moral design may be read in the structure of the universe. The work thus proceeds on an acceptance of the most advanced scientific positions, and shows that this is consistent, not with agnosticism, but with a refined and stately theism. The writer is the Rev. W. D. Ground, author of *Ecce Christianus* (1879).

WE have received three *Memoirs* of the science department of the University of Tokio, Japan. About one of these, on "The Chemistry of Saké-Brewing," by Prof. R. W. Atkinson, we may say something hereafter. The other two, both by Dr. T. O. Mendenhall, Professor of Experimental Physics, have for their subjects "The Meteorology of Tokio for the Year 2540 (1880)," and "The Wave-lengths of Some of the Principal Fraunhofer lines of the Solar Spectrum."

THE *Revue scientifique* prints, at length, a French translation of the presidential address delivered by Mr. Siemens at the recent meeting of the British Association at Southampton.

PHILOLOGY NOTES.

THE Cambridge Press will publish this autumn a Catalogue of the Buddhist MSS. brought back by Dr. Wright from Nepal, and now in the university library, which are undoubtedly the oldest Sanskrit writings we possess. The editor, Mr. Cecil Bendal, of Gonville and Caius College, will supply an Introduction upon the various points of palaeography suggested, and also notes on the chronology of the dynasties of Nepal and Bengal referred to in the colophons.

AMONG the volumes in preparation for Messrs. Trübner's "Oriental Series" are a translation by Prof. Samuel Beal of Hwen Thsang's *Si-yu-ki*, to be entitled "Buddhist Records of the Western World;" and *The Philosophy of the Upanishads*; or, a Survey of Primitive Indian Metaphysics, by Mr. A. E. Gough, Principal of the Calcutta Madrasa.

FROM the half-yearly Report of M. H. Wallon, permanent secretary to the Académie des inscriptions, we learn that the second volume of the *Corpus inscriptionum Semiticarum* is now in the press, and may be expected before the end of the year. It will contain the Phœnician inscriptions found in Egypt, Greece, Malta, Sicily, and Sardinia. The editor is M. Renan.

M. REVILLE, assistant-keeper of Egyptian antiquities at the Louvre, hopes to publish before the close of the present year his *Catalogue of Demotic and Greek Papyri, from Cambyse to Constantine*, for the preparation of which he has visited all the libraries and museums of Europe in which these papyri are to be found.

THE address delivered by M. Renan at the annual meeting of the Société asiatique is printed—almost in full—in the *Revue politique et littéraire* for September 9. It includes obituary notices of Longpérier, Dulaurier, and Chabas. But its chief interest lies in the rapid sketch given of the progress of Oriental studies during the sixty years since the Société asiatique was first founded. M. Renan also notifies his intention of resigning the post of annual reporter, which he has held for fifteen years.

THE third volume of the *Proceedings* of the Iowa Academy of Natural Sciences has a paper on "The Inscriptions on the Davenport Tablets" by Prof. Seyffarth, who adopts the theory that the characters are akin to the Chinese.

FINE ART.

The "Liber Studiorum" of J. M. W. Turner. Reproduced in Facsimile by the Autotype Process. With Notices of each Plate by the Rev. Stopford Brooke. Vol. I. (Autotype Company.)

PHOTOGRAPHY could scarcely have set itself a more difficult task than that which it has several times undertaken of the reproduction of Turner's *Liber Studiorum*. The etchings that Turner executed for this work lend themselves most admirably for reproduction, the lines coming out not merely faithfully, but with almost as much softness and delicacy as in the original. But it is different with the mezzotints. Here everything depends on the gradation of tints and the preservation of the fine etched line through them; for

the chief charm of the *Liber* lies in those subtle little touches of the master's hand which, even in the prints, are sometimes felt rather than perceived, and which too often die out altogether in the later stages of the plate. How much more, then, in the photograph. But the modern practice which permits of etching on the negative has done much in these autotype reproductions towards preserving the delicate lines of the original; and the marvel truly is, not that photography has accomplished no more, but that it has accomplished so much.

Turner's art, it is true, is a precious thing, that can only be seen in perfection in the treasured collections of connoisseurs and museums; but when we find that so much value is set upon this precious thing at the present day as to enable a complete set of the *Liber* prints to sell, as it did last year at the Bale sale, for £525, and a single plate, the "Ben Arthur" in first state, for £210, lovers of Turner's work who have not a fortune at command must needs be grateful for any good reproduction of it. The present reproduction is undoubtedly superior to any that have preceded it; and its value, moreover, is enhanced by the appreciative notice that the Rev. Stopford Brooke has supplied to each plate. For although Mr. Stopford Brooke "refrains from all critical blame," it is extremely valuable, as well as interesting, to learn what such a true connoisseur thinks and knows about the various plates. "My object," he says in the Preface,

"has solely been to tell the pleasurable thoughts and feelings these engravings have awakened in me, and the things I have seemed to see concerning their composition and sentiment during a companionship with them of many years. . . . If others, then, enjoy, or are taught to enjoy, the same things, or the way to enjoy rightly, good is done; and if the things we enjoy are not justly, but only fancifully, enjoyable, then no harm is done. There is nothing which is so easily discovered to be fantastic as fantastic enjoyment."

I own that much of the admiration lavished on Turner of late appears to me to be what Mr. Stopford Brooke calls "fantastic," and much again to be a mere blind following of Mr. Ruskin into paths of loving reverence where even the faults and wilful carelessnesses of the master are seen as beauties. But whether criticism exalts unduly or depreciates unduly, the intrinsic worth of Turner's work remains the same; and this is especially manifest in the *Liber*, which, taken as a whole, shows, perhaps more than any other work, the wide range of the artist's knowledge and skill. The present volume of reproductions gives twenty-four plates, including "Norham Castle," "Procris and Cephalus," "Jason," "Dunstanborough Castle," "Thun," and "Basle."

MARY M. HEATON.

THE COINS IN THE RUSSIAN FOREIGN OFFICE.

Collections scientifiques de l'Institut des Langues orientales du Ministère des Affaires étrangères: "Inventaire des monnaies des khalifes orientaux et de plusieurs autres dynasties." Publiée sous la direction de l'Académicien Dorn. Second Fascicule. (St. Petersburg: Impr. de l'Acad. imp. des Sciences.)

THIS second part of the Catalogue of the

Russian Foreign Office Cabinet of Coins is the last work of the distinguished scholar whose death we had to deplore a year ago, and whose learned energy endured to the end of his laborious life. How much Oriental learning in Russia owes to M. Dorn it is unnecessary to say. He was the centre and life of the various institutions which have made St. Petersburg famous in the history of the progress of Eastern study. His last work is not the least valuable of his contributions to science. We have often insisted on the importance of authoritative inventories of the various collections of Europe, and the present work removes one more museum from the list of inedita. What Fraehn did for so many Russian collections, M. Dorn has done for that of the Institut des Langues orientales. We only wish we could see the same activity in Paris and Berlin, and that the catalogues of MM. Lavoix and Erman were beyond the MS. stage.

The collection here described is not, indeed, a large or remarkable one, but it contains a certain proportion of rare or unpublished coins which all numismatists will be glad to notice. The first part of the inventory, which appeared in 1877, described the issues of the Eastern Khalifs; the present fascicule deals with the other Mohammedan dynasties, with the exception of fourteen classes, which M. Gamasof, who edits the present part, hopes before long to prepare. The vast majority of the coins here published have already been described in the present writer's Catalogue of Oriental Coins in the British Museum, vols. ii.-v.; but there are a good many valuable specimens hitherto inedited which were worth a minute description. It would, perhaps, have been better to have given references to the British Museum Catalogue for all coins published there, and thus thrown the unpublished specimens into greater prominence. The majority of the contents of M. Dorn's inventory are copper pieces; and it must be observed that the coins generally appear to be in bad preservation, so that fresh dates or mints which would be usually on the worn margins are rarely found on them. We believe all but one or two of the series of Ayyūbi coins here described are also in the British Museum Catalogue, and are there given with fuller inscriptions from better specimens, whereon the dates and mints are preserved, and many lacunae in the inscriptions of M. Dorn's examples are supplied. The same may be said of the imperfect series of Mamlūk coins, to which, it should be added, belongs the piece counterstruck by Eybek (p. 69), here attributed to Es-Salīh Ayyūb. These Mamlūk coins are only half legible in the Russian collection, but most of them can be identified with specimens in the British Museum which present the full inscriptions. The finest series in M. Dorn's inventory are, as might be expected in a Russian collection, those of the northern Mohammedan dynasties, the Tāhiris, Saffaris, and especially the four hundred Sāmāni coins. Among the rarities of the work must be noted the specimens of Mumin, Khān of Bulghār (p. 151), of El-Hasan, and Rustem of Tabaristān, and the barbarous issues of the Illek Khāns of Turkestan, on whom M. Dorn's memoir, which appeared in the *Bulletin de l'Académie*, is here judiciously reprinted. The Seljūk series is very insignificant, and the first coin looks more like a piece of Shāh Rukh's coinage than of Melik Shāh's. We have doubts also on the subject of the supposed Tughrul Arslān's coins on p. 173. The arrangement of the various dynasties is a little perplexing, and the apparent admission of duplicate specimens adds to the bulk but not to the value of the work. It is, however, a distinct gain to numismatics to have the contents of even a not very important collection duly registered and published, and we shall not

quarrel with M. Gamasof if he completes the late M. Dorn's undertaking in the same manner as it was begun and continued. We would only urge him to adopt photographic plates instead of the less satisfactory lithographic representations which illustrate the present fascicule.

STANLEY LANE-POOLE.

PONTORMO'S PICTURE FROM HAMILTON PALACE IN THE NATIONAL GALLERY.

THE pictures bought at the Hamilton Sale for the nation have already been noticed in the ACADEMY. They have now been exhibited for some weeks at the National Gallery, where a few of the names formerly attached to the pictures have judiciously been altered; and I may therefore be permitted to suggest a new explanation for one of the pictures which is "assigned to Jacopo da Pontormo" (No. 1131). This is believed to represent an "Allegory," of which no interpretation has yet been offered, so far as I am aware. It contains numerous figures of rather small size. The peculiar style of Pontormo's drawing and colouring is most decidedly displayed here. The broad hands, with their prominent knuckles, the somewhat coarse features, with eyes sunk in their sockets, which may be recognised in almost every figure, are, in my opinion, palpable proofs that no other artist than Pontormo painted this picture. And if we consider its admirable state of preservation—only a few heads on the left have been repainted—we are perhaps justified in looking at it as a *chef d'œuvre* of that master. But, at the same time, we must admit, on comparing it with the "Portrait of a Boy" (No. 649), exhibited since 1860 as a genuine work of Pontormo, that the striking differences between the two pictures almost exclude the possibility of placing both under the same heading. Dr. Frizzoni has already shown that the "Portrait of a Boy" is the work of a later artist.

Pontormo's "Allegory" has generally been acknowledged to be a puzzling composition, but the mystery of the subject will perhaps be cleared up if we admit the possibility of an explanation through an historical event. Thus the many separate motives and the multitude of figures in this so-called "Allegory" will present themselves as five successive stages of one and the same story. The clue is to be found in the dress of one figure which in four of the groups plays a prominent part.

On the right side of the picture there is a *bizarre* circular building with an open room. An old man lies on his dying bed, giving his benediction to two boys, who kneel before him, and are introduced by their father. On the steps leading to the room outside the building one of the same boys is seen walking up by the side of his father; the other boy at the top of the staircase is received by his mother, who tenderly embraces him. The artist intended, I believe, to represent here Joseph when going with his sons Manasseh and Ephraim to his father's death-bed. He is followed by "the steward of his house" in a long red mantle—a striking figure which everyone will recollect who has once looked at the picture.

Vasari informs us, in his biography of Pontormo, that this artist painted pictures of the life of Joseph; and, if my interpretation of the scenes already described be accepted, we may be justified in explaining the three remaining, and perhaps somewhat complicated, scenes as also having reference to Joseph's life in Egypt. We recognise Joseph by his garments in a group of figures below the building. Here he is seated on a car, which is drawn by three

cupids, and seems to listen to a man who kneels on the road and addresses him by a petition. We see Joseph again on the left side of the picture, clad in the same robes, but holding his red cap pressed to his breast, as if beseeching Pharaoh, who stands opposite him in a white turban. The people who follow Joseph appear to be in need of Pharaoh's help. Great excitement prevails also in the group of men who occupy the middle distance of the picture. By the three last-named scenes the artist has somewhat freely, but on the whole correctly, interpreted the text of Gen. xlvii. 13-26—viz., Joseph relieving the people of Egypt from famine and bringing thereby their property into Pharaoh's possession. The antique statues which adorn the buildings will scarcely surprise us if we consider that the artists of the middle ages had been induced by certain popular legends to take them for a specially characteristic feature of Egyptian scenery (see *Evangel. Pseudo-Mtth.*, ed. Tischendorf, chaps. xxii., xxiii.). Many pictures could be cited in proof of this.

The following quotation from Vasari secures to Pontormo's picture in the National Gallery a prominent place in art history:—

"Whoever may desire to see the best work ever performed in his whole life by Jacopo da Pontormo, and may propose to ascertain what the genius of that master was capable of effecting, whether as regards the power of invention displayed, the grouping of the figures, the animation of the heads, or the variety and beauty of the attitudes, let him examine one angle of the apartments in the palace of the Florentine noble, Borgherini—namely, that on the left, where there is a story of which the figures are small, although the work itself is of fair size, and is, indeed, of admirable excellence. The subject chosen is the reception by Joseph of his father Jacob and all his brothers, when Joseph himself had become a prince, and, so to say, the sovereign of the land of Egypt."

By this the biographer apparently points to the prominent group on the left. Pharaoh has been interpreted by him to represent Joseph—"quasi re e principe." But this is inadmissible for various reasons. The figure which in this scene must be meant for Joseph is no doubt not an attractive one—Vasari might have taken it for one of his brothers. Moreover, the features are disguised by heavy repainting. But there are, on the other hand, evident proofs that the man with the red cap opposite Pharaoh is identical with the one who in the other scenes has already been recognised as Joseph.

Vasari concludes his description with the following passage:—

"Among the figures is one which is indeed singularly beautiful; this is the portrait of Jacopo's disciple Bronzino, then but a boy, whom he has represented seated on a flight of steps at the lower part of the picture; the youth holds a basket in his hand. A most animated figure it is, and beautiful to a marvel."

This very figure appears in the picture exactly as Vasari describes it. Bronzino was born about the year 1502, and, as he seems here about ten years of age, we may assign the picture to about the year 1512.

At the exhibition of Old Masters in 1881 we had an opportunity of admiring similar representations by Andrea del Sarto, Pontormo's friend. These are known to have belonged to the Borgherini Palace, and now adorn Lord Cowper's beautiful gallery at Panshanger. Andrea's pictures are of about the same size as this; and it is noteworthy that in his representations of Joseph's life in Egypt he arranged the groups with the same freedom and depicted the same scenes (with a characteristic display of varied accessories) as we see here in Pontormo's companion picture.

JEAN-PAUL RICHTER.

NOTES ON ART AND ARCHAEOLOGY.

M. FRANÇOIS LENORMANT is on the point of starting for Southern Italy, on a mission from the French Ministry of Public Instruction, to complete his exhaustive examination of the archaeology of that region, to which he has already devoted three journeys. He intends this time to explore the interior of the province of Basilicata (the ancient Apulia), and also the whole of the western coast from Reggio to Paestum. We hope again to print the first-fruits of his discoveries—for discoveries he is certain to make.

MR. LLEWELLYN JEWITT hopes soon to have ready for publication the work upon Corporation Plate and Insignia of Office upon which he has been engaged for several years past. It will embrace every corporate town in England and Wales, giving detailed notices of the maces, swords of state, seals, chains, badges, arms, armour, plate, &c., belonging to each. It will be illustrated with several hundred plates and wood-engravings, from drawings and photographs taken specially from the objects themselves.

A SPECIAL library is in course of formation at South Kensington of books treating of the art of fencing from the fifteenth century. Many of them are handsomely illustrated.

M. FRÉDÉRIC FÉTIS, the author of a catalogue of the faïences and porcelain in the Musée royal at Brussels, is now on a visit to London, studying the classification of the pottery at South Kensington.

AN exhibition of lace, old and modern, hand and machine made, and of fans will be opened at Brighton, in the Aquarium buildings, on October 7.

THE *Revue artistique*, a French weekly paper published in England, and edited by the energetic M. Le Roy de Sainte-Oroix, has increased its size, and now gives contributions of some length from foreign cities. Its chief object, however, is to chronicle English news; and we do not know any other paper that covers precisely the same field.

WE learn from the *Courrier de l'Art* that several Phœnician antiquities have recently been added to the Louvre. Among these is a head from the neighbourhood of Tunis, which has for its covering a vulture, closely resembling in design the well-known emblem of the Egyptian goddess Maut. It is conjectured that the Phœnicians must have borrowed this head-dress from Egypt.

THE Print Department of the Bibliothèque nationale has undertaken the formation of a *Catalogue raisonné* of the portraits it possesses belonging to the sixteenth and the first half of the seventeenth centuries. These alone, it is stated, number 2,000, which will all have to be separately studied, classified, and identified. The present Catalogue of Coins in the great national library of France enumerates 145,618 specimens.

A COMPETITION has been opened at Paris for a statue of Ledru Rollin, to be erected on the boulevard Voltaire. The presidents of the committee are MM. Victor Hugo and Louis Blanc.

ALESSANDRO CASTELLANI, the well-known Roman archaeologist, has presented the casts of three bas-reliefs by Mino da Fiesole to the Trocadéro Museum. The originals of these casts are in the crypt of the Vatican. They represent Faith, Hope, and Charity.

WE hear from a correspondent that Padre F. Fita, on his recent visit to Compostella, found a Roman milestone at Iris, dated in the reign of

Gratianus, employed to thresh corn upon. It is now in the museum at Compostella.

THE Municipality of Rome have decided to put a commemorative tablet on the old Hotel dell' Orso, where Montaigne lived during his long stay in Rome. The inscription on the tablet is as follows:—

"In this ancient Hotel dell' Orso lived the French moralist Montaigne, author of the *Livre des Sages*, who has contributed greatly to the progress of the new philosophy. The Senate of Rome conferred on him the right of Roman citizenship."

THE September number of the *Art Journal* contains the first part of an account of the late John Linnell, by Mr. F. G. Stephens, full of information. The author is, however, wrong in supposing that the Christian name of the famous Dr. Monro was Thomas, and that he was one of the physicians of George III. Miss Margaret Stokes commences an interesting essay on the Corona Radiata and its connexion with the Crown of Thorns; and Mr. Lionel Robinson writes pleasantly of Albert Dürer. Of the illustrations *hors texte* the best is a charming etching by L. Flameng after E. Renouf. It is like a French "Hook," and represents a little girl pulling at her father's oar.

THE *Revue des Arts décoratifs* has done well in issuing separately the "Bulletin de l'Union centrale," and thus liberating a great deal of its space for more generally interesting matter. Among other articles by its excellent staff may be mentioned those by M. Garnier on painting on porcelain. The illustrations to this well-conducted magazine are as numerous and as good as could be wished.

Art in Everything. By Henry Fawcett. (Houlston.) These papers have already appeared in the *Churchman's Shilling Magazine* and elsewhere. We think that they might have been permitted to disappear there also. They are neatly written in the style of a prize essay, and express sentiments which are, for the most part, unimpeachable. The tone of them is distinctly "parsonic." As we read their flavourless, but neatly rounded, sentences, we seem to be listening to some dear old clergyman in a country pulpit. "The small acorn," writes Mr. Fawcett,

"contains within itself the germ of a mighty tree, and many thousand acorns are found on a single oak. The massive trunk and spreading branches of the tree not unfitly represent the future forest. The oak appears in its proper place, and to the best advantage, standing alone—a shelter from the heat of the sun or the cold rain."

Mr. Fawcett can go on like this for a long while.

The Cycle of Development of Roman and Greek Sculpture. By Hodder M. Westropp. (Gould Memorial Home.) This little book embodies a course of lectures delivered by Mr. Westropp in 1881 before the British Archaeological Society at Rome. The society was fortunate in its lecturer, and its members can seldom have listened to a more full and lucid discourse upon the history of ancient art. Mr. Westropp is well acquainted with his subject, and is not content with simply repeating the statements of others. Indeed, his independence of thought sometimes leads him into direct collision with the accepted doctrines of modern scholars. Whether we agree with him or not, his arguments demand respectful consideration, and, apart from disputed points, we always find him an interesting and intelligent guide.

MUSIC.

NEW VOCAL PUBLICATIONS.

The Redemption: a Sacred Trilogy. Written and Composed by Ch. Gounod. (Novello.) The vocal score of the "Redemption," recently performed at the Birmingham Festival, will prove a welcome addition to the long list of oratorios published by Messrs. Novello. It is impossible to say what will be the verdict of posterity upon M. Gounod's latest work, or, as he calls it, "opus meae vitae," but at present most musicians seem agreed as to the great merit and marked character of the sacred trilogy. The composer has approached his subject with reverence and deep feeling; and his chief concern seems to have been to set forth, by the help of poetry and music, the facts connected with the Passion, Death, and Ascension of Christ, rather than to win by showy or elaborate writing either the applause of the public or the approbation of the learned. Many of the numbers will, without doubt, become general favourites—more especially, perhaps, the pathetic quartett and chorus "Beside the Cross remaining," followed by the beautiful solo of the Virgin Mary, "The Holy Women at the Sepulchre," in the second, and the "Lovely appear" in the third, part. The pianoforte accompaniment of this edition has been skilfully arranged by Mr. Berthold Tours, and the numerous score indications will prove most acceptable to students. The excellent translation of the *libretto*, written by M. Gounod himself, is from the pen of the Rev. J. Troutbeck. A commentary by the composer precedes the work.

Abraham: an Oratorio. Composed by Bernhard Molique. (Op. 65.) (Novello.) The performance of a selection from Bernhard Molique's "Abraham" at the Hereford Musical Festival this week reminds us of a work that seems to have all but passed into the realm of oblivion. It shows workmanship of no common order; but a musician needs not only a trained and skilful hand, but heart, soul, and imagination. "Abraham" does not show any marked individuality of thought; and hence, in spite of much clever and pleasing writing, it cannot rank beside such oratorios as Spohr's "Last Judgment," Mendelssohn's "St. Paul," or his "Elijah." Having frankly said what we think of the work generally, let us mention some of the best pieces. In the first part there is a very good quartett (No. 5), "Go in Peace! before the Lord," and a pleasing air for tenor (No. 9), "Who walketh uprightly." The air and chorus (No. 14) are also worthy of notice. In the second part there is a very fine chorus (No. 35), "Great is our Lord," and the concluding "Great and Marvellous are Thy Works" is ably written. The oratorio was produced at the Norwich Festival of 1860 under the personal direction of the author. This celebrated violinist, who died in 1869, is principally known as a composer for his own instrument; in addition, however, to concertos and pieces for the violin, he wrote sonatas, trios, and quartetts, and also two Masses, the one with orchestral, the other with organ, accompaniment.

The Shunammite: a Sacred Cantata. By George Garrett. (Novello.) The "Shunammite" was performed a few months ago at the Cambridge University Choral Society, and has been heard again this week at Hereford. The cantata is divided into three parts; in the first we learn of the birth of the Shunammite's son, and, in the second, of his restoration by means of Elisha's staff. The third is occupied with the thanksgivings of the Prophet, the mother, and the Chorus. The composer writes thoroughly well, and has studied good models; but, as he

has not any marked originality, he would do well to keep to works of small compass. In the "Shunammite" the choruses "Be not forgetful," "Sing we Praise to our Creator," and "Death is come up into our Window" seem to us most deserving of mention.

Psyche: Cantata. By Niels W. Gade. (Op. 60.) (Novello.) The production of Herr Gade's "Psyche" at Birmingham was a brilliant success, and there is every reason to believe that this composition will be as popular as the well-known "Erl King" or the "Crusaders." We have already expressed our opinion that the last-named work is more interesting than the new cantata. This remark especially concerns the solos; the *ensemble* pieces and choruses in "Psyche" are delightful. The vocal score just published will soon be in the hands of all who like tasteful, tuneful, and temperate music. The poetical story of the unfortunate maiden who descended into Hades, but was afterwards transported to the regions of supernal light, has attracted more than one composer, and it is indeed a subject well adapted to musical treatment. Herr Gade's cantata is a work that will suit ordinary choral societies; it requires only three solo vocalists (soprano, alto, and tenor), and the choruses present no alarming difficulties. The cantata is conveniently divided into sections, each one of which could, if necessary, be performed apart from the rest of the work.

The Holy City of Mr. A. B. Gaul (Novello) may be recommended to small choral societies. The music is sound and good; the composer has well measured his strength, and writes in a clear, and at times skilful, manner. In a Preface, we are informed that "the treatment of the subject of the work is almost entirely reflective, the more dramatic parts of the Vision of St. John having been already treated in so masterly a manner by Louis Spohr in 'The Last Judgment.'" Mr. Gaul was certainly wise in not running the risk of having his work compared with Spohr's *chef d'œuvre*. The chorus for double choir, "Let the Heavens rejoice," and the concluding number of the cantata contain some excellent fugal writing.

Ode to the Passions. Composed by Alice Mary Smith. (Novello.) The musical setting of Collins' fine ode on the Passions by Alice Mary Smith (Mrs. Meadows White), so far as we can judge from a vocal score without any orchestral indications, is a bright, pleasing, and efficient work. The soprano solo, "Hope," the trio, "Melancholy," and the tenor air, "Joy," are written in a somewhat popular style; but in the choruses there is some very clever and spirited writing. The opening and concluding numbers are decidedly successful, and in performance will doubtless prove highly effective. The work has been given this week at the Hereford Festival. J. S. SHEDLOCK.

LITERATURE.

The Poetical Works of Percy Bysshe Shelley.
Edited by Harry Buxton Forman. In 2 vols. (Reeves & Turner.)

MR. FORMAN tells us in his Preface that the wide acceptance of his annotated library edition of the works of Shelley induced him to believe that there was a place for an edition of the text without annotation of any kind. And so he has here separated from the extensive notes and appendices of the library edition the text as there printed; and, adopting the same principles of arrangement, he has issued the complete works in a cheaper and more compendious form for the use of that class of readers to whom variorum readings are not of sufficient interest to compensate for the distraction of puzzling repetitions. In addition to every poem or fragment of verse which has yet been published under Shelley's name, the present edition contains a few dozen lines not hitherto included in the poet's works; but, as these last are not of much moment, we do not propose to discuss or quote them. In the first of the two volumes Mr. Forman has printed Shelley's mature poetic issues in chronological order, and has followed up these works with the principal posthumous poems published contemporaneously with that series. The arrangement seems to us, on the whole, an excellent one, though we doubt if the same plan would apply with equal appropriateness to Keats, of whose works Mr. Forman announces a companion edition. It is hardly necessary to say that the work involved in this case done most thoroughly, with immense labour, and with both sympathy and sagacity. A more interesting enquiry than that which concerns itself with bibliographical details is suggested by the temper of Mr. Forman's Preface to this edition of Shelley and the temper of the criticism first published on that poet. The Shelley literature that has accumulated in recent years is almost portentous in amount. Since Hogg's *Life* and Trelawny's *Records* in 1858, Peacock's articles in *Fraser's* in 1860, Mr. Garnett's *Relics* in 1862, there have been Mr. W. M. Rossetti's edition of the works, the late D. McCarthy's *Early Life*, Mr. Barnett Smith's *Critical Biography*, Mr. J. A. Symonds's contribution to the series of "English Men of Letters," Miss Blind's essay in the *Westminster Review*, and Mr. Todhunter's monograph. The tone of recent Shelley criticism has been laudatory to the verge, and perhaps beyond the verge, of idolatry, but earlier criticism was curiously, amusingly, and instructively hostile.

When, at eighteen years of age, Shelley made his first appearance in print as a poet by publishing, together with his sister Elizabeth, a volume of sixty-four pages entitled *Original Poetry by Victor and Cazire*, his first critic was the *Poetical Register* (1810-11), which said: "There is no original poetry in this volume; there is nothing but downright scribble." It was not until seven years later that Shelley received from the critical press any individual attention, and then it was of the nature of continuous covert attack; for, just as it had happened to Wordsworth eighteen years earlier to be constantly alluded to, but not named, in abusive articles on Southey in the *Edinburgh Review*, so now it occurred to Shelley to be for a time the subject of unfavourable anonymous mention in articles published on Leigh Hunt in the *Quarterly Review*. The earliest of such notices appears in a review of *Foliage* (*Quarterly*, January 1818), in which Shelley's university career is spoken of as "disgraceful and flagitious," his poetry as "the production of a man of some ability," and his "liberal and comprehensive morality" as the "decency that rails at marriage and the honour that pollutes it." But the critics of the time soon came to a conclusion as to whether it was right to lend notoriety to Shelley's work by any critical comments; and (personal assaults apart) perhaps the first noticeable opinion published with respect to him was the astounding one (Shelley's occasional metrical imitations of "Thalaba" notwithstanding) that he was "an unsparing imitator" of the Lake Poets, to whom it was said to be matter of perpetual sorrow to see their philosophy degraded by a miserable Pantheist who had just sense enough to abuse its terms, but neither heart nor principle to comprehend its import. By one reviewer Shelley's claims as a philosopher were summarised in one succinct passage which is so little known, and so amusingly at variance with the sort of thing written nowadays by Mr. Buxton Forman and the latest school of Shelley critics, that we cannot forbear to quote it, if only for its disciplinary value as at once an awful and a ludicrous warning:—

"Let him not be offended at our freedom, but he is really too young, too ignorant, too inexperienced, and too vicious to undertake the task of reforming any world but the little world within his own breast."

In that article on Shelley in the *Edinburgh Review* which Mr. Forman here quotes with approval, and connects with the name of Prof. T. S. Baynes, the following passage occurs:—

"He had an intellect of the rarest delicacy and analytical strength, that intuitively perceived the most remote analogies, and discriminated with spontaneous precision the finest shades of sensibility, the subtlest differences of perception and emotion. . . . Every nerve in his slight but vigorous frame seemed to vibrate in unison with the deeper life of nature in the world around him, and, like the wandering harp, he was swept to music by every breath of material beauty, every gust of poetic emotion."

This was the approved tone of Shelley criticism when the words were written in the year of grace 1871; and it is still the tone adopted with varying inflections by Mr.

Symonds, Mr. Rossetti, Mr. Garnett, Miss Blind, and, of course, by Mr. Forman. We are far from saying that it is not vastly nearer the note of truth than was the tone of contemporary criticism in Shelley's case, but it is instructive to set over against such a passage as the one quoted from Prof. Baynes the following from the *Quarterly Review* of 1819. After remarking that, though Shelley has not all that is odious and contemptible in Hunt, that though he has not exhibited the bustling vulgarity, the ludicrous affectation, the factious flippancy, or the selfish heartlessness of that person, and after saying that, nevertheless, from early childhood he has carried about him a soured and discontented spirit, unteachable in boyhood, unamiable in youth, querulous and unmanly in manhood, singularly unhappy in all three—the reviewer concludes by affirming that "Rosalind and Helen," compared with the "dulness and pruriency" of "Laon and Cythna," is

"less interesting, less vigorous and chaste in language, less harmonious in versification, and less pure in thought; more rambling and diffuse, more palpably and consciously sophistical, more offensive and vulgar, more unintelligible."

And "So," reflects the sapient critic, "it must ever be in the downward course of infidelity and immorality." But even at this time Shelley was not without ardent upholders, who, though not, perhaps, quite such reverential observers of the poet's commas and notes of exclamation as Mr. Forman is, were yet occupied with the defence of his character as a poet, philosopher, and man. *Blackwood's Magazine* in 1819 finds Shelley a "scholar, a gentleman, and a poet;" but a change comes over the spirit of this dream, and in 1820 it goes the length of "despising Mr. Shelley's understanding," and affirming that his "private life has been a disgrace to humanity and his poetry a blot on the literature." One mitigating circumstance the writer is, however, still merciful enough to remember, and this is that "it is mentioned in credible quarters that Mr. Shelley's reason has become unsettled." The key to this altered attitude lies in the fact that the Northern critic had at length realised that Shelley had gone over to Cockaigne and become a mouthpiece of the presumptuous triumvirate of Pisa.

The greater part of the useful Preface with which Mr. Forman introduces his compilation is occupied with the discussion of the texts of Shelley with a view to purging them of corruption. How exact and laborious a bibliographer the editor can be may best be realised by quoting a single passage:—

"Throughout his works *O* and *Oh* are used interchangeably without any apparent rule; and, more than this, they are sometimes followed by a comma, sometimes by no stop at all, sometimes by a note of exclamation. To me it seems most objectionable to interfere with this irregularity. Whatever Shelley's view on this small but important word may have been, I do not presume to think he unerringly carried out that view in writing; but *O* is so constantly used within a line or two of *Oh* that I cannot think he would have left us so many of these divergences of practice had they been wholly unintentional."

"Tis much," as Christopher Sly might have

said—unless he had preferred to say *Oh!* In pursuance of his rigid editorial principles, Mr. Forman never permits himself (in his library edition) to make so much as the minutest variation without affixing a note indicative of his daring emendation. Here he is as conscientiously exact as where, in editing Keats's letters to Fanny Brawne, he refused to correct the poet's bad spelling of the word yacht—seriously asserting that such a liberty would be an unwarrantable attempt to make Keats write what he did not actually pen. In view of such laudable observance of minor detail, we can only indulge the amusing notion how aghast at such literal precision must be the wraith of the critic who wrote as follows in 1820, *a propos* of that idol of all modern Shelley critics, "Prometheus Unbound":—

"He follows his own rhymes, and shapes his subject to the close of his measure. . . . On these principles a hundred or a hundred thousand verses might be made without taking the pen off the paper. . . . The subject is indifferent to the poet, let it be the 'Golden Age,' or 'Mother Goose,' or 'Waterloo,' or the 'Wit of the Watch-house,' 'Tom Thumb,' or 'Thistlewood.'"

The only value of the contrast we have furnished of the early with the current criticism of Shelley lies in the enquiry it raises into the forces which have operated at an interval of no more than fifty years to produce such opposite results. Looking at the earliest Shelley criticism, we perceive that the relations of the "Cookney" school and their first critics have an interest (for all who care to go below the surface) exactly similar in kind to that which attaches to the relations of the "Lake" school and their first critics. It was hard for the writers of 1800 to judge of the *Lyrical Ballads* apart from the standards of taste which grew out of a love of "the pointed and fine propriety" of the school of Pope; and in like manner it was hard for the writers of 1820 to escape from the influence of Wordsworth's plea for the diction of real life when called upon to judge of an order of poetry as unduly elaborated as was that out of which they had formulated their primary canons of judgment. The only serious critical impeachment urged against the "Cookney" poets was that, in their desire to employ a diction that should be super-poetic, they affected language so far removed from that of every-day life as to degenerate sometimes into downright gibberish. And there was justice in the accusation. The three early works of the three foremost poets of the school, "Rimini," "Endymion," and "The Revolt of Islam," are disfigured by much artificiality, the clear outcome of an inordinate anxiety to avoid the commonplace. In order to grasp the whole theory of the school, we have only to reflect upon all that is involved in Keats's rather audacious counsel given to Shelley to put aside a little of his magnanimity and load every rift of his poetry with ore. Here lies, we think, the key to the strength as well as weakness of the poets in question, and the key, also, to the adverse tone of critics who were nurtured first on the poetry of Pope and afterwards on that of Wordsworth. As a further explanation of the severity of contemporary criticism in the

cases of Hunt, Shelley, and Keats, it may possibly be permitted to an admirer of the "triumvirate of writers" to say that their early writings too frequently exhibited not a little mawkish and unmanly sentiment. Neither in their stronger nor softer moods were they always sufficiently robust; and effeminacy was not a weakness to which their age could afford to be tender. So much for the adverse tone of the early critics. Of the worshipful tone of contemporary writers, what is there to say on the score of poetic *technique* but the obvious truth that the artificialities of diction with which Shelley, in common with Hunt and Keats, was first charged have become part and parcel of much of the poetic language of the day—poetic language perhaps as unlike that of real life as was the language which Wordsworth set himself to sweep away? This fact accounts at least for the charitable attitude adopted towards excesses of style by chaste writers like Mr. Symonds, by impartial critics like Mr. W. M. Rossetti and Mr. R. Garnett; and it also accounts for the circumstance that Mr. Forman can busy himself throughout thirty pages of a Preface full of the evidences of erudition with endeavours to restore the punctuation and orthography of Shelley's text to the exact condition in which the poet left them. T. HALL CAINE.

The Peak in Darien. With some other Enquiries touching Concerns of the Soul and the Body. By Frances Power Cobbe. (Williams & Norgate.)

THE paper which furnishes a title to Miss Cobbe's new volume is not, as some prosaic readers might suppose, the narrative of a mountain ascent. It is an attempt to gather something definite out of the utterances of those who, having almost crossed the sea of life, have stood in view of "the horizonless Pacific of eternity," and have seen, or seemed to see, the sailors on that deep. The authoress cannot be classed among the simply credulous or the lovers of the marvellous. Neither ghost stories nor spiritualism possess for her any attractions; but she cannot divest herself of the belief that to some it is vouchsafed to lift the veil that hangs between the scenes of earthly and unearthly life, and catch a momentary glimpse of those who have passed from the one into the other. The instances which she records are interesting, and might be largely multiplied; indeed, there seems no reason why they should not include such a case as that of the martyr Stephen and the many similar to it which may be found in the Lives of the Saints. It is, of course, no explanation of the mystery to say that it is ecstasy, unless we can clearly define all that is meant by that term. Etymologically, indeed, it covers that condition of being "in the body," and yet "out of the body," which has been experienced at other times than the hour of death; and we do not see why we should limit it, as Miss Cobbe seems to desire, to that one particular time. The matter, however, is one which deserves the attention of psychologists, from whom we hope it may receive the same reverent treatment which Miss Cobbe has given it.

New ground is broken by the authoress in her essay on "The Fitness of Women for the

Ministry of Religion." The term ministry is not to be understood in its larger sense (for as visitors of the sick and suffering women have long ago proved themselves fitter than men), but in the more limited and questionable sense of public teachers. Miss Cobbe is fully aware of the opposition, reasonable and unreasonable, which such a suggestion as hers is likely to excite. She admits that women labour under several disadvantages—sometimes amounting to disabilities. Few female voices are strong enough to be heard in a large assembly, and

"nothing would be more pitiable and ridiculous than for one of these ladies [of deficient vocal power], whatever might be her mental gifts, to mount a pulpit and, with feeble voice, rising only to crack in an occasional screech, to attempt to pour forth exhortations which three-fourths of her audience could not hear, and under which the remainder would writhe in an auditorial purgatory."

And, if the average female voice is unequal to pulpit exertion, is not the average female mind unfit to deal with pulpit topics? Miss Cobbe admits that it may be, and that

"a special peril lies in the ill-omened circumstance that the greater the folly of the woman, so much greater, alas! is generally to be found her propensity to preach in private, and, therefore, it may presumably be dreaded, her proclivity to extend to a larger sphere the benefit of her exhortations."

But, on the other hand, there are certainly plenty of men already in the ranks of the ministry, and freely admitted thereto, who share in one or both of the above impediments; and, if a Liddon be rare in the ranks of the clergy, a Dinah, we may believe, may now and again be found outside the regions of fiction. The pulpit teaching of the present day is, we must allow, lacking not only in eloquence, but also in practical application; and Miss Cobbe assures us that, as the concrete and personal will probably always possess keener interest for the majority of women than the abstract, the vague, and the universal, the sermons of female preachers will be very much more to the point than many which the ordinary male theologian, if such he may be termed, contentedly reads to his listless congregation. But, be that as it may, is not there good reason to believe that a woman's heart would best conceive and a woman's lips best utter those thoughts of divine love which are the special characteristic of Christianity? Are men, and especially men who have renounced those ties of natural affection through which the Author of Nature has caused the human heart to grow tender, likely to be the fittest exponents of a tenderness and a sympathy which even a father rarely feels? It need scarcely be said that Miss Cobbe pleads the cause of her sex ably and persuasively. That we should listen to her as a preacher with the same pleasure as we have heard her as an advocate may be conceded; but yet we may doubt "the fitness of women for the ministry of religion." They would, we cannot help thinking, largely augment the ranks of the purely emotional preachers; they would be narrow and sectarian in their teaching, and, so far as we can judge, would enjoy rather than avoid the pleasant excitement of controversy. However, in spite of Mrs.

Booth's success, we do not anticipate an immediate demand for priestesses, though we should be glad to know that the deaconesses employed as ministering angels were more numerous.

"Sacrificial Medicine" is an interesting and amusing paper upon the therapeutics of past days, in which it was thought that, if patients would only pay enough or suffer enough, a cure was a certainty. It appears to us that the fallacy is by no means exploded; and that there are at any rate plenty of patients, both rich and poor, who hold the very same opinion in these days, and to whom a simple prescription like "wash and be clean" gives as much offence as it did to the Syrian captain. "Zoophily" is a warm defence of the rights of animals, which vivisectionists ignore; and in "Magnanimous Atheism," the first and longest essay in the volume, we have a vigorous protest against the assumptions of the school of Agnosticism and the tone in which they are put forward.

From the first to the last page this book is full of interest, and pervaded by an earnestness of purpose which modern literature seldom exhibits.

CHARLES J. ROBINSON.

Memoir of Alexander Seton, Earl of Dunfermline, President of the Court of Session, and Chancellor of Scotland. With an Appendix containing a List of the Various Presidents of the Court and Genealogical Tables of the Legal Families of Erskine, Hope, Dalrymple, and Dundas. By George Seton. (Blackwood.)

THE biography of a man much mixed up with the political history of his time is always apt to be difficult and unsatisfactory, because, unless the subject of it is really the centre of the events in which he is concerned, it may involve an amount of contemporary history which is necessary for explanation, but which often seems out of proportion to the true biographical narrative. The difficulty is, of course, much increased when, as in the present case, the personal information is comparatively scanty. Mr. Seton seems to have made the most of the available material, but much of his volume is inevitably taken up by a brief narration of affairs the interest of which only fully appears when taken in their natural relation to current history. In his Preface he tells us that the present memoir may be regarded as a specimen of a projected series of Lives of the Presidents of the Court of Session. Such a work might be well worth doing, but its interest will chiefly depend upon Lives in which the personal and legal elements are more conspicuous than they are in this volume.

Alexander Seton was a younger son of that George seventh Lord Seton who distinguished himself as one of the most faithful and chivalrous adherents of Queen Mary. Born in 1555, he was the god-child of the Queen, from whom he received as "ane godbairne gift" the lands of Pluscarden, in Moray. His early connexions and education were wholly Catholic. When a boy he was sent to the Jesuits' College at Rome, where he was trained for a priest; and it even seems doubtful whether he did not actually take orders. But on

his return to Scotland he appears as an adherent of the reformed religion; and, although at various times accused of a leaning to Papistry, it is scarcely possible to trace in him any special effect of his early training. He appears, from the slight indications we have, to have been very much of a latitudinarian in religious matters, and to have effected his change of conviction, such as it was, without retaining any particular affection for, or acquiring any particular hatred to, the Church he had abandoned. He was received as an advocate in 1577, accompanied his father on an embassy to France, and in 1586, shortly after his return, was made an extraordinary Lord of Session. After that time he rose rapidly. He became an ordinary Lord of Session with the title of Lord Urquhart, was elected President in 1593, was created Lord Fyvie a few years afterwards, was entrusted with the guardianship of Prince Charles; and finally, while in England as one of the commissioners for promoting the proposed union, he was appointed Chancellor in the beginning of 1605, and about the same time created Earl of Dunfermline. He remained Chancellor of Scotland until his death in 1622, and during all that period was one of the most influential men in the kingdom, although he cannot be reckoned as a prominent statesman. He maintained his position, in spite of occasional storms, by the favour which he had acquired from his ability and personal character, but made no special mark on the history of his time.

About his legal career there is almost nothing to be said. According to the testimony of his contemporaries, he was an accomplished lawyer; but the courts of Scotland at that time could scarcely have afforded much opportunity for the display of legal knowledge, and reports had not yet come into existence. His character as a judge stood high; and on one notable occasion he showed an amount of independence, not very common at the time, by resenting the personal pleading of the King in a case in which the Crown was sued by Robert Bruce, then one of the prominent ministers of the Kirk. So far as it lay with him to carry out the ecclesiastical policy of the King, it seems to have been done with moderation. Calderwood says that

"howsoever he was popishly disposed in his religion, yet he condemned many abuses and corruptions in the Kirke of Rome. He was a good justiciir, courteous and humane both to strangers and to his own country people; but noe good friend to the bishops."

Spottiswood tells us that he

"exercised his place with great moderation and to the contentment of all honest men; he was ever inclining to the Roman faith as being educated at Rome in his younger years, but very observant of good order, and one that hated lying and dissimulation, and, above all things, studied to maintain peace and quietness."

There seems to be no reason to suppose that he really was a concealed Romanist; but it is possible enough that he retained a kindly inclination to the Church which he had left, which perhaps aided him in maintaining a certain impartiality and moderation in dealing with the ecclesiastical parties of reformed Scotland. The glimpses we get of his private life show him to be a man of calm temper and of various

and scholarly interests. Of his taste in architecture he has left a memorial in the beautiful castle which he caused to be built on his northern estate of Fyvie, and in the house, Pinkie, where he died.

The Chancellor's letters, which are not very numerous, relate almost entirely to public matters. The few that are at all personal in their character make us regret that we do not see more of his private life. Mr. Seton has, however, made good use of everything that could throw any light on his character. The book is very well illustrated; and the frontispiece, after a portrait at Yester by Zuccaro, gives us the impression of a refined, far-seeing, even-tempered man.

ALEXR. GIBSON.

Tibetan Tales. Translated from the Tibetan by F. Anton von Schiefner. Done into English from the German, with Introduction, by W. R. S. Ralston. (Trübner.)

MORE than half of the Introduction to the present work is devoted to an account of the rise of Tibetan philology, and the labours of Körösi, Schiefner, and others, the names of whom are not by any means "legion," who have toiled in this neglected and somewhat arid field of Oriental scholarship. In the latter part of the Introduction, Mr. Ralston, whose name is so familiar to all lovers of Russian folk-lore, has supplied some interesting Western analogues and parallels, drawn, for the most part, from Slavonic sources, to the Eastern folk-tales, culled from the *Kah-gyur*, one of the divisions of the Tibetan sacred books.

There is no doubt or uncertainty as to the Aryan character of these *Tibetan Tales*. They are, as the translator well remarks, all of Indian origin; and, he might also have added, they belong undoubtedly to Buddhist literature. Here we meet with some familiar acquaintances, such as the Vessantara, Kusa, Tittira, Tinduka, and Mahosadha *jātakas* (pp. 25, 257, 302, 342, 348), the well-known stories of Jivaka (p. 75) and Kisagotamī (p. 216), together with others that occur in the *Pañcatantra* and *Kathā-sarit-sāgara*. In these selections from the Tibetan writings we come across the originals of some of our Western stories, as "The Wolf and the Sheep" (p. 314), "The Ungrateful Lion" (p. 311), and "The Ass as a Singer" (p. 323), and others in which the moral is the same as that conveyed by corresponding European fables.

By the help of Benfey, Hardy, Tawney, and Rhys Davids, the English translator has been enabled to refer the reader to various Buddhist sources where the originals of his tales, in Sanskrit or in Pāli, are to be found. He has, however, overlooked one or two contained in Dr. Davids' translation of the *Jātaka*-book. Thus the story of "The Guilty Dogs" (p. 342) corresponds to the *Kukkura-jātaka* (No. 22). The *Kah-gyur* curiously enough mentions the names of the two naughty dogs, which the Pāli omits. The tale of "The Peacock as Bridegroom" is plainly "The Dancing Peacock" in the *Nacca-jātaka* (No. 32), but the Tibetan version is very bald, and leaves out the point that constitutes the real fun and moral of the story.

There are other *jātaka* stories among these *Tibetan Tales* that Mr. Ralston has failed to notice; and for this he must be held blameless, as only those who have a knowledge of Pāli and some acquaintance with Prof. Fausbøll's excellent edition of the *Jātaka-book* can be expected to identify them. The story of the hypocritical cat (p. 344), another form of the *Bildra-jātaka* (No. 128), is found in the *Pañcatantra* and *Kathā-sarit-sāgara* (ii. 67), and has many Western analogues. "The Wise and Foolish Monkey Chiefs" (p. 352) is a variant of the *Kimpakka-jātaka* (No. 85). The latter part of "The Five Lovers" (p. 300) is identical with the *Paduma-jātaka* (No. 261). The beginning is a different story tacked on, and is a bungling attempt to explain the second, the moral of which is that more is to be gained by speaking the plain truth than by coarse flattery. The medley necessitates some curious alterations in the Tibetan rendering of the second story. The first part of "The Punishment of Avarice" (p. 286) is the *Vodabbha-jātaka* (No. 48), the original of a similar story in Chaucer's "Pardoner's Tale." Here, again, we find the unskillful admixture of two distinct *jātakas*, the latter part of the Tibetan tale being the well-known story of "The Greedy Jackal." The moral of both is the same, and is intended to show that "covetousness is the bane of creatures" (see the *Kathā-sarit-sāgara*, ii. 50). The original of the story of *Ādārsamukha* (p. 29) is the *Gāmani-canda-jātaka* (No. 257), which shows us that the Tibetan names *Ānanda* and *Dandin* represent the Pāli *Janasandha* and *Canda*.

In one instance (the story of *Vessantara*) Mr. Ralston is inclined to look upon the Tibetan variant as the more poetic and pathetic of the two renderings. The Pāli version, we venture to think, would not support this favourable verdict; and a comparison of Nos. 19, 44, 46, and 85 with the Pāli originals would go far to disprove it, and show how inferior are the stories in the *Kah-gyur* to those in the books of the Southern Buddhists.

"Incredulity Punished" (p. 350) is probably a *jātaka* story, which, like many others in the volume before us, has suffered much in its Tibetan re-cast. It is, in its present form, quite non-Buddhist in giving countenance to a belief in dreams, for in the *Mahāsupina-jātaka* (No. 77) Buddha is represented as saying to the King of Kosala, "Do not be disturbed on account of dreams" (*Supinapaccayā te bhayaṃ n'atthi*).

These Buddhist stories are made the vehicle of conveying salutary truths and wholesome maxims, and there is in many of them a store of worldly wisdom. The danger of calling in "one conversant with the law" as an arbiter is humorously enforced in the story of the two otters which quarrelled over a large fish they had just caught. The jackal, which in Eastern stories seems to be endowed with the cunning of the fox, on being called upon to decide the contest, takes the middle of the fish for himself, and leaves his clients the head and tail (p. 332). This fable, Mr. Ralston reminds us, "closely resembles the well-known legal eater of the disputed oyster and presenter of the oyster-shells to the two claimants who

had referred their dispute to his decision." The folly and mischievous consequences of the blind leading the blind are forcibly illustrated by the tale of the monkeys which, seeing the reflection of the moon in a well, come to the conclusion that "the lesser light" has fallen into the water and rendered the earth moonless; whereupon they form themselves into a chain to draw the moon out, and restore it to the world. But, clinging together by a weak branch of an overhanging tree, they are precipitated into the water and seriously damaged. They are thereby reminded that, "when the foolish have foolish leaders, they all go to ruin" (p. 353). The unwisdom of attempting the impossible is well brought out in the story of the jackal (p. 341), which, following the track of an elephant, sees the large foot-prints and claims them as its own. Setting its foot in one of them, it is tripped up and gets a nasty fall. It is a verification of an old-said saw that

"He who strives to touch a star
Oft stumbles at a straw."

"Tread upon a worm and it will turn," we are told; and in the volume under notice we learn that a dog may, by harsh treatment, be made to speak (p. 175). The story, briefly told, is this: A certain king named Janaka, wishing to test the cleverness of his Ministers, gave them each a dog, and bade them teach it to talk within a given time. Mahaushadha, the king's favourite, was the only one who accomplished the task, which he did by the following device:—He fastened the animal near his own table, and allowed it to see all the dainties that were placed upon it, but did not let the dog taste any of them. Scantily and badly fed, the poor creature became lean, gaunt, and half-dead. When the king saw it he marvelled thereat. The cunning Minister was ready with his answer. "O king," he said, "I have given it the same kind of food that I ate myself." This was too much for the dog, which instantly exclaimed, "O king, that is not true; I am all but dead with hunger."

The Miracle or Mystery play patronised by the Church and the guilds in mediæval times seems to have its counterpart in these *Tibetan Tales* (p. 236). Bimbisāra, King of Magadha, instituted a festival in honour of the converted *Nāgārjūna*, Girika and Sundara. An actor from the South, with a view to amuse the assembled multitude and to enrich himself, determined to compose for the occasion a drama in which Buddha should be extolled and glorified. For the purpose of getting together the chief facts in the life of Gotama, the ambitious actor sought to obtain information from six "brethren" of the Order, who, however, refused to help him. Then he betook himself to Sthūlananda, the chief of the Buddhist sisterhood, who out of the *Abhinishkramana-sūtra* supplied him with materials for his drama. The actor succeeded in entertaining his audience, and made a large profit by his performance. He was, however, indiscreet enough to introduce the six *bhikkhus* into his play and to make fun of them. They, however, turned the tables upon him by setting up a rival theatre and performing a *divine drama*, so that the over-reached actor himself thought that it was played by gods, demi-

gods, and angels. In order to get rid of his rivals, the actor was obliged to sue for pardon, and to hand over to the *bhikkhus* all his receipts. If the six "brethren" really did, as they are here represented, receive the proceeds of the first performance, they were very bad Buddhists; but we suspect that the author of the tale, like the Southern actor, was desirous of having a little joke at the expense of the good brothers of an Order that did not, after the death of its founder, and at the time this story was composed, scorn endowments and State aid.

R. MORRIS.

DR. STRACK'S INTRODUCTION TO THE OLD TESTAMENT.

Einleitung in das Alte Testament. Von Lic. Dr. H. L. Strack, a.o. Prof. der Theologie in Berlin. Extract from Vol. I. of "Handbuch der theologischen Wissenschaften." (Nördlingen: C. H. Beck.)

PERHAPS the day will come when dictionaries of the Bible and handbooks to the literary criticism of the Scriptures will be relieved of some of the ballast which at present almost uselessly fills up their pages. Meantime, Dr. Strack has made a thankworthy attempt to "orientate" the German student of the Old Testament by sketching the characteristics of the various books and the problems which attract the attention of contemporary criticism. This at least is the portion of the little work before us which will most interest the ordinary English student. It is not indeed such a limited point of view from which Dr. Strack regards his subject; apocrypha and pseudepigrapha, the formation of the canon, the history of the text, the ancient and modern versions, are all noticed by the author, and the bibliographical lists which accompany every section are composed with almost equal completeness and discrimination.

Dr. Strack is perhaps not the scholar whom most students would have chosen for the task. Well known as he has been since the year 1872 as an indefatigable student of the later Hebrew literature, he has not yet come before the world as a sympathetic worker in the still more difficult field of literary and historical criticism. How gladly would one have seen a handbook to the Old Testament by such a trained and impartial scholar as Riehm or Kamphausen! Still, there should be no stint in the friendly recognition of Dr. Strack's work on the part of older scholars. That an orthodox theologian should admit without reserve that, difficult as it may be to propound thoroughly satisfactory solutions of the problems of the Pentateuch and Isaiah, the traditional solutions are absolutely untenable, is a gain not only for friends of science, but for lovers of religion. There is only a line or two expressing this conviction on the part of the author; more than this was unnecessary in Germany. Of course, everyone who has worked in this field will have some objections to make to an individual writer's statement of the actual state of critical controversies; indeed, such a statement could not attain thoroughness within the narrow limits assigned. For instance, I see no reference to what has more than once been

referred to in the ACADEMY, and lately also by Friedrich Delitzsch (following Goldziher) in Germany—viz., the difficulty of accounting for the close parallelisms between the Yahvistic as well as the Elohist accounts of the early fortunes of man, on the one hand, and the Babylonian, on the other, on any of the current critical hypotheses; nor to the difficulties felt by several Egyptologists in accepting the comparatively recent origin assigned by analytic critics to the narratives of Exodus. Nor can I, at least, admit the author's statement of the critical problems of Isaiah to be in the slightest degree adequate; nor agree with him that all non-traditionalist critics, without exception, regard the last twenty-seven chapters of the Book of Isaiah (certainly not the work of Isaiah) as a production of the second half of the Babylonian exile. Really there seem to be traditions among liberal critics almost as difficult to overturn (particularly if the assailant be an Englishman,) and yet almost as groundless, as those of conservative scholars. Something more, too, will have to be said, in Dr. Strack's second edition, of the critical problems of other books; e.g., of Joel and Job. Dr. Oort long ago proposed the most conservative view which the facts of Joel appear to allow; but the tendency of students has been for some time (not, indeed, without a protest in these columns) to maintain with growing positiveness the post-exile origin of the book, the grounds for which are indeed strong. The theory of the gradual growth of the Book of Job has been less favourably received owing to the extreme form in which it was propounded by Studer in the *Jahrbücher für protestantische Theologie*, 1875, but it has yet to be seriously considered; the conflicting and arbitrary accounts of the line of thought of Job and his friends and of the object of the author create a certain *a priori* presumption against the unity of the poem. In all these critical discussions one fault of the critics has been that they have considered them too much by themselves, whereas the complicated nature of the problems demands that the books in question should be treated in connexion, and with an eye to a provisional outline of the history of the Old Testament literature. It is pleasant to be able to speak with high praise of the section on the Book of Daniel. It no longer, then, appears "profane" to German orthodoxy to admit that the Book of Daniel is not the work of Daniel himself, nor even of a single age; but that, like so many other Old Testament books, it has grown. Dr. Strack was naturally drawn to the problems of Daniel by the Aramaic language of chap. ii. 4-vii. 28, which fell so naturally within the range of his early special studies. His solution agrees in the main with my own (art. "Daniel," *Encycl. Britann.*, ed. 9), except that he has not found space to consider the relation of the narratives in Daniel to the cuneiform inscriptions. The form in which he puts his solution is this:—

"The second part (no doubt from chap. vii. onwards) having been assuredly written in the Maccabean period, it seems fairest to suppose that, since the time of Alexander the Great at least, a book of Daniel-narratives was extant in Aramaic, and that at the time of Antiochus Epiphanes this was welded together with the

newly composed book of visions. To what extent it was altered by the author of the (Hebrew) visions cannot now be determined. At present the entire book forms an indivisible whole."

Dr. Strack adds that

"the visions of the Book of Daniel, which are valuable to us through the New Testament, retain a high religious significance, even if we regard them as written not in the sixth century, but in the second quarter of the second century B.C."

The full development of this dictum will doubtless be found in a succeeding part of the same work, by Dr. F. W. Schulz, devoted to the important subject of Old Testament theology.

It need only be added that the meagre section on the formation of the canon is supplemented by the ample information contained in an article on the Old Testament canon by Dr. Strack in vol. vii. of the new edition of Herzog's *Realencyclopädie*—a work in the hands of every German-reading theological student. T. K. CHEYNE.

NEW NOVELS.

Alasnam's Lady. By Leslie Keith. (Bentley.)

Gabrielle de Bourdaine. By Mrs. Spender. (Hurst & Blackett.)

All among the Barley. By Flora Hayter. (White.)

Scenes from the Ghetto. Translated from the German of Leopold Kompert. (Remington.)

Princess Alethea. By F. M. Peard. (Bell.)

WE have hardly more than one fault to find with *Alasnam's Lady*. (People do not unfortunately read the *Arabian Nights* as they once did, so that it may be well to refer them there for the reason of the title.) It is too long; much too long. Its pages are more than the pages of the ordinary three-volume novel, which certainly does not as a rule err in point of brevity; and they are so printed as to contain more than half as much matter again as is usual. Now it must be a writer of very exceptional power who can keep up the interest through such a mass of material, and Mr. Leslie Keith is not a writer of very exceptional power, though he is better than the average novel-writer. He has several advantages. His scene is for the most part pitched in Madrid, the least familiar of European capitals to most English readers, and the picture of the little English colony there is very good. His three contrasted Graces, Deonys Ouvry, Philippa Henshaw, and Bell Fullarton, are interesting, and a person of lawless inclinations might not object to marry them all three. The most original, though the least prominent, is the last-named, Bell, a young Scotchwoman possessed of that innocently absurd patriotism which indignantly repudiates the name "English," and of which every Englishman who knows Scotland must have an amused memory. The real hero of the story, so far as there is a hero, Ralph Malleon, a disappointed and middle-aged person of humour, is also good; and the "Prince Alasnam" is not more offensive than young men of more luck than

brains are in real life, and less so than they generally are in novels. When among his minor personages Mr. Keith is more conventional. Mr. Ferryman, the Liverpool man, is but a stale and theatrical man of business; and we confess to being extremely tired of the selfish *dilettante* father who re-appears in Mr. Ouvry. But that Mr. Keith is better than conventional when he chooses is proved by Philippa Henshaw, the coquette in search of a husband, who has quite sufficient differences. To the conscientious novel-reader who has plenty of time at his or her disposal, *Alasnam's Lady* may be confidently recommended.

Mrs. Spender appears to be one of those persons who suffer from a minor frenzy of John Dennis in estimating the amount of attention which the world is likely to pay to them. There was once a beginner in literature who was made very miserable by a misprint (accidentally amounting to a grammatical blunder) in an article of his. He bewailed himself to his editor thereon. "My dear sir," replied the man of experience, "I am very sorry, but the majority of the world will not, I fear, read your article; the majority of those who do read will not, I trust, notice the slip; and the majority of those who do notice will not, I am sure, think or care about the matter." In the same way, though, perhaps, with less authority, we may assure Mrs. Spender that a Preface assigning reasons why she has not adopted "a merrier tone," and why she has attempted to deal with "the deeper elements and more ultimate realities of life," is quite superfluous. Provided her novels are good and readable, nobody will quarrel with her if they are as lugubrious as that celebrated play wherein "there remained not one of the considerable characters alive" at the end of the fifth act, or if they are as chokefull of fun as the *Précieuses Ridicules*. If they are bad, her readers will not be propitiated in the very least by her ultimate realities and her deeper elements. As a matter of fact, *Gabrielle de Bourdaine* is neither good nor bad, but it is rather bad than good. It is sometimes awkwardly and sometimes absurdly written, as when Mrs. Spender talks about "a calm and almost frigid manner seeming to be in keeping with a Roman nose." The characters have little verisimilitude, and the incidents little probability or truth to fact. Mrs. Spender lays her scene chiefly in Guernsey, and says that she has lived in that island. How little she has noticed its ways may be judged from her remark that Gustave de Bourdaine "bought a steam plough" when he was farming there. He is elsewhere said to have been suspected of madness; and certainly this suggests it. The largest farm we ever heard of in Guernsey (and that was quite abnormal) was about 100 acres; and by far the greater part of every Channel Island property is in grass. A steam plough of his own would be of about as much use to a Guernsey farmer as a white elephant or an ironclad train. Gustave de Bourdaine, however, does other odd things, the chief of which is that, "with a crowd of other diggers," he seeks and finds gold in Australia "for years" before 1848, whereas history has generally set the date of the famous Hargreaves dis-

covery in 1851. It may be said, that these things are trifles, but they are not. In the third volume some interest of incident is evolved; but it is dangerous to trust to readers having the courage and perseverance to reach it.

Miss Flora Hayter quotes no other book on the title-page of *All Among the Barley*, and therefore may be presumed to be a novice. The best advice we can give her is either to abandon novel-writing altogether, or to change her style entirely. As Miss Rhoda Broughton to Miss Helen Mathers, so, and much more also, is Miss Helen Mathers to Miss Flora Hayter. Miss Hayter is a very innocent writer, and her situations are not risky, though they are often unpleasant and in bad taste. But, though we are loath to use hard language to a lady, we are bound to say that, in a long and painful experience, we hardly remember to have read a sillier book. There are not wanting in it signs that Miss Hayter is not quite satisfied with the "Cometh up as a Flower" ideal which at first she seems to have set up; but that is all that we can say for her.

Kompert's Jewish sketches have a great reputation, which has been recently increased by the revival of *Judenhetze* in Russia and Germany. The English reader has a translation of them here which, as a translation, is neither very good nor very bad. It does not, however, altogether obscure the individual and original savour of the stories. The first, "Schlemiehl" (which in Jewish phrase does not mean a man without a shadow, but a persistently clumsy and unlucky person), and the last, "Without Authorisation," are the best. The first has a great deal of pathos. The longest story, "The Randar's Children" is a little too long and somewhat destitute of central interest. But it illustrates the curious hatred of the Jews as publicans which is said to be at the bottom of most of the recent riots.

The author of those pleasant books *Car-touche* and *The Rose Garden* has been seen to much greater advantage than in *Princess Alethea*. The story is very much after the fashion of Miss Yonge, but it lacks her command of domestic detail and interest; it has too many characters for its length, and the characters do not combine in any artistic fashion to work out the story. It is distinctly "goody"—a word which we are very chary of using in condemnation—and its goodness is not reasonable. A girl of seventeen who failed to resent her father's remarriage with a wife only three or four years older than herself would be either a saint or else utterly wanting in all the characteristics that justify the existence of women. We sympathise thoroughly with Alethea, and are extremely sorry when she knuckles down to her stepmother. Now it clearly must be Mrs. Peard's fault when she leaves Christian men in this un-Christian frame of mind; and we feel that our guilt is on her head.

GEORGE SAINTSBURY.

CURRENT LITERATURE.

On Physical Education, and its Place in a Rational System of Education. A Lecture by Concordia Löfving. (Sonnenschein.) This book deserves a very hearty welcome. The writer is a Swedish lady, who has done good work in London by training the Board schoolmistresses to teach physical exercises to the girls. But what she has to say extends beyond primary schools. The English people have never failed to enjoy rough games and sports, and at the present time their importance is becoming more and more acknowledged. Yet it is certain that no adequate recognition has ever been given to the necessity of a systematic training of the body in both sexes from the earliest age. On this subject Miss Löfving writes not only as an enthusiast, but also as one endowed with a wide knowledge. Her object is to make known in this country the system of rational gymnastics elaborated by her countryman, Peter Henry Ling. Her earnestness, her grasp of philosophical principles, her skill in exposition, and her fluency in the English language are alike worthy of the highest praise. We have seldom read a book that was at once so practical and so convincing. She promises a complete work on education, in which the ideas here expressed will be more fully worked out; and we heartily encourage her to such an undertaking. It is not superfluous to add that this little volume is dedicated to Princess Louise, and has for its frontispiece a photographic portrait which at once wins our attention.

English Lessons for School-Room Use. By Kathleen Knox. (Bell.) We can warmly recommend this little book also to all who are concerned in the education of the young. The writer, believing that a perfect store of wisdom, beauty, and the highest mental training is to be found in poetry, believes also that poetry cannot be too much or too early made the foundation of all study; and that, for the teaching of the English language, English poetry must be the best, the most fitting, and the most beautiful of lessons. But though most of the extracts contained in this book are in verse, a few very noble examples of English prose are given also; and we do not doubt that some will object to the selections as beyond a child's capacity. In painting, which is but poetry in another form, we have always found the instinctive judgment of a child to be an unerring test of excellence; and in our attitude towards children we are too ready to forget in what degree they may indeed become our teachers. What we have to do is to confirm the transient impression; to transmute the passing emotion into a permanent source of elevation. Miss Knox's thoughtful little work affords us an admirable method for fixing in the pupil's mind the images of truth and beauty she has so carefully selected. The danger of failure in its use lies more in the unsympathetic nature of the teacher than of the taught. We should guard against the snare that they fall into who, as George Eliot says, would tell us all about the violet, yet have no nostril for its scent; and, recognising their natural powers of appreciation, give them freely from our store, thus making their little world

"Large with a land of mountain, lake and sear,
And larger yet with wonder, love, belief"

towards those great masters who have

"Sent them this wealth of joy and noble grief."

Reminiscences of an Old Bohemian. In 2 vols. (Tinsley.) Mr. Herbert Spencer has observed that a man's conversation is a sure index to his mental capacity. Let that capacity be of a high order, and he will talk of abstract principles; let it be limited, and his discourse will be confined to persons, their virtues, defects, and oddities. It is probable that the

mental faculties of ninety-nine readers out of a hundred are incapable of grasping, much less enjoying, abstractions; and it is to this large class that the author of these *Reminiscences* appeals. He has, while recalling some incidents in a long and chequered career, assembled a most amusing collection of personal anecdotes of celebrities, British and foreign. His gallery of portraits includes royal personages and pretenders, great captains, conspirators of every kind and degree, artists and musicians, authors and journalists, not to mention adventurers of every nationality and description. Our "Old Bohemian" is an excellent story-teller. He but seldom introduces as fresh acquaintances the Joe Millers of our youth; and, above all, though, as he himself informs us, these two volumes contain the confidences of an old man, yet they are pervaded by a zest and exuberant humour which are usually supposed to be the characteristic of youth. We have spoken of them as containing a gallery of portraits; and, although drawn, for the most part, in the barest outline, it is easy to see that they are, one and all, the work of an artist. If such a comparison may be allowed, we will say that the author's personal sketches remind us of nothing so much as of the life-like outline sketches by MacIver. Not infrequently our "Old Bohemian" will devote but a single anecdote to some individual, yet that anecdote generally conveys a stronger impression of its hero's presence than might have been gathered from fifty pages of an ordinary biography. Whether in the amassing of this treasury of personal details due care has always been taken to avoid offence to the feelings of individuals yet living is open to question, and we fear there are many who will look upon their portraits in this collection with any but pleasurable feelings. The author is never ill-natured, but he might, with advantage, have borne in mind that most men would prefer that their positive defects should be presented to the world rather than those weaknesses which invite ridicule. With few exceptions, the stories carry the stamp of truth, but, doubtless, readers would like a little more proof before accepting some few assertions. For instance, it is stated that the means of carrying into execution the Boulogne expedition of Louis Napoleon were raised by M. Fialin, afterwards the Duc de Persigny, from the proceeds of the famous Exchequer Bills fraud, in which he is said to have taken an active part with Mr. Beaumont-Smith, who was subsequently transported for his share in the crime. The author relates one or two anecdotes concerning the earlier career of Napoleon III. which are trivial, but interesting, as they exhibit the strange mixture of audacity and fatalism which entered into the composition of the third Emperor of the French. It happened that the "Old Bohemian" was in Strassburg at the very time when the pretender tried to seduce the garrison of that city, in October 1836, and he unintentionally intruded upon a secret meeting of the conspirators a few hours before the plot discovered itself. He says that, having gone to pay a farewell visit to friends who were staying in the Grand Rue, he stumbled into the presence of

"some ten gentlemen standing in a semicircle round a personage wrapped in a large carbonaro cloak, who was addressing them in French with a slight Helveto-Alsatian accent. He stopped short when I entered, and several of the gentlemen looked round, with evident impatience and annoyance. . . . I withdrew. . . . I had had time, however, to catch a glimpse of the face of the personage in the cloak; it was a rather heavy-looking semi-Dutch face."

If we are to believe the author, this conspiracy was really much more formidable than it seemed, after its failure; its ramifications are

said to have extended over Alsace and Lorraine, and, although it was kept very secret, a large number of Buonapartists must have been privy to it. We cannot in this notice do justice to the very varied matters of interest to be found in these Recollections, but before concluding we must call attention to the abundant store of anecdotes they contain respecting English journalists and journalism during the last thirty years. Those who care for such reading will find portraits of Thomas Littleton Holt, Jefferson Prowse, inimitable James Grant, and many another worthy, which will place those heroes before them in the very flesh.

Essays of John Dryden. Selected and Edited by O. D. Yonge. (Macmillan.) It is so good a thing that Dryden's admirable prose (for the most part accessible hitherto only in cumbrous and expensive editions) should be cheaply and handily edited that a critic is almost disposed not to look the horse in the mouth at all. This acquiescence would perhaps be well for Prof. Yonge, for his Introduction and notes are not only unsatisfactory in general execution, but abound with positive blunders. He gives such perfectly unnecessary pieces of information as that Brutus was the murderer of Caesar, and he quotes freely from Macaulay, Hallam, Johnson, &c., but he supplies no original critical *aperçus* on the position of Dryden in the history of English prose. His statements are often exceedingly wild. He says that "Dryden, whose earliest prose works were written a few years after those of Temple, and while that statesman was at the height of his reputation, may, without derogating from his claim to originality, be fairly supposed to have studied and profited by Temple's example." Now, when Dryden wrote the "Essay of Dramatic Poesy," Temple had written nothing whatever of importance, and was hardly known either as a writer or a statesman. On the other hand, Mr. Yonge does not so much as mention Tillotson, whom Dryden, by his own statement to Congreve, did study. It is not true that the Dryden family were of "knightly rank." The story told of Waller, and his ingenious reply to Charles II. about poets handling fiction better than fact, Mr. Yonge transfers to Dryden. It is not the fact that "he composed his tragedies and comedies in rhyme." The comedies are almost entirely in prose, and not all the tragedies are in rhyme. It is simply absurd to say that "in a dozen years he wrote a greater number of plays than any previous dramatist." When *Abolom and Achitophel* was published, Dryden had not "recently succeeded to the Laureateship." He had held it for more than twelve years. *Macfiekenoe* was not "dictated by his jealousy against a crowd of inferior poets," but was levelled at Shadwell, and Shadwell only. We have marked numerous other misstatements, but this selection will probably suffice. It should perhaps be said that Prof. Yonge has selected the "Essay on Satire," that on "Translation," and that on "Poetry and Painting" to represent Dryden. The first is beyond question in place, the second somewhat less so, and the third very far from representative. The preface to the Fables and the "Essay of Dramatic Poesy" had much better have been chosen. This, however, is a matter of taste; the errors just noticed, and not a few others like them, are not.

The English Catalogue of Books. Compiled by Sampson Low. Vol. III. (Sampson Low.) When we have said that this *Catalogue* is invaluable, there is little to add. Those who have used the previous volumes will know best how to prize this, which covers the nine years from 1872 to December 1880. From the point of view of the strict bibliographer, something may be wanting; but, for practical purposes, the librarian, the writer, and the reader will do well

to be satisfied. Nothing is so difficult as to verify the facts about a modern book without a direct appeal to a great library. Mr. Sampson Low has conferred a great benefit upon all who try to be accurate, by thus relieving them of a constantly recurring waste of time. It is interesting to notice that thirty-six editions of *Shakespeare* (more or less complete) have been published during the nine years, and twenty-six of *The Pilgrim's Progress*. Mr. Tennyson has thirty entries to himself; and Mr. Browning ten, though all Mr. Browning's but one represent new poems. Of all English writers, however, we fancy that the late W. H. G. Kingston must take the lead. He seems to have written at the rate of eleven volumes a-year, or exactly ninety-nine in all. A valuable feature in the *Catalogue* are the two Appendices, giving (1) the publications of the learned societies, &c.; and (2) the series issued by the different publishers.

Handy Book on the Law and Practice of Joint-Stock Companies. With Forms and Precedents. By Anthony Pulbrook. (Effingham Wilson.) Mr. Pulbrook, whose useful text of the Companies Acts, first published in 1865, is now in a sixth edition, has here supplemented that legal book with a practical guide for the benefit of laymen. The introduction of the principle of limited liability and (more recently) the issue of shares in small denominations have so combined to popularise joint-stock enterprise that no person even of moderate means can feel himself safe without knowing something about the management of companies. Mr. Pulbrook addresses himself not only to the large shareholding public, but specially to those among them who may have the wealth, the leisure, or the opportunity to become directors. That such persons should know something of the law under which they administer their trust is absolutely essential, though by no means universal. Fair dealing and mutual confidence are the foundation of success in company enterprise, as in all other business. But some measure of technical knowledge is also necessary; and this seems to be very judiciously supplied in Mr. Pulbrook's little handy book. We notice that he has added an unusually copious Index.

We have received from Messrs. Macmillan a translation, by Clara Bell, of Prof. Ebers' last novel, *Die Frau Bürgermeisterin*, which was reviewed in the ACADEMY of February 4. It is only necessary here to state that the translation has been carried out on the principle of allowing the reader to perceive that it is not the original he has before him. We mean this for praise and not reproach. In general appearance we could wish for nothing better than this series of volumes, of very varied character, which Messrs. Macmillan are now issuing at four and sixpence each.

THE last addition to Bohn's "Novelist's Library" (George Bell and Sons) is a reprint of *Cecilia* in two volumes, with a Preface and Notes by Annie Raine Ellis, who last year gave us a similar edition of *Evelina*. Despite the contemporary praise of Johnson and Burke and the essay by Macaulay, we fear that Miss Burney will not now find many readers. Even Miss Austen, we have reason to know, is more talked about than read by the present generation. Newspapers and magazines take up so much of the time of those among us who even pretend to read that the old-fashioned novel of character is never likely to regain its place. Yet, if we could have our way, no woman should be permitted to write fiction until she had gone through a course of Miss Burney and Miss Austen. We might get duller work from the survivors, but we should at least probably get literature.

MR. DAVID DOUGLAS, of Edinburgh, is issuing a very convenient edition of Mr. W. D. Howells's works, which are expressly stated to be "published with the sanction of the author." Most of the novels, or rather novelettes, get into a single volume; but *The Lady of the Aroostook* will require two. The price of each volume is only one shilling, excellently printed on good paper. We now have on our table *A Counterfeit Presentment* and *Their Wedding Journey*.

NOTES AND NEWS.

MR. BROWNING has left his temporary French home near the Grande Chartreuse, and is journeying slowly towards Venice, where he will probably stay till November.

MR. A. M. BROADLEY, author of *Tunis, Past and Present*; or, the Last Punic War, and the correspondent of the *Times* during the war in Tunis, left London on Thursday on his way to Tripoli, whence we may hope for a fresh series of letters shortly from his accomplished pen.

We are glad to hear that the Government of India has decided to employ Mr. J. Faithfull Fleet, of the Bombay Civil Service, a pupil of the late Dr. Goldstücker, as epigraphist to the Archaeological Surveys. This work was recommended last year by Gen. Cunningham, Director of the Archaeological Survey in the North and East of India, and by Dr. J. Burgess, of the Survey of Western and Southern India, whose representation was supported by the Berlin Congress of Orientalists, and, at the instance of Sir Walter Elliot, by the Royal Asiatic Society. We understand the Secretary of State for India has within the last few days sanctioned the appointment of Mr. Fleet, whose accurate Sanskrit scholarship is well known.

MR. HALL CAINE has written a volume of *Recollections of Rossetti*, which will be published shortly by Mr. Elliot Stock. We hear that the book will contain a great number of interesting letters on literary subjects written by the poet during the last four years of his life. These letters embody the fullest statement yet made public of Rossetti's views on Shakespeare's sonnets, on Donne, Drayton, Wordsworth, Coleridge, Keats, and Chatterton, as well as on the less-known poets of the last eighty years. The book is not a formal biography, but it contains an account of the entire career. The personal reminiscences of the writer (who was, it will be remembered, Rossetti's daily associate during the last year of his life) will form a leading feature of the work.

MR. RONALD BAYNE has undertaken to complete Prof. Mayor's edition of the English works of Bishop Fisher for the extra series of the Early-English Text Society. This completion will contain the new-found sermon of Bishop Fisher preached at the recantation of Dr. Barnes, Starkey's unprinted Life of Fisher, the *Life in the Lansdowne MSS.*, and all the letters from, to, and about Fisher which Mr. Bayne can collect from the Record Office, the British Museum, and other sources.

PROF. ARBER has just finished his edition of Richard Barnfield's poems, 1594-98, and in another fortnight will issue it with Joy's *Apology to Tindale*, 1535, and Bishop Cooper's *Admonition to the people of England*, 1589 (the reply of the Bishop to Martin Marprelate's *Epistle*), in his "English Scholar's Library" of faithful reprints. In his modernised reprints, Prof. Arber has two fresh volumes of his *English Garner* ready, the sixth and seventh containing many rare and curious pieces whose intrinsic merit the alteration of their outward form cannot much damage.

DR. JAMES MARTINEAU's study of Spinoza, which we have already announced as about to

be published by Messrs. Macmillan, will have as frontispiece a photograph from the portrait preserved in the Wolfenbützel library.

MR. G. A. SALA has ready a new book, to be called *Living London*, with illustrations from his own pencil.

PROF. RHYS' little book on *Celtic Britain* will be published shortly by the Society for Promoting Christian Knowledge in their series entitled "Early Britain," which was begun by Mr. Grant Allen's *Anglo-Saxon Britain*. It will have two maps.

MR. SAMUEL WADDINGTON will publish immediately, with Messrs. Bell, a monograph on Arthur Hugh Clough.

MESSRS. BENTLEY propose to issue a limited edition, on large paper, of Miss Austen's novels, printed on hand-made paper, and bound in white cloth. The edition consists of six volumes, which will not be sold separately.

OWING to an unexpectedly large demand, the publication of Canon Farrar's new work on *The Early Days of Christianity*, which we announced last week for September 22, has been postponed till October 2.

MESSRS. HURST AND BLACKETT will shortly publish a new work by Mr. J. Fitzgerald Molloy under the title of *Court Life Below Stairs*; or, London under the First Georges, 1714-60. It will contain pictures of Sir Robert Walpole, Lady Mary Wortley Montagu, Pope, and other literary personages of the time.

MR. EDWARD WALFORD, who, in conjunction with Mr. Walter Thornbury, wrote *Old and New London*, has been engaged in the preparation of a companion book, entitled *Greater London*, which will embrace the environs of the metropolis. This new work will be published by Messrs. Cassell, Petter, Galpin and Co. next month, in serial form.

MR. SYDNEY HODGES, whose last year's Christmas book—*Among the Gables*—will not have been forgotten by those who came across it, proposes to issue a continuation this winter, to be called *Among the Wobblins*.

MESSRS. F. V. WHITE AND Co. will publish early in October a novel in three volumes, by T. Shairp, entitled *Bell and the Doctor*. We understand that the author is a cousin of the well-known novelist Florence Marryat.

A NEW novel by William Westall, entitled *Red Byington*, will be published during October by Messrs. Hurst and Blackett. The same firm have in the press *A Golden Bar*, by the author of *Christina North*, &c. Both these will be in the orthodox three volumes.

MESSRS. BELL have in the press a new edition of Boswell's *Life of Johnson*, based on that of Oroker, but thoroughly revised and augmented by the Rev. Alexander Napier; and also a translation, by Mr. J. S. Stallybrass, of Grimm's *Teutonic Mythology*.

A *Scamper through America in 1882* is the title of a book which Messrs. Griffith and Farran have in the press. It is written by Mr. T. S. Hudson, a shipowner of West Hartlepool. With his wife he visited Washington, San Francisco, the Yosemite Valley, Arizona, and Santa Fé, and took a run into Canada. He has not only described the scenes he visited, but he has recorded many impressions which will be valuable as coming from one who is able to take an independent view of matters in their commercial aspect.

MESSRS. T. AND T. CLARK, of Edinburgh, will publish early next month the second series of their "Foreign Theological Library" for this year—viz., Martensen's *Social Ethics* and the first volume of Weiss's *New Testament Theology*. Also Meyer's *Commentary on Hebrews* and

James and John, completing the "Meyer Series" in twenty volumes.

THE following are preparing for publication:—A second edition of M. Paul Janet's *Final Causes*; Uhlhorn's *Charity in the Primitive Church*; *The Doctrines of the Holy Spirit*, by Prof. Smeaton, being the "Cunningham Lectures"; and the third volume of Hefele's *History of Church Councils*, to the Council of Chalcedon.

OF the "Bible Class and Handbook Series" three more volumes are in the press:—*Genesis*, by Dr. Marcus Dods; *Romans*, by Principal Brown; and *The Reformation*, by Prof. Lindsay.

THE Society for Promoting Christian Knowledge announce the following additions to their serial publications:—In their "Home Library," *The Church in Roman Gaul*, by the Rev. R. T. Smith, Canon of St. Patrick's, Dublin; *John Hus*; or, the Commencement of Resistance to Papal Authority on the Part of the Inferior Clergy, by the Rev. A. H. Wratislaw; *Judaea and her Rulers*, from Nebuchadnezzar to Vespasian, by M. Bramston; and, in their "Diocesan Histories," *Oxford*, by the Rev. E. Marshall, and *York*, by the Rev. Canon Orsaby.

THE same society also announce the publication of a great many stories, most of which will be illustrated. The following are samples of the bulk:—*Old-Fashioned Fairy Tales*, by Juliana Horatia Ewing; *The Good Ship Barbara*: a Story of Two Brothers, by Mr. S. W. Sadler; *Isaac's Hero*: a Story of the Revolt of the Cevennes, by Esmé Stuart; *Una Orichon*, by the author of *Our Valley*, &c.; *Alone in Crowds*; or, Kindlup Tower, by Annette Lyster; *Fairy Tales for Every Day*, by Harriet L. Child-Pemberton; *Brothers of Pity*, and other Tales of Beasts and Men, by Juliana Horatia Ewing; *A Baker's Dozen*, by L. H. Apsaque; *The Professor's Daughter*, by A. Eubule-Evans; *Sketches of Our Life at Sarawak*, by Harriette McDougall; *A Brave Fight*: being a Narrative of the Many Trials of Master William Lee, Inventor, by the Rev. B. N. Hoare; *Out of the Shadows*, by Crona Temple; *Rudolph's Dilemma*, by A. H. Engelbach; *Tender and True*, by Florence Wilford; *Under the Blue Flag*: a Story of Monmouth's Rebellion, by Mary E. Palgrave; *A Dream of Rubens*, by Austin Clare; *Adé*: a Story of German Life, by Esmé Stuart; *Asaph Wood*; or, Little by Little, by Phoebe Allen; *Beechwood*, by Mary Davison; *The Church Farm*, by S. M. Sitwell; *Harriet's Mistakes*: a Story for Servants, by the author of *Clary's Confirmation*, &c.; *Little Will*, by Helen Shipton; *Miss Jean*; or, Lives that Tell, by M. E. Hayes.

MESSRS. BLACKIE also announce a long series of illustrated story-books by popular writers for the young:—two by Mr. G. A. Henty, *Under Drake's Flag* and *Facing Death*; two by Mr. G. Manville Fenn, *In the King's Name* and *Nat the Naturalist*; two by Mrs. R. H. Read, *Our Dolly* and *Fairy Fancy*; two by Mrs. M. R. Pitman, *Garnered Sheaves* and *Florence Godfrey's Faith*; also *Stories of Old Renown*, by Mr. Ascutt B. Hope; *Four Little Mischiefs*, by Miss B. Mulholland; *Brother and Sister*, by Mrs. Lyngait; *Adventures of Mrs. Wishing-to-be*, by Miss Corkran; and *New Light through Old Windows*, by Mrs. Gregson Gower.

IN the same class of books, Messrs. George Bell and Sons have ready *Princess Althea*, by F. M. Peard (which is noticed in another column of the ACADEMY), and *Hector*, by Flora Shaw, with eight illustrations by W. J. Hennessey.

A NEW work from the pen and pencil of Mr. T. T. Wildridge, secretary of the Hull Art Club, will appear at an early date under the title of *Old and New Hull*.

THE Institut de Droit international held its third meeting at Turin last week, from Tuesday

to Saturday, under the presidency of Sig. Augusto Pierantoni, Italian Deputy, and Professor of International Law at Rome. An address in memory of the late Muntzelli was delivered by M. Rolin-Jacquemys, the Belgian Minister of the Interior. Three important subjects were discussed. First, the conflict of commercial law, with reference to which special committees were appointed to consider bills of exchange and the contract of freightage; second, a scheme brought forward by M. de Martens concerning mixed tribunals in the East; third, a revised code of the law of maritime prize, consisting of sixty-eight articles, which it is proposed to submit to the several Governments of Europe. Sir Travers Twiss was kept away by illness; but Prof. Holland, of Oxford, M. Emile de Laveleye, of Liège, and M. Olunet, of Paris, were among those present. It was arranged to hold next year's meeting at Munich in the first week of September.

THE New York Critic of September 9 has an interesting paper on "American Literature in Russia," signed P. J. Popoff. The Indian tales of Fenimore Cooper are more read in translations than any other foreign novels. Longfellow's poems are familiar to all educated Russians, among whom it would be difficult to find one who has not read *Uncle Tom's Cabin*. Emerson is known and admired; and the writings of Bret Harte and Mark Twain are translated into Russian as soon as they appear. The novels of Henry James, Jun., also find some readers, but Russia is still ignorant of the poets Poe, Whittier, Whitman, Lowell, and Bryant.

THE Russian Academy intends publishing shortly the diary of Joseph, late Metropolitan of the Baltic Provinces, the deceased prelate having bequeathed a sum of money for this purpose. The diary, which extends over his entire period of active duty, will have copies of official documents appended, and is expected to throw interesting light on the position of the Orthodox Church in these provinces.

THE Russian Palaeographic Society has issued a monograph by M. Nikolai Barsulov, entitled *Istokhniki Russkoi Agiographii* ("The Sources of Russian Hagiology"), being vol. lxxxi. of the society's publications. This work forms a complete bibliographical index of Russian saints—both those who have been duly canonised and those who are merely so in the popular belief. The uses of such a compilation to students of Russian history are obvious.

PROF. ANGELO DE GUBERNATIS fairly overwhelms us with his literary activity. But a month ago (August 19) the second volume of his learned *Mythologie des Plantes* was reviewed in the ACADEMY. He now comes forward as the editor (and, we venture to conjecture, in great part the writer likewise) of a "Storia universale della Letteratura" that is published by Hoepli, of Milan. The undertaking is a great one, for it is to be divided into three series, of about six volumes each. The beginning has already reached us, though by anticipation dated 1883. It consists of two volumes dealing with the drama. In the first of these we have a rapid sketch (in less than 600 pages) of the drama of all times and all countries, including that of the Hebrews, the Chinese, Guatemala, and such minor European nations as the Servians and Ruthenians. The second volume, which is itself divided into two parts, consists of a "florilegio," or collection of extracts (in Italian), exemplifying each of the national dramas before mentioned. It begins with the famous "Sakuntalá" of the Sanskrit poet Kālidāsa. The work is, of course, intended for Italian readers, but this hardly excuses the proportion of more than 200 pages devoted to Italy and just ten to England. The extracts

are from Marlowe's "Faust," "Hamlet," "The School for Scandal," and "I nostri Bimbi" by Mr. H. J. Byron.

AMERICAN JOTTINGS.

WE hear that M. Alphonse Daudet, the novelist, has written a paper on M. Victor Hugo for an early number of the *Century*.

It is stated that no less than twenty-one post-office towns in the United States now bear the name of Garfield.

MR. J. BRANDER MATTHEWS, whose recent study of the French stage was very favourably received in this country, has made a collection of *Poems of American Patriotism*, arranged in the chronological order of the events celebrated. It will be published by Messrs. Charles Scribner's Sons.

AMONG the books to be issued by Messrs. Houghton, Mifflin and Co., of Boston, which are of interest on this side the Atlantic are a new edition of the complete works of Nathaniel Hawthorne, in twelve volumes, with bibliographical notes by his son-in-law, Mr. George P. Lathrop; an edition of Shakspeare, in three volumes, edited by Mr. Richard Grant White; a new edition of the complete poems of Mr. Aldrich, in one volume, with twenty-eight illustrations specially designed by members of the Paint and Clay Club of Boston; an edition of "Evangeline," in folio, with sixteen illustrations by Mr. F. O. C. Darley; a new edition of *The Autocrat of the Breakfast Table*, revised by the author, who has himself added bibliographical notes and a fresh Preface; a novel entitled *Doctor Zay*, by Miss Phelps, author of the once-celebrated *Gates Ajar*; *Fenimore Cooper*, by Prof. T. B. Lounsbury, of Yale College, and *George Ripley*, by Mr. O. B. Frothingham, in the "American Men of Letters" series; and also *Andrew Jackson*, *John Randolph*, *James Monroe*, *Daniel Webster*, and *Thomas Jefferson*, in the "American Statesman" series.

As evidence of the popularity of English authors in America, we note that the announcements of Messrs. Roberts Bros., of Boston, include new editions of the following:—Landor's *Imaginary Conversations*, the works of Mr. Hamerton, and the collected poems of Keats, D. G. Rossetti, Miss Rossetti, Miss Ingelow, and Mr. Edwin Arnold.

THE Trustees of the Boston Public Library have issued their thirtieth annual Report, which shows that the number of volumes has increased during the year by 13,239, and that the grand total now exceeds four hundred thousand. Mr. H. H. Furness, who was deputed to examine the Shakspeare department, states that this is only surpassed by three English libraries—the British Museum, the Bodleian, and Trinity College, Cambridge. The system by which the library is made specially useful for the schools of the town, appears to be entirely successful.

THE *Critic* attributes the want of success in the negotiations for an international copyright entirely to the fault of the English publishers. It alleges they have claimed that no English books shall be republished in the United States "within a certain period (say six months) after their appearance in Great Britain." We believe that there is no foundation whatever for this statement, which is absurd on the face of it. Possibly the writer has made a confusion with the American demand that English books must be republished there within a limited period under penalty of losing all copyright. The *Nation*, on the other hand, in a long article reiterates its point (which seems to us to contain the gist of the matter) that the key of the position is held by the "Western pirates." The question is, and always has been, one of "cheap books" versus "authors' rights."

FRENCH JOTTINGS.

WE hear that negotiations have begun between the French and German Governments for a new treaty of international copyright.

It is stated that two more newspapers will shortly appear in Paris, each, as usual, representing some leading politician. These are *L'Indépendance française*, to be inspired by M. de Freycinet; and another, as yet unnamed, will be edited by M. Daniel Wilson, the son-in-law of the President.

THE question of boarding-schools against day-schools, and of colleges against universities of the Scotch type, has substantially been decided in one way in this country, though perhaps not after sufficient consideration. The same question is now being warmly discussed in France, where the weight of authority seems to be against the system of "internat," represented by the great *lycées* at Paris. As might be anticipated, the clergy were the first to oppose this system years ago. In 1871, the eminent chemist, the late Sainte-Claire Deville, read a paper before the Académie, in which he attacked the moral and physical evils of the *lycées* with no unsparing hand. M. Bréal, the Inspector-General of Public Instruction, has for the last ten years held no less strong views. M. Maxime du Camp, of the Académie française, M. Gréal, recteur de Paris, and M. Jules Simon have all recently expressed opinions adverse to the present system, though they do not regard it as incapable of improvement. In the current number of the *Revue politique et littéraire*, M. Francisque Boullier, of the Institut, comes to the defence of the *lycées*. He does not appeal at all to English precedents, but his final argument is very much like our own:—

"C'est seulement avec l'internat qu'elle peut faire des hommes; avec l'externat, elle ne peut faire que des bacheliers."

UNDER the title of *Un Poète philosophe* (Paris: Ollendorff), M. Coquelin aîné, of the Comédie française, has issued a brilliant study of the young Academician, M. Sully Prudhomme, containing several poems never before published.

THE series of "Documents inédits sur l'Histoire de Paris" has been augmented by three volumes containing the Remonstrances of the Parliament of Paris during the eighteenth century.

ACKNOWLEDGMENTS.

WE have received the following pamphlets, &c.:—*Gibraltar: Is it worth Holding? and Morocco*, by Capt. Fred. P. Warren (Stanford); *Gibraltar and Ceuta*, by Gen. Sir William J. Codrington, reprinted from the "Times" of February 3, 1869 (Stanford); *Comparative Ethics: I. Moral Standpoint—"Present Religion,"* Vol. III., by Sara S. Hennell (Trübner); *Industrial Assurance: As it Was, As it Is, As it Will Be*: a series of pamphlets by Edward F. Taunton—I., "The Poor Law and Industrial Assurance" (Kegan Paul, Trench and Co.); *John Bunyan and the Gypsies*, by James Simson (Baillière, Tyndall and Co.); *Sir Bartle Frere's Last Attack on Cetehuayo*: Sir H. Bulwer and Bishop Colenso (Griffith and Farran); *Household Boiler Explosions: their Cause and Prevention*, by William Ingram (Orosby Lockwood); *Something more than the Electric Lighting Bill*, by Sir Frederick Bramwell, reprinted from the "Times" (Clowes); *The Raspberry and Strawberry*, and *The Gooseberry and Currant: their History, Varieties, Cultivation, and Diseases*, by D. T. Fish (Upcott Gill); *The Order of Corporate Re-union*, by the Rev. Thomas Livius, reprinted from the "Irish Ecclesiastical Record" (Dublin: Browne and Nolan); *The Restoration of the Jews and the Rebuilding of Solomon's Temple*, by Brother O. W. Meiter (published by

the Author); *Curiosities of Government: Facts and Figures for the Million*, by One of the Crowd (Heywood); *Some Observations on Consumption*, by Dr. William H. Pearce, reprinted from the "Medical Times and Gazette" (Pardon); *The Gas Consumers' Guide*, by Altruism, Second Edition (Pitman); *Health Lectures for the People*, Series 1881-82, Nos. 6, 7, and 8—"Infant Feeding in Relation to Infant Mortality," by Dr. Henry Ashby; "Colds and their Consequences," by Dr. J. Dreschfeld; "Measles and Whooping Cough," by Dr. John Tatham (Heywood); *Views on Spelling Reform*, by G. L. Larkins, Second Edition, augmented (Stanesby); *Silver Bells*, Tonic Sol-fa Notation, Edited and Arranged by W. M. Miller (Moffat and Paize); *Church Army Songs*, Compiled by the Rev. W. Carlile (Grattan, Marshall and Co.); *How the Railway Companies are crippling British Industry and destroying the Canals*, by Peter Spence (Pitman); *Recollections of George Dawson*, and his Lectures in Manchester in 1846-47, by Alexander Ireland, reprinted, with Additions, from the "Manchester Quarterly"; "John Byron's Journal, Letters, &c., 1730-31," by J. E. Bailey, reprinted from the "Palatine Note-Book" (Manchester: Gray); *Sunday in Lancashire and Cheshire*, by William E. A. Axon, reprinted from the "Transactions" of the Historic Society of Lancashire and Cheshire (Liverpool: Brakell); *Thoughts on Emigration*, by James Washington Bell (Leipzig: Matthes); &c., &c.

ORIGINAL VERSE.

TWO HARVESTS. 1882.

HERE Autumn rules with nodding poppies bound
'Midst serried barley, wheat-spears, shafts of gold,
Birds, laughing children, love's old story told
To willing ears when twilight gathers round;
There, bugle's blare and cannon's deep hoarse sound,
The vanquished Arab and the victor bold
Alike in smoke and crash of onset rolled—
Death there the harvest to his mind hath found.
While earth revolves both harvests shall not cease,
Yet mutely witness they of better things
When from this world the soul obtains release;
Tow'ards that new life the hopeful spirit springs,
Ere long 'twill rise to it on viewless wings—
There Love reigns circled with the rainbow Peace.

M. G. WATKINS.

MAGAZINES AND REVIEWS.

BY far the most interesting articles in the *Cape Quarterly Review* (Juta) are those which smack of the soil. The "Chronicles of Cape Commanders" are continued in the July number with some valuable lists of the Dutch burghers in 1691. Mr. George M. Theal gives the second part of his "Notes on Books relating to South Africa," in which due attention is paid to Portuguese, Dutch, French, and English writers. But the most important paper of all is that on "Early African Exploration up to the End of the Sixteenth Century," which was originally read by Dr. Theophilus Hahn before the South African Philosophical Society. Taking as his text two early maps, Dr. Hahn runs through the history of African exploration from Egyptian times, and thus summarises the work done by the Portuguese:—"As the matter stands at present, all Central African explorers stand on the shoulders of the Portuguese travellers of the fifteenth, sixteenth, and seventeenth centuries." There are no less than three articles treating of the Cape University, but we confess that they have not left a very definite impression on our mind. A proposal, which has apparently been carried out with success, to protect ostrich camps by means of electric bells is very curious.

THE chief thing noticeable in the September *Literary* is a long concluding article by M. Paul

Lacroix on his relations with Balzac. It is illustrated with a really charming portrait of Mme. de Balzac, by Vogel, printed in brown ink. The arrangement of the hair, taken in profile, escapes the commonplace effect inseparable from the Madonna bands of forty years ago or thereabouts; and the face, with its curious thoughtfulness, makes the reader feel hardly startled when he comes to the Bibliophile's assertion that Mme. Hanska "pouvait revendiquer une bonne part d'auteur" in no less a work than *Séraphita*.

In the last number of the *Anglia*, a quarterly which Prof. Wülcker keeps up at a high level of scholarship, the leading paper is one by M. Bech on the sources and plan of Chaucer's "Legende of Good Women," and its relation to Gower's "Confessio Amantis." Dr. A. Schröer gives a diplomatic print of the short Anglo-Saxon poem "The Grave." O. Lohmann illustrates Byron's "Manfred" from his diary and letters in a very interesting way. Dr. W. Sattler continues his careful studies of the construction of English words with special propositions: *to die of, from; the key of, to; kind of (in) him; in (with) a loud voice*. M. Hartmann discusses whether King Alfred is the author of the alliterative translation of the *Metres of Boethius*. Prof. Wülcker gives an account of the Homilies of the Vercelli MS.; and of a young French student of Anglo-Saxon, L. Botkine, who, after publishing the first French translation of "Beowulf" and the "Chanson des Runes," died last May at the age of thirty-nine. Theodor Wissmann opposes Prof. Schiffer's theory of Middle-English accentuation.

OBITUARY.

DR. PUSEY.

DR. PUSEY, who died on September 17, filled for nearly fifty years a position which had already become an enigma to the last generation of his contemporaries. Like the other great leader of the Oxford reaction, he was at one time in sympathy with the temperate academical liberalism of which Oopleston and Whately were the most conspicuous representatives. Card. Newman's liberalism is known to this generation by his recantation; Dr. Pusey's found expression in the work on German Rationalism (never formally recanted), which was completed in 1828, the year that its author was appointed Professor of Hebrew. By a singular fate, the future leader of the High Church party in Oxford began by breaking a lance with one of the leaders of the High Church party at Cambridge in support of the thesis that Rationalism was almost a venial sin in Germany, as it could trace its historical development to a pietistic reaction against the intolerable yoke of Lutheran scholasticism, which Pusey, like Möhler, held to be far more galling than that of the scholasticism of the thirteenth century. A change of front is not always a change of base; but between 1828 and 1836 Dr. Pusey changed front silently, but very completely. As soon as the "movement of 1833" made itself felt outside Oxford, the Regius Professor of Hebrew was recognised as its real head. He owed the recognition not merely to his academic station or to his connexion with the aristocracy, not even to his learning or his munificence, but to his judgment and his character. Of all the leaders of the movement he was the most sanguine, the most tolerant, and the most clear-sighted; he knew from the first the full range to which patriotic principles could be carried at Christ Church; he knew from the first that it was hopeless to try to enforce them by coercive discipline; that the question was not whether the Church was to dictate to the State, but whether Parliament or the courts or the Press were to dictate to the

clergy. He disapproved of the Gorham prosecution and the prosecution of Messrs. Williams and Wilson, as he had disapproved of Bishop Blomfield's attempt to enforce his reading of the rubrics upon the London clergy; he took as little part as might be in the campaign against Hampden, and he had his reward. When the appeal to the secular arm failed, he was not shaken or discouraged; he simply reasserted the doctrines which usurping courts had tried to disparage. Then he had the great advantage of not being a hostile critic of the actual Establishment; he apologised for the Revolution of 1688, and he thought it a matter of course to subscribe to the Martyrs' Memorial at Oxford till he found that to do so would separate him from Newman. It is true that he did not escape the astonishing inventiveness of outraged Protestantism. Once as he was travelling by rail he found himself the neighbour of a lady who "had it on the best authority" that he was in the habit of sacrificing a lamb every Friday; of course the lady did not know that she was speaking before Dr. Pusey. When he was known, his influence told by its own weight with the minimum of friction; it told the more readily because of the contagion of his fervour. Of all the leaders of the movement he was the only popular preacher. Keble, to the public at large, was only the author of *The Christian Year*. Newman's self-restraint made his wonderful sermons cold to untrained hearers: besides, neither Keble nor Newman had "the popular fibre;" Hook and Wilberforce, who had it, were limited in other ways, Hook by his insularity, and Wilberforce by his disinterested regard for public opinion. Learned as Pusey's sermons were, it was not an intellectual effort to follow them when they were interpreted by his voice and his presence. His natural authority was so great that he could assume the authority of the Church and the Fathers without having to be always proving it: his sermons might have suggested the well-known line in the *Lyra Apostolica*—

"They argued not, but preached, and conscience did the rest."

He had lived with the Fathers till he had become as one of them. In his later sermons especially he reproduced them largely; and, as a rule, the extracts gained in their new setting. And all his authority was brought to bear upon the tenderest points: others were the theorists of providence and authority and schism and self-discipline; he was the preacher of the sacraments, of repentance and devotion. The library of the Fathers, to which he devoted much time and money, had only a limited success; he never realised how much an ordinary reader has to get through before he can begin to enjoy them. But, though he failed to naturalise the Fathers, he succeeded in naturalising, through his numerous adaptations (of which the *Spiritual Combat* and the *Paradise of the Soul* were perhaps the most important), as much of the spirit of the devotional and ascetical literature of the counter-Reformation as could be separated from the cultus of the Saints: for on that one point he was jealously Protestant from first to last. Naturally it fell to him to direct the first attempts to revive the conventual life, which, but for his support, might have been compromised by the hazardous experiments of a foundress who was ready to copy all the audacities of the Thebaid and Assisi. In all things he had much of the nature of a chieftain, and not least in this, that he was always ready to defend those who applied his principles consistently; even when he might have thought the application indiscreet or premature he never saved himself by saying so. Nor did he ever regard an enforced retreat as an apostasy; when the police failed to protect Mr. Bryan King, Dr. Pusey advised him to end the scandal by putting himself into the hands of the churchwardens.

His generosity to the weak was of a piece with his veneration for the poor, which was so deep and genuine that it preserved him more completely than any other great ecclesiastic of the nineteenth century from political partisanship; he never sought to make capital out of either the fears or the hopes which the advance of democracy excites. The piquant denunciations of luxury in the sermon on "Our Pharisaism" have no partisan flavour; the aristocracies which have lasted longest have lived under written or unwritten sumptuary laws. If he wasted neither strength nor thought upon parliamentary politics, he was too powerful in Oxford to keep aloof from university politics. In these his attitude was that of a very determined and very enlightened Conservative. He was prepared from the first for all changes by which his principles had nothing to lose—such, for instance, as the specialisation of study during the latter part of the academical course; and he resisted to the last changes, however inevitable, like the abolition of tests, which could not but be unfavourable to his principles. He successfully resisted the proposal to raise the salary of the Regius Professor of Greek out of university funds; and he did not resist the compromise whereby Christ Church, in fulfilment of a duty of doubtful obligation, increased the endowment of the Chair. Neither this controversy nor the action of the first University Commission, nor even the abolition of university tests, impaired his influence; for more than a quarter of a century he was the leader of a majority against which nothing could be carried in Council or Convocation.

Of course such a position is not held without great labour, which of itself must have been a serious hindrance to literary work; besides, he had his lectures to prepare and to deliver, and all the time he was burdened with the personal care of many souls. Then, too, the overflowing fullness of mind which made his sermons as delivered so impressive was rather a hindrance when he came to write for publication. Most of his later works, except his sermons, were in the nature of collections of testimonies, like the treatise on the Real Presence, which was a supplement to the sermon for which the Six Doctors suspended him in 1843, and the work on the Councils of the Church, which was his reply to the claims of the Papacy. Such works were often long delayed, and it is not likely that their influence will be permanent. With immense and accurate historical knowledge it cannot be said that he had the historical temper which is inseparable from a sense of the movement of human affairs and some interest in things temporal, while he never seemed to care for anything in history but what he could think a manifestation of the eternal.

Amid all these hindrances Dr. Pusey's indomitable perseverance carried him to the end of all his undertakings but the *Irenicon*, of which part I. appeared in 1865. It was laid aside when the Council of the Vatican invited Pius IX. to proclaim himself infallible in faith and morals. Even the wonderfully minute commentary on the Minor Prophets, which began to appear in 1862, was completed at last, and remains a worthy monument of the traditional school of Hebrew scholarship. Something more than this may be said of the nine lectures on Daniel the Prophet, first published in 1864. In none of his writings is the author's magnanimous confidence in his position more conspicuous or more effective. The history of the variations of Rationalists in the vain attempt to make the vision of the seventy weeks and the two visions of the four empires end with Antiochus Epiphanes is really masterly, and goes far to justify the tone of victorious assurance which is maintained throughout. The work, as a whole, did not convince Bishop Thirlwall, but that

competent judge pronounced after reading it that the true history of the Book of Daniel had still to be written. Dr. Arnold had believed that the true history of the book was written long ago—by Porphyry. G. A. SIMCOX.

"THIS IS HOW THE WAR BEGAN."

[We have received the following letter; and, though the march of events has rather outrun comment, our readers will probably think that it ought not to be lost.]

Sept. 5, 1882.

The old saying anent Turkish succession is

"An Amurath an Amurath succeeds."

But, when the last Amurath (ex-Sultan Moorad) proved wanting in wits and *vis*, he was thrust aside by his brother, Abdul Hamid—an unrighteous succession, without intervention of the venerable Ottoman State machinery, the bow-string or the "bowl," i.e., the coffee-cup. The result of such innovation is that the reigning Sultan became, in the eyes of all his Mohammedan subjects, an impostor, a usurper; and so he will remain till Allah please to remove ex-Sultan Moorad.

Abdul Hamid, however, proved equal to the emergency. An Armenian *pur sang*, he has not a drop of Turkish blood in his veins; you have only to look at the man and his manners. He inherits all the special qualities of that exceptional people, which, throughout their length of history, with one short brilliant interval, have been ever serfs and slaves to their neighbours. This is the result of their prodigious personal cowardice. Endowed with splendid constitutions and with immense bodily strength and endurance (as the Hammal of Stamboul shows), and remarkable for many of the mountaineer's virtues—industry, frugality, thrift, temperance—they fail in one thing only. They will not, they cannot, fight. They have no stomach for war. Their natural condition is peace, and their only campaigning is "beggar-my-neighbour."

His *provenance* explains the banalities and the peculiarities, the contrasts and contradictions, of the Armenian Sultan's character. An utter poltroon in physique, he has all the reckless audacity of the Brahman politician. With a woman's horror of gun and sword, and with all a tyrant's abject terror of assassination, he can face consequences like a hero. Apparently uncertain, titubant, blown about by every gust of opinion, he has the perseverance of a sitting hen, a persistence which, united with personal courage, would be a will of iron. He is never so determined as when he shows and pleads doubt. Like his ancestors, the Medes, his laws know nothing of change. He may be compelled, but it must be by *force majeure*—by an appeal to the *ultima ratio*—which prostrates him. And last, not least, he has all the deep-laid, stored-up, passive, feminine bigotry and fanaticism which characterise the gifted Armenian brain. Compare him with his compatriot, Noobar Pacha, so well known in London and Paris; the parallelism of the lines is peculiar and impressive.

Abdul Hamid hardly seated himself upon the throne before he proceeded to develop his pet *politique*. It had long been floating in the air; he brought it down to earth. The Hegiran year 1300, which will open on November 12, has a special significance to Moslems. It will see the Second Coming of the Mahdee—that mysterious personage who causes so much blundering among Kaffir scribes. Uninspired prophecy declares that the re-appearance heralds the general triumph of Islam, which will be world-wide before the opening of its fifteenth century. Thus we have lately seen an Imam Mahdee or two, and we shall

very soon see more. It is not merely a matter of knavery and dupery. Even sensible Mohammedans, who are above such preternatural absurdities, begin to think that, if Islam is to be saved from the silent but absorbing advance of Christianity in Asia and Africa, determined action must be taken ere action come too late.

Abdul Hamid threw himself heart and soul, with all his Armenian ardour—the mountaineer's *perfidum ingenium*—into this religious movement. He aimed at making himself the Head of the Revival. It was to be, under him, a "Crescentade" not less determined than the old Crusades. It would fight when necessary; but it would begin with quiet, peaceable, "constitutional" measures. It would preach at Mecca before drawing the sword and marching to conquest at Medinah.

It is unnecessary to take up time and space by detailing the progress of this "Crescentade" during its first five years. Enough to say that the Revival of Islam was everywhere hailed with a prodigious outburst of wild enthusiasm. From Hedgaz, the heart and holy land of the Moslem world, this movement ran like lightning to the finger-tips of the body religious beyond the great deserts of Africa. In Persia it has already abated much of the secular animosity between Soonnee and Sheeah—Catholics and Protestants. In Upper India it has lit a smouldering fire of Wahhabeeism, which wants only the oxygen of opportunity to flame forth with prodigious violence. It has overrun Malacca, and has extended even to China, where it is wiping out the memories of the Panthay massacre and the destruction of Mohammedanism by Mandarinism. In Egypt, one of the most bigoted as well as the "basest of kingdoms," it has developed from an imbroglia into a rebellion, a massacre, and a war which we must not look upon as a mere isolated accident. It is one of the links in the great chain which binds together the whole Moslem world.

Ex-Khedive Ismael, who, from his laboratory at Naples, has been laying down electrical wires conducting bribery, corruption, and confusion throughout the length of Western Asia and North-eastern Africa, is an old fox that fought shy of the movement-snare. He saw that it would soon move against himself; and he kept aloof, at the expense of much snubbing, of paying dangerous visits to Constantinople, and of "parting" heavily in the shape of douceurs. But England, directed with the proverbial amount of political wisdom, persuaded him to "retire from business," and throned Tewfik Pacha in his stead. This unfortunate son and heir had never been a *persona grata* to his father. Although the latter secured, unlawfully as usual, the succession to his eldest child, when it belonged to the eldest male of the reigning house, he had not educated the raw laddie for succession. Tewfik was a *dummer junger*, without a trace of his father's talents and ambition, political or financial. He was deficient in energy as he was devoid of intellect. Weak as water, conscious of being a mere usurper in the eyes of all good Mohammedans, and terrified by isolation, like a child in the dark, he looked helplessly around for some support, some mainstay. The first glance decided him. He threw himself with abandon into the open arms of his suzerain, the Armenian Sultan. He sent missions to Constantinople, imploring that his brothers, especially the active and energetic Hussein, the only man in the family, might be kept in banishment. He surrounded himself with a bigoted and retrograde Ministry, whose chief was the Jew-Moslem, Riyaz Pacha. He revived and encouraged the import slave-trade by way of snapping his fingers at Europe. He built mosques here, there, and everywhere, even in the main square of Suez. At levées and receptions he endeavoured to assign pre-

cedence to his promoted Fellahs, and showed as much incivility as he dared to Europeans who were not officials. Through his Jew Minister, he compelled (Chinese) Gordon Pacha, Governor-General of the Equatorial Provinces, to resign; and he supplied his place by a half-servile of the worst reputation. And, so far, his weakness, accentuated by his fanaticism, was directly concerned in bringing about the present war.

The military element in Egypt, which has almost "eaten up" the religious, was the creation of the ex-Khedive. In his unhappy mania for apeing Europe he established a corps of guards, with messes, mess-plate, and all the regimental furniture of England. Nothing could be quaintier than the contrast of the Fellah-peasant officer and these civilised surroundings. But the fellow appreciated the position, and, being duly mounted and equipped, forthwith rode whither beggars on horseback usually ride. The day when the darky colonels plucked Rivers Wilson's beard may be considered the triumph of military revolt and the *jour de naissance* of the present campaign.

Among the Pretorians was "Ourabi" Bey, now written Arabi and mispronounced A'raby—doubtless a reminiscence of "Araby the blest." Continental newspapers, which prefer fancy to fact, have made him a Frenchman, a Spaniard, and what not; and he will probably become an Irishman, though very different from the futile Patlander. Arabi is the son of an honest Fellah who tilled the soil near Cairo. His mother, who has been interviewed by more than one Englishwoman, sent all her boys as volunteers to serve and to die for Saeed Pacha. This remarkable step—for the Egyptian parent invariably did and does the reverse—drew the ruler's attention to the lads. He placed them in the Military College; and he was heard to say, according to his widow, that honest Anglophobe, Mdme. Saeed Pacha, that he expected Arabi to become one of the foremost men of his day. Happily, he did not live to see the forecast justified.

In 1873 Arabi Bey was bastinado'd by Ismael Pacha, who at once gave him a regiment. In 1880 his name was unknown at Cairo. It made progress in 1881, and in 1892 its bearer is the pivot of the situation. His right is that of being, after a fashion, a representative man; his claim is having posed before Egypt and Europe as the Leader of the National Party. But, before noticing this section of the subject, it will be advisable to say something about the Nation.

The Egyptian race stands aloof from and above all its neighbours. The Nilote is African almost whitewashed by foreign intervention. Mr. Lane, a mild sentimentalist, dubbed him an "Arab," and derived him from the invading soldiery of Amru and of other early conquerors. You have only to place the Fellah by the side of the Bedouin, and the fallacy of the theory "jumps at the eyes." And in mind the two are even more different than they are in body. The Fellah's half-brother is the Copt, who has kept his blood purer. Both are peculiar peoples. The climate of the Nile valley allows no foreign-born to be *viable*; neither Turks, nor Circassians, nor Persians, nor Europeans can here increase and permanently multiply. It has an atmosphere of absolute conservatism. From the days of the Monuments and of Herodotus, the Fellah has altered little but his faith. His *morale* has all the turbulence and violence, the persistence and bravery, of his forbears. The press of England, when commenting upon the massacre of June 11, asked with wonder how these lambs had so suddenly become wolves. Lambs, indeed! Why no fighting ram is more dogged or determined, more pugnacious or less open to pity and mercy, than an Egyptian Fellah. And if, in this matter, the men are

bad as bad can be, the women are worse. They are the most depraved of their sex; and their modes of murdering are unutterably horrible. That account of these gentle beings promenading the streets of Alexandria with the legs and arms of slaughtered Europeans carried like flags on staves should open eyes that can be opened. It was the tale of Hypatia told over again; very old friends with new faces.

The morbid philanthropy and the mawkish humanitarianism of England have so long pitied and petted the "poor downtrodden Fellah" that they have created a theoretical, an ideal being. The Fellah of fact would start to see his own portrait. They most deserve compassion who have anything to do with him. There is hardly a European in Egypt, of those who frequent the villages as sportsmen or antiquaries, who has not been assaulted by the Fellahs, while sundry have been half killed. This has happened even to high officials, who, of course, were careful not to report their drubbings. The turbulent villagers also act as their own police, and all criminal cases are tried within their mud walls. If man or woman offend against the bye-laws, the offender is not denounced to the "guardians of the peace" (the worst robbers in the land); he or she is carefully manacled, gagged, trussed up, and thrown into the river. Father Nilus could tell more tales of horror than all the streams in the United Kingdom.

Among the Fellah's notable qualities we must not forget his persistence and his bravery. A drive to the Pyramids will show you urchin-troops running a mile in the forlorn hope of a copper; and the boy is father to the man. Under Sesostris, the Egyptian soldier, who invented the phalanx, overran the nearer East. Under Ibrahim Pacha, he thrashed the Turks at Nezeeb; and the late Gen. Jochmus escaped defeat only by systematically declining battle with the armies of Mohammed Ali. The dogged pluck of the gunners at Meks and the other Alexandrian forts proves that the stock has not degenerated. As a rule, the sight of blood does not excite the Egyptian; it only makes him an "uglier customer."

With such national material it is not hard to found a National Party. There is such a thing in Egypt, and there has been for some time; but it has been grievously misrepresented and misunderstood in England.

Little notice need here be taken of the theories foisted on the English world by Sir William Gregory and Mr. Wilfrid S. Blunt. The former, who interviewed Arábi the rebel, and wrote his praises to the *Times*, toured for a winter in the Nile Valley and is utterly ignorant of its language. Mr. Blunt knows something of Arabia and Arabic, but next to nothing of Egypt, or he would not have noted Arábi's approval of Lord Byron (!). He is, moreover, one of the most crotchety of men, who has seriously proposed to abolish steamers and railways. Such were the amateur diplomatists who sorely vexed the soul of that model red-tapeist and Foreign Office pet, Sir E. B. Malet, and who promoted Arábi to the leadership of the "National Party."

The true National Party, as all old Egyptians know, is headed by Oherif Pacha. It can hardly have a better head; upon this point all opinions agree. Oherif is a gentleman of ancient house, well brought up, married to a daughter of Col. Sévres (Sulayman Pacha), and the father of sons whom he sends for education to Vienna. He plays billiards, he is a good shot, he enjoys European society, except with those who consider him a "vain, contemptuous Turk," and his perfect courtesy of manner contrasts well with the "ughness and 'aughtiness" of the ex-donkey-boy Egyptian Pacha, a common variety of that breed. He is a man of large fortune, inherited not made; no one

has a word to say against his honour or honesty, and his only fault is being too good for the situation. He was loyal to his late prince, and his idea of a National Party is founded on patriotism, tempered by moderation and common-sense. He ignores the silly cry "Egypt for the Egyptians"—which means "Perish Egypt"—and he confines himself to wishing that the sons of the soil should have fair play against the foreigner, and should share the goods of which the stranger would once more spoil them.

On the other hand, Arábi, now no longer Pacha, was, and is, only the ringleader of a mutiny. On September 8, 1881, it will be remembered, he headed the second revolt, which dismissed the miserable Riyás, Gordon's *bête noire*; made Oherif Pacha "Premier;" augmented the army; and established a "Chamber of Notables," or delegates, ostensibly to formulate a Constitution, or Organic Law, but really to abolish the invidious Anglo-French Control. Tewfik, weak as water, and poltroon as usual, granted all the demands of his mutineers, with a feeble resolve to cut off the head as soon as possible. This ended in an abortive attempt to wreck a railway-train. The new Mameluke régime waxed bolder and bolder, and at last compelled Oherif Pacha, whose moderation and conciliatory measures offended the Dictatorship, to resign. Then came a third *pronouncement*, and the state of things we now find. The fifty years of good work begun by Mohammed Ali Pacha were undone in as many days.

The Armenian Sultan, who, like his predecessors, has ever longed for the flesh-pots of Egypt in the shape of piastres, and who well knows that a Khedivate under the guarantee of Europe would not permit indiscriminate official plunder, seized the opportunity for playing a trump-card. He entered into intimate relations and *pourparlers* with the self-constituted Leader of the National Party. Compromising documents have already been found in the Alexandria Palace. Dictator Arábi was chosen for the future Khedive, a mere creature and tool of the Sublime Porte. The descendants of Mohammed Ali had "ceased to reign." The intended successor was shamelessly decorated with the Medjidieh while in arms against his prince; and a certain Commissioner, whose name need not be mentioned, was sent to Egypt for operating the change of dynasty. This official had distinguished himself highly in Albania, where he "coffed" his way to complete success. No man could even differ in opinion from him without a stomach-ache so serious that it led directly to the coffin.

Tewfik, however, took precautions, or, rather, precautions were taken for him. And Arábi, thinking his succession secure and despising his enemy, now made his first wrong move—a mistake which will be fatal to him. His error was in relying too firmly upon the pet Egyptian theory, that England and France cannot combine in political measures, and that the jealousies of the Western Powers would render action nugatory. In fact, he forced events instead of allowing himself to be carried onwards by the tide of fortune. The "Joint Note," a most unwise move, made the Egyptians cling to him and caused the catastrophe. Hence the massacre, the bombardment, and the present campaign. Hence, too, the Armenian Sultan was compelled to cast off, when too late, the too active tool that cut both ways. Hence, finally, the tool, claiming to be a Lazzia, has mounted the green turban of a Descendant of the Prophet, and has openly proclaimed himself a subject of the Meccan Shereef, not of the intrusive Turkish Sultan. In his turn, the latter, after inducing the Fellah to rebel, has proscribed him as a rebel and an outlaw, or, rather, has declared that he "deserves to be proclaimed a rebel." Can even a Turkish Government show anything more inept?

That Arábi still maintains his position is due to the extraordinary fanaticism and bigotry of the lower and lowest orders of Egyptians, and to their abhorrence of, and contempt for, foreigners and non-Moslems—a contempt exaggerated by the marvellous poltroonery displayed by the Christians surprised at Alexandria. And the Leader will continue to be their idol as long as he poses for the Regenerator of the Faith, the Revivalist of Islam. Even the Egyptian lads scattered among the schools and colleges of Europe bless him and pray for him as the Saviour of Egypt and the destroyer of the grasping Faranj, especially the English.

So far Arábi has made his name, and the ex-Fellah will go down to peasant-posterity as a Moslem John Hunyadi or a Scanderbeg.

CORRESPONDENCE.

MR. RAMSAY AND THE GREEK PROFESSORSHIP
AT EDINBURGH.

Edinburgh: Sept. 12, 1882.

I trust you will find space to allow me to correct a statement which I have heard, and which is calculated to do much injury to the cause of archaeological study and the investigation of little-known parts of the Greek world. It has been said that it would be impossible for me to carry out the schemes of further exploration in Asia Minor—which are now the object of a public subscription under the auspices of the Society for the Promotion of Hellenic Studies, and which are in a considerable degree dependent on my own work in that country—in the event of my candidature for the Chair of Greek in Edinburgh being successful. Reference to the *Journal of Hellenic Studies*, 1882, p. 31, will show that, in urging the great value to the study of Greek art of a new expedition into the border-land between Greece and the East, I said, "The time of year for an expedition would be to arrive [in Phrygia] not earlier than June 15, and spend the summer and early autumn." Scientific work is hardly possible during the winter and spring months, owing to the intense cold and the long continuance of snow which hides every ancient monument. The only effect that my appointment to a Scotch professorship would exercise on my exploration in the Greek world is that I should be able to carry it on with much greater advantages, and that I should not, as at present, be dependent for my chance of travelling on the precarious result of a public subscription and on the generosity of the friends of Greek learning.

W. M. RAMSAY.

THE LOST MEDICAL WORK OF MARAT.

1 Clarendon Villas, Oxford.

When M. F. Chevrement, the indefatigable student of the life and works of that much-maligned revolutionary leader, Marat, published, in 1865, his *Catalogue des Œuvres complètes de J.-P. Marat* as a supplement to M. Bougeart's well-known *Marat*, he inserted a note:—

"Indépendamment de *The Chains of Slavery*, édité par Marat à Londres en 1774, et de *A Philosophical Essay on Man* en 1773, Marat serait l'auteur d'un troisième ouvrage édité en Angleterre sous ce titre *An Enquiry into a Singular Disease of the Eyes*, by Mr. M....., M.D., at Nicholl's, St. Paul's Churchyard, or Williams' in the Strand. Brisot, dans ses *Mémoires*, tom. ii., p. 3, annonce cet ouvrage, et Simone Eyraud (veuve Marat), dans son Prospectus de la réimpression des œuvres politiques de l'Ami du Peuple, nous apprend que Marat avait acquis une grande célébrité dans la curation des maux d'yeux, où il excellait. Espérons qu'un jour ce livre sera connu des bibliographes français" (*Marat, l'Ami du Peuple*, par A. Bougeart, vol. ii., p. 361).

Nevertheless, when, in February 1881, M. Chevrement published his *Marat: son Esprit politique, scientifique et littéraire*, he had not been able to discover the missing work, although during the intervening sixteen years he has done much valuable work on Marat, and, in particular, has unearthed his diploma of M.D. at the University of St. Andrews.

Being much struck by the new light thrown upon Marat by MM. Bougeart and Chevrement, and believing that further investigations into his early life would give a new aspect to his character and career, I determined to do what I could to elucidate the eleven years he declared he spent in London and Dublin, which must have extended from 1766 to 1777, for it was in the latter year he was appointed physician to the Gardes du Corps of the comte d'Artois, and took up his residence in Paris. Naturally, my first hope

was to discover the lost English medical work mentioned by Chevrement. To begin with, I found that the work in question was not mentioned by Brisot in his *Mémoires*, but only in a note by M. de Montrol, the editor, who quotes the title from a note in Marat's own handwriting. At the British Museum I could get no clue, and no copy was to be found there; but a courteous sub-librarian at the Bodleian directed my attention to Watt's *Bibl. Britannica* (1824), in which I found under Marat's name his *Essay on Man* (1773); an *Essay on Fleets* (1775), of which I have at present discovered no copy; and *An Enquiry into a Singular Disease of the Eyes*, &c. (1776). I was then recommended to consult the numerous Catalogues of the various medical libraries in the Bodleian, and, to my great delight, discovered a copy in the Catalogue of the library of the Royal Medical and Chirurgical Society of London. Through the kindness of a fellow of the society, Mr. Malcolm Morris, I was enabled to consult the copy, and make a transcript of it, and there can be no doubt that it is the missing work.

It is a short pamphlet of nineteen pages, with the title-page,

"An Enquiry into the nature, cause, and cure of a Singular Disease of the Eyes, hitherto unknown, and yet common, produced by the use of certain Mercurial Preparations, by J. P. Marat, M.D. London, Printed for W. Nicoll in St. Paul's Church-Yard, and J. Williams in Fleet Street. [Price One Shilling, Sewed.]"

On the first page is a curious address to the Royal Society, of which he asserts "this is not a Dedication: such a matter of form I have ever thought beneath the Dignity of Philosophy;" and it is dated Church Street, Soho, January 1, 1776. The address has in two places the word "gentlemen" inserted, probably in Marat's own handwriting, and the copy seems to have been the presentation copy. The little pamphlet is interesting both from the light it throws on Marat's scientific ideas and on the chronology of his life.

He commences by describing the effect of mercury on the eyes and sight, and the mistakes of the usual treatment; and then propounds his own treatment, of which the most interesting part is the use he makes of electricity. We see from the first case he describes in this pamphlet that he had greatly studied the phenomena of electricity, and had used it for medical purposes at least as early as 1765; and that, therefore, when he published his *Recherches sur l'Électricité* in 1782, he was no scientific dabbler, as Michelet represents, but a man whose attention had been fixed on the science of electricity for at least seventeen years. Whether Marat is right in the diagnosis and treatment of the particular disease he describes it is impossible for me to say; but he was certainly no empiricist, for he supports his theory and treatment with three examples of patients he had treated, with minute, almost daily, notes as to their progress under his treatment; and, further, at the conclusion of his address to the Royal Society, he invites examination:—"If any of the members of your society would be pleased to amuse themselves with verifying by Dissections the elucidation which is offered in the following pages, it might not, perhaps, be a regrettable employ of time."

But a more real interest lies in the light thrown on his early life. The first case he gives of his treatment is that of "Charlotte Blondel, daughter of a merchant in Paris," whose

"parents applied to a famous oculist, who declined undertaking the case; afterwards application was made to a Fryar of some repute for curing diseases of the eyes, . . . who attended her for seven months together. . . . The patient was already given over, when I undertook her cure. As I was not unversed in Optics," &c., &c.

This passage shows that Marat had at least some practice in Paris before he came to England in 1766, and indicates already his fondness for optics, of which he was to be so diligent a student. His other cases—D. B., a merchant in London, and J. P., Esq., in both of which Marat successfully treated patients who had been long under other treatment—show that he was a medical man in some practice in London, and not a teacher of French, as has been generally asserted. His address, too, in Soho, which was then a fashionable quarter, and the fact of his different publications, indicate that he held a fair position. But the most useful fact is contained in a note on p. 19: "The last August being at Edinburgh, I (under the eyes of the ingenious Mr. Miller, oculist) treated an American gentleman for this disease. . . . Affairs calling me back to London," &c. This supplies a useful addition to M. Chevrement's discovery of the diploma of M.D. of St. Andrews conferred on Marat in 1776 on the recommendation of certain Edinburgh physicians. For it shows that he was not, as M. de Montrol has asserted, a teacher of French in Edinburgh, but had merely made a short stay there, in which he moved in good medical society, and had given such an impression of his medical knowledge that he was recommended for the degree of M.D. of a neighbouring university.

I can only conclude by hoping that it may be possible to recover a further knowledge of Marat's life in England; and it would be particularly interesting to know why and when he spent the year in Dublin which he mentions in his retrospect of his own life. It was probably in some way connected with medicine; and it would be curious to know if he obtained a degree there, for in the brevet of his appointment in 1777 as physician to the Gardes du Corps of the comte d'Artois, he is described as "Jean-Paul Marat, docteur en médecine de plusieurs facultés d'Angleterre," and we at present only know of one degree, that of St. Andrews in 1775. H. MORSE STEPHENS.

SCIENCE.

Animal Intelligence. By George J. Romanes.

"International Scientific Series," Vol. XLI. (Kegan Paul, Trench & Co.)

The Scientific Evidences of Organic Evolution. By the Same. "Nature Series." (Macmillan.)

PERHAPS few biologists have ever been so well fitted by temperament and attainments to approach the difficult question of animal intelligence in a scientific spirit as Mr. Romanes. His tastes have always kept him evenly balanced between the subjective and the objective points of view. On the one side, he is a subtle psychologist, well grounded in all that has been done for his science by Locke and Hume, Berkeley and Kant, Bain and Spencer; on the other side, he is a first-hand investigator of the phenomena of nervous systems, and a practical naturalist and sportsman of considerable experience. The way in which he has set to work upon his present subject is most thoroughgoing and business-like; it reflects his deep sense of the necessity for a regular scientific method of procedure in psychology. Intending as he does to investigate the evolution of intelligence throughout the whole animal world, he has begun with that fundamental *πρώτον*, a basis of carefully sifted and organised data from which to draw his inferences in a later volume. His new work, in fact, was originally planned as the

introductory part of his promised treatise on Mental Evolution; it was to be concerned only with the positive facts of animal intelligence, while the second part was to deal with their relation to the theory of descent. But the collection grew under his hand, until at last it became necessary to publish it in a separate form as a substantially independent work, though still ancillary in purpose to the main treatise for whose basis it was originally compiled.

It might seem at first sight as though this task could have been as well performed by some lesser workman, without using up so much valuable time at the hands of an original investigator; and we confess this was our first idea on taking up Mr. Romanes's volume. A single perusal, however, soon leads one to adopt a very different view of the work and its intrinsic importance. The subject of animal intelligence has so long been given over to the myth-making fancy of mere marvel-mongers and anecdote-manufacturers that it has become necessary for some strict and judicious critic to go over the whole mass of available evidence—some good, more indifferent, and most utterly bad—and to pick out carefully the few grains of wheat which may be found scattered about among this intolerable quantity of useless chaff. If we are ever to have a sound science of comparative psychology at all, it must begin, as comparative anatomy began, with a careful collection of ascertained facts. For this purpose it is highly desirable that we should possess

"something resembling a text-book of the facts of comparative psychology, to which men of science, and also metaphysicians, may turn whenever they may have occasion to acquaint themselves with the particular level of intelligence to which this or that species of animal attains."

The evidence thus collected is mainly intended to serve Mr. Romanes for his forthcoming work on the genesis of mind. But even in itself it supplies us with an admirable digest of all that is yet known with regard to the mental powers of animals; and we are grateful to him for having thus reduced so vast a mass of chaos to something like reasonable and duly marshalled order.

Mr. Romanes begins with an introductory chapter, in which he discriminates in his usual lucid manner between reflex action, or "non-mental neuro-muscular adjustment;" instinct, or "reflex action into which there is imported the element of consciousness;" and intelligence, or "the intentional adaptation of means to end." He then proceeds to apply the principles so set down to the lowest forms of life, quoting with due caution the few observed facts which would seem to credit even the protozoa with some faint foregleams of intelligent action, and inclining to relegate his own peculiar favourites, the Medusae, to the limbo of purely reflex organisms. Nor does he see grounds for attributing purposive movements to the echinodermata, finding rather the earliest indications of intelligent action in those remarkable proceedings on the part of earth-worms to which Darwin called attention in his latest monograph. Among the mollusca, he relies chiefly upon the observations of Dictionnaire, White, Agassiz, and Lonsdale, the last named having

the unfortunate fault of proving quite too much; for the famous anecdote of the friendly snail which returned to deliver its weakly mate from a garden prison would imply not only a high degree of intelligence, but considerable affection and strong imagination as well. Having ourselves formerly kept many snails in boxes for long periods, we are inclined to rate their mental powers decidedly higher than most people would at first suppose; yet it would be very difficult to quote any one fact or anecdote in support of this cumulatively acquired view. In fact, it often happens that persons who have kept any animal as a pet have arrived imperceptibly at a certain familiarity with its way of thinking without being able to give any definite reason for the faith that is in them; though such a vague belief on the part of a careful observer may really be much better grounded than any number of inferences made from casually collected instances by field naturalists who have not themselves kept the creature in captivity, and watched its everyday habits and manners.

Among the insects there is abundance of such evidence forthcoming from the most excellent sources, such as the notes on ants, bees, and wasps by Bates, Belt, Müller, Moggridge, Sincecum, McCook, and Lubbock, and those on termites by Bastian, Fritz Müller, and Smeathman. Mr. Romanes has also thrown together the best observations on the other articulate, such as trap-door and web-building spiders, crabs, lobsters, ant-lions, and even earwigs. For the psychology of vertebrata the materials are far more ample. Among fish, indeed, we are yet at sea; but with birds and mammals, we feel ourselves at last on *terra firma*. Here Mr. Romanes has gathered together all that is most valuable about memory, sympathy, and aesthetic emotions; about nidification, especially as regards the abnormal instincts of the cuckoo; and about the general signs of intelligence in birds. He has also given us the gist of all that is known about beavers, elephants, cats, foxes, dogs, monkeys, and other exceptionally clever mammals. Of course, much of the information might already have been got elsewhere, though much is also quite new; but in any case it is a great point to have it all brought to a focus in this classified and digested fashion, instead of having to search for it through many scattered volumes of *Memoirs* and *Transactions*. As a whole, the task of selection has been admirably performed, though perhaps Mr. Romanes sometimes allows a questionable story to pass a little too readily. It is hard to doubt the positive assertion of ordinarily truthful people; yet experience shows that, when once an animal story has assumed the guise of an endemic myth (such as the hedgehog, who "pikes apples upon his spines by rolling over them), there is no moralist on earth so stern but will solemnly declare he has seen the thing with his own eyes. Some of Mr. Romanes's correspondents will doubtless think him very rude for hesitating his doubts as to their absolute correctness; we ourselves are inclined to fancy that at times he has not been quite rude enough. But the volume altogether will take rank at once as the standard work on the subject with which it

deals; and any future text-book of comparative psychology will necessarily proceed to build upon the solid foundation here laid down.

The little book on Organic Evolution contains a brief *résumé*, adapted to the general public, of Darwin's main arguments. It ought to answer excellently the purpose for which it is intended; and it obtained the high approbation of the great biologist himself when it first appeared as a popular lecture. We can only hope it may be widely read by those for whose benefit it is so well designed.

GRANT ALLEN.

PHILOLOGICAL BOOKS.

History of the Egyptian Religion. By C. P. Tiele. Translated by J. Ballingal. (Trübner.) The value of Prof. Tiele's "Comparative History of Ancient Religions" is so well known that this English translation of the first volume of it is sure to be welcomed by a large class of readers. Egypt, too, is at present attracting an amount of interest and attention which ought to make the appearance of the volume particularly well-timed. The cultivated part of the public has long been asking for an authoritative work on the religion of the ancient Egyptian monuments which would be accessible to English readers, and it is therefore a matter of surprise only that we have had to wait so long for a translation of the clearest and most satisfactory book on the subject that exists in any language. Though not a professed Egyptologist, Dr. Tiele is sufficiently acquainted with the hieroglyphs to be able to control the often conflicting statements of Egyptian scholars, and to form independent opinions of his own. The unrivalled knowledge he possesses of ancient forms of faith, and the sober and impartial judgment he brings to bear upon them, give what he writes an exceptional importance. Of course, it is not possible for others to agree with all his conclusions; nor can even his care and accuracy always preserve him from the slight errors incident to every human work. Thus *Men* is not *Mnevis*, whose Egyptian name was *ur-mer*, "great bull," but "cattle" in general; and it was not Herodotus, but Manetho, who asserted that the sacred animals were first worshipped under King Kaiekhoe. Abisa, again, is the name of a country, not of its chief; there is no evidence that the sphinx was erected by Khufu; Amun-ra was unknown in the time of the Old Kingdom (p. 123); the cuneiform symbol of the Tigris does not signify an arrow; the royal names of the Twenty-second Dynasty are not Assyrian, Brugsch notwithstanding; and M. Maspero has shown that the story of Saneha must not be accepted as an historical fact; while we are surprised to find Dr. Tiele saying that Menes is "a mythic personage, who is perhaps the same as Minos and the Indian Manu," or admitting the relationship of the Egyptians to the Aryans. It is doubtful, too, whether the religious revolution affected by Khun-en-Atem was as great as is usually supposed, or whether his mother was really of foreign origin. Nor is it any longer correct to say that the pyramids of Gizeh and Sakkarah are sealed. "Heliopolis" for "Memphis," in p. 91, is obviously a misprint, the responsibility of which must be laid upon the translator, who has not performed his task in an altogether satisfactory way. His English does not run smoothly, and savours of a foreign idiom; while spellings like *Psammotiscus*, *ureus*, and *thyphalic* suggest doubts as to his classical knowledge. Throughout the book the proper names are written in a Dutch, and not an

English, fashion. What English reader could pronounce properly Amenj, Chün-aten, Pacht, or Jahveh? The imperfect character of the translation is the more to be regretted as it may prevent the book from being so widely read as it ought to be. After the masterly way in which the development of Egyptian religion is traced in it, and the differences pointed out between the religious conceptions that prevailed during the long period covered by the monuments, it will be difficult for the popular error still to hold its ground which sees in the Egyptian religion of the pyramid-builders and the Theban dynasties, of the Saïtes and the Ptolemies, one and the same unchangeable faith. But what does Dr. Tiele mean by saying that "Prof. Sayce, of Oxford, has recently conjectured . . . that [the Hittites] were nearest akin to the Sumirs and Accads"? Prof. Sayce's papers in the *Transactions of the Society of Biblical Archaeology* show that he could never have made such an assertion.

The Law of Cosmic Order. By Robert Brown, Jun. (Longmans.) By Cosmic Order Mr. Brown means "the harmony of the world in its varied round of day, night, week, month, season, and year." His present work is an attempt to point out the way in which man attained to an idea of this order, so far as the year and zodiacal signs are concerned. It is more especially with the zodiacal signs as we have received them from the Greeks that he concerns himself. They were ultimately derived from the Accadians, who first mapped out the sun's course through the sky, and gave to each section of it the names by which the signs are still, for the most part, known. Mr. Brown claims to have shown that the signs, when the mythological conceptions which lie at the bottom of them are examined, fall naturally into two groups, six being diurnal and six nocturnal. In this way the year became to early men the day of twenty-four (or rather twelve) hours on an enlarged scale. We always find in Mr. Brown's writings proofs of wide reading and happy suggestions, and these characteristics are not wanting in the little book which now lies before us. As he himself remarks, however, "Assyriology is a (rapidly) progressive science," and it is therefore inevitable that some of the conclusions of Assyrian scholars on which he relies have been corrected by subsequent research. But, on the whole, there are very few of his statements with which we should be disposed to quarrel, and the general reader cannot fail to find his work both instructive and interesting. The resemblance to which he draws attention between the form of the symbol of *Libra* and two altars sculptured on a Babylonian stone is certainly very striking, and gives countenance to his view that the sign of the balances has usurped the place once occupied by the sign of an altar.

The Names of the Stars and Constellations compiled from the Latin, Greek, and Arabic; with their Derivations and Meanings. By W. H. Higgins. (Hamilton, Adams and Co.) This is a very useful little book. We do not know of any other work in which the meanings of the Arabic names of the stars, important as the subject is for the history of astronomy, can be found in so handy a form, if at all. Mr. Higgins has gone to the best authorities, and his opinion is always worthy of respectful consideration, even in the few cases in which we should be inclined to suggest a different interpretation of the Arabic word.

The Sinonima Bartholomei, which the Oxford Press has put out as part i. of the first volume of the Mediaeval and Modern series of its *Anecdota Oxoniensia*, is a list of Latin names of herbs, plants, diseases, &c., with explanations, generally in Latin, but sometimes in

English. It is of the date of 1387 or thereabouts. To the student of Early English this short treatise has not, of course, the value of the *Promptorium* or of the *Catholicon*; but to the botanist and the Mediaeval Latinist it will be very useful. Comparing a few of the English entries with those of the *Catholicon*, we find in B. "*Fragaria*, *Frasea*, an[glie] straubery," O. "a Strabery," *fragum*; B. "*Zisannia*, lollium idem, i. cokel," O. "Cokylle, quodam aborigo, *zazannia*." On p. 26 the advocates of the First Folio as the best text of "Hamlet" and of its *Hebenon*, which they say is *Hembane*, against the *Hebona* = *Hebon*, or *ivy*, of the Second Quarto, will find help as to the form of their word, for *Iusquiamus* is entered as "an[glie] henebon," whence the change to "hebenon" is easy, just as in the *Catholicon*, the Latin *Iusquiamus*—from the Greek *δοκίμαρος*, as Mr. Herrtage notes—appears as "Hen-bane, *Iusquimanus*." For "ivy" B. does not preserve the final *n* which O. interestingly has, and which Mr. Herrtage says is still kept in the North, thus retaining the connexion with *Germ. eiben*, Dutch *even*, and the Elizabethan *Hebon*; O. "an Iven, edera;" B. "*Edera arborea*, crescit super arbores et parietes domorum, i. yvi." For B. "*Acedula*, herba acetosa idem [quod Acer]," we have O. "a Sowredoke, *Acedula*;" but the English name does occur in B., under "*Oxylapacium*, i. *acedula*, souredock." The form in B. "*Mora rubi*, blakeberien," may be useful to the editors of *Piers Plouman*, &c. The *Sinonima Bartholomei* is part "of a medical treatise on diseases and remedies, composed by John Mirfeld or Marfelde, and is entitled the 'Breviarium Bartholomei,' in honour of St. Bartholomew's in London, of which monastery the author was an inmate." To this work is prefixed a calendar of Walter de Elveden for the year 1387, of which the January part is printed in the present booklet. The editor, Mr. Mowat, has done his work very carefully and well, though his notes would have been a good deal more interesting had they been more like the admirably full ones of Mr. Way to the *Promptorium* and Mr. Herrtage to the *Catholicon*. One form on p. 22 we do not like. We hoped that Prof. Arber was the only man in the world who printed the early contraction for "that" as "yat," but we must now count Mr. Mowat as sinner No. 2, for he has "*Fugerole*, an. ferre yat growes on londe." The "flamum" which he queries on p. 21 under "*Flamogogum* dicitur medicina purgans flamum (?)" is surely only the English "flem," "fleame," or "flewme, *flegma*, *fluma*, reuma," *Catholicon*. If Prof. Wülcker has not already printed the *Sinonima* in his Collection of Early Glossaries that has been so long at press, we hope that he will add to his book all Mirfeld's entries in which English words occur, and which Mr. Mowat has indexed.

THE second volume of the *Acta Seminarii Philologici Erlangensis*, or proceedings of the Philological Seminary at Erlangen (Erlangen: Deichert), edited by Iwan Müller and Woelfflin, contains a number of valuable studies on special subjects, Greek and Latin. "De Polybii dicendi genere" (J. Stich), "Asyndeta Aeschylea" (Th. Gollwitzer), "Arrianae" (A. Boehner), "De figuris etymologicis linguae Latinae" (G. Landgraf), "De dativo Graeco" (H. Tillmann), "Syntaxis Frontoniana" (A. Ebert), are instances of careful study in the remoter branches of philology. Of a different kind are the essays by J. Hoffmann on the authorship of the *De Mundo* attributed to Apuleius, by F. Vogel on the fortunes of the *Historiae* of Sallust (*Salustiana*), by Christ. Schoener on the titles of the Roman emperors, and by G. Helmreich on Galen *repl. alpestris*. This last paper is virtually a new edition of Galen's treatise. Short critical notes on various authors are interspersed between the essays. When will the English universities

produce a collection of essays so solid and full of promise as those contained in the two volumes published under the auspices of the Erlangen professors?

CORRESPONDENCE.

THE PRINCIPLE OF ANALOGY IN THE EVOLUTION OF SPEECH.

London: Sept. 18, 1882.

In his review of Delbrück's *Introduction to the Study of Language* in last week's ACADEMY, Mr. Sayce has some extremely suggestive remarks on the rival theories of the "agglutinationists" and "analogyists." But, while allowing its due importance to the principle of analogy or adaptation, to me it seems that its proper function has been somewhat misunderstood, or at least unfairly enlarged, by Ludwig and his followers. It must be obvious that there can be no room for analogy at all until a system has been developed producing certain tendencies, creating, so to say, a certain bias or predilection for given grammatical forms. The wide sphere of analogy in the after-state of speech will not be denied by any who have studied its action. But, in the earlier stages, while facts are being accumulated and tendencies slowly created, there can be no scope for this principle, or only a very limited scope, always expanding as we advance, growing more contracted as we go back to the origins of language. We come thus to a period in the evolution of speech when the part played by analogy was unappreciable. Until a large body of materials has been systematised, no norms can be conceived in conformity with which fresh material will continue to be moulded. When speech consisted merely of a few ejaculations, onomatopoeic terms and other articulate sounds, with vague meanings attached, expansion, enlargement, in a word, growth, could not have proceeded according to the law of analogy, as sufficient data did not yet exist to create any such law. But it could have proceeded according to the law of phonetic decay, which must have come into play almost from the first, flowing, as it does, from the very imperfections of human nature. This latter process will be retarded here, stimulated there, according to many silent influences too subtle and too remote to be now always detected. And thus some groups of languages will linger on in a more or less isolated state, while others pass into the agglutinating, and others again rise still higher into the inflecting, state.

Thus analogy does not appear to be the main principle in the growth of language, but only a later influence, which must be taken into account in our analysis of after-states of speech, as, for instance, of the earliest known forms of Aryan grammar. In this apparently old, but comparatively quite modern, state much may undoubtedly be due to the influence of analogy, and consequently much need not necessarily be the result of direct transition from agglutinated to inflected forms. In modern English we sometimes hear such humorous forms as *ghide*, *glode*, *glidden*; *collide*, *collode*, *collidden*. These imitative inflections of weak verbs, or of verbs that have become weak, after the norms of strong verbs, are the direct inspirations of analogy; and it is conceivable that grammatical slang of this sort might ultimately acquire "rights of citizenship."† But

* The *Comic English Grammar* supplies such instances as *row*, *rew*, *roun*; *snow*, *snew*, *snoun*, on the analogy of *blow*, *blew*, *bloun*.

† In this way several strong verbs have in fact already become weak; and the tendency is undeniably in this direction, because weak verbs are now so much more numerous than strong. They give, as it were, the norms; and all new verbs are necessarily conjugated by analogy according to the

it is also obvious that such imitative forms could never have been suggested until the language through other influences had acquired a bent or bias for these strong verbal inflections. The question, therefore, ultimately resolves itself into this other question, How was the bent or bias originally acquired? What were the influences at work in creating it? Analogy being useless at a period when the facts were accumulating which created the bias, we are driven at last to the only alternative—phonetic decay, euphony, laziness, love of brevity, and all those other minor influences which, acting jointly on the agglutinated state, result generally in true inflection. This state once reached, free scope is given to the action of analogy, but not till then. The mistake, therefore, made by those who argue for the principle of analogy instead of agglutination is, that they shift its ground, pervert its true office, apply it to the earlier as well as the later stage of linguistic evolution. They are guilty, as it were, of an anachronism, whereby the true sequences in the history of human speech become obscured and distorted.

It may now be readily allowed, with Mr. Sayce, that many inflections may well be "late forms in which the agglutinated element is assimilated to the general inflectional character of the language." But the general inflectional character itself must still be regarded as the outcome of the above described process going on from the first, and not as the result of analogy, which can only begin to make itself felt later on. Ludwig's "pre-existing suffixes" themselves could not always have existed in the form of mere relational particles. They must have resulted from corruption; they are the product of decay; before they were suffixes they were words. And if they cannot all now be traced back to their original forms, it is because human speech in its earliest extant phases is still too old; it has long forgotten most of its etymologies. It follows also that "the flank of the agglutinationists" is not "turned," if even it be clearly shown that "the reduction of the personal pronouns into flections was due to the general inflecting character of Aryan grammar." The question will here again arise, How was this general inflecting character itself acquired? By inspiration? By creation? Or not rather by phonetic corruption—that is, by natural growth? The agglutinating theory certainly "implies that the roots of the philologist's workshop were once actual words." But which is the more reasonable view—that these words became simply ground down, by incessant use, to the condition of mere particles of relationship, or that such particles, sublimated abstractions as they are, existed from the first? The latter view requires us to assume that they were either created or else invented by savage man. But creation is merely a last resource of ignorance; while it is preposterous to suppose that man in his infant state invented wholesale marvellously subtle grammatical devices, not one of which cultured philologists can so much as imitate. These particles, therefore, were neither created nor invented; they were words, first naturally evolved, and then naturally corrupted. No doubt, "as far back as our materials allow us to trace the phonetic laws of Aryan speech, we find only inflections and an inflectional grammar." But the very oldest known forms of Aryan speech are quite recent compared with those of its previous prehistoric life. This is surely a truth which no one will pretend to deny, unless he be prepared to regard,

weak form. But in the Teutonic group the weak is modern compared with the strong conjugation. Consequently, there was a time when the analogy must have been the other way. Consequently, also, before the evolution of the strong conjugation, there can have been no analogy at all.

for instance, the complex grammar of Vedic literature as a direct revelation to our Aryan forefathers. If, also, we cannot get beyond the oldest extant Aryan state without "violating the phonetic laws with which we are acquainted," it must still be remembered that these laws themselves have changed, and in many instances changed profoundly, during the historic period—as witness the substitution of accent for quantity in Aryan verse, the shifting of accent from root to suffixes even within the Teutonic group, and so on. Hence it may reasonably be argued from "analogy" that these same phonetic laws also underwent continual change throughout the prehistoric period. In any case, what is there at all fixed or permanent in organisms such as human speech subject to perpetual growth and decay? If the solid trunk and roots themselves are liable to corruption, why should we expect constancy in their lighter graces and harmonies? And thus are removed the last difficulties from our acceptance of the principle of agglutination in preference to that of analogy. Or rather, thus may be reconciled both principles, due regard being had to the respective functions of each, and to the proper sequences in the evolution of speech.

A. H. KEANE.

SCIENCE NOTES.

SIR ALEXANDER JARDINE is now in London making arrangements for the disposal of his father's collection of birds, which, as is well known to friends of the late Sir William Jardine, is a very fine one. There is some reason to believe that the collection will be sold by auction.

MESSRS. LONGMANS will publish next month a *Dictionary of Medicine*, which has been for some years in preparation. The articles are contributed by many eminent members of the profession, under the general editorship of Dr. Richard Quain.

THE biographical articles upon Charles Darwin that appeared in *Nature* shortly after his death are to be collected and published by Messrs. Macmillan and Co. as a volume in their "Nature Series." Prefixed will be the portrait engraved originally for *Nature* by the late O. H. Jeens.

THE Society for Promoting Christian Knowledge propose to publish a new series entitled "Heroes of Science." The first will be *Botanists, Zoologists, and Geologists*, by Prof. P. Martin Duncan, to be followed by *Astronomers*, by Mr. E. J. C. Morton.

MESSRS. GEORGE BELL AND SONS have in the press a fourth edition, revised and enlarged, of Mr. W. H. Bessant's treatise on *Hydromechanics*; and *Glass Manufacture*, by Messrs. H. Chance, H. Powell, and H. J. Harris, in their series of "Technological Handbooks."

AT a time when petrology is engaging the attention of so many geologists it may be useful to call attention to a thoughtfully written paper in a recent number of the *American Journal of Science*, in which Mr. A. Wendell Jackson deals with the general principles of the nomenclature of the massive crystalline rocks. The confusion which at present exists with regard to rock-names abundantly justifies any attempt to improve our nomenclature. It is obvious that names should be uniform and stable, with sufficient elasticity to adapt themselves to considerable variations in the proportion of the mineral constituents of a given rock. All massive crystalline rocks may be accurately designated by a purely mineralogical and textural nomenclature; and therefore it is needless, in naming a rock, to take into account either its geological age or its chemical composition. As to uniformity of system, Mr.

Jackson recommends the provisional adoption of the nomenclature used by Prof. Rosenbusch, of Heidelberg, one of the few men who have a right to speak with authority on such a subject.

UNIVERSITY COLLEGE, BRISTOL, seems to be making a special feature of practical science teaching. Its new buildings, which will be completed before the close of the present year, "will give increased facilities for the study of science." Affiliation to the Bristol Medical School, and new arrangements for the thorough training of students as electric engineers, all point in the same direction. So far, so good. But we fail to see that equal attention is paid to liberal studies; and, under these circumstances, we cannot share in the regret that the college has no foundation. Applied science does not need endowment.

WE have received *From Benguela to the Territory of Yacca*, by H. Capello and R. Ivens, which we shall review at length very soon. But, in anticipation of the judgment of our reviewer, we must enter an immediate protest against the nondescript animals depicted on the cover. The draughtsman has been guilty of that common confusion in popular natural history between "bison" and "buffalo." On the body of an American bison he has set the horns of an African buffalo. The animal is correctly represented in the plate facing vol. i., p. 312.

PHILOLOGY NOTES.

THE Cambridge Philological Society propose in the future to publish each term a collection of its *Proceedings*, consisting of short summaries of the papers read and business done at the meetings. The first two numbers have just been issued, and may be obtained by non-members from Messrs. Trübner for 1s. 6d. We may add that these *Proceedings* are quite distinct from the larger volume of *Transactions*, which prints the papers in full, and also systematic reports of the condition of philological studies. Both these publications, however, are largely due to the activity instilled into the society by its secretary, Prof. J. P. Postgate.

WE are glad to hear that Padre Fita, whose *Actas inéditas de Siete Concilios Españoles* was reviewed in the ACADEMY of last week, has made a beginning of his proposed "España Semítica" by sending to Paris drawings of two Jewish sepulchral inscriptions from Oronna. He has also contributed some Rabbinical contracts of the twelfth century to the *Revue des Etudes juives*.

DR. D. G. BRINTON proposes to issue by subscription a "Library of Aboriginal Literature," consisting of Indian works in the original language, with an English translation and notes. The first volume, containing the Maya Chronicles, edited by Dr. Brinton himself, will be ready before the close of the year. Other texts suggested are the Central American Calendars, the Annals of Quauhtitlan, the National Legend of the Creeks (edited by Mr. Albert S. Gatschet), and the Chronicles of the Cakchiquels. Dr. Brinton's address is 115 South Seventh Street, Philadelphia; and we notice with approval that subscription can be made separately for the first volume.

THE *Revue de Linguistique* of July 15 contains the second portion of livre v. of the Codex Calixtinus of Compostella. The value of this part lies in the descriptions of objects of ancient and early mediæval art, notably those at Compostella, the sarcophagus of St. Aegidius at Arles, and the other Roman remains there. We have Roland and his peers venerated as martyrs at Blaye and in the Landes; among them the body of "Arastagni Regis Britannia." Some legends of the saints are as interesting as any folk-lore tales—e.g., that of St. Eutropius,

who, with his "dux exercituum, Warradae," visited Jerusalem in the time of our Saviour. The other articles are by Ch. E. de Ujfalvy, on the language of the Yagnôbes, a small tribe in the Pamir Valley, with a grammar distinct from that of the people round, and with Iranian analogies. A Marist missionary begins some careful notes on the language of Lifu, one of the Loyalty Islands, with particular attention to the phonology. A. S. Gatschet has a list of geographical names from the Southern States of the United States, with etymologies from the speech of the former Indian inhabitants. A family folk-lore tale and a specimen of Mozambique Oréole-français complete the number.

In the *Euskal-Erria* of September 10 subscriptions are invited for the "Diccionario Basco-Español" left in MS. by F. de Aizquiabel. The work will be published in folio parts, double columns, on the 1st, 5th, and 15th of each month, at the rate of eight folio columns the half-real (1½d.). Foreign subscribers will be charged the postage in addition. Subscriptions are received by J. R. Baroja and L. Kubinat, booksellers at San Sebastian.

FINE ART.

GREAT SALE of PICTURES, at reduced prices (Engravings, Chromos, and Ostracographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—GEO. KERS, 115, Strand, near Waterloo-bridge.

Ghiberti and Donatello, with other Early Italian Sculptors. By Leader Scott. (Sampson Low.)

THAT period in the history of plastic art which begins with Niccola Pisano and finishes with the end of the fifteenth century is surpassed in interest by that of no other age or country. It is remarkable for its steady development, for its unity, and almost hereditary transmission through a long line of great artists, bound together by the relationship of father to son and master to pupil. At the beginning of this period, in the thirteenth century, Italy was not strikingly ahead of other parts of Europe in artistic power. The wonderful sculpture on the north doors of Rheims Cathedral executed in the first half of the thirteenth century by French sculptors, the painted retablo of Westminster and the lovely bronze effigy of Eleanor of Castile, both produced by Englishmen at the end of the thirteenth century, are at least equal in artistic merit to any contemporary Italian work. But, while in France and England but little further progress was made in the centuries that followed, in Italy it was only the beginning of a long and steady course of development, which culminated in the wonderful productions (to speak of sculpture only) of Ghiberti and Donatello, with their pupils.

Mr. Leader Scott's little book gives an outline of this great period of art in a very clear and concise manner. It is well and carefully written throughout; and one cannot but regret that its narrow limits have excluded any account of so many not unimportant sculptors, especially during the later part of the period treated of—men, for example, such as Rossellino and Mino da Fiesole. After a valuable sketch of the pre-Niccola sculptors of Italy, Mr. Scott discusses in a very fair and impartial manner the much vexed question as to whether the art of Niccola was not Apulian in its origin rather than classical.

After describing the scanty documentary evidence on both sides, he writes:—

"In the absence of proof, internal evidence must be sought. If Niccola were not a purely inventive genius, where is his anti-type? Do his works more assimilate to the classical remains at Pisa or the mixed classical-Saracenic style of meridian art of the twelfth century?"

The author's suggestion is a very probable one:—

"Is it not likely that, when Frederick II. took Niccola in 1221 to Naples (he being a lad of sixteen or seventeen), the sculptures of the South may have developed his artistic genius, and induced him, on his return to Pisa, to study with greater interest the Greek sculptures there which were his models in his more mature works."

Useful descriptions follow of Niccola's chief works—the Pisan pulpit, dated 1260; the famous shrine of St. Dominic at Bologna; the still more magnificent pulpit at Siena; and the fountain in the Piazza at Perugia, begun in 1274.

From Niccola the long line of artists continues through his son Giovanni, whose pupil, Andrea Pisano, executed the first gate of the Florence baptistery in 1332, with many others, all owing something, directly or indirectly, to the first great Pisano. One family of sculptors, however, the Cosmati, seem to have laboured all through the thirteenth century in a quite independent way—relying for richness of effect on many-coloured mosaics rather than on their sculptured decorations. I may add to Mr. Scott's short account of this remarkable family of artists that they have a special interest to us English from the fact that the "Petrus Civis Romanus" who made the shrine of Edward the Confessor and part of the mosaic pavement in Westminster Abbey can be almost proved to be the same Petrus who helped to make the beautiful *baldachino* over the high altar of San Paolo fuori le Mura.

The account given by Mr. Scott of Ghiberti and the story of the making of his marvellous baptistery gates is no less excellent than the rest of the book. The history of these gates is practically the history of the man's working life, for he spent on their production no less than fifty years—a lifetime well spent, as no words can do justice to their wonderful beauty and technical skill in execution. The two are very dissimilar—the earlier one is simple in design and thoroughly sculptural in treatment; the later gate, with its compositions of many figures in each panel, and its wonderful effects of receding planes and distances, to some extent verges upon the domain of painting. And yet the work is so beautiful, and its effects are produced with such skill, that it is impossible to wish it any other than it is. Each little figure, each small bust which decorates the framework of the large panels, is a studied and finished work of art in itself; and yet they are but little noticed in the general mass of splendour. There is a very fair reproduction of this in the South Kensington Museum, where the details can be easily examined. No one should omit to notice the wonderful little portrait busts of Ghiberti himself and his step-father, Bartolo.

Ghiberti and Donatello had the happy lot

to live in that intermediate period of Italian history when Florentine sculptors had learned from classical art its full lessons of quiet harmony and truth to nature, without having lost those religious beliefs which gave expression and deep feeling to the works of the earlier artists whose technical knowledge was imperfect. In the course of a few years the great wave of revived pagan thought was doomed to obliterate this early spirituality and reverent worship of purity, making a mock of all religion and belief in goodness, and creating a state of society the wickedest, perhaps, that any age or country has ever seen. This was the beginning of the decay of all the arts. Even Michelangelo, that almost superhuman artist and poet, was deeply oppressed by the gloomy and sin-stained spirit of his age. One feels that even his most perfect works are to some extent marred artistically by a crushing sense of the *Welt-Schmerz* (world-pain) and a shrinking dread of the divine wrath which seemed to be threatening the world. The works of Donatello are free from any expression that recalls sin or pain. Quiet peace and innocent beauty are the chief characteristics of his sculpture. Beauty of form is combined with the suggestion of a pure and faith-directed soul in perhaps as perfect a manner as the laws of plastic art will admit. His St. George is not only a beautiful youth—so far, a Greek sculptor would perhaps have surpassed him—but he is also a noble-minded knight, with steadfast, trusting soul, whose look and attitude show that he will not flinch in the presence of the awful danger that is coming upon him. Nothing, not even the work of a Greek sculptor, could surpass the exquisite grace and loveliness of Donatello's bas-relief of St. Cecilia, a profile bust in very low relief. The saint is evidently touching the keys of an organ, though the hands are not shown; she looks downwards, with lips slightly parted. This power of obtaining the utmost amount of expression in the very slightest relief was one of Donatello's specialities, and was imitated with varying degrees of success by a whole school of pupils. The wonderful delicacy and refinement of execution for which the works of Donatello and Ghiberti are so remarkable is no doubt partly owing to their early training in the goldsmith's art. Donatello especially delighted, quite to the end of his life, in work which brought out his early practice in this handicraft. The beautiful bronze reliefs of angels playing musical instruments which adorn the high altar of the Duomo at Padua are enriched with delicate lines and ornaments inlaid in gold. The Martelli mirror-case, now at Kensington, is another instance of this.

Among its other uses this little book of Mr. Scott's will form a very instructive guide to a great part of the South Kensington Museum, which is extraordinarily rich both in originals and casts of the best specimens of Italian sculpture. Nowhere else, indeed—not even in the Bargello in Florence—can the student see so large a collection in one place. Mr. Scott has certainly done good work in helping to make this collection intelligible and instructive.

J. HENRY MIDDLETON.

THE BOOLAK MUSEUM.

WHILE Egyptologists of every nationality are congratulating themselves and each other upon the safety of the Boolak Museum, it will not be amiss to note that a priceless addition had been made to the treasures of that famous collection shortly before the breaking out of the late rebellion. Several of the royal mummies discovered last year at Dayr-el-Baharee were, it will be remembered, found garlanded with flowers, those flowers being for the most part in as perfect preservation as the specimen plants in a "Hortus Sicous." M. Arthur Rhoné, in a recent letter to *Le Temps*, has described the extremely curious way in which these garlands are woven. They consist of the petals and sepals of various flowers, detached from their stems, and enclosed each in a folded leaf of either the Egyptian willow (*Salix saulea*) or the *Minusops Kummel Bruce*. The floral ornaments thus devised were then arranged in rows (the points being all set one way) and connected by means of a thread of date-leaf fibre woven in a kind of obain stitch. The whole resembles a coarse "edging" of vegetable lace-work. Among the flowers thus preserved are the bright blue blossoms of the *Delphinium orientale*, or larkspur; the blue lotus, or *Nymphaea coerulea*; the white, or *Nymphaea lotus*, with pink-tipped sepals; the blossoms of the *Sebania Aegyptiaca*; and the orange-hued flower of the *Carthamus tinctorius*, or safflower, so largely employed as a dye by the ancient inhabitants of the Nile valley. The dried fruit, as well as the dried yellow blossom, of the *Acacia Nilotica* is likewise present; and mention is also made of the blossom of a species of water-melon now extinct. The foregoing are all interwoven in the garlands in which the mummy of Amen-hotep I. was elaborately swathed. With others of the royal mummies were found fine detached specimens of both kinds of lotus, the blue and the white, with stems, blossoms, and seed-pods complete. Still more interesting is it to learn that upon the mummy of the priest Nebsooni, maternal grandfather of King Pinotem II. (XXIst Dynasty), there was found a specimen of the lichen known to botanists as the *Parmelia furfuracea*. This plant is indigenous to the islands of the Greek Archipelago, whence it must have been brought to Egypt at, or before, the period of the Her-Hor Dynasty (B.C. 1100 or B.C. 1200). Under the Arabic name of "Kheba," it is sold by the native druggists in Cairo to this day.

These frail relics of many a vanished spring have been arranged for the Boolak Museum with exquisite skill by that eminent traveller and botanist Dr. Schweinfurth. Classified, mounted, and, so to say, illustrated by modern examples of the same flowers and plants, they fill eleven cases—a collection absolutely unique, and likely ever to remain so. The hues of these old-world flowers are said to be as brilliant as those of their modern prototypes; and, but for the labels which show them to be three thousand years apart, no ordinary observer could distinguish between those which were buried with the Pharaohs and those which were gathered and dried only a few months ago.

AMELIA B. EDWARDS.

CORRESPONDENCE.

PONTORMO'S PICTURE FROM HAMILTON PALACE
IN THE NATIONAL GALLERY.

National Gallery: Sept. 18, 1882.

The explanation of the subject of the above-named picture which has been offered by Dr. J.-P. Richter in last week's issue of the ACADEMY will have been read with interest by all who have paid attention to the remarkable

composition itself. The title "An Allegory," which the picture bore when at Hamilton Palace, has indeed been allowed to remain for the present until a less vague or more satisfactory description of the subject could be given. Yet that some theme from sacred, profane, or legendary story was here treated seemed more and more palpable the longer one contemplated the picture. Nor could certain figures and combinations occurring therein fail to recal to mind passages from the history of the patriarchs Jacob and Joseph.

It was difficult, however, to unite the separate groups in one consistent whole; and it was evident at least that more than one event, more than one phase of a continuous story, was here presented to the eye at once. The turbaned and crowned personage who forms the centre of the group on the left was clearly an Eastern potentate, and on the first glance suggested a Pharaoh. The two children clad alike, ascending the winding staircase, and seen again above at the death-bed of an aged man, instantly recalled either Jacob and Esau, or Manasseh and Ephraim. But their connexion with what passed elsewhere was not very clear; while the riddle was further complicated by the ostentatious display of isolated statues, which might rather pre-suppose a classical than a sacred story. Not but that "idols" might appropriately appear and play a very prominent part in a Biblical subject. Only here they seemed to be mere adjuncts to the scene, attracting no attention for good or for evil from the persons around. The rôle of the personage who wears a red cap and a violet mantle, and who re-appears in four different parts of the composition, was not easily to be guessed; no more than that of either of the women above, clothed in red, save that one of these might be the mother of the boy whom she embraces at the top of the staircase.

Dr. Richter may now be congratulated on being the first to furnish a most probable elucidation of the subject-matter of the picture. And his explanation will appear all the more convincing if we take into account the very peculiar mode of conception and treatment of Biblical subjects common to Andrea del Sarto and his two distinguished pupils and sometime co-workers, Pontormo and Franciabigio. True character-painting was not usual with any of them. A certain abstract type of head is apt to prevail in their works. Occasionally, as in some of Andrea's magnificent frescoes in the court of the Annunziata, we find beautiful female portraits introduced, notably in that representing the Nativity of Mary. But portraiture is rarer in his works and those of his followers than in the compositions of an earlier generation of Florentine painters. When Pontormo would aim at character, he is apt to fall into caricature, as in the picture now in question, where the figure in which Dr. Richter, probably correctly, discerns the "steward of the household" of Joseph is really grotesque in its crabbéd and pompous self-sufficiency, and is not unlikely to be maliciously reminiscent of some *maggiordomo* with whom Pontormo had had to deal. The abstract, in fact, in contradistinction to the true ideal on the one hand, and to the purely naturalistic on the other, had begun to pervade the Florentine school. The only artists who could conceive a true ideal, and so place themselves on a level with the ancient Greeks, were Leonardo da Vinci and Michelangelo.

None need be astonished to find the consecutive incidents of a story told on one panel or canvas. This had been done from the beginning of mediæval art, and was continued and amplified in the frankest manner throughout the period of the Renaissance. But the simplicity of this mode of treating a narrative was no longer in accordance with the more artificial and conscious practice of the sixteenth

century. The charming *naïveté* with which a Botticelli, a Filippino Lippi, or a Ghirlandajo, or, in the Northern school, a Memlinck, could assemble in one harmonious composition, enriched by the beauties of landscape and architecture, the main incidents and all the possible accidents of a story, yet leaving them all distinct and, so to say, legible with ease, gave way to an awkward attempt to satisfy academical exigencies by extremely artificial grouping and ingenious arrangements of background.

The picture now under consideration is a striking example of the later practice. It contains great beauties. The figures are well drawn, if with some conventionalism; the draperies are well cast; the colouring is rich and luminous; the execution at once precise and masterly. But, as to the subject, it is obscured by the artificial arrangement and the effort to crowd a number of separate events into a contracted space. The spectator remains cold.

Accepting Dr. Richter's exposition of the subject as the most probable one, strengthened as it is by his citation from Vasari, which would really seem to identify the picture with that once in the Casa Borgherini, there yet remain some points to be cleared up. Any difficulty arising from the non-appearance of all of Joseph's brethren in the principal group may be easily got over; want of space restricted the painter to suggesting the presence of all by the introduction of two or three. The eager crowd in the background, kept in check by soldiers, may contain the rest of the family and their belongings. A more serious problem is the appearance of Joseph on a car, or platform, drawn by what Dr. Richter (inadvertently, no doubt) calls "Oupida." It is obvious that these three naked children could never move that rather ponderous machine on small wheels, encumbered by the weight of a man and a child, together with what appears to be the statue of a boy on a column, although this figure is represented with the colours of life.

I take this entire group, including the kneeling man who presents a petition or an address to the person on the car, to symbolise the high position to which Joseph had attained in the land of Egypt. The notion is a "triumph," which the painter had to compress into his limited space as well as he could. In the three "putti," crowned with wreaths of bay or olive, we may recognise an idea taken from those triumphal and allegorical pageants and processions so rife in Italy during the fifteenth and sixteenth centuries, in some of which, in Florence, Pontormo himself had been called upon to exercise his ingenuity.

For the rest, I only so far dissent from Dr. Richter's interpretation as to doubt whether anything is meant to be represented in the composition beyond the personal history of Joseph and his kindred when the latter had immigrated into Egypt. I am inclined to see in the crowd in the middle distance the newly arrived Hebrews only, and not the natives of the land, who, for some well-timed measures of corn, had been so cunningly deprived of their fields and cattle by the astute stranger and his royal patron. But this slight reservation in no way impairs Dr. Richter's chief argument.

F. W. BURTON.

NOTES ON ART AND ARCHAEOLOGY.

A SOCIETY for the study and illustration of ancient and mediæval costume is being formed. It proposes to publish large and careful drawings from contemporary objects—sculpture, paintings, illuminations, &c.—accuracy being guaranteed by experts, whose signatures will be attached. The value of such work is obvious; and the scheme has already met with the approval of many distinguished artists and

servants, both here and on the Continent, who have promised their support. The hon. secretary is Mr. E. W. Godwin, of 7 Great College Street, Westminster.

We are glad to hear that Mr. Griggs' series of "Portfolios of Modern Art," to the rare excellence of which we have more than once drawn attention, is to be continued, with Mr. Quaritch for publisher. These consist, it may be as well to repeat, of examples of industrial art (chiefly from South Kensington) reproduced by means of photo-chromo-lithography. Twenty-two parts have already appeared, each containing two plates; and some of these are now out of print.

THE NEW YORK CRITIC states that Mr. Ruskin has bought several etchings and water-colours of Mr. Thomas Moran, chiefly landscapes in the Yellowstone country, and also some etchings of Mrs. Moran.

M. LEOPOLD FLAMENG's fine picture of "Borke's Drift" has been bought by the Austrian Government.

AMONG the art books to be published by Messrs. Sampson Low during the coming season are Dr. Jean-Paul Richter's long-expected *Italian Art in the National Gallery*, which will be illustrated with forty engravings; *The Renaissance of Art in Italy*, by Mr. Leader Scott; *An Illustrated Dictionary of Words used in Art and Archaeology*, by Mr. J. W. Mollett; *Painting, English and American*, by Messrs. H. J. Wilmot Buxton and S. R. Köhler; and a translation of Dr. Franz von Reber's *History of Ancient Art*, by Mr. J. T. Thacker, with 300 illustrations and a glossary.

MESSRS. GEORGE BELL AND SONS have ready for immediate publication *The History of Wood-Engraving in America*, by Mr. W. J. Linton, with one hundred specimens; and *How to Decorate*; or, *Hints on Home Decorations*, by Mr. M. E. James, with coloured plates and numerous diagrams.

AMONG Messrs. Romington's announcements we notice *Modern Landscape*, by Mr. J. Comyns Carr, with etchings after Crome, Constable, Rousseau, Corot, &c.; and a condensed edition of Mr. Charles O. Perkins' *Historical Handbook to Italian Sculpture*.

MESSRS. JOHN WALKER AND Co. have in the press *Scottish Loch Scenery*, by Thomas A. Orrol, illustrated with a series of twenty-four coloured plates from drawings by A. F. Lydon, being a companion volume to *English Lake Scenery*, which was so favourably received last year; also a *Guide to China Painting for Amateurs*, translated from the German.

We learn from the *Scotsman* that a cast of the cross which stands in the old churchyard of Kildalton, Islay, has been presented to the museum of the Scottish Society of Edinburgh. According to Mr. Anderson, this may be regarded as perhaps the best example of the best period of Celtic art in stone to be met with in the country.

An exhibition of the works of the late Henri Lehmann is being organised in Paris to be opened next January.

THE pleasantest article in the *Gazette des Beaux-Arts* this month is one in which M. Clement de Ris gives a sketch of the French artist Maurice Quentin de Latour à propos of seventy portraits by him that have lately been engraved by A. Lalauze. Latour is not an artist of whom the uninitiated know much; indeed, M. de Ris admits that it is impossible to know him at his best without making a pilgrimage to the little museum of Saint-Quentin, which is not always convenient even for his most devoted admirers to do. However, the portraits engraved by Lalauze, several of which are reproduced in the *Gazette*, show him to have been a fascinating

artist—one who was able to reflect the character of his sitters in his art, whether it were the piquante charm of the ladies of the Court of Louis XV. or the mock heroism of their gallants. M. Clement de Ris allows his enthusiasm to carry him beyond bounds sometimes—as, for instance, when he compares Latour with Titian and Vandyke—but everyone will thank him and M. Lalauze for introducing them to such a clever, spirited artist who has hitherto only been known by a few drawings in the Louvre collection. It is sad to hear that his life was unhappy. He was always subject to fits of insanity, and died mad.

THE *Kunstchronik* gives this week an interesting notice of the veteran German painter Stirnbrand, who died on August 2 at Stuttgart, aged ninety-one. Stirnbrand's career was most remarkable. When about three years old he was rescued from the waters of the Danube, into which his mother (a Croatian soldier's wife) had thrown him, by an Austrian officer, who provided for him for some time by placing him with a Rentmeister at Linz, who brought him up with his own children. He received the name of Stirnbrand on account of a burn on his forehead. He began his art-life as a house-painter, and then as a painter of tea-boards and other lacquered wares, which he decorated with portraits of all the celebrities of the time. His portraits were so good that they soon brought him into notice; and, without having had the least instruction in painting, we find him receiving numerous commissions from princes, queens, and other celebrities. He does not seem, however, to have made a fortune, but his house, presided over by a clever wife, became a centre of much of the artistic and literary society of his day. His portraits were always carefully executed and pleasing, but did not show any remarkable genius. He executed a few altar-pieces and genre-pictures, but for the most part his long life was spent in endless portrait-taking.

MUSIC.

Dictionary of Music and Musicians. By Georg Grove. Parts XV. and XVI. (Macmillan and Co.)

A LONG time has elapsed since the appearance of part xiv.; but we have now before us a double number containing some important articles, among which those of Schubert and Schumann, with the well-known signature "G.", will probably prove the most readable and the most attractive. The article on Beethoven in the first volume, occupying nearly forty-eight pages, was considered a very long one, but that on Schubert in part xv. exceeds it in length by about sixteen pages. Dr. Grove has for many years taken a deep interest in everything connected with the life and works of the great Viennese composer; the "dusky heaps of music" discovered by him at Vienna in 1867, the production of Schubert novelties at the Crystal Palace through his influence, and the recent discussion about the "Gastein" symphony—all this proclaims him one of Schubert's most ardent devotees. There is not anything new to say about the composer's life, which is here told in the writer's usual graphic and genial style. Some valuable tables have been arranged with much care, patience, and minute research. Of these, the most important are the alphabetical list of his songs and the catalogue of all the printed and unprinted works in the order of their composition. In looking down the long list, one is astonished at the number of pieces which still remain in MS. Musicians will of course be anxious to know whether any fresh discovery has been made

respecting the supposed missing symphony. Dr. Grove has nothing new to reveal, but his belief in the fact that a symphony was written at Gastein remains unshaken. Schubert's letter to the committee of the Musik Verein in 1826 and the statements of Bauernfeld are certainly very strong points in favour of "G.'s" assertion that a symphony was composed at Gastein in 1825 and forwarded to the society in the following year. There is, however, much to be said on the other side, and Herr Pohl's statement that the symphony in question is identical with the one known as No. 9 in C cannot be lightly dismissed. In Kreisler's *Life of Schubert* it is stated that Ferdinand Schubert, usually very accurate, gave the year 1826 as the date of the origin of this symphony in C. This might explain Schubert's allusion to "a grand symphony" in the celebrated "Kupelwieser" letter; and the fact that in 1828, when the symphony in C was found too difficult for performance by the Musik Verein, Schubert himself proposed the earlier one, No. 6, also in C, seems to go somewhat against the Gastein theory. Why, if he sent in a symphony in 1826, was not that one tried?

The article on "Schools of Composition" is somewhat tediously spun out; all the information might, we think, have been given in far less space. A rapid survey of the various schools from the fourteenth to the nineteenth century would have been useful; but, crowded as it is with detail and with unnecessary comments, the article is unsatisfactory. Mendelssohn and especially Max Bruch come in for too large a share of praise; while the account of Wagner's music and theories is as illogical as it is ill-tempered. In speaking of the German school of the eighteenth century, the writer says that Haydn worked out the sonata-form "by his own unaided genius." What about the labours of Carl Philipp Emanuel Bach, his predecessor, and Haydn's generous statement, "All that I know I owe to E. Bach"? Again, from some remarks he makes on "Additional Accompaniments" in connexion with Handel, it would seem that the writer is unable or unwilling to distinguish between their use and their abuse. Of Mozart he says that he wrote "not from the head, but from the heart." The heart had certainly a great deal to do with his music, but there was also plenty of head-work. It is a pity that Raff is mentioned as one of the greatest living representatives of the imaginative and romantic schools.

The article on Schumann is very interesting. Dr. Grove, after describing the artistic relations between Schumann and Mendelssohn, most justly remarks that, if some of the expressions in Mendelssohn's letters with regard to Schumann sound somewhat disparaging, we must remember that "it is not the personal Mendelssohn speaking against the personal Schumann, but rather the creative artist speaking against the critic." In the notice of Mme. Schumann it is said that she has not played in Paris since 1832. This statement is not correct; she played there about twenty years ago.

Other articles of importance are those on "Score," "Scottish Music," "Service," "Shake," and "Singing." In the one on "Score" the writer gives two ways of "arranging" a passage from the overture of "Der Freischütz." The first was sanctioned by Weber. The second is given to show how, "in the hope of attaining brilliancy," the rhythm of the passage is distorted. A third way, by Liszt, ought also to have been given, in which the spirit of the original is preserved and brilliancy attained without any distortion of rhythm.

Part xvi. gives the commencement of an article entitled "Sketches, Sketch-Books," which promises to be very entertaining and instructive, J. S. SHEPLOCK.

INTERMEDIATE EDUCATION BOARD for IRELAND.

EXAMINERS, 1883.

The INTERMEDIATE EDUCATION BOARD are prepared to receive APPLICATIONS from persons who desire to have their names placed upon the list from which the Examiners for 1883 will be selected. The subjects of Examination are—Greek, Latin, English, French, German, Italian, Critic, Mathematics, Arithmetic and Book-keeping, Natural Philosophy (Experimental Physics), Chemistry, Botany and Animal Physiology, Drawing, Music, Domestic Economy.

Particulars as to remuneration, &c., can be had on application to the Assistant-Commissioners. Applications, endorsed "Examiners," should be sent in on or before the 15th of OCTOBER NEXT, addressed to the Assistant-Commissioners.

By order,

ARTHUR WILL COOPER, } Assistant-
T. J. BELLINGHAM BRADY, } Commissioners.
1, Home-street, Dublin, September 11th, 1882.

A VACANCY having occurred in the PROFESSORSHIP of GREEK and LATIN in the MASON SCIENCE COLLEGE, BIRMINGHAM, the COUNCIL are prepared to receive APPLICATIONS (accompanied by Testimonials) for the APPOINTMENT. The stipend is £200 per annum, plus two-thirds of Class Fees. Applications must be sent in to the Secretary, G. H. MORLEY, not later than OCTOBER 31st, 1882. Further particulars may be obtained from the Secretary.

DRAWING, Oil Painting, Terra Cotta, China, &c., Figures, Flowers, Landscapes.—LESSONS by a Lady (Exhibitor); also Piano (classical and modern), Singing, &c. Terms moderate.—Address CARO, 10, Upper Baker-street, W.

PRE-RAPHAELITE MASTERPIECE for SALE.—SHEPHERD BROS. have NOW ON VIEW at their PICTURE GALLERY, 57, KING STREET, ST. JAMES'S, LONDON, "THE REVEREND MR. MASTON MOOR," a large and important work, painted by HENRY WALLIS in 1830, and engraved in the "Art Journal."

PICTURESQUE, ANTIQUE FURNISHED HOUSE.—Eleven Rooms; healthy, lovely scenery. Streeton Hills, Shropshire. £75 per annum.—Address A. B. WOOD, Esq., Penarth House, near Llanarny, Shropshire.

This day is published, price 2s.

THE LIFE and CORRESPONDENCE of DR. SAMUEL HERBERT WARE, Author of "The Foundations of Manchester," &c. Edited by Mrs. HERBERT WARE. Manchester: J. K. COCKING, 23, Piccadilly.

THE VICTORIA UNIVERSITY.

THE OWENS COLLEGE CALENDAR for the SESSION 1882-83. Price 2s. by post, 2s. 6d. Manchester: J. K. COCKING; London: MACMILLAN & CO.

Just published, price 1s. 6d.; by post, 1s. 8d.

THE CALENDAR of the UNIVERSITY COLLEGE of WALES for the SESSION 1882-83. Manchester: J. K. COCKING, 23, Piccadilly.

Just ready, fcap. 8vo, price 1s.

OUTLINES of ZOOLOGY for JUNIOR CLASSES. With numerous Illustrations. By W. F. COLLIER, LL.D. Dublin: SULLIVAN BROTHERS; London: SIMPKIN, MARSHALL, & CO.

LE PASSANT

(THE LIGHT-HEARTED ONE).

From the Original of FRANÇOIS COPPÉE.

By T. L. OXLEY.

Author of "Annunziata Grimaldi," "Calais to Karlebad," "Jacques Balmet," "Yadarte," &c.

London: KENNY & EYDRAU, Publishers, 440, Oxford-street.

THE AUTOTYPE COMPANY,
74, NEW OXFORD STREET, W.O.
(Twenty doors west of Muller's Library.)

AUTOTYPE represents Permanent Photography, with unique powers of artistic expression.

AUTOTYPE is celebrated for its noble Collection of Copies of the OLD MASTERS, and for numerous fine examples of MODERN ART.

MUSEO DEL PRADO, MADRID.

ISSUE of 207 AUTOTYPE REPRODUCTIONS of PAINTINGS in this Celebrated Gallery. Catalogue on application.

TURNER'S ETCHINGS

For the "LIBER STUDIUM."

Twenty-five of these Celebrated Etchings, in Autotype Facsimile, are now ready, half-a-crown each; or the Set can be obtained, elegantly bound in cloth, at Three Guineas.

WALKER'S CABINET of OLD FANS. Fifty-two Illustrations. A few Copies left. One Guinea each.

The AUTOTYPE COMPANY are producers of BOOK ILLUSTRATIONS of special photographic excellence and wide application.

To adorn at little cost the walls of Home with Artists' Masterpieces, visit the AUTOTYPE FINE-ART GALLERY, 74, New Oxford-street, W.C.

THE AUTOTYPE COMPANY,
LONDON.

THE LIBER STUDIUM

J. M. W. TURNER, R.A.

Reproduced in Facsimile by the Autotype Process, and accompanied with Notices of each Plate by the Rev. STOPFORD BROOK, M.A. Publishing in Three Volumes, each containing Twenty-four Illustrations, price Four Guineas per Volume. Volume the First now ready.

Detached Plates of this Edition of the "Liber," with the Complementary apparatus, are sold at 5s. 6d.

HENRY SOTHERAN & CO.,
24, Piccadilly, W., and 136, Strand, W.C.

New and Cheap Edition, crown 8vo, 6s.

TRASEADEN HALL. "When George the

THIRD WAS KING." By Major-General W. G. HAMLEY, Author of "Gully or Not Gully," "The House of Lya."

"Traseaden Hall" is in all respects an admirable novel—it is animated and humorous, soldierly and scholarly. *Times.*

"We may repeat that we have rarely met with a book by a veteran writer so full of freshness and unflagging animation."—*Saturday Review.*

This day is published.—The Third Edition.

THE REVOLT of MAN. By Walter BESANT. New and Cheaper Edition. Crown 8vo, 3s. 6d.

"The Revolt of Man" is decidedly clever. . . . It is a happy idea well worked out, and must rank amongst the best literary confections of its kind."—*Athenaeum.*

Edinburgh and London: WILLIAM BLACKWOOD & SONS.

THE SCIENTIFIC RESULTS of the VOYAGE OF H.M.S. "CHALLENGER."

Now ready, "Narrative," Vol. II., in royal 4to, price 39s., cloth.

REPORT on the SCIENTIFIC RESULTS of the VOYAGE of H.M.S. "CHALLENGER" during the Years 1873-76, under the Command of Captain G. S. NARES, R.N., F.R.S., and Captain F. T. THOMSON, R.N. Prepared under the Superintendence of the late Sir C. W. THOMSON, F.R.S., and now of JOHN MURRAY, F.R.S.E., one of the Naturalists of the Expedition.

"This Volume may also be had in Three separate Parts, XIV., XV., and XVI. of the entire Work, as follows:—

PART XIV. "Magnetical and Meteorological Observations." Price 25s.
PART XV. APPENDIX A. "Report on the Pressure Errors of the Challenger Thermometers." Price 5s. 6d.

PART XVI. APPENDIX B. "Report on the Petrology of St. Paul's Rocks." Price 5s. 6d.

Printed for H.M. Stationery Office: Published by Order of H.M. Government: Sold by Longmans & Co., John Murray, Macmillan & Co., Simpkin & Co., Trübner & Co., R. Stanford, J. D. Potter, and Kegan Paul, Trench & Co., London; A. & C. Black, and Douglas & Foulis, Edinburgh; and by A. Thom & Co., and Hodges, Piggis, & Co., Dublin.

EUGENE'S FRENCH GRAMMAR.

Fifth Edition, crown 8vo, cloth, 6s.

EUGENE'S STUDENT'S COMPARATIVE GRAMMAR of the FRENCH LANGUAGE. With an Historical Sketch of the Formation of French. For the use of Upper and Middle Schools. With Copious Exercises. By G. EUGENE.

OR, GRAMMAR, 2s.; EXERCISES, 2s. 6d.

"The appearance of a Grammar like this is in itself a sign that great advance is being made in the teaching of modern as well as of ancient languages. . . . Mr. Eugene's book is one that we can strongly recommend."—*Educational Times.*

"In itself this is in many ways the most satisfactory Grammar for beginners that we have as yet seen."—*Athenaeum.*
"The most attractive book on the subject that has ever come under our notice."—*Leeds Mercury.*

EUGENE'S FRENCH METHOD.

Third Edition, crown 8vo, cloth, 1s. 6d.

EUGENE'S FRENCH METHOD. Elementary French Lessons. Easy Rules and Exercises preparatory to the "Student's Comparative French Grammar," by the same Author.

"Certainly deserves to rank among the best of our elementary French Exercise-Books."—*Educational Times.*

"The best book of the kind with which I am acquainted, 'Eugene's Elementary Lessons in French.'"

Dr. BREYMAN, Lecturer of French, Owens College.
WILLIAMS & MORGAN, 14, Henrietta-street, Covent-garden, London; and 20, South Frederick-street, Edinburgh.

On September 29th (One Shilling), No. 274.

THE CORNHILL MAGAZINE

For OCTOBER.

London: MACMILLAN & CO.

F. V. WHITE & CO'S NEW BOOKS.

THE POPULAR NEW NOVELS
AT ALL LIBRARIES.

ALL AMONG the BARLEY. By FLORA HAYTER. 3 vols.

FAIR FACES and TRUE HEARTS. By the AUTHOR of "MARGARET MORTIMER'S SECOND HUSBAND." 3 vols. [Just ready.]

LOST in the CROWD. By the AUTHOR of "RECOMMENDED to MERCY." 3 vols. [Immediately.]

MY CONNAUGHT COUSINS. By HARRIETT JAY, Author of "Two Men and a Maid," "The Queen of Connaught," &c. 3 vols. [Shortly.]

HOW THEY LOVED HIM. By FLORENCE MARRYAT, Author of "My Sister the Actress," "A Broken Blossom," &c. 3 vols. Second Edition.

"Mrs. Lean has written a stronger book than she ever wrote before."—*Athenaeum.*

WAS HERS the FAULT? By the AUTHOR of "A CRUEL SECRET," "WOOLING A SWEETBRIAR," &c. 3 vols.

"There is much cleverness in the story."—*Queen.*
"The book is very readable."—*Academy.*

SWEETHEART and WIFE. By LADY CONSTANCE HOWARD. 3 vols. Second Edition.

"Sweetheart and Wife" is a love idyll, skilfully painted in the midst of many people and many scenes, described by one who writes with that very rare attribute of the modern novelist—knowledge of, and familiarity with, the society she pictures."—*Life.*

THREE FAIR DAUGHTERS. By LAURENCE BROOKE, Author of "The Queen of Two Worlds," &c. 3 vols.

"Three Fair Daughters" is just the pretty taking story its title suggests. . . . Indeed, the whole story is fresh and amusing in no common degree, and will hardly fail to give pleasure wherever it may be read."—*John Bull.*

F. V. WHITE & CO'S SELECT NOVELS.

Crown 8vo, cloth, 3s. 6d. each.

The following Volumes of the Series are now ready, and can be obtained of all Booksellers in Town and Country, and at all Railway Bookstalls.

MY SISTER the ACTRESS. By FLORENCE MARRYAT.

MOENING POST says:—"It is a very pretty story, and told in the author's happiest manner."

THE DEAN'S WIFE. By Mrs. ELOABET.

JOHN BULL says:—"Any reader who wants a good story thoroughly well told cannot do better than read 'The Dean's Wife.'"

A BROKEN BLOSSOM. By FLORENCE MARRYAT.

SCOTSMAN says:—"Deserves to be ranked as the most artistic and altogether the best work of fiction its clever and prolific author has yet written."

TWO MEN and a MAID. By HARRIETT JAY, Author of "The Queen of Connaught," &c.

GRAPHIC says:—"Compared with the former works of the authoress of 'The Queen of Connaught,' this novel must be pronounced second to none."

PHYLLIDA. By Florence Marryat, Author of "My Sister the Actress," "A Broken Blossom," &c. [In October.]

COURT JOURNAL says:—"Phyllida" is decidedly one of the best novels of the season."

SWEETHEART and WIFE. By LADY CONSTANCE HOWARD. [In October.]

In picture cover, price 1s.; post-free, 1s. 2d.

THE LIFE and ADVENTURES of FRED. G. BURNABY, Colonel Commanding the Royal Horse Guards Blue; Author of "A Ride to Khiva."

London: F. V. WHITE & Co., 31, Southampton-street, Strand.

SATURDAY, SEPTEMBER 30, 1882.

No. 543, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscripts.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

"ENGLISH MEN OF LETTERS."

Swift. By Leslie Stephen. (Macmillan.)

AN essential qualification of Swift's biographer is that he shall be both attracted and repelled, and that, finally, he shall be able to hold his own with masculine force, while aware of repulsion within a zone of attraction and attraction within a zone of repulsion. Swift's vices were inverted virtues; his finest qualities had in them a touch of the satanic. His foulness was cleanliness grown rabid; his love meant imprisonment in the grim fortress of his heart; his piety was a Mameluke's loyalty to his Sultan in heaven. Swift was a patriot who hated his country; a philanthropist who scorned his species. His laughter rings with terror; his imagination constructs a nightmare by aid of geometry; he is the best of reasoners on the worst of premisses. His end was terrible and mean—Prometheus, not gnawed by vultures, but perishing "like a poisoned rat in a hole."

Mr. Leslie Stephen holds his own with Swift. He is, perhaps, a little too superior to extravagance; for the sanest of critics might do well to let himself be carried far by the tide of attraction, and far by the tide of repulsion, before recovering himself and attaining the neutral position of shrewd, yet sympathetic, good sense. When a man effuses a legend about himself, much of the real man's virtue lives in the legend; we need be in no hurry to disengage the prosaic figure from the mist which magnifies it. On the other hand, the legend is monotonous, and the blare of panegyric, or the blare of invective, soon fatigues the ear. Justice and truth alone have infinite variety, and the finest nuances are possible to good sense. Mr. Stephen is in the main admirably just to Swift, and therefore he is generous, not with the effeminate generosity of intemperate praise, but with some of that adult, manly generosity which is the illuminated expression of justice. On the whole, while waiting for the fuller biography by Mr. Henry Craik, we can be content to accept Mr. Stephen's reading of the difficult story.

Perplexities begin at the outset. Was Swift English or Irish? "No more Irish," replies Thackeray, "than a man born of English parents at Calcutta is a Hindoo." But there does not appear to be any marked tendency in Anglo-Indians to become more Hindoo than the Hindoos, while it is admitted that the transplanted Englishman changes readily to a new Hibernian variety in Irish soil. Swift breathed Irish air, ate Irish

bread, during boyhood and youth; it would have been hard to distinguish him as a foreigner among his Kilkenny schoolfellows; he misbehaved at college with as much aptness as one to the manner born; and afterwards did he not choose for his manservant a drunken Patrick, and an honest lump of Irish girlhood for his "sweetheart" the cook? In Swift's pamphlets we discover, not the Anglo-Indian of the Irish dependency (he may be found in Spenser's prose treatise), but a person to whom due honour has never been done—the Irish half-breed. Half-breed—it sounds ill, and hard things have been said of the moral or spiritual half-breed by that philosophic observer, Theophrastus Such. None the less, in Ireland the salt of the earth is to be found in the man named Mixtus. He has dropped some prejudices, and he has escaped some illusions. He delights in neither the British brag nor the Celtic brag. He is not the benevolent Englishman striving to do his duty towards the inferior country. He is not the patriotic Irishman animated by a heroic aspiration to make himself disagreeable to the Saxon (and achieving the object of his desire). He can be more Irish than the Irish, inasmuch as he lives more upon the soil and less in Cloud-cuckoo-town than they. He is stirred by the infamy of Wood's halfpence, though somewhat cool as to the glories of Brian the brave. To this tribe, from which has come all that is best in Ireland, Swift, and Molyneux, and Berkeley, and Burke belonged—they were all half-breeds.

It is a wonder that, in these days of scientific criticism, the melancholy ocean (ocean, the very reverse of melancholy, breather of health, bringer of food) has not been summoned to account for the dark and tempestuous temper of Swift. The stage-manager of the world's tragi-comedy doubtless needed his pessimism and despair as a foil to the amiable ethics of Addison and the smooth optimism of Pope. What gives his rage against life its peculiar character is that Swift's genius was not speculative, nor in a high sense imaginative, but was eminently practical and positive. He is not confounded by the thought of man's mingled greatness and misery—"how noble in reason! how infinite in faculty!" and yet "the quintessence of dust." "Le silence éternel de ces espaces infinis m'effraie," exclaimed Pascal; but if the eternal silence drives us in from the outposts of creation upon our central self it also invites us to escape from self, and be at rest. Swift never reached out to the eternal silence; the din of this world clattered upon his ears perpetually. He did not expect infinite things from life—infinite love, boundless knowledge, absolute beauty. But he thought men and women might at least be clean, healthy, industrious, quiet, comfortable, honest, friendly, temperate, rational. Was it a too ambitious programme? And he found, or thought he found, them nasty, slothful, diseased, malicious, vain—creatures by so much more hateful than the Yahoo as corrupted reason is worse than brutality itself. Yet his last word in *Gulliver* is one of reconciliation, not of revolt. The sometime pupil of the noble Houyhnhyms will try to apply their lessons of virtue; he will try to enjoy his own speculations in

his little garden at Redriff; he will instruct the Yahoos of his own family so far as they are docile animals; he will behold his figure often in a glass, and thus, if possible, habituate himself by time to tolerate the sight of a human creature. Only the pride of a Yahoo drives him mad.

And yet what contradictions! What Titanic pride to strive to see things as a god; to dwarf man's glory or aggrandise his vices with planetary magnifying or diminishing glasses; to distort his features in the concave mirror of the heavens! The Houyhnhyms—Swift's ideals of moral excellence—are calm, rational, benevolent creatures, devoid of passions: and he himself is devoured by scorn and hate. They have not learnt to say the thing that is not: and Swift does not scruple to print monstrous falsehoods for a party purpose. They are modest and cleanly: and Swift flings ordure in the faces of women and of little children. They have tranquil deaths, towards which they move with resignation: and he makes his exit in a rage.

The last indignity was reserved for our own century and for philosophers in the Flying Island of the British Association. In 1835, in making alterations under the aisle of St. Patrick's Cathedral, the coffins of Swift and Stella were found side by side. The British Association was holding its meeting in Dublin, and, as the genius of irony would have it, phrenology was then the fashion. Doubtless with the permission of Swift's successor at that day in the deanery of the Cathedral, two dainty toys were provided for the perambulating professors and their fair entertainers. The skulls of Swift and of Esther Johnson went the round of the drawing-rooms; they were patted and poised and peeped at; pretty, sentimental speeches and ponderous scientific phrases flew to right and left; here hung "only a woman's hair," and there the condyloid processes projected into the foramen magnum of the occipital bone. The bumps of veneration and amateness were measured, and it was ascertained that wit was small. Drawings and casts were made. Finally, when all the pretty speeches had run dry, and the spectacles were all taken off, and wisdom had departed from the land, the desecrated bones were restored to darkness, to be once more discovered within a few days past, but not again to have their nakedness exposed to the gaping inhabitants of Laputa.

The presence and the power of Swift still brood over the place that once knew him. Paltry waifs connected with him may be found from time to time in Dublin by the seeker for such possessions. I have seen in a little ragged book-shop a Prayer-book having "J. S. D.D. A.D. 1710" engraved upon the old silver clasps. His walking-stick became not long since a collector's trophy. In a musty garret, the press which held his cap and gown has been pointed out to me as a desirable object of purchase. In a dingy book-den I came upon a copy of the *Drapier's Letters*, presented in the year of their publication to an obscure acquaintance by that serving-man who was supposed by Swift to have betrayed the open secret of their authorship, the blank pages exhibiting one or two poor epigrams on D—n S—t,

presumably in the serving-man's handwriting. And once, when wandering on a foggy November night near St. Patrick's, I encountered a figure striding through the mist, which, having looked often at the Dean's portrait in the Examination Hall of Trinity College, I could not fail to recognise. By the gas-flare in the fog I could feel the uneasy light that flickered in his great blue eyes; his forehead had the angry furrows of insanity. I thought to soothe his spirit with the latest news of the Irish Parliamentary party, but he shook his head impatiently. I changed the subject, and told him how the great Mr. von Hartmann had erected Pessimism into a system; how the Universe is a monstrous blister, or Zugpfaster, which our new Supreme Being, the Unconscious, has unconsciously applied to his back parts to draw out the purulent matter causing his anguish; how man by his sufferings may redeem his Maker; and how it is the duty of each of us to increase and multiply the race of Yahoos, because competition leads to culture, and culture increases the sum of human wretchedness. He looked thunderously amused; then shook himself free with a portentous laugh, which sounded like a series of transformed groans, and waved adieu as he moved rapidly in the direction of the north aisle of the cathedral.

Before concluding, we must give the reader a taste of Mr. Leslie Stephen's quality. It is an excellent answer to the question, What is the interest of the *Journal to Stella*?

"What, then, is the interest of the *Journal to Stella*? One element of strange and singular fascination, to be considered hereafter, is the prattle with his correspondent. For the rest, our interest depends in great measure upon the reflections with which we must ourselves clothe the bare skeleton of facts. In reading the *Journal to Stella* we may fancy ourselves waiting in a parliamentary lobby during an excited debate. One of the chief actors hurries out at intervals; pours out a kind of hasty bulletin; tells of some thrilling incident, or indicates some threatening symptom; more frequently he seeks to relieve his anxieties by indulging in a little personal gossip, and only interjects such comments upon politics as can be compressed into a hasty ejaculation, often, as may be supposed, of the imprecatory kind. Yet he unconsciously betrays his hopes and fears; he is fresh from the thick of the fight, and we perceive that his nerves are still quivering and his phrases are glowing with the ardour of the struggle. Hopes and fears are long since faded, and the struggle itself is now but a war of phantoms. Yet with the help of the *Journal* and contemporary documents we can revive for the moment the decaying images, and cheat ourselves into the momentary persuasion that the fate of the world depends upon Harley's success, as we now hold it to depend upon Mr. Gladstone's."

EDWARD DOWDEN.

From Benguela to the Territory of Yaoca.
Description of a Journey into Central and West Africa. By H. Capello and R. Ivens.
Translated by Alfred Elwes, Ph.D. In 2 vols. (Sampson Low.)

In last week's ACADEMY a passage is quoted from the *Cape Quarterly Review* to the effect that all recent Central African explorers "stand on the shoulders of the Portuguese

travellers of the fifteenth, sixteenth, and seventeenth centuries." There may be some exaggeration in this; but it will be readily conceded that the names of Serpa Pinto, Capello, and Ivens stand very nearly, if not quite, on a level with those of the most illustrious successors of the early Portuguese pioneers in the field of African research. It will be remembered by the readers of Pinto's work that these three explorers were jointly entrusted with the conduct of the Portuguese geographical expedition, organised in 1877 for the purpose of tracing the Kwango from its source to its confluence with the Congo, and surveying the intervening region thence to the Atlantic coast. But, fortunately for the interests of science, they had got no farther than Ocanda, in Benguela, when "a split in the camp" took place; and, although all were again momentarily united at Kanguombe, capital of Bihé, a final separation here occurred, Pinto proceeding across the continent to Durban, the other two remaining to carry out the original programme. It is due to them to add that in the work under review they completely vindicate themselves from the charges somewhat hastily brought against them by Pinto, and very freely circulated in the English press. That these noble officers of the Portuguese Navy were altogether incapable of the conduct and motives attributed to them by their military fellow-traveller is in any case abundantly evident from the marvellous story of adventure revealed to us in these absorbingly interesting volumes.

Adhering somewhat closely to their instructions, which confined them mainly to the Portuguese West African possessions, they had few opportunities of extending the boundaries of geographical discovery. As they also failed to carry out the main object of the expedition by tracing the Kwango from its source to its mouth, the results may at first sight seem scarcely commensurate with the time, labour, and expense involved. But this impression will be speedily dissipated by a perusal of the graphic pages in which their achievements are recorded. Although the main features of the land were tolerably well known, we soon begin to perceive how profound was our ignorance of the details, and how vast was the amount of useful work actually performed by the intrepid explorers. Throughout the whole journey of some 2,500 miles, from Benguela to Bihé, thence northwards to the farthest point reached on the Kwango in 6° 30' N., and back to the coast at Loanda, no amount of fatigue or hardships could ever tempt them to relax their efforts in taking accurate measurements of heights, latitude and longitude; in making observations on the temperature; in collecting geological, botanical, and zoological specimens. The result is a vast accumulation of valuable materials, which will entitle these volumes to rank scientifically nearly on the same high level as those of Barth, Naohtigall, and Schweinfurth.

The actual geographical discoveries, although few in number, are in some instances important. Among the most conspicuous are:—(1) The determination of the source of the Kwango at an altitude of 4,756 feet on the culminating point of the Great Divide, "a

sort of St. Gothard of the African waters," which flow thence to the Zambesi, Congo, and Kwanza basins. (2) A careful survey of the upper and middle course of the Kwango, including the discovery of the great Caparanga Falls—by the discoverers renamed the Louisa Falls, in honour of the Queen of Portugal. This cataract, which lies in 10° 06' N., 18° 43' E., is formed by the Kwango at a point where the broad stream, winding through a sinuous bed, is suddenly precipitated from a height of 163 feet into a narrow, rocky gorge at a single plunge.

"On the upper region the river, with water dark as night, runs quietly and evenly enough between its wall-wooded banks, so that the traveller at a hundred paces remove would not even suspect its existence; and then suddenly, with this drop of 163 feet, the whole scene is changed. The current, increasing in velocity as it nears the abyss, tries to bear down the rocks which bar the way, and, failing in the attempt, leaps majestically over them in every direction, and precipitates itself with a huge roar into the gulf below. The water in the act has lost all its dark hue, and like a silvery sheet enwraps the black and angular peaks as it rushes downwards, until, on reaching the bottom, it flies up again in spray to catch the beams of the bright sun, and form mimic rainbows across the chasm" (i. 273, 274).

(3) The discovery of the Cu-gho, which flows from the north-west through a lacustrine region to the left bank of the Kwango, of which it appears to be the most important affluent.

This lacustrine region, which consists of a number of independent tarns overflowing intermittently towards the Cu-gho and Kwango, henceforth takes the place of the phantom lake Aquilonda, with its emissary the Barbela, flowing northwards to the Kwango, which has figured for the last 200 years or so on our maps. "The natives only stared when we talked about the great lake Aquilonda, and they looked even more astonished when the subject of the celebrated River Barbela was broached" (i. 145). The authors make the ingenious suggestion that the word *Aquilonda* may be a corruption of *Aqua Lundao*, by which the old missionaries wished to indicate some large body of water which they may have heard of in the eastern region of Lunda (Ulunda). Thus, while in East Equatorial Africa Burton's lacustrine region merges in the vast lake Victoria Nyanza of Speke and Grant, in the West our explorers are reluctantly compelled to break up an imaginary sheet of water into a number of insignificant lakelets in no way connected with each other, but consisting of "small basins of two, three, and four miles in extent, confined by lofty mountains."

A few miles north of this district they entered the Yacca country, where the expedition was brought to an abrupt termination in 6° 30' N., 17° E., still some 150 miles from the banks of the Congo. But the wonder is, not that they were unable to follow up the course of the Kwango to the confluence, but that they were ever able to penetrate so far northwards. To do so they had to traverse a frightful desert in the Quicongo district, mostly treeless, destitute of water, and exposed to the fierce rays of a tropical sun. The dreadful sufferings and hardships endured

by the caravan throughout the whole of this section of the journey are vividly described, and in their harrowing details will rival any similar scenes of modern adventure:—

"What frightful solitudes they were! What sadness, which sank into the soul, weighed upon the entire land! The silence of the tomb reigned supreme upon those rocks and hollows, whose gloomy and naked aspect, made more terrible by the blinding light of the equatorial sun, seemed to bar all relief to the many ills under which we were sinking! No occasional scraps of green, no clouds to temper the intensity of the sky, offered any relief in the midst of that awful desert, where the silence was appalling, the immovability of every blade of burnt grass was insufferable, where the heat was suffocating, and where the valleys but echoed to the groans and laments of our exhausted crew" (ii. 136).

Then comes a still more eloquent extract from their diary for June 9, 1879, the date on which the northernmost point of the journey was reached:—

"Desert still continues—we can go no farther—we turn back to-day—ten men suffering with dysentery—rations at the lowest ebb—heat intense—fever at nightfall, dysentery permanent. A cursed territory is this of Yacca!"

Yet the very next day, it being absolutely necessary to get out of the wilderness, the first homeward march, with the glass at 89° F., covered no less than twenty-five miles! Such an exploit as this, which, under the circumstances, will bear comparison with almost any on record, should also help to allay the fears of the noble-minded travellers as to their reception in Europe. "What will they say of us at home?" they ask in the diary at the close of that tremendous march. "So near to a solution of the problem, and obliged to give it up! Patience! Patience! It is all that is left us. So farewell to our hopes! May those who come after us be more successful!" (ii. 137).

Of Yacca-land itself but little information was gleaned, and that not of the most favourable nature. It seems to comprise an extensive tract, stretching along both sides of the Kwango northwards to the Ba-Congo, and north-eastwards to the territory of the Ba-Cundi cannibals. The natives are described as very rude and barbarous, mostly hunters, fishers, and stock-breeders, governed by a large number of sovas, or kinglets, under a supreme chief variously known as the Quianvo, Mequianvo, or Muene Puto Cassongo. His residence lies under 60° 30' N. on the N'ganga, a tributary of the Kwango on the right bank. Both he and his people appear to stand in some political relationship with the Muata Yanvo of Ulunda, the precise nature of which nobody seemed quite to understand. Some reported that the Ma-Yacca were all slaves of the Ma-Lunda; some that the Quianvo was a vassal of the Yanvo; others that he was quite independent, or even superior, "inasmuch as, on the death of the Yanvo, the former appointed his successor." But these and the many other problems awaiting solution in Western Equatorial Africa are probably destined to be speedily cleared up. Mr. Stanley, whose return to Europe has just been announced, reports the opening of roads and the successful establishment of several stations at

intervals along the banks of the Congo, which may soon become so many centres of trade, civilisation, and exploration in these regions.

Meantime the promoters of these projects will not be encouraged to find that the natives in Portuguese territory, or on the border lands, have made no perceptible advance in culture since the first appearance of Europeans on the West Coast some 400 years ago. Our explorers, who have paid special attention to this subject, entertain a decidedly low estimate of the Negro character and mental faculties. A deplorable picture is drawn of the social state of the aborigines, who are still universally addicted to the practice of witchcraft, with all its attendant horrors; who treat their women as so much cattle, whose only notion of government is blind obedience to a besotten despot, whose religion is still mere fetishism, and who have no idea of a Supreme Being—the term *n'zamba*, supposed by the missionaries to involve this concept, simply meaning an "elephant," the largest and most formidable beast known to them.* Nevertheless, it is not denied that they are capable of improvement under judicious treatment, and a somewhat serious indictment is here unwittingly brought against the Portuguese Government for the misrule and neglected state of its West African subjects. Even at Cassange, an advanced station in Angola, when the local factions fall out they give notice to the European traders to close their stores, and then fire away at each other till one or other, or both, has had enough of it. Heavy charges of extortion, and even murder, are more than insinuated against the Portuguese local administrators, one of whom

"was accustomed to get rid of people who were distasteful to him by sending them into the forest to cut wood, and then ordering them to be quietly shot and buried. These are some of the delights of a subaltern military administration."

The town of Ambaca, formerly a thriving place, is stated to have been ruined by

"the persecutions and grasping of the authorities. . . . The aspect of affairs at the present time is simply this, that Ambaca is worth nothing at all, because all she ever had has been squeezed out of her, and it would be difficult indeed for any place to retain importance when her wealthiest sons have been driven away, and those who are left are systematically spoiled" (ii. 189).

In Cassange itself the travellers witnessed a shocking case of trial by ordeal, ending in the death of the victim; and they assure us that in many places the funeral of sovas is accompanied by barbarous sanguinary rites quite as atrocious as those Cameron has described as customary in the interior of the continent.

"They immolate and place male or female slaves in the tombs with their respective lords, unless their barbarity, as in some instances, induces them to bury these poor creatures alive, after previously breaking their legs! This was the case on the death of the old Sovo of Quimbundo, some short time before we arrived at the place, when two unhappy beings, a boy and

* In the same way the *kamui* of the Ainu is originally the flesh-giver, the bear, whom they first worship and then devour.

girl, had their legs fractured, and were interred in the vast mausoleum of the hideous chief!" (i. 381).

But the limits of our space have already been exceeded before a tithe of the interesting points have been touched on which had been marked off for notice. In fact, large as the work is, it teems with incident to such an extent that it cannot be said to contain a single dull page. It is supplied with three useful maps, a copious Index, and numerous illustrations fairly well executed, and including two good portraits of the authors. The translator has also done his part efficiently; but it is to be regretted that he has retained not only the Portuguese spelling, but even the definite article before the names of territories and districts. Thus we have the Bihé, the Dombe, the Huambo, the Tibesti, &c., which is like saying the Wales, the Picardy, the Switzerland, and the Tyrol—which last has, unfortunately, become far too common, owing to similar carelessness on the part of writers translating or imitating foreign phraseology.

A. H. KEANE.

Poems, Original and Translated. By H. J. D. Ryder, of the Oratory. (Dublin: W. H. Gill.)

FATHER RYDER has been armour-bearer to a giant; and when he tells us that a small volume of verse is "a selection from compositions whose dates range over a quarter of a century" one opens it with considerable expectations. Small as the volume is, the greater part of it, including the opening poem, is padding—the kind of thing that we are used to when a pious person of either sex can find a publisher. One really does not want a tame idyll on the ravens of St. Meinrad of Einsiedeln, who, it seems, played the same part as the crows of Ibycus; or a legend from Rodriguez of a dying leper, who, in the prospect of Paradise, sang sweeter than the birds in May; or a story of a Dominican schoolmaster, two of whose pupils used to share their breakfast with the child Jesus, till they were bidden with their master to dine with him in Paradise. All folk-lore is beat in the oldest prose form. One hardly wants translations of hymns—though the "Nightingale" of John of Hoveden (a chaplain of Queen Eleanor's) is turned into really flowing and musical verse—still less translations of Italian sonnets, including St. Philip Neri's, and specimens of minor German writers. We could have even spared two pretty versifications of Scripture—the story of Elisha and his servant and the story of the blind man who washed in Siloam—and some pathos about "A Great Drought" and "Marie Antoinette." We could also have spared all the sonnets about the English martyrs, and almost all the sonnets on St. Philip. Some might make an exception in favour of these tercets:

"He taught this lesson: Heaven is nearer home—
Home which God's finger traces out for each—
Than to another spot, however blest.
Heaven's choicest gifts are lost to those who roam;
The ripest fruit hangs most within our reach;
Of all life's fare, God's daily bread is best."

We might have spared all the other sonnets,

with two exceptions—the last of the three to Bice, which begins

"What shall we do for Bice's sake,
That dwelling here with her at one,
When what remains of life is done
Our darling we may overtake?"

and the quartets of the sonnet by one about to be deservedly hanged. Perhaps, too, the sonnet on the popular saying, "God sides with the stronger battalions," may claim to be Miltonic, and *Hoc erit in votis* to be humorous. But if Father Ryder had never written sonnets he could never have written the light and dainty couplets on sonnet-writing that would hold their own in any anthology. An "Epithalamium" is not a bad sequel to Card. Newman's charming "Valentine." "Death Loss" and "Animæ Fidelium" have something of the grace of Miss Rossetti's work when most austere. "Laughter" would not have been out of place in the *Lyra Apostolica*.

Still, if this were all, the volume would hardly call for separate notice; but it contains some dozen pages which are really memorable. The subject of old age never leaves Father Ryder uninspired. This is what gives its interest to the grim fragment on the work-house; the aged paupers are forced to bear the irksomeness of school-boy life:

"Sadly subservient to the pert command
Of some trim Hermes with official wand."

The same thought comes again in a less impersonal shape in a sonnet where the author figures as a gray-haired truant coming late to Christ's school. In "Thy Stewardship" the exaggerated self-reproach is unrelieved; in "Mundi Servitus" there is insight as well as bitterness:

"There is a chimney-corner for you yet,
The world is kind,
Wherein to moralise your fond regret,
Feeble and blind.

Rose-crowned skeleton at life's high feast,
Groan not too loud;
Groan rhythmically at the very least;
Rip not the shroud.

That you got what you could not hope to keep
Selling your Lord
Gives you no right at all to weep
At the world's board.

One stood without full patiently and knooked;
Stands he there still?
Youth stoutly held the door and gaily mocked;
Age hears but ill."

The last stanza is monumental, and leads appropriately to the "Unbidden Guest," which is too sacred for quotation, though it is certainly the gem of the book. It has all the quaint ingenious daring of Herbert with a freedom of movement he never attained. One gets back to natural feeling in "The Last Train" with its dreary burden:

"Seemeth those who stay
To the last, but gain
Night-travelling for day,
Waiting for the train.

Sitting very still,
Weary heart and brain,
But with steadfast will,
Waiting for the train."

And the poem "Old Age," though redundant, is very fresh and pathetic in the horror of dying by inches:

"While I live I fain would be
All there ever was of me

No fragment of existence merely,
For what I had been cherished dearly
Whose formal death you scarce deplore,
The real was so long before.
Forgive me, Saviour, if I plead
That though Thy pangs were hard indeed,
And all Thy body racked and wrung,
Some pains Thou hadst not, dying young."

The end is hopeful and almost triumphant. "A Birthday" is even playful; it begins with the picture of an old bachelor's birthday greeting:

"Alas! there's nothing here but bills,
And this small box—a box of pills.

In infancy we all are kings,
As every year our birthday brings.

Once to have been or seemed a king
Is not a mean or trifling thing;
'Twere worth the labour of the wise
So fair a dream to realise."

And so on. A birthday hymn, "Angelo Custodi," is mystical and tragical again:

"God and you alone can tell
Of the foul and rugged ways;
Where you raised me as I fell,
Following me for many days.

Thou methinks on high art known,
Where the sons of heaven meet,
For a glory of thine own,
Angel of the bleeding feet.

I in turn would wish thee joy,
For the passing of a year
Of thy wearisome employ;
Lo, the end is drawing near."

One hardly knows how to thank the writer. The apostle was content to call himself the chief of sinners once before men. Many who would gladly think every elderly religious venerable will read these cruelly sincere confessions with a pain that is not all compunction. They will ask whether one who has done what he could to leave all has indeed received a hundredfold in this present time. More will turn back to Mr. Emerson's "Terminus" to renew their courage; to Mr. Browning's "Rabbi Ben Ezra" and the Gipsy Queen in "The Last Duchess" to renew their hope.

G. A. SIMCOX.

Foreign Secretaries of the Nineteenth Century.
By Percy M. Thornton. Vol. III. (W. H. Allen.)

THIS third volume of Mr. Thornton's series of historical biographies does not differ in character from its predecessors. The same kindness of disposition and the same desire to deliver a favourable judgment on all the political leaders of the century are conspicuous in every page. He passes in review the careers of the Foreign Secretaries since 1834, and pronounces them all without exception worthy of the high office which they held. Though it is not difficult to see the tendency of his own opinions, they are not allowed to affect his estimate of the qualities of his opponents. Lord Clarendon is singled out for the warmest praise, and styled the "highest type of a Foreign Minister." For Lord Malmesbury's administration of the Foreign Office Mr. Thornton is especially anxious to obtain a more decided measure of approval than the world at large has yet bestowed; and we may perhaps meet his wishes so far as to allow

that the emphatic condemnation which has been passed on that Foreign Secretary was not wholly deserved. Lord Malmesbury suffered in public opinion from the fact that the speeches delivered by the ablest member of the Derby Ministry—its leader in the House of Commons—displayed in 1859, and for some years later, a marked bias in favour of supporting the wishes of Austria. England, as a whole, yearned for a free and united Italy; and the electors, in the belief that the views of Lord Malmesbury must be swayed by the influence of a colleague cast in a stronger mould, visited the sins of the genius of the party on the nominal director of its foreign policy.

With Mr. Thornton's opinions, either on the past or the present, it is not possible for us always to agree. Not once nor twice only does he impress upon his readers that Canning's action was practically in agreement with Castlereagh's. Such an assertion seems to us to be opposed to all the evidence of history. That Lord Castlereagh would have adopted the enlightened policy of his brilliant rival in dealing with the Spanish settlements in the Southern hemisphere, or in treating the differences which threatened to place the two Powers of Spain and Portugal in open war, is a belief which is not justified by his conduct during his long tenure of the Foreign Office. In the affairs of the present day Mr. Thornton conveys the impression that his judgment, were it allowed full play, would lead him to conclusions from which his prejudices seem to recoil. Too often does he see the right and extend to it his approval, yet finally accepts an erroneous judgment. The difficulties of the situation in 1871, when Russia announced her intention of withdrawing from a treaty which she had entered into, are forcibly and fully described; but the verdict delivered by the jury is against the summing-up of the judge. He recognises the advantages which England enjoyed in dealing with the subsequent troubles in the East through the satisfaction of the Alabama claims, yet uses language in discussing the merits or demerits of that settlement which we hesitate to endorse. Moreover, a critical reader may sometimes detect a contradiction in the opinions of Mr. Thornton when discussing the same events in different biographies. If, as he asserts (p. 250)—and asserts, as we think, with justice—that the mistake of Lord Palmerston's political antagonists in opposing the Government Bill for altering the law regulating the conduct of political refugees in this country "went far towards consolidating" that statesman's ultimate position, it is not possible to believe that the Conservative party would have gained more seats in 1859 "but for a false impression" which prevailed as to their treatment of foreign affairs. Nor can we accept, as we are urged to do on p. 159, the judgment of one member of the Ministry on the conduct of another, when we are expressly told only a few sentences previously that all of them were "almost fully engrossed in learning the routine of their several offices."

Incredulity is not a fault which can be laid to Mr. Thornton's door. It has been reserved to him to disclose to the view of the English nation the presumable cause which induced the Emperor Nicholas to enter upon the war

of 1854-56. The Czar visited England in 1847, and, it appears, obtained from the three leading Tories of that year, the Duke of Wellington, Sir Robert Peel, and Lord Aberdeen, a secret memorandum in which they practically promised to support the Russian claims to the guardianship of the holy places; and it was on the strength of this mysterious document that he was deluded into a ruinous contest. Fifteen years later the Whigs, in their turn, went wrong. Their leaders had the indiscretion to pledge themselves by letters to Kossuth to preserve England's neutrality even if the French marched to Hungary. The last touch of simplicity deals with the present time; it is that Sir Evelyn Wood never signed the final peace with the Boers. These are three of the marvellous statements that Mr. Thornton accepts with implicit reliance, though we doubt if he will find many of sufficient simplicity to imitate him.

Let not the reader be tempted, by a singular blunder on the second page, from accompanying the author any farther on his travels. In describing Lord Melbourne's visit to the King at Brighton in 1834 Mr. Thornton mentions that one of the subjects of conversation at the interview was certain Ministerial changes necessitated by the "death of Lord Spencer (better known in history as Lord Althorpe)." The truth, of course, is that the new arrangements were caused by the death of Lord Spencer, the father of the Cabinet Minister Lord Althorpe, and that by the latter's accession to a seat in the House of Peers the leadership of the House of Commons had become vacant. Much as we should be inclined to agree with Mr. Thornton, we are afraid that chronology will not permit us to accept his assurance that the portrait of the Marchioness of Tavistock (*ob.* 1767) is "probably one of Vandycke's happiest efforts;" and, although it is true that peerages were conferred on very inferior persons, and through very questionable influence, in the darkest days of George III., we are not aware that they were bestowed (as was the case if the assertion on p. 211 is correct) by a Prime Minister who had been dead for some years. Mr. Barnett Smith may perhaps complain of having twice been robbed of his patronymic, but that is a matter in which we will leave it to him to enter his protest.

In the Preface to this volume Mr. Thornton speaks with kindly appreciation of the critics of his former labours. I for one would cheerfully reciprocate his good-will, and, at the same time, acknowledge to having perused the third volume of these biographies with pleasure, if not always with agreement.

W. P. COURTNEY.

ROLLAND'S POPULAR FAUNA OF FRANCE.

Faune populaire de la France. Par Eugène Rolland. Tome V. "Les Mammifères domestiques." Deuxième Partie. (Paris: Maisonneuve.)

ABOUT five years ago M. Eugène Rolland commenced the exhaustive work on the Popular Fauna of France (see ACADEMY, December 22, 1877), of which the second part of the fifth volume has recently been

published. With untiring industry and the most painstaking conscientiousness, he has laboured on, collecting every scrap of information which can throw light on the views of the French peasants with regard to the birds, beasts, fishes, reptiles, and insects with which they are familiar, and the names which they bestow upon them; and the result of his toil, when completed, will be a credit to French scholarship. One more volume remains to be printed, devoted to domestic birds and falconry. As soon as it is off his hands, M. Rolland will proceed to bring out a similar work in six volumes on the Popular Flora of France. All lovers of folk-lore will heartily wish him success.

The present instalment of his work is mainly devoted to the ox, the sheep, the goat, the pig, and the rabbit. Of what he says about four of these animals we will give a few specimens. Everyone may not be aware that the bovine race is particularly susceptible to the charms of music. But in some parts of France this fact is so well known that a ploughman who has to deal with oxen is chosen more on account of his musical than his agricultural skill. As soon as he commences a favourite song the oxen may be seen to shake their heads with pleasure beneath the yoke, and to set to work with redoubled energy. Even combating bulls have been known to suspend their contest in order to listen to a fine voice, and to return to the fight only when its accents ceased. Unfortunately, the ox, though it appreciates melody, cannot itself produce it. But if it cannot sing, it has the power of talking once a year. Having assisted, along with the ass, at the birth of Christ, it enjoys the privilege of holding converse with its companions in toil on Christmas Eve. What the animals say is intelligible to human ears, but it brings bad luck to listeners. On one occasion an inquisitive farmer hid himself in a stall just as the hour destined for bovine conversation was drawing near. "What shall we do to-morrow?" said one of the oxen to another. "We shall convey our master to the grave," was the reply. Infuriated by this unpleasant prediction, the farmer seized an axe wherewith to chastise the prophet, and delivered a slashing blow. But its force fell on himself, and he died; and next day the two oxen conveyed his remains to the churchyard. As a proof of M. Rolland's industry, it may be mentioned that he has collected over 300 names applied in France to the various types of the bovine race, and he has compared them with a large number of foreign equivalents; and he has also filled nearly fifty pages with the proverbs, and about twenty-five with the ideas of the people with respect to what are still called in some parts of France *l'aumaille*, the *animalia*, the animals most necessary to the tiller of the soil.

In spite of the proverbial innocence of the lamb, the sheep, especially when of a swarthy complexion, is sometimes accused of diabolical practices. In the neighbourhood of one village a sheep, which is supposed to be the damned soul of a deceased parishioner, amuses itself by night with pushing passers-by into a pool. A foolhardy villager attempted to wrestle with it on one occasion,

but was so worsted in the encounter that he soon afterwards died. Near another village is a watercourse traversed by a foot-bridge. As soon as anyone sets foot upon it a small sheep runs between his legs and pitches him into the water. A peasant returning home late one night found a stray black sheep, which he carried away with him on his shoulders. As he drew nigh to the village crucifix the sheep became more and more heavy. At last, when close to the sacred image, the man exclaimed, "You are as heavy as the Devil." "Why, I am the Devil," exclaimed the sheep, and fled away laughing in an annoying manner. Impecunious debtors are often assisted by a black sheep of a demoniacal nature, which deludes and leads astray the creditor or bailiff who was about to annoy them. Everyone may not be aware of the origin of the phrase, "Revenir à ses moutons." Here is M. Rolland's explanation:

"Ce proverbe est tiré de la farce de l'avocat Patelin, dans laquelle est introduit un marchand qui, en plaidant contre un berger pour des moutons qu'on lui avait volés, sortait souvent hors de son propos pour parler d'un drap que l'avocat de sa partie lui avait volé, de sorte que le juge lui cria plusieurs fois de retourner à ses moutons."

In France, as everywhere else, the goat is invested by popular fancy with a demoniacal character. According to one of the stories about it, it was invented by the Devil, who had made a bargain with a man that each of the two was to bring to a given spot some animal, which was to become the property of the other individual in case he was able to guess what it was. The Devil arrived, bringing the newly created goat; but the man overheard him saying, with the ingenuous confidence of Rumpelstilzchen, "I have brought a goat. He will never guess what it is." The consequence was that the man obtained the goat, which has remained a domestic beast ever since. But the man brought his wife, whom he had tarred and feathered for the occasion, and the Devil was discomfited, being unable to say what manner of bird she was. One of the most touching of the goat-stories is that of the farmer's wife who went to confess her sins to a Capuchin monk. After uttering the first few words, she began to weep bitterly. The confessor attempted to console her, telling her that sins repented of were readily forgiven. But she replied, "Father, I am not weeping for my sins, but for our poor goat which is just dead, and which had a long beard just like yours." The goat is a morose and rancorous beast; and it is supposed to have given rise to the word *bouder*, to sulk, whence *boudoir* has been derived, the sulking-room, answering to the chamber into which the Hindu wife retires when she feels a desire to indulge in wrath. M. Rolland suspects the former existence of a French word *boude*, akin to the Portuguese *bode*, signifying a goat. Wine of an inferior order is universally declared by proverbial philosophers "to make goats dance." In dealing with the statement that "C'est du vin de Bretagne qui fait danser les chèvres," Leroux de Lincy, the learned collector of French proverbs, says M. Rolland, has been

led astray by a story made up for the purpose of explaining the saying. According to the Abbé Tuet, it seems there was a native of Brittany named Chèvre. He was addicted to wine-bibbing, and whenever he grew mellow he made his wife and children dance before him. Whence arose the statement that "Britigny wine made the Chèvres dance." This, we are told, is like the story of an actor named Languille, which was invented in order to account for the fable about "l'anguille de Melun, qui crie avant qu'on l'écorche." A pleasant survival of heathenism is found in some parts of Savoy, where a dead villager is followed to the grave by a she-goat, which utters plaintive cries under the influence of hunger, and is handed over to the priest after the funeral.

About swine some very strange stories are narrated. A Breton legend tells how a certain young lady was so afraid of the pangs of childbirth that she made a vow not to marry until she was too old to bear children. At the age of twenty-eight she died suddenly. The night after she was buried, as the clock struck twelve, she appeared before the eyes of her bereaved parents, clothed in her shroud, wearing her maiden crown. After casting around a mournful glance, she looked behind her, and fled away as though in despair, fiercely pursued by seven white piglings. These little pigs were the children which she would have had if she had married. Every night the same heartrending scene was renewed, until at last the pigs ate up the defunct spinster who ought to have been their mother. Immediately after indulging in this unfilial repast they turned into seven fine boys, and flew up into heaven. Another equally heathenish tale, but somewhat more modified by Christian influences, is that of the drunkard who called in a priest to offer the consolations of religion to a being at the point of death, the moribund creature in question being really a pig which was to be killed next morning. Finding out the trick which had been played upon him, the priest retired silently. From that time the drunkard was never seen again. But next morning his wife found two exactly similar pigs in the sty which ought to have held one only. Then she knew, after the priest had told her what had happened overnight, that one of the two pigs was her husband. But she could not tell which of the two he was, so she was afraid of killing either of them for fear of making herself a widow.

W. R. S. RALSTON.

TWO BOOKS ON FISHES.

The Acclimatisation of the Salmonidae at the Antipodes. By A. Nicols. (Sampson Low.) Some of the greatest triumphs of acclimatisation in modern times have taken place in Australasia, especially with regard to the salmonidae, while, as we write, the tea plant is, we find, being successfully cultivated in New Zealand. This little book will be very useful as a book of reference for details of the difficulties successively met and successively vanquished at the cost of a large, but patriotic, outlay by the Tasmanian and New Zealand Governments and private enterprise, in first introducing the ova of salmon and salmon trout by the ship *Norfolk* in 1864, and since breeding and distributing these ova and their

successors among the most Scotch-like streams of the colonies. The common brown trout of our waters has thriven beyond all expectation at the Antipodes. The variety which was imported was the *Salmo fario ausonii*, to which our Thames trout belongs. A trout of this kind weighing nine pounds and a-quarter was taken in the River Plenty (Tasmania). This river has been opened to rod-fishers at a licence of £1 per rod since 1870, and there seems no doubt that the trout is now quite at home in colonial waters. A curious fact is here put beyond dispute, that salmon trout, though migratory salmonoids, have bred in confinement in the ponds of the Plenty. There seems little doubt, too, that the salmon proper has bred in the upper waters of the Derwent and other streams. Difficulty in identifying a salmon in the different stages of its growth is not confined to Great Britain; but, after many conflicting reports, an unmistakable salmon was captured by rod and line at New Norfolk in 1876, and in January 1877 the Governor of Tasmania himself took in the same manner a fish of eight pounds and a-half. The fishermen of the Antipodes do not seem of such a calm and philosophic nature as Walton has fashioned them at home. A good deal of angry discussion has prevailed concerning the man to whom the honours of this fish acclimatisation rightly belong. We have always understood (and Mr. Nicols shows it conclusively) that Mr. J. A. Youl deserves this credit. Frank Buckland, however, Mr. Ramsbottom, and others were zealous co-workers. Attempts are now being made to introduce the salmon of the North Pacific, *S. ginnat*, which is so largely "put up" into tins, into Australia. We regard this as a very questionable benefit, seeing that this fish is popularly supposed to die after spawning, and has no good reputation for rising at a fly. It is as sad as it is certain that our own salmonidae, in the midst of the abundant supply of grasshoppers and insects which the streams of the Antipodes furnish, do not display the same alacrity in rising at an artificial fly as their relatives in Scotland. The breeding places of the salmon in the Tasmanian Derwent have not yet been found. It may be hoped that they soon will be, for Mr. Nicols notices a singular and grave matter when he states "that latterly an increasing proportion of the ova from the imprisoned fish have proved infertile."

The Herring and the Herring Fishery. By J. W. de Caux. (Hamilton, Adams and Co.) Mr. de Caux, in writing on this subject, gives us much practical information, the result of his long experience, and notices several grievances which the herring fishers have to contend with under the present condition of the law. It is to be regretted that when he indulges in comparison between the importance of the herring fishery and farming, or in speculations about the physical attributes of his pet fish, he is not quite so happy. The capital employed in the outfit of the fishing vessels round the coast of England would, says Mr. de Caux, be amply sufficient for the farming of 1,500,000 acres of land. "But this statement, important as it is, gives only a faint notion of the capital employed, because, while land is indestructible, fishing boats and fishing gear rapidly depreciate in value, and very soon are absolutely destroyed." Does Mr. de Caux imagine that farm buildings and agricultural implements, like the land, are indestructible, and that a farmer does not suffer from depreciation of plant? Fishes may, or may not, hear; but we fail to see how the assertion that a man and a seal are unable to hear the passage of a body through water beneath the surface establishes the fact one way or the other. Mr. de Caux very properly calls attention to the absurd regulations of the Board of Trade in force relating to the salving of anchors, which, undoubtedly, want most

material alteration, as well as the regulations in force respecting drift-net boats and trawlers. He also points out the unfairness of applying to fishing boats all the rules of the mercantile marine, many of which must seriously interfere with the working of the boats. The description of the new trawling apparatus patented by the author is clear and worth reading by anyone interested in this form of fishing.

CURRENT LITERATURE.

The Visitation of Wiltshire, 1623. Edited by G. W. Marshall. (Bell.) The work of printing those Visitations which remain in MS. is being slowly but steadily advanced by societies, by individuals, by magazines. We have in this volume the latest accession to the ranks. Dr. Marshall has elected, wisely as we think, to reproduce the MS. "with as little variation as possible," and thus to place "the original document" in the student's hands. So far as the text is concerned this principle is clearly the right one. But the more faithfully the MS. is reproduced the greater is the need of annotation. *Hoc opus, hic labor est.* A Visitation, un-annotated, is rather copied than "edited." Dr. Marshall speaks of some rival works as "mere over-edited compilations;" but we trust he means "over-emendated," or the criticism would peculiarly apply to the *Westminster Abbey Registers*, in which a faithful text is so happily combined with the exhaustive and brilliant notes of its lamented editor. While urging the advantage of literal reproduction—the plan adopted by Dr. Marshall—we must beware of a superstitious reverence for this or any other Visitation until their skeleton pedigrees have been corroborated by those wills, deeds, registers, &c., from which a painstaking editor will obtain the authentic evidences of descent. The heralds' practice of admitting a descent of two generations on mere parole evidence, together with the fact that most Visitation pedigrees do not exceed this limit, suggests that the bulk of their matter is absolutely unproven. Moreover, as the longer pedigrees were usually admitted by the more easy-going heralds, it seems probable that they also had little or no proof. Heraldry, in fact, rather than genealogy, was their object, and the pedigree was subsidiary to the coat-armour. There are, of course, Visitations and Visitations, but it must not be supposed that any of them can afford to dispense with proofs. Misaffiliation and omission of a generation can at times be detected by a capable editor; and if this MS., excellent though it may be, was indeed, as Dr. Marshall states, "received as evidence" at an assize, such a proceeding was very questionable. It skips, for instance, a generation of the Burnells. It allows two cousins to record their common forefather as "Giles" and as "Thomas," Thynne of Longleat is made to marry his wife's aunt, and Gore of Alderton hastens to record his grandmother's legitimacy, though her mother's name and parentage are both incorrectly given and her alleged marriage with Lord Stourton is a very *crux* in Wiltshire genealogy. All this "the intelligent student" is left to discover for himself. Dr. Marshall explains his system of editing. He informs us that the long J is printed I, as Ivie not Jvie; and he has done the precise contrary in four cases out of the five in which the name occurs. He claims to have added a "[sic]" to "obvious errors of the writers;" yet such glaring errors as "Sir Elw." (p. 8) for "Sir Edw." and "1633" (p. 50) for "1623" pass unnoticed, while the order of the Hyre sons (p. 76) is left in a hopeless tangle. A Horner has a "sic" for signing the Lamb pedigree, but a Sadleir and a Tyderley sign unchallenged the pedigrees of Paulett and of

Read. He claims where "a word has been evidently left out" to have "supplied it in brackets," and accordingly inserts "[mar]" before *filia* on p. 94, yet not in a similar case on p. 101, and moreover the word left out was not "mar," but "*duxit*." After "Marshall of Markley" he inserts "[Martley]," yet such variants as "Marlingesburie" and "Maulenborow," and even "Byndewey" and "Binwey" (Roundway) are left unexplained. This Visitation gives the Wiltshire ancestry of Lord Brouncker the mathematician, but his name will be sought in vain in the Index, his family appearing only as "Branker," just as Maskelyne figures as "Masculin." In such cases there should be a cross-reference. Nor is Dr. Marshall's system of nomenclature clear, for in these cases he disregards the spelling of the signatures (i.e., "Brouncker" and "Maskelyne"), while the "Waldron" pedigree, which is signed Walrond, figures in the Index under both forms. The system is not based on the MS. index (which itself is not printed), and has a very practical inconvenience. A most important feature of a printed Visitation is a good nominal Index, in which the insertion of Christian names is essential. In this Index they are not inserted, and the entering of surnames under their antiquated forms alone increases the labour of search. Two pedigrees, at least—those of Jordayne and Goldston—are not to be found in it, and there are many points on which Dr. Marshall might consult the rules of the Index Society. We fail to see why, in the same paragraph, "*de la Mason*" should be entered under M and "*de la Roche*" under D, "*le Stoke*" and "*le White*" under S and W, but "*le Blount*" and "*le Blunt*" under L, and "*le Blont*" omitted wholly. Lastly, we would venture strongly to protest against the excessive use of "drops," for which the precedent was set by the Harleian Society, but which renders some of the charts in Dr. Marshall's book almost unintelligible. We may instance the opening pedigree, and those of St. John, Mompesson, and Ayliffe. But even though the "editing" be not free from defects, Dr. Marshall has done good work in printing this important record. The subject-matter is of the usual character, but it is interesting to find at least one "gentleman" who could not even sign his name, and another who carefully records his marriage with his father's sister! And there is something quaintly human about the widow of a squire of ancient lineage, who was allowed by the kindly "Blewmanntell" to indulge her just maternal pride by entering all her sixteen children (half of them by a previous and obscure husband) and her womanly spite by inserting in full the *natural* children of her brother-in-law.

Transactions of the Royal Historical Society. Vol. X. (London: Printed for the Society.) There is a marked improvement in the issues of the Royal Historical Society. The present volume, like its predecessors, contains some padding, but there is much useful and instructive matter in it. Perhaps the most remarkable paper is one on "The Struggle of the Christian Civilisation from the Era of the Crusades to the Fall of the East." New facts or new views on such a subject were not to be expected, but its author, Dr. Irons, has given us a carefully executed word picture of much beauty and great accuracy. There is another remarkable paper which borders on, but scarcely touches, the realms of theology. Mr. J. Baker Greene has contributed a very learned and careful paper on "Jewish and Early Christian Baptism." He is evidently thoroughly at home in his subject, which is on many accounts one of no ordinary difficulty. He has trod the thorny path he has chosen very warily, but we should not be surprised to find that he has given offence to some of those who seem to hold that history

has no lights to throw on dogmatic theology. We know of no work which tells us so much in a connected form as to the rite of baptism among the Hebrews. The Hon. Isaac N. Arnold, of Chicago, has furnished a highly laudatory paper on President Lincoln. The writer knew him well, and his estimate of the great President's character is valuable on that account. There are several minor matters in his paper at which it might not be unreasonable to take objection, but, as a whole, both in facts and tone, it is worthy of high praise. The paper by Mr. George Harris on "Domestic Manners" is a continuation of earlier ones. We do not think it of much permanent value. The Rev. Edward King has examined the Penrith registers and given a series of extracts from them. We wish that some Northern antiquary would print the whole of the document, which must be highly curious. Our American friends may like to have it pointed out to them that there was a John Washington there in 1681. Penrith church has been famed for possessing pictures in stained glass of Richard Duke of York and his wife, Cecily Neville. Mr. King calls in question this tradition. On what evidence it rests we do not know; but he seems to make out a very good case against it by producing evidence which renders it at least probable that the windows are representations of members of the family of Hutton. Mr. C. Pfoundes has some notes on "Old Japan" which make us wish that he had told us more as to the traditions of the earlier time. It seems that the date can be ascertained when the habit of immolating slaves at the funerals of nobles ceased, and clay images were substituted in their place. We do not call to mind that this fact has been noticed before.

William Pitt. By Lewis Sergeant. (Isbister.) This new volume in the series of "English Political Leaders" is an improvement upon Mr. Trollope's *Palmerston*, though we cannot regard it as entirely adequate. When all is said, Palmerston must always remain a less interesting figure than Pitt, just as his epoch is of less importance in English history. Mr. Sergeant has evidently taken a good deal of trouble to acquaint himself with the events at first hand, and not only through Lord Stanhope's *Life*. But he has been no more successful than Mr. Trollope in making his hero actually live before us. Possibly there may be some limitations imposed upon the writers in this series, for they alike seem to fail in the main duty of a biographer. In the first chapter we have a sketch of the leading men when Pitt entered political life, which is chiefly remarkable for its strange depreciation of Burke. But we nowhere have an estimate of the actual conditions which formed Pitt's career, nor of Pitt's own character. Macaulay's well-known article on William Pitt in a former edition of the *Encyclopædia Britannica* may be one-sided; but at least it depicts an intelligible human being, and not a mere series of events. Mr. Sergeant has given us a careful political study, with constant reference to the questions of to-day; whereas we expected a biography in miniature. His style, we may also remark, is too much like the better class of leading articles.

Gladstone and his Contemporaries. By Thomas Archer. Vol. III. (Blackie.) This further instalment of Mr. Archer's History of the last half-century of social and political progress deals with some of the most momentous events that have occurred to the British empire. To the present generation the Crimean War and the Anglo-French alliance must always be themes of surpassing interest; but the Indian Mutiny, with which the present volume also deals, is a subject that for all time is likely to prove of vital importance to all of

British descent. It is one that Mr. Archer will find impossible to parallel in dramatic incident in the forthcoming section of his work. It is gratifying to notice that he manifests the same tireless industry and impartial treatment of political subjects in this third volume as he did in its predecessors. Should the entire History be completed in this spirit, it will be a most valuable contribution to our not too numerous works of reference, and long likely to maintain its place in the library and the reading-room.

NOTES AND NEWS.

We are glad to be able to confirm the good news as to the recovery of M. Erckmann from the dangerous illness which prostrated him last month. His health is now so far restored that he hopes soon to be able to undertake a journey through the Vosges. The first representation of "*Madame Thérèse*," the new drama founded upon the well-known novel by MM. Erckmann and Chatrian, will take place in Paris next week.

We hear that the Rev. Matthias Jochumsson (pastor of Oddi, Iceland) has nearly completed his Icelandic versions of "Othello" and "Romeo and Juliet;" and they will be published in the coming year as one of the volumes issued by the Icelandic-Literary Society for 1882-83. The same poet has previously issued admirable translations of "Hamlet" and "Macbeth;" while another *skald*, Mr. Skingrímur Thorakinnson, has published a good rendering of "King Lear." The Icelanders will, therefore, soon have access to five plays.

MESSRS. SIMPKIN, MARSHALL AND CO. will shortly publish a second and much enlarged edition of Mr. Alexander Ireland's *Memoir and Recollections of Ralph Waldo Emerson*. The first edition met with a very rapid sale, and was most favourably noticed by numerous journals on both sides of the Atlantic. This has induced Mr. Ireland to add largely to the matter originally published, and to present the new edition in a goodly crown octavo volume, with three portraits of Emerson not known in this country, which will add greatly to its interest. The favourable reception of Mr. Ireland's *Memoir* augurs well for the eagerness with which the reading public will welcome the correspondence between Emerson and Carlyle, announced to be in preparation with the sanction of Emerson's family, and which is to be published simultaneously in America and England before Christmas. Mr. Ireland's *Memoir* is, we believe, the only record of Emerson's life and works, which has yet made its appearance in either country since his death.

We are informed that Mr. Waddington's monograph on the Oxford poet, Arthur Hugh Clough, to which we referred last week, will not be published until the end of October. It will contain passages throwing light on Clough's life and work from Mr. M. Arnold, the late Dean of Westminster, Charles Kingsley, Mr. R. H. Hutton, Dean Church, Mr. F. T. Palgrave, Mr. J. A. Symonds, Mr. W. M. Rossetti, Mr. T. Arnold, Mr. William Allingham, Mr. Thomas Hughes, Prof. Sellar, Mr. C. E. Norton, Prof. Masson, the late Mr. Walter Bagehot, and others. The publishers are Messrs. George Bell and Sons.

THE new edition of Mr. Cheyne's *The Prophecies of Isaiah* (Kegan Paul, Trench and Co.) will shortly be completed by the issue of the second volume. The commentary has been revised, and many additions of some interest have been made, especially in the critical notes and "Last Words." Account has been taken in vol. ii. of Dr. Robertson Smith's recent work, *The Prophets of Israel*. The author's critical and theological position remains unaltered.

We are now able to give some further details about *Longman's Magazine*, of which the first number will appear on November 1. It will open with a novel by Mr. James Payn, entitled "Thicker than Water;" and among the contributors to the two first numbers will be Messrs. E. A. Freeman and J. A. Froude. The design for the cover is a wood-cut, after the old-fashioned conventional style, of an apple-tree, with Messrs. Longman's ship, first launched in 1726, in the upper left corner, and a swan (presumably representing the new venture) in the right.

We have reason to hope that the essays contributed by the late Stanley Jevons to the *Contemporary* and other Reviews will shortly be published in a collected form.

In addition to the volumes of poetry announced below by Messrs. Kegan Paul, Trench and Co., they will also publish two from the Irish judicial bench. These are a new edition of Mr. Justice O'Hagan's excellent translation of *The Song of Roland*; and *Hymni Uctati Latine Redditi*, by Mr. Justice Lawson.

THE Queen's Printers, Messrs. Eyre and Spottiswoode, are about to issue an edition of the Book of Common Prayer, furnished with Introductions, analyses, and notes by Canon Barry, Principal of King's College. It will be styled the *Teacher's Prayer Book*, and will form a companion volume to the *Teacher's Bible*, of which we lately noticed the "variorum edition."

MESSRS. MACMILLAN AND Co. will issue next week the two first of their "gift-books" for the season. These are a selection from Grimm's *Fairy Tales*, translated from the German by Lucy Crane, and done into pictures by Walter Crane; and Robert Bloomfield's ballad, *The Horkey*, told in coloured pictures by George Cruikshank, with an address to young folks by F. O. Burnand.

MR. SAMUEL BRANDRAM'S *Selected Plays from Shakespeare* (Smith, Elder and Co.), which has been adopted by the School Board for London, is now being issued in sixpenny parts, each containing one of the abridged plays.

MESSRS. CHATTO AND WINDUS have ready for publication a new edition of Lane's *Arabian Nights*, edited from a copy annotated by Lane by his nephew, Edward Stanley Poole. Mr. Stanley Lane-Poole has written a new Preface.

MESSRS. SAMPSON LOW are the publishers in this country of *Thoreau*, by Mr. F. B. Sanborn, in the "American Men of Letters" series.

MESSRS. BENTLEY will issue, probably in the beginning of November, *Old Coaching Days*, by "An Old Stager," with several full-page illustrations by Mr. John Sturges; and a new and much enlarged edition of Bishop Thirlwall's *Letters to a Friend*.

MESSRS. REMINGTON have in preparation a new edition of *A Life's Love*. It will contain a selection of sonnets from several of Mr. Barlow's former volumes, and also some entirely new poems—among others, a poem on the deaths of Darwin, Rossetti, Longfellow, and Emerson.

We understand that in the course of next month Messrs. Hodder and Stoughton will issue a popular edition of *The Life and Speeches of the Right Hon. John Bright, M.P.*, by Mr. G. Barnett Smith. This new edition will be in one handsome volume of about 700 pages, containing all the matter which appeared in the original expensive issue, as well as the two steel portraits and the Index.

EARLY next month will be published by Messrs. Simpkin, Marshall and Co., London, and Messrs. Abel Heywood and Son, Manchester, a new work of fiction from the pen of Mrs. G. Linnaeus Banks, under the title of *Through the Night*, consisting of a number of legendary or

ghostly tales, chiefly relating to the North of England. It will be uniform with the cheap re-issue of her popular novels; and it will be illustrated by the author's son, Mr. George Collingwood Banks.

THE series of carefully printed little books known as "The Parchment Library" will be continued by the immediate publication of *The Christian Year*, printed in red and black, with a portrait of the author from Mr. G. Richmond's drawing; *Gay's Fables*, edited by Mr. Austin Dobson, with a portrait of Gay from the sketch by Godfrey Kneller recently added to the National Portrait Gallery; a selection of *Shelley's Letters*, by Mr. Richard Garnett; Mr. Mark Pattison's annotated edition of *Milton's Sonnets*; the earlier poems of Mr. Tennyson, in two volumes, with frontispieces by Mr. W. B. Richmond; and *French Lyrics*, selected and arranged by Mr. G. Saintsbury. To these may be added the first volume of a new series, to be produced in a similar style, but on larger paper; this introductory volume is to consist of a selection from the writings of *Living English Poets*.

THE Rev. Moncure D. Conway has two books ready, both of which will be published this autumn by Messrs. Trübner and Co. These are entitled *Emerson at Home and Abroad*; and *Travels in South Kensington*, with Notes on Decorative Art and Architecture in England.

In philosophy the same publishers announce translations of Hartmann's *Philosophy of the Unconscious*, by Mr. W. O. Coupland; and of Schopenhauer's *World as Will and Idea*, by Messrs. Haldane and Kemp; and a criticism of Mr. Spencer's *Unification of Knowledge*, by Mr. Malcolm Guthrie.

A *Fearless Life*, by Charles Quentin, author of *So Young, my Lord, and True*, will be published by Messrs. Bentley about the end of next week.

MR. ANTHONY TROLLOPE'S new novel having reference to Irish life of the present time, entitled "The Land Leaguers," and written expressly for *Life*, will be commenced in that journal on November 15. The story will be of the ordinary three-volume size.

THE cheap edition of Mr. Thayer's book, *From Log Cabin to White House*, consisting of 10,000 copies, has been entirely taken up by the trade, and another edition of the same number will be issued from the press immediately.

MESSRS. KEGAN PAUL, TRENCH AND Co.'s announcements include *Reminiscences of Court and Diplomatic Life*, by Lady Bloomfield, with portraits and illustrations; *The Life and Times of St. Anselm*, by Martin Rule; *Life of Antonio Rosmini Serbati* (founder of the Institute of Charity), by G. S. Macwalter; *Diaries and Letters of Philip Henry* (the father of the commentator), by M. H. Lee; *The Duke of Berwick, Marshal of France*, by Col. Townshend; *John Duncan, Weaver and Botanist*, with Notices of his Friends, by William Jolly; *Free Trade Speeches of the Hon. C. P. Villiers*, in two volumes; *Demerara Papers: being Sketches of the Aborigines of British Guiana*, by Everard F. im Thurn; *Notes of a Visit to Russia in 1840-41*, by the late William Palmer, selected and arranged by Card. Newman; *The Elements of Military Administration*, by Capt. Buxton; and a new edition of Miss Millice Hopkins' *Work amongst Working Men*.

In philosophy and theology, the same publishers announce *Nature and Thought: an Introduction to a Natural Philosophy*, by Prof. St. George Mivart—the author's object being to point out the harmony which exists between the human mind and external nature; *The Greek Philosophers*, giving an account of their systems from Thales to Proclus, by A. W. Benn; *The*

Origin of Ideas, translated from the fifth Italian edition of the "Nuovo Saggio" of Antonio Rosmini Serbati; *The Ultimatum of Pessimism: an Ethical Study*, by J. W. Barlow, of Trinity College, Dublin; *Notes on Evolution and Christianity*, intended to show that the origin and history of Christianity are explicable in accordance with the ordinary processes of evolution, by J. F. Yorke; *The Evolution of Christianity: Unconscious Testimony, or the Silent Witness of the Hebrew to the Truth of Historical Scriptures*, by O. F. Hutton, head-master of Daventry Grammar School; *A Synopsis of Moral and Ascetical Theology*, arranged by the late Rev. James Skinner; *The Chair of St. Peter; or, the Papacy considered in its Institutions, Development, and Organisation of over Eighteen Centuries*, by John Nicholas Murphy; *Many Voices*, a volume of extracts from the religious writers of Christendom, from the first to the sixteenth century; *The Doctrine of Last Things*, contained in the New Testament, compared with the Notions of the Jews and the Statements of Church Creeds, by Dr. Samuel Davidson; *Romanism, Protestantism, Anglicanism: a Layman's View of Some Questions of the Day*, by Oxoniensis; *A Critical Commentary on the Revised Version of the New Testament*, by the Rev. W. A. Osborne; a volume of *Sermons* by the Rev. J. H. Thom, of Liverpool; and further volumes by the late George Dawson, entitled *The Three Books of God—Nature, History, and Scripture*, and by the late H. T. Adamson on *The Millennium*.

In poetry, Messrs. Kegan Paul, Trench and Co. announce *River Songs, and other Poems*, with twelve autotype illustrations, by Arthur Dillon; *Birds and Babies*, a book of poems for children, by Mrs. Coxhead, with about thirty pictures; a new edition of Mr. Domett's *Ranolf and Amohia*; the collected works of Mr. Lewis Morris, in three volumes; *Frithjof and Ingebjorg*, by Douglas B. W. Sladen, an Australian colonist; *The Garden of Fragrance*, a complete translation of "The Bostán of Sâdi," from the Persian, by Dr. G. S. Davis; *The Chronicles of Christopher Columbus*, by M. D. C.; *David Biazio, and other Tragedies*, by the author of *Ginevra*, &c.; a second edition of Mr. J. G. Cordery's translation of Homer's *Iliad*, in two volumes, with the original Greek text printed on the opposite page; and Lessing's *Nathan the Wise*, translated by Eustace K. Corbett.

TEN volumes of "The Pulpit Commentary" having now been given to the Old Testament, Messrs. Kegan Paul, Trench and Co. propose to commence the issue of the New Testament series with two volumes treating of the Gospel according to Mark. These will be edited by Dean Bickersteth. The Old Testament series will be continued at intervals of two or three months, the next volume being devoted to the Prophecies of Jeremiah, under the supervision of the Rev. T. K. Cheyne, whose commentary on Isaiah has now reached a second edition.

MESSRS. W. H. ALLEN AND Co. maintain their old reputation as publishers to the India Office by announcing a long list of Indian books. Foremost among these is the first volume of a series by Col. G. B. Malleon to be entitled "The Founders of the Indian Empire"—Olive, Warren Hastings, and Wellesley. There is no other living writer who could attempt successfully to follow where Macaulay led—not always in the right path. *Olive* is to be published next month; and in March of next year Col. Malleon will collect into a volume "The Decisive Battles of India," which have been appearing in the *Army and Navy Magazine*, and about the value of which we have already expressed our opinion.

OTHER books by Indian writers announced by Messrs. Allen are *Imagery of Indian Days*,

by Mr. J. W. Sherer; *Wanderings in Baluchistan*, by Gen. Sir O. M. McGregor; *The English in India*, translated from the French of M. E. D. Valbezen; *Gujarat and the Gujaratis*, by Behramji M. Malabari; *The Romantic Land of Hind*, by Capt. O. F. Maackenzie; *Life in India*, by Major the Hon. O. Dutton; *Reminiscences of an Indian Official*, by Gen. Sir Orfeur Cavenagh; *My Recollections of the Afghan Campaign*, by Dr. J. Duke; and the second volume of Major Vibart's *Military History of the Madras Engineers*.

MESSRS. W. H. ALLEN'S general announcements include a *Complete Concordance to the Revised Version of the New Testament*, by Mr. J. A. Thoms; *The Orders of Chivalry*, English and Foreign, Existing and Extinct, down to the Present Time, compiled from original authorities by Major J. H. Lawrence-Archer; *The Spas of Europe*, by Dr. H. J. Hardwicke; *Memoirs of the late 64th (Second Staffordshire) Regiment*, by Mr. H. G. Pardon; *Flotsam and Jetsam: Wreckage and Spun Yarn*, by Mr. T. G. Bowles; "Master Mariner;" *Hunting Sketches*, by R. Finch Mason; and the following translations:—*Diplomatic Study of the Crimean War*, from the Russian Foreign Office; Heine's *Book of Songs*; *Queer People*, from the Swedish of "Leah"; a *History of the Jesuits*, from the German of T. Grussinger; and *Franz List, Artist and Man*, from the German.

MESSRS. RIVINGTON have nearly ready for publication a new volume of *Lectures and other Theological Essays*, by the late Dr. J. B. Mozley; a translation, with a Preface by Canon Liddon, of Rosmini's *The Five Wounds of the Church*, a work which was placed in the Index and withdrawn from circulation; a presentation edition, in quarto, of Adams' *Sacred Allegories*, with new illustrations arranged and engraved by J. D. Cooper; the Bampton Lectures, delivered at Oxford during the present year by the Rev. P. G. Medd, entitled *The One Mediator*; a one-volume edition of the *Life of Bishop Gray*, of Cape Town, abridged from the larger work; *Thoughts upon the Liturgical Gospels for Sundays*, in two volumes, by Dean Goulburn; a continuation of *Practical Reflections on Every Verse of the Holy Gospels*, containing "Acts" to "Revelation"; a cheap edition of *Voices of Comfort*, edited by the Rev. T. V. Fosbery; two volumes of *Sermons on the Catechism*, by Isaac Williams, reprinted from "Plain Sermons by Contributors to 'Tracts for the Times'"; a new edition, in quarto, with heliotype illustrations, of the Rev. F. H. Sutton's work on *Organs*; a volume of selections from the writings of Canon Liddon; *The Witness of the Passion*, by Canon Knox Little; revised editions of the *Manuals of Religious Instruction on the Old and New Testaments* and the Prayer-book, by Canon Norris; new editions, printed on fine paper, with red lines, of *The Imitation of Christ*, *The Christian Year*, *The Devout Life*, *The Spiritual Combat*, and *The Hidden Life of the Soul*, the five volumes edited by the Rev. W. H. Hutchings; a large-type edition, in one volume, with red rules, of Mrs. Sidney Lear's *Precious Stones*; *Meditations, Poems, &c., for Invalids*, edited by the Rev. M. F. Sadler; a revised edition of the Rev. E. Hatch's *The Organisation of the Early Christian Churches*; a third volume of the Bishop of Lincoln's *Church History*, bringing the work down to the Council of Chalcedon, A.D. 451; a new series of miniature volumes of selections from various authors, by Mrs. Sidney Lear, entitled *Sunrise, Noon, and Sunset*; and *Early Influences*, with a Preface by Mrs. Gladstone.

MESSRS. MACNIVEN AND WALLACE, of Edinburgh, will publish during the winter the following new volumes of the "Household Library of Exposition":—*The Galilean Gospel*, by Prof. A. B. Bruce; *Ecclesiastes*, by the Rev.

Dr. Joseph Parker; *The Lamb of God: Expositions in the Writings of St. John*, by the Rev. W. R. Nicoll; and *The Temptation of Christ*, by the Rev. G. S. Barrett. The same publishers also announce a new series of volumes, to be entitled the "Evangelical Classics." Each volume will contain a memoir of a distinguished Evangelical author, founded on a special study and extracts from his works. The first volume will be *Leighton*, edited by the Rev. W. Blair, of Dunblane, to be followed by *Bunyan*, by the Rev. W. Howie Wylie.

MESSRS. SMITH, ELDER AND CO. announce the following new novels, each in the orthodox three volumes:—*Treherne's Temptation*, by Alaric Carr; *Damocles*, by the author of *For Percival*; *Fair and Free*, by the author of *A Modern Greek Heroine*; and *Loys, Lord Beresford*, and other Stories, by the author of *Phyllis*.

MESSRS. THOS. DE LA RUE AND CO.'S Christmas books will be *Monthly Maxims*; or, "Rhymes and Reasons, to suit the Seasons; and Pictures New, to suit them too," by Mr. Robert Dudley, with numerous full-page illustrations by the author, reproduced in chromo-lithography; *The May-pole: an Old English Song*, with the Music, illustrated by Gertrude A. Konstam and Ella and Nellie Casella; and a new translation of *Rumpelstiltskin*, illustrated by Mr. G. B. Halkett.

MESSRS. GEORGE WATERSTON AND SONS have in the press, uniform with their popular "Musical Nursery Library," *Three Blind Mice*, "with Mewsic and Words from an early edition," illustrated by Mr. Charles A. Doyle; also, *Details from Italian Buildings chiefly Renaissance*, from drawings to scale made from the originals by Mr. John Kinross.

THE October number of the *Antiquary* has an interesting article on "Extracts from the Gild Book of the Barber-Surgeons of York," by Mr. J. T. Bent; and also an article on the "Preston Gild," by Mr. G. L. Gomme.

Aunt Judy's Magazine will in future be published by Messrs. Bemrose. The new volume beginning in November will contain a coloured frontispiece, by Richard André, to a tale entitled "Sunflowers and a Bushlight," by Mrs. Ewing; a paper on "Dartmoor," written and illustrated by Mr. Richard S. Chattock; "Bride Piootee," by Miss Roberts, with original illustrations; "Songs for Children," by Mr. A. S. Gatty; &c.

MESSRS. REEVES AND TURNER will publish at an early date a paper read before the Hull Literary Club by Mr. C. Staniland Wake, on "The Origin and Significance of the Great Pyramid."

MR. RIDGEWAY has in the press a work by Baron de Matotrie, entitled *Egypt: Native Rulers and Foreign Blunders*.

THE fourth session of the Aristotelian Society will open at 8 John Street, Adelphi, on October 9, at 7.30 p.m., with an address by the president, Mr. Shadworth H. Hodgson. Meetings will then be devoted to Spinoza and the relation of Leibnitz and Wolf and of Locke, Berkeley, and Hume to Kant. In January the society will commence the study of Kant's *Critic of Pure Reason*, which will occupy the remainder of the session. Particulars may be obtained by applying to the hon. secretary, Dr. A. Senior, 1 Bloomsbury Square, W.C.

THE sixtieth session of the Birkbeck Literary and Scientific Institution will commence on Monday next, October 2. The Right Hon. W. H. Smith has consented to preside at the annual distribution of prizes, which will be held during the opening term. The plans of the new building have been approved, and it is intended shortly to lay the foundation-stone. Those interested in educational progress are asked to

aid in the development of an institution which for so long a period has successfully carried on the work inaugurated by the late Dr. Birkbeck.

THE subscription list to the new edition of Ducange's Glossary, now being brought out by M. Favre, is closed, 500 subscribers having been obtained. But copies can still be obtained at the original subscription price from Mr. David Nutt.

SOME time ago we stated that Kossuth's friends in his own country proposed to make him a presentation on the occasion of his eightieth birthday. We now hear that Kossuth has himself requested that the proposed subscriptions should be devoted to some work of public charity.

THE Government have given their sanction to the proposal to name a new street in Paris after Littré.

IN France, professors who are also members of the Legislature are not permitted to lecture, but must appoint deputies from session to session. M. Paul Bert has just nominated Dr. Dastre to lecture for him on experimental physiology at Paris, and M. Batbie has nominated M. Beauregard to lecture for him on political economy.

YET another new political newspaper is to be published at Paris after the holidays. This is *Le Passant*, to be edited by M. Jules Simon; and it is said to have a good deal of money at its back.

THE second volume of M. de Beaucourt's *Histoire de Charles VII* is announced to appear in the middle of October. It will go as far as the Treaty of Arras, 1435.

NOTHING is so dangerous as an obituary notice. The *Revue politique et littéraire* for September 23 writes—"mort en Angleterre du docteur Puisse, fondateur de la secte protestante qui port son nom." And the *New York Nation* for September 14—usually so impeccable—reports the death of Earl Grey, instead of Sir George Grey, and condenses an account of him from "Men of the Time."

WE have received *Calendars* from the following universities or educational establishments:—The University of Tokio, which gives an interesting historical sketch of the introduction of Western learning into Japan; The University College of Wales (Manchester: Cornish); the Mason Science College, Birmingham (Birmingham: Cornish); the University of Durham College of Physical Science, Newcastle-upon-Tyne (Newcastle: Carr); and *The Irish Education Guide and Scholastic Directory* (Dublin: Mara), which seems to have been issued with special reference to the demands of the Intermediate Education Act of 1878.

GERMAN JOTTINGS.

THE veteran historian, Leopold von Ranke, is now engaged in preparing for the press the third volume of his *Weltgeschichte*. It will comprise the Roman Empire and the beginnings of Christianity.

THE issue of the supplement to Dr. Sanders' *Wörterbuch der deutschen Sprache* is so rapidly progressing that the completion of that useful publication is likely to take place ere long. Only about eight parts more have to be issued; and Dr. Sanders will then be in a position to claim the merit of having given to Germany—single-handed—the first comprehensive dictionary, which will always maintain its rank even when the huge *Wörterbuch* of Grimm will be completed. We are also glad to see that the same author's *Wörterbuch der Hauptschwierigkeiten der deutschen Sprache*, which is almost indispensable to advanced students of German, has just been issued in a thirteenth enlarged edition.

A BIOGRAPHY of Gluck will shortly appear from the pen of Herr August Reissmann (Berlin: Gutentag). It will be entitled *Gluck: sein Leben und seine Werke*.

HERR W. FRIEDRICH, of Leipzig, announces a series of handbooks dealing with the literature of the world. Three instalments will be issued very shortly: "French Literature," from the earliest times to the present day, by Eduard Engel; "Polish Literature," by Heinrich Nitschmann; and "Italian Literature," by C. M. Sauer. The English, Hungarian, and Spanish sections are in preparation.

HOFRATH DR. JOSEF HALLER, of Munich, is about to publish a work on the proverbs of Spain, which has occupied him for many years. Not only has he diligently collected in the rich field of Spanish proverbial lore, but he has endeavoured to trace the history of each saw, and to find its equivalents in every civilised language. The first volume, containing the Spanish proverbs only, is in print, and will be issued by Herr G. Manz, of Regensburg, before the close of the present year. The second and concluding volume, giving variants in thirty different languages and dialects, is also ready for the press.

AMONG German novels issued this month are *Irene Liebe*, by Fanny Lewall, and *Moderne Wolltätigkeit*, by the authoress of "Eglantine."

PROF. KARL BIEDERMANN, of Leipzig, has just issued (Leipzig: Weber) the fourth and last volume of his exhaustive History of Germany in the Eighteenth Century.

THE first number of a new Review, to appear three times in the year, under the editorship of Herr Ch. Meyer, archivist of the province of Posen, has just been issued by Koebner, of Breslau. It is entitled *Zeitschrift für Geschichte und Landeskunde der Provinz Posen*.

THE series of "Military Classics" published by Wilhelm, of Berlin, has been increased by two new volumes (xiv. and xv.) containing the *Militärische Schriften* of the Archduke Charles of Austria. A biographical introduction by Baron von Waldstaetten states that the Archduke also left an autobiography, which has never been published.

THE last addition to the series of "Germanischer Bücherschatz" (Freiburg-i-B.: Mohr) is the text of Bede's *Ecclesiastical History*, edited by Alfred Holder, the editor-in-chief of the series. This will be followed by a new edition of the works of Notker Labeo, the learned monk of St. Gall, who died in 1022. This will take three volumes, edited, with illustrations, by Prof. Paul Piper. Prof. Piper also has in preparation for the same series a Glossary to Otfrid's *Evangelienbuch*.

ORIGINAL VERSE.

SONNETS FOR TWO PICTURES BY ROSSETTI.

*La Pia.**

"Ricorditi di me che son la Pia;
Siena me fe' disfecemi Maremma;
Scalci colui che innell'alta pria
Disposando m'avea colla sua gemma."

SHE sits behind the rampart, with sad eyes
Watching the grey mists on the desolate plain
Hover above the pools of stagnant rain—
A dreary landscape underneath drear skies:
Along the mouldy battlements there lies
His crimson banner, and close by are lain
Fierce Nello's lances—cursed be his pain
Who caused her all these tears and weary sighs.

The stifling day is dead—dead as the fire
That in her heart flamed once with glad desire
For him who wedded her one fatal day—
Death dwells in the Maremma, whose foul air
Insidious moves about her ev'rywhere,
Misty and cold and damp and drear and grey.

Mnemosyne.

SHE looks, in vision, upon some dead thing
With steadfast eyes, subtly interpretive
Of somewhat wonderful that once did live
Beneath soft alien skies in some old Spring—
She hears the laughter that shall no more ring,
She hears the words no lips shall ever give
Again in twilight moments fugitive,
She knows the pain that long since lost its sting.

Her right hand holds the lamp of memory
Low burning, and behind her dies the day,
As dies for her the present. Hush! she heard
Some antique, time-forgotten mystery,
Known only where the swart priests used to pray
In shrines that were grown old in ancient years.

* *La Pia* (de' Tolommai) is she who is mentioned in the fifth canto of "Il Purgatorio" as the bride of Nello della Pietra, who was so cruelly imprisoned by the latter in a lonely fortress in the Maremma, where malaria ere long finished what grief had begun.

WILLIAM SHARP.

OBITUARY.

WE have to record the death, on September 10, of the Commendatore Leopoldo Cattani Cavalcante, one of the most remarkable Italians of his time, and well-known throughout Italy for his philanthropic works. Born in Florence in 1814, he married in 1843 Robina Wilson, eldest daughter of Andrew Wilson, and sister of Charles Heath Wilson, whose death was lately recorded in the ACADEMY. His name first became known through Tuscany for the valuable aid he afforded to the sufferers from the inundation of the Arno in the autumn of 1844. He established bakeries, and instituted a service of boats to carry food to the starving peasants, receiving into his own villa of Casteletti many whose houses had been destroyed. He himself faced the greatest dangers in attempting to save and relieve the people, encouraged in the work by his English wife. In 1855 the cholera brought desolation to his home, his wife being the first victim of that terrible epidemic. Despite this blow, Cavalcante, as a brother of the Misericordia, became one of the most diligent nurses of the worst cholera cases in Florence. It was after this that he first turned his mind to the education of the poorer classes, and instituted on his estate of Casteletti an agricultural school for boys. In a few years he was obliged to build a second school on a much larger scale, to which gentlemen were eager to send their sons to receive the thoroughly good practical and theoretical education given, for which they paid a nominal sum, the Commendatore spending over £2,000 sterling annually on this school alone. In 1875 he bought a tract of waste land on the West coast, lying between Leghorn and Spezia, where he built a third school, the task of the pupils being to cultivate the sandy waste, which is now covered with vines and corn. When Florence became the capital of Italy, the Commendatore added to his other work that of being member of Parliament. On the capital being removed to Rome, he wished to resign his seat, but his constituents persuaded him to remain their member to the last. In the beginning of September of the present year, he went to Arezzo to act as president of an agricultural exhibition. His friends, knowing him to be in bad health, begged him to take some rest; but he answered that if he died it would be while doing his duty. Seized at Arezzo by typhoid fever, he insisted on being taken to his house in Florence, which he reached on the evening of September 9, and on the morning of the 10th he died. His has been a life of self-sacrifice to his country; and during his hours of delirium his last words were "Education, and the duty of the rich to the poor."

ONE of the best historical scholars of Switzer-

land, Franz Rohrer, canon of Luzern, has just died in that town at the age of fifty. He was Professor of History at the Lyceum and the Realchule, and combined with this office the Professorship of Church History, Patrology, and Archaeology at the Theological Lehrschule. He was born at Stanz in 1832, and studied theology at the Universities of Freiburg and Tübingen. He was ordained first in 1856, and was for some time pfarrer of Kerns. His chief attention, however, was given to historical research, which his subsequent position as librarian at St. Gallen enabled him to prosecute with greater freedom. After the death of Dr. Lütolf he became president of the Historische Verein of the Five Cantons and editor of the *Geschichte*. He was also one of the most active members of the Swiss Geschichtsforschende Gesellschaft, and undertook its continuation of the great historical work left incomplete by Kopp, and afterwards by Lütolf—the *Geschichte der eidgenössischen Bünde*, of which a new volume lately appeared, under his care, bringing down the history to the peace of Austria with Luzern and the Forest Cantons (1330-36). After serving as rector of the Gymnasium in Altorf, he was elected a canon of the Stiftskirche in Luzern in 1873. His stately and imposing figure must have been familiar to many English visitors to that town. In his younger days he was a zealous member of the Swiss Studentenverein, and for a series of years edited the *Monatshefte*. He described himself to the last as a theologian of the "Richtung der Lacordaire." His historical essays and lectures are numerous.

REGIERUNGSRATH ALBERT BITZIUS, who was for many years the colleague, and afterwards the successor, of Heinrich Lang, of Zürich, in the editorship of the *Reform*, died at Bern on September 20. He was the son of the most popular of Swiss story-tellers pfarrer Bitzius of Lützelfüh, in the Kimmthal, better known as "Jeremias Gotthelf," several of whose tales have been translated into English. The younger Bitzius was born in his father's parish in 1835, and was educated at Burgdorf, and afterwards studied theology at the University of Bern, and later at Berlin and other German Universities. After serving as vicar, or assistant, in two or three parishes of his native canton, he accepted the pastorate of the German congregation at Courtelary. His literary activity was devoted chiefly to serial works. He obtained the first prize offered by a Dutch society for an essay on capital punishment. Bitzius had a great reputation in Switzerland as a pulpit orator. In 1878 he became a member of the Government of Bern, after resigning the parochial charge at Tünn, and the last years of his life were devoted almost exclusively to the reform and completion of the educational system of the canton. He was a man of childlike simplicity, but of masculine force of character, and will be greatly missed by what may be called the Broad Church party in the Established Evangelical Churches of Switzerland, which looked up to him as a trusted leader.

CORRESPONDENCE.

"EUSKARIAN" OR "NEOLITHIC."

Sare : Sept. 18, 1882.

Mr. Grant Allen asks, "If my kindly critic wants to fight on the question at length, why does he not attack Dr. Broca and Prof. Boyd Dawkins, instead of turning his arms against a mere member of the ordinary rank and file?" Prof. Boyd Dawkins' paper, "The Northern Range of the Basque," appeared in the *Fortnightly Review*, September 1874. Within the month, I believe, I sent a reply to the editor, which failed to obtain insertion. By the kind mediation of Prof. Sayce, my paper was at length read and discussed before the Anthropological Institute, July 1875. Previously to this, Mr. P. W. Stuart-Menteth had read for me a paper at the meeting of the British Association at Edinburgh; this, I think, also found its way into the *Journal* of the institute. On the publication of *Early Man in Britain*, I again combated these views in *La nouvelle Revue*, May 15, 1881. I have protested against them on various occasions in the ACADEMY and before local societies in South-west France. Though I may well be accused of presumption in attacking anthropologists such as the late Dr. Broca and Prof. Boyd Dawkins, with whom I should certainly not attempt to measure myself on any other point of anthropology, I at least can hardly be accused of cowardice in dealing only with the rank and file.

Dr. Broca was, I believe, once for a month in the Basque countries; he visited only St-Jean-de-Luz and some of the towns on the Spanish coast, and his examples were taken solely therefrom. I am not aware that Prof. Boyd Dawkins has ever been in the Basque country. If any man has a right to speak with authority on Basque matters it is Prince L.-L. Bonaparte. He has a more thorough knowledge of the language in all its dialects than probably any other living man; he has visited the whole country, Spanish and French, in detail, under the best circumstances for obtaining exact information; his map of the Basque dialects is a model of geography applied to linguistics. In the discussion of July 1875 he said: "Mr. Webster's discourse offers scarcely any point

in which I cannot cordially concur." Mr. P. Stuart-Menteth, who read and defended my paper at the British Association, has also been through every part of both sides of the Basque Pyrenees, and has lately published a geological map of the same from detailed personal examination. Dr. de Rochas, a practised anthropologist, went carefully through the Pays basque with all official help towards investigation. He states his conclusions on this point on p. 186 of *Les Parias de France et d'Espagne* (Hachette, 1876). At the close of his journey I met him at St-Jean-de-Luz, and asked him if he thought the Basques fairer than their neighbours. "C'est incontestable," he replied. "Mon petit enfant [a boy of ten or eleven] même l'a remarqué." Other authorities, from the twelfth century downwards, will be found in my papers above referred to. I wish to add only that of Bowles: *Introducción a la Historia natural et de España* (Madrid, 1775), pp. 300-309. He is a strong partisan of the likeness between Basques and Irish, but apparently on exactly opposite grounds from those of Broca and Boyd Dawkins, for he dilates on the fine *physique* of the men, and "la tez fresca y sanguina" of the women, in spite of exposure to the weather. I write now from the least mixed population of the Labourd, and it is striking to notice how much more fair the lower class is than the upper, who are everywhere more mingled in blood.

I have not had an opportunity of seeing Mr. Grant Allen's paper, but on the more general question there seems to me to be an equivocation in the use of the word dolichocephalic. The Basque skull is postero-dolichocephalic; the skull of Northern France, according to Broca, is antero-dolichocephalic. The series runs—(1) postero-dolichocephalic, (2) brachycephalic, (3) antero-dolichocephalic. To apply the same term to (1) and (3) seems to court confusion. I believe that it is the dark type of the Basques that is brachycephalic, and the fair postero-dolichocephalic. This is also the opinion of Dr. T. Hack Tuks, who has seen them on the spot (see "The Cagots," *Journal* of the Anthropological Institute, May 1880). Again, granting that the Basques represent a Neolithic population, I fail to see how the colour of the hair and eyes can be deduced from a Neolithic skull. Aryan or Indo-European are less extensive terms than Neolithic; yet how can we infer from an Aryan skull whether an individual was fair or dark? I admit that the dark Basques are in the majority, but I maintain that their characteristic, as a race, is a greater frequency of the fair type than is to be found in any of their neighbours. I object to the term "Euskarian" as perpetuating a mistake made by one or two eminent scientific men generalising from insufficient evidence. It is moreover taken from the name of the language, "Euscara," and not from that of the people, who are "Esculdunac;" but on this you will probably hear further from a more competent correspondent. WENTWORTH WEBSTER.

London : Sept. 19, 1882.

There is a refreshing vigour about Mr. Grant Allen's letter. But his use of "Euskarian" on no matter what authority, is absurd. Even admitting the theory on which it depends, this word is essentially *national* rather than *ethnological*. It belongs exclusively to a surviving fragment of a formerly widespread race, whose most general name might be Iberian, but certainly never was Euskarian. Hence to substitute the latter for the former is like making Northumbrian, for instance, or Frisian, or Hessian equivalent to Germanic or Teutonic. It is making the part equal to the whole. The absurdity is intensified when we remember that the presence of Iberian blood in these

islands is a pure assumption—a plausible theory and nothing more. Not a shred of the Esculdunac speech has survived here, and as to the type we do not yet quite know what that was. The Esculdunac or Basques have, I believe, been assimilated to the Caucasian type, and anthropologists differ as to their salient features. What does survive in its purity is the Euskarian (Iberian) speech, a sufficiently remarkable phenomenon; but the race has become absorbed beyond recovery. A. H. KEANE.

THE FOLIO ALTERERS OF SHAKSPEARE'S TEXT.

Walditch, Bridport, Dorset.

I noted lately in the ACADEMY (July 22, p. 60) how two of Shakspeare's unexpected, yet specially characteristic, words in "Hamlet"—"comart" (mutual dealing) and "sallied" (assaulted, harassed)—had been altered by his successors (no doubt Heminge and Condell) into the far more commonplace "counant" and the bathetic "solid." A like instance occurs in "Much Ado." In the scene which my fellow-editor, Mr. W. G. Stone, and I—following James Spedding—make sc. ii., act III., instead of the usual sc. i., Hero bids Margaret tell Beatrice to "steale into the peached bower . . ."

"there will she hide her,

To listen our proposc."

12

"Propose" naturally pulled me up—as Shakspeare's special words almost always do his readers—and made me find out its meaning. This done, I said, "Of course the Philistines of the Folio altered it, and all Philistine editors have followed them." I turned to the First Folio, and there, sure enough, at p. 109, col. 2, was

"there will she hide her,

To listen our purpose."

The wrong stress again for the right one, *purpose* for *propose*—as in *counant* for *comart*—and the wrong word again too. Moreover, the change was made in defiance of Shakspeare's express prior authority for his right word "propose;" for in l. 3 of the same scene he said:

"Good Margaret, runne thee to the parlour;
 There shalt thou finde my coffin Beatrice,
 I ropp/sing with the prince and Claudio"

—that is, chatting with them; for Cotgrave gives Shakspeare's meaning of his substantive "propose" as the second definition of the French

"Propos . . . talke, speech, discourse, chat, conference, communication."

I trust, then, that future editors will let "propose" stand—as we old-spelling folk shall—in Shakspeare's text; and that all real students of our poet will sympathise with us in resisting the attempts of the Folio alterers to damage his text and deprive him of the words, and meanings of words, that are specially his.

Another like weakening of a strong Quarto word by a weak Folio one is seen in "Much Ado," IV. i. (our iii.) 135:

"Who, *smirched* thus, and mired with infamy,"

where the Folio reads "smeered" for "smirched."

Others are seen in the Folio copy of "Troilus and Cressida," which, though it contains a text revised by Shakspeare, has also weakenings by Heminge and Condell, or some "Globe" player, as "inclineable" for "attributive" (Q. II. ii. 58), "money" for "an eye" (Q. I. ii. 260). (I of course admit that in many other cases the Folio has the right word when a Quarto copier or printer has made a blunder.)

May I suggest a simple explanation of the so-called difficulty in "Much Ado," V. i. 16?—

"If such a one will smile, and stroke his beard,
 And sorrow wagge, orie 'hem' when he should grone."

Sorrow is the object of the verb *wag*; and *wag* is a causal of Shakspeare's "let them wag; trot, trot" ("Merry Wives"), meaning cause to wag, move, remove, move off. So that, in "forrow wagge," "wagge" means to "remove, push away, shake off," as in Span. "*manear*, to wag, to weald, to shake off" (Minsheu). The passage needs no emendation, though Hammer and Warburton's "*sorrow wative*" comes near the right sense. F. J. FURNIVALL.

PS.—As there has often been question how much of "*Troilus and Cressida*" is spurious, I wish to say that, in my judgment, Shakspeare's work in the play ends with V. iii. 28:

"Life, every man holds deere, but the deere man
Holds honor farre more precious-deere then life."

The ludicrous bathos of the next line:

"Enter Troilus.

"How now, young man? mean'st thou to fight to-day?"

marks the beginning of the completer's work. (But he has a finish metaphor in V. v. 24, 25.) The Prologue and rest of the play are genuine, except, of course, the absurd insertion about Aristotle and moral philosophy (II. ii. 163-67).

A GIPSY LETTER.

Alldingham: Sept. 19, 1882.

The enclosed, cut from a Cheshire newspaper, is the production of an old friend of mine in that county. It may interest some of the readers of the ACADEMY to know that there is at any rate one student of Gipsy language who can claim the proficiency of an adept.

SCIENCE.

An Anglo-Saxon Dictionary: based on the MS. Collections of the late Joseph Bosworth. Edited and Enlarged by T. Northcote Toller. Parts I. and II. (Oxford: Clarendon Press.)

NOTHING is easier than to point out the shortcomings in a dictionary, as Dr. Johnson has long ago so feelingly indicated. His

words are just as applicable to the work now under review as to his own performance.

"All the interpretations of words are not written with the same skill or the same happiness; things, equally easy in themselves, are not all equally easy to a single mind. Every writer of a long work commits errors, where there appears neither ambiguity to mislead nor obscurity to confound him. . . . But many seeming faults are to be imputed rather to the nature of the undertaking than the negligence of the performer."

To which we may add his other words—"yet these failures, however frequent, may admit extenuation and apology." Writing in a similar spirit, Prof. Toller, in his brief "Preliminary Notice," calls attention to that which is certainly the weakest point in the present work—viz., an occasional incorrectness in marking the length of some of the vowel-sounds, and adds:—

"The work, no doubt, admits of improvement; but those who are best able to detect its shortcomings will be best able to appreciate the difficulties attending such a compilation; and it may be expected that at least English scholars will not judge too severely one whose zeal for the study of English was proved by his attempt to compile an Anglo-Saxon dictionary, and by his foundation of the Anglo-Saxon Chair in the University of Cambridge."

With all its drawbacks, this dictionary is unquestionably one of great value and importance. We may forgive a lexicographer many errors in interpretation and many slips in etymology if he will but give us, correctly and clearly, his references. This is one of the things which Dr. Bosworth endeavoured to do, and, as he was by no means wanting in diligence, he has fairly succeeded in this duty. The references are very numerous, and we have reason to believe that they are, in general, correct. Indeed, we frequently find, for the same word in the same passage, references to two or three different editions of a given poem or piece of prose. One peculiarity in the method of printing these references we shall point out at once, because there is no mention of it in the Preliminary Notice, and it may easily be overlooked; for it turns upon a mere matter of punctuation, and only becomes obvious upon a close and minute examination of the work.

Dr. Bosworth has, we find, availed himself of the difference between a colon and a semi-colon, to mark out the distinction between passages which are altogether different and passages which occur (without difference) in two or more editions. An example will make this clear, and the observation of this peculiarity will enable the reader to seize the information which is intended to be conveyed. The references for the dat. pl. *ceasterwarum* are given thus:—"Elen. Kmb. 83; El. 42: Andr. Kmb. 3290; An. 1648." The semi-colon is to be read as meaning "which is the same as"; while the colon means "also," and introduces a new authority. The reader must also be careful to consult the "list of contractions used by Grein," just preceding the letter A, as well as the longer list of contractions of a more general character. Hence the above references mean:—

"see the poem of Elene, as edited by Kemble, l. 83, or (which is the same thing) the poem of

Elene, as edited by Grein, l. 42: and see also the poem of Andreas, as edited by Kemble, l. 3290, or (which is the same thing) the poem of Andreas, as edited by Grein, l. 1648."

These double references are frequently very convenient, as the student may happen to have only one edition at hand; and the difference in the mode of counting lines is often troublesome. Where there are no such double references (though this seems to be rare), we may remember that German editors print poems in long lines, counting two English editor's lines as one, though there are occasional slight variations in the mode of division. To recur to the above examples, eighty-three long lines give forty-one long lines and a half-line over, bringing us to l. 42 of the German edition; while the half of 3,290 is 1,645—near enough to 1,648 to enable anyone to find the word. Prof. Toller has followed Dr. Bosworth's lead, as may be seen by taking any example. We happened to take the word *gestigan*, where one of the references is as follows:—"Cd. 137; Th. 172, 32; Gen. 2853: 227; Th. 303, 14; Sal. 612." This means—

"See the MS. of *Cædmon*, fol. 137—that is, in Thorpe's edition, p. 172, l. 32, or l. 2853 of that part of *Cædmon* which Grein calls *Genesis*: see also the same MS., fol. 227—that is, in Thorpe's edition, p. 303, l. 14, or l. 612 of that part of the poem which Grein calls *Satan*."

(Here, by-the-way, is one of those slight misprints which so easily occur, since "Sal. 612" should be "Sat. 612.") We beg leave to suggest that, when the work is completed, it would not be amiss to explain, by help of a few examples such as the above, how the dictionary is to be practically worked. It should be particularly borne in mind that an Anglo-Saxon dictionary is frequently consulted by Englishmen who have no knowledge whatever of the literature or of the grammar of the language. Wonderful, indeed, are the etymological conclusions which they thus sometimes arrive at; but the best way of minimising the evil is by conveying information in the plainest manner, so that it may not require much erudition to make the strangeness of their vagaries manifest.

One excellent feature of the dictionary, and likely to be productive of great good, is the frequent occurrence of short sentences, accompanied by a translation into modern English. Thus, under *dóm* we find: "*Hæfde Daniel dóm micelne in Babilónia, Daniel had much honour in Babylon.*" This shows at once that the Anglo-Saxon *dóm* could express an idea which does not belong to the modern *doom*. Under the same heading, it will be seen that some of the explanations are given in Latin. Thus we find: "*Dóme Drihten eorþan ymb-hwyrft ealle gesette, Dominus corripit orbem terrarum.*" This is as it should be, for there is an excellent reason for it. The passage occurs in a version of the Psalms edited by Thorpe, and the Latin words cited are those of which the Anglo-Saxon sentence is a free paraphrase. So, again, just above: "*Hit ys Godes dóm, Dei judicium est, Deut. i. 17.*" Here *Dei judicium est* are the precise words of the Vulgate version from which the Anglo-Saxon translation was made. In several quotations from the gospels the spelling of Latin words has a strange appearance. These strange

spellings are not misprints, but are deliberately (and rightly) adopted from the Latin text in the Lindisfarne MS. So, again, in citing the numerous Anglo-Saxon glosses, the addition of the Latin word is most important as giving the real authority. An example appears in the following:—"Gælæþ, Gælæþ? a cage to sell or punish bondmen in; catasta, Som. Ben. Lye: Gælæþ catasta, Wrt. Voc. 288, 24." This may be taken to mean that "gælæþ" appears in Somner's dictionary, whence it was copied by Benson, whence it was copied by Lye, none of them giving any authority; but Prof. Toller has found the word with its Latin equivalent in Wright's *Vocabularies*, vol. i., p. 288, l. 24. Wright, however, prints *catasta*, though Ducange only gives *catasta*, explained as an instrument of torture. It may here be noted that the glosses abound with obscure terms, and it is often hard to say whether the Anglo-Saxon or the Latin word is the more puzzling—some of them defy explanation.

On the possible demerits of the work we have no wish to dwell; it is a pleasure rather to recognise the fact that it exhibits the results of much patient and honest work, and is, especially for English readers, a very great advance upon all previous works of the same character. In the matter of Anglo-Saxon dictionaries we have not been very fortunate hitherto. Somner's dictionary, written in 1659, is a most unsatisfactory book, especially from its woful lack of references. Some of his words seem to have been his own inventions, but we can seldom be sure of this, as some authority for them may at any time appear. Benson's is a mere vocabulary, and is almost worthless. Lye's dictionary is a chaotic mass of Gothic, Anglo-Saxon, Early English, and even Anglo-French; and it is a singular thing that he seems not to have advanced very far in the study of the grammar. He never tells us the gender of a single substantive, except when he gravely remarks that the neuter article *þæt* can be used with masculine or feminine substantives, as *þæt cild*, the child, *þæt wif*, the woman! He explains *cy* (*sic*) by *racca*, as if it were singular, not knowing that, in provincial English, *kye* is the plural of *coo*. Yet Lye has one great merit, in that he gives a great number of references; and it must have been to him a work of enormous labour, such as we can hardly rightly estimate, seeing that he had to consult MSS. rather than editions. One at least of his references is obscure; he frequently refers to "Cot.," which he explains to mean a glossary in the Cotton MS. Julius A. 2, now printed in Wright's *Vocabularies*, vol. i., p. 70. But this does not seem to be right, and it may be that he refers to another MS. altogether. The point is worth investigating, for Bosworth also cites "Cot.," as, e.g., under *begannes*; but we believe that all such instances are copied from Lye. Prof. Toller cautiously explains "Cot." to mean "a MS. of the Cotton library quoted by Lye in his dictionary;" perhaps we may hope one day to learn which MS. Next came Dr. Bosworth's larger dictionary, published as long ago as 1838, which is still of value, being a considerable improvement upon Lye's, upon which it was founded. His smaller dictionary, published in 1848, omits

the references, but is in all other respects preferable, as it contains many corrections. Bosworth's dictionary was, in its turn, surpassed by Ettmüller's, in 1851—a work which, to this day, for all etymological purposes, remains the best, but is only useful to such as can understand it. The perplexing way in which the author contemns alphabetical arrangement is a trial to the patience; and to find any word under its right vowel is a delightful exercise to such as understand the Anglo-Saxon vowel-sounds, but must be a wonder and a source of confusion of mind to all who do not; so that it will never come into general use. Grein's lexicon of all the poetical words is of unsurpassable excellence; but it omits many prosaic words, and it is out of print. Leo's *Glossar* has its merits, and, in particular, contains many references not to be found elsewhere; but the arrangement is perplexing; and the explanations, being given in German only, are not likely to be in general favour in this country. By far the best feature of Leo's book is the splendid alphabetical Index, made by Walther Bissegger, whose name, strange as it may sound in English ears, is well worthy to be remembered with all thankfulness.

It will be seen from these brief remarks that there was still great need in England of a good Anglo-Saxon dictionary and a fair opening for anyone who would undertake it. Dr. Bosworth accordingly devoted himself for many years to the improvement of his former work, to which it was easy to make large additions by availing himself of Grein's labours. A comparison with the present volume shows a very great advance, as may be seen under almost every article. The number of references has been very largely increased; the references are more exact, and have commonly been verified instead of being merely copied from Lye; and the workmanship throughout is far better, so that there is hardly any comparison between the two editions as regards their value. Dr. Bosworth remained at work almost till the very last day of a long life, and succeeded in completing the first 288 pages of the work, ending with the word *firgen-streám*, a mountain-stream, which occurs in a fine passage in "Beowulf."

It was some years before the work, thus interrupted by his death, was resumed, and it is fortunate that so good a scholar was found willing to continue it, for it was no light undertaking. Prof. Toller has had the advantage of learning the language with the help of better books, and at a period when the phonetic laws of the language are far better known; and the additional 288 pages which he has contributed exhibit excellent work, such as all students should be duly grateful for. He has advanced the work as far as the word *hwistlian*, to whistle—i.e., almost to the end of *h*; or, in other words, has completed quite half of the whole work, as may be seen by counting the pages in Grein's glossary. It is a pleasure to find that such good progress has been made with a work of such great importance; and we can now only hope that it may proceed steadily, and without interruption, to a successful end.

W. W. SKERT.

CORRESPONDENCE.

THE YI KING.

Oxford: Sept. 19, 1882.

I was away from Oxford nearly all last month, and did not get back to it till the 5th current. In consequence, I did not see Prof. Douglas's notice of my translation of the Yi King when it appeared in the ACADEMY of the 12th ult.; nor, indeed, did I have an opportunity of reading it till Tuesday of last week. I beg now to be allowed to offer, through you, some observations in reply to his strictures and views.

The first matter of importance on which he dwells is "the very vexed point of the authorship of the Yi;" and he says that, "as a matter of fact, very few critics of the first rank have pronounced positively on the question." I would ask him, however, to give the names of a "very few critics" of any rank who have pronounced positively or hesitatingly against the authorship of the text of the classic by king Wán and his son. He fancies that, "a few days" before he wrote his notice, he had discovered one such critic in Lo Pi, of our twelfth century, and I will by-and-by consider the testimony which he ascribes to him.

The proofs adduced by myself for the authorship by Wán and his son (the duke of Cháu) do not appear to Prof. Douglas to be sufficient. But I do not think that he allows their due weight to the forty-ninth and sixty-ninth paragraphs which I quoted from the second section of the third appendix to the Yi. For the character *hsing* in them, which I have translated by "began to flourish," I might, after Morrison and Medhurst, have given "arose," or, after Williams, "originated." Taken in connexion with the name, "the Yi of Cháu," which I quote (Introduction, p. 3) from "the Official Book of the Cháu dynasty," the intimations in those paragraphs acquire additional force. It is true that the passage of Sze-má Oh'ien, to which also I refer (note 1, p. 6), only speaks, as my critic says, of the multiplication by Wán of the eight primary trigrams to the existing sixty-four hexagrams; but if the historian (the earliest Chinese writer who is entitled to be so styled) believed that we owe to Wán the formation of the hexagrams, he could not mean that we should go up before him for the text that is found under them.

But how is it that Prof. Douglas did not go on to note 2, immediately following the reference to Sze-má Oh'ien? I say in it that the symbolism (which constitutes much the larger portion of the text) is recognised as the work of the duke of Cháu in the T'ao Chwán so early as B.C. 540. If he had turned to his T'ao Chwán he would have found that in that year the premier of the State of Tsin, when he was on a visit in Lü, and "saw the symbolism of the Yi and the Oh'un Ch'ü of Lü," exclaimed, "The institutes of Cháu are all in Lü. Now, indeed, I know the virtues of the duke of Cháu, and how it was that (the House of) Cháu attained to the royal dignity."

The authorship of the text by king Wán and his son might be further supported both by external and internal evidence; but I will not lengthen my letter by entering more into the subject here.

Having dealt with the point of the authorship, Prof. Douglas quotes my translation of the text of the thirtieth hexagram, and is greatly offended by the subject-matter and language of the paragraphs. If he had anything to object to in my renderings, he keeps it in abeyance; it is the text itself which he cannot accept. "It is difficult," he says,

"to believe that the two sages who were conspicuous for wisdom and intellectual ability could have ever deliberately written anything which would bear the meaning put on this chapter, for

instance, by the native critics who attribute it to them."

There, however, the text of the sixty-four hexagrams is, and I flatter myself that I have done something to bring it within the comprehension of an English reader as clearly and fully as its nature will admit. Thousands of "native critics," including Confucius, whom the wide world acknowledges to have been a true sage, have thought they found a good meaning under all the figures. (For Confucius's judgments see pp. 389-96, *et al.*) I have endeavoured to account for the peculiarity of the style in my Introduction (pp. 20-25, *et al.*), and do not feel that our estimate of the qualities of Wān and his son need be affected by it. The difficulties both of translation and interpretation are, indeed, great; for of the symbolical explanations of the lines, amounting to nearly 400, the greater number are in themselves only grotesque. As I have further said about them, p. 22:—

"We do not recover from the feeling of disappointment till we remember that both father and son had to write 'according to the trick,' after the manner of diviners, as if the lineal augury had been their profession."

It was necessary that I should, by a faithful version, make the readers of "The Sacred Books of the East" aware of what was really to be found in the Yi King. It was a great satisfaction to me, in the exercise of my own judgment upon the text, to discover that my views were generally in striking accordance with those of the mass of native scholars for 2,000 years and more.

Without pausing to discuss my method of interpretation, Prof. Douglas contents himself with saying that,

"When we read chapter after chapter like the thirtieth, we feel that the clue to the text must be lost, and that we must look for some meaning in it which has been hidden from the commentators. Fortunately, to the discerning eye of M. Terrien de La Couperie the secret has become apparent; and the sentences of the text now stand revealed—some as vocabularies, some as ephemerides, some as geographical or ethnological enumerations, &c. But, if this be so, we must believe that the text was far older than the time of king Wān, to whom we must assume that it was as unintelligible as it was to Confucius."

I do not affirm that the belief said in the last of these sentences to be necessary is unworthy of consideration, but the assumption, also pronounced to be necessary, appears to me to be so. The present text, according to it, is the translation of what was *unintelligible* to its author. They are certainly bold adventurers who undertake to restore from it the old vocabularies of which, according to them, it consisted. Prof. Douglas's final statement on this point is that "king Wān amused himself while in prison by devising a system of divination from the text which he failed to understand, and that he added the expressions 'lucky,' or 'unlucky,' in accordance with his scheme."

And Prof. Douglas had discovered very recently that this opinion was not a new one, but was plainly stated by Lo Pi, "the well-known historian," in his *Lü Shih* (first published in 1171). I have long been familiar with the *Lü Shih*, which Mayers (*Manual*, p. 16) characterises, and characterises truly, as "a collection of fabulous and legendary notices relating to prehistoric times." The passage appealed to by Prof. Douglas is inadequately represented by him, and must have been translated hastily; but I have no time or space to go into an examination of characters and phrases. What Lo Pi says is this:—

"In the time of Fū-hsi, he himself multiplied the linear figures (from 8 to 64). He also made careful and extensive application of them (see App. 3, Sect. II, 11, 12); only nothing (of his

views) was shown in writing. Coming to the Lien Shan and Kwei Tsang, we find that there were the first and second parts of the Yi, and the symbolism of the lines was completed on a large scale; but (these two Yi) were not in (those) ages very much enquired into. When they descended to king Wān, he, being imprisoned in Yü Li, made use of them to divine, and might seem to be inserting expressions prognosticating good or evil. He moreover changed the numbers of the Expansion, that he might set up his plan of the Great Expansion (see App. 3, Sect. I., chap. 9), and make it possible to multiply (the figures by his divining process). After this, the descriptive text was first completed in detail, and the whole was named the 'Yi of Cháu.'"

I appeal to the reader whether in this long statement we have the same view of the Yi which Prof. Douglas claims as his. I might rather claim it as favourable to my own view. If Lo Pi did hold that there existed a Yi text, or perhaps two texts, before king Wān, he gives no hint that they were unintelligible to that monarch, by whose labours also, he says, the descriptive text was for the first time made complete in all its details, and was known as "the Yi of Cháu," the Yi which has been transmitted to the present day. There is not, to a Chinese scholar, the slightest difficulty in translating any part of his statement till we come to what I may term the twelfth member of it, for which Prof. Douglas gives: "He added and surreptitiously introduced the foretelling words." My copy of the *Lü Shih* (1611) reads: *Jā ts'wān chāu ts'ze*. If the reading of Prof. Douglas's copy be the same, he felt the difficulty occasioned by *jā* in construing the sentence, and changed it into *kiā*. If there be *kiā* in his copy, it only performs the part of an adverb, and should not be translated by "he added." *Ts'wan* performs the part of the verb in the sentence. It is used both intransitively (meaning "to abscond," which does not suit in this passage) and transitively (meaning "to conceal," sometimes = "to deposit," and "to banish, or keep in concealment"). "He surreptitiously introduced" is the version of a partisan, as if the writer had a spite against king Wān, which Lo Pi had not. If I were to introduce another character instead of *jā*, it would not be *kiā*; but I have preferred to make the best of the sentence as it stands. If we take it in connexion with the three members of the statement that follow (left untranslated by Prof. Douglas), and with other places in the *Lü Shih*, I think its meaning might be better determined, approximately at least; but the passage has taken already more than sufficient time and space. I would only say further on it that, according to Lo Pi, the Lien Shan was the Yi of Shān Nāng, whose first year is variously dated, up and down, in the fourth millennium B.C., and even earlier; and that he, in making his Yi, began with what is now the fifty-second hexagram, and employed the services of his diviner by the tortoise-shell, and two diviners by the stalks. All that is said about the Yi in the *Lü Shih* is of a piece with the character of the collection quoted above from Mayers' *Manual*. It is not entitled to any consideration; and what it does say affords no confirmation of the views of Prof. Douglas.

Leaving Lo Pi, Prof. Douglas goes on to re-affirm his view of the text of the hexagrams as consisting of vocabularies, and ends by dealing with that of the thirtieth figure, so as to bring out of it the definition of about twenty different characters, all bearing the sound Li. The conclusion seems to me "lame and impotent," and the operation leading to it is, once and again, more than questionable; but I will wait until Prof. Douglas has treated in the same way the text of all the sixty-four hexagrams. I will in the meantime conclude this long letter by stating a few of the considerations which keep me from

seeing any reasonableness in the views of him and his friend, or any chance of success in their method of interpretation.

1. Prof. Douglas seems to allow at last that the text is that of king Wān and his son. But how could they bring it out of an older text which was unintelligible to them, so that, from the study of it, it can now be possible to reach to that ancient text?

2. The text is woven together in so many paragraphs, according to the nature of Chinese composition, as artistically as sentences are constructed in English. How can those paragraphs be broken into fragments having no internal connexion? Judging from the attempt with the thirtieth hexagram, the thing cannot be done.

3. The text of each hexagram is covered by one monosyllable, the name in the first place of the figure made by the six lines composing it. It has been held to give, in its own peculiar way, an explanation of the ideas of the authors condensed in the name and the figure. But these new commentators find in it so many definitions of names quite different in meaning and written form, though more or less akin in sound, according to the scant phonetic constituents of Chinese speech.

4. Is anything like the case before us to be found in the monuments of other languages? Do we discover among them vocabularies distinguished by the phenomena ascribed to the hexagrammatic texts of the Yi by this new criticism? I have heard that similar vocabularies have been discovered in what are called Accadian inscriptions; and, again, I have been assured that no such discovery has been made. I desire as much as anyone the greatest play of thought and freedom of enquiry in studying the Chinese classics; but at the same time I must grudge being drawn off from important enquiries to discuss views not commended by reason in themselves or analogy from without.

JAMES LEGGE.

NOTES OF TRAVEL.

MR. O'DONOVAN's work describing his travels east of the Caspian during the last three years, and his five months' residence at the Turcoman capital, Merv, will be published by Messrs. Smith, Elder and Co. at the end of next week or in the beginning of the week after. The author, in addition to a spirited account of his adventures, gives with considerable detail the diplomatic history of what is called the Merv Question. The work will form two volumes, with several maps and copious Appendices.

MR. WILLIAM KERMODE, who has resided in Natal for many years, will issue next week, through Messrs. Tribner, a handy and exhaustive account of that colony. The work will deal specially with Natal as a field for emigration; the natural advantages, mineral wealth, prospects of agriculturists, ostrich farming, &c. The author, who came over a short time since in order to see the work through the press, has now returned to Durban.

SCIENCE NOTES.

SEVERAL interesting papers have been written by Prof. O'Reilly, of Dublin, with the view of proving that the directions of the main coast-lines of the world are due to the jointing of the rocks, itself the result of the secular contraction of the earth's crust. In the last number of the *Proceedings of the Royal Irish Academy*, he extends this view by seeking to establish a relation, so far at least as Europe is concerned, between the localities in which earthquakes occur and the directions of the coast-lines and main systems of jointing. Marking on a map the earthquake localities from the records of

Mallet, Perrey, and Fuohs, he finds that the localities range themselves in lines which bear a marked relation to the coast-line great circles which he has traced upon the globe. In the same journal we find a valuable report by Prof. A. H. Church on the constitution of the natural phosphates of aluminium, in which several original analyses are recorded.

MESSRS. KEGAN PAUL, TRENCH AND Co. will shortly add to the "International Scientific Series" translations of M. Ribot's *Diseases of Memory: an Essay in the Positive Psychology*, and of N. Joly's *Man before Metals*. These will be followed by Mr. Robert H. Scott's *Elementary Meteorology* and Prof. Sheldon Amos's *Science of Politics*.

The first volume of Messrs. Cassell, Petter, Galpin and Co.'s series of *Technological Manuals*, edited by Prof. Ayrton and Dr. Wormell, will be ready for publication early in October. It will be *Cutting Tools worked by Hand and Machine*, by Prof. Robert H. Smith.

M. BARTHÉLEMY ST-HILAIRE, the veteran author and friend of Thiers, has finished his French translation of Aristotle's *Historia Animalium*, which will be published immediately by Germer Baillière in three volumes, with Preface and commentary. He contends that the text was originally accompanied by illustrations.

PROF. INOSTRANTSEV, of St. Petersburg, succeeded in collecting, during the construction of the Siak and Svirak Canals, a number of prehistoric remains, including human bones and implements. These, with the assistance of other Russian anthropologists, he has examined and classified, the result being a large and richly illustrated volume recently published at the expense of the Ministry of Education, and entitled *Doistoricheski (shelovék) Pobrezhia Ladzhkago Ozeru* ("Prehistoric Man on the Shores of Lake Ladoga"). This work contains a geological account of the locality, its prehistoric flora and fauna, and the conditions of human life at the period indicated by the remains.

No. 17 of the *Johns Hopkins University Circulars* (Baltimore: Murphy) gives an account of the work done at the Chesapeake zoological laboratory up to July in the present year. From the same source we learn that Prof. Mitukuri, of Japan, who spent the seasons of 1879 and 1880 at Beaufort, has organised this summer a similar marine station on the sea-coast of Japan; and also that Mr. E. B. Wilson, who has for the last two years worked as assistant at Beaufort, is coming to Europe for twelve months for the further prosecution of his researches.

PHILOLOGY NOTES.

PROF. AUFRECHT, of Bonn, has recently been staying at Oxford, with the object of collating some Sanskrit MSS. in the Bodleian. He is now on a visit to Cambridge with a similar purpose.

DR. JAMES BURGESS starts for India early in October to resume his work on the archaeological survey with the beginning of the dry season. Concerning the appointment of Mr. P. J. Fleet as epigraphist to the surveys, which we announced last week, Dr. Burgess writes to us:—

"Thirty-five years ago the Court of Directors instructed Lord Hardinge to get the ancient inscriptions copied and translated. But the duty was left to natives; and, though much money was spent on it and the same thing tried again and again, the copies were always found to be full of errors, and the translations the mere whim of

pandits who hardly knew the alphabet. If I could only show fully the translations I get from natives, and the changes they undergo before publishing—when they are published at all—it would be seen what a necessity there is for the control of a scholar like Mr. Fleet."

M. BERGAIGNE has contributed to the *Académie des Inscriptions* a long account of the Sanskrit inscriptions brought back from Cambodia by M. Aymonier on his first visit. They number twenty in all, consisting of about 1,500 lines of Sanskrit, occasionally interspersed with lines in prose in the Cambodian vernacular. The oldest inscription with a date is of the year 589 of the Saka era (667 A.D.), and gives a list of five kings, Rudravarman, Bhavavarman, Mahendravarman, Indravarman, and Jayavarman. The mode of writing is said to resemble the oldest rock-inscriptions of the Deccan. The next oldest inscription gives a gap of two centuries, being dated in the Saka year 797 (or 875 A.D.). Besides its historical interest, as giving a new dynasty with a new capital, it is important through being written in two several characters, the one the ordinary Cambodian, derived from Southern India, the other a hieratic character apparently borrowed from Northern India. The matter of the inscriptions is mainly genealogical rather than historical. But it seems certain that the earliest form of worship introduced from India was that of Siva and other Brahmanic divinities. Buddhism is not found until the reign of Rajendravarman, who came to the throne in the Saka year 866 (944 A.D.).

BESIDES many books that have already been announced in the ACADEMY, Messrs. Trübner and Co. will publish this autumn—*Contested Etymologies in Skeat's Dictionary*, by Hensleigh Wedgwood; an *English-Persian Dictionary*, by Prof. E. H. Palmer; *Kalilawa Dimnah*, the Syriac text, with Introduction and notes, by Prof. W. Wright; the third volume of Prof. Fausbøll's edition of the "Jataka," with its commentary in Pali, being the *Majjhimanikayo*, one of the principal books of the Buddhist canon, edited by Dr. V. Trinckner; and a second edition of the late Thomas Wright's *Anglo-Saxon and Old-English Vocabulary*, collated, corrected, and enlarged by Prof. K. Wulker, of Leipzig.

THE Comte de Charencey will publish immediately, with Ernest Leroux, a volume entitled *Mélanges de Philologie et de Paléographie américaines*. In this he has collected all the papers he has written upon the languages and inscriptions of Central America, with special reference to the mode of writing found in Yucatan and known as "calculiform."

THE new volume in the "Bibliothèque slave elzévirienne" (Paris: Leroux) is the mission to Moscow of Antonius Possevinus, edited, with notes, from the annual Reports of the Society of Jesus by Father Pierling.

FINE ART.

ETCHING by BRUNET-DEBAINES—"ST. MARY-LE-STRAND." In the "ART JOURNAL" for OCTOBER. Price 2s. 6d.

TINTED FACSIMILE. A Drawing of an Old Man's Head, by LEONARDO DA VINCI. From the British Museum Collection. The Colour of the Original faithfully reproduced. In the "ART JOURNAL" for OCTOBER. Price 2s. 6d.

NEWCASTLE-UPON-TYNE. The "ART JOURNAL" for OCTOBER (No. 61) contains an Article on Newcastle, by Mr. RICHARD WILKINSON, with Five Illustrations; and a Full-page Engraving from a Painting by J. O'CONNOR. Mr. F. G. STEPHENS also contributes his Notes on "JOHN LIVERIE, PAINTER AND ENGRAVER."

ART BOOKS.

A Manual of Sculpture. By George Redford. (Sampson Low.) This is certainly one of the best of the illustrated art handbooks

published in the useful series edited by Mr. Poynter. The literature of sculpture is large in comparison with the general knowledge of it. This has always been confined to few, but the few have always existed. The pursuit of archaeology, as well as the love of art, has been useful in preserving the grand old marbles and in searching out the records of their history. It is, however, only of recent years that attempts have been made to popularise the subject; and, at least in England, we do not know where we should find any work which could be justly compared to this of Mr. Redford. Cheap, of small compass, well printed, and well illustrated, it is a model of what such a handbook should be. It is, of course, something less than a history, but it is much more than a bare skeleton of facts, treating the various branches of its subject concisely, but with sufficient fullness to interest a reader. As a work of reference and a guide to the study of sculpture it may be safely recommended. There are many signs of an increasing public interest in this the noblest of arts, but too many yet turn away from the sculpture-room of the Royal Academy on the plea that they do not understand or do not care for it. To all such we can recommend Mr. Redford's book. They will find it neither hard nor unpleasant reading; and, if, after the hour or so required to peruse its pages carefully and to examine its really illustrative wood-cuts, they find themselves unmoved in their carelessness and ignorance, they will at least know that their case is hopeless. The admirable engraving of the splendid bronze head of Artemis, purchased from Sig. Castellani for the British Museum, is well worth the money charged for the book.

A Round of Melodies. Drawn and Etched by R. and M. Farren. (Cambridge: Macmillan and Bowes.) It is hard to find fault with things so delicate and refined as these etchings. If etching had been in favour with the pre-Raphaelites, and Mr. Ruskin had not condemned it as a blundering art, we should have thought that they were done by some clever, but timid, disciple of that school under the careful eye of the late Slade Professor. They remind us of the days of Millais' "Ophelia" and Hughes' "King's Orchard," when every leaf was painted separately, and eyes were scarcely strong enough to discover the fineness of the handiwork. Nor is the labour altogether thrown away in these studies from Nature. Although the trees are not satisfactory (the ramification being often weak and untrue), the intricacies of foliage are rendered with much success, and the bits of bank, covered with grasses and weeds, are faithfully and patiently executed. The skies and effects of light are also good in several of the etchings, especially in those which are suggested by "Hark, Hark, the Lark," &c., and "Wearin' awa'." Altogether, the collection is marked by very true feeling and much patient handiwork, but little strength or confidence.

The Photographic Studios of Europe. By H. Baden Pritchard. (Piper and Cartar.) Mr. Pritchard has a lively manner and a clear style. Although dealing with a variety of processes of a scientific kind he is never dull; and many of his little articles, like those on photographing prisoners in England and France, are amusing as well as interesting. It is a pity that he has made some of them so short. The account of Dr. Huggins' wonderful photographs of the spectra of the stars would have justified the employment of much more space. As it is, it is meagre, especially in the description of the apparatus, which is by no means clearly described. On the other hand, most of the articles are admirable examples of popular description. As an instance we may mention that on the Woodbury process. From a statement in the Preface, we may conclude that Mr. Pritchard's

book is only a first instalment; and we hope that the next may do more justice to the French studios, and may contain some account of the work of Messrs. Amand Durand, Goupil, Dujardin, and others, who certainly deserve mention in any work of the kind.

Elementary Decoration. By J. W. Facey, Jun. (Orosby Lockwood.) The Preface informs us that this work "was greeted during its publication in the pages of a weekly technical journal" with "unqualified expressions of approval." It contains many hints which will be found useful by those who wish to try their hands at applying stencil ornaments inside and outside of their houses. They can learn from Mr. Facey, Jun., how to set to work. On the preparation of colours and the process of applying them, the author's personal experience qualifies him for a guide. His advice in matters of taste—as, for instance, that the woodwork of a room should contrast instead of corresponding with the colour of the paper—is more questionable. "Thus," he says, "a blue-green ground would require a reddish-orange tint, and the effect would be to define the boundary of wall and cornice with great distinctness." It would indeed. No doubt contrasts as well as harmonies are desirable, but Mr. Facey recommends the former as if they were all in all.

Phiz (Hablot K. Browne): a Memoir. By Fred. G. Kilton. (Satchell.) We are glad to welcome even such a short and slight account of an artist whose name certainly deserves to rank among the few real "illustrators" of fiction. Although it appears from Mr. Kilton's little book that the conceptions of "Phiz" did not always please Dickens, there is no doubt they pleased Dickens's readers; and in many cases—as Sam Weller, Mrs. Gamp, and Mr. Guppy, for instance—satisfied them so completely that they never thought of these characters in any other form, or with any other expressions, than those given to them by "Phiz." Moreover, when "Phiz" got hold of a character he never lost him; and, though the first idea of Mr. Pickwick is no doubt Seymour's and not Browne's, it is doubtful whether Seymour could have carried the character through all the remarkable situations in the dear old bachelor's chequered career with such perfect preservation of his individuality. Whether there was a natural affinity between the two men, or Browne was unusually susceptible to the impressions of Dickens's strong creative faculty, we know of no case (except some of Thackeray's illustrations of his own works) in which text and picture are so homogeneous as the novels in which the connexion between this artist and this novelist was unbroken. The sympathy was complete, both in the quality of the humour and the quality of the melodrama. Old Weller and Mr. Chadband are not more perfectly "Dickens" than Mr. Tulkynghorn's chamber with "a new meaning in the Old Roman." "Phiz," like George Cruikshank, became mannered and old-fashioned; the dash so conspicuous in his illustrations to *Lever* became stereotyped and stiff, his types too familiar, his fun stale. He was left behind, in fact; but there has been no one since who can replace him. One fact sadly interesting is revealed by Mr. Kilton's little book, and cannot be too widely known; and this is that for the last fifteen years of his life he was suffering from incipient paralysis, which compelled him to hold his pencil between the middle and fore fingers. This is sufficient to account for the inferiority of his later work which distressed those of his former admirers who were not in the sad secret. Henceforth we trust that everyone, in estimating his work as an artist, will carefully exclude from consideration the whole of the designs produced under such a terrible disadvantage.

THE COPTS OF EGYPT AND THEIR CHURCHES.

I.

OWING to the isolated position of the Copts with regard to other Christian sects, and their thoroughly Oriental dislike to any kind of change, it is in their churches, better than in any others, that the architecture and ritual of early Christian times can be well studied and understood. The last thousand years, or even more, though it has to a great extent stripped the churches of their rich treasures of gold and silver vessels, jewels, and embroidered vestments, has yet left almost unaltered both the buildings themselves and their ritual, with all its interesting peculiarities and primitive observances. For this reason these churches are specially deserving of study, as well as for the sake of their curious early paintings, their rich mosaics, and gorgeous woodwork, inlaid with the most delicate patterns in ebony, ivory, and mother-of-pearl.

Before describing the churches it will be well to give a slight sketch of the history of the Copts and of their faith. In spite of the Greek, the Roman, and, lastly, of the Arab and Turkish occupations of the country, the Copts still preserve some of the characteristics of the Ancient Egyptians, from whom they are, in the main, descended; while their language (now almost forgotten) can be shown to be derived from that of the hieroglyphs. Their Christianity is of early date; they claim as their founder St. Mark the Evangelist, whom they count as the first of their long roll of Patriarchs of Alexandria. Till the fifth century they were in communion with the rest of the Catholic Church, and, in spite of persecutions under various Roman emperors, seem to have prospered and increased both in numbers and wealth. During the patriarchate of Theonas, in the year 284 A.D., the people of Egypt (Qibt of Misr) revolted against Diocletian, who put down the rebellion with a strong hand, and slaughtered many thousands of the Copts. He further ordered all their churches to be closed, and made the old Pagan worship obligatory on the people, under pain of death. This slaughter of the Christians in 284 the Copts call the "Era of the Martyrs," and from this they date all succeeding years. So that, in their phraseology, the present A.D. 1882 is "year of the martyrs 1598." At the Council of Chalcedon in 451 the Coptic Patriarch Dioscorus, and six of his bishops, following the new Monophysite heresy of Eutyches, a Greek monk, asserted that "the Messiah was one substance out of two substances, one person out of two persons, one nature out of two natures, and one will out of two wills;" while the Emperor Marcianus, and the rest of the bishops of the Christian world who were present, 634 in number, maintained that "the Messiah was two substances, two natures, and two wills in one person." In rather more intelligible language Dioscorus asserted that Christ's nature was only divine, not human; while the Council decided that Christ had two natures—one divine and one human. In spite of the overwhelming majority and the authority of the Emperor, backed by many threats, being against them, Dioscorus and the six bishops refused to yield; and from that time the Copts were divided into two sects, most bitterly hostile one to the other. The truth is that the quarrel was as much a matter of politics as of religion—Dioscorus representing the national party, while his opponents supported the foreign Roman or Byzantine rulers. For this reason the latter were called Melchites, or Imperialists, and the unorthodox party were called Jacobites, from Ya'gub (Jacob), the name of Dioscorus before he became Patriarch. They are also called Eutyohians from the inventor of their heresy,

and Monophysites from their belief that Christ had only one nature. It is to this Jacobite or unorthodox party that the Patriarch and the bulk of the modern Copts belong.

From the time of this split in their Church—the middle of the fifth century to the middle of the seventh—the Melchites, or orthodox Copts, supported by the temporal power of the Græco-Roman emperors, had, for the most part, the upper hand, and grievously oppressed the Jacobites, who were often slaughtered in great numbers, and their churches and houses burnt, for the advancement of the true faith in Christ's humanity. At the time of the Mohammedan conquest the state of the two parties in Egypt was this:—all the officials, soldiers, and families connected with the Court of the Byzantine emperor, numbering above 300,000, were of the Melchite party; these were chiefly of Greek blood. The Jacobite party was composed of the bulk of the Egyptian nation (the Qibt): these were of mixed descent, many Abyssinians, Nubians, and Jews being mingled with the descendants of the ancient people of Egypt (see *El Maqrizi's History of the Copts*, circ. 1500, English translation by the Rev. S. C. Malan).

On the invasion of Egypt by Amru Ibn-el-Asi, the Mussulman general sent by the Kaliph Abou Bekr (Mohammed's immediate successor), the Melchite party, under the Emperor Heraclius, vigorously opposed the invaders, but were defeated in a decisive battle near what the Arab chronicler El Maqrizi calls "the fortress of Misr." This is probably the great Roman castle which still exists at Old Cairo, near the banks of the Nile, under the name of Kasr-es-Shehamah. The Jacobites, on the other hand, delighted at the defeat of their oppressors. Christians though they were, gladly made terms with Amru, who granted a treaty of peace and protection on condition that they paid tribute and assisted him to drive the Melchite (Byzantine) party out of Egypt. This treaty was made in 642 between Amru and Benjamin, the Jacobite Patriarch.

For some years the Copts appear to have lived peaceably under Moslem rule, and to have enjoyed equal privileges with their Mussulman fellow-subjects. But in course of time a feeling of hostility sprang up between them, and the Moslem rulers vexed the Copts by exorbitant taxes and various other forms of oppression. In addition to a heavy tribute laid on them, the Copts were insulted by laws compelling them to wear an ugly and conspicuous dress; they were forbidden to ride on horses; and each Coptic monk was branded on the hand with a number, and the name of his monastery. Any monk found without this brand was killed, or had his hand cut off. In the reign of the cruel El Hakim—996-1021—each Copt was obliged to wear hung round his neck a heavy wooden cross; his clothes and turban were ordered to be of black—a colour at that time hateful to the Mussulmans. They still wear the black turban; but it is no longer a mark of disgrace, as it is also worn by more than one Moslem sect, though slightly different in shape from that of the Copts.

These persecutions, which began soon after the year 700, caused many rebellions on the part of the unhappy Copts, in which they were always unsuccessful, and only drew down upon themselves heavier burdens, together with periodical massacres and the destruction of their churches. The enmity between them and their Arab conquerors lasted in full force till the present century, and even now is not extinct. It appears to have been an antipathy of race rather than of religion; and El Maqrizi, referring specially to those Copts who had avowedly become Mussulmans in religion, concludes his history of them thus (Malan's translation, p. 109):—

"But their real estate is not hidden from him

whose heart God enlightens. For, from the traces they left, will there be seen how shamefully they intrigued against Islam, and the followers of it, as anyone may know who looks into the lowliness of their origin, and the old hatred of their ancestors towards our religion and the doings thereof."

The modern city of Cairo (El Kahira) is now the seat of the Coptic Patriarch, though he still takes his title from Alexandria. The cathedral church of St. Mary is a completely modernised building, and is of small interest. By far the most interesting group of Coptic churches is that at Old Cairo (El Fostat or Misr-el-Atika), distant about two miles from the Arab Cairo, on the south-west side, near the banks of the Nile. This was the site of the Roman city, which was defended by the great fortress above mentioned, now called Kasr-es-Shemmah. It was not till the tenth century that the Fatimite Kaliphs founded the modern Cairo, under the hills of Mokattam, called Misr-el-Kahira (the victorious Misr) to distinguish it from the older Misr by the Nile. The new city rapidly increased in size and importance, and drew away from "Old Misr" its wealth and commerce, so that the older city gradually sank into ruin, and has left little sign of its former greatness except those vast rubbish-heaps mixed with broken pottery which extend over a large area between modern Cairo and the Nile. Here, among countless mounds made up of the *débris* from the ruined houses of Old Misr, are a succession of *dayrs*, or castle-like groups of buildings, each surrounded by a high wall, and generally with only one small entrance, easily defended against the attacks of the Mussulmans. Within the walls of each *dayr* are Coptic churches and monasteries, varying in number from one to seven or eight, surrounded by the houses of the priests and their families. The outside of these *dayrs* are quite plain; the high walls of brown brick are almost windowless; only a few simple turrets and buttresses break the monotony. From a distance some of the white domes of the churches within, and the tops of a few palm-trees, can just be seen rising above the outer precinct wall.

On entering one of the larger *dayrs* the scene is a strange and picturesque one—labyrinths of narrow winding streets, with houses on each side so high that little sun ever reaches the ground between; while, through an open doorway, here and there, a glimpse is caught of a bright sunny court, with shady *loggia* of marble columns, and a palm-tree or two growing in the middle. What windows the houses have generally look into these inner courts, and often have the beautiful *Mushrabeeyehs* of delicate pierced lattice-work, which are one of the chief beauties of all the better houses in Egypt, whether they belong to Mussulman or Copt. The churches are generally crowded on all sides by houses, and are absolutely free from any ornament or architectural design outside. A plain high rectangle of brick-work, quite windowless, is the aspect presented by the exterior of a Coptic church. What little light they have comes from a lattice-grating in the gable of the roof, or a small opening at the base of one of the domes at the east end. One might pass and re-pass the outside of one of these buildings in its dark narrow street without suspecting the existence of a church, much less of one whose interior is adorned with so much splendour.

The largest of these *dayrs* is that called the Kasr-es-Shemmah, built on the site of the great Roman fortress once occupied by the three legions who formed the garrison of Misr. A great part of this grand old Roman castle still remains, and it is yet possible to trace the line of that part of the wall which has been destroyed. It is built of finely worked limestone blocks, quarried in the neighbouring hills of Mokattam, with bands of brick at regular intervals, three courses of brick to five of stone, in

the usual Roman fashion—a good example of which may be seen in England in the Roman walls of Richborough and of Colchester. At intervals, all round the fortress, there are large semi-circular bastions, projecting outwards, and at one point, on the side towards the Nile, two great round towers or guard-houses of enormous strength—one on each side of the principal entrance. This is a square-headed doorway, with a classical pediment over it—very well preserved. The upper half only is visible, as, owing to the accumulation of sand, the level of the ground all round the fortress is six or seven feet above the level inside. It was probably from this doorway that the road led to the bridge of boats made by the Romans across the Nile to connect Memphis and Misr, or Babylonia, as it was called then. There are several stories told to explain why this fortress and the town round it were called Babylonia, but none are very satisfactory. The name, however, seems to have survived long after the Romans, or rather Byzantines, were expelled, and we often find in mediæval romances the title "Sultan of Babylon" used to mean the Moslem Emir of Egypt. Within this large and strongly fortified enclosure is the principal group of Coptic churches in Old Cairo—as well as a small town of houses of Coptic families—chiefly, but not all, those of the priests and other ministers of the churches.

J. HENRY MIDDLETON.

(To be continued.)

NOTES ON ART AND ARCHAEOLOGY.

MR. HUBERT HERKOMER will leave England next month on a visit to the United States of some months. He purposes to deliver a course of lectures in New York, and also to exhibit a collection of his works in the many forms of art which he has attempted. We believe that Mr. Herkomer was once before in America, when quite a child.

MR. SEYMOUR HADEN also intends to visit America this winter, and give lectures on etching.

MR. SUTTON PALMER, whose sketches and drawings in water-colour of Yorkshire scenery made such a pleasant exhibition last winter, has been devoting himself to Surrey since April last. His year's harvest will be shown at Messrs. Dowdeswells', in New Bond Street, in December. The drawings will include Dorking and its neighbourhood, Boxhill, and Bletchworth Park on the Mole; Reigate; Farnham, with views on the Wey at Elstead and Tilford; scenes at Richmond, Ripley, and Haslemere; and Hind Head, Leith Hill, Cooper's Hill, and Guildford.

MR. BIRKET FOSTER is engaged in making a series of drawings of the cathedrals of England and Wales. These will also, we believe, be exhibited at Messrs. Dowdeswells', but not till the spring.

M. MASPERO left Paris on Tuesday last, the 26th inst., for Egypt.

WE hear that Gen. Cunningham has recently found, in the course of his excavations near Mathura (Muttra), a statue which is more manifestly the product of pure Greek art than any which has hitherto been discovered in India. This statue represents Hercules with the lion-skin. It may be remembered that two sculptures, evidently showing Greek influence, and supposed to represent Silenus, were found years ago in the same neighbourhood.

THE new museum at Dorchester approaches completion. It is a perpendicular building in the main street, with a large room for the school of art in rear. We hear that a model is to be made for it of the earth-work in

the neighbourhood of the town, Maiden Castle, which is said to be the most remarkable of its kind in England, with its four series of high ramparts and deep trenches, its *têtes-du-pont* and *mamelons*. It is some twenty acres in extent, and is attributed by local antiquaries to the prehistoric inhabitants of this island, no traces of Celt, Saxon, or Dane having been found in it. The Romans left outside their city only the amphitheatre and the camp at Poundbury, both close to the town.

MESSRS. TRÜBNER AND Co. will publish this autumn Dr. James Burgess's *Report on the Buddhist Cave Temples and their Inscriptions*. It will be in two volumes quarto.

MESSRS. W. H. ALLEN AND Co. will publish immediately a *History of London Goldsmiths and Plate-workers*, by Mr. William Chaffers, uniform with the same author's *Hall-Marks on Plate*. It will contain more than 2,000 illustrations, consisting of plate-marks copied in facsimile from celebrated examples and the earliest records preserved at Goldsmiths' Hall.

A SECOND edition of Mr. J. Villiers Stuart's last book, *The Funeral Tent of an Egyptian Queen*, is in preparation.

THE Rev. Francis St. John Thackeray, one of the masters at Eton, has published (*Virtue*) a little *Guide* to the collection of Roman coins in the Boys' Library at Eton College which is a model of what such a work should be. Taken together with his account of *Eton College Library* (*ACADEMY*, December 17, 1881), an example is given of that best sort of education which comes from actual contact with the objects of learning. Add a few MSS. and a few casts, and the series would be complete. Most classical scholars, even at Oxford and Cambridge, would be the better for this sort of knowledge. The coins, we may add, were purchased as duplicates from the British Museum a few years ago by Dr. Hornby and some of the assistant-masters.

PROF. CARL WORMMANN, of Düsseldorf, has been appointed to the office of Director of the Dresden Gallery.

THE remains of the painter David, who was buried in 1826 at Brussels, in the old cemetery, have recently been transferred to the new cemetery. At one time there was a talk of moving them to Paris.

AN interesting account of the influence exerted upon Dutch architecture by the revival of classic art is afforded by Herr Georg Galland in his *Renaissance in Holland* (Berlin: Carl Duncker).

THE Académie royale de Belgique has published in the forty-first volume of its "*Mémoires couronnés*" a paper by M. Edgar Baes upon the influence of the brotherhoods of Saint Luke upon Flemish painting.

THE *Magazine of Art* for October is full of various and interesting matter. Miss Julia Cartwright writes very pleasantly of Orvieto; and Miss Jane Harrison commences what promises to be an interesting series of articles on Greek myths in Greek art. The American artist Mr. Eastman Johnson forms the subject of an article by Mr. Benjamin; and an interesting experience of studio life in Paris is given by Mr. Barclay Day. A fair rendering in black and white of Millet's impressive "*Bergère gardant son Troupeau*" is the full-page illustration.

THE winter exhibition of water-colour drawings and etchings annually held by Messrs. Gladwell Bros., at the City of London Fine Art Gallery, is announced to be opened at the end of November. The receiving days are November 20 and 21.

HURST & BLACKETT'S NEW WORKS.

THE FRIENDSHIPS of MARY

RUSSELL MITFORD: as Recorded in Letters from her Literary Correspondents. Edited by the Rev. A. G. L'ESTRANGE, Editor of the "Life of Mary Russell Mitford," and Author of the "Life of the Rev. W. Harnes," &c. 2 vols., 21s.
"Whoever reads my letters—that is, the letters written to me—will find them interesting."—M. R. M.

COURT LIFE BELOW STAIRS:

or, London Under the First Georges, 1714–1760. By J. FITZGERALD MOLLOY. 2 vols., 21s.

PLAIN SPEAKING. By the

AUTHOR of "JOHN HALIFAX, GENTLEMAN." 1 vol., 10s. 6d.
"We recommend 'Plain Speaking' to all who like amusing, wholesome, and instructive reading."—*St. James's Gazette*.

THE NEW NOVELS

AT ALL LIBRARIES.

THE BRANDRETHS. By the

Right Hon. A. J. B. BRESFORD-HOPE, M.P., Author of "Strictly Tied Up." 3 vols.
"In 'The Brandreths' we have a sequel to Mr. Bressford-Hope's clever novel of 'Strictly Tied Up,' and we may add that it is a decided improvement on his maiden effort. He has not only laid a firmer grasp on some of those characters which, in his earlier work, were rather wanting in outline and individuality; but he has secured the interest of his readers by simplifying his story. 'The Brandreths,' although it abounds in the study of personal character, investigating the innermost life, and analysing the feelings of the heart, is nevertheless in great measure a political novel. Mr. Hope writes of political life and the vicissitudes of parties with the knowledge and experience of a veteran politician. Not a few of the casual pictures of society are exceedingly faithful and lively. We repeat, in conclusion, that the novel is one which will repay careful reading."—*Times*, September 26.

GABRIELLE de BOURDAINE. By

Mrs. JOHN KENT SPENDER, Author of "Godwyn's Ordeal," "Both in the Wrong," &c. 3 vols.
"Gabrielle de Bourdain" is a pleasant story in its quiet and simple way. It is readable and attractive. "Athens." "This novel is deeply interesting. There are many passages which would make the reputation of a novelist. Gabrielle is drawn with a powerful pen, and is a delightful study."—*Scotsman*.

NEW BABYLON. By Paul Meritt

and W. HOWEL POOLE. 3 vols.
"This story is clever and amusing. Vivid and graphic scenes follow in unbroken succession."—*Daily Telegraph*.
"New Babylon" will attract attention at the libraries, where an exciting story is always welcome. The tale hurries along from one stirring incident to another, and compels the reader to admire the inventive power of the writers and their ingenuity in weaving a complicated series of incidents."—*Era*.

SAINT and SIBYL. By C. L.

PIRKIS, Author of "A Very Opal," "Wanted, an Heir," &c. 3 vols.
"In 'Saint and Sibyl' there are some excellent pieces of writing, some touches of poetical art, some highly dramatic scenes, some pretty and pathetic pictures."—*St. James's Gazette*.

THE MERCHANT PRINCE. By

JOHN BERRICK HAWWOOD, Author of "Lady Flavia," "The Tenth Earl," &c. 3 vols.
"This story is pleasantly told."—*Athenaeum*.

RED RYVINGTON. By William

WESTALL, Author of "Larry Lobengrin," &c. 3 vols.

BOOKS FOR THE COUNTRY.

Each Work complete in 1 vol., price 5s. (any of which can be had separately), elegantly printed and bound, and illustrated by
Sir J. GILBERT, MILLAIS, HUNT, LEBCH, POYNTER, FOSTER, TENNIEL, SANDYS, E. HUGHES, RAMBOURN, &c.

TRAVELS in SOUTH KENSINGTON.

With Notes on Decorative Art and Architecture in England. By MONCREUR DANIEL CONWAY, Author of "The Sacred Anthology," &c. 8vo, Royal 8vo, cloth, illustrated, 10s. 6d.

CONTESTED ETYMOLOGIES in the DICTIONARY of the

Rev. W. W. SKEAT. By HENSLEIGH WEDGWOOD. Crown 8vo, cloth, 5s.

ATTEMPTS at TRUTH.

By St. George Stock. Crown 8vo, cloth.

JUVENALIS SATIRAE.

With a Literal English Prose Translation and Notes. By J. D. LEWIS, M.A., Trin. Coll., Camb. Second Revised and considerably Enlarged Edition. 2 vols., post 8vo, cloth.

A COMPREHENSIVE PHRASEOLOGICAL ENGLISH— ANCIENT and MODERN GREEK LEXICON.

Founded upon a Manuscript of G. P. LASCARIDES, Esq., and Compiled by L. MYRIANTHEUS, Ph.D. 2 vols., fcap. 8vo, cloth, 20s.

SCENES from THE PILGRIM'S PROGRESS.

By R. B. Rutter. Fcap. 4to, half-bound, 5s.

THE BHAGAVAD-GITA; Or, the Sacred Lay.

A Sanskrit Philosophical Poem. Translated, with Introduction and Notes, by JOHN DAVIES, M.A. (Cantab.). Post 8vo, cloth, 8s. 6d.

THE PHILOSOPHY of the UPANISHADS and ANCIENT INDIAN METAPHYSICS.

As exhibited in a Series of Articles contributed to the "Calcutta Review," by ARCHIBALD EDWARD GOUGH, M.A., Lincoln College, Oxford; Principal of the Calcutta Madrasah. Post 8vo, cloth, 8s.

LAND NATIONALISATION: Its Necessity and its Aims.

Being a Comparison of the System of Landlord and Tenant with that of Occupying Ownership in their influence on the well-being of the People. By A. R. WALLACE, Author of "The Malay Archipelago," &c. Second Edition. Crown 8vo, cloth, 5s.

AN INDEX to PERIODICAL LITERATURE.

By W. F. POOLE, LL.D., Librarian of the Chicago Public Library. Third Edition, brought down to January, 1882. Royal 8vo, cloth.

TRÜBNER'S SERIES OF SIMPLIFIED GRAMMARS of the PRINCIPAL ASIATIC and EUROPEAN LANGUAGES.

Edited by E. H. PALMER, M.A., Lord Almoner's Professor of Arabic in the University of Cambridge, and Examiner in Hindustani to H.M. Civil Service Commission.

I. HINDUSTANI, PERSIAN, and ARABIC.

By the EDITOR. Crown 8vo, cloth, 5s.

II. HUNGARIAN.

By IGNATIUS SINGER, of Buda Pesth. Crown 8vo, cloth, 5s.

LONDON: TRÜBNER & CO., LUDGATE HILL.

This day is published.—The Third Edition.

THE REVOLT of MAN. By Walter BESANT. New and Cheaper Edition. Crown 8vo, 3s. 6d.

"The author of the satirical romance before us has achieved a very remarkable success. . . . The book, as a whole, ought to be read by everybody who has the wit to appreciate it, with a great deal of pleasure and amusement."—*Saturday Review*.

This day is published, a New and Cheaper Edition.

TRASEADEN HALL. "When George the Third was King." By Major-General W. G. HAMLEY, Author of "Guilty or Not Guilty," "The House of Lys." Second Edition. In 1 vol., crown 8vo, 6s.

"An admirable novel. There is spirit in the style and culture in the matter; the themes are as fresh as the thoughts are bright. . . . We may repeat that we have rarely met with a book by a veteran writer so full of freshness and unflagging animation."—*Saturday Review*.
"Traseaden Hall" is in all respects an admirable novel—it is animated and humorous, soldierly and scholarly."—*Times*.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

Helen of Troy. By A. Lang. (George Bell & Sons.)

MR. LANG is a poetical craftsman of such merit that it is almost superfluous to say of any work by him that it is marked by a delicate sense of metre, and by classical scholarship widened and fortified by comprehensive knowledge of other literature. The present writer must frankly avow himself disappointed with *Helen of Troy*; yet he does so with a full sense that there may well be in the poem what he has failed to find there—fire as well as grace, and originality as well as technical skill. And to have expected overmuch is apt, no doubt, to make one discontented even with so fair a gift as *Helen of Troy*.

The poem consists of six books, containing the history of the Trojan War, from the first arrival of Paris as a wandering guest at the Court of Lacedaemon to the return of the Greeks after the sack of Troy, the peaceful re-establishment of Helen as Menelaus' Queen, and their final translation to the Fortunate Islands—the realm of "Rhodamantus of the golden hair." The poem thus challenges reference not only to Homer and Virgil, but to Landor, Mr. Tennyson, and Mr. Morris. All these poets have been laid under contribution, as far as matter is concerned: the manner, I am constrained to say, is almost exclusively that of Mr. Morris.

How close the parallelism of style and expression is may be shown by one example, culled almost at random; in which, however, the slight difference of metre cannot obscure the intrinsic likeness. Thus sings Mr. Morris in "The Hill of Venus":—

"Then from his eyes his hands fell, and e'en so
The blissful knowledge on his soul did grow
That she was there, her speech as his speech,
stilled
By very love, with love of him fulfilled.
"O close, O close there, in the hill's grey shade,
She stood before him, with her wondrous eyes
Fixed full on his! all thought in him did fade
Into the bliss that knoweth not surprise,
Into the life that hath no memories,
No hope and fear; the life of all desires,
Whose fear is death, whose hope consuming fire."

And thus Mr. Lang, when, after her death-like trance, Helen meets Paris in the garden by Eurotas' stream, ere they flee together to Cranae and to Troy:—

"Then either looked on other with amaze
As each had seen a god; for no long while
They marvelled, but as in the first of days,
The first of men and maids did meet and smile,
And Aphrodite did their hearts beguile,
So hands met hands, lips lips, with no word said
Were they enchanted 'neath that leafy ale,
And silently were woo'd, betroth'd, and wed."

"Ah! slowly did their silence wake to words
That scarce had more of meaning than the song
Pour'd forth of the innumerable birds
That fill the palace-gardens all day long;
So innocent, so ignorant of wrong
Was she, so happy each in other's eyes,
Thus wrought the mighty goddess that is strong,
Even to make nought the wisdom of the wise."

The resemblance is palpable, independently of the pleasant confession lately published by Mr. Lang in the *Contemporary Review*, of his abiding preference for the "Earthly Paradise" and "Jason" as opposed to "Sigurd."

But Homer and Mr. Morris—both rhapsodists—are rhapsodists "with a difference." One may feel nothing but admiration for the latter, and yet think that Homer's subjects lose by being treated in the Morrisian manner. It is, I own, with some surprise, as recognising more of

"The surge and thunder of the Odyssey"

in the prose version of Mr. Lang and his coadjutor than in any other that has ever been written, that I find so little of the Homeric directness, and so little of what Mr. Arnold taught us to call "the grand style," in Mr. Lang's verse. Here and there a touch of it may be found, as in Oenone's last words over the pyre of Corythus, and in the description of the arrival of the Grecian armament:—

"But oh, ye foolish people, deaf and blind,
What death is coming on you from the sea?
Then all men turned, and lo, upon the lee
Of Tenedos, beneath the driving rain,
The countless Argive ships were racing free,
The wind and oarsmen speeding them amain."

"Then, from the barrow and the burial,
Back like a bursting torrent all men fled
Back to the city and the sacred wall.
But Paris stood, and lifted not his head.
Alone he stood, and brooded o'er the dead,
As broods a lion, when a shaft hath flown
And through the strong heart of his mate hath sped,
Then will he face the hunters all alone."

But scarcely anywhere else in the poem is the directness and rapidity of the Homeric narrative preserved. It may be replied that this is to force a comparison not challenged by the writer. But, in truth, no one can disconnect the name of Mr. Lang from Homeric scholarship; and Homeric, in the sense of abounding in Homeric ideas and phrases, *Helen of Troy* assuredly is. All the more is it to be regretted that the influence of a modern singer has been so potent with Mr. Lang in the matter of style that his book reads like the completion of a small epic, of which Mr. Morris' "Death of Paris" formed one book. That would be high praise; and yet, with his power and his materials, I cannot but think Mr. Lang might have aimed higher still. His models would have been, no doubt, of a more un-reached excellence; but, from this very fact, his own performance would have attained what it lacks—a measure of sublimity and fire. The grace of wistful pathos, indeed, it exhibits in many passages. Witness the following, on the death of Paris (p. 138):—

"But Paris spake to Helen: 'Long ago,
Dear, we were glad, who never more shall be
Together, where the west winds fainter blow
Round that Elysian island of the sea,
Where Zeus from evil days shall set thee free.
Nay, kiss me once, it is a weary while,
Ten weary years since thou hast smiled on me,
But, Helen, say good-bye with thine old smile!'"

But, amid this delicate *explanation* of sadness, one sighs for something like, or even faintly recalling, the wail of Thetis in anticipation of Achilles' doom:—

"ὦ μοι ἐγὼ δαίλῃ, ὦ μοι δυσσαστοτόκεια,
τὸν δ' οὐχ ὑποδέξομαι αἰδὼς
οἴκαδε νοστήσαντα, δόμον Πηληϊίδων εἶσω"—

or the doom of Kebriones or that of Achilles, summed up in two words, when each lay out at length—*λαλασμένους ἱπποσυνάντων*.

Mr. Lang, in the article mentioned above, has set the example of recalling the effect of contemporary tentative productions upon the mind of undergraduate Oxford. He will, perhaps, permit me to say that the perusal of *Helen of Troy* has quickened in me a regret I have always felt that "The Shade of Helen," added to the "Ballads and Lyrics of Old France," should remain a fragment only. The dreamy myth, in which the real Helen sojourned in Egypt, while Greek and Trojan fought at Troy for a shadow and a phantom of her, seems to me now, as it did then, one admirably suited to the tone of Mr. Lang's fancy. Nothing in *Helen of Troy* has quite the picturesqueness of "The Shade of Helen":—

"another life seems mine,

Where one great river runs unswollen of rain,
By pyramids of unremembered kings,
And homes of men obedient to the dead.
There dark and quiet faces come and go
Around me, then again the shriek of arms
And all the turmoil of the Ilian men."

However, it is idle to complain of any writer that he has given over, or as yet withheld from us, a design of which the early sketch pleased us well. We must "know to wait." *Helen of Troy* is more calculated to please those who wish to know Greek legends in a modern form than those who wish to be reminded of the originals.

The long "Note" on the character and history of Helen as conceived by the Greek mind at different periods, which closes the volume, is extremely lucid and pleasant reading. I almost wonder that in relating (p. 190) the tale from Pausanias—how Achilles' spirit dwells in the Island of Leuke in the Euxine—Mr. Lang has not reminded us that it forms the subject of a most graceful little poem in *The Lost Tales of Miletus*, one of the few of the first Lord Lytton's many verse-writings that reaches to be poetry. The superiority of Homer to Virgil in point of chivalrous feeling is well pointed out (p. 180). Truth to say, it is hard to forgive Virgil wholly for his admiration for his own hero. To excuse Aeneas is possible; to idealise him should have been impossible when once Dido's death-pyre had shone over the Carthaginian sea.

E. D. A. MORSEHEAD.

The Burman: his Life and Notions. By Shway Yoe. In 2 vols. (Macmillan.)

THE most populous portion of Burma has been British territory for about thirty years. During that time many books relating to the country, both British and independent, have been published; while official reports and an excellent gazetteer have supplied information on all points which directly concern Government administration. These publications have treated of the geography, the history,

the religion, and the ethnology of the Burmese people; and the wars with the British Government of India have been fully narrated. The late Capt. Forbes, in an interesting volume, gave a few chapters on the social life and amusements of the people in the British province; but much remained to be done for the information of foreigners in those particulars. The author of the work now to be noticed, who, though bearing a Burmese pseudonym, is evidently an Englishman, has, under a simple title, included the whole "life and notions" of a Burman, from his cradle to his coffin. The work is the result of observation, during several years, at Mandalay and other parts of independent Burma, as well as in the British province. Burmans have no concealments, but admit to their confidence without reserve those whom they feel to be friendly; and Shway Yoe's task may be accepted as affording the most complete interior view of an interesting and ingenuous race that has yet been published.

Passing over the first few years of the young Burman as described by the author, his "school-days" are depicted in a chapter which opens up scenes new to a European reader. The schools of Burma are almost entirely monastic. The interior aspect of, and general silence in, the monasteries, with the grave ascetic demeanour of the Buddhist monks, encourages

"the foreigner in the belief that the monastery and the discipline must crush all life and light-heartedness out of the young scholars. Nothing, however, can be farther from the actual fact. No Estonian, no old Rugbeian, can look back with greater delight on triumphs on the river or in the football-field than the grown-up Burman does on his early days at the Pohngyee Kyong."

The "casual foreign observer," continues the author, "declares that monastery schools are hopelessly badly conducted, and without the semblance of discipline." But not to mention the teaching of the moral law, "which need fear comparison with none on earth," they do give a fair amount of elementary instruction to nearly all the male population. The great majority of the scholars, after a few years as lay students, and a brief period as "novices" or "probationers," leave the monasteries for ever. The few who feel the power of the vocation make profession, receive a monastic name—a solemnity termed by the author "Buddhist baptism"—and in due time are ordained. The life and discipline in the monastery are graphically described; and a chapter is given to the two parties in the Buddhist "church" of Burma, who may be roughly classed as "High" and "Puritan." After relating the legends concerning the most famous pagodas, which are all within British territory, and contending that Burmese Buddhists, in spite of appearances and assertions of foreigners, are not idolaters, the author goes on to notice the regular worship days observed, the period of Lent, and the "spirit" or "fairy" worship so common among the lower classes—being, in fact, the survival of pre-Buddhistic observances—and then proceeds to describe the industries and handicrafts which exist among the Burmese. The leading occupation is cultivation of the one great cereal—rice. So much

is this work revered that it is performed by the King in an annual State ceremony. Like his great elder brother "the Son of Heaven," the monarch of Burma once a year, attended by his whole Court, ploughs a furrow. The author describes this interesting ceremony not without a glance at the ridiculous figure cut by the attending Ministers in their efforts to show their proficiency before their master. The many feasts and festivals of the Burmese—their drama, music, dancing, boat-racing, and other public amusements—are set forth in separate chapters. Of play-acting, the author remarks "there is no nation on the face of the earth so fond of theatrical representations as the Burmese," and a lively account is given of these popular entertainments, which are always held in the open air. The new year's feast, universally observed in all parts of the country by pouring water over friends and acquaintances (originating probably from the idea of purification at the beginning of the year) is described in the different methods as practised—water offered reverently to Buddhist monks; poured devoutly over holy images; respectfully over high dignitaries; and for fun and frolic mutually between young people. These chapters afford a charming picture of the gaiety and good humour so characteristic of the Burmese people. It may be remarked that though the people of the delta of the Irawadi belong for the most part to a separate branch of the stock from which the inhabitants of the upper country also sprang, yet in character and disposition the two peoples are now essentially homogeneous. Last of all, as is fitting, two chapters are devoted to funeral rites. The funeral of a Buddhist monk is a scene of rejoicing, because he is supposed, as a reward for his holy life on earth, to be at once translated to the celestial mansions, there to dwell for long ages, as with a spiritualised body, in a state of refined enjoyment. The funeral of a layman is, as elsewhere, a ceremony of mourning. The relatives of the deceased show their regard to his memory by spending large sums in feeding their neighbours, in alms and offerings, and in expensive display generally. The ceremonies in both cases are faithfully described by the author.

Throughout his work Shway Yoe shows a generous admiration of the Burmese people, and a vivid appreciation of their many good qualities. But, in the chapters which treat of the Burmese Court, there appears a regrettable bias against the higher classes at the capital of independent Burma. The insolent treatment of the earlier envoys from British India is justly denounced, but, as connected with existing circumstances, is as apposite as it would be to bring up at the present time the murder of Capt. Cook against the Hawaiians, or the tortures inflicted at Amboyna against the Dutch. In vol. ii., p. 158, it is stated:

"All [envoys], down to Sir Douglas Forsyth in 1874, have had to go in shoeless, and crouch humbly, in adoring attitudes, the unaccustomed nature of which did not tend to render the position less ridiculous. In other ways they were treated with every indignity."

The making a grievance about "going in [to the palace] shoeless" is quite unworthy of one who knows the customs and feelings of Bur-

mese in all ranks of life. The rest of the statement is erroneous. During the time of Col. Burney, who was Resident more than half-a-century ago, and since his day, no British envoy has been required to "crouch humbly in adoring attitudes." He has been expected to sit on a carpet or mat when in the King's presence, sitting being the position of respect, as standing is in Europe. But he might, and always did as far as I know, sit without "crouching;" and there never was any requirement as to an "adoring attitude." The position was inconvenient, but nothing more. The statement that "the members of the embassy of 1856 were nearly bullied into taking off their hats to the pyathat" (spire of the palace) is an exaggeration of a petty incident the mention of which by the author evinces a disposition to accumulate instances to support a view without due regard to accuracy.

Excepting these sentences, and a few more of minor importance in which similar prejudices crop out, *The Burman: his Life and Notions*, may be accepted as the best book on the character and manners of the Burmese since the *Description of the Burmese Empire*, by Father San Germano, which appeared in an English translation half-a-century ago.

ARTHUR P. PHAYRE.

The Training of Teachers, and other Educational Papers. By S. S. Laurie. (Kegan Paul, Trench & Co.)

MANY of those who see the title of this book and the name of its author will form expectations which, we fear, are doomed to disappointment. Mr. Laurie has now been for several years the Professor of Education in Edinburgh, and was honourably known, long before, in connexion with some of the best movements for promoting education in Scotland. A volume from him, containing even a single course of systematic lectures, developing his well-known views on methods of teaching, or on the history or philosophy of education, would have been cordially welcomed by a large and increasing class of readers. The present work, however, does not correspond to such a description. It contains, it is true, the inaugural address delivered on the foundation of the professorship; but, otherwise, it is made up of miscellaneous papers, and reprints of review articles which have been written at different times, and are of very unequal value. Besides the inaugural address, a discussion on the claims of Latin as a subject of instruction, and a careful monograph on Montaigne, all of which have permanent interest, the book consists of articles on the Education Code, on the management of the Dick bequest, on a debate in the House of Lords referring to the Fourth Schedule of Additional Subjects, and on other phases of educational politics, which are of ephemeral importance, and have already lost much of their significance. The title of the book, therefore—*The Training of Teachers*—is a misnomer, and gives no indication of its real character and contents. The essays have undoubted weight, and are especially calculated to interest Scottish readers. But for the ripe fruit of the somewhat bold experiment tried by Dr. Bell's trustees, when

they established in the Universities of Edinburgh and St. Andrews permanent chairs of didactics or pedagogy, the public must, it seems, be content to wait some time longer.

In the introductory address, Prof. Laurie vindicates elaborately the claims of his own special subject to form part of a university course, and incidentally expresses his conviction that the system of preparing teachers in special professional training colleges is narrowing and inadequate. Throughout the volume there runs the contention that Government ought to recognise the academically trained man, who, in addition to a university degree, has also attended the professorial lectures on education, as a more valuable instrument than the mere student in a training college, who, after pupil-teachership, qualifies himself to obtain a schoolmaster's certificate. It may be admitted that there is much truth in this view. All true professional training presupposes a liberal education; and so much of that education as is not professional is best obtained in a free intellectual atmosphere, and among companions who do not all intend to follow the same calling. Scotland especially needs, even among her elementary schoolmasters, a considerable number of men competent to prepare scholars for the universities, and able to maintain, as of yore, the connexion between the lower and the higher studies. But, in comparing the two methods of providing technical training for the future schoolmaster, it must not be forgotten that the Normal college proper has a practising school, and systematic arrangements for actual drill in the art of teaching under supervision. For the rank and file of elementary teachers, this is precisely the most effective part of their preparatory course; and it is this which, in the nature of things, the arrangements of a university do not supply, however wisely the scheme of lectures on the theory and history of education may be devised. This book, in fact, throws little light on that part of the "training of the teacher" which does not consist in acquiring knowledge, nor in learning what has been done and thought by others about education, but which brings the aspirant into actual contact with the minds of scholars and with the difficulties of school organisation and management, and shows him, by example, how those difficulties are to be overcome. Prof. Laurie's view on this point is summed up in the sentence:—

"The instruction of the Normal school in methods is good in its place and way, but all empirical methodology, while failing to elevate the teacher, binds him down and makes him a pedant. Philosophical methodology, on the other hand, especially if enriched with the history of education, gives him the freedom and liberty of the spirit."

If this be so, and the sort of "clinical" lectures, model lessons, and practical instruction in method which training colleges give, form, after all, only a barren empiricism, it is all the more necessary that the philosophic methodology which is to supersede it should be forthwith supplied in order that it may be universally adopted. It can hardly be said, however, that any attempt to supply it is made in this volume.

But enough of that easiest yet most irritating of all forms of criticism which points out what has not been said, or what might have been said, by an author who has formed a different conception of his own work from that which the critic would have formed for him, and who probably had good reasons for not wishing his book to be other than it is. It is more to the purpose to say that the book has positive merits, and contains much material of great value to the student of the history and theory of teaching. The author contends with freshness and force for the inclusion of systematic professional study in the university course, and as a necessary part of the equipment of those who intend to devote their lives to teaching. A paper on the "Philosophy of Education in its Relation to the School and the Teacher" gives a thoughtful and careful *résumé* of the work done by Ratich, by Sturm, and by Comenius towards the evolution of such a philosophy, besides a discussion of the value of Locke's and Mr. Herbert Spencer's more recent contributions to the same result. Prof. Laurie's remarks on the inadequacy of the conception formed by the latter writer of what is needed for the *discipline* of the intellect, as distinguished from the mere order and material of instruction, will commend themselves to the judgment even of those who are conscious of the greatest obligations to Mr. Spencer's wise and suggestive book.

The chapter on Montaigne contains the fullest and most interesting account of that writer and his works which has yet appeared in English, and may be fitly read in connexion with Mr. Oscar Browning's shorter but very valuable study of Montaigne in his well-known volume on *Educational Theories*. Both of them show clearly how much Locke owed to this writer, and trace in him the germs of many of the most fruitful of modern methods and theories. "Montaigne's public school," says Prof. Laurie,

"if he had to construct one in these days, would certainly be somewhat after the fashion of a German Real school; and, so far, he is rightly named a realist. But the leading purpose of all his instruction would essentially be ethical and humanistic. The only respect in which his curriculum would be realistic in the utilitarian meaning would be in the subordinate place assigned to Latin and Greek. So far is he from being a realist in the modern sense that he may be rather set down as an enemy of mere knowledge or information. 'The cares and expense our parents are at in our education point at nothing save to fill our heads with knowledge,' he says, 'but not a word of judgment or virtue. We toil and labour to stuff the memory, and in the meantime leave the conscience and the understanding unfurnished, void.'"

To the polemical part of the book, that which deals with recent legislation, and with discussions respecting the influence of codes and departmental regulations upon the primary education of Scotland, it would be very easy, if space allowed, to take many exceptions, notwithstanding one's very hearty recognition of the general good sense and practical usefulness of Prof. Laurie's suggestions. It is, for example, not a little surprising to find a man of his experience boldly advising that, in administering the parliamentary grant to schools, "individual examination must cease, and the inspectors must go right for the

intelligence and life of each class"—forgetting, apparently, that both forms of test are necessary; that individual examination is, after all, the best safeguard yet devised both against slovenly teaching and slovenly inspection; and that it is quite possible, by wise arrangements, to secure all that is valuable in the inspection of the method and the spirit of a school without parting with this safeguard. It is also remarkable that, while holding "that the leading subject of all discipline and of all culture is our own tongue, the centre round which all true education of the intelligence turns," he yet appears to think that, even in the case of boys who leave school at fourteen, such discipline and culture are only to be had through the medium of Latin; and pours scorn upon "detailed analysis of sentences and the dreary pedantry of school grammars of our native tongue." A fuller knowledge of the best primary schools would, we believe, bring Prof. Laurie to two very different conclusions on this vital point—(1) That, in a school course which is to end at fourteen, the elementary knowledge of Latin cannot be carried far enough to serve any really disciplinary or humanising purpose, but is apt to end in a very sterile form of mere mnemonics; and (2) that exercises in the grammar and composition of the vernacular tongue, if wisely given and connected *au fond* with enquiries into the meaning and formation of words, may furnish in an elementary school a very good intellectual equivalent for the French or Latin of a higher course. These are examples of the yet unsolved problems connected with national education on which even the most enlightened theorists are not yet agreed, and on which further discussion is still needed. But every additional volume added to the schoolmaster's library, impressed, as this book is, with the philosophic spirit, and characterised by fairness, by careful research, and extensive knowledge of the subject, will help much to remove practical difficulties and to make the road to future improvement easier to see and safer to walk in.

J. G. FITCH.

A Register of the Scholars admitted into Merchant Taylors' School. Vol. I. 1562-1699. By C. J. Robinson. (Lewes: Farncombe.)

THIS *Register of Merchant Taylors' School* deserves to meet with a cordial welcome. The scientific study of family history has created a demand for registers of all kinds in an accessible and handy shape, and to these Mr. Robinson's handsome volumes will form a notable addition. Though the admissions to the colleges of the two great universities, which it may be hoped will now soon see the light, would possess a peculiar value, yet it is probable that the registers of the historic Companies would prove of more general interest, and would afford a fund of original and authentic information on the rise of our later aristocracy. The singular mixture of classes which of old characterised these companies is well illustrated by the admission entries "interned" in Mr. Arber's vast volumes. Even in that comparatively aristocratic age the race for wealth was a mighty leveller, and

squire and peasant jostled one another in their eagerness to secure for their sons an opening, through the livery, to fortune. It would be a worthy undertaking, and congenial, one would think, to the conscript fathers of the City, if some of the surplus wealth of these ancient corporations were expended in printing their unique memorials, or at least in judiciously affording such facilities and "encouragement" for the task as the Company of Merchant Taylors have here provided. The record before us, it is true, cannot compete with such registers, and is rather in need of illustration from the admission books of the Company than capable of supplementing their entries. The labour which this illustration must have cost the editor will be realised, we fear, by few. Yet it is hardly fair to appraise from a purely genealogical standpoint a work primarily intended for old members of the school, and not for genealogical students. From this point of view no exception must be taken to the long strings of obscure names, of which less than a quarter are annotated, and with which Mr. Robinson has been obliged to content himself, till we come to the most interesting portion by far of the present volume—the register kept by Mr. Dugard during the seventeen years of his mastership.

Of this remarkable man Mr. Robinson tells us but little. A grammarian of some eminence, and a typical pedant of his age, he was a zealous and, in practice, a most successful teacher, while the strength of his convictions was quaintly tempered by an amiable weakness for displaying on every conceivable occasion his pseudo-classical erudition. We find him at Colchester, in 1641, inscribing in his school-book, in Latin elegiacs, a long "epicedion" on his wife's death; but the "viduus maestissimus" (as he described himself) must have been consoled ere long with another mate, for we find, from an entry in Mr. Robinson's pages, that, when deprived of his mastership and thrown into Newgate—"ab Archididascalatûs officio summotus et in carcerem Novae-Portae coniectus," as the worthy man expresses it—he has nothing left "unde victum quæram Uxor et sex liberis." We learn from the *Liber Scholæ Colcestriensis*, unfortunately still in MS., that he rapidly raised the roll of that school from ten to seventy; and, when we are introduced to him by Mr. Robinson in 1644, we find Merchant Taylors' kept always full by his reputation. It is, however, for his admirable registers that he deserves to be had in remembrance. In his "small, square, precise, and exquisite" handwriting (to quote the words of his worthy successor at Colchester), he entered, at every admission,

"non solum nomina sed et insuper parentum titulos et vitæ conditionem, comitatum et locum quo nati sunt, ætatem qua vixerunt, tempus quo admissi sunt" (*L. S. O.*).

"This document," as Mr. Robinson truly observes, "is simply invaluable to the genealogist," from its faithful record of the parents' status—a fact not to be determined from parish registers, save in such exceptional cases as the Gray's Inn marriages, lately published in Mr. Foster's *Collectanea*. It is to be hoped that the remaining portions of the Sion College MS., together with Mr. Dugard's

entries at Stamford and Colchester, may eventually appear in print.

Dugard appears to have been followed to Merchant Taylors' by several of his former pupils. Among them was the son of John Wigmore, *tabellarius Colcestriensis*—"post-master of Colchester," as Mr. Robinson translates it. This Wigmore was the London carrier, and employed a large stud of pack-horses, which the besieged Royalists, a few years later, impounded as re-mounts for their cavalry (*King's Pamphlets*). The Dugardian vocabulary is also responsible for a *tripudiarus*, here rendered "dancing-master"—Milton would have made it "kick-shoe"—perhaps the last personage we should have expected to meet with just after the "die parricidio Regis Caroli infami," to quote the words of the indignant pedagogue.

The editor informs us that his annotations are "merely suggestive," and we must therefore not judge them too critically. Yet in dealing with the ancestors of well-known families—as, for instance, Gore and Sandys—we might reasonably have expected some care. Gerard Gore, alderman and merchant-taylor, was a well-known man, and is certainly believed to have had a third son, Gerard. But when Mr. Robinson identifies this son with a Gerard Gore born in 1594 (p. 50), and then makes him the father of Christopher Gore born in 1593 (p. 53), our ideas of chronology refuse to acquiesce. Moreover, we think that Christopher Gore is a better authority than the editor as to his own father-in-law. Again, "Gerrard Sandys, s. of Thomas, gent." was admitted in 1583, and Mr. Robinson asks, "Could the father have been the younger brother of Sir Edwin and Sir Miles Sandys? (*cf. ante*)." If so, he must have been married about the time that his elder brothers first went to school, for, on referring as requested, we find their admissions under the year 1571. Such annotations are indeed "suggestive," but not in the sense that Mr. Robinson intended. Thomas Sandys, the suggested father of the boy admitted in 1583, was himself not born, as a matter of fact, till December 3, 1568!

The principle of selection adopted by the editor was doubtless a matter of necessity, but in practice its application is always difficult, and apt to be somewhat haphazard. Why, for instance, with the Alingtons of Swinhope, should Marmaduke be identified (p. 311), and not Hildebrand (p. 335)? A protest is also needed against that *cacoethes emendandi*—as Dugard himself might have phrased it—with which our ablest historians are at times smitten. A case occurs to me from that scholarly work, *The Court and Itinerary of Henry II.*, in which Mr. Eyton, finding an Essex charter signed in Essex by an Essex notable, Humfrey de Barenton, suggests that for Barenton we should read Bohun, merely, it would seem, because no Barenton was known to him. Mr. Robinson's suggestions are equally unfortunate in such cases as "Auborne (*query* Avebury), co. Wilts" (p. 245), where Alborne is clearly meant, and "Yelding (*query* Ealing), co. Midd." (p. 235), where the locality is obviously Yelding (subsequently Yeading or Yedding), a hamlet in Hayes.

It is pleasant, however, to turn from such

criticisms, and to be able to praise the really admirable Index—of which the practical value is increased by the rejection of erratic orthography—and to add that the general get-up of the volume is of unusual excellence throughout.

J. H. ROUND.

FUNK'S EDITION OF THE FATHERS.

Opera Patrum Apostolicorum. Edidit Franciscus Funk. Vol. II. Clementis Rom. Epistolæ de Virginitate; Eiusdemque Martyrium; Epistolæ Pseudo-Ignatii; Ignatii Martyria tria, Vaticanum, a Simeone Metaphraste conscriptum, Latinum; Papiæ et Seniorum apud Irenæum Fragmenta; Polycarpi Vita. (Tübingen: Laupp.)

THE first instalment of this work has been already noticed in the *ACADEMY* of July 26, 1879. The second volume, now before us, is likewise based on extensive studies, full examination of the principal Greek and Latin MSS., and a sound criticism. Let me first refer to the documents concerning St. Ignatius, Bishop of Antioch. Unlike other Catholic and Protestant scholars, who have supposed the author of the interpolated epistles of St. Ignatius to have been an Arian, Prof. Funk proves that he was a member of the sect of Apollinaris. The new Greek text of these spurious letters brought out by Dr. Funk deserves all praise; three valuable codices were carefully collated in the Munich and Vatican libraries and at Constantinople, where Philotheus Bryennius, metropolitan of Nicomedia, was kind enough to examine once more, on behalf of our editor, the important codex of St. Clement's epistles which he edited in 1875. This is the only one that contains the complete text of the pseudo-Ignatian epistles. Of the latter, a Latin translation was made as early as the ninth century; it must needs be ascribed to this period, for it was already known to Ado of Vienna. Faber Stapulensis published in 1498 the *editio princeps*, afterwards adopted and corrected by Usher. A far better text has been established by Prof. Funk, who consulted, and largely used, an Oxford codex (C. 229, Baliol). In order to indicate what belongs to the genuine letters of Ignatius, and what is to be attributed to the interpolator, he has adopted italics for the Greek text, thus enabling the reader to form his own opinion. As to St. Clement's epistles on Virginity, Prof. Funk holds them to be spurious, and to have originated after the third century. I will not enter on a discussion with him, but only remark that many Catholic authors of great weight, as Prof. Beelen, of Louvain, defend the contrary opinion. But putting aside this intricate question, our editor must unquestionably be credited with the best text of St. Ignatius' "Martyrium." Hitherto, it has been mainly based on a Vatican Greek codex (866); whereas Prof. Funk, for the first time, employed the entire Oxford codex (Bodleian, 69). As the latter MS. affords by far the best recension, his new edition we have before us may justly be styled the most correct now existing. Last, but not least, let me urge on the reader's attention the "Vita Polycarpi," a document belonging to the beginning of the

fourth century, and as yet known only in a Latin translation procured by the Bollandists. Prof. Duchesne, of the Catholic university of Paris, published for the first time (1881) the Greek text, which was immediately inserted by Prof. Funk in his new edition of the venerable documents of the first ages of Christianity. Sound critical notes, a Latin translation of the Greek texts, and extensive Introduction (i.-lviii.) enhance the value of this work, which, together with the first volume of the genuine works of the apostolic fathers, may be safely and usefully consulted by all scholars of ecclesiastical history.

ALFONSUS BELLESHEIM.

NEW NOVELS.

All Sorts and Conditions of Men. By Walter Besant. In 3 vols. (Chatto & Windus.)

The Brandreths. By A. J. B. Beresford-Hope. In 3 vols. (Hurst & Blackett.)

Chums: a Tale of the Queen's Navy. In 3 vols. (Tinsley Bros.)

Fair Faces and True Hearts. By the Author of "Margaret Mortimer's Second Husband." In 3 vols. (White.)

The Flower of the Forest. By Charles Gibbon. (Chatto & Windus.)

José and Benjamin: a Tale of Jerusalem in the Time of the Herods. By Prof. F. Delitzsch. Translated by J. G. Smieton. (Hodder & Stoughton.)

A MELANCHOLY interest attaches to the first work upon our list from the fact that Mr. Walter Besant's name appears alone upon the title-page, unaccompanied by that of the fellow-worker with whom for so long he has been associated in artistic production. We have no knowledge of the precise nature and extent of Mr. Rice's co-operation with his friend in their joint labours; but, such as it was, the surviving partner in the literary firm valued it highly and generously, and acknowledges his sense of loss both by a dedication to Mr. Rice's memory and by a Preface in which he speaks of the unbroken accord of their ten years' association. Judging from internal evidence only, it would seem likely that Mr. Rice's share in the works which owned him as one of their two parents was, in the main, confined to suggestion and to the collection of materials; for both in conception of character and incident, and in the mere details of literary craftsmanship, it would require a critic of singularly keen vision to discern any appreciable difference between the present work and its numerous predecessors. It is, like them, eminently bright, readable, original, and charming—a book to be read with unalloyed pleasure, and to be closed with regret, the regret being, however, pleasantly tempered by that sense of satisfaction which is always given by work which is in every respect well done, which suggests no disparaging "ifs" and "buts," but which, from beginning to end, one would not have other than what it is. *All Sorts and Conditions of Men* may, like various other works from the same pen, be

described as a romance constructed from the materials of an ordinary novel. Mr. Besant, on his title-page, calls it "An Impossible Story" because some of his friends have so regarded it; but he declares that he has "never been able to understand why it is impossible," and this lack of understanding will be shared by all people who are not hopeless cynics. His charming heroine, Miss Angela Marsden Messenger, is an heiress with a fortune of more than a million of money, and the proprietor of a world-renowned brewery at the East End of London. Miss Messenger feels, with a keenness which is happily becoming less and less unusual, the responsibilities attaching to her wealth, and determines to go down and live among the people from whom it is so largely derived, with the hope of raising at least some of them to a higher level of thought and feeling. Assuming the rôle of a dress-maker, she establishes a co-operative dress-makers' association which would delight the heart of Mr. Ruskin; and the story tells of the people she met and the adventures she encountered in undertaking her novel experiment. As one of these people is a young gentleman who has taken to amateur cabinet-making for much the same reasons that have sent Miss Messenger to amateur dressmaking, the element which is indispensable to the modern novel is supplied; and the third volume ends after the manner of third volumes, but rather more impressively than is usual. Whether *All Sorts and Conditions of Men* be a possible or an impossible story, there cannot be any doubt that it is altogether refreshing and delightful.

The Brandreths is a sequel to its author's previous work, *Strictly Tied Up*; and it must be declared with all sadness that the second book is even duller than its predecessor, which seemed to realise a rounded ideal of dulness. A novel may have a score of sins, and yet have the virtue of readableness which covers them all; but *The Brandreths* is utterly unreadable, and for this sin no virtue can atone. Mr. Beresford-Hope might say, like Canning's needy knife-grinder, "Story, God bless you, I have none to tell, sir;" and the novel-reader, to whom a story is all but indispensable, is hardly likely to feel compensated for the lack of it by half-a-dozen shadowy and utterly uninteresting characters, by a number of dissertations upon social topics which suggest the very flattest articles in the *Saturday Review*, or even by various elaborate defences of orthodoxy in general and of the Athanasian Creed in particular. A political or semi-political novel is hardly likely to be a success, save in the hands of a master of epigram and satire like Lord Beaconsfield, or of a born raconteur like Mr. Anthony Trollope; and in the hands of Mr. Beresford-Hope it is a dreary failure. The account of the attempts made by the Duchess of Merioneth to achieve social distinction as the inventor of either a new religion or a new costume is mildly amusing; but it can only be recommended to people whose laugh is, as Mark Twain put it, "hung upon a hair trigger." Even in the matter of taste the book is far from faultless, proving again, what has often been proved before, that only the highest art can describe vulgarity without

falling into it. The elaborately drawn portrait of that sickening, but, happily, impossible, person Lady Gilderdale would ruin a much better book than *The Brandreths*.

To ordinary mortals who are depressed by the consciousness of a torpid liver, by the length of butchers' bills, by the discord of street music, or by any other of the unavoidable ills of life, there is something exasperating in the contemplation of unfailing high spirits. To such people a book like *Chums* may be recommended with many hesitations and reserves; but the young and thoughtless souls who have no liver that they can recognise, who eat their mutton but do not pay for it, and to whom Herr Joachim's violin and the Italian grinder's organ stand upon the same low level, may be expected to enjoy it with a great enjoyment. The teller of this "Tale of the Queen's Navy" is evidently at home with his subject; and those who appreciate a record of gun-room practical jokes, and of the peculiar kind of wit and humour affected by midshipmen of the type which Capt. Marryat loved to describe, will find in *Chums* a story to their taste.

The title *Fair Faces and True Hearts*, which is silly in itself and utterly wanting in appropriateness, is likely to deter readers from opening a book which, though not without faults, is, on the whole, rather more interesting than the average product of the circulating library. As the first incident in the story is a mysterious murder committed with the familiar dagger of foreign workmanship, the reader naturally classes the author among the disciples of Mrs. Henry Wood, and expects that something very stirring is in store for him. But no sooner is the inquest satisfactorily over than the stream of narrative begins to meander through chapters of comparatively unexciting love-making, which quite redeem the book from the charge of what in the slang of the day is called "undue sensationalism." Perhaps there are rather too many of these chapters. Lovers' talk is interesting to lovers; but, when the reading public is concerned, it is generally well to treat the conversations of enamoured couples like those formal documents which are taken as read. *Fair Faces and True Hearts* is a fairly good novel, but it would have been better in two volumes, and best in one.

In the prehistoric days of his literary career, Mr. Charles Gibbon must surely have been a contributor to the pages of some penny-dreadful, for only on such a supposition is it possible to account for the appearance of his name on the title-page of such a chamber of horrors as *The Flower of the Forest*. The publication of this book is probably due to commercial considerations; but even the author of the graceful story of *Robin Gray* can hardly afford to play such a scurvy trick upon his own literary reputation. The matter consists of three murders including a case of parricide, the same number of abductions, and a variety of similarly pleasing incidents. Of the manner nothing need be said save that the book is entirely destitute of literary value.

José and Benjamin belongs to the same class of works as Mr. Ingram's popular story, *The*

Prince of the House of David, but the fact that Dr. Delitzsch is a distinguished Oriental scholar will probably attract readers for whom ordinary books of this kind have few charms. The story is full of interest, and is very pleasantly told, the descriptions of the treatment of lepers in Palestine in the early years of the Christian era, and of the conflict between the old Jewish and the new Christian ideas, being specially vivid and realisable. The writer has done well in embodying some of his copious knowledge in a form calculated to interest readers who like to have the powder of instruction administered in the jam of entertainment.

JAMES ASHCROFT NOBLE.

SOME ELEMENTARY SCHOOL BOOKS.

Outlines of Latin Mood Construction, with Exercises. By G. E. C. Casey. (Bell.) The aim of this little book is modest. It strikes out no new idea, being, in fact, simply a digest of the system of teaching Latin mood-constructions employed by Prof. Kennedy in his well-known Grammars. But the digest is very well made; and the result is a clear and compact little book, which, short as it is, is quite thorough enough to lay a sound foundation for beginners, and suggestive enough to put them on right roads when they get beyond the "weak and beggarly elements" of syntax. But that we regard the brevity of the book as a distinct point in its favour, we might perhaps regret that its analysis of distinguishable (rather than distinct) usages have not been followed by a synthetic demonstration of the points of contact between them; showing, for instance, how the line of demarcation between "potential," "hypothetical," and "mild assertion," when viewed in certain lights, tends to fade, if not to vanish entirely; and how the "dubitative" may be for some purposes regarded with advantage as merely the "hortative" thrown into the form of a question. On one or two minor points we may, perhaps, say a word in the way of objection without seeming to recognise less fully than we do the general merits of the book. "The pure conjunctive" has never seemed to us a happily chosen phrase. "The conjunctive in simple sentences" is hardly a less compendious, and, in our judgment, certainly a less misleading, expression. And is it not artificial and, strictly speaking, untrue to call such a sentence as "Nihil in bello contemni oportet" an instance of indirect statement, and to say that the corresponding direct is "nihil in bello contemnitur"? There is here, surely, no quotation of a "statement"; we are not approving an assertion—that *nothing is despised*, but imagining a course of conduct—the *despising of nothing*, and pronouncing such an imagined course desirable. Finally, is it safe, after introducing a learner to the ordinary idiom, "si quid habebat, daret," to add, without further explanation, "or rarely si quid haberet, daret"? If it is meant, that the contingency, which, when conceived as now contemplated, takes the form "si habebat, daret," becomes, when described as contemplated on a former occasion, "si quid haberet, daret"—that we think is true, but it needs explanation. But that "si quid haberet, daret," referring to a present contingency, can ever be anything but a "sumptio ficti"—a contingency not prospectively contemplated, but viewed retrospectively and rejected—seems to us a most pernicious doctrine; and we should be sorry to believe that a scholar of Mr. Casey's evident discretion and knowledge of Latin idiom could really maintain it.

Latin Genders taught without Rhyme. By James Nettleship. (Simpkin, Marshall and Co.) The ordinary method of teaching Latin gender, by arranging the exceptions to each main rule so as to form little jingling stanzas which are easily learnt by rote, is open to criticism on two sides at least. We should not ourselves lay much stress on what may be called the theoretical objection to the practice—viz., that it appeals to the memory only, and not to the intelligence of the learner; for the strength of an average young boy's memory, as compared with the weakness of his reasoning power, is a natural fact which it is nowadays too much the fashion among educational theorists to ignore. But we have had practical experience of so many boys who have combined the power of rattling off these strings of rhymes at railroad pace with a total inability either to make use of their knowledge in elementary Latin composition, or even to answer a direct question as to the gender of this or that word in their lists taken by itself, that we are glad to welcome any sensible departure in a new direction. Mr. Nettleship's idea, which we may say at once seems to us a good one, is to substitute for the old rhymes lists in which each substantive is accompanied by an epithet showing its gender—*Cornelia gens, liquidus fons, Pons Sublucius*, and the like; nouns of common gender being indicated by adjectives of less than three terminations—e.g., *levis cortex*. Mr. Nettleship has chosen the particular adjectives which he employs by no means at random, but usually with distinct reference to well-known passages of the best authors. The arrangement of his little pamphlet is perhaps a trifle too complicated; and he has not applied his own method to all his instances, giving sometimes a substantive without any adjective, and merely stating the fact as to its gender. This we think decidedly a mistake. If his method is as good as we believe it, it deserves to be employed consistently. Why not teach "gelidum Tibur" and "molle siler" (instead of "Tibur" and "siler" simply), as well as "Alpes Graiaae" and "atra Styx"? And we should have liked to see all the examples collected in one conspicuous paradigm, rather than dispersed in fragments through the book, and "sandwiched" in between statements of rules in large type and observations in small.

MR. T. A. STEWART'S *Advanced Greek Course* (Edinburgh: Oliver and Boyd) is an imitation, in almost every detail, of Mr. Sidgwick's well-known *Introduction to Greek Prose*—a fact to which the author has not thought it necessary to call attention. Now that Columbus has shown us how to balance the egg, he must expect to find his example imitated. In this case we decidedly prefer the original. Mr. Stewart's egg does not stand quite straight. It is particularly crooked when, to drop metaphor, he deals with optative clauses. To say that "a wish of the present is conveyed by the optative present, a wish of the future by the aorist optative," is at this time of day *un peu trop fort*. Mr. Stewart should read Prof. Goodwin's *Moods and Tenses*, or even the same author's *Elementary Greek Grammar*. That would save him from talking such nonsense.

MESSRS. HEATLEY AND KINGDON, the joint authors of a successful little translation book, *Gradatim*, which we noticed favourably in a former number of the ACADEMY, have followed up their work with another in the same direction, but somewhat more advanced. *Excerpta Facilia* (Rivingtons) is a collection of Latin passages for translation in lower forms, chosen with care to avoid those parts of authors most read in schools "so as not to interfere with future reading." These extracts are "cooked" by the omission of difficulties, wherever pos-

sible, and are thus rendered capable of assimilation by very youthful digestions. They are accompanied by notes and a vocabulary, which, as far as we have tested them, appear to be adequate. And we observe as a good point in the book that, while it is divided throughout into short sections, each possessing some degree of unity, a continuous thread of narrative runs through considerable groups of these sections, thus preserving some of the advantages which (in spite of countervailing disadvantages) certainly attend the early study of Latin in an "author," rather than in a delectus.

The Accidence of the Greek Verb taught through Inflections and Analysis. By S. J. Hulme. (Parker.) Mr. Hulme rides his hobby altogether too hard. To insist that "inflections should be learnt independently of the verbal stem, and first," and to make this a cardinal principle of grammatical teaching, is simply to increase, and not to remove, an ordinary beginner's difficulties. The more concrete, and the less abstract, elementary teaching can be made, the more chance it has (whatever some theorists may suppose) of being apprehended by a young intelligence. Mr. Hulme's doctrine is the modern counterpart of the old Platonic fallacy—which Plato, however, lived to outgrow—that "knowledge of the things of sense disturbs and confuses the mind, and prevents it from grasping the true realities." As well forbid a young student of entomology to look at a moth or a beetle till he has mastered the whole structure and life-history of the "entomarchetype." There is something quite appalling in the claim which Mr. Hulme makes that teachers who use his book should "insist on" the learning and writing out of the whole of it "word by word, without any omission, from beginning to end." Nay, it would appear that even this will not content him, and that the unfortunate boy is to learn and write out *twice* the whole of these 114 pages! For "what is not understood the first time," says the author, "will become clear upon repetition." Before going to these lengths with their pupils, we should advise teachers to be quite sure that the entire contents of Mr. Hulme's book are worth reception into a boy's mind at such a cost. Certainly, to learn and write out twice that the future of *ἀν* is *ἀν* (*ac*) is a dubious benefit. What advantage, or, indeed, what truth, is there in teaching that "the structure of the verb in *ω* is more complete" than that of the verb in *μ*? Has *ἵστημι* less forms in use than *λύω*? The teaching (at p. 75) on the augmentation of certain verbs is open, at least, to question, perhaps to contradiction. Where is the authority for saying that *ὀλίζω* (I smell of wine) takes no augment? Homer's *ὀλίζοντο* (they got wine) proves nothing as to the Attic use. Again, it is by no means certain that *οἰστρέω* and *οἰκιστροφέω* took no augment; in each case the theory rests upon a disputed reading, as to which Porson, Elmsley, Dindorf, Paley, Kirchhoff, and Sandys all take the opposite view to that which Mr. Hulme appears to favour. Indeed, Mr. Hulme's whole teaching on irregularities of augment is spoilt by a total neglect of the differences between Homeric and Attic usage. Forms like *ἐμφοχέω* (for which, by-the-by, Homer also uses *οἰμφοχέω* and *ἐμφοχέω*) or *ἐμδανον* or *ἐμδανον* (here, too, *ἐμδανον* is more frequent) are quite out of place in a manual for beginners. Lastly, though the author expects his book to save learners and teachers all the "endless guesses after voice and tense which," &c., &c., we can find in it no account of such forms as *τετάχεται*, nor of the contracted optatives (*ιστάμεν*, &c.) of verbs in *μ*. Possibly we have overlooked them, but we have hunted with some care. But here we must stop; for, though we have by no means exhausted our list of objections, we have exhausted our space.

CURRENT LITERATURE.

Old Yorkshire. Vol. III. Edited by W. Smith. (Longmans.) All lovers of what Fuller calls "the best shire of England" will be grateful for another volume of this pleasant medley. Far-off forgotten things are here resuscitated and placed in juxtaposition with recent history; *novi homines* prove themselves not unworthy to carry on the warlike or political virtues of the *cincti Cathegi* of the county; archaeology jostles picturesque accounts of those rolling moors which form so striking a feature of Yorkshire's northern districts; eccentric characters, authors, artists, and centenarians find niches in the collection, and together make up a book which will delight every Yorkshire household. We cannot fancy a more charming book for a rainy day, which, however, occurs more seldom in Yorkshire than in any other county. The list of the dead belonging to Yorkshire in Westminster Abbey, the account of the old Doncaster Library, unfortunately burnt with the church in 1853, and the tracing of the different steps by which, from its foundation in 1768, the Library at Leeds has advanced to its present excellence, are specimens of commendable and useful work. These papers contain information which would alone justify the existence and, we trust, the continued prosperity of Mr. Smith's venture. The heads of the Lansdowne and Dodsworth MSS. relating to Yorkshire which are given in this book will be a boon to future students of the county's history. The Index, good though it is, might be enlarged with advantage, while the following loose sentence from the Introduction—

"A few years ago a refractory farm servant on the Wolds was punished (I believe sent to prison) ostensibly for not attending church according to one of the fustiest Acts of Parliament that regulated Old Yorkshire in common with the other counties"

—is a specimen of all the faults that ought to be guarded against in this book. Such stories, Mr. Wheeler should be reminded, are mere gossip unworthy of reproduction, unless dates and particulars are accurately verified. It is only fair to add, however, that slipshod writing of this sort is not often found in *Old Yorkshire*. All lovers of the county will long for another volume of these sketches and worthies. In view of the splendid educational establishments at Leeds and throughout Yorkshire at present, Fuller's scoff against the county, we may trust, is being amply refuted—

"I suspect that the observation of foreigners hath some smart truth therein, that Englishmen, by making their children gentle-men before they are men, cause they are so seldom wise-men."

North Devon and Cornwall, from Exmoor to the Land's End. By C. S. Ward. With Maps and Plan. (Dulau.) This is the second of the "Thorough Guide" series that we have received this year, and the first of them not written by Mr. Baddeley himself. Mr. Ward, however, treads closely in the steps of his leader. We can give him no higher praise than by saying that he is equally practical. The tourist of the modern type, who wishes to have as much pointed out to him as possible, will here find his every desire anticipated. Mr. Ward also rivals Mr. Baddeley in the occasional superfluity—not to say flippancy—of his remarks. No guide-book writer has yet learnt the supreme arts of conciseness and reticence. Descriptions of scenery and stories of personal adventure are both odious—if not odious; likewise such phrases as "the pedestrian will find compensation for being his own carriage and pair" (p. 111). Yet, when all is said, we know of no guides that we would sooner take with us than those of this series. If they fail to satisfy as literature, they are by far the most useful on the spot. From a considerable experience, we quite agree with the condemnation here passed

upon the Ordnance maps of Devon and Cornwall. They are always inadequate, and often misleading. The fly-leaf giving modes of approach and local coach routes, &c., is a valuable feature, but it might have included the steamer from London to Falmouth.

Ordnance Gazetteer of Scotland. Edited by Francis H. Groome. Vol. II. (Edinburgh: Jack.) We noticed the first volume of this *Gazetteer of Scotland* at the time of its publication, and the second volume suggests little to be added. We speak with some knowledge of similar works when we say that, on the whole, we have never seen one more creditable alike to editor and publisher. The strongest articles in this issue are those on Edinburgh and Dundee, which are marvels of condensed information. Historical interest is represented by the battlefields of Culloden and Dunbar. But, as we said before, every hamlet, burn, and laird's house is adequately described. From a literary point of view, the most curious feature to remark is the peculiar development given to the style by the matter-of-fact method of recording details which every English visitor to Scotland must have observed. Your genuine Caledonian delights in unimportant facts and figures, which, indeed, are not unimportant from his point of view. He writes like a photographer—without colour. As to the "get-up" of the book, only two points can be criticised. That the volumes should run on without a separate pagination for each is awkward; and the county maps are distinctly inferior to those for particular districts, which latter alone have evidently been specially prepared for the work. The frontispiece is a very fair example of steel-engraving.

Anamula: the Zulus, their Past History, Manners, Customs, and Language. By Thomas B. Jenkinson. (W. H. Allen.) It is a pity that the writer has not confined himself to the pages of a religious magazine or a missionary report. To the readers of such publications his observations and his private journal might be acceptable. There is nothing in the book to warrant a separate publication. Mr. Jenkinson is a missionary of the Society for the Propagation of the Gospel, and was stationed at Springvale, in Natal, from 1873 to 1879. His object in writing is to present a truthful picture of what he has himself seen and known, in the hope that others may be induced to settle in Natal as missionaries or as good colonists. We fail to see what special inducements he holds out to one class or the other. He is evidently an earnest and amiable man, but he is not endowed with any literary faculty. His book is ill-arranged, the information given consists almost entirely in quotations from other writers, and his own observations on the people, climate, and natural history of Natal are crude and meagre in the extreme. Great stress is laid in his journal on clothing the native Christians; and, as a matter of course, they are required to renounce polygamy, no pity being expressed for, nor even a word said about, the discarded wives of the converts.

The Handbook of Jamaica for 1882. By A. C. Sinclair and Laurence R. Fyfe. (Jamaica: Government Printing Establishment; London: Stanford.) This is a very creditable historical and statistical account of the colony, well compiled from official and other trustworthy sources, and put together with commendable literary skill. It contains almost all the information about Jamaica which any ordinary person is likely to want, combining to some extent the advantages of a Blue-book, a Gazetteer, an official list, and a general directory. Like most other West Indian publications, however, it indulges in the somewhat pompous descriptive style common in the old slave colonies, and so tends to produce an unduly exalted idea of the civilisation of the island in

the mind of an English reader. Anyone who took his picture of Jamaica from this work, with its statistics of Legislative and Privy Councils, Supreme Courts, public gardens and plantations, institutes and museums, railways and gas-works, banks and building societies, and all the rest of it, would certainly form an absurdly exaggerated notion of the real state of the island at the present day. That, however, is hardly the fault of the compilers, who have done their best with the material afforded them, and have worked it up into an extremely convenient and readable form.

NOTES AND NEWS.

MR. BROWNING has come home, having been unable to get to Venice through the ruin of the Lombard country by the floods. Neither from Turin nor Bologna could he make progress, and the general misery of the poor folk was sad indeed to see. There were cases of people remaining exposed to the rain on the bridge at Verona, and deprived of food, for thirty-six hours, no help being available from either side.

It is hoped that the late Prof. Green's scattered papers will be collected and published in the course of next year. A considerable quantity of his unprinted lectures will also be given, together with a short memoir. Anyone who is in possession of any MS. by Prof. Green, or of letters, which they would allow to be used for the memoir, is requested to communicate with Mrs. Green, 13 Banbury Road, Oxford.

We are also informed that Prof. Green's *Prolegomena to Ethics*, which Mr. A. C. Bradley is editing, will probably be published by the beginning of January.

We hear that the Revisers of the Old Testament have made so much progress that their work will certainly be finished in a few more months. Indeed, there is even some probability that the Revised Old Testament may be ready for publication by the close of next year.

THERE are now no less than five professorships vacant at Oxford—Regius Hebrew, Whyte's Moral Philosophy, Waynflete's Anatomy (a new chair), Corpus Jurisprudence, and Vinerian Law. Some of these have been vacant for many months; and it is an open secret that the boards of electors have found it difficult to make up their minds. It appears that the new statutes have made no provision for the case of an equality of votes. In the meanwhile, Edinburgh has promptly elected a successor to Prof. Blackie and, we may add, a companion to Prof. Jebb.

BEFORE Dr. W. W. Hunter left for India last year to become President of the Educational Commission, he was engaged in preparing for the press a *School History of India*, mainly based upon the historical chapters of his *Indian Empire*, but simplified in style and reduced in matter to about 220 pages. This has already been adopted in the Government schools of the Madras Presidency; and it will shortly be published in this country by Messrs. Tribner, under the title of *A Brief History of the Indian People*.

BISHOP WORDSWORTH, of St. Andrews, has prepared an edition of the historical plays of Shakspeare, which will be published by Messrs. Blackwood in three volumes.

THE collection of tales from the *Shah Nameh* of Firdusi, upon which Miss Helen Zimmern has long been known to be engaged, is now nearly ready for publication. It will be entitled *The Epic of Kings*; or, *Stories Retold from the Persian Poet Firdousi*. The *Shah Nameh* itself, it may be as well to observe, is perhaps the longest poem ever written, consisting of about sixty thousand distichs, which narrate the mythical history of Persia. What Miss Zimmern

has done is to select those incidents which best admit of being popularised for English readers, and to retell the stories rather than translate them, while carefully reproducing all essential details. Mr. E. W. Gosse has written a prepatory poem of fifty-four stanzas, entitled "Firdusi in Exile," which treats of the poet's life after his retirement from the Court of Mahmud of Ghazni to his death at Tus. Mr. Alma Tadema contributes two etchings, illustrating the story of "Zal and Rudabeh." An *édition de luxe* of the work will be printed on Dutch hand-made paper by Van Gelder, with artist's proofs of the etchings printed upon Japanese paper by Mr. De La Rue. It will be bound in vellum, richly decorated with designs adapted from old MSS. of the *Shah Nameh* in the British Museum. Mr. T. Fisher Unwin, who is the publisher, hopes to have it ready for issue to subscribers by November 1. After that date the price will be raised.

MISS AMELIA B. EDWARDS has undertaken to write an article on "Recent Discoveries in Egypt" for Stoddart's American Supplement to the *Encyclopædia Britannica*.

MISS M. CROMMELINE, author of *Orange Lily*, *Queenie*, *Black Abbey*, &c., is, we understand, writing the forthcoming number of *Arroweemish's Annual*.

THE next volume in the "English Citizen" series will be *The State and the Land*, by Mr. Frederick Pollock.

THE new instalment of Nassau Senior's *Conversations*, which Messrs. Sampson Low will publish immediately, contains the narrative of his visit to the East in 1856, when he accompanied the commission that investigated the site of the future Suez Canal. Conversations are recorded with the Viceroy, Said Pasha, M. de Lesseps, M. St-Hilaire, Sir Frederick Bruce, and Sir Adrian Dingli. The work will be in two volumes, edited by the writer's daughter, Mrs. Simpson.

PROF. BUOHHEIM's annotated edition of Lessing's *Nathan der Weise* will be issued in a few days from the Clarendon Press. The Commentary will fully explain what is, next to Goethe's *Faust*, the most difficult work in the German language. The Introduction will give a complete account of the history of the composition, of the tendency of the drama, and of the celebrated Parable of the Three Rings, besides an analysis of the characters and an independent criticism of the drama from an æsthetic point of view.

MESSRS. TRÜBNER are the publishers in this country of Mr. Bancroft's *History of the Pacific States*, which is announced to appear in no less than twenty-five volumes. Two volumes, one beginning the history of Central America, the other the history of Mexico, but forming vols. i. and iv. of the complete series, will be ready before the end of October. This work is a continuation of the same author's *Native Races of the Pacific States*, and takes up the history from the first arrival of Europeans.

NOTWITHSTANDING the additional number printed of Canon Farrar's *The Early Days of Christianity*, the entire supply prepared has proved inadequate to meet the demands of the trade, and the work is consequently again being reprinted. The new edition is expected to be ready by the 13th inst.

MISS BRADDON has just completed a new Christmas novel, "Flower and Weed," for the next issue of *The Mistletoe Bough*. It will be illustrated by Mr. Henry French, whose drawings have been engraved by Messrs. Sheeres, Symmons, Cooper, Batterahell, and Knight. To give an original work of fiction by a well-known author, and to illustrate it and print it in the most advanced style of fine-art pro-

duction, for one shilling, cannot fail to excite curiosity.

Mrs. Raven's *Temptation*, a new novel by the author of *Dr. Hardy's Marriage*, will be published by Messrs. Richard Bentley and Son in about ten days.

With the *Connaught Rangers*, in *Quarters, Camp, and on Leave*, is the title of a new work by Gen. E. H. Maxwell, author of *Griffin, Ahoy!* to be shortly published by Messrs. Hurst and Blackett. It will be in one volume, with illustrations.

A new novel by Mrs. Forrester, entitled *I have Lived and Loved*, will be issued during November by Messrs. Hurst and Blackett, who also announce *Exchange no Robbery*, by Miss M. Betham-Edwards. Both these will be in three volumes.

MESSRS. SAMPSON LOW announce *Studies in Russian Literature*, by Mr. O. E. Turner, English lecturer in the University of St. Petersburg.

THE Society for Promoting Christian Knowledge has in the press *The Teacher's Prayer-book*, a work which was announced in the society's Report some time ago. It consists of the Book of Common Prayer, with notes and comments by well-known scholars. The historical Introduction is by the Rev. Dr. Maclear, who also contributes the notes on the Morning and Evening Prayer, and on the Thirty-nine Articles. The other contributors are Canon Bright, Prof. Lumby, the Revs. R. Sinker, F. E. Warren, C. O. Mackarness, E. J. Boyce, and E. Wenaley. The work is enriched with a very full concordance to the Prayer-book, including the Psalter.

MR. ELLIOT STOCK announces the following antiquarian works for the coming season:—a facsimile of the first edition of *Robinson Crusoe*, *The Civil War in Hampshire*, and *The Siege of Basing House*, by the Rev. G. N. Godwin; *Studies in Lambeth Palace Library*, by S. W. Kershaw; *Place-Names of the West Riding*, by the Rev. N. Greenwell; *The History of Old Dundee*, by Alexander Maxwell; *Kingethorpiana*; or, *Researches in the Church of Kingethorp*, by the Rev. J. H. Glover; and *Historic Notices of the Borough and County Town of Flint*, by Henry Taylor.

THE same house will publish *The New Medusa*, a volume of poems by Mr. Lee Hamilton; and *Verses of Varied Life*, by H. T. Mackenzie Bell.

MESSRS. RICHARD BENTLEY AND SON'S announcements include a *Memoir of Lord Hatherley*, with two portraits, by the Rev. Prebendary Stephens, author of *The Life and Letters of Dean Hook*; *The Retrospect of a Long Life*, with Reminiscences of the Literary Men of the Time, by Mr. S. C. Hall; *Notes upon some of Shakspeare's Plays*, by Mrs. (Fanny) Kemble; the sixth volume of the *Memoirs of Prince Metternich, 1835-48*; a new book by Lady Jackson, to be entitled *The Court of the Tuileries, of the Restoration, and of Louis Philippe*; *Personal Reminiscences of Lord Stratford de Redcliffe and of the Crimean War*, by the author of *Frontier Lands of the Christian and the Turk*; and the sixth and concluding volume of Dr. Evelyn Abbott's translation of Duncker's *History of Antiquity*, containing the rise of the Persian empire. This last will be immediately followed by the two first volumes of Duncker's *History of Greece*, translated by S. F. Alleyne.

MR. T. FISHER UNWIN announces a story by the author of *The Spanish Brothers*, entitled *The Roman Students*; or, *On the Wings of the Morning*: a Tale of the Renaissance, with illustrations by Jacomb Hood; *Heroic Adventure*: Chapters in Recent Exploration and Discovery, with portraits and illustrations; *Tales of Modern Oxford*, by the author of

Modern Oxford; *Poems and Hymns*, by the Rev. G. T. Cooster; *Geographical Questions*, by R. H. Allpress, being vol. iii. of the Army Examination Series; *The Illustrated Poetry Book for Young Readers*; *The Children's Bouquet of Verse and Hymn*, being a new volume of the Pocket Series bound in wood; *Dick's Holidays*, a picture-book for children; and *Ephemerides*: "The Days of the Year, a New Christmas Annual," edited by Edward Walford. Also new editions of *Modern Missions*, by Robert Young, revised to date; *Industrial Curiosities*, by Dr. A. H. Japp; *Wise Words and Loving Deeds*, by E. Onder Gray; *Footprints*, by Sarah Tytler; and *Labour and Victory*, by Dr. A. H. Japp.

MESSRS. W. COLLINS AND Co. will publish *Histories of Austria and Hungary*, by Dr. Zerffi, and of *Norway, Sweden, and Denmark*, by Dr. J. N. Langley; also *Simple Stories from English History*, to meet the new requirements of the Education Department; *Drink and Strong Drink*, a temperance reading-book for schools and families, by Dr. B. W. Richardson; and *Book-Keeping*, by Mr. J. MacLean.

MR. EFFINGHAM WILSON has in the press a new edition, the thirteenth, of that standard work *Fenn's Compendium of the English and Foreign Funds*. It is entirely rewritten, and brought down to the latest date, by Mr. R. L. Nash. It contains not only a history of the debts and revenues of all nations, but a full account of almost all securities dealt in by investors at home and abroad. It has now grown into a bulky volume of seven hundred pages, and is dedicated, by special permission, to the Committee of the Stock Exchange.

THE *Scotman* of October 3 gives a long account of an interesting relic of Burns preserved in the Select Subscription Library at Edinburgh, which is now being dispersed. This is Burns' own copy of Robert Ferguson's poems, containing the holograph of the well-known lines entitled "Inscribed under Ferguson's Portrait," and several other verses. It is noticeable that the holograph differs in two or three respects from the lines as printed from 1803 downwards, and that it happens to be written above, and not below, the portrait. The book was given by Burns, as shown by an inscription in his handwriting, to the poetess Miss Carmichael.

THE Cheltenham Browning Society took advantage of Mr. Furnivall's visit to the town to hold its first meeting of this session at Mrs. Owen's, The Beeches, a fortnight earlier than had been intended. Miss Beale, the foundress and head of the well-known Ladies' College at Cheltenham, read an admirable paper on "The Religious Aspects of Browning's Poetry," which will be printed forthwith, and be in the hands of the members of the Browning Society before the first meeting of their second session, on October 27.

THE opening meeting of the tenth session of the New Shakspeare Society will be held on Friday, October 13, at University College, Gower Street, at 8 p.m., and will be open to the public. Miss E. H. Hickey will read a paper on "Julius Caesar."

PROF. S. BEAL is to lecture on Tuesday and Thursday next at University College, Gower Street, on the following questions:—(1) "What light is thrown on the chronology of Buddhism by Chinese Buddhist books?" (2) "What effect did the Greek trade with India produce on later Buddhism?" Each lecture to begin at 3 o'clock. Admission free.

THE subject of Mr. Shadworth H. Hodgson's address before the Aristotelian Society on Monday evening next will be "The Method of Philosophy."

THE papers to be read before the Hull Literary

Club during the next session include "Libraries, Ancient and Modern," "Ruined Cities of Central America," "Edgar Allan Poe," "Literary Doctors," "Analogies of Animal and Vegetable Life," "A Night with Gilbert and Sullivan," "The Food of the Future," "Bibliomania," "Oliver Goldsmith," and "The Relations of the Earth and Moon."

MR. A. ARTHUR READE has conceived the idea of administering to men of letters and science a series of interrogatories touching their practice in the matter of alcohol and tobacco. He now proposes to publish, with Messrs. Heywood, of Manchester, the replies he has received, which include letters from the late Charles Darwin, Dr. Carpenter, Prof. Blackie, Dr. Alexander Bain, Messrs. E. A. Freeman, Anthony Trollope, Wilkie Collins, &c.

MR. CHARLES FLEET'S *Glimpses of our Ancestors in Sussex* has been so well received by the public that the author has in preparation a second volume. This will be published shortly, by Messrs. Farncombe, of Lewes, uniform with the second edition of the first volume. It will contain chapters on royal visits to Sussex, the Sussex martyrs, noble Sussex families, Knight Templars in Sussex, the Quakers in Sussex, hermits in Sussex, Sussex cricket, Sussex lore. It is proposed to add illustrations, should the number of subscribers warrant the outlay.

MR. T. BUNOLE, of the *Guide*, Arbroath, has in preparation a book to illustrate Arbroath and district, under the title of *Round about the Round O, with its Poets*. Selections will be given from the poems of Balfour, David Carey, William Allan, James Thomson, John Sim Sands, Thomas Watson, William Johnston, Dr. David Arrott, and many other local poets; and full topographical notes will be supplied by the editor, Mr. George Hay, author of the *History of Arbroath*. The illustrations—upwards of 120—are by Mr. John Adam, of Edinburgh, reproduced in heliogravure by M. Amand Durand, Paris.

The committee of the public library at Plymouth have issued an appeal for subscriptions towards a special fund for the formation of a collection of works of local interest, which already numbers 1,495 volumes.

MR. LESLIE STEPHEN, in his *Swift*, recently published in the "English Men of Letters" series, comments upon the word "pilgarlick," and quotes a use of it by Carlyle. It may be worth mentioning that a correspondent of the *Western Antiquary* (September, p. 81) states that he has heard it applied to ragged and dirty children; but, unfortunately, he does not say where.

In addition to refusing copyright to foreign authors, the United States also maintain an import duty upon foreign publications at the rate of twenty-five per cent. *ad valorem*. This is not exacted on book parcels sent through the post of less value than fifty cents (2s.); but it is levied from all printed matter imported wholesale. The total amount realised is about 600,000 dols. (£120,000) a-year. When the Tariff Commission held its sittings last month at Boston, Mr. H. O. Houghton, of the well-known publishing firm of Houghton, Mifflin and Co., expressed his opinion in favour of maintaining this duty, though with a preference for a specific to an *ad valorem* duty. His principal reasons were the common Protectionist ones, with the addition of an argument that American authors might otherwise be induced to emigrate, and thus the supply of American literature would become contaminated at its source. It is more interesting to know that Mr. E. Steiger, a New York bookseller, whose business seems chiefly to lie in the importation of educational and scientific works, has issued a vigorous protest against the existence of any

duty on books at all. To repeat his arguments would be unnecessary in this country. But it is certainly curious (quite apart from the Protectionist point of view) that a government which professes to encourage in all ways the dissemination of knowledge should thus handicap foreign knowledge. That the duty will be repealed, however, we have no hope.

THE Académie française has elected M. J.-B. Dumas directeur for the current quarter, and M. Cherbouliez chanciller. M. J.-B. Dumas, the illustrious chemist—who must not be confounded with M. Alexandre Dumas fils, also a member of the Académie—is now in his eighty-third year.

ON Monday last the Bibliothèque royale at Brussels was lit with the electric light. A large room is now open every evening from 7 to 10.30, to which admission may be freely obtained from the librarian. Here are arranged periodicals and the most common books of reference; other books on the shelves of the library property are to be got only after an application made earlier in the day. It is manifestly impossible to illuminate the whole library, or even to search for books at night.

M. E. MAILLET, 20 Rue de la Pépinière, Paris, has published the prospectus of a *Bibliographie des Editions originales d'Auteurs français du 15^e au 18^e Siècle*, which will interest bibliographers of all nations. It will contain an exact reproduction of the title-pages of the original editions of about 300 masterpieces of French literature, from the *Roman de la Rose* and Villon to the works of Beaumarchais and Saint-Pierre. The form will be that of Brunet's *Manuel du Libraire*. M. Jules Le Petit will contribute the necessary information with regard to the original editions and their market value. The subscription price will be 30 frs. up to the 31st inst., after which it will be raised to 50 frs.

ORIGINAL VERSE.

A NORSEMAN'S PROPHECY.

I HAVE seen the ash-keys ripen and fall,
And the idling winds have the lost seeds strown;
Then behold upspringeth a gray stem tall,
And another tree in the land has grown.
I have seen the pine in the forest strengthen
Through snow of winter and summer's heat;
I have seen the bands of the ivy lengthen
And catch at the oak stem and cling to its feet,
Till at last the brown bark is covered and hidden.
I have seen the swallows come back with the sun,
And the storks return to their nests unbidden;
And for years uncounted these things have run.
I have seen the black of the raven's breast
Grow white as the snow on the hill-top bleak,
Yet the fledgling I saw while it lay in the nest
When its wings were unfeather'd and tender its beak.
I have blessed the God who gives meat to the raven,
Who raised the ash by the might of his hand,
Who made the pine as a rest and a haven
For the wandering birds of the far south land.

But dead, you say, is the great god Odin,
Another shall reap of the seed he sowed in
The hearts of men, and another the store
Shall gather and take to the garner floor.
Another be pledg'd in the mead and the ale;
Of another, men's mouths shall be telling the tale.
And Thor with his thunder is dead and vanish'd,
And Balder the glad with his gladness banish'd;
And all the gods whom our fathers knew
Must flee from these gods that you bring with you.
The gods that we love—the hope of our race—
Must fade as dim smoke and leave empty their place.
But what new thing bring the gods you teach of,
And what new gospel is this you preach of?
Have we not Odin, all-seeing, all-wise,
To tell to the heart and to open the eyes?
Know we not surely that Balder shall rise
When the serpent is dead and the wolf death-struck lies?

Have we not Thor, with his hammer of might,
The strong man to aid and the coward to smite?
Have we not Loki, if yet more we need,
The cunning in heart and the crafty in deed?
What do we lack that the gods do not give?
Live we not by their light as our fathers did live?

But dead, you say, is the great god Odin;
Your gods shall bide in the place he bode in.
Balder the bright is for ever departed,
Beautiful Balder, the gentle-hearted;
And hammer-strong Thor is forgotten for ever;
And Loki the schemer shall come back never—
Loki, who never yet tempted in vain
The double in heart and the subtle in brain.
Shall Loki then fail in the days yet to be,
And these southern gods have the mastery?
Stands it written that Loki yet ever did fail—
That he tempted a man and he did not prevail?

But if it be truth that the gods are dead,
What will you give in the great gods' stead?
We will live by the words that our fathers taught,
That the gods are patient and troubled by naught,
Headless of mocking and careless of praise,
And thus shall they rest till the ending of days.
You shall think you have smitten the gods of the north,

You shall fling your banners of victory forth,
You shall deem they are dead with the last night's dreaming,
And yours shall be truth in the outward seeming;
But our gods you but call by another's name,
And our lov'd ones live on and are ever the same.

You shall hear the wailing wind in the sky,
And know it is Sleipnir hurrying by.
Your lips shall whiten and hearts grow cold
When Thor with his thunder is out on the wold;
And the flowers that blossom'd where Balder bled
You shall lay in the hands of your lov'd ones dead.
You shall fear the voice of the wolf and the cry
Of the wandering crow, though you know not why;
The raven's call shall be harsh to your ear;
Forgotten gods shall you worship in fear;
By the speech of the birds and the message they give,
Shall you know of a truth that the wise ones live.

You shall mark your food with the hammer of Thor,
And think you are signing a holy sign;
But the high gods shall laugh, for the symbol of war
You have laid on the bread and the flesh and the wine.

At Balder's tide, though forgotten his name,
You shall feast when the days grow light and long;
When the harvest is in you shall kindle a flame
That the great gods know, though changed be the song.

And the names be altered, and only the deeds
Remain to be sung of and told in rhyme;
You shall cover our faith with your Christian creeds,
But the gods shall live on to the end of all time.

And I, I will feast with the gods of my fathers,
And drink of the mead from the gold-bound cup,
Till the wrath shall fall that now slowly gathers,
And the world and her kingdoms be shrivel'd up.
I will strike when the ends of the earth are shaken,
I will sleep when the days wax dark and dim;
And when Balder awakes, I too will awaken
And look on his face and be glad with him.

MABEL PEACOCK.

MAGAZINES AND REVIEWS.

IN the magazines for this month everyone will turn first to the "Valedictory" (why not "Farewell"?) of Mr. John Morley in the *Fortnightly*. Its interest is partly personal, but still more suggestive of consideration about the effect exercised by the Review since its foundation in 1867. As to the question of signed names, Mr. Morley has before confessed that his theory was not quite so rigid as his practice. For our own part, despite the fact that France has recently taken a backward step, we hold to the view that signatures are no less desirable in political than in literary journalism. The disadvantages, which we admit, must in the long run work their own cure. But it is Mr. Morley's retrospect of the character of his articles that most gives rise to reflection,

Those who recollect the early days of the *Fortnightly*—when novel ideas were expressed with no less novel vigour and eloquence—will appreciate his generous praise for his distinguished band of contributors. The old *Fortnightly* was a power in the land, because it concentrated and brought before the general public a body of opinion that had hitherto lain unread in weighty books, or perhaps had nowhere found open expression. Philosophical radicalism—in religion as in politics—here first became widely known. But competitors quickly sprang up; the charm of freshness began to wear off; and—if the truth must be told—the original standard has not always been maintained. Far be it from us to complain of the absence of great names. The articles in the *Fortnightly* used to be greater than the names. But somehow the new generation are not equal to their fathers. We seem to have lost the power of going straight to the heart of a question, and of writing in a way that must at least stimulate. The first set of contributors wrote because they had something to say which it was good for us to hear; the present seem to write because there are a dozen magazines to fill. The success of "periodicalism" is tending to found a profession. What we mean may be illustrated by the *Nineteenth Century* for this month. It contains ten papers of varying length, but we cannot honestly say that any one of them is worth the trouble of a careful reading. Either the subject is of secondary importance, or the treatment is inadequate. The *Contemporary*, which varies to a curious degree, happens to give us an exceptionally good number, though at least one of its articles absolutely refuses to be read at all. Others are thin. But Prof. Max Müller is always instructive, even when he has nothing new to tell; and Mr. Mulhall can always extract a meaning from columns of figures. Returning to the *Fortnightly*, we must not forget to notice that Mr. Sully has a paper on Herder marked by a genial criticism and a grace of style that he did not expect. The first article on Skobeloff is interesting, but we cannot admit the justice of the parallel with Bayard. Surely Nelson would be nearer.

THE *Revista Contemporanea* of September 15 is rich in archaeology. An anonymous paper on Celtiberian Olunia shows how much awaits the explorer's spade in Spain. The province of Burgos, for two years in succession, voted sums for work at Olunia, but no one undertook it. Becerro de Bengoa concludes his "Studies on the Iberians or Euskara" in the Province of Alava; and Narciso Pagés his "Municipal Government of Spain under the Romans." In the former we notice that the hill on which Felton was routed and fell before the Battle of Najera, 1367, still bears the name of Inglesmendi, English Hill. The latter maintains that the office of *Decuriones* was an elective and honourable one in Spain, and that of the *Defensores* still more so; the degradation of the *Curia* and *Curiales* took place in the Eastern Empire only. A lecture on the "Teaching of Languages," by Escriche y Mieg, treats language as a science, and the comparative as the only true method; and declares the results in individual tuition to be marvellous.

IN MEMORIAM

EVELYN PHILIP SHIRLEY.

ANOTHER name of mark has disappeared from the roll of living antiquaries and genealogists. Mr. Evelyn Philip Shirley, the well-known author of *The Noble and Gentle Men of England*, died on September 19, of an apoplectic fit, at his seat, Ettington Park, near Stratford-on-Avon. He was in his seventy-first year, and was the eldest son and heir of the late Evelyn John Shirley, M.P. for South Warwickshire, by Eliza

Stanhope, the only child of a cadet of the House of Chesterfield. Mr. Shirley was the representative of a younger branch of the House of Ferrers, descending from George Shirley, who was a younger son of the first Earl and an uncle of the half-blood to Selina Countess of Huntingdon, and to the Earl of Ferrers who was hanged. George Shirley and his descendants inherited, to the impoverishment of the earldom, the lordship of Lower Ettington, in Warwickshire, and the barony of Farney, in the Irish county of Monaghan, which came to the Shirleys by descent from Robert Devereux Earl of Essex.

Evelyn Philip Shirley, the heir of George in the fourth generation, was born on January 22, 1812, and was educated at Eton and at Oxford. He matriculated in 1830 as a gentleman commoner at Magdalen, and took his bachelor's degree in 1834; but he was too much absorbed in genealogical and heraldic studies to graduate in honours, as a reading man of his abilities might have been expected to do. On leaving the university he went to reside for a time on his father's estates in Monaghan, where he served the office of high sheriff in 1837, and was elected in July 1841 one of the knights of the shire in Parliament. He was a Conservative like his father, who sat in the same Parliament as one of the members for South Warwickshire; but Irish politics were not much to his taste, and when Parliament was dissolved in 1847 he did not care to seek re-election. In the meanwhile, he had established his reputation as a genealogist by publishing in 1841 the *Stemmata Shirleiana*, a quarto volume, containing the history in detail of the Shirley family and estates. The Shirleys are traced in an unbroken line from Seawalo or Sewallis, who was meane lord of Ettington in Domesday under Henry de Ferrers; but the chief glory of their ancestry is derived from the marriage of Sir Henry Shirley in the reign of James I., whose wife, Dorothy Devereux, was eventually the co-heir of her brother, the Earl of Essex, the general of the army of the Parliament. This match brought to the Shirleys the barony of Ferrers of Chartley and a moiety of the Irish principality bestowed by Queen Elizabeth on her favourite, the ill-fated Earl of Essex; and the descendants of the marriage are entitled to the distinction of quartering the royal arms of France and England, as being representatives in blood of the youngest son of Edward III. The original edition of the *Stemmata* was limited to one hundred copies, and the book soon became scarce; but an enlarged edition appeared in 1873, which deservedly ranks high among family Histories. Shirley took a greater interest in literature than in politics, and during his father's lifetime did not care to re-enter the House of Commons. But he never shrank from his duties as a great landowner, and, after his succession to the family estates, returned to public life in 1853 as M.P. for South Warwickshire. He retained his seat until 1865, when, after twelve years' service, he considered himself justified by declining age in retiring from Parliament and devoting what remained of life to his favourite studies and the improvement of his estates. He continued, however, to take an active part in county business, and was a regular attendant at the council board of the Society of Antiquaries and other learned societies. His liberality as an Irish landlord and his exertions for the welfare of his tenants are vividly described by his former agent, Mr. Trench, in his popular book *Realities of Irish Life*. Shirley took the deepest interest both in the past and the future of his Irish estates, and one of his earliest literary efforts was *Some Account of the Territory of Farney in Ulster*. It was a labour of love in his later years to expand this work into a

History of the County of Monaghan, a folio which ranks among standard county Histories of the first class. His literary industry was indefatigable; and, besides a number of volumes which he published, he was a constant contributor to *Notes and Queries* and to the *Transactions* of the principal archaeological societies. His chief work, perhaps, is *The Noble and Gentle Men of England*, which has been so well appreciated that it has already passed through several editions. It is profusely illustrated with armorial shields, and gives a sketch of each family from the earliest ancestor on record. It is the book which most nearly approaches an English *libro d'oro*; and the line of exclusion is drawn high, for no families of gentry are admitted into his list unless they are actually landowners at the present time, and also unless their ancestor in the male line was in possession of an estate before the dissolution of monasteries—the change of religion being notoriously a period of social revolution. This rigid rule excludes a large proportion of the existing peerage, and makes sad havoc with received pedigrees. Genealogists, who know all the weak points in their neighbours' pedigrees, are never favourites in society; and Lord Beaconsfield showed his knowledge of human nature when he portrayed Shirley in *Lothair* as Mr. Ardenne, "a man of ancient pedigree himself, who knew everybody else's, which was not always pleasant." Shirley arranged his families according to their respective counties, and those who are not antiquaries will read with some surprise that Middlesex contains no families of gentry. Apart from blemishes which are inseparable from such undertakings, Shirley's book is one of real merit, and commands a place in every genealogical library. Both as an antiquary and as a country gentleman, he took the warmest interest in hunting and hawking, and all other knightly sports of the olden time. His book on deer-parks is a classic on the subject of the noble science of venery. His own deer-park at Ettington is one of the oldest in the kingdom, and he delighted in explaining to his visitors the radical difference between a deer-park proper and a park with deer in it. A real deer-park could only be imparked by the royal licence, and was invested by statute with diverse privileges and immunities, none of which attach to so-called parks of modern creation, which are only fields fenced in and stocked with deer at the will of the proprietor. Shirley took great pride in the manor-house of Lower Ettington, which he enlarged and remodelled in 1862 in the early English style. His improvements were carried out with consummate taste; and the magnificent library which he built to contain his literary collections made it one of the finest mansions in the county. The house is out of all proportion to the surrounding estate, which produces scarcely £2,000 a-year; but the modest rent-roll of Ettington is supplemented by Irish revenues of nearly £30,000. His hospitality was unbounded, and those who had the privilege of being his guests will never forget the genial and polished courtesy of their host. He had printed an interesting description of his seats at Ettington and Lough Fea, which he was in the habit of presenting to his guests as a remembrance of their visit. He does full justice to the grandeur of his baronial hall and to the wild scenery of his Irish territory, but his heart was in the Warwickshire woodland which had been the home of the Shirleys for a thousand years. This account of their ancestral homes is dedicated to his children, who are touchingly reminded of their duty to Him in whose sight a thousand years are but as yesterday, a watch in the night. The little book is characteristic of an antiquary who was emphatically first a Christian and then a gentleman.

He died in harness, for he worked at his favourite pursuits till the last, and the day before his death addressed a paper to *Notes and Queries*, to which he had been a contributor from its commencement. The end was very sudden. On Sunday, the 17th ult., he went upstairs to dress for dinner in, apparently, his usual health. He was so punctual in his habits that his delay in descending to the drawing-room created some uneasiness, and Mrs. Shirley went up to his dressing-room to look for him. She found him lying on the floor paralysed and unconscious. Medical skill was unavailing, for he never recovered consciousness, and died on the morning of the 19th. He was buried on September 26 in the vault which he had just completed in Ettington church, where the Marquess of Hertford and all the chief men of note in Warwickshire assembled to pay the last tribute of respect. He lies among his ancestors; and none of them have left a name more worthy of remembrance than the Christian gentleman who discharged with credit every duty of his high station, and who was distinguished in his generation as an antiquary and a county historian.

EDMOND CHESTER WATERS.

A COMPETITION OF BASQUE IMPROVISATORS.

Sare, Basse-Pyrénées.

THE Basque Festival at Sare has been sadly marred this year by drenching rain. It was late in the afternoon of Monday, September 11, ere the international contest of Ball play ended in the victory of the French Basques. Without delay, the "Garde Champêtre" mounted the wall which bounds the dug-out end of the long court, and summoned the *Coplaçaris* to the trial of improvisation there. First, led on by a boy, a blind old labourer appeared, his pale face telling of privation. A pause ensued, and a murmur arose that there would be no competitors. At length a lad with frizzly hair, Pelho, a blacksmith from Cambo, came forward. A shout announced a somewhat older man of herculean build, recognised as the miller of Oyarzun, one of the first *Bersolaris* of the Spanish Basques. An old man from Echalar, (Navarre), with two younger from Sare and Baigorri, completed the list of candidates. The method of competition was as follows:—

The candidates were brought forward successively in pairs to the edge of the wall, about twelve feet above the mass of the audience in the court below. On the bank, at right angles to the candidates, sat the jury, four well-known names in Basque literature—Ospita, Duvoisin and Elisamboure, Salaberry of Mauléon, and Dr. Guilbeau, Maire of St-Jean-de-Luz. These, on the spur of the moment, gave the themes to the competitors. The first immediately improvised a verse of four, six, or eight lines, singing it at the top of his voice to some well-known tune; the other replied; the first again took up the theme, and so on, until the jury were satisfied, usually at the end of ten or twelve minutes, as to the comparative merits of the competitors. The best performers, though interrupted by applause, would recite together from twenty-four to twenty-six couplets in that time; the inferior, only from twelve to sixteen. The contest was quite as much one of rustic wit as of poesy; but tune and rhythm were always fairly kept. There was no need to understand the language; the faces of the audience below, the burst of laughter and applause at a successful hit, the silence, or a long-drawn oh! when a couplet fell dead, significantly pointed which way the contest was going.

The first trial was between the blind man and Pelho of Cambo; the subject, "Sobriety versus Good Cheer." The old man began with confidence,

but could not keep to his theme. Pelho sung his first couplet with evident nervousness, his second was better, his third won loud applause, and at the sixth stanza he was proclaimed an easy victor. Then the miller of Oyarzun and the labourer from Echalar defended each his calling—"Miller versus Labourer"—in Spanish Basque. Only two of the labourer's couplets told, wherein he sang of the miller's trickery in taking illegal toll of the grist, and of the probable punishment here and hereafter; the miller retorted: what fools the labourers must be to allow themselves to be cheated when aware of it. The labourer could find nothing else effective, and the miller won. The man from Baigorri having vanished, Pelho was again pitted against a middle-aged man, who defended "Contentment at Home" against "Emigration to America for Wealth." The new-comer was smiling and confident, was quick, had a capital voice, and sang well; but he constantly wandered from his subject into mere platitudes, and, though the contest was superior to those preceding, Pelho was again the conqueror.

Now came the final trial between him and the miller, and it was more exciting from the fact that one was a French and the other a Spanish Basque. It was plain that the general expectation was in favour of the miller. The theme was "The Condition of a poor Peasant Proprietor against that of a Metayer or a Servant under a Good Master." Both men did their best; each was ready as soon as his rival ceased, and began the instant the applause allowed him to be heard, and the thirteen couplets each were sung in the same time as six had been in the first contest. The miller stood with his arms folded on his broad chest, and sought occasional inspiration from a small wine-skin proffered by his brother. Pelho squeezed his folded berret hard in his right hand, and swayed his arms to time in not ungraceful action. For the first five or six verses he fully held his own, but it was then evident that the physical strength of the miller would tell. Pelho's smile died out, a look of exhaustion was coming over him, and the jury compassionately ordered the prize, 80 fra., to be divided. Couplets of thanks from the two to the audience, the jury, and to M. d'Abbadie, the prize-giver, closed the contest. The crowd dispersed with immense satisfaction at the result, and Pelho was hugged and slapped and kissed almost to death by admiring friends.

During this time, the printed songs which had won the first and second prizes for written composition were handed round among the audience. These were "The Charcoal Burner on the Mountain," by P. Bidarrart of Baigorri, and a versified fable "The Wolf turned Saint," by Landondoberri of Sare—neither of them above the almost universal mediocrity of prize poems everywhere. WENTWORTH WEBSTER.

CORRESPONDENCE.

THOMAS WEDGWOOD.

London: Oct. 3, 1882.

Will you allow me to make your columns the medium of an announcement, to such as are interested in the fact, that some members of my family have discovered a box containing letters to, and MSS. by, Thomas Wedgwood, the friend of Coleridge, Godwin, &c., and that these are in the hands of persons competent to decipher and arrange them? We should be grateful if anyone who has papers or information tending to throw light on the history of Thomas Wedgwood (a person who excited some attention among his contemporaries) would allow us to see them; and my cousin (Mr. Arthur Wedgwood, 34 York Street, Portman Square) would take charge of, and faithfully return, whatever may be entrusted to him.

JULIA WEDGWOOD.

THE OCTAVO "BRECHES" NEW TESTAMENT OF 1575.

Huddersfield: Sept. 25, 1882.

I believe it has never been noticed, by any writer on the subject of early versions of the Bible, that the octavo New Testament printed by Tho. Vautroullier for Christopher Barker, 1575, differs not only from all other Geyevan and Tomsons New Testaments, but also from every other English version.

For example, the word "babe," which occurs so often in all other versions, is omitted, both in the singular and plural form, from the 1575 edition.

In S. Luke i. 41, King James's version of 1611 has—

"the babe leaped in her womb ;"

the 1575 reads—

"the childe sprang in her bellie."

The same in the 14th verse—

"the childe sprang in my bellie for joye."

In S. Luke ii. 12 the 1611 has—

"Ye shall find the babe wrapped in swaddling clothes, lying in a manger ;"

the 1575 reads—

"Ye shal finde the childe swaddled, and layd in a cratch."

The 16th verse the same—

"the Childe layd in the cratch."

Heb. v. 13—

"For every one that useth milke is inexperience in the wordes of righteousness : for he is a childe."

S. Matt. xi. 25—

"because thou hast hid these things from the wise and men of understanding and hast opened them unto children."

Rom. ii. 20—

"An instructor of them which lacke discretion, a teacher of the unlearned."

1 Cor. iii. 1—

"Even as unto Children in Christ."

1 S. Pet. ii. 2—

"As newe borne children."

It would be interesting to know by whom and by what authority the revision of this edition was made.

Should the title-page and colophon be lost, the above is sufficient to distinguish the 1575 from all other editions of the New Testament.

J. R. DORN.

THE ETYMOLOGY OF "KESTREL."

Cambridge.

The word *kestrel*, as denoting a base kind of hawk, occurs in Spenser, F. Q. ii. 3, 4; also, as *kastrel*, in Ben Jonson, Epicoene, iv. 4; and, as *castrel*, in Beaumont and Fletcher, Pilgrim, i. 1: see Nares. Mr. Wedgwood derives it from "Burgundian *cristel*, Fr. *crasserelle*, *quer-celle*, a hawk of a reddish colour;" and observes that "the G. synonym *röthel-weih*, from *röthel*, raddle or red chalk, points to an origin in G. *rod-crite*, creta rubra: Dief. Supp." This is not quite clear; but if it is meant that *kestrel* has anything to do with the Latin *creta*, the conclusion can hardly be admitted.

The exact Fr. form which produced the E. *kestrel* was rightly pointed out by Minshew as being *quercerelle*, whence *querc'celle*, *kes'cel*, and, finally, *kestrel*, with excrecent *t* after *s*, as in *amongst*, *whilst*, &c. Now *quercerelle* is for *quercelle*, the regular diminutive of *quercelle*, the original of which is, of course, the Latin *quercedula*, a kind of teal, as shown by Dies and Scheler. As to *quercu-edula*, it is of imitative origin, from the Aryan root *KARK*; cf. *croak*, *creak*, *chirk*, &c.: see Vaníček.

The Fr. forms are numerous. Cotgrave gives *quercelle* and *quercerelle* as meaning "kestrel;" *cercelle*, "a teal;" *cercerelle*, "a kestrel, also teal;" whence, by shifting of *r* (as in E. *bird* for *brid*), we have also *crecerelle*, "a kestrel," and the Mod. F. *crécercelle*, which Scheler explains as the diminutive of *crécelle*, a by-form of *cercelle*. The Mod. F. *crécelle* in the sense of "rattle" is referred by Scheler either to a supposed Latin form *crepiscella* (from *crepere*), or to the imitative root seen in English *creak*. The latter is the simpler solution, and helps to account for the shifting of *r*; cf. F. *croquer*, and observe how Cotgrave equates the words in explaining *crecerelle* as "a rattle or clack for children to play with, also a

kestrell," &c. And, after all, even the Latin *crepere* is from a base *KRAP*, which is practically a mere variant of *KARK*, and of similar directly imitative origin.

In the sense of "teal," the F. *cercelle* was frequently spelt *carcelle*, in which form it appears in Cotgrave as well as in Modern French. See further in Littré, under *crécelle*, *crécercelle*, and *sarcelle*; and in Diez, under *cerceta*, which is the Spanish form.

The Burgundian *cristel* is interesting as having a similar excrecent *t*. I have little doubt that there was also a Prov. F. *cristerele* in use as a diminutive form. The change from initial *cr* to *tr* (as in Icel. *trani* for E. *crane*) at once accounts for the Ital. *tristarello*, explained as "a kestrell" by Florio.

WALTER W. SKEAT.

"EUSKARIAN."

Bayonne: Sept. 26, 1882.

I do not object to the assertion in Mr. Grant Allen's letter (ACADEMY, September 16) that the Basque skulls are similar to the Neolithic, although I should hesitate positively to affirm it. The Basques are a very mixed people, and it is difficult to determine what their primitive type originally was. The current opinion among anthropologists now is, it is true, that the ancient Basque type was dolichocephalic. But is it demonstrated that this dolichocephalic type was identical with that of the various contemporary European races? And what proof is there that this identity should be restricted to the Neolithic ages, and not include the Palaeolithic also?

But, however this may be, I may add, as an apparent support of the assertion, that a few Basque names of instruments appear to be derived from the word "stone;" e.g., *aizkora*, hatchet, from *aiz*, *atz*, "rock, stone." This etymology is not mine.

I should nevertheless object to the generalisation of the term "Euskarian" as synonymous with "Neolithic" or "Palaeolithic." First, because such use of the word apparently implies the identity of all the races of the Neolithic age, which, at least from the linguistic point of view, is scarcely admissible. Secondly, because the word "Euskarian," as a characteristic term for a Basque origin, is too recent, and is hardly yet admitted into common use. It is a pedantic term, invented some forty or fifty years ago by local grammarians, with the mere object of avoiding the repetition of the one correct, popular, and historical term, "Basque." "Euskarian" is derived from *Euskara*, the original name of the Basque language, meaning, it is supposed, "the clear manner of speaking; the one true language." So that "Euskarian" would mean not "of the Basque people," but "of the Basque language," and is thus quite unsuitable as a general anthropological denomination. The word "Basque," on the contrary, would be perfectly suitable for the purpose, if only the identity of all Neolithic European races be admitted.

JULIEN VINSON.

London: Oct. 2, 1882.

A dolichocephalic short race is admitted by the best authorities, both in this country and in France, to have preceded the tall brachycephalic people, whose remains in Western Europe are generally found associated with bronze weapons; and the name "Iberian" (first adopted on craniological grounds by Dr. Thurnam) does not appear to be unsuitable.

It is one of the few "fixed points in British ethnology," according to Prof. Huxley, that these two races—one dark and the other fair—were in England when the Romans invaded this country; and it is something more than an assumption that there were similar populations

at that time on the Continent also. Mr. F. W. Rudler summed up the evidence on the subject in his able address at the Swansea meeting of the British Association in 1880 in this sense:—"As the Silures were to Britain, so were the Aquitani to Gaul; they were the dark Iberian element." And he quoted Strabo as stating that, "while the natives of Celtic and Belgic Gaul resembled each other, the Aquitanians differed in their physical characteristics from both these people, and resembled the Iberians" (British Association Reports, 1880, pp. 615, 616). Certainly the people about Brive and Limoges struck me, during a recent tour in France, as generally dark and short.

Dr. Beddoe, on examining the forms of the heads in the West of England, found that those which are ordinarily called brachycephalic belonged, for the most part, to individuals with light hair, the dark-haired people being dolichocephalic. He also found that the form of Dr. Broca's typical Basque cranium was very similar to the modern Silurian (South Welsh) head (Memoirs of the Anthropological Society of London, ii. 350-56).

It is worth mentioning that, in old maps of the world "as known to Herodotus," the inhabitants of that part of the Continent answering to Spain and about half of France are styled "Iberi," east of whom are the "Ligyes," with the Celts north of both peoples, very much as in later times.

As regards the linguistic difficulties, it should be remembered that language is no sufficient evidence of race; and in the Basque country there are evidently two types, one of which must have given its language to the other. They appear to be now much mixed.

J. PARK HARRISON.

Another correspondent writes:—

"I have just noticed the following passage in Larramendi's *Corographia de Guipuzcoa*, which ought to be decisive of the question whether the Basques are fair or not. Larramendi was a native of Guipuzcoa, the only province which is purely Basque, not having been occupied by the English during their domination in South-western France from the twelfth to the fifteenth century. Larramendi, writing in 1756, says:—

"Los hombres son de estatura regular, bien agestados, blancos, aun los que todo el año sufren los ardores del sol y las inclemencias del tiempo, como son los labradores."

"He goes on to say that the women are 'de vivissimo color'—ruddy or ruddy-cheeked, I suppose he means."

[It may be as well to remark that our own objection was not to the anthropological theory which identifies the Silures with the Iberi, but to the use of the word "Euskarian" for the supposed common stock.—ED. ACADEMY.]

UNIVERSITY COLLEGE, BRISTOL.

University College, Bristol: Sept. 27, 1882.

In the ACADEMY of September 23, under the heading "Science Notes," you have inserted a paragraph calling attention to University College, Bristol, for which we owe you our thanks. You point out, what is perfectly true, that extensive arrangements have been made for the study of medicine and applied science. Then follows your next sentence:—

"But we fail to see that equal attention is paid to liberal studies; and, under these circumstances, we cannot share in the regret that the college has no foundation. Applied science does not need endowment."

These remarks are entirely erroneous. The Literary Department, buildings for which are already provided, embraces, as you will see by the accompanying *Calendar*, instruction in the

classical languages, Hebrew, English history and literature, French and German languages and literature, moral philosophy, political economy, and mathematics; and the council would be very pleased to enlarge this curriculum had they sufficient means at their disposal. With the exception of the chair of political economy, for which Balliol College, Oxford, provides endowment, all of these chairs depend on annual subscription for their support. That the public do not agree with the substance of your last sentence—viz., that “applied science does not need endowment”—is shown by the fact that the chairs of chemistry and engineering have lately been endowed for a limited time, the former by the Clothworkers’ Company, and the latter by the Anchor Society of this city. As a proof that due attention has been given to the claims of literature, it is only necessary to point out that these departments were provided for by the erection of the first portion of our permanent buildings, that they are attended by a large number of female as well as of male students, and that the excellence of the teaching is attested by the number who pass the Higher Local Examinations of Cambridge University. In these classes some permanent endowment is essential if the work is to be carried on with satisfaction, but I need only refer to the comparatively inexpensive nature of their requirements with those of the scientific departments to prove the fallacy of your last statement.

W. RAMSAY (Principal).

[We willingly print the above explanation for what it is worth. But, for ourselves, we cannot admit the inference that, because applied science has been endowed, therefore it needs endowment. Again, teaching up to the standard of the Cambridge Higher Local Examinations is not precisely what we meant by “liberal studies.”—ED. ACADEMY.]

THE “RECORDS OF THE SOCIETY OF JESUS.”

Bottlesford Manor, Brigg: Sept. 30, 1882.

In my review of the *Records of the English Province of the Society of Jesus* (ACADEMY, September 9, p. 181) I suggested that in some instances the author had withheld exact information as to the birthplaces of a few of the members of the Society of Jesus whose lives he has written. In this I was undoubtedly mistaken. Mr. Foley writes that,

“Regarding the places of nativity, not a single one has been intentionally omitted to the best of my recollection? Well knowing the importance of such information, I have been anxious to obtain the fullest particulars; but, unfortunately, the writers of the old Catalogues and MSS. which I have used are generally satisfied with giving the county alone.”

EDWARD PRAOOCK.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, Oct. 9, 7.30 p.m. Aristotelian: Presidential Address by Mr. Shadworth H. Hodgson, “The Method of Philosophy.”

WEDNESDAY, Oct. 11, 8 p.m. Microscopical: “Observations on *Staphylococcus*,” by Mr. T. B. Royster; “Some Swiss Jurassic *Varicose* of *Trechamnina incerta*,” by Dr. E. Haemeler.

FRIDAY, Oct. 13, 8 p.m. New Shakespeare: “Julius Caesar,” by Miss E. H. Hickey.

SCIENCE.

LENORMANT’S EARLY BIBLICAL HISTORY.

Les Origines de l’Histoire d’après la Bible. By Fr. Lenormant. Vol. II. (Paris: Maisonneuve.)

Those who have read the first volume of M. Lenormant’s work on the earlier chapters

of Genesis will have looked forward eagerly for the second. This now lies before us, and is marked by the same powers of clear exposition, extensive learning, and ingenious combination. If it is not so interesting as the first volume, the fault lies with the subject-matter, not with the author. The site of Paradise, the three sons of Noah, and the descendants of Japheth according to the tenth chapter of Genesis are the questions which fill a volume of more than 500 pages.

While the book was passing through the press, Prof. Delitzsch’s attempt to localise the Garden of Eden in Babylonia appeared. In noticing this work in the ACADEMY, I expressed my agreement with the theory it advocated—a theory, in fact, which had already been defended by Sir Henry Rawlinson and myself. It will, therefore, be readily understood that I find myself unable to agree on this subject with M. Lenormant, who seeks to show that the primitive Eden lay where Zend tradition placed it, in the high lands of the Hindu Kush, and was only subsequently adapted to the geographical conditions of Babylonia. I confess that I can see neither trace nor possibility of contact between the early Aryans of the far East and the Accadians and Semites of the Euphrates Valley until that later age when Phœnician ships traded to Ophir and the Assyrian monarchy came into conflict with the Medes in the ninth century B.C. What resemblances there may be between the account of Paradise as we have it in Genesis and the traditions of the Persians seem to me far more likely to have been due to borrowing on the part of the latter, after the overthrow of the Babylonian empire, than to their derivation from a common origin. Otherwise I do not understand why they should have been known only to a few members of the Aryan and Semitic families. Moreover, the express mention of the Tigris and Euphrates among the rivers of Paradise, coupled with the Babylonian colouring of other portions of the Jehovistic narrative in Genesis seems to point plainly to the true source from which the Biblical account has been drawn.

In common with many others, however, M. Lenormant feels a difficulty in regard to the much-debated expression in Genesis which is rendered by the Authorised Version: “and from thence (the river) was parted, and became four heads.” But I think I can throw some light upon this from the cuneiform documents. In *W. A. I.* ii. 51, 45–49, the River Innina is explained to be “the snake-river,” “the river of the rope of the great god” (Hea), “the river of the great deep;” and “the snake-river” seems to be equivalent to “the river of the snake god,” since, in the line preceding that in which it is named, the Uruttu, or Euphrates, is said to be “the encircling river of the snake-god of the tree of life.” Now, in early Accadian mythology, the mouth of the Euphrates was identified with the river of death, which encircled the earth like a serpent, and beyond which lay the home of the gods and heroes. The Okeanos of Homer had, I believe, its origin in this Accadian river which coiled itself round the world. It was usually termed “the deep,” and as such was the dwelling-place of Hea, the god of waters and of wisdom,

whose symbol was the snake. Like the serpent Vāsuki in the Mahābhārata, by means of whom the sea was churned, the snake of Hea was also “the rope of the world” (*W. A. I.* ii. 29, 62), a phrase which irresistibly reminds us of the golden chain which Zeus challenged the gods to hang from the sky. The Euphrates was thus a representative of the heavenly river which surrounded the earth; and, as the rivers of the four regions of the world were fed by the latter, the Euphrates, its earthly antitype and microcosm, was similarly regarded as feeding the other rivers and canals of Babylonia. “The snake-god of the tree of life” must be connected with that Chaldean account of the Fall which is yet to be discovered; but the tree of life to which he belonged was planted in the heavenly Paradise, not in its sublunar representative on the banks of the Euphrates. It was only when the heavenly Paradise was localised in the Babylonian Eden that Babylon, “the gate of God,” the old Accadian Ka-dingira, came to be entitled “the city of the tree of life.” This tree of life is elsewhere called “the pine-tree (of Eridu),” “the shrine of the god Irninu.”

The space at my disposal prevents me from even touching upon the many interesting points which are suggested by M. Lenormant’s book. There is hardly a page from which we cannot glean some new fact or point of view. Naturally, it is not possible to be always of one mind with the author, or to accept all the conclusions he puts before us. The etymology of Deukalion, for instance, which he adopts cannot be right. The word is a patronymic, like other epithets of the Sun-god, such as Hyperion and Apollon, and is formed from Deukalos. The latter name has the same origin as Poly-deukēs, and possibly Odysseus, and means “the bright one,” just as the Homeric δδευκός is conversely the “inglorious.” The geographical position, again, which I should assign to Ashkenaz is different from that for which M. Lenormant contends. In Jer. li. 27, Ashkenaz is associated with Ararat, Minni, and the Medes; and, as it is mentioned between Minni and the Medes, we should naturally look for it on the eastern frontier of Assyria. Now it is just here that Sargon places a country of Asguza, with which I am strongly inclined to identify Ashkenaz. Ararat extended eastwards of Lake Van, and, as we learn from the Vannic inscriptions, adjoined the Minni, who lived on the south-western side of Lake Urumiyeh. If Asguza is Ashkenaz, the prophet would describe the invaders of Chaldaea in geographical order—first Ararat, then Minni, next Ashkenaz, and finally Media, of which Kyros made himself master before advancing upon Babylonia.

I hope it will not be long before the third volume of M. Lenormant’s work appears. The further discussion of the ethnological table of Genesis and the account of the confusion of languages open up fields of research which none can treat with a more genial or competent hand.

A. H. SAYCE.

FOREIGN TRANSLATIONS OF THE S.P.O.K.

The Foreign Translation Committee of the Society for Promoting Christian Knowledge has issued the following works during the past year:—

Boondei. Collections for a Handbook, by the Rev. W. H. Woodward.

Luganda. An outline Grammar, by the Rev. C. T. Wilson.

Yao. Portions of the Prayer-book.

Swahili. The Alphabet on a large sheet.

Yoruba. The Book of Common Prayer.

Malagasy. The Book of Psalms.

Florida. Portions of the Prayer-book.

Isabel. Portions of the Prayer-book and Scripture Readings.

Maori. An Outline of Scripture History.

Hawaiian. A Book of Hymns.

Zimshian (British North America). Portions of the Prayer-book.

Chipevyan. Portions of the Prayer-book.

Telugu. Paley's *Evidences of Christianity*, translated by the Rev. J. E. Padfield.

Urdu. A Commentary on the Acts of the Apostles, by the Rev. R. Clark and the Rev. Imaduddin.

Persian. The Book of Common Prayer.

The Committee have also in the press or in preparation the following works:—

Susu (the Pongos Mission, West Coast of Africa). The New Testament.

Ibo and Mendi (in the neighbourhood of the Niger, Western Africa). A Vocabulary and Grammar respectively. The Ibo Vocabulary was drawn up by Bishop Crowther, and the Mendi Grammar by the Rev. J. F. Schön, who is seeing both works through the press.

Persian. A short Bible History.

Turkish. The Book of Common Prayer.

Ojibwa. The Book of Common Prayer.

Hawaiian. The Book of Common Prayer.

Boondei. The Litany, &c.

Arabic. The Book of Common Prayer.

Urdu. A Version of forty-four Sermons in Bishop How's *Plain Words*; and *The Spring of Life*.

Kashmiri. The Book of Common Prayer.

Japanese. The Book of Common Prayer.

Maori. A short Explanation of the Prayer-book. A Compendium of Church History. A Guide to the Old Testament, and an Explanation of its Difficulties.

CORRESPONDENCE.

THE YIH KING.

London: Oct. 2, 1882.

Will you allow me to say a few words in reply to Dr. Legge's letter of the 19th ult.?

I fear that he has not done me the honour of reading my review of his Yih King attentively, or else I cannot understand how he can say, as he does, that "Prof. Douglas seems to allow at last that the text is that of king Wán and his son." My recent studies have led me to exactly the opposite conclusion; and the main drift of my review was to prove that the text was not written by either king Wán or his son.

Dr. Legge further says that, in my version of the vocabulary of which chap. xxx. of the Yih King consists, I have translated it by bringing out the "definition of about twenty different characters." This, also, is a mistake. In each case, as I pointed out in my review, the character (Lo) is the same, with the addition, however, of subsequently added apophony determinatives.

But Dr. Legge directs his main attack on my extract from Lo Pe's History. And here again he appears to be under the erroneous impression that I referred to Lo Pe as "a critic of the first rank." Whereas I merely mentioned his views as incidentally supporting my own,

which have been derived from the internal evidence afforded by the text, and not from the opinions of Chinese writers.

Dr. Legge further attempts to minimise the weight of Lo Pe's evidence by quoting against him a disparaging criticism from the *Manual* of the late Mr. Mayers. But another and an even greater authority on Chinese literature, Mr. Wylie, gives a more correct view of his writings when he says: "The historical portion is considered of little value, . . . but there is a good deal of learning shown in the geographical and critical parts." It is from the critical part that I have taken my extract.

But Dr. Legge finds fault also with the inadequacy of my translation of the quotation given. I can only say that I adhere to my rendering, though it differs from his own; and I cannot be but surprised that he should have suggested that in one passage I may have exchanged one character for another in presence of a difficulty of translation. I can assure him that I should never vamp up a text, whatever may be the difficulties in my way.

Dr. Legge congratulates himself that his translation is in accord with the views of many generations of Chinese writers. I quite admit it; and my contention is that the result of his accord has been the production of an unintelligible volume.

On the other hand, I contend that, when M. Terrien de La Couperie and myself shall have completed our translation of the Yih King in the sense in which I have rendered chap. xxx., there will be shown to be in it far more knowledge, and infinitely more practical wisdom, than the Chinese have any idea of.

ROBERT K. DOUGLAS.

THE PSYCHOLOGY OF BUDDHISM.

Berlin: Sept. 12, 1882.

My attention has only just been called to a review of my *Der Buddhismus in seiner Psychologie* by Dr. Rhys Davids in the *ACADEMY* of August 26, p. 154.

While I venture a few words in reply to so well known an authority, I am chiefly prompted to do so by the esteem I bear him, and by the wish to get profit from his criticism. Till now this has turned out severe enough; and it would be just also, every word of it, if the book condemned had professed to be a text-book on Buddhist psychology. Far from such pretensions, my book aims at being but one more attempt, after a long line of predecessors, to collect the materials which lie scattered over the world and through history, and are often bewildering even to ethnological eyes. But for this there is here neither occasion nor place, beyond the remark, already made, that the book is primarily concerned with comparative psychology, taking the data occasionally furnished by Buddhism as its starting-points. If so, the question may be asked, Why place Buddhism prominently on the title-page, and lead critics astray by a false sign?

Here a confession has to be made, for which I crave pardon. The deceptive sign was hung out intentionally, to allure the attention of Buddhist scholars. Since my return from my travels through Further India in the years 1860-64, the Buddhist materials collected during my stay at Mandalay and in Siam had remained unpublished. So I thought to avail myself of an opportunity that offered, and give part of them to the public. Of the danger I had to run in acting thus I was not unaware. Buddhist studies are at present entrusted (to their great benefit) to a body of learned specialists, who form a splendid array of shining lights, illuminating the darkness of ancient lore. And, for my part, I am neither a Sanskrit nor a Páli scholar, as I have always openly declared (*Der Buddhismus*, pp. 337, 360), and, as I may

add, always regretted. But ethnology, which calls to Africa to-day, to North or South America to-morrow, to Polynesia, Australia, or wherever else, does not leave leisure for every language; there are too many in five continents. Among the languages of Eastern Asia, I am acquainted only with Birmanese and Siamese sufficiently to translate the vernacular books, and to talk with the monks in the convents which I passed on my voyages on the Irawadi and the Menam. Turning these conversations mostly to the Abhidhamma, I learned a good deal about the psychological conceptions of modern Buddhists. The hope then came to me that our Buddhist scholars, who, through the prevalence of the Jataka texts (or the Suttapitakam in general and Vinayapitakam) in European libraries, cannot expect much psychology in their reading, might perhaps be interested in popular notions, taken, not from the treasures of classic languages, but from the humble vernaculars. I now see that, by fitting in these original materials here and there in my book, they have been so greatly disguised as to be overlooked even by experienced eyes. The critic has only hard words for my bad transcriptions; and, in regard to these, I am always afraid (knowing my own deficiencies best) to be weighed in the philological balance. But, in this present case, the difficulty of understanding the passage quoted lies in the mistake of referring to the name of the Sutra (Saggitī, not Sangitī, in this canon of transcription) what rightly belongs to the philosophical term, the Vimukti (Vimutti) or Vimoksha (Vimokkha), being brought up to five (from the śryāni satyāni or ariyāni satoṭṭhāni) by Paripāṭhanīya saññā. As an ancient standard work on Buddhism (whose pages formerly used to be familiar to every reader) returns in several of its chapters to the discussion of these terms, I had thought that I might be short, and speak in parentheses. For shortness' sake, also, I leave alone the other mistakes; the last of the "three blunders," and in reality the only one remaining, being due to negligent revision of the French. Instead of this kind of polemic, I prefer to call the attention of Buddhist scholars to some points which appear to me not to have received due attention, though in some respects they may be regarded as turning-points of the whole system. For, I repeat, the main features of Buddhism are psychological.

1. The part played by the Chetasiika in forming the new existence (with the first rising of the Saṅkhāro out of Avijjā), as well as during the actual existence in their close connexion with the Chitr (Cittam). The conception of their way of working supplies the key for understanding the doctrine; but, apart from a short mention of the "tsedathit" (Chetasiika or Chetasiik) by Bigandet, they are hardly anywhere referred to in Buddhist handbooks (as far as known to me), not even in Childers' valuable storehouse (except the adjective Cetasiko).

2. The Chuti-Chitr (Outi, vanishing) for the Karma to work the future existence out of the former one by transmigrating in the Patience-Chitr (Patiandhi), as explained in the Abhidhammatthasangaha.

3. The Aromana (ārammanam) is to be looked for in vain in most Buddhist handbooks, except as shortly alluded to by Hardy and Alabaster; and by Childers it is discussed rather in connexion with the Kammatthana—meditation. Whereas they form the moving spring of the whole development, Dhamma (Dharma) being the Aromana of Mano, in Nirvana, as Asaṅghara-Ayatana. Thus it was in the treatise I received from the hands of King Mongkut himself, who is no mean authority in Buddhist philosophy.

4. About Nirvana discussion has often waxed warm since entire satisfaction in "extinction

or annihilation" began to fail. But already, at a time when all was lulled in the *opore pacis* of Nirvana, as meaning "nothingness," a protest was entered against that view in my books. Nirvana (as I have since repeated on several occasions) appears in its own home as just the contrary of what European scholars and philosophers have tried to make it. The opposite of Maya (the negation of negation) must constitute the true reality, to be conceived as "Grenzbegriff" in modern terminology. Quite recently many illustrations have been given of this obscure point, and many new elucidations added; but I have seen no reason to change the views which I formed sixteen years ago. Dr. Rhys Davids, in his latest work (1880), fixes Nirvana as "moral condition." Good authority for this, if it were needed, could be given from the various explanations noted down in my diaries; whereas at other times they ran out in the "jewelled realm of happiness," and other descriptions of indescribable bliss in Moksha or in the more material picture of a Myang Niphan. But in prolonged conversations with philosophical minds (as, for instance, the abbot of the Vat Borommanivet) the aspect was changed, and the whole became a great evolution theory in the concatenation of moral and physical forces under the governing laws of Phra Tham (Dhamma or Dharma). It is not my concern here which of these different explanations be the true one (though what is absolutely true, after all, in the vacillating opinions of schools?); but I cannot get rid of the personal impression that Buddhism, as rooted in its psychology, must be understood psychologically in order to reach its genuine character.

My object in the above publication was only to lay before the masters in the field of Buddhist research some contributions from an out-of-the-way place gathered by a casual explorer. Considered by themselves, they cannot be void of all value, for they were taken from pure sources—in the interior of Buddhist countries, from the lips of the teachers or from their every-day books, so as to represent the ideas prevailing there at present.

To save, however, valuable time, which might be lost in trying to pick up "the few grains of wheat" among what must appear superfluous chaff from a strictly philological point of view, I shall avail myself of my next leisure to gather them in a condensed form, and present them to the kind consideration of those whose opinions are of value in the questions suggested—to philologists on the one hand, and to ethnologists on the other.

A. BASTIAN.

NOTES OF TRAVEL.

MISS C. F. GORDON CUMMING'S new book will be entitled *Five Fountains*. It will be published by Messrs. Blackwood, in two volumes, with a map and numerous illustrations.

MESSRS. JUTA, HEELIS AND CO. announce for immediate publication a new story of life in South Africa. The title of the book is *The Farm in the Karoo*. As the author, Mrs. Carey Hobson, has resided for many years in the eastern province of Cape Colony, the descriptions of scenery, natural objects, and manners may be relied upon for accuracy; and the incidents related are founded on fact.

THE books of travel announced by Messrs. Bentley include *In the Land of Misfortune* (presumably South Africa), by Lady Florence Dixie, with illustrations by Major Fraser and Capt. O. F. Beresford; *In the Land of Schamyl*, by Mr. Philippe-Wolley; *In the Black Forest*, by Mr. Charles W. Wood; and *Brighter Britain: being a Description of Life in Northern New Zealand*, by Mr. W. Delisle Hay.

SCIENCE NOTES.

A PAPER read a short time ago before the Birmingham Philosophical Society by Mr. W. Jerome Harrison, and recently reprinted from the society's *Proceedings*, deals with a subject of considerable interest to geologists in the Midland counties. It is well known that pebbles of quartzite are abundantly scattered through the drift of the Midlands; but their original derivation is matter of great uncertainty. It is true that from their lithological characters, and from the fossils which they contain, we may fairly infer that the pebbles were immediately derived from the conglomerate which forms the middle member of the Bunter Sandstone or Lower Trias; but there still remains the question, What was the origin of the materials of this conglomerate? To this question several answers have at various times been given. In the present paper, Mr. Harrison argues with much skill in favour of the derivation of these pebbles from the quartzites in the palaeozoic rocks which, during the Triassic period, stretched as a broad ridge or land axis across Central England, connecting, as by an isthmus, the old rocks of the Eastern area with those of Wales. It should be noted that with the origin of the quartzite pebbles of the Midlands is bound up the vexed question of the parentage of similar pebbles at Budleigh Salterton, in Devonshire.

WE understand that Dr. Bowman's *Intermediate Text-book of Physical Science*, which has been prepared to meet the want indicated by Prof. Huxley for a suitable class-book for students at night-schools, mechanics' institutions, &c., will be published in a few days by Messrs. Cassell, Petter, Galpin and Co.

AMONG the works about to be issued by Messrs. W. Collins, Sons and Co. are the following:—*Hydrostatics*, by J. T. Bottomley; the second volume of Collins' *Mineralogy*, dealing with Descriptive Mineralogy; *Algebraical Examples*, for lower forms, by E. Atkins; and *Animal Physiology*, by Mrs. F. Fenwick Miller.

WE learn that the interesting series of ethnographic masks and busts modelled in plaster by the brothers Schlaginweit from living specimens of various races in British India, Thibet, Central Asia, Morocco, and North America has been reproduced both in zinc and plaster under the personal superintendence of the surviving brother. The Asiatic section of the collection includes 275 masks; and among these are Hindu and Mussulman types from India, Buddhist and Mussulman types from Thibet, and Moghul faces from Central Asia. The casts from Morocco are twenty-six in number, consisting of twenty-one masks and five busts, taken by Eduard Schlaginweit during the Spanish expedition of 1859-60. There are also nine masks modelled by Robert Schlaginweit from North American aborigines. It is said that the execution of the casts is faultless, exhibiting the slightest roughness of skin in the originals. They are being sold by Johann Ambrosius Barth, of Leipzig; the price of the entire series in metal is 7,216 marks, and in plaster 1,241 marks.

PHILOLOGY NOTES.

WE are glad to see that the Gaelic Union (which, it may be as well to premise, is not a Scottish, but an Irish, society) at last feel themselves justified in announcing a periodical to be devoted exclusively to the cultivation of the Irish language. It is to be a monthly, printed partly in English, partly in Irish, with (it is hoped) a gradually increasing proportion of the latter. The contents are to be miscellaneous—

prose essays, original poetry, notes and queries, proverbs, &c.—but all aiming at one end, the furtherance of the Gaelic movement. Surely the Irish can do in this matter what the Finns have done. The address of the Gaelic Union is 19 Kildare Street, Dublin. Its patron is Archbishop Croke; its president, the O'Conor Don.

MESSRS. TRÜBNER propose to re-classify certain of the volumes published in their "Philosophical Library" and their "Oriental Series" under the new title of "The Great Religions of the East." No less than twenty-six volumes are at once included in the new series; and, among those announced as in preparation, we are glad to notice a translation of the second volume of Prof. Tiele's *Comparative History of Ancient Religions*, which will be classed under "Assyrian." We must observe that it is only by some new process of "orientation" that Dr. Hahn's *Tsunt-Igoam* is included in this series.

THE new volume in Messrs. Trübner's collection of "Simplified Grammars" is *Hungarian*, by Ignatius Singer, of Buda Pesth. Among the other announcements in this series we should prefer to see "Finnish" substituted for "Finnic."

M. EMILE CHATELAIN has received a mission from the French Government to examine the principal Latin MSS. in the public libraries of Italy and to prepare photographic facsimiles of them. In especial, he is to collate the MSS. of Sidonius Apollinaris, a Christian writer of the fifth century.

WE take the following from the *Revue critique*:—M. Dieulafoy, civil engineer, has given an account to the Académie des Inscriptions of some of the results of an archaeological mission in Persia which had been entrusted to him by the Government, its object being the study of the monuments of the Achaemenian and Sassanid dynasties. He has interested himself chiefly in two monuments situated in the plain of Polvar-Rûd, to the north of Persepolis, near the villages of Meshed-Muzzab and Madereh-Suleiman. The place has been regarded as the site of the ancient Pasargadae, where, according to tradition, Cyrus was buried. M. Dieulafoy combats this opinion, and recognises in the plain of Polvar-Rûd the spot where Cyrus vanquished the forces of Astyages, his grandfather, and where Cambyes, his father, was slain and buried. Cyrus had begun in this place the building of a city which he wished to make his capital. M. Dieulafoy attributes to him one of the two edifices which he described to the Académie—that, namely, which bears the name of Takht Madereh Suleiman, or "Throne of the Mother of Solomon." It consists of immense substructures formed of colossal blocks of stone, but never finished, which remind us of the most ancient Greek monuments like those of Segesta or Selinus, and appears to have served as the model of the great terrace of the palace of Persepolis. As for the edifice of Meshed-Muzzab, a square tower, like the Lycian tombs, M. Dieulafoy thinks it belonged to Cambyes himself. The capital Cyrus wished to found must have received the name of Parçakarta ("city of the Persians"), Persepolis in Greek, a title of honour which belonged to every capital of the country, and was afterwards transferred by Darius to the town founded by him eighteen miles to the south of the other. It is this name of Parçakarta which the Greeks confounded with that of Pasargadae—a confusion which gave rise to the error mentioned above.

THE first two bi-monthly numbers have appeared of a *Bulletin de Correspondance africaine*, having for its sub-title "Antiquités libyques, puniques, grecques et romaines." The greater

numbers of the articles are devoted to Roman inscriptions and the ruins of Roman towns. The editor is M. E. Masqueray, directeur de l'Ecole supérieure at Algiers.

THE announcements of Herr Teubner, of Leipzig, include a Lexicon Pindaricum by Dr. J. Rumpel; and a continuation of Dr. A. von Velsen's critical edition of the Plays of Aristophanes.

FINE ART.

GREAT SALE of PICTURES, at reduced prices (Engravings, Chromos, and Geographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—GEO. REES, 115, Strand, near Waterloo-bridge.

Ancient Marbles in Great Britain. By Prof. A. Michaelis. Translated from the German by C. A. M. Fennell. (Cambridge: The University Press.)

THE private collections of ancient sculptures in this country lie in so many different quarters, and often so far apart, as to make an acquaintance, if it were only with the chief of them, a matter of some difficulty. Nor was it hitherto the length of the journeys that was the sole obstacle. There was no regular source from which information could be obtained as to what was really to be seen when all was done. Some of the sculptures were known from engravings in the *Specimens* of the Dilettanti Society or in *Clarac*, from descriptions in Dallaway's *Anecdotes* or from notes communicated by German students who had visited certain of the collections. But a knowledge of a great part of them lay hid in private catalogues, or did not exist at all. Occasions were constantly arising when it was necessary, in the pursuit of some theory, to find a more accurate description of this or that statue; and the possibility that here or there sculptures of the highest importance might be lurking entirely unknown was becoming oppressive. It was in these circumstances that Prof. Michaelis undertook the laborious task which he has accomplished in this large volume.

For such a task it was required, above all, that whoever undertook it should possess the full confidence of archaeologists in regard to his judgment, so rare are the opportunities of comparing the descriptions with the sculptures themselves. It was a work which, if done at all, should be final. In this respect the qualifications of Prof. Michaelis were beyond dispute; and, in the arduous labour of examining these collections far and wide, it must have been satisfactory to him to know that his judgment would be relied on, and that in future no one need be in the dark as to what exists or does not exist in them. Where he was unable to visit and personally inspect the sculptures of a collection his descriptions will retain the imperfections, if there were any, of the sources from which they are drawn; but these cases are comparatively few and unimportant. Possibly, also, there are still in country houses statues and busts entirely unknown to him. Yet, on the whole, his great volume may be confidently accepted as a critical catalogue of the private sculptures of this country. It is, in fact, much more than a catalogue, even in the German sense of what such a thing should be, with masses of information heaped from all quarters under

each item. That alone would have been laborious enough. It is at the same time a history of the formation of these collections of ancient sculpture. By keeping this well in view the author has added a charm to his book which its mere archaeological value would not have created. The introductory sketch is so full of interest that, with all its great length, it is yet too short. It is only in regard to a few of these collections that I am able to speak to the accuracy of Prof. Michaelis. But probably what is true of them is true of the others also. Here and there trifling alterations might be suggested, errors corrected, or additions made of objects that have been overlooked.

The advantage of a complete catalogue of the sculptures in this country—including, as they do, many specimens that enter largely into archaeological discussion—appears to have been duly appreciated by the authorities of Cambridge, if we may judge by the elaborate care which, at their instance, has been bestowed in bringing out this book. Not that it is faultless in the bringing out. Where there is so much that demanded incessant attention to painfully minute details, slight mistakes could easily escape notice. The translator, Mr. Fennell, has evidently had an up-hill fight in the conversion of technical terms from German into their English equivalents. That may have been unavoidable, and such faults as there are of this kind do not matter much. It is to be regretted, however, that, accustomed as we suppose him to be to translate from classical languages, and particularly from writers famous for style and pith of expression, he has too frequently overlooked the fact that the language very properly employed by Prof. Michaelis for dry archaeological details cannot be treated like a classical author. The result is that words and phrases are constantly wasted which on other occasions would be vigorous and forcible. To confine ourselves for examples to p. 561, we notice "the terminal portion of a skirmish;" a figure of Cybele with "a lion right across her lap;" "quite in advance is a boy in an apron." "Quite" is a favourite word with Mr. Fennell, as with some others. But his "quites" and "rights" are out of place in this kind of literature. The general tone of the translation is too often worked up to them.

The illustrations are few, and not unsatisfactory, if we except the terra-cotta belonging to Mr. Cook at Richmond Hill. The mention of this collection reminds us that Prof. Michaelis has sometimes included in his catalogue objects which do not come under the head of marbles, from a desire to convey information, in passing, which may be useful to some student. In thus going beyond the proper limits of his task, he may produce an impression of having dealt also with most of the minor objects of antiquity in private possession in this country. That would be incorrect. This, however, and other matters which we might wish to have been altered must not affect our conclusion that Prof. Michaelis has done a most useful piece of work. It has been arduous, no doubt; yet far less so to him than it would have been to any other. He has made it attractive in many ways.

A. S. MURRAY.

THE COPTS OF EGYPT AND THEIR CHURCHES.

II.

THE principal churches within the walls of the Kasr-es-Shemmah are these:—(1) Abou Sergeh (St. Sergius, martyr in reign of Maximianus); (2) El Moallaka, "the suspended church," so called from its being built on the old Roman towers, high above the ground; (3) Kedeeseh Berbera (St. Barbara, martyr in reign of Maximianus); (4) Sitt Miriam (the Virgin Mary); (5) Mari Girghis (St. George); (6) El Adra (the Virgin); (7) St. Michael (now the Jewish synagogue); and (8) St. George (a Greek church).

The most interesting, perhaps, of these is the church of Abou Sergeh, both from its early date and from its being, in all respects, a good typical specimen of a large Coptic church, but little altered, and in a very good state of preservation. The appearance of the exterior is in no way remarkable, as is the case with all Coptic churches. It is a plain, rectangular building about 100 feet long and 60 feet wide, without buttresses or anything to break the monotony of the surface. Its walls are pierced by no windows; and the only openings to admit light are two triangular windows fitted with wooden lattice-work, which fill up the spandrels of the nave roof at its east and west gables. The only entrance is by plain square-headed doorways at the west end. It is built, like other Coptic churches, of small hard bricks, brown in colour, shaped, not after the Roman tile-like fashion, but like a modern English brick, only smaller. It is orientated a little to the south of east.

The general plan is this:—A central nave, with an eastern apse, and a narthex, or vestibule, at the west. A south aisle, with an apsidal chapel at the east end, and a north aisle, with a square eastern chapel, and another chapel at the west end, originally the baptistery.

This general plan is one which has been largely adopted for the early basilicas both of the Eastern and Western churches. Examples very nearly identical in form and date with this Coptic church are to be found in great numbers among the early Christian churches of Central Syria (see Count de Vogüé, *Syrie centrale*)—as, for instance, at El-Barah, Baqouza, Quab-Louzeh, and Tourmanin; all these churches have an apsidal nave, aisles with eastern chapels, and a western narthex. They are of the sixth and seventh centuries in date. The resemblance, however, between the Syrian and Coptic churches extends no further than the plan. All those above named are built of large, carefully worked stones, generally have arches with wide spans, and always have numbers of windows and a considerable amount of external decoration. At Constantinople the church of St. Irene has a similar plan, and at Cassaba, in Lycia, and St. Nicholas at Myra, we find a plan originally the same, but further developed by the grouping of additional chapels and porches round the west end. Western examples are not less numerous. To take a few from among the churches of Rome, we may note San Niccolò in Carcere, San Giovanni by the Porta Latina, San Pietro in Vincoli, Santa Sabina, and Santa Agnese fuori le Mura, all of which were originally almost exactly the same in arrangement as the church of Abou Sergeh, though in some cases later alterations have modified the old plan.

It is difficult, if not impossible, to come to any decided opinion as to the date at which this church was built. Setting aside the screens and other fittings, which are all much later than the main structure, there is little in the way of carving or ornament of any kind to assist in fixing the century to which the church belongs; nearly all the columns and richly carved capitals

are fragments taken from earlier Roman buildings, and thus afford no clue. On the whole, judging from the appearance of the nave arcade, and the semi-classical style of those few carved caps which appear specially made for their position, I think we shall not be far wrong in assigning this church to the eighth century, in spite of the Coptic tradition which declares its founding to have been two centuries earlier.

The nave arcade has six pointed arches on each side, which rest on a continuous wooden beam or architrave, supported by columns of white marble, with semi-classical carved capitals and moulded bases. The wooden beam is enriched with delicate carving and painting, arabesque patterns, and inscriptions partly in Coptic, partly in Arabic. On most of the columns, about four feet from the ground, is a small incised "consecration cross." The marble shafts have been further decorated with paintings of figures of saints, life-size, but now almost destroyed by age. The design of this arcade, a common one in Coptic churches, is very interesting as showing a transition from the trabeated to the arched form of construction. The arches are very timidly used; they are much less in span than the distance from column to column, so that a great part of the wall above rests on the wooden architrave. The various stages of development were these:—*First*, the purely trabeated construction, as in a Greek temple, with its massive architrave and close inter-columniation. *Second*, a wider inter-columniation, which, by giving a longer bearing to the architrave, weakened it, and so created the necessity for a relieving arch above. This form exists in many Roman temples. *Third*, as in this church, the architrave is still retained, but the relieving arch above it is pierced. A Western example of this may be seen in the church of Santa Maria in Trastevere, Rome. *Fourth*, the architrave is done away with, and the arch springs boldly from pillar to pillar, as in a Gothic church.

Above the nave arcade of Abou Sergeh is a row of openings, supported by slender marble columns. These open into a large triforium, or upper series of chapels, which are over both the aisles, and also over the narthex at the west. In some cases this upper floor extends over a very large area, and contains a vast number of small chapels, each with its altar, and surrounded by graceful lattice-work screens. In this church, as in many others, the openings into the nave have been built up, and the whole of the upper floor made into dwelling-rooms for the priests and their families. To some of the rooms *mushrabyehs*, or lattice-work windows, have been added, and these project into the church in a very picturesque, though rather incongruous, manner. Judging from the analogy of the earliest Western basilicas, such as Sant' Agnese and San Lorenzo outside Rome, it appears probable that these spacious upper floors over the aisles were originally intended to be used as a "matroneum," or place from whence the women could join in the services, below without being seen by the male part of the congregation. This is not, however, the modern Coptic custom—part of the west end of the nave is reserved for women, and screened off from the rest of the church.

The church of Abou Sergeh, like most others of the Copts, has a high-pitched open roof over the nave, with tie beam and queen posts, pinned together entirely with wood, no metal being used. The aisles have flat roofs, and all are covered with cement instead of tiles or slates. The sanctuary and eastern chapels have domes. The sanctuary, or Hêkel, consists of the space in the eastern apse, screened off by a high close screen, or iconostasis. Round the apse are tiers of white marble seats; and in the centre, a little higher than the rest, the *cathedra*, or bishop's throne, recessed in a niche

with a pointed arch, enriched with very beautiful minute mosaic work in marble, mother-of-pearl, and coloured enamels. All round the back of the seats the wall is panelled with marble to a height of several feet. This arrangement was common to all the early basilicas of Italy, and in many instances still exists. One of the best examples is at Torcello near Venice. The chapel at the north end of the east aisle has a similar set of marble seats and central throne. The southern apsidal chapel has only the central throne. This Coptic arrangement of having three eastern chapels resembles the plan of a Greek church; but there is one important difference. The Greeks admit only one altar; and the "Holy Tables" at the ends of the aisles, which they call the Prothesis and Diaconicon, though they look like altars, really are only tables on which the bread and wine, the sacred vessels, and the vestments are placed before the Mass begins. The Greeks call all three *âyta traptai* (holy tables), but they distinguish the central one by calling it the *θυσιαστήριον* (altar of sacrifice). The Copts, on the other hand, admit an unlimited number of altars; in one case, in the church of Abou Sifayn, there are fourteen—seven on the ground floor and seven in the small chapels above.

Unlike other Coptic churches in Egypt, Abou Sergeh has a crypt—a very interesting little building, possibly earlier than the church above. It is a small vaulted chamber about twenty feet long and eighteen wide, divided into nave and aisles by plain round arches and white marble columns—apparently of Roman workmanship. At the east end there is a curious semi-circular niche, with a marble slab at the bottom, on which a floriated cross is carved. This is the high altar—a very early form which, I believe, is found nowhere else except in the catacombs of Rome.

On the south, another similar altar is recessed in the wall. The corresponding niche on the north has no cross carved on its marble slab, but has a rectangular sinking, about half an inch deep, like the very early altar in the crypt of San Giovanni Evangelista at Ravenna. In the middle of the nave is a round marble slab covering a well, at which the Virgin Mary is said to have drunk and rested for the night, with the infant Jesus and Joseph, during the flight into Egypt. It is to her that the crypt is dedicated. At the east end of the south aisle is a font—a deep round sinking in a table of masonry, with a recess to hold the bottle of holy oil.

The fittings and furniture in the church of Abou Sergeh are especially interesting, and may be taken as a good sample of those usually found in Coptic churches. The most important of these, artistically speaking, are the screens, which, by their number and the richness of their materials and workmanship, give so much picturesque beauty and mysterious charm to the interior, from whatever point it is seen. The most important is, of course, the iconostasis, which cuts off the Hêkel (sanctuary) and the two eastern aisle-chapels from the choir. It is a high, close screen of wood, richly decorated with minutely moulded panel-work, carving, and inlay of ivory, pearl, and various coloured woods. Over one of its doors there is an Arabic inscription inlaid in ivory, and above it, in Coptic, "Greeting to the Church of the Fathers." There are three doors in the screen, and on each side of the doors a small square window with a sliding shutter. The central door—Greek *ἀπαια πόλη*—opens into the sanctuary, and has, hung in front of it, a silk curtain embroidered with a large cross, Coptic inscriptions, and other ornaments. Every Copt, when he enters the church, kneels down and kisses this curtain, and before it the priest repeats "the prayer of the veil" before entering the Hêkel to perform Mass. The present screens

are, as a rule, not older than the sixteenth century, and some are later, but fragments of older ones are often worked up in them.

The iconostasis of Abou Sergeh has five very curious panels of hard dark wood, carved in relief with representations of the Nativity, the Last Supper, and three Coptic saints on horseback, called by the priests St. Mark, St. Sifayn, and St. George. Judging from their style, they are probably of the eighth or ninth century, contemporary with the church itself. On the top of the iconostasis is a row of rude pictures, painted in oil on panel with gold grounds; none appear to be earlier in date than the sixteenth century. In many churches a small wooden cup is fastened to this screen in which the cruet for the wine is kept.

The next screen, passing westwards, separates the choir from the men's division of the church. It is a high screen with a row of pictures at the top, but is formed of open lattice-work, not like the iconostasis, which is quite impervious to sight. In the north part of the choir there is a well, and by it, in the floor, a kind of sink, probably to wash the sacred vessels. There are three wooden lecterns, each with a tall candelabrum standing by it. The next screen, of open lattice-work, is only four feet six inches high; it separated the men's division from one bay of the church, in which is a large wooden chair sometimes used by the Patriarch. The next screen divides this narrow strip of the church from the compartment appropriated to the women of the congregation—it is high, but made of lattice. The next screen, a high lattice one, separated the women's division from the narthex, in which is the great epiphany tank. These numerous screens in this way divide the church across into six compartments: (1) Hêkel, or sanctuary, (2) choir, (3) men's division, (4) division with Patriarch's chair, (5) women's division, (6) narthex. They very much increase the apparent size of the building, and give a great charm and dignity even to the smallest churches.

The pulpit stands in the men's division; it is of wood, richly decorated with inlay of intricate patterns. Some churches have very magnificent white marble pulpits enriched with glass and marble mosaic, and delicate carving of the Arab stalactite form.

J. HENRY MIDDLETON.
(To be continued.)

NOTES ON ART AND ARCHAEOLOGY.

THE Princess Beatrice has become an honorary member of the Institute of Painters in Water-Colours. The Crown Princess of Germany, the Princess Royal of England, was elected a few years ago, and has sent pictures to some of the exhibitions. This society has existed now for close on half-a-century, and held its exhibitions during that time at 53 Pall Mall. The exhibition in May was the last it will have there. Next spring it will open its new galleries in Piccadilly, nearly opposite Burlington House. With this change a system will be inaugurated which will be at least novel to the water-colour societies: that is, the works of artists who are not members will be accepted, and hung on the walls. It will thus be an "open" exhibition, and water-colour artists from any part of the country may send in pictures. There will, of course, be a hanging committee, who will have the power of selection; and the society will elect new members from the exhibitors in the same way as the Royal Academy adds to its ranks. This new move, with the large space of the galleries, will enable water artists to show what they can do; and it ought to have a beneficial effect on the development of that form of art among us.

MESSRS. HENRY GRAVES AND CO. have commissioned Mr. Alfred Lucas to engrave for them one of Constable's grandest works—a picture of the church at Stratford-upon-Avon, with the river and a look in the foreground. It will form a companion to the well-known engraving by the late David Lucas of the same artist's "Salisbury Cathedral."

THE same art publishers have also in prospect the issue of a series of engravings from the finer works of George Morland, a painter of whose genius Englishmen may well be proud. The works by him which have been exhibited at the winter exhibitions at Burlington House have done something to restore a reputation which was obscured mainly by his own follies, or worse than follies. Although even when living from hand to mouth, and painting only in the intervals of debauchery, his paintings never fell below a certain level, yet there is a wide gulf between the hasty dexterity of his later work and the fine colour and finish of his prime. Unfortunately, it is by the numerous productions of his decadence and their innumerable forgeries that he is now most generally known, and Messrs. Graves will be doing a service to English art by showing of what he was capable while he was yet "clothed and in his right mind."

MR. J. M. GRAY is at present compiling a catalogue of the works of David Scott, R.S.A., to form part of his forthcoming volume on that artist. He will feel grateful if owners of paintings by Scott will communicate with him at 25 York Place, Edinburgh.

THE papers on "The Woodcutters of the Netherlands" which Mr. W. M. Conway has been contributing to the *Bibliographer* will shortly be collected into a volume, with many and important additions and illustrations. It will be published by Mr. Elliot Stock.

THE annual exhibition of the Photographic Society of Great Britain opens on Monday next, October 9, in the gallery of the Royal Society of Painters in Water-Colours, 5A Pall Mall East. The private view is to-day. The exhibition remains open every day until November 16, and also on the evenings of Monday, Wednesday, and Saturday.

MESSRS. HILDESHEIMER AND FAULKNER, who have made a reputation as publishers of Christmas cards, announce a novel competition. In August they gave away in prizes the large sum of £5,000 for the cards themselves. They now offer £1,000 for albums containing these cards, the award depending upon tasteful selection and arrangement. Minor prizes are also offered for fancy articles ornamented with satin pictures. On this occasion the judges are three ladies.

MESSRS. W. A. MANSSELL AND CO. have an exhibition of Christmas and New Year cards at their galleries in Oxford Street. Messrs. Mansell are themselves publishers of these seasonable little presents, but the exhibition is not confined to those of their own issue.

MESSRS. SEELEY AND CO. have sent us proofs of two engravings they are now publishing, one of which appears in the October number of the *Portfolio*. This is by Mr. F. Holl, after the late P. F. Poole's "A Midsummer Night's Dream." The other is by Mr. Lumb Stocks, after Mr. Millais' diploma picture, fancifully entitled "A Souvenir of Velasquez." We have before expressed our pleasure that the proprietors of the *Portfolio* should have thus given their powerful support to the fine old art of line-engraving, which lately seemed to be giving way before the facility of amateur etching. Half the value of engraving comes from its demanding a laborious apprenticeship. Of the two examples before us, we prefer "A

Midsummer Night's Dream," where the strange greenish effect of moonlight in which the painter delighted has been very skilfully reproduced by the engraver. Mr. Millais' picture was painted in 1868, five years after he was elected R.A. The subject is likely to be popular, and Mr. Stocks has evidently expended much good work upon it; but for us it has not the simple charm of the other. Also, we do not feel quite sure about the hands.

THE *prix du Salon* for sculpture was awarded this year (as we announced at the time) to M. Longepied, for his remarkable work representing a fisherman finding the head of Orpheus. But the limit of age in these cases is fixed at thirty-two years; and one of the unsuccessful competitors has proved that M. Longepied had exceeded that age at the critical time by a few months. The prize is therefore withdrawn. In justice to M. Longepied, it should be stated that the words of the regulation lend themselves to his belief that competitors may be in their thirty-third year.

THE death is announced of M. Joseph Bilco, a member of the Ecole française d'Athènes, who caught a malarious fever while conducting archaeological researches in Phthiotis. He died at Lamia.

THE photographs in the *Great Historic Galleries of England* are good as usual. They represent a portrait of a lady, by Flinck, in the Marquis of Butte's collection; Meissonier's "Self-satisfaction," belonging to Sir Richard Wallace; and Reynolds' portrait of "Omiah" or "Omai," the celebrated native from Otaheite who in 1774 was brought to England by Capt. Furneaux in the *Adventure*, and became a "lion" of London society.

BESIDE continuations of articles we have already noticed, the *Art Journal* for October contains an interesting paper on Sunderland, by Mr. Richard Welford, well illustrated; and M. Brunet Debaines contributes a picturesque etching of St. Mary-le-Strand, taken from the bottom of Drury Lane.

RECENT numbers of *L'Art* show to advantage the great resources and enterprise of its conductors. The discovery of an unpublished book of emblems of the sixteenth century, with two hundred spirited designs by Jean Cousin, forms the subject of a series of articles by M. Ludovic Lalanne, illustrated with facsimiles of the original drawings. M. Henry de Chennevières writes brightly of "Les Menu-plaisirs du Roi et leurs Artistes," and Miss Clara Montalba obtains a well-deserved tribute to her talent from the pen of M. Paul Leroy. A portrait of M. Bonnat (wood), and etchings of Marseilles by M. Lucien Gautier, of "Les Contourières" by M. Uhde after his picture in the Salon, and by M. Charles Courty of an Algerian interior by M. Gustave Guillaumet, are all very good of their kind.

THE Académie des Beaux-Arts has given its approval to the project of erecting a statue to Claude Lorraine at Nancy. The present year is the bi-centenary of his death. More than 13,000 frs. have already been collected by the local committee.

WITH reference to Mr. J. H. Middleton's review of Mr. L. Scott's *Early Italian Painters* in the *ACADEMY* for September 23, a correspondent writes that a German critic, Dr. L. von Scheffler, of Jena, has lately suggested that Niccolò Pisano's style is neither classical nor Apulian, but strictly native, and descended from Etruscan.

MUSIC.

FUTURE CONCERTS.

THE twenty-seventh series of the Saturday Concerts at the Crystal Palace will commence on October 14. There will be, as usual, twenty-

five concerts—ten before, and fifteen after, Christmas. The following dates, November 4, December 18, March 31, and April 14, all fall on a Saturday. The second date is the anniversary of Beethoven's birth, the third that of Haydn's birth; while the first and last commemorate the deaths of Mendelssohn and Handel respectively; so we shall probably have several in *memorial* programmes. Some interesting novelties are announced. Three of the works produced at Birmingham will be given—Mr. C. V. Stanford's serenade for orchestra, Mr. C. Hubert Parry's symphony in G, and M. Gounod's "Redemption;" the last named will be performed in November. Schubert's symphony (No. 7) in E is promised. At the beginning of last year, when all his symphonies were played at the Crystal Palace in chronological order, this one, being incomplete, was of necessity omitted. Schubert scored the introduction and a portion of the *allegro*, but only left a sketch of the remainder of this movement and of the *andante*, *scherzo*, and *finale*. Dr. Grove truly observes that "the memoranda are perfectly orderly and intelligible," and they are indeed so complete that it is said Mendelssohn had once the intention of completing the score. This work has now been accomplished by Mr. J. F. Barnett. He has undertaken a difficult and responsible task, and it is to be hoped that his efforts will prove successful. Every bar has been drawn-in by Schubert, and there is not one which does not contain the part of one or more instruments. Hence Mr. Barnett has not to compose, but to fill up; and, as the names of the instruments have been fully written at the beginning of each movement, there is no danger of "additional accompaniments." The MS. belonged to Ferdinand Schubert, who presented it to Mendelssohn in 1845. A few years ago it was sent to Dr. Grove by the late Paul Mendelssohn. The recent death of Joachim Raff is noticed at the Palace by the performance, at the second concert, of his sixth symphony in D minor (op. 189), with the appropriate motto, "Gelebt, Gestrebt, Gelitten, Gestritten, Gestorben, Unworbene" (Life, Aspiration, Suffering, Struggle, Death, Fame). This symphony will be heard for the first time in England. Berlioz' "Messe des Morts" is announced for one of the Saturdays in Lent. This remarkable work for chorus and orchestra was produced at L'Eglise des Invalides in Paris, on December 5, 1837, for the funeral service of Gen. Darnémon. The orchestra required is exceptionally large; and for the "Tuba Mirum" and other choruses the composer has directed four separate orchestras of brass instruments to be placed at the south, west, east, and north of the orchestra. There are some extraordinary effects with eight pairs of kettledrums tuned as a chromatic scale. Berlioz, writing to his intimate friend Humbert Ferrand a few days after the performance, says:—"Its effect upon the majority of the audience was terrible;" and again, in the same letter:—"When it came to the Last Judgment, the startling effect produced by the five orchestras and the eight pairs of drums accompanying the 'Tuba Mirum' was beyond description." In concluding our list of principal novelties, we ought not to omit mention of Mr. Wingham's fourth symphony (MS.). Mr. Manns will, as usual, be the conductor. At the first concert, Mr. Oscar Beringer will play Brahms' concerto (No. 2) in B flat.

The Borough of Hackney Choral Association will give four concerts during the coming season, under the conductorship, as usual, of Mr. E. Prout. The following works are announced:—Cherubini's *Mas* in D minor, Mozart's music to "King Thamos" (first time in England), Gade's "Christmas Eve," and Schumann's "Paradise and the Peri." The programme of the last concert will be selected from the works of living English composers.

SATURDAY, OCTOBER 14, 1882.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

The Early Days of Christianity. By Frederic W. Farrar. (Cassell, Petter, Galpin & Co.)

HAVING written the Life of Christ and the Life of St. Paul, it was but natural that Canon Farrar should write also on the Early Days of Christianity, thus completing a work in which he tells us his object has been "to furnish English readers with a companion, partly historic and partly expository, to the whole of the New Testament." Those who have read Canon Farrar's former works will know pretty well what they have to expect in this one. They will be sure that the narrative portion will be conducted with fascinating eloquence; that every page will furnish evidence of wide reading and refined culture; that, combined with reverence for Christianity as the supreme and perfect religion, there will be everywhere apparent a generous appreciation of whatever may be true and good in other systems; that questions affecting traditional opinions will be discussed in a scholarly fashion, and with an air of the most entire independence, but without the concession of any really important point; and that, in short, as regards anything forbidden by a broad and genial interpretation of the English Articles, they will be in perfectly safe hands. In these expectations assuredly they will not be disappointed.

In the opening chapters of his work Canon Farrar tells once more the story of the first persecution, of the burning of Rome, and of the crimes and death of Nero, thus supplying the historic frame-work for the visions of the Apocalypse, afterwards explained at length; and he paints, with a few strong emphatic touches, the moral corruption of the Roman world. No language, indeed, could easily be too strong. But the author of *Seekers after God* here does less than justice to Stoicism, and seems rather reluctant to admit that there were other influences besides the little Christian churches struggling against the evils which they could not cure; nor does he speculate, with M. Renan, on the risks run by the infant Church from the competition of the Mithraic rites. The question of the charge against the Christians, as having been the authors of the conflagration by which the greater part of the imperial city was laid in ashes, is of course considered, and M. Renan's "plausible hypothesis" adopted (it is undoubtedly through inadvertence that the obligation is not acknowledged), that it originated in the jealousy of the Jews, favoured by the Jewish proclivities of the Empress Poppaea and the pantomimist Aliturus. Canon Farrar would

hardly be himself if he were not sometimes carried away by the sweep of his own rhetoric; but when, in contrasting Seneca with St. Paul, he calls upon the world to "remember the two scenes, in one of which the polished Stoic, in the other the Christian Apostle, stood—the one a magnificent minister, the other a fettered prisoner—in the presence of the lord of the world," we cannot help asking where, in authentic history, the second of these two scenes is described.

Criticism is not, perhaps, Canon Farrar's strong point. Yet, when he is not labouring to defend traditional views which have now been very largely abandoned by independent scholars, and especially when he is dealing with the New Testament writings in their purely literary aspect, he is sometimes exceedingly happy. The third book of this work, for example, treating of Alexandrian Christianity and its characteristic New Testament product, the Epistle to the Hebrews, shows him at his best; nor could anything be finer in its way than the following passage, in which he contrasts the style of the Epistle to the Hebrews with that of St. Paul:—

"The writer cites differently from St. Paul; he writes differently; he argues differently; he thinks differently; he declaims differently; he constructs and connects his sentences differently; he builds up his paragraphs on a wholly different model. St. Paul is constantly mingling two constructions, leaving sentences unfinished, breaking into personal allusions, substituting the syllogism of passion for the syllogism of logic. This writer is never ungrammatical, he is never irregular; he is never personal; he never struggles for expression; he never loses himself in a parenthesis; he is never hurried into an anacoluthon. . . . The movement of this author is that of an Oriental sheikh with his robes of honour wrapped round him; the movement of St. Paul is that of an athlete girded for the race. The rhetoric of this writer, even when it is at its most majestic volume, is like the smooth flow of a river amid green fields; the rhetoric of St. Paul is like the rush of a mountain torrent amid opposing rocks."

Canon Farrar holds, with Luther, that the writer whom he thus eloquently contrasts with the Apostle Paul was Apollos, and indeed proves, by a process of exhaustive reasoning, that, if he was anyone named in the New Testament, he could be no other. Credit must be given to him also for the decisiveness with which, in a short excursus, he disposes altogether of the Presbyter John, so convenient to other defenders of the Fourth Gospel, as the hypothetical author of the Apocalypse. Canon Farrar, it is well known, is able to believe that the apostle wrote both works. With similar courage, he flatly denies that there is the slightest ground for the doctrine of the Aseparthenia, and maintains that James, "the Lord's brother," was the son of Mary the mother of Jesus. His defence of the authenticity of the epistle is, of course, more questionable.

The treatment of the epistles of Peter is much less satisfactory than that of the epistle to the Hebrews. 1 Peter, along with 1 John, Canon Farrar considers "to stand above all suspicion;" but his arguments proceed so largely on the assumption that in the gospels we have the *ipsissima verba* of Christ, and in the Acts those of Peter himself, that they cannot be considered of much value. Thus,

if Peter speaks of "your adversary the devil," using the word *diabolos*, this must be a reminiscence of what Christ is reported as saying in Matt. v. 25. Such coincidences—of which, as is well known, there are many far more striking with other parts of Scripture—are undoubtedly extremely interesting; but they only show that the author must have been acquainted with the books whose phrases he borrows, and may, therefore, have been much later than the genuine Peter. Again, this epistle, Canon Farrar points out, is Judæo-Christian in sympathy, but Pauline in expression. There is in it no allusion to the Mosaic law; it makes no use of St. Paul's central doctrine of justification by faith. Precisely so; but those phenomena are far more in accordance with the supposition that it was written by a late author with a conciliatory purpose than that it is a genuine composition of the apostle of the circumcision. It is true the objections to 1 Peter, especially if regard be had to the external evidence, are not so weighty as those to the second epistle; and, in presenting the case against the latter, Canon Farrar is on sure ground; but it is somewhat disappointing to find that, after showing that it cannot possibly have come from the pen of the apostle or of anyone living at so early a date, in the sequel he turns round and claims a quasi-authenticity for it after all. If Peter "lent to this epistle the sanction of his name and the assistance of his advice," it must have been written in his lifetime and under his eye; and, in that case, what becomes of the argument founded on the correspondences with Josephus lately discovered by Dr. Abbot, and on which Canon Farrar lays so much stress? Does Canon Farrar, then, admit that the epistle was known to Josephus? It is true he only says that that is "a difficult supposition."

Of the Apocalypse, it is hardly necessary to say, Canon Farrar accepts, in its leading features, what may now be considered, for all reasonable people, the true solution of its enigmas. He, of course, repudiates the idea of there being in it any polemic against the Apostle Paul. The second Beast from the land, or the False Prophet, he identifies with Vespasian, as answering best to the ten indications furnished by the seer; or else he thinks it may be a composite symbol, combining Simon Magus and Josephus with Vespasian. Canon Farrar maintains that the prophecy of the return of Antichrist was adequately fulfilled in Domitian; and, neglecting the spirit of his own remark in reference to the nearness of the Advent—"Language is simply meaningless if it is to be so manipulated by every successive commentator as to make the words 'speedily' and 'near' imply any number of centuries of delay"—refuses to see that the Advent itself is predicted in language which makes it impossible to believe that it was anything but a splendid dream.

The general scope and character of Canon Farrar's new work will perhaps be sufficiently gathered from the foregoing remarks; but, as the title might suggest that it is more purely narrative than is actually the case, it may be as well to add that it is also largely critical and expository. It is an attempt, in the author's own words,

"to set forth, in their distinctive characteristics, the work and the writings of St. Peter, St.

James, St. Jude, St. John, and the author of the Epistle to the Hebrews."

and, in dealing with these writings, Canon Farrar has

"sometimes furnished a very close and literal translation, sometimes a free paraphrase, sometimes a rapid abstract, sometimes a running commentary."

It is divided into five books, of which the last, on "The Earlier Life and Work of St. John"—the Gospel not being here included—fills the greater part of the second volume; the first is entitled "The World," while the remaining three treat respectively of "St. Peter and the Catholic Church," "Apollos, Alexandrian Christianity, and the Epistle to the Hebrews," and "Judaic Christianity."

ROBERT B. DRUMMOND.

The Friendships of Mary Russell Mitford, as recorded in Letters from her Literary Correspondents. Edited by the Rev. A. G. L'Estrange. In 2 vols. (Hurst & Blackett.)

A DELIGHTFUL person forms the centre of this collection of letters. Already we know much of Miss Mitford, but to meet her again cannot weary us, for she makes no excessive demands on us, she puts no strain on head or heart, and she always brings with her health, brightness, sweet temper, courage, and the country air. Mr. L'Estrange's new volumes probably close the series formed from Miss Mitford's correspondence, and they are less interesting than the preceding volumes. Some truly eminent persons appear among the letter-writers, and there are some not eminent who have pleasant things to tell; others are *literatuli* over whose names the dust has fallen thick, and perhaps it was hardly worth while to disturb the dust. With such volumes a reviewer's duty is not to review, but to rob, and to bestow the stolen goods among his readers. First in interest stand some letters from Mr. Ruskin. The following is dated "Keswick, Good Friday, 1853":—

"I should be very, very happy just now but for these wild storm-clouds bursting on my dear Italy and my fair France, my occupation gone, and all my earthly treasures . . . perilled amidst the 'tumult of the people,' the 'imagining of vain things.' Ah, my dear Miss Mitford, see what your favourite 'Berangers' and 'Gerald Griffins' do! But these are thoughts as selfish as they are narrow. I begin to feel that all the work I have been doing, and all the loves I have been cherishing, are ineffective and frivolous—that these are not times for watching clouds or dreaming over quiet waters, that more serious work is to be done, and that the time for endurance has come rather than for meditation, and for hope rather than for happiness. Happy those whose hope, without this severe and tearful rending away of all the props and stability of earthly enjoyments, has been fixed 'where the wicked cease from troubling.' Mine was not; it was based on 'those pillars of the earth' which are 'astonished at his reproof.' I have, however, passed this week very happily here. We have a good clergyman, Mr. Myers, and I am recovering trust and tranquillity, though I had been wiser to have come to your fair English pastures and flowering meadows, rather than to these moorlands, for they make me feel too painfully the splendour, not to be in any wise resembled or replaced, of those

mighty scenes, which I can reach no more—at least for a time. I am thinking, however, of a tour among our English abbeys—a feature which our country possesses of peculiar loveliness. As for our mountains or lakes, it is in vain that they are defended for their finish or their prettiness. The people who admire them after Switzerland do not understand Switzerland—even Wordsworth does not. Our mountains are mere bogs and lumps of spongy moorland, and our lakes are little swampy fish-ponds. It is curious I can take more pleasure in the chalk downs of Sussex, which pretend to nothing, than in these would-be hills, and I believe I shall have more pleasure in your pretty lowland scenery and richly painted gardens than in all the pseudo sublime of the barren Highlands except Killiecrankie. I went and knelt beside the stone that marks the spot of Claver's [sic] death-wound, and prayed for more such spirits—we need them now."

Mr. Ruskin speaks of receiving from "Ather-ton" the same kind of refreshment which he did from lying on the grass in spring. Miss Mitford's writings have for him an indescribable perfume and sweetness "as of lily of the valley and honey":—

"I perhaps feel it the more from having read very little lately, except of old books, hardly any poetry even among them, but much of dry history. I do not mean *dull* by dry, but dry in the sense of faded leaves, the scent and taste of it being as of frankincense instead of the fresh honey. I am sure that your writings will remain the type of this peculiar character of thought. They have the playfulness and purity of 'The Vicar of Wakefield,' without the naughtiness of its occasional wit, or the dust of the world's great road on the other side of the hedge, as it always is there. I don't know where one can get a PERFECTLY innocent laugh, except with you. All other laughing that I know of, even the best, is either a *little* foolish and therefore wrong, or a *little* malicious and therefore wrong too. . . . April 23 [1854]. I have had one other feast, however, this Sunday morning in your dear friend's poems—Elizabeth Browning. I have not had my eyes so often wet for these five years. I had no conception of her power before. I can't tell you how wonderful I think them."

The following from Miss Barrett (January 5, 1839) may fitly follow:—

"Only the unexcitable by nature can be supposed to endure continual external occasions of excitement. As if there were not enough—too much that is exciting *from within*. For my own part, I can't understand the craving for excitement. Mine is for *repose*. My conversion into *quietism* might be attained without much preaching, and, indeed, all my favourite passages in the Holy Scriptures are those which express and promise peace, such as 'The Lord of peace Himself give you peace always and by all means,' 'My peace I give you, not as the world giveth give I,' and 'He giveth His beloved sleep'—all such passages. They strike upon the disquieted earth with such a *foreignness* of heavenly music—surely the 'variety,' the *change* is to be unexcited, to find a silence and a calm in the midst of thoughts and feelings given to be too turbulent."

Miss Mitford describes, from a letter of Mrs. Browning, a meeting between the English poetess and George Sand in 1852. George Sand was very simply dressed, her manner very kind, very quiet; a low soft voice, an unemphatic utterance, rather calm than ardent. "Mrs. Browning could not help stooping to kiss her hand, upon which M^{de}m^e.

Sand threw her arms round her neck and kissed her upon the lips." Of "Casa Guidi Windows," Miss Mitford writes with a woman's over-sharpness in criticism:

"That book, the 'Casa Guidi Windows,' is a book without convictions—one feels that as one reads it: Mrs. Browning took up the subject because she had a mind to be an Italian George Sand, and because it was something to write about and that's all."

The following conversation of Carlyle with the American publisher, Mr. J. T. Fields, possibly has appeared elsewhere among the numerous Carlyleana, but I have not met with it. Miss Mitford is the recorder:—

"'So, sir, ye're an American?' quoth the self-sufficient Scotchman.

"Mr. Fields assented.

"'Ah, that's a wretched nation of your ain. It's all wrong. It always has been wrong from the vera beginning. That grete mon of yours—George' (did anyone under the sun ever dream of calling Washington *George* before?)—your grete mon George was a monstrous bore, and wants taking down a few hundred pegs."

"'Really, Mr. Carlyle,' replied my friend, 'you are the last man in the world from whom I should have expected such an observation. Look at your own book on Cromwell! What was Washington but Cromwell without his personal ambition and without his fanaticism?'

"'Eh, sir,' responded Carlyle, 'George had neither ambition nor religion, nor any good quality under the sun—George was just Oliver with all the juice squeezed out.'"

Miss Martineau, on the pleasures of growing old, strikes a fine prosaic mean between the enthusiastic joy of Mr. Browning in his "Rabbi Ben Ezra" and the melancholy of Mr. Arnold's well-known poem:—

"As for me, I absolutely enjoy the symptoms of growing old, and find the privileges of years thus far out of all proportion to any incipient evil that has occurred as yet. I am somewhat less briak since I turned fifty than before; but I am abundantly strong and well, and the tranquillising effects of the sober period I have reached are very sweet to such a lover of quiet as I am. After this one summer I do not mean to be so desperately over-worked any more, as I have been for some years; and I have a strong impression that I shall find, as so many do, that the decline of life is its best part. No fear of any of us being idle, any of us who have health to work, for the world cannot afford a full holiday at present to any of its labourers; and to work for conscience, and not too much for that, and for health, while merging one's personal interests in wider ones, is my ideal of a happy decline. If it takes place in the country, as you and I have chosen that ours should, it is all the sweeter."

A poem of two stanzas, found among Miss Mitford's papers, and written, it is believed, by Jane Porter, deserves a place in our anthologies. The title is "Past is Past":

"Disinter no dead delight,
Bring no past to life again;
Those red cheeks with woe are white,
Those ripe lips are pale with pain.

"Vex not then the buried bliss
(Changed to more divine regret),
Sweet thoughts come from where it lies,
Underneath the violet."

The Eton boy spoken of in the following passage has grown so big and got so high in the school, and fought so many rounds and written so many letters, that he will take no

harm from Miss Mitford's amused and amusing comment of 1853 :

"Do you see the *Times*? and, if so, do you remember certain letters signed 'An Englishman' abusing my dear Emperor. Those letters had a tone of authority which might have become not merely a judge or a bishop, but a cardinal or Lord Chancellor. Well, they were written by an undergraduate at Oxford, a lad called Vernon Harcourt, whom our lad here—George Russell (whom his mother and I pet and scold all day long)—talks of as his junior. I'm not sure that he wasn't his fag at Eton. I cannot tell you how much this has amused me. The letters were inflated and bombastic enough for Tom Thumb, but there was an air of grandeur about them which must have taken in the *Times*. What a fool the lad was not to keep his own secret."

Any word that rudely touched her dear Emperor, Louis Napoleon, the idol of her woman's fancy—"a head so pale and earnest, the finest foot and hand in Paris, the best horseman, such dignity, such courtesy, such simplicity, such grace"—was warmly resented by the little old lady, whose white hairs betrayed her years, but on whose heart there never fell the earliest shower of winter snow.

EDWARD DOWDEN.

York. By George Ornsby. "Diocesan Histories." (S. P. O. K.)

"No diocese in England," says Canon Ornsby, "possesses so many august traditions as the diocese of York. The great mother church of the Northern province rises in its stateliness and beauty from the midst of a city which was great and flourishing while London was comparatively insignificant and Canterbury as yet unknown."

It is well that a diocese thus standing alone in some ways has found its *vates sacer* in a canon of its own metropolitan church, and one so well qualified to deal with its history as the writer of the work before us. The University of Durham, which has only lately been celebrating its fiftieth anniversary, has been fortunate in *alumni* who have done much to illustrate our ecclesiastical history, and particularly that of the North of England. In support of this remark we need only refer to Dr. Blunt's *History of the Reformation*, the first volume of which has just been followed, at only too long an interval, by the second; to Canon Raine's *Fæsti Eboracenses*, a second volume of which has long been much desired; and to Mr. Low's diocesan history of *Durham*, reviewed in the *ACADEMY* of October 29, 1881. Canon Ornsby has set to work with a good will, and has done his work well. Long residence in the diocese, and familiarity with the best sources of information, have enabled him to write a diocesan history which must take its place as one of the best in the series. If less racy and picturesque than Mr. Low's *Durham*, the York volume is certainly not less full of important historical matter.

It is not easy in a work of this kind to decide how far general as distinct from strictly diocesan history ought to be included. Here, the writer seems to propose at first not to go any farther than necessary into general history. Whether he has done so or not will be a matter of opinion; probably he may

have exceeded in that direction. There is a good deal that would have come equally well into any other English diocesan history, and which, perhaps, the reader might be supposed to be familiar with or to have access to elsewhere. But, at any rate, there is no lack of valuable and interesting local matter. Of course we have the oft-told tale of Wilfrid and his wonderful life, his faults and his excellences; and, later on, we have a great deal about a very different and a less-known person, Archbishop Holgate, known among his contemporaries as a "parcel-Protestant," who, during his short archiepiscopate received the pall from Henry VIII., and prohibited as well the use of organs in divine service as the shaving of crowns. Not that there was anything of Popery in a pall; of necessity, Henry only reverted to original practice, as the pall was at first bestowed by the Emperors only; afterwards, by the Popes, with their permission. Holgate received it in acknowledgment of the royal supremacy. The injunctions issued by Holgate and others throw much light on the history and antiquities of the periods to which they relate. An enquiry made by the Puritan Archbishop Grindal helps to explain how it is that we have so many, and have had many more, chalices of Elizabethan date. The ministers were asked whether they used at Holy Communion "any chalice heretofore used at masse." Such chalices were regarded as "monuments of superstition," and so, no doubt, were often reconstructed after the well-known Elizabethan type, though here and there one has escaped this form of "restoration." Although the rubric required then, as now, that the eucharistic vestments should be "retained and be in use," this lawless archbishop enjoined a wholesale destruction of them all, as well as of the ancient service-books, which were often hidden away—as, for example, in "that superstitious and abominable vault called Seynt Wilfride nedyll" at Ripon—in the hope that they would be required again. Canon Ornsby gives a very good account of the "Use of York," and its differences from other uses. We also find excellent notices of the York gilda, of printing in York, and of certain York "worthies." There are, as a matter of course, short accounts of all the archbishops of whom anything particular is known down to Sharpe; and at the end is a chronological list.

In the latter part of the book we have an interesting account of the French and Flemish settlers who were brought by Cornelius Vermuyden to drain the fens of South-east Yorkshire and the adjoining part of Lincolnshire. These were mostly Protestants, and Archbishop Neile tried to force them into conformity with the Church of England. Very many, it seems, did resort to their parish churches, although they did not understand English. They managed, however, to build themselves a meeting-house at Sandtoft, just within the diocese of Lincoln, where they were left to themselves until they died out as a distinct community, and their place of worship fell into decay. Their descendants, however, remain, and many bear the original surnames]

Such are only some of the out-of-the-way matters that are brought before our notice in this admirable little volume. Among minor matters of commendation may be mentioned the writer's habit of referring to original authorities—as, for instance, to no less than seven or eight different volumes in the Surtees Society's series. Such references greatly add to the value even of "popular" works by inspiring confidence, but still more by directing the mind of the reader to the knowledge of the primary sources of information, the very names of which will often give definiteness to a statement made in the text.

The map includes the greater part of Lincolnshire, Lindsey having been claimed as belonging to the province of York until soon after the Norman Conquest. A place named and marked as a monastic establishment just south of the Humber—viz., "Nuneaton"—must surely be placed in the map by mistake.

J. T. FOWLER.

Henry D. Thoreau. By F. B. Sanborn. "American Men of Letters." (Sampson Low.)

THIS sketch of Thoreau's life is, on the whole, a disappointing book. At this time of the day, after the excellent articles by his native and sympathetic critics, Emerson, Lowell, and Burroughs, after the playful sharpness of Mr. R. L. Stevenson and Mr. H. A. Page's suggestive volume, Mr. Sanborn had an excellent opportunity which he has missed. His book would have been more interesting if we had more of Thoreau and less of Concord, of which he was the most famous native. Mr. Sanborn seems to have shut his eyes to all critics except Emerson, whose admirable essay does duty here in various cuttings. The book, moreover, is ill proportioned: there are some fifty pages devoted to Concord, while the Walden adventure only occupies fifteen. Mr. Sanborn has a weakness for quoting poetry and hauling in the big names in literature after the best American manner. His work is written as a bit of provincial history—one man excelled "in the flourish of his pitchfork," and another had "to shovel himself out." But it is surely carrying this pitchfork and shovel style too far to describe Thoreau as the "Concord Endymion," or to say that Emerson was a man of "genius whose like has not been seen in America nor in the whole world in our century." Finally, Mr. Sanborn gives no critical estimate of Thoreau's works—an unpardonable omission. It is to be regretted that his book will rather repel than attract readers to Thoreau's fresh pages.

As Thoreau becomes better understood, his rough figure tones down. Millet was called the wild man of the woods, and Thoreau is said at times to have looked a sort of wise wild beast. He made the first attempt in America to study Nature and live by his own handiwork. The famous story of his having said he would never make another pencil after he had mastered the work disappears at once and for ever under the fact that he wrought many years afterwards, at intervals, at pencil-making. Thoreau is no longer a stoic; Mr. Sanborn makes him a very respectable man,

without those innate, terrible eccentricities that startle. For instance, his hermitage at Walden, where he went to "transact some private business," is explained away. He was there as social as he had been while an inmate at Emerson's; it was "his writing-desk," and he really lived at home. I rather like this new Thoreau; to me he is more real and unexaggerated than the old Thoreau of his own books.

Mr. Sanborn has given personal touches, sincere letters, and sincere talk that make his book worth reading. There are incidents, odd events in provincial life, though having little connexion with Thoreau, that would come handy to Blackmore or Hardy. When a boy, he, like Emerson, drove his mother's cows to the pasture; on leaving college, he was, like our Northern students, furnished with "letters" from the professors to enable him to get teaching; his power in youth of repressing his pathos and his seriousness earned him the nickname of "Judge;" and a sentence from an essay in his twentieth year is worth quoting:—"So far as my experience goes, men *never* seriously maintain an objectionable principle, doctrine, or theory; error *never* had a sincere defender; her disciples were *never* enthusiasts." He loved a story from a fisher or a hunter more than drawing-room gossip; he liked everything to be first-hand. He was alive from head to foot with curiosity about farmers and their sturdy lives, and would listen to their talk for hours in the bar-room. A strange heifer came blowing up and eat an apple from his hand; nothing remarkable this, Mr. Jefferies could tell us, nor even in making short cuts whenever possible in walking. All country walkers do that when walking with an object. This "small and rather inferior looking man" was, when carrying a portmanteau in one hand and a serviceable umbrella in the other, often taken for a travelling peddler. The finest traits in his character were the juggling tricks, his singing "Tom Bowline" (*sic*), his making willow whistles, and trumpets from stems and leaves for the children with whom he romped. He could dance, and play well on the flute.

Thoreau appeals to many of us who want to live their own lives in their own way, and who do not want to discover, when they come to approach their long home, that they have never lived. He was a great listener to Nature's voice; he was a keen observer and faithful recorder; he watched Nature with a big ledger in his hand; he was very patient. I agree with the New York *Critic*, that Mr. Sanborn puts Thoreau on too high a pedestal. Thoreau should have no pedestal. He lived on his own legs; his place is among our feet on the fields, and in the forests, and on the river; they are his home; there he won his name. But did he possess the sane mind? or the deeper feelings which cause men to search after truth and find poetry at their feet? Was he not a lover of the out-of-the-way more than of truth? Does he not too often endeavour to puzzle and startle the reader over trifles, in merely cataloguing the natural events, and the nature that grows in grass and bark, and is graven in the soil? After all, and like us all, he tells his own life in his own books; and it is to be hoped

that all the materials he left will be published some day. His contentment and serenity even on his death-bed are shown in a beautiful letter by his sister Sophia:—

"None of his friends seemed to realise how very ill he was, so full of life and good cheer did he seem. One friend, as if by way of consolation, said to him, 'Well, Mr. Thoreau, we must all go.' Henry replied, 'When I was a very little boy I learned that I must die, and I set that down; so, of course, I am not disappointed now. Death is as near to you as it is to me.'"

And, again:—

"He would sometimes say, 'I should be ashamed to stay in this world after so much has been done for me. I could never repay my friends.' And they remembered him to the last."

Ay, and his friends this side the Atlantic can never forget Thoreau, though dead, the New England apostle of the ideal.

JAMES PURVES.

PERRET'S FRENCH PYRENEES.

Les Pyrénées françaises. Par Paul Perret. Illustrations by E. Sadoux. Vol. I., "Lourdes à Barèges;" Vol. II., "Le Pays basque et la Basse-Navarre." (Paris: Oudin.)

THIS work is essentially a popular one; it aims at nothing more than to serve as a pleasant souvenir to those who have visited the Pyrenees and wish to renew their pleasure by turning over its pages. The volumes are independent of each other, and can be purchased separately. It differs from ordinary books of its kind chiefly by its more numerous illustrations and by its greater size; when complete, it will form four volumes of largest octavo.

As a popular work it claims a certain indulgence from the critic, and we cannot deny that it needs it. Vol. ii. is, however, a marked improvement on vol. i. There is nothing therein so utterly absurd as the description of donkey-riding in vol. i., pp. 91, 92; and, though English tourists are still the favourite butt of the author's wit, the offence is much less frequent in the latter tome. Were it not for an almost uniform "derangement" of epithets, we should not have very serious fault to find with vol. ii. Thus p. 7, "l'immense berret basque;" it is the Béarnais berret which is large, and the Basque small. It is true that Basque frontier churches—Urrugne, for instance—served as fortified places of refuge, but not "pendant les guerres de religion," which never reached those parts. The remark, twice repeated, pp. 5 and 304, "tout ce que en haut pays pyrénéen s'appelle des Gaves prend le nom des Nives en bas pays" is quite incorrect; there is only one Nive and one Nivelle, while there are twelve large Gaves and numerous Gabarrets and Gabarrons. On p. 313 we are treated to an etymological discussion founded simply on a fault of orthography; *Mosmours* is a misprint for *Mosmours*, anciently *Momors*. These are samples only of faults which occur on almost every other page. The author, as we see by many an allusion, is a Norman, and familiarity with Pyrenean dialects is, therefore, not to

be expected from him; but we should hardly have thought it possible for one to have gone through the country and to have confounded tongues so different as Basque and Béarnais. Yet, vol. i., p. 77, a verse of one of Despourrin's songs is gravely printed as Basque; and vol. ii., p. 341, in the middle of the Béarnais Vallée d'Aspe, we read, "Remarquez, je vous prie, que nous voilà rentrés en Pays basque"! The author rarely leaves the road, at least in the Pays basque, but does his work pretty thoroughly wherever wheels can carry him. There are, of course, the inevitable exaggerations. The myths of the guides are repeated as literal matters of fact. Guides are taken where there is not the slightest necessity for their services. From Luz to Gavarnie—a road traversed daily during the season by innumerable carriages and by at least one huge omnibus—we are told, "un guide est ici plus que jamais nécessaire." Ropes are recommended at the Grotto of Sare—an utter absurdity; and danger is spoken of in places in which the tourist is far more safe than in the environs of Paris or London at the same hour. Spots off the road are evidently not described from personal observation. No one who has been there could speak of "l'ombre des bois" at Ahusquy, where there is not a tree. The description of the "grands et blonds" Basques of Ste-Engrace, the most secluded village of the Pays basque—"quelques uns même avec les yeux bleus"—would be valuable were it not that from other little touches we suspect it is only second-hand. The paint and gilding in the curious church are most certainly not of the seventeenth, but of the nineteenth, century. We have seen the church both before and since this barbarism was perpetrated.

But a truce to fault-finding, which it would be easy to continue in detail. Both author and artist seem to have a true taste in architecture. We are delighted to read their hearty onslaught on the odious fashion of painting the interior of churches which has prevailed in France during the last thirty years. In our opinion, M. Perret does not speak at all too strongly of the "tons criards" in Bayonne cathedral; while in village churches the painting after a few years looks simply like an inferior wall-paper. We are charmed at the recognition of Oloron and of Sauveterre as sketching places. We have often spoken of the latter to amateurs. To the sites here given may be added the ruins of the château of Bideren, the junction of the Gaves, and the lovely pool and cliff at the lowest bridge over the Saison—all these are charming subjects within two miles of the town. One word of the illustrations—they are remarkably honest, and the subjects are usually well chosen. The artist cannot draw a tree or a ship, but all else is good; and the engravings are as superior in literal truth to nature to the "belles infidélités" of Gustave Doré as they are inferior in artistic merit. What the work needs is a careful revision by some native of the Pyrenees who knows the local idioms, and who can distinguish between guides' fables and genuine traditions. This might easily be done for a new edition.

WENTWORTH WEBSTER.

NEW NOVELS.

Robin. By Mrs. Parr. In 3 vols. (Bentley.)

Valentina. By E. C. Price. In 2 vols. (Chatto & Windus.)

Proper Pride. In 3 vols. (Tinsley.)

A Modern Instance. By W. D. Howells. In 2 vols. (Edinburgh: Douglas.)

Treherne's Temptation. By Alaric Carr. In 3 vols. (Smith, Elder & Co.)

The Professor's Daughter. By A. E. Evans. (S. P. C. K.)

THE lady novelists seem to have definitely entered of late on a course of action "in restraint of marriage," as the lawyers would call it. No incentive to celibacy ever more richly deserved the rigours of a *Lex Julia* than these books, which should be carefully kept out of the reach of every young man of marriageable age and prospects, and industriously bought up and burnt by our insulted damsels and their despairing mammas. For how can the fond youth but stand aghast as he foresees himself a prey to one of these best of their sex as portrayed by their own sex, supposing, as he no doubt does, that women are the only good judges of women, or, at least, of ideal female perfection? Such is rarely the case. The lives of most women involve a fair amount of involuntary and unheroic prose; they therefore draw their heroines in violent contrast to themselves, and invest them with all the frowardness, the futilities, and the megrims of which themselves are secretly conscious. The heroic abstraction in practice fades with its unreality, and leaves nothing of concrete but the megrims. This appears to be the genesis of the New Heroine in both her types, sometimes distinct, sometimes blended, and ranging through various stages of comparative moral and mental sanity between the extremes of raging madness and melancholic idiocy. No woman is now worth a woman's admiration, it seems, unless she is either dolt or fiend; or as they more cautiously put it, a sweet, sad, incomprehensible anomaly, or a delicious, delirious, naughty creature of impulse. Both indulge in a disgusting effrontery of self-sacrifice; both are to the core supremely, wholly, perfectly selfish. Of these painful creations we have three or four bad specimens to be dealt with this week. Let us get rid of a dolt first—the heavy bore before the exasperating tease. Masculine names augur ill for a heroine; nothing is surprising in a Sydney, a Cecil, or a Robin, and Mrs. Parr would have much better preserved her tone and keeping had she named Robin's poor, long-suffering husband, Angelina instead of Christopher. Robin is the daughter of a nomadic *chevalier d'industrie*. Her lover is also a little dubious. The plot is very well in its way:—lover departs, too poor to marry—heart-disease of the father—rich cousin arrives—Robin marries him—father dies—married life in England, of course, insanely wretched—lover comes into his estates, re-appears, and the nauseous part begins, and lasts. Of course the elopement is frustrated for decency's sake, bronchitis of the husband being just as convenient and much more respectable a means of securing what Mrs. Parr fondly thinks the mutual bliss, but what must have proved

the mutual purgatory, of her precious couple. This book alone of those we are noticing to-day betrays an unhealthy tone, though it is written in good faith. There is something singularly irreverent and revolting in this caricature of marriage, in the servile, despairing attitude of the young, sensitive, religious husband towards this worthless girl, who is supposed to be too stupid or too lazy to settle which man she really loves until she is married and capable of real mischief. The character is indeed contemptibly absurd; even an untrained, undisciplined paragon, no stranger to Baden and Monaco, must be either mad or bad to neglect her husband and spend all her time with an old lover without dreaming of anything more than friendship. The book is cleverly and neatly written; but it is very false, and so very dull.

Valentina belongs to the other type. It is avowedly a case of demoniac possession. This Lady Val—observe again the significant tendency to *propria quae maribus*—simply beggars description. "She must have been," says the authoress, very obligingly, "one of those enchanting, irresponsible beings from a borderland" (meaning, it seems, the borders of the supernatural or infernal). "Well, poor thing, she found herself hardly placed in a world and a century that does not understand such people." Nothing of the kind! It was the world, or at least her world, poor thing, which found itself hardly placed in contact with this aggressive young nuisance. Like Robin, she married two husbands; shamefully ill-used, neglected, and destroyed the first, and caught a Tartar in the second; and we suspect Robin did also. As she had hitherto boasted that she had always had her own way, and ever acted from pure caprice in consistent contempt of advice, natural affection, decency, and good feeling, the bare idea of her husband objecting to her writing love-letters to her friend and lover confounds and stupefies her whole being. She fades away, and dies a haggard skeleton at a romantic mill after learning the surprising fact that the dear friend who had always stood first in her every thought, and sacrificed his time and prospects to almost menial service upon her from the first, was positively in love with her, though always forestalled in proposing by her deplorable precipitancy in accepting other men a few hours before him. However, we are taught that somehow this young creature managed to exist without heart or stomach, and was anomalous in all respects. She begins by a clandestine walk in the Champs-Élysées, and by accosting a stranger; she has by no means finished when she insults her husband's guests at their country seat by breaking her engagement to preside over an excursion in order that she may sneak off at dawn with a favourite plough-boy in a cart on a bird's-nesting and brook-wading ramble. Of her brutality and violence it is useless to speak; if the woman was insane—it seems her mother was deranged—the authoress should have said so; if she was responsible for her actions, it is degrading to be asked to sympathise with such a monster of concealed insolence, ingratitude, folly, and diabolical perverseness. The

lover who idolised such a creature must perish with his idol in our esteem. The other characters are few, but well drawn, and the book is most beautifully and pathetically written.

It is hard to write seriously about *Proper Pride*, which is a very first work indeed, and a foredoomed failure, yet not without excellent points. Here we have the dolt studied exclusively in her married life, evidently by a young lady who knows about as much of marriage as of Hebrew. The result is a series of impossible situations whose *naïveté* borders on the uncomfortable. In the second chapter Alice marries a splendid Captain; a few months after a practical joker sends her a mock marriage certificate with the names of her husband and some other woman. On this abounding proof the sullen termagant refuses to live with him, in spite of his appeals to common-sense. He goes out to India, fights the Afghans, clears up the certificate hoax, and, after some years, returns, and positively for the last volume and a-half lives under the same roof with his wife in an idiotic estrangement. Both are consumed with love, and rather indelicately goaded to reconciliation by their guests; but Reggy has now taken to sulks, and every art is tried by the authoress to keep them asunder till the three volumes are complete. There is some little extra reserved point, some rubbish about a letter; and it is comical to see, whenever in their long talks they approach this dangerous but inevitable ground—"Why did you not write to me in India?" or "Did you not get my letter?"—how the writer at once puts her hand upon their lips by some convenient interruption. All this is very silly, and the heroine a tiresome, surly, ill-conditioned sort of animal; but the book is still pleasant, and, apart from this strange *ménage*, fresh, healthy, and vigorous. The writer is horsey, and has been in India, and what she knows she does her best to describe, and succeeds. And if she has really seen enough of such a young officer as Geoffrey to describe him from the life so delightfully as she does, we trust she will value her privileges more than Alice did hers.

Of Mr. Howells we once spoke doubtfully, waiting till he should give us a longer and less sketchy work to judge by. Our doubts are quite confirmed by *A Modern Instance*. It is simply longer, and therefore not better, but much worse than the rest. He has expanded without enlarging. We must here class him with the three ladies to whom we have just paid homage, for, like them, he is entirely absorbed by the study of a single female character. His Marcia is mainly a dolt, but has sudden flashes of the devil. The character is probably natural enough, and is fairly consistent, but it is one in no way deserving of such elaborate study. Nor was this commonplace, stupid, violent woman likely to have impressed men and women of education as she is supposed to have done. Her ungovernable passion for, and shameless pursuit of, a vulgar *bel-homme*, and her fine doings when the clay idol begins to crumble, are not heroic, but very ordinary forms of selfishness. Mr. Howells fails to see that the tremendously high moral rule by

which he condemns the husband simply annihilates the wife. Though an American newspaper reporter, the man had neither the birth nor training of a gentleman; his principles were not high, and his refinement was superficial. Marcia, however, has no principles whatever beyond some conventional scruples, not the less vulgar because true; and such refinement as she possesses she sacrifices to the gratification of her passions and to her coarse jealousy. The English reader will not scruple to pity the husband of this stupid vixen, in spite of the severity of the author. To his rigid morality we cannot object; it is very sincere; but the cause of that morality, we must insist on saying, is not served by enlisting a morbid interest in the struggles of the husband's friend against his adulterous passion for the heroine. A depressing, dreary book, with all its ability and good intentions.

We could not read very much of Mr. Alario Carr's treatise, on account of the style. It is not a novel, and can hardly be called literature at all. There is about a dozen pages of story; the rest is simply a shuffling and dovetailing of all the most flippant newspaper articles of late years on every possible topic. This rubbish is retailed in long conversations of deplorable smartness and fatuity. The copious use of foreign tongues has not deceived us. He who is so used to reading French as to write english, french, would hardly perpetrate such horrors as "an englishman, a frenchman, an anglo-saxon, a german." But Mr. Carr does. Again, we ourselves have never been distressed by hearing a young lady address her father as *père* (without the *mon*). Mr. Carr's heroine, whether speaking in French or English, always does so.

The Professor's Daughter is not a very bright specimen of its class. On the whole, it is rather dull; but some episodes are very amusing, especially the old aunt's menagerie of pets. E. PURCELL.

SOME FOREIGN BOOKS OF HISTORY.

Vor der Bartholomäusnacht. Von Hermann Baumgarten. (Strassburg: Trübner.) Herr Baumgarten has done a good service in this book. He has tried to lead back into sober history the endless controversy about the exact culpability of every possible person in the Massacre of St. Bartholomew. Historical problems seem to have all the fascination of personal squabbles when they can be attached to some particular character. Next to Mary Queen of Scots, Catherine de' Medici has been the most eminent "daughter of debate" in history. Herr Baumgarten begs us to remember that the personal question is not necessarily important as an historical question. The Massacre of St. Bartholomew was a violent reaction against the policy pursued by France during the two previous years. It is more important to estimate the bearings of that policy than to discover who was responsible for the exact form which the reaction assumed. Accordingly, Herr Baumgarten sets himself to trace the movement in France against the policy of Spain which characterised the years 1570-72. The English alliance, the support of the revolt in the Netherlands, and the approach to the German Protestants are carefully traced. Herr Baumgarten wishes to show that the same

tendencies were at work as afterwards marked the policy of Henri IV. There is nothing new in his researches; but he puts together the records of French diplomacy in corroboration of his view, and points out that the advance of France in this direction was checked by the opposition of the personal interests of Catherine de' Medici, and by the over-haste of the French Protestant leaders. Not content with the growth of a feeling against Spain, they wished openly to advance to war with Spain; but the Protestant Powers in Europe were lethargic, and Catherine de' Medici saw in the expedition to Flanders the death-blow to her own power. It was not difficult for her to contrive that the reaction against the new policy should be decisive. This is the subject of Herr Baumgarten's book, and he has worked out his position carefully and fully.

L'Entrevue de Bayonne de 1563. Par M. F. Combes. (Paris: Fischbacher.) M. Combes, unlike Herr Baumgarten, has been unwilling to leave the mystery of the Massacre of St. Bartholomew unravelled. He has gleaned from the Simancas archives some important documents relative to the interview at Bayonne, and the understanding then arrived at between the Duke of Alva and Catherine de' Medici. There is no doubt that both of them wished to keep their plans secret, and that indications of any definite project are likely to be slight. Yet, though the indications which M. Combes brings to light are slight, they are certainly strong. A letter from Don Frances de Alava, dated July 4, 1565, says:—

"The Duke of Alva will inform his Majesty of the resolutions which he has concerted with this most Christian Queen; if they are realised it will be a great service for God and for the King our master. I have some fears on account of the confusion which she sometimes feels, and because I foresee that it is necessary to hammer these heretics [que an de martillar estos herejes]."

Philip II. on his part perceived the same need for reserve, and in a letter of August 24, 1565, to Card. Pacheco, says that Catherine "determined very sincerely to apply a remedy to these questions of religion;" the resolution was, however, kept a profound secret: "the remedy, if known, would be as difficult to apply as it is easy if it be kept secret." The Pope must not communicate it to anyone, "not even to the most Christian Kings themselves." These expressions are certainly very significant; and the letters published by M. Combes are likely to establish the belief that the Massacre was agreed upon, at all events in some vague form, at the Conference of Bayonne.

L'Invito di Eudossia a Gensio. Studio critico del Prof. Giuseppe Morosi. (Firenze: Succursori Le Monnier.) Probably all readers of history have felt that the story of the summons sent to the Vandal King by the widowed Empress Eudoxia, compelled to marry the murderer of her husband, bore a very legendary aspect. Sig. Morosi has submitted it to the test of a close criticism, before which it has disappeared. The strength of Sig. Morosi's argument lies in the fact that the story rests on the authority of Procopius, and does not seem to have been known to Western contemporaries, especially not to Sidonius Apollinaris. At the same time, the existence of such a legend is easy to account for. The downfall of the Roman Empire was a subject of amazement even to those who witnessed it, and they wished to explain it on any other grounds than their own feebleness and cowardice. We cannot follow Sig. Morosi into the details of his argument; but his painstaking monograph deserves the attention of all who are interested in the history of the fall of the Roman Empire.

Aus Dante's Verbannungszeit. Von Paul Scheffer-Boichorst. (Strassburg: Trübner.) Herr Scheffer-Boichorst is known for his fierce onslaught on the authenticity of some of the early Florentine chroniclers, and the controversy which he has raised respecting Dino Compagni still rages furiously. Pending his reply to the work of Sig. del Lungo, Herr Scheffer-Boichorst seems to have wished to give a proof that he can construct as well as destroy, that he can raise up as well as cast down. The book before us consists of a careful examination of all the documents concerning Dante's life during the period of his exile; and the general tendency of Herr Scheffer-Boichorst's examination is to defend the authenticity of some that have been attacked, and to uphold the credibility of others that have been questioned. Thus he defends the letters of Dante to Can Grande della Scala and Guido da Polenta, and he maintains the credibility of Boccaccio's Life of Dante. He has found a field in which the higher criticism is on the side of tradition. The points involved in these discussions are mostly points of detail, interesting only to a student of Dante. One question, however, of some general importance which Herr Scheffer-Boichorst discusses is the date at which the "De Monarchia" was written. Prof. Witte's arguments seemed almost conclusive that it was written before Dante's exile; but it must be admitted that Herr Scheffer-Boichorst brings forward some strong reasons for regarding the "De Monarchia" as a work of Dante's last years, written side by side with the "Paradiso." We cannot do more than indicate the scope of this book; but it deserves the attention of Dante students, to whom it is solely addressed.

Etude sur la Condition des Protestants en Belgique depuis Charles Quint jusqu'à Joseph II. Par Eugène Hubert. (Bruxelles.) Whatever praise may justly be claimed by laborious investigations into somewhat uninteresting by-paths of history is due to M. Hubert for the work before us. He has consulted an appalling number of printed books and MSS., and has produced a full and clearly written narrative, whose authenticity is attested by an Appendix of some hundred pages of *pièces justificatives*. M. Hubert has wisely omitted to dwell at any great length on the early portion of his subject. Up to the time of Joseph II., the history of Low-Country Protestantism can only be sought in a perpetually recurring series of oppressive measures directed against the temporal and spiritual liberties of its professors; and when in 1714 the Low Countries passed from Spain to Austria, the position of the dissenters remained unchanged. It is only, in fact, when we reach Joseph II.'s impetuous attempt to set the Protestants on a footing of equality with their Catholic countrymen that the subject grows in any sense really interesting. M. Hubert, who has naturally devoted his longest chapters to this singular episode, cannot be said to have shown much originality in his treatment of it. He depends largely for his knowledge of Joseph's plans and motives on von Arneth's elaborate volumes; but he has well contrasted the Emperor's single-minded enthusiasm for his *liberté de croire* with the obstinate and thorough intolerance, not only of his mother who educated him, but of the Austrian officials among whom he was brought up. M. Hubert's occasional generalisations from his voluminous facts do not always strike us as very happy. Although it may be an error to attribute to the French Revolution the first recognition of the principle of liberty of conscience, it seems to us a somewhat extravagant demand to make upon those who sympathise with Joseph II.'s schemes to ask them to regard him as practically the originator of the doctrine. When we call to

mind the writings of many moderate Protestants in England and Holland who flourished before him, or the works of John Looke and his French disciples—among whom the *Encyclopédistes* and the *Physiocrates* may in a sense be reckoned—or the enlightened policy that Prussia had for very many years pursued in religious matters, it is impossible to accord to Joseph II. any but a subordinate place among those to whose exertions Europe is indebted for the modern doctrine of religious liberty.

We have received three papers, by M. J. Delaville le Roux, of some value in the history of the Order of St. John of Jerusalem. The first, a "Note sur les Sceaux de l'Ordre" (*Société nationale des Antiquaires de France*, vol. xli.), clears up several doubtful points, and supplies descriptions of some unknown seals, by the publication of a statute of the thirteenth century, declaring the seals with which the master and the other dignitaries of the hospital shall seal; this is supplemented by information on the different types, by a list of known seals of the Grand Masters, and by descriptions of known seals of the Priors of langues. These investigations point to a curious origin for the seal of the English langue. The second paper, "Des Sceaux des Prieurs anglais de l'Ordre de l'Hôpital aux 12^e et 13^e Siècles," by means of examination of charters at the British Museum and numerous documents at the Record Office, rectifies the hitherto imperfect chronology of the priors in England, even adding two to the list. Several moot points, however, remain to have further light thrown upon them; we doubt whether the suggestion that the well-known name *Vere*, otherwise *Ver*, *Veer*, may be a corruption of *Wilhelmus de Vileris* will do much towards this. Both these papers are accompanied by excellent plates in heliotype. The third, on "La Commanderie de Gap," (*Bibliothèque de l'École des Chartes*, t. xliii., 1882), gives the text of a document establishing the priority of Gap over St-Gilles, hitherto believed to be the oldest settlement of the Order in France; together with a new list of the Preceptors of Gap, from 1211 to 1788, doubling the names previously known.

THE FIRST OF THE GIFT-BOOKS.

MESSRS. MACMILLAN AND Co. open the season with two books which exemplify very well the general character of the class. Both are attractive in their several ways, but neither quite comes up to our conception of what the ideal gift-book should be. This branch of publishing has become almost a fine art; and the originality of our writers has failed to keep pace with the talent of our illustrators. Hence it is that the artists have to go back to the past for their subjects, as well as for their style.

Household Stories; from the Collection of the Bros. Grimm. Translated from the German by Lucy Crane, and Done into Pictures by Walter Crane. (Macmillan.) This long title-page (though we are unable even to hint at the charming design into which it is fitted) tells its own tale. Grimm's Fairy Tales are ever fresh, and for this new rendering we have a guarantee in a name not unknown to literature. Mr. Walter Crane we have always liked best in black and white. He has here showered upon us a profusion of designs in his very happiest style. We doubt whether children have ever had so much pains taken for them before. The full-page illustrations please us least (though we must make an exception in favour of that to "Mother Hulda"), for Mr. Crane is not at his best in drawing the human form. But the smaller cuts—initials, head- and tail-pieces—are simply perfect. Animals and birds, grotesque incidents, and arabesques are Mr. Crane's special province, in which he has no competitor.

Children will appreciate them, and their elders may subscribe for the large paper edition.

The Horkey: a Ballad by Robert Bloomfield. With Illustrations by George Orlikshank. (Macmillan.) To reveal what "The Horkey" is would be a sin against the prefatory address contributed by Mr. F. O. Burnand. Suffice it to say that the text is a dialect poem by "The Farmer's Boy," to whom the present generation is beginning to do tardy justice. Bloomfield was a native of Suffolk, and died just sixty years ago. His epoch, therefore, is precisely that about which Dr. Jessop has recently been writing in his "Return to Arady." There was some jollity, after all, in the rural life of those days. We confess that we are prejudiced against Mr. George Orlikshank for his successful imitation of an illustrious signature. Trade-marks in art ought not to be hereditary. The illustrations themselves are unequal. Some are poor; others are very good. But, on the whole, it may be said that the artist is best when his subject is best. The style is that combination of Kate Greenaway with Caldicott which has been already reached by others. We must not omit to observe that the pictures have been most skilfully reproduced in colour by Messrs. Clay, Sons and Taylor—by what process we do not exactly know. They are models of soft and even tinting.

The Flowers of Shakespeare. Depicted by Viola. (Sampson Low.) The idea of this book can scarcely be original, nor can we say that it has been very happily carried out. Flowers are not so easy to draw as they look; and the process of chromo-lithography that has been adopted is a coarse one. The result compares unfavourably with the book just noticed. But still Shakespeare's "wood notes" can never lose their charm, and we are thankful for every attempt to make them better known. A mistake has been made, we venture to think, in representing all the flowers as plucked in nose-gays. But perhaps this was unavoidable.

Fairy Tales. By Hans Christian Andersen. Illustrated by E. V. B. (Sampson Low.) This book, again, we are unable to praise. The bold colour outside is typical of the glaring pictures within. The artists named above have taught even children to look for better art than this. In this case, also, the colourist is not a little to blame, for we notice that the drawing on the protecting paper cover is much more effective than the chromo-lithographic reproduction beneath.

The Union Jack. Vol. III. Edited by G. A. Henty. (Sampson Low.) The speciality of this boy's magazine is "stirring tales of adventure by land and sea." We have not yet lost the taste for such ourselves, but we confess that here we have had "as good as a feast." Boys like something more than stories alone. For next year the editor promises more varied fare, and better paper. It is to be hoped that he will also keep a sharper look out for palpable misprints. M. Louis Rousselet, himself a contributor, is several times spelt "Rosselet," and once "Bousselet." These are small points, but not insignificant. Mr. Henty would also do better to protest a little less.

The Phynodderree, and other Legends of the Isle of Man. By Edward Callow. With Sixty Illustrations. (J. Dean and Son.) The Isle of Man is full of fairies to this day, as we ourselves know from actual hearsay; and the Manx fairies have a local character of their own. But we fear that Mr. Callow is not the "Hans Andersen" of Man. He has yet to learn the supreme art in all story-telling—brevity, both in the stories themselves and in his sentences. Of the illustrations, we need only say that they are old-fashioned, neither above nor below the average.

THE Society for Promoting Christian Knowledge has fairly overwhelmed us with what they are pleased to call the first instalment of their publications. After having selected some for special notice—such as the excellent series of "Diocesan Histories," of which Canon Ormsby's *York* is reviewed in another column—we find ourselves left with no less than forty-four volumes of varying sizes on our table. To notice all these in detail would manifestly be impossible. Speaking generally, they all deserve high praise for the creditable manner in which they are turned out. The several series are bound to match; and, though certain colours are better suited to the designs than others, the binding throughout is almost "aesthetic." A certain design on one series, of which we have received nine volumes, is particularly graceful; and the price of these volumes is only eighteenpence, with three full-page wood-cuts. *Little Will*, by Helen Shipton, is the example we have selected as the model of what a book of this kind should be. The "Home Library," which gives sketches of epochs in religious history, is continued in three volumes, which treat of the Church in Roman Gaul, John Huss, or Hus (*etc.*), and the Rulers of Judaea from Nebuchadnezzar to Vespasian. These do not profess to be more than compilations from the ordinary sources of history, but the work of compilation seems very well done. Altogether, we feel justified in saying that the society deserves to be congratulated on the works of all sorts that it is publishing. Our columns last week showed what it is also accomplishing indirectly towards the advance of philology through its Translation Committee.

Belt and Spur: Stories of the Knights of the Middle Ages from the Old Chronicles. With Sixteen Illustrations. (Seeley, Jackson and Halliday.) Whatever this publishing season may yet have in store for us, we venture to prophesy that it can yield no "gift-book" more entirely welcome than this. Mr. Church's series of "Stories from the Classics" have deservedly reached their thousands, nor is the vein yet worked out. The subject-matter of these "Stories from the Chronicles," which are issued by the same publishers, ought to bring them a no less decided success. For, though not so stated on the title-page, they are almost all chapters of English and Scottish history, beginning with the landing of William and including the exploits of Richard in his Crusade. We can only wonder that such a field was never thought of before. Its discovery gives a welcome contradiction to the complaint we have made above of the lack of originality in this class of publications. The subject, again, was one that it was hardly possible to spoil in the telling; and the adapter (whom we shall hardly do wrong in connecting intimately with the head of the publishing house) has done his (or her) part with great skill. Occasionally, we must admit, a false note is struck, such as by the use of the modern word "doctored;" but, on the whole, the simplicity of the original is well preserved. The illustrations are yet more attractive than the text. They are mostly illuminations from MSS. in the British Museum, reproduced in the finest form of chromo-lithography. They are precisely what children want to enable them to realise what they read. A facsimile of the Bayeux tapestry would be worth more than a "Student's Freeman." We regret to add that, through imperfect binding, our frontispiece has already fallen out. Such a valuable book cannot afford such a loss.

Birthday Gleanings. Collected and Arranged by M. J. Grain. (Marcus Ward.) The outside of this book is exceedingly beautiful—almost too beautiful for handling. Inside, also, the typography is of that high merit which we expect

from Messrs. Marcus Ward. Unfortunately, we are unable to speak so well of the work contributed by Mrs. Grain. We do not complain of the selections of poetry, three of which are given after the usual "birthday" fashion for each day in the year. But the compiler has managed to perpetrate such a quantity of misprints and similar literary *bêtises* as, we venture to say, were never before found in so fair a setting. Even on the cover she has murdered her Latin motto by a mispunctuation; her introductory page gives a reference to Hesiod's *Works*, meaning *Works and Days*; and on almost every page we have obtruded on us such painful forms as "Mont-faucon," "Barthélemy," "Adolph Thiers," "Freilgrath," "Georges Sands," "Niebhur," "Goethe," "Viscomte Chateaubriand," "Gouchy," "Sir Edmund Fry," "d'Agnesseau," &c., &c., &c. These may be trifles in themselves; but their number is appalling, and the irritation of detecting them has quite spoilt the enjoyment we had otherwise got from so handsome a book.

THE first almanac for 1883 to reach us is that illustrated by Kate Greenaway, and published by Messrs. Routledge. The binding is charming; but, as to the inside, we confess to having become a little tired of this style of design, even in the hands of its founder. It requires a larger scale than in this little booklet, and (we may add) more careful reproduction.

NOTES AND NEWS

WE regret to hear that Dr. Schliemann, who has recently been on a visit to Paris, has not yet shaken off the malarious fever contracted in the Troad. He hopes, however, to return to his home at Athens by the end of this month. His forthcoming work on the results of his excavations at Hissarlik last winter will be published simultaneously in English and in German. It will contain a chapter on "Trojan Ethnography," contributed by Mr. Karl Blind.

ARRANGEMENTS are already being made for the sixth international congress of Orientalists, which will be held next year at Leiden. The date fixed is from September 10 to 16. The local committee of organisation is thus constituted:—President, Prof. Dozy; vice-president, Prof. Kuenen; secretaries, Profs. de Goeje and Tiele; treasurer, Prof. Pleyte. Is there one of our English universities that could show names so distinguished in every branch of Oriental learning as this little Dutch town?

WE are glad to learn that Mr. Edmund Gosse, whose recent volume on *Gray* in the "English Men of Letters" series has been so favourably received, has undertaken for Messrs. Macmillan and Co. a complete edition of Gray's writings, the first that has ever been attempted. Such an edition has long been wanted; and, with a view to its being made as perfect as possible, Mr. Gosse would be grateful if any possessor of Gray MSS. of whatever kind would communicate with him at his private address, 29 Delamere Terrace, W.

MESSRS. TRÜBNER AND Co. will publish before Christmas a new poem by Mr. Edwin Arnold, entitled *Pearls of the Faith*; or, *Islam's Rosary*: being "The Ninety-nine Beautiful Names of Allah," with comments in verse. This poem, or rather series of poems, professes to be the utterances of an Indian Musulman respecting the life and religion of Mohammed by means of legends, records, and traditions of Islam, as in *The Light of Asia* Buddha's life and doctrine were treated from the standpoint of an Indian Buddhist. The tenth edition of the English original of the latter work is now in the press here, while of the numerous editions printed in different cities of America in various

forms and sizes more than one hundred thousand copies have been disposed of up to the present time.

MRS. AUGUSTA WEBSTER, who is a candidate for re-election on the London School Board (Chelsea) will publish immediately, through Messrs. Kegan Paul, Trench and Co., a new drama, entitled *In a Day*.

WE hear that the article "Malta" in the next volume of the *Encyclopædia Britannica* has been entrusted to Miss Toulmin Smith.

THE volume of *Studies in Philosophy* which Mr. W. L. Courtney, of New College, Oxford, will shortly publish with Messrs. Rivington treats of the following subjects:—Ancient Idealism—Parmenides; Ancient Hedonism—Epicurus; the Failure of Berkeley's Idealism; a Chapter in the History of the Word "Cause"; the New Psychology; the New Ethics; "Back to Kant"; Kant as a Moralist and as a Logician; the Hegelian Religion. It will be seen that Mr. Courtney is not afraid to touch some of the burning questions of the day.

MESSRS. SAMPSON LOW are about to publish a cheap edition of the illustrated re-issue of Gilpin's *Forest Scenery*, edited, with notes bringing it up to date, by Mr. F. G. Heath. It is a curious fact that the third edition of *Forest Scenery*, which was revised by Gilpin himself, and which forms the text of Mr. Heath's reprint, is not to be found in the British Museum.

MESSRS. NIMMO AND BAIN have in the press a new library edition, in ten volumes, of Lingard's *History of England*, with all the copyright additions.

MESSRS. KEGAN PAUL, TRENCH AND Co. will publish next week a new English translation in octosyllabic metre of Juvenal, Persius, Martial, and Oatullus, by Mr. W. F. Shaw. It is described on the title-page as "an experiment in translation."

MR. WILLIAM PATERSON, of Edinburgh, will shortly publish a volume dealing with the county houses of the three Lothians. It will contain a large series of photographs by Mr. John and Messrs. T. and B. Annan; and the historical and descriptive letterpress will be from the pen of Mr. John Small, librarian to the University of Edinburgh.

RAJA SAURENDRA MOHAN TAGORE, of Calcutta, whose *English Verses set to Hindu Music* first called attention to the subject some years ago, has written a Sanskrit version of "God Save the Queen," and has also undertaken to set the music to native melodies.

MR. W. M. WOOD, who represents Messrs. Austin's house at Hertford, has lately transcribed one of the old parish registers at Hertford, A.D. 1560-1630. It contains entries of the burial of Thomas Shakespeare, gent., in 1628, and of his son in 1625.

MR. FURNIVALL has sent to the printer, for the Extra Series of the Early-English Text Society in 1883, the copy of Hoccleve's *Minor Poems* (1413-48) which he has just made from the unique MS. in the Philipps collection at Cheltenham. Prof. Skeat is finishing for the society's Original Series next year his glossary to "The Vision of Piers the Plowman," which will form the fifth volume of his edition of the three different versions of the poem, and complete the work on which he has been so many years engaged.

A NEW novel by Mrs. Oliphant, entitled "The Wizard's Son," will be begun in the November number of *Macmillan's Magazine*.

THE new volume in Messrs. Blackwood's "Foreign Classics for English Readers" will be *Rousseau*, by Mr. H. G. Graham. This will make the seventeenth of the series.

UNDER the title of *Heart Chords*, Messrs. Cassell, Petter, Galpin and Co. announce a series of volumes by eminent divines, whose common aim will be to stimulate, guide, and strengthen the life of Christians. The contributors to the series include Bishop Otterill, Dean Montgomery, Dean Bickersteth, Dean Edwards, Dean Boyle, Canon Farrar, Canon Boyd Carpenter, Prof. Blaikie, Prebendary Chadwick, the Rev. P. B. Power, the Rev. Dr. Matheson, and the Rev. E. E. Jenkins.

MESSRS. S. BAGSTER AND SON have in the press a new work upon the disputed verse in the First Epistle of St. John about the "Three Witnesses." The author is the Rev. H. T. Armfield, Rector of Colne Engaine, Essex. He complains that the Revised Version of the New Testament should have omitted the verse without explanation or comment, and he supports his view by a letter from one of the members of the Revising Committee.

MR. W. MACK, who boasts to be the originator of that household institution the "birthday book," announces yet another addition to his long list, to be called *The Churchman's Birthday Book*. The selections are from the *Imitation of Christ*, adapted so far as practicable to the Anglican calendar. The Rev. George Morris has written an Introduction and a sketch of the life of Thomas a Kempis.

MESSRS. RIVINGTON have nearly ready for publication, in addition to the books we have before announced, a complete edition of Bacon's *Essays*, by Mr. F. Storr; a *Short History of England for Schools*, by Mr. F. York Powell, with maps and illustrations; *Stories from English History*, by Mrs. Oreighton, also with illustrations; and a new volume of Mrs. Lang's *Geography for Beginners*, treating of the continent of Europe.

AMONG school-books proper the same publishers announce *A Companion to Algebra*, by Mr. Leonard Marshall; *A Syntax of Attic Greek*, by Mr. F. E. Thompson; *A Second Latin Reading-Book*, forming a continuation of "Easy Latin Stories," by Mr. G. L. Bennett; *A Latin English Dictionary*, by Mr. C. G. Gepp; *Introduction to Greek Verse Composition*, by Mr. Arthur Sidgwick and the Rev. F. D. Morice; *Excerpta Facilia*: a Collection of Stories for Translation from various Latin Authors, with notes and vocabulary, by Messrs. H. B. Heatley and H. N. Kingdon; *Arnold's First Greek Book*, Revised by the Rev. F. D. Morice; the *Jugurtha* of Sallust, by Mr. E. P. Brooke; *A Manual of Greek Verbs*, with Rules for the Formation of Tenses and Tables of Verbs for Practice, by Messrs. F. Ritchie and E. H. Moore; and *Selections from Thucydides*: an Easy Greek Reading-Book, by Mr. E. H. Moore.

THE new series of the publications of the Chetham Society is being actively prosecuted. To meet a generally expressed desire, some volumes are being formed from the MSS. of the late Canon Raines, two of which, left by that antiquary in a completed state, are now in the printer's hands—viz., "The Rectors and Wardens of Manchester" and "The Vicars of Rochdale," to be edited by Mr. James Crossley, Mr. J. B. Bailey, and Mr. H. Howorth. These Lives, which include the names of many notable ecclesiastics, have been compiled with great care, and extend up to the time of Dean Herbert and Vicar Hay. Mr. Chanoeller Christie has in hand a Catalogue of the Old Church Libraries of Lancashire and Cheshire, with bibliographical and other illustrations. Among other works for the subsequent volumes are John Byrom's *Commonplace-Book* (including his *Journal and Letters*) for the years 1730-31; the *Accounts of the Constables of Manchester*, 1613-47 and 1742-80; a volume

of Wills, a History of Poulton-le-Fylde and Bispham, the Chartulary of Furness Abbey, the Diary of Dr. John Dee, &c. The remaining volumes of the old series, as well as the Index from vol. xxxi. to the end of the series, are expected to be completed shortly.

MR. W. F. POOLE, of Chicago, having finished the new edition of his *Index to Periodical Literature*, now throws out the suggestion that he may possibly be induced to undertake a general index to works other than periodicals. Such a work, he observes,

"should not include every topic in the range of human knowledge, but only such practical subjects of general interest as students, literary men, general scholars, and writers for the press are likely to need. The work, therefore, could be brought into reasonable limits. Volumes of essays and miscellanies, and standard books in history, biography, political economy, social science, education, &c., would be analysed and indexed under special topics. Different departments could be assigned to the persons most competent to treat them. A responsible editor should be selected, to whom contributions should be sent, and to whose judgment the selection and arrangement of the material would be committed."

After the successful completion of the *Index to Periodical Literature*, we are prepared to believe that everything is possible to the American librarians in conference assembled.

MESSRS. TRÜBNER will be the London publishers of Mr. Poole's *Index to Periodical Literature*.

MESSRS. JAMES CLARKE AND CO. have in preparation the following volumes for children:—a richly coloured picture-book, entitled *Elfinland*, with verses by Josephine Pollard; *Christmas Rhymes and New Year's Chimes*, by Mary D. Brine, with wood-cuts from original designs by Mrs. Jessie Curtis Shepherd, Miss C. A. Northam, Miss Jessie McDermott, and D. Clinton Peters; and *The Rosebud Annual*, for the nursery, being the year's numbers of the *Rosebud* magazine, containing two hundred and fifty pictures, with simple stories, in large type, divided into syllables.

THE same publishers have nearly ready a new volume by Mr. J. Ewing Ritchie—*East Anglia: Personal Recollections and Historical Associations*; and *The Philosophy of Missions*, by T. E. Slater, of the London Missionary Society.

Timehri, the half-yearly journal of the Royal Agricultural and Commercial Society of British Guiana, of which the first number was noticed in the ACADEMY of September 26, may be obtained in this country from Mr. Stanford. The word "timehri" we may add, is the Carib name for the old hieroglyphic writing on the rocks of Guiana, of which a specimen is given on the cover of the journal.

THE *Scotsman* published last week an indignant leading article because the new Professor of Greek at Edinburgh has the misfortune to be English, and the cry has been taken up by several correspondents of that paper. We have not yet observed that the *Englishman* has thought fit to return the compliment by commenting in a similar spirit upon the recent appointment to Whyte's Chair of Moral Philosophy at Oxford.

In the programme of the Edinburgh Philosophical Institution we notice that Dean Bradley is announced to deliver two lectures upon his predecessor at Westminster, while Dr. W. Robertson Smith will lecture on "Arabian and Egyptian Folk-Lore." At the Edinburgh Literary Institute there will be lectures by Mr. W. M. Ramsay on "Historical Scenes suggested by Wanderings in Asia Minor," and by Prof. Knight, of St. Andrews, on "The Poetry of Robert Browning."

THE subject for the Howard Medal to be awarded in June 1883 is

"The best exposition of the experiences and opinions of John Howard on the preservation and improvement of the health of the inmates of schools, prisons, workhouses, hospitals, and other public institutions, as far as health is affected by structural arrangements relating to supplies of air and water, drainage, &c."

In addition to the medal, which is of bronze, the Council of the Statistical Society will present to the successful writer the sum of £20.

THE first volume is now ready of the grand edition of the complete works of Thomas Aquinas which is being brought out under the express authority of the Pope, whose high opinion of "the angelic doctor" is well known. It contains the Commentaries upon Aristotle's "Peri Hermeneias" and "Posteriora Analytica," and is printed at the press of the Propaganda. Finer printing it would be impossible now to find. The folio volume, containing 346 pages of Introduction, &c., and 440 of text, is sold for fifty lire (£2); and cheaper editions are also issued. M. Dulau, of Soho Square, is the agent in England.

DON J. V. ARAQUISTAIN, the author of *Leyendas vasco-cántabras*, has just published at Tolosa a romance entitled *El Basojaun de Eumeta*.

THE new number of the *Bibliographie der Schweiz* (Basel: H. Georg) contains a timely and interesting attempt at the compilation of a "Gotthard-literatur." The catalogue names 670 works during the last forty years, 1842-82, beginning with a "Memorial über die schweizerischen Alpenpässe," published in the *Neue Helvetia*. Among the English writers we find Stephenson and Swiburne (*etc.*). There are several works by Italians, fewer by Germans; the greater number are by Switzers.

THE Milan correspondent of the *Berlin Deutsches Montagsblatt* says that an Italian translation of the "Plutus" of Aristophanes, by Prof. Goffredo Franceschi, is now being played at the Teatro Manzoni in Milan. It seems, however, that the "translator" has taken some liberties with the original by introducing a couple of lovers, and also some speeches against the democracy which are supposed to aim at a living Italian statesman.

WE have to thank Mr. H. Buxton Forman for a re-issue of his library edition of Shelley (Reeves and Turner), confined to the poems, and thus reduced from eight to four volumes. In every other respect, this re-issue is identical with the original published in 1876-77. That it should have been called for is the best evidence of its value. With the unannotated edition, in two volumes (which was reviewed in the ACADEMY of September 23), this makes the third that we owe to Mr. Forman's enthusiastic labours. We must not forget to add that he has here given us what we believe to be the first general index, as opposed to an index of first lines, to any edition of Shelley.

MESSRS. BLACKWOOD have sent us a new edition, in one handsome yet convenient volume, of *Trascaden Hall*, Gen. Hamley's last novel, and (as many think) his best. For our part, we have been more interested in the fighting in the Peninsula than in the love complications or the strange devolutions of the property.

NOTES FROM MANCHESTER.

THE winter session of the Manchester Literary Club opened on October 2 with a pleasant *soirée*. Besides the usual series of lectures and papers, it is hoped that Mr. William Morris will lecture, at a date not yet fixed, before a joint meeting of the Literary Club, the Academy of Art, and the Art Museum Committee.

LECTURES in libraries should, one would think, be a powerful stimulus to study, and we are glad to learn that the experiment tried last winter in connexion with the Salford Free Library is to be repeated. A course of twelve lectures will be delivered between October and March. The subjects range over travels, geology, history, and literature.

THE Ancients Recreation Committee is endeavouring to infuse some sweetness and light into that very dreary work-a-day district of Manchester. Mr. George Milner, on September 30, opened an exhibition in the Public Hall of pictures lent by Mr. T. R. Wilkinson. These include the drawings of Oxford and Cambridge made by the late Mr. William Hull, drawings of Seville by Mr. E. M. Bancroft, and Mr. Ford Madox Brown's picture of "Wycliffe reading his Translation of the Bible to John of Gaunt." In addition to the exhibitions, there will be concerts and "entertainments" of reading and recitations each evening during the present month. Still more remarkable are the lectures to be given on Sunday afternoons. The first of the course was delivered on October 1 to an audience of about eight hundred working men and women by Prof. H. E. Roscoe, who took for his subject "Coal-pit Explosions: their Cause and Cure."

ALL visitors to Manchester know Lewis's, which is the local Whiteley's and something more, for it appeals to a larger circle of customers. Lewis's newest enterprise is to provide a volume of "Penny Readings," so called, apparently, not because they are to be read at meetings to which the charge for admission is one penny, but because the price for the whole volume is but one penny. It consists of a selection of prose and poetry. And, as it is evidently intended for the million, it is interesting to observe what so experienced a caterer as Lewis's thinks that the million like. Byron is most strongly represented, with no less than nine extracts; then Shakspeare and Tom Hood, five each; Mrs. Hemans and Longfellow, four each. Of the rest it is only necessary to say that Will Carleton is evidently much read, and the late Lord Beaconsfield much admired, by the customers of Lewis's.

FRENCH JOTTINGS.

THE one authentic likeness of Auguste Comte, a portrait by the sculptor Mox, has recently been the subject of judicial proceedings in France. Comte's widow, who died in 1877, bequeathed this portrait to M. Wyruboff, who, though editor of the *Revue positiviste*, is not a member of the strict sect of Comte's followers. Thereupon M. Laffitte, Comte's own executor and the recognised *directeur* of the Positivists, disputed M. Wyruboff's right. The court at that time decided that the portrait should be delivered to neither, but remain in the custody of M^{me}. Comte's legal representative. That gentleman, however, is now dead; and the matter has again come up for legal decision. On this occasion the right to possession has been awarded to M. Laffitte. The portrait, therefore, will now be placed in the house rue Monsieur-la-Prince, No. 10, in which Comte died in 1857, and which has ever since been religiously preserved by his disciples as their head-quarters.

IT is expected that the Académie française will fill up next month the two *fauteuils* vacant by the deaths of Charles Blanc and de Champagny.

THE eighth volume of the *Discours et Plaidoyers* of M. Gambetta, edited by his friend M. Joseph Reinach, will be published next week by Charpentier, the actual date announced being Sunday, October 15. It will comprise the speeches made during what is known as the

period of May 16—i.e., the attempted *coup d'état* of Marshal MacMahon. The text will here be given in full of the speech at Lille on August 16, 1877, which contained the famous alternative "*se soumettre ou se démettre*," and for which the orator was prosecuted. The volume ends with a Budget speech, delivered in the Chamber on December 4, which led directly to the resignation of the stop-gap Ministry of Gen. Rochebouet.

THE third volume of the Letters of George Sand, published at Paris this week by Calmann Lévy, covers the period from 1848 to 1853. Specially interesting is the appeal for clemency addressed by her to Louis Napoleon on January 20, 1852, less than two months after the *coup d'état*.

M. ARMAND BASCHET will shortly publish a work on the Italian players at the French Court during the reigns of Charles IV., Henri III., Henri IV., and Louis XIII., founded mainly upon original documents.

MGR. PERRAUD, Bishop of Autun, and one of the new members of the Académie française, has printed (Paris: Gervais) the discourse on Card. Richelieu which he delivered in 1866, when the remains of the Cardinal were collected and buried in the church of the Sorbonne. He treats him as "*évêque et théologien et protecteur des lettres*."

A NEW French translation has just appeared (Paris: Hachette) of Locke's *Thoughts concerning Education*. The translator, M. Compayré, has added a Preface, giving an elaborate comparison with Mr. Herbert Spencer's essays on education, which he regards as "*une refonte au goût du jour des idées de Locke*."

THE *Revue politique et littéraire* of October 7 contains an appreciative estimate of Landor by M. Léo Quésnel, and the text of the address delivered by M. Paul Janet at the inauguration of the statue of Lakanal, the founder of the educational system under the First Republic.

ACKNOWLEDGMENTS.

WE have on our table *Scottish Myths*, by Dr. B. Craig MacLagan (Edinburgh: MacLachlan and Stewart); *The Coward Science: Our Answer* to Prof. Owen, by Charles Adams (Hatchards); *The History of a Lump of Coal*, from the Pit's Mouth to a Bonnet Ribbon, by Alexander Watt, with Illustrations (Johnston); *The Beeches: a Novel*, by George F. Turvey (Dunn and Wright); *The Lady of the Avoetook*, by William D. Howells. Author's Edition (Edinburgh: Douglas); *The Patna Crisis; or, Three Months at Patna during the Insurrection of 1857*, by W. Tayler, Third Edition (W. H. Allen); *Euphrates Valley Route to India*, in Connexion with the Central Asian and Egyptian Questions, by Sir William Andrew, Second Edition, with Map and Appendix (W. H. Allen); *Worked Examination Questions in Plain Geometrical Drawing*, by F. Edward Hulme (Longmans); *The Wonders of Nature*, by Prof. Rudolph, revised by Alex. Brown, with sixteen illustrations (Gardner); *The Eclogues and Georgics of Virgil*, translated into English Verse by the Rev. J. M. King, Improved Edition, uniform with "*The Aeneid*" (Stanford); *In Christ; or, the Believer's Union with his God*, by A. J. Gordon (Hodder and Stoughton); *Faith: the Life-root of Science, Philosophy, Ethics, and Religion*, by H. Griffith (Elliot Stock); *Lights and Shadows of Ancient European Mythology, Language, and History; or, Odin's Runa of Yggdraail*, by Elizabeth Wilson (Partridge); *A Method for Prayer*, Compiled and Arranged from Matthew Henry, by Capt. George Palmer (Bagster); *Our Lord's Life on Earth*, by the late Rev. Dr. Hanna (Religious Tract Society); *The Footsteps of St. Paul in Rome*, by S. Russell

Forbes (Nelson); *The Second Epistle to the Corinthians*, with Explanatory Notes, by the Rev. Henry Linton (Philip); *The Book of Comprehension: the Relational Classification of Ideas*, Parts II. and III. (Cattell); &c., &c.

ORIGINAL VERSE.

A FRAGMENT.

WE roam'd the sandy beach; around us spread
The halo of September; in the air
A dreamy languor; while the ebbing sea
Did kiss his farewell to each dimpled ridge,
And whisper promises of sweet return
In lonely hours, when mortals are asleep.
Three were we, brother, sister, and a friend
In spirit dear to both, though he that day,
And not before, did look into her eyes.
Our talk was bright, and rippled with the play
Of fancy and affection link'd in one.
Our joys from books and nature we compared,
And felt them kindle warmer in the telling.
Then, as from calm retreat and vantage-ground,
Pass'd in review life's battle, pomp, and woe.
Thus one, despising the shell-dappled plain:—
"The sandy shore is dull; no roaring waves,
No crags, defiant silence frowning back."
"Nay," came response, "our deepest, holiest
thoughts
We do not bellow blatant to the skies.
The sea hath other things to do than roar.
On dizzy cliffs the spirit folds her wings,
And shuddering, crush'd, bewilder'd, fears to soar.
By awe depress'd, we're quicken'd by repose."
Thus topics shifted, strung on golden thread
Of happiness; till coldly each 'gan feel
The crowding moments, for our time was brief.
And from that on our talk's spontaneous flow
Was choked with pauses full of sweet regret
That life was not all one September day
And happy intercourse of buoyant souls.
Then hands were clasped, and the softening light
Grew deep to tender sadness in our eyes;
And then we parted, and the sun went down.

JOHN W. JOYNT.

OBITUARY.

PROF. HERZOG.

NOT a few readers of the ACADEMY will learn with much regret the great loss historical theology has suffered by the death of the well-known editor of the *Real-Encyclopädie für protestantische Theologie und Kirche*, Johann Jakob Herzog, which happened at Erlangen on September 30. He was born at Basel in 1805, entered the university of his native town in 1822, and afterwards studied at Berlin. From 1835 till 1846 he held a Professorship of Historical Theology at the Académie of Lausanne, where he published his *Life of the Basel Reformer, Oekolampadius* (1843). In 1847 Herzog was invited to fill a Chair at the University of Halle. In 1851 he received a commission from the Prussian Government to visit Geneva, Paris, London, and Dublin in order to investigate the sources for the history of the Waldenses. The result of this mission was his work *Die romantischen Waldenser* (1853). At this time, also, he conceived the plan of his *Real-Encyclopädie*, and he succeeded in gaining for this great undertaking the co-operation of many eminent scholars. The first edition was published from 1854-68, in eighteen volumes, with four supplementary ones. Since the beginning of this work he had left Halle for Erlangen, which remained his sphere of activity till his retirement from active academical duties in 1877. The last years of his well-employed and worthy life were occupied with his *Abriß der gesamten Kirchengeschichte* (three volumes, 1876-82), and with the preparation of a second edition of his *Real-Encyclopädie*, which has already reached the tenth volume. We have every reason to hope that the latter work will survive its editor, and be brought to a desirable completion by the efforts of his friends. H. KREBS.

MAGAZINES AND REVIEWS.

THE *Cornhill Magazine* has the beginning of an article on "*Miss Edgeworth*," which gives a pleasant sketch of life and society at the end of last century, and contains many amusing stories of Mr. Day, the author of *Sandford and Merton*, who was intimately connected with the Edgeworth family. J. O. C. also begins a scholarly study of "*Voltaire in England*;" it is done with a thoroughness beyond the average of magazine articles. J. A. F. writes on "*Some Solar and Lunar Myths*," with the intention of showing that irrational mythology is the product of irrational minds, and that its irrationality is the very essence of its plausibility. Shway Yoe gives an account of "*The Kachyena*," who inhabit the region between China and Burma. The account of "*A Visit to Delphi*" is a pleasant record of travel, but does not increase the reader's topographical or antiquarian knowledge.

THE *Antiquary* improves steadily, and bids fair to be to this generation what the *Gentleman's Magazine* was to our forefathers. Mr. Gomme's article on the Preston Guild is particularly valuable. It shows how the most seemingly valueless documents may be compelled to reveal facts of high import. We are glad to find that Mr. Gomme lifts up his voice against the notion still common that our old corporations are no older than the date of their earliest charter. It is certain in some cases, probable in almost all, that the charter was but the confirmation of franchises and rights of much earlier date. The extracts furnished by Mr. Bax from the accounts of a Surrey yeoman are of value as furnishing data for a history of agriculture. The spelling is most curious. The whole MS. should be studied by someone learned in dialects. Its strange forms of spelling are many of them evidently not the result of ignorance, but of a desire to represent the pronunciation which the yeoman heard. Mr. James Purves has a good article on "*Fletcher of Saltoun*," which puts the man in a favourable, but not too favourable, light. Scotchmen honour the patriot's memory, but he is commonly looked upon as very much of a dreamer. This is surely unfair. A theorist by nature, he lived in a time of rapid change, and had therefore somewhat better opportunities of airing his hobbies than we have. He was highly educated, and yet condemned to spend much of his time among his social equals, who were almost all of them very deficient in culture. Such a position does not tend to foster the virtue of humility. Mr. Purves expresses much admiration for Fletcher's style, which certainly is well-knit and terse to a degree rarely equalled. We wonder what his hero would have thought of something being described as "*like a table of statistics clothed in realisation*." The Reports of local antiquarian societies have been prepared in the careful manner to which we have of late become accustomed.

THE current number of the *China Review* opens with an article by Mr. Jamieson on some recognised legal decisions in cases affecting the Chinese Marriage Law. In most countries marriage laws are of difficult interpretation. But in China, where usage so commonly passes into law, and where the relation of master and slave exists, their intricacies are endless; and as Chinese jurists, instead of laying down any general principles, enlarge only on details, they add to the confusion by the multiplication of cases, and leave untouched the central doctrines which might serve for the guidance of the courts. But, though unsatisfactory to the legal mind, many of the cases quoted by Mr. Jamieson are interesting from the strangeness of the circumstances surrounding them. Mr. Parker next continues the

narrative of his journey in Szoh'uan. Being a vigilant observer, he has also something interesting to say either of the people and their industries, or of the country and its products. Being also evidently able to endure much, he never fails to describe with cheery good humour the many and perpetual discomforts which attended him on his travels. Mr. Watters, in the succeeding article, compares Mr. Bendall's translation from the Sanskrit of the "Megha Sūtra" with the Chinese version, without, however, adding much to our previous knowledge. In a review of M. Cordier's *Bibliotheca Sinica*, M. Möllendorf, one of the authors of a *Manual of Chinese Bibliography*, points out some errors of omission, though constrained to give a qualified approval to M. Cordier's exhaustive work. The notices of new books at the end of the number testify to the increased literary activity in all matters relating to China.

THE *Deutsche Rundschau* has a pretty story by Herr Meyer, "Page Leubelfing," of which the plot is laid in the days of Gustavus Adolfus. Herr Renier begins an elaborate description of the island of Elba. An interesting autobiographical sketch of a German officer, "Aus zwei annectirten Ländern," gives the personal reminiscences of a Hanoverian of the events between 1848 and 1866. The most interesting paper, however, is one by Prof. Haeckel, "Die Naturanschauung von Darwin, Goethe und Lamarck." It was read as an address before a philosophical society at Eisenach last month. To an English reader it is interesting for the writer's personal reminiscences of Darwin, whom he visited in 1866, 1876, and 1879. Prof. Haeckel admires especially Darwin's quiet life as a student.

"Nothing is, in our opinion, so destructive to profound and earnest scientific work as the scholastic jealousies of our great universities and the party struggles of our learned academies. From these, as well as from all sorts of distinction and other distracting influences of outer life, Darwin always kept himself aloof, and he acted wisely."

Prof. Haeckel publishes a letter which Darwin wrote, after repeated entreaties, to a young student at Jena who pressed for his opinions. As it is the most definite statement of Darwin's attitude towards religion it deserves quotation:—

"Down: 5th June, 1879—

"Dear Sir,
"I am much occupied, an old man, with bad health, and I have no time to answer your questions fully, even supposing that they admit of answer. Science has nothing to do with Christ, except so far as the habit of scientific observation makes a man careful in admitting evidence. As regards myself, I do not believe that any revelation has ever been made. In respect to a future life, every man must make his decision between contradictory and undetermined probabilities.

"I remain,

"Your well-wisher,

"CHARLES DARWIN."

It is curious to contrast Darwin's simple statement with Prof. Haeckel's assertion of "a monistic religion of humanity."

WHAT CAN INDIA TEACH US?

WITH reference to Prof. Max Müller's article in the current number of the *Contemporary Review*, an "Old Indian," than whom few, if any, have made a better use of their stay in India, sends us the following lines:—

"No men have better opportunities of obtaining accurate and valuable information on a thousand different matters that interest scientific men than the officers of Government in India, but few make use of such opportunities. The reason of this,

so far as my experience extends, is not so much want of energy as want of knowledge of the kind of information required in Europe, and want of means of communication with those who require it. Before the young official leaves Europe, he has no time to think of anything but 'cramping' for examinations, and, therefore, arrives in India with very little more information than those examinations require. It may be that he has taken a liking to some particular branch of that information, and continues to elaborate it; but in most cases he has taken a dislike to the whole of his recent studies, and prosecutes them as little as possible. At any rate, he knows next to nothing of the many scientific problems awaiting solution by means of careful observation of facts which will daily, or occasionally, pass before his eyes unobserved; and they are left unrecorded, possibly for some casual visitor to the country to note under all the disadvantages of hurried observation and inadequate means of enquiry, which often leads to false inferences from true facts, as the visitor has no time or means for continued observation and investigation. Much of this waste of opportunities is no doubt unavoidable; but surely some of it might be prevented if scientific men in Europe could formulate the questions likely to be solved by observation in India, pointing out what is known and what remains to be ascertained, and if they could find some means, independent of Government control, of putting and keeping themselves in communication with every official in India. They would soon discover which men were useful, and which impracticably careless of knowledge. Possibly it would be more difficult to induce the scientific men of Europe to take this trouble than to move the Indian official to do his part of the work."

NOTES FROM MELBOURNE.

THE University of Melbourne has at last made a great step in the direction of progress by passing a resolution to appoint a professor of the English, French, and German languages and literatures. It was proposed to unite with this chair a lectureship on comparative philology; but the Council have, on reflection, come to the conclusion that this subject can better be taught in connexion with the classical chair, and so Dr. Strong, the classical professor in the university, has undertaken to give a course of lectures on comparative philology. A lectureship has also been established of mental and moral philosophy, the duties of which are performed by Mr. Henry Laurie. The lectureship on natural philosophy, vacant by the death of Mr. Pirani, has been filled by the election of Mr. H. M. Andrew, of St. John's College, Cambridge.

Mr. Ormond, the munificent founder of the affiliated college which bears his name, finding that his college is full of students, has generously determined to enlarge it at his own expense. Trinity College, the affiliated Episcopalian college, being likewise full, a benefactor has appeared in the person of Mr. Joseph Clarke, who has undertaken to erect a new wing. Thus Mr. Macfarland and Mr. Leeper, the principals of these two colleges, will each find themselves at the head of some fifty or sixty students.

The Government of Victoria has placed about £12,000 at the disposal of the trustees of the Public Library and National Gallery of Victoria. The accommodation for the school of art is to be extended, and the public library is to be increased.

The Acclimatisation Society, having obtained leave from the Government to make a charge on admission to their gardens, are obtaining a regular revenue from this source, and are increasing their stock of animals by large additions made from India, Singapore, New Zealand, New Guinea, &c. Their reptile house was lately destroyed by fire. They purpose to add a museum to their already existing collection.

CORRESPONDENCE.

POPULAR NAMES OF FISHES.

Preston Rectory, Wellington, Salop.

In my investigations concerning the food of fishes by an examination of the stomachs and intestines of various species, to which you were good enough to draw attention in the ACADEMY a short time ago, I do not forget to enquire about the names of fishes as popularly known either to fishermen or to those engaged in the

trade. When I visited Grimsby last July I heard the following names used in the fish docks as applied to three distinct kinds of fish—*Roker*, *Latchett*, and *Whitches*. I had previously noticed these names in the columns of the *Manchester Examiner and Times*, which gives day by day the prices of nearly all kinds of the common commercial fishes as current both at Grimsby and Billingsgate; but before I visited Grimsby I did not know the fish intended by these respective names, nor had any idea as to their meaning and origin. It is hardly within the scope of a general dictionary to notice popular or provincial names; and, accordingly, Prof. Skeat, in his splendid etymological dictionary (which everyone who values true scholarship may feel proud to possess), makes no allusion to these fish names.

As to the three names just mentioned, I find that at Grimsby the word

1. **ROKER** is used to denote the thornback-ray (*Raja clavata*, Lin.) exclusively, and this species is, by this name, distinguished from others of the family *Rajidae*, to which the term "skate" is applied, such as to the common skate (*R. batis*), and to one or two other marketable kinds. The roker is the thornback-ray. Rokers fetch a less price than skate in the markets, and are always quoted separately. But what is the meaning of the word "roker"? It seems to be clearly referable to the Swedish word *Rokka*, the Danish *Rokke*, and the Dutch *Rog*, all of which denote especially, but not altogether exclusively, the thornback. The North Sea fishermen, who are in the habit of taking several kinds of fish well known to our Dutch or Scandinavian neighbours, would very naturally sometimes adopt their names.

2. **LATCHETT**.—This name, not much known in London, is used to designate one of the gurnards or gurnets. It is well known in the Grimsby fish-market, and is applied to the species called by Bloch *Trigla pini*; the *T. cuculus*, Lin. and Day; the red or cuckoo gurnard of Yarrell; and the *Elleck* of Couch. Latchetts and gurnets are always quoted in the price-lists as distinct; the former, being much more esteemed than the latter, fetch a higher price. The fishermen, however, fully recognise the latchett as a gurnet of some kind. By the term "gurnets" at Grimsby are generally meant the gray gurnet (*T. gurnardus*, Lin.), of which immense quantities, usually of a small size, are caught in the trawl-nets; but perhaps one or two other species may be included under the name of gurnet. The meaning of the word "latchett" is not very evident. One might, perhaps, suggest that it is another form of the word "rotchet," a corruption of the French *rouge*, "red." Compare *le grondin rouge*, "the red gurnard." The word "rotchet" is as old as Willughby (1686), who speaks of "the red gurnard or rotchet a Gallico *rouget*, id est russus, dictus" (*Hist. Pisc.*, p. 281). The *T. pini* is red, but so also is another beautifully coloured species, the roseate piper (*T. lyra*, Lin.), and this is said to be called sometimes the rochet. But as both the terms latchett and rochet, or rochet, are used of gurnards, I think we must regard them as distinct in meaning and origin. I am disposed to think that the word "latchett" has reference to a well-marked and distinguishing character in the species denoted. The lateral line in the latchett, or *T. pini*, is strongly crossed by a number of short straight lines, which run at right angles to it. This reminded Bloch of the acicular leaves of the pine-tree—hence his name of *T. pini*; to others, this crossed lateral line might probably suggest the idea of rudimentary lace-work and the name of "latchett"—i.e., a little lace, or plaited string. This character of the lateral line is very conspicuous in specimens that have been for some time out of water, and may account for the meaning and origin of the term under consideration.

Fishermen and sailors, from their constant dealing with twine and netting, would be likely to mark the resemblance alluded to, and to characterise it by a not inappropriate name.

3. **WHITCHES**.—These fish, well known in Grimsby and Manchester, where they have a considerable sale, are not etymologically connected with the "Lancashire witches" who sell them. The term is used exclusively in the trade to denote a species of *Pleuronectidae*—namely, the craig-fluke (*Pleuronectes cynoglossus*, Lin.), a kind of dab, which is taken in considerable numbers in the North Sea in certain places. Whitches somewhat resemble in general appearance another kind of dab, wrongly called a sole—viz., the lemon dab, *P. microcephalus*; but the fishermen and salesmen distinguish them rightly even at a glance. In quality of flesh whitches are soft, and not commendable. Though they furnish cheap and wholesome food, I do not think they are nearly as good as the lemon dab. Shakspeare asks: "What's in a name? a rose by any other name would smell as sweet." True; but it is found preferable to call a lemon dab a lemon sole, the sole being by far the superior fish; and perhaps lemon dabs would not sell as well as lemon soles, and this brings me to what I think is the origin of the word "whitches." These fish are sometimes called white soles, being much lighter in colour, as a rule, than the real sole. From white sole to whitsole and whitches the transition is easy in rapid pronunciation.

I believe that Mr. Satchell is engaged on a glossary of fish-names for the English Dialect Society, and I have thought that these remarks may interest some of your readers.

W. HOUGHTON.

EUSKARIAN.

Settlington Rectory, York: Oct. 9, 1882.

As I believe I am chiefly responsible for giving currency, some twenty years ago, to the term "Euskarian," to which exception is now taken, you will perhaps allow me space for a few words in its defence.

The word was intended as a generalisation to express conclusions philological rather than anthropological. It has, therefore, no necessary connexion with the shape of crania, the colour of hair, or the use of flint axes.

But, as there are grounds for assuming a philological connexion between certain non-Aryan races of South-western Europe, a linguistic term to represent this hypothesis is clearly convenient. The Euskarian word for "water," which is found in the names Silures (Siluria), Asturia, Iluria, Liguria, and many more, and the plural locative suffix *-etan* or *-itan*, denoting "those who are in," which is seen in the ethnic names *Lus-itan-ia*, *Maur-itan-ia*, *Aqu-itan-ia*, *Br-itan-ia*, and in a host of ancient tribal names in Spain, such as the *Cerr-etan-i*, *Aus-etan-i*, *Lal-etan-i*, *Oos-etan-i*, *Vesc-etan-i*, *Lac-etan-i*, *Carp-etan-i*, *Or-etan-i*, *Bast-etan-i*, *Turd-etan-i*, *Suess-etan-i*, *Ed-etan-i*, and others, make it highly probable, to say the least, that races speaking languages of the Euskarian type were located along the Western coasts of Europe and North-western Africa at a very ancient time—probably before the arrival of the Celtic people.

If a word has to be coined to express this probable fact, the choice seems to lie between Silurian, Ligurian, Iberian, and Euskarian. To all four there are obvious objections, as there are to all similar generalisations—such as the terms Aryan, Semitic, Indo-European, Ural-Altaic, or Turanian; but, on the whole, the term Euskarian, as a linguistic expression of a deduction from linguistic science, seems to me now, as it seemed twenty years ago, open to less objection than any of the possible substitutes. It is only a choice of difficulties at best. Silurian, Ligurian, and Iberian are

already pre-occupied; the two first, moreover, are derived from extreme outlying tribes, and the last would involve undesirable confusions and misconceptions. Your correspondents would do well to find a good substitute for the malignant term before proposing to abolish it. "Neolithic" certainly will not do—it is too wide, just as "Silurian" is too narrow, besides involving, as your correspondents have pointed out, a very questionable theory. No term derived from the colour of the hair or the shape of the skull can be accepted, and we are therefore driven back perforce on some term primarily either geographical or linguistic.

ISAAC TAYLOR.

THE ORIGIN OF THE ROUMANIANS.

London: Oct. 7, 1882.

A propos of your observations of to-day on the quality of the articles in the current numbers of the leading monthly magazines, may I call attention to an assertion as to the origin of the Roumanians which Mr. O. F. Keary prefixes to his account of their popular poetry in the *Nineteenth Century*? He says:—

"According to all popular belief and tradition, and to the testimony of geographers and historians alike, the Roumanians are nothing else than the offspring of the legions which Trajan placed in the land to colonise it."

Mr. Keary then proceeds, guided apparently by the light of nature, to suggest that the experts may have overlooked a probable Slavonian element to which the extensive Slavonian corruption of the Wallachian vernacular bears seeming witness; but he betrays no acquaintance with external aids to the consideration of the question.

Now, as a mere matter of fact in recent literary history, a considerable number of "geographers"—a term intended doubtless to include "ethnographers"—and "historians" have during the last eight years agreed utterly to discard this "popular belief" in favour of a theory which makes the Romance-speaking people of Roumania and Hungary to be mainly the offspring of emigrants from Moesia, Thrace, and Macedon—the last-mentioned region still contains a considerable Roumanian element—whose speech became Latinised during the age of Roman domination, so far as the vocabulary goes, and who received the contemptuous epithet, rendered "Wallach" in English, from their Slavonian conquerors. The date of the first wanderings of the Wallachs to the present seats of their race this side the Danube has been fixed as early as the Slavonian invasions of the sixth and seventh centuries by Miklosich, and as late as the thirteenth century by the late B. Roessler, of Grätz, the vindicator, albeit not the actual reviver of this theory, which, originally broached by Thunmann, of Halle, towards the close of the last century, had fallen into oblivion. Men of such diametrically opposite points of view as U. Jireček, the historian of the Bulgarians and grandson of the great Slavist Schafarik, and Messrs. E. A. Freeman and W. B. Morfill—each, perhaps, *Scavintor ipis Slavinis*—in the one camp, and the Hungarians Hunfalvy and Schwicker, and Biedermann, of Vienna, in the other, have unhesitatingly accepted the theory of Roessler, whose *Hauptwerke* on the subject, *Römische Studien*, had, oddly enough, the effect of driving into the ranks of the opposition (then headed by Jung, of Innsbruck) the very writer by whom Thunmann's long-forgotten theories were once more brought to notice and apparently adopted—W. Thomaček. As the controversy has gone on, sundry hot Slavonian partisans have joined the forces of Jung, and roundly taken young Jireček to task for the treason to the Slave cause involved in supplementing, by

a body of weighty evidence from old Serbian sources, a theory which has found acceptance at Budapesth.

Those of your readers to whom the details of this question are unfamiliar, who will turn to my review of the work of one of these gentlemen—*Ueber der Abkunft der Rumanen*, by J. L. Pils—in the ACADEMY of October 30, 1880, and my letter on the same subject in your issue of September 17 of the following year, can judge of the methods of controversy to which the strength of Roessler's position has driven some defenders of the "popular belief" who are not of Latin race—methods which exclude neither the ruthless mutilation, the apparently wilful suppression, nor the direct misrepresentation of authorities where vital points are in question. A "tradition" which stands in need of such championship must, however "popular" or venerable, be pronounced, with Mr. Freeman, to have been "completely dispersed by modern research."

A. R. FAIRFIELD.

THE MERCHANT TAYLORS' REGISTERS.

West Hackney Rectory: Oct. 7, 1882.

Your reviewer, in his notice of my annotated *Registers of Merchant Taylors' School*, charges me with having fallen a victim to the prevalent *cacotheca emendandi*. Without claiming entire immunity from the disease, I venture to say that in one of the two instances alleged it shows itself in my critic and not in myself. I suggested that by "Yielding co. Middx." Dugard probably meant the parish now known as Ealing. Your reviewer unhesitatingly states that "the locality is obviously Yelding, a hamlet of Hayes." Now, the accurate Dugard distinctly called Yelding a *parish*; why is it, then, "obviously" a *hamlet*? He knew the difference between such divisions, and on the page preceding the supposed error marked it in the fifteenth entry. Lysons says that Ealing was known as Yeling, Yellyng, and Yealing; and there is no other parish in the county at all resembling Dugard's word. Quite unintentionally, I have no doubt, Mr. Round has by the two instances he has quoted implied that the suggestions in my notes are of little value. Other and more favourable judgments have been expressed upon them, and I can truly say that they represent much honest labour and independent research.

I am glad to say that Dr. Howard is printing in the *Miscellanea Heraldica et Genealogica* those portions of Dugard's admission-book which relate to his private school.

CHARLES J. ROBINSON.

While maintaining that it is as impossible to make "Yielding" into Ealing (ignoring the distinctive "d" of the *cald*) as "Auborne" into Avebury, I hasten to add that the supposed implication is indeed "quite unintentional;" and to repeat, of Mr. Robinson's annotative matter, that "the labour which this illustration must have cost the editor will be realized, we fear, by few."

J. H. ROUND.

THE NEW TESTAMENT OF 1575.

Taunton: Oct. 10, 1882.

With reference to Mr. Dore's remarks (ACADEMY, No. 544, p. 281), it may be interesting to state that, in the Geneva small quarto edition (Oreepin; 1568) of the Geneva version of the New Testament, the reading at Luke ii. 12 is "childe," and that at Rom. ii. 20 is "the unlearned," as in the edition of 1575 quoted by Mr. Dore.

WM. P. PINCHARD.

"THE DIGBY MYSTERIES."

Berlin, S. W., Kleinbeerstrasse 7: Oct. 5, 1882.

Glancing over the Glossary appended to *The Digby Mysteries*, just re-edited by Mr. Furnivall for the New Shakspeare Society, I was struck by the explanation of "3af" in p. 122, l. 1799, as "if." The passage in which the word occurs runs as follows:—

"pay now, ser, and go to lond,
for here is be portt 3af I ondyrtend."

I think there is not the least doubt that "3af" is a proper name here = Joppa, Germ. Jafa.
J. ZUPITZA.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, Oct. 16, 7.30 p.m. Education: Examinations—
"Lacroix's Theories of Education," by Mr. F. G. Fleay.
8 p.m. Royal Academy: "The Bones of the Human Body," III., by Prof. Marshall.
TUESDAY, Oct. 17, at 5 p.m. Hellenic: "Explorations in Aesche," by Prof. Bayce; "A New Statue of Herakles," by Mr. A. S. Murray.
FRIDAY, Oct. 20, 8 p.m. Royal Academy: "The Bones of the Human Body," III., by Prof. Marshall.

SCIENCE.

P. Vergili Maronis Opera. Virgil, with an Introduction and Notes by T. L. Papillon. In 2 vols. (Oxford: Clarendon Press.)

Few teachers will doubt the lawfulness of a fresh attempt to supply the need of an edition of Virgil with English notes for school and college use. Of the two complete editions, which are abreast of modern scholarship, that of Prof. Conington is often embarrassing to the average student from the very copiousness of the commentary, not less than from the uncertainty of tone which sometimes marks its utterances; while that of Dr. Kennedy, even in its latest form, supplies much less than might fairly be demanded. Mr. Papillon's volumes, therefore, have a sufficient reason for their existence; and, on the whole, they appear to have satisfied it.

The first volume contains the text, very beautifully printed, and an Introduction of forty-eight pages; the second, of nearly four hundred closely printed pages, contains the notes. Mr. Papillon has therefore allowed himself almost exactly the same space for commentary as that which Dr. Kennedy occupied. It is evident that, if his aim was to give more assistance than Dr. Kennedy had furnished, it was necessary to exercise a very rigid self-control, and to cut away with an unsparing hand all that did not strictly bear upon the elucidation of the author. It may be doubted whether Mr. Papillon's pruning knife has always been as merciless as it should have been. The commentary does not generally err on the side of diffuseness. Indeed, it is only the sense of the need of rigid compression which can lead a critic to overlook the meagreness of the notes on some much-debated passages. For instance, in *Aen.* ix. 140 ff., Mr. Papillon gives the true version, though without the desirable reference for the force of *fuisse*; but he takes no notice of the reading of Ribbeck and Forbiger, which, considering the wide currency of Ribbeck's text, should at least have been noted; and in *Ecl.* iv. 49 Mr. Munro's interpretation is touched upon far too briefly. But, this being the case, it is open to doubt whether it was wise to offer to the class of students whose needs are being kept in view twenty pages on

the text of Vergil, full of details as to the ancient commentators. It is certain that a reader who desires information about Aemilius Asper or Velius Longus will not need to be informed as to the primary meaning of *latro*.

As a rule, Mr. Papillon's judgment is sound, and his interpretations accurate. In determining the text he is decidedly conservative; and, contrary to the practice of most recent editors, he inclines to follow the guidance of the MSS. rather than the express quotation of grammarians (e.g., *Aen.* xii. 605). In *Ecl.* vi. 16 the note is not in accordance with the text; the latter runs, *serta procul, tantum capiti delapsa, iacebant*, from which it would appear that the editor accepts the interpretation, supported, among others, by Dr. Kennedy, of *tantum delapsa*, as "just fallen;" but the note is *procul tantum*, "just apart," *τῶν δὲ ὄσων ἀπὸθεν* (*Theocr.* i. 45); and authorities are quoted for the force of *tantum*, "only so much," and *procul*, "apart." This is not the only instance in which an unobserved discrepancy is likely to puzzle the reader not a little. There is, perhaps, too little help given in the way which is the most valuable and the least injurious to students, that of reference to some standard grammar; such a reference would have obviated the necessity for notes like the somewhat misleading one on *egeret* (*Aen.* ix. 88).

In the matter of orthography, Mr. Papillon has deliberately adopted what may be called a method of conventionalised uniformity. Wherever the MS. evidence is clear and consistent he follows it; but, wherever there is any variation, he falls back upon the most familiar spelling, and keeps to it unswervingly. The argument on this point is by no means convincing. He says:—

"Granted that in Virgil's time pronunciation had not completely triumphed over etymology in the assimilation of prepositions; that the varying forms '-is' and '-es' for nom. and acc. plur. of 'i' and consonant stems were still in use; that the feeling against the combination 'uu' ('vu') was not yet extinct; and that 'maxumus' and 'vorto' still held their ground beside 'maximus' and 'verto'—is it therefore necessary or desirable to maintain in Virgil's text, on the evidence of MSS. written long after his time, such variations as 'impius,' 'inpius,' 'navis,' 'naves,' 'volnus,' 'vulnus,' 'lacruma,' 'lacrima,' 'vortex,' 'vertex'? Can we feel that the poet himself would have tolerated such irregularity; or, at least, that there is any improbability in retaining in his text only one of two varying forms?"

To these questions most scholars would probably feel inclined to return an answer very different from that which the writer expects. Mr. Papillon himself recognises that the true method is that inaugurated by Lachmann on Lucretius—"to sift as carefully as possible the existing MS. evidence, and from it make the best approximation to what the author *might* have written, taking as a rule the oldest form for which evidence, direct or indirect, is forthcoming." But this method leads to exactly the opposite result to that which Mr. Papillon professes (though with happy inconsistency) to accept. He, after "sifting the MS. evidence," insists upon a uniformity against which they bear witness on every page, and rejects the older forms wherever

MSS. "written long after his time" furnish later ones. Mr. Papillon gives sound reasons for not accepting Ribbeck's text as a whole; but he is less convincing in arguing against his principles of orthography; and, indeed, passes from the one point to the other in a somewhat confusing fashion (Introduction, p. 2). One would be glad, too, to know on what evidence the statement rests that "in Virgil's time the forms 'eiicio,' 'reicio,' &c., were normal."

Perhaps the most entirely satisfactory part of this edition is to be found in the translations, which are introduced somewhat frequently as affording the shortest and clearest form of explanation. In these Mr. Papillon need not fear comparison with any of his predecessors. He has usually hit a happy mean between the over-ornateness of many of Conington's versions and the baldness of some of Dr. Kennedy's. *E.g.*, in *Æn.* ix. 140, 141:

"But, you say, 'tis enough that they have perished once. Ay, it should have been enough to sin once in days of old, hating utterly (thenceforth) well-nigh all woman kind. Fools! whose trust in the rampart that parts us, and the trench that stays our onset, poor fence 'gainst death, is all that gives them heart,"

is a rendering which will not suffer by the side of Dr. Kennedy's:

"But (it will be said) to have perished once is enough: to sin once before should have been enough for them, hating utterly from that moment almost all the female sex: warriors forsooth, to whom this trusty wall that intervenes, these impeding ditches that divide us for a short while from death, lend courage."

Mr. Papillon's list of authorities is somewhat meagre; and it is curious that, while Forbiger is one of the few editors who have been habitually consulted, no notice is taken of his latest (fourth) edition (1871-74), which that indefatigable scholar most carefully brought up to date. Nor does he appear to have noticed the difference between Wagner's larger and his smaller edition; at least the account of Wagner's work on p. 45 is very misleading. But although Mr. Papillon's edition can hardly be pronounced in its present form the ideal commentary on Vergil, even for its restricted purpose, it is not too much to say that no edition has been hitherto published in England which approaches so nearly to that ideal; and that, if the accomplished editor chooses to submit it to revision and expansion in future editions, incorporating the results of a more extensive use of the Vergilian literature, it has qualities which may enable it to retain its place unchallenged.

A. S. WILKINS.

CURRENT SCIENTIFIC LITERATURE.

A Treatise on Marine Surveying. By the Rev. J. L. Robinson. (Macmillan.) We are always ready to welcome any work that seems likely to further the interests of marine surveying, which becomes every day more and more important in view of the great strides being made in modern shipbuilding. A well-known officer of high rank has laid down the axiom that a fair surveyor must of necessity be a good navigator; and another eminent authority has placed on record his opinion that some knowledge of both the practice and theory of surveying is a necessary part of the training of every naval officer, without which he cannot have an

intelligent understanding of the charts, the methods of using them, and the confidence to be placed in them. The great importance of the hydrographic branch of the navy is, indeed, very generally recognised, and the scope of the examination in marine surveying has been greatly increased since the establishment of the Royal Naval College at Greenwich. Under these circumstances, Mr. Robinson considered that a small manual was wanted which would not only meet the requirements of students, but might also excite a wider interest in the more popular features of this useful branch of study. The plan of the work is similar to that employed with success in text-books of elementary science, combining a description of the instruments used, and of the various methods pursued, with a careful selection of representative examples, which, with their solutions, will no doubt be highly appreciated by many a gallant young officer who would carry a lighter heart into action than into the examination-room. Indeed, these examples form one of the principal features of the book, which, though the materials have been selected and arranged with much judgment, has otherwise small pretensions to originality. In the chapter on "Instruments and Observing," we should like to have seen more stress laid on the great importance of obtaining a thorough mastery of the sextant; and, though surveyors do not trust much to the compass, still, in an introductory work of this kind, something should be said about the amount of dependence which may be placed on it. We would also suggest that some remarks on the conduct of a running survey, and on Sumner's method for determining a ship's position, would tend to make the book more generally useful. As it stands, however, it is an excellent companion to the treatises of Commander Hull and Mr. Laughton, and is therefore one of the books which should be studied by every young naval officer who wishes to become a good surveyor or pilot. Marine surveying is, in a sense, the essence of pilotage; and as pilotage enabled Nelson to fight the Battle of the Nile at his own time, so it has also contributed in no small degree to the success of the recent naval operations under Sir Beauchamp Seymour.

A History of Coal Mining in Great Britain. By Robert L. Galloway. (Macmillan.) Mr. Galloway has produced an excellent little book. Forbearing to enter into technical details, understood only in the mining world, he has sketched in pleasant lines the development of an industry which, from its supreme importance, ought to be of interest to every Englishman. At a time when a Royal Commission is busily engaged in an enquiry into the causes of accidents in coal mines, we turn with special curiosity to those parts of the work which deal with the means of lessening the miner's risks. On this subject the information, without being anything like exhaustive, is sufficiently full and satisfactory. The writer enters at some length into the famous controversy as to the invention of the original safety lamp; and, though Stephenson's partisans will probably be displeased with some of his remarks, we believe that he holds the balance between the rival claimants with much fairness. As a proof that Mr. Galloway has brought his information well up to date, we may remark that he mentions the recently suggested use of caustic lime in breaking down coal—a method which, if capable of successful application on a large scale, may eventually supersede the practice of blasting, and thus remove one of the many sources of danger to which the miner is exposed.

Geology. By A. H. Green. Part I.—Physical Geology. (Rivingtons.) Prof. Green, of the Yorkshire College of Science, has issued a new edition of his excellent treatise on physical

geology. The work has been greatly expanded, especially in those parts which relate to mineralogy and petrology. In the first edition the sketch of mineralogy was much too slender to form a satisfactory introduction to the science; hence this part of the work has been recast and amplified so as to present a fairly complete outline of mineralogy, such as is suited to the use of geological students who require only a very general knowledge of minerals. A new chapter on metalliferous deposits will be acceptable to the student of mining. In the department of petrology so much has of late been accomplished as to render considerable alteration necessary. In its improved form Prof. Green's work is probably the best English treatise that can be used by a student who desires a really sound knowledge of physical geology.

Science in Short Chapters. By W. Mattieu Williams. (Ohatto and Windus.) One of the papers in this volume—that in which the writer criticises Dr. Siemens's theory of the constitution of the sun—is here printed, we believe, for the first time; but the rest have already appeared in various journals. We note with satisfaction that the writer is careful to specify in each case the source from which the article has been taken, and in most cases the date of its original appearance. Mr. Mattieu Williams is undoubtedly able to present scientific subjects to the popular mind with much clearness and force; and these essays may be read with advantage by those who, without having had special training, are yet sufficiently intelligent to take interest in the movement of events in the scientific world.

The Geological Record for 1878. Edited by W. Whitaker and W. H. Dalton. (Taylor and Francis.) Accustomed for several years to look forward to the punctual appearance of this annual record, we are surprised to find the present volume so far behind date. It appears, from the Preface, that the delay has mainly arisen through the failure of one of the honorary sub-editors to supply the usual abstracts of papers, and thus it comes to pass that the present volume has been published without the section on American geology. This is, of course, a very serious drawback to its utility; but, setting this omission aside, the rest of the work is more than usually valuable. We are glad to notice on the title-page the name of Mr. Dalton as associate-editor, since we have reason to know how energetically Mr. Dalton has worked, not only on this volume, but on several of its predecessors.

The Harveian Oration for 1880. By John W. Ogle. (Privately printed.) The task of a Harveian orator grows harder year by year, as all the facts bearing on Harvey's life and scientific activity are used up. To Dr. Ogle it has clearly been a labour of love; he lingers over every page of his own work, adding footnotes and appendices without end. Indeed, the "adversaria" take up much more than half of the book, and deal with topics as far removed from each other as the school of Salerno and the relation of knowledge to action. Like Burton's *Anatomy of Melancholy*, which it resembles in the amazing multitude of its quotations, Dr. Ogle's volume is not to be read at a sitting, but taken up at leisure moments and enjoyed deliberately. Every page contains something instructive, or, at any rate, something of interest, even to the general reader.

THE Association for the Advancement of Medicine by Research are issuing reprints of addresses delivered by eminent members of the profession on various occasions, dealing more or less directly with the subject of experimental research on living animals. We have received copies of papers by Mr. Bowman, Mr. John Simon, Prof. Humphry, and 'Mr.

Robert McDonnell. They are all well worthy of perusal by those who are still uncertain as to the importance and value of the experimental method in the pursuit of biology, and the nature of the relation in which biological enquiry stands towards the practice of medicine and surgery. The chief benefits conferred by the former upon the latter are indirect; the whole intellectual atmosphere is gradually changed, though it may be difficult to say in what the change consists at any given moment. This is the truth most difficult of apprehension to the uninitiated; and these publications, coming from men of recognised authority in their several departments, will do much to impress it upon the public mind.

THE author of *The Remote Antiquity of Man not Proven* (Elliot Stock) has unwittingly performed a useful piece of work. His strenuous efforts to establish a hopeless thesis have resulted in such a ludicrous fiasco that others may possibly be induced to take the lesson to heart, and avoid wasting their energies in the vain attempt to overthrow some of the universally accepted conclusions of modern science. The evident labour bestowed upon the work will thus not have been quite thrown away. But surely even this writer might have abandoned his self-imposed task when he found himself driven to suggesting an antediluvian Negro-type present in Noah's family itself in order to meet the difficulties created by the appearance of this type on early Egyptian monuments. After such a *tour de force*, the affiliation of the Polynesian to the Chinese and Semitic languages, the acceptance of Champollion's Egyptian chronology, the unity of mankind deduced from the Australian boomerang, the denial of a Stone age, which is merely "an ingenious conception for eking out the long period required by the theory of man's remote antiquity," became comparatively easy assumptions. At the same time, the author of these bold feats has perhaps, on the whole, done wisely to preserve the anonymous.

MR. ROWLAND WARD, of 166 Piccadilly, has sent us a second edition of his *Sportman's Handbook*, which consists, first, of elaborate rules for the preserving of skins and heads, and, second, of a short guide to the chief hunting-grounds of the world. To this latter part is added a series of plates giving the horns of various kinds of deer, antelope, &c. For its size, no book could be more practical and thorough than this. It is handsomely bound in what we take to be alligator skin.

WE have received the first three numbers (A to K) of a German Dictionary of Pharmacognosy, limited to drugs derived from the vegetable kingdom. This dictionary forms part of the *Encyklopädie der Naturwissenschaften* in course of publication by E. Trewendt, of Breslau. After a botanical description of each plant, we have a short account of its chemical composition and essential constituents, of possible adulterations and tests for purity; its medicinal uses are then briefly indicated, and its history traced. The work of compilation seems carefully done; and the book will prove of use not merely to students of the *Materia Medica*, but to all those who are interested, whether commercially or otherwise, in the subject of economic botany.

THE TRANSIT OF VENUS.

A LECTURE on the transit of Venus was delivered at the Royal Artillery Institution last week by Capt. G. Mackinlay, a member of the transit party proceeding to Jamaica. The lecturer referred to the rarity of the transits, only two occurring in a century. Photographs were shown of the appearance of the planet at various

stages of its orbit, at times resembling a miniature full moon, and at others a new moon, but with the horns much finer and longer. The several methods of finding the distance of the earth from the sun were described; and it was explained that the approaching transit is expected to confirm the corrected result deduced by Sir George Airy from seventy-four observations of the last transit in 1874—that the distance is 93,300,000 miles, and not the 95,000,000 previously accepted, which was based upon Halley's method used in the transits of 1761 and 1769. Delisle's method of computing was next explained. It was used in the last transit, and will be used again in this. The greatest duration of the transit, which takes place on December 6, will be sixteen minutes, first visible in the Southern hemisphere. At the Cape of Good Hope it will commence about 2.12 p.m.; in Jamaica, about 9 a.m.; and in England, about 2.5 p.m.

The cost of the British expedition will be defrayed by the Treasury; and the arrangements are undertaken by a committee of the Royal Society, under the direction of Mr. Stone, Radcliffe Observer, Oxford. The observers will be divided into three groups—one in the West Indies, another at the Cape, and the third in Australia. The West Indian group embraces three stations—viz., Barbadoes, at which Mr. Talmage and Lieut. Thomson will observe; Jamaica, with Dr. Copeland and Capt. Mackinlay; and Bermuda, with Mr. Plume and Lieut. Neate. In the Cape group, which includes Madagascar, there will be four stations, worked partly by observers from England, and partly by observers from the Cape Observatory—the former at Madagascar and Aberdeen Road, and the latter at the Cape Observatory and Montague Road. In addition to the above, two Jesuits—Father Perry and Father Lidgreave—will go to Madagascar, being conveyed in H.M.S. *Fawn*; also, Mr. Marth will go from England to Aberdeen Road at the Cape. In the Australian group the observers from England are Capt. Morris and Capt. Darwin, and Mr. Peake, who goes out at his own expense, and taking his own instruments, but working with the party. Other places in Australia will be worked from Melbourne Observatory; and the New Zealand party will consist of Col. Tupman and Lieut. Coke. In addition to these observers, many others are going on their own account. Dr. Pearson, of Emmanuel College, Cambridge, is thus going to Jamaica. All the observers have been trained by Mr. Stone at Oxford; and the Jamaica party, which is the last to leave, will sail from London on October 17. All will use the same kind of instruments, and record minutely their observations and notes, independently of one another.

The French expedition will observe the transit from two stations in South America—one at Uarmen de Platones, and another at Santa Cruz; and the Brazilian astronomers will observe from Rio Janeiro, Pernambuco, Cape Horn, and the West Indies.

The Union Steamship Company's steamer *Durban*, which sailed from Southampton on October 6, had among her passengers Prof. S. Newcomb, Lieut. T. L. Casey, Ensign Holcourt, and Ensign Alke, who form the expeditionary party sent by the United States Government to witness the transit. It is probable that their station will be at Beaufort, three hundred miles from Cape Town, where there is almost invariably a clear sky. Other American parties have gone to Patagonia, to Valparaiso, and to New Zealand.

SCIENCE NOTES.

IN the October number of the *Geological Magazine* Mr. J. Starkie Gardner proposes a revised classification of the Eocene strata of Great Britain. It has been frequently suggested that English geologists should follow their Continental brethren in recognising between the Eocenes and Miocenes an Oligocene division. If this division be admitted, it will absorb all the strata now called Upper Eocene, including the classical Fluvio-marine series of the Isle of Wight. The remaining Eocene beds will then require re-arrangement. Mr. Gardner proposes to characterise the Upper and Middle Bagshot beds as *Upper Eocenes*; then to place the Lower Bagshots and the London clay in the division of the *Middle Eocenes*; and to include all the remaining strata down to the top of the chalk in the *Lower Eocene* series. Perhaps the most notable change suggested by this revision is the transfer of the London clay from the Lower to the Middle group of the Eocene strata.

THE last number we have received of the *Journal of the Asiatic Society of Bengal* (vol. li, part ii., No. 1) is devoted entirely to entomology. It contains three papers by Dr. O. F. von Möllendorf, of Hongkong, and two by Mr. J. Wood-Mason, of the Indian Museum, Calcutta. A note appended laments that the greater part of the impression of one of the plates has been destroyed by white ants.

MR. WILLIAM E. A. AXON has written for the *Companion to the Almanac* a paper on "Insects Injurious to Agriculture."

MR. J. A. WESTWOOD OLIVER, of Glasgow, has in the press a pamphlet on the comet of 1880 and the effects which may be expected to follow its absorption in the sun.

DR. BERTILLON'S mortality statistics published in the recently issued *Annuaire statistique de la Ville de Paris* show that the conditions of existence in the capital of France are distinctly unfavourable to both the reproduction and prolongation of human life. In 1880 the number of deaths registered in Paris exceeded by 20,000 the returns from any population of the same size distributed over the centre of France; while, taking the same basis for estimating the proportion of births, Paris was in default by 10,000.

PHILOLOGY NOTES.

MESSRS. RIVINGTON will shortly publish a volume of essays by Oxford men, somewhat similar to the volume entitled *Hellenica* that appeared in 1880, and likewise edited by Mr. Evelyn Abbott. But these essays will deal solely with the works of Aristotle, omitting the strictly scientific treatises. Mr. T. Case, of Corpus, will write on the *Organon*; Mr. E. L. Nettleship, of Balliol, on the *Metaphysics*; Mr. W. Wallace, the new Whyte's Professor of Moral Philosophy, on the *De Caelo* and the *Physics*; Mr. A. C. Bradley, formerly of Balliol, and now of the new Liverpool University, on the *Ethics*; the Rev. E. Wallace, who has recently issued an independent edition of the work, on the *De Anima*; and the editor himself, on the *Poetics*—a work which has but recently taken its place in the Oxford curricularum.

AT a recent meeting of the Académie des Inscriptions M. Halévy read a paper upon "The Belief of the Semitic Races in the Immortality of the Soul." His object was to prove the affirmative—that the Semitic races did believe in existence after death, at least in some form. The cuneiform inscriptions of the Assyrians contain many allusions to a future state, and even give elaborate descriptions of the other world. The goddess Astarte descends to that

world to look for her lover Tammuz. A warrior who has died in battle is represented as enjoying perfect bliss. Certain deities have for their appellations "he (or she) who recalls the dead to life. Among the Hebrews, it must be admitted, nothing can be found so explicit. But this silence is partly to be explained by the fact that the Bible represents a polemical literature which aimed at obliterating all traces of the early polytheistic superstitions. And yet traces of a belief in a future state and another world may be discovered. M. Halévy quoted the story of the witch of Endor; the word "school," equivalent to the Greek Hades, a land of shades; and the phrase "gathered to his fathers."

IN the catacombs of San Gennaro dei Poveri in Naples a column of travertine has been found bearing an inscription in square Hebrew characters, with the word "Priapos" written above it in Greek. The latest attempt to read it has been made by Sig. S. de Benedetti, who, in a communication to the Royal Academy of Naples, proposes the following two alternative renderings:—(1) "(Ye will find) the excess by measuring the trough of flour. The province rejoices (to which) the sovereign makes the gift (of plenty)." (2) "Through the abundance, when one measures the meal-tub, the province rejoices (to which) the Sovereign makes the gift."

THE forthcoming volumes in the series entitled "Die grossen Religionen und Glaubens bekennnisse des Ostens," published by Otto Schulze, of Leipzig, will be *Zoroaster*, by Dr. K. Geldner; *Muhammed*, by Prof. Ludolf Krehl; and the second part of the German translation of Dr. Kern's *Buddhism*.

THE last two parts of Höpfer and Zaehner's *Zeitschrift für deutsche Philologie* (xiv. 2, 3) contain an important investigation of the system of accentuation in Notker's Boethius, where the accents are marked with great accuracy and regularity, by O. Fleischer. The general result is that the accentuation follows very definite laws, agreeing generally with those laid down by Lachmann from the metrical point of view. The same numbers also contain an investigation of the word-order in the same text, which will be continued.

THE first number of the *Arkiv för nordisk Filologi*, edited by Gustav Storm (Christiania: Cappelen), has appeared, containing articles by Bugge, Fritzner, Hoffer, the editor, and others. G. Stjernström gives a full list of books and essays relating to the Northern languages published in 1881.

FINE ART.

COMPETITION.—£1,000 IN PRIZES.—CHRISTMAS CARD ALBUMS AND FANCY ARTICLES.—Messrs. HILDESHIMER & FAULKNER, Publishers, 41, Jewin-street, London, E.C., will give the sum of £1,000 in Prizes for the most tasteful selection and best arrangement of their Christmas Cards in Albums or Scrap-books. Ask your Stationer or Fancy Dealer for prospectus and full particulars.

Ancient Scottish Lake-Dwellings or Crannogs. With a Supplementary Chapter on Remains of Lake-Dwellings in England. By Robert Munro. (Edinburgh: Douglas.)

THE memory of the Scottish and Irish lake-dwellings has never been wholly lost. Those of Ireland seem in some instances to have been held as places of defence down to the seventeenth century; in Scotland, though their military value may have ceased earlier, some of them continued to be inhabited, or the memory of their being used as habitations to have remained, until about the same period. The word "crannog" is understood to mean an artificial island, but we conceive

that it has been applied to natural islands also when used as bases for buildings of wood or stone. Mr. Robertson was, we believe, the first person who directed attention to the fact that the word, with the same signification, existed in Scotland as well as in Ireland. In certain articles drawn up in 1808 in the Register of the Secret Council it is provided that "the hail houssis of defence strong-holds and *cranokis* . . . be visit at his Majesty's pleasor." We have here evidence of lake-dwellings, but it by no means follows that these "*cranokis*" were timber structures, or, indeed, artificial works of any kind.

The interest now felt in Scottish lake-dwellings has been in a great measure excited by the remarkable revelations of those of Switzerland. A few antiquaries of the last and of the beginning of the present century had given scanty notices of them; but it was not until the Swiss archaeologist had unfolded for us a new chapter in the history of man that the Scottish examples became objects of scientific study. Even now there is not one of them that has been examined with that minute care which is needed to bring out every point of history that has been preserved.

On almost all questions of prehistoric archaeology it is unsafe to generalise except with extreme caution. It seems, however, from the evidence at present before us, that the Scottish lake-dwellings are later both in time and in historical development than those of Switzerland. All those described by Mr. Munro must be classed as belonging to the Iron age. A few flints and stone hammers, it is true, have been discovered, but the chief "finds" point to the latter time. Of course, the fact that they were used when men had learned how to work iron, and were in the habit of employing it freely, does not necessarily prove that they were built by men who possessed this knowledge. The Iron men may have lived in dwellings constructed by their Bronze or Stone predecessors. There is, of course, a chance of this, but it is no more than a chance, and Dr. Munro's book furnishes no evidence to remove such an opinion out of the region of mere guess-work; we gather, indeed, that he himself does not give it countenance. His opinion is that

"the lake-dwellings in the South-west of Scotland were constructed by the Celtic inhabitants as a means of protecting their lives and moveable property when, upon the frequent withdrawal of the Roman soldiers from the district, they were left single-handed to contend against the Angles on the East and the Picts and Scots on the North."

This is certainly a very modest estimate of their age—too modest, as we think, to satisfy all the requirements of the case. That some of them were used at the time he indicates is quite certain, for in the crannog at Lochspouts, in Ayrshire, a fragment of a bowl of Samian ware was found, and in that at Buston, in the same county, a very singular forged coin, made of thin plates of gold fastened upon a copper core. This relic, Mr. Evans says, "belongs to a class of trientes which have been found almost exclusively in England, and are probably of Saxon origin." These objects—and others might be quoted—

demonstrate that the crannogs where they were found were in existence, and probably inhabited, after the time when the pottery and the little coin were made; but they no more show that the structure and the relics are of the same age than do the shillings and half-crowns of Charles I., a hoard of which was found some thirty years ago among the ruins of the abbot's house at Fountains, go to prove that those monastic buildings were erected in the seventeenth century.

Dr. Munro speaks with authority, as he has personally witnessed excavations at the more important lake-dwellings, and has, we should gather, left but few unexamined. He is, moreover, a careful observer, and one well read in the literature of the subject. Notwithstanding these advantages, we cannot but think that he has made the uncommon error of minimising the antiquity of the objects with whose history he deals. That the Scotch crannogs described in his book belong to the Iron age we consider proved, but we have no evidence whatever as to when that period began in North Britain; that it was far earlier than the Roman occupation seems certain. As we have not personally examined the Scottish lake-dwellings, we can only suggest with diffidence what seems to us a mark of a somewhat greater antiquity than that which Dr. Munro allows. Is it not a matter of fact that in some instances true peat has accumulated to a considerable extent over the timbers? The rate of the growth of peat in Scotland has not been ascertained, but the most recent investigators are of opinion that it is very slow.

In the Appendix a crystal object found at Lochspouts is engraved. The ornament is quite new to us. Is it a charm, or can it have formed the centre knob or boss in the binding of some richly decorated breviary or gospel-book? Crystals very similar, but oblong in form—like a Brazil nut—may be seen in some of the rich covers of books of early date, and a few that have been detached are preserved in collections. One such object forms part of a crystal necklace in the Ashmolean Museum, and another in private hands was employed, not so very many years ago, in the West Riding of Yorkshire for the purpose of seeing spirits. If this relic be, indeed, a book-boss, it makes it probable that the crannog was at one time inhabited, or at least visited, by Christian missionaries.

EDWARD PEACOCK.

DR. SOHLIEMANN'S "ILIOS."

WE have received from Herr W. Dörpfeld, of Athens, who has been occupied professionally as architect (with M. J. Höfler, of Vienna) at Hisarlik for five months, a conclusive reply to Dr. Brentano's speculations on this subject. His letter is far too long for insertion, but we extract from it the following points:—Herr Dörpfeld justly notes that all the personal observers of the sites are convinced of the absurdity of assigning any other site than Hisarlik for the ancient Troy; it is only the "envious pedant" sitting at home who invents objections. Recognising six distinct layers of habitation—the alleged Lydian being only guaranteed by pottery, and therefore uncertain—the writer states that the second and sixth (counting from below) are clearly the most important. Of these, the sixth is,

without doubt, the *Novum Ilium* of the Roman times. But in the case of both this and the lowest but one (second) a regular levelling of the whole site took place for the purpose of new building. The level of the second town is several metres over the first, or original settlement on the native soil, which must therefore have been very old. The plan and buildings of the second city are really large and imposing. The principal buildings of burnt bricks M. Dörpfeld believes to have been temples. The most recent excavations (this year) have shown that a large town, extending far beyond the mound of Hissarlik, surrounded these buildings, which were the acropolis of the town. The destruction of this town and all its buildings was complete, the structures on the acropolis being actually raised to the ground after they were burnt with fire. Thus the language of the tragic poets seems confirmed, and this town is to be set down as Homer's Troy. There is no evidence how long the site was desolate, probably not very long, for a small and shabby population re-occupied the acropolis only, and built rude houses on the rough and unequal surface of the ruins. The old city wall was patched and restored, apparently with stones from the now deserted lower town, which became a mere field. Some of the remains of this poor village still stood six feet high when found in the excavations. This was the town which Dr. Schliemann at first set down as the burned Troy, whereas he now recognises that the burnt stratum belongs to the second town. Such corrections, as M. Dörpfeld remarks, are to be expected from every original and honest investigator. A thin layer of earth separates this town from the fourth, of which many walls remain, with isolated marks of fire. The repeated destructions of houses and scattering of materials had partially filled up the hollow between the acropolis and lower town, so that the fifth town spreads over a larger area than the third and fourth. Over its ruins comes the great and imposing Roman Ilium, with public buildings of marble, and elegant private houses in the lower town. These are the facts, rectified and cleared up by the later excavations. M. Dörpfeld is convinced that the second city must be the Troy of Priam. Brentano's assertion that this must be the town burnt by Fimbria is so absurd that it needs no refutation, but it may be stated that all remains and inscriptions of the Macedonian period are found more than sixteen feet over this stratum. Surely, then, the controversy should be regarded as settled, by all reasonable men.

THE COPTS OF EGYPT AND THEIR CHURCHES.

III.

THE church of the Virgin Mary, called *El Moallaka*, is a very interesting one; it is built on the upper floors of the great Roman towers, before mentioned. It has a nave, south aisle, two north aisles, and three eastern apsidal chapels, with narthex and atrium at the west. A small chamber in the south part of the narthex is the baptistery. A corresponding chamber on the north contains a wine-press for the sacramental wine. It has fine inlaid and carved screens, a beautiful marble pulpit in the nave, enriched with mosaic; and some remains of a very beautiful mosaic pavement in *Opus Alexandrinum*. The epiphany tank is in the north aisle.

St. Berbera, in the same *dayr*, or enclosure, has a nave and two aisles, with seven eastern chapels. Some of its fine old screens have recently been destroyed.

Mari Girgis (St. George) is a small church, with nave, aisles, and a central apse.

El Adra (the Virgin) has three eastern apses, but is not divided into nave and aisles.

St. Michael (now the Jews' synagogue) has nave, aisles, and a central apse. The Copts sold this church, some centuries ago, to the Jews, to whom they owed a large sum of money.

St. George (the Greek Church) is chiefly remarkable for the magnificent Rhodian tiles which line the walls of the apse and other parts of the church; like *El Moallaka*, it is built in the upper part of the Roman towers.

All the above churches are contained within the walls of the *Kasr-es-Shemmah*, or Roman fortress.

The *dayr* next in importance to this is that called *Dayr Abou Sepheen* (St. Mercurius). It contains three churches:—

1. *Anba Shenouda*.—A church with wide nave, narrow aisles, and three eastern chapels. The baptistery on the south contains the epiphany tank, as well as the font. It has four chapels and two baptisteries on an upper floor.

2. *Sitt Miriam* (the Virgin Mary).—A small church with nave, aisles, three eastern chapels, and a baptistery in the south-west corner; it has suffered very much from restoration within the last three years.

3. *Abou Sepheen*.—A fine church with beautiful screens and magnificent mosaics in the apse, behind the marble seats, and bishop's throne. Some of the pictures on the iconostasis are unusually good. The plan of this church is peculiar. The nave is very wide, and the aisles are little more than passages. The font stands at the east end of the south aisle. On the north is an extensive building in two stories containing many chapels and a second font. There are, altogether, in this church, seven altars on the ground floor, and seven above on the upper floor.

The church of *St. Menas* stands about half way between Old and New Cairo. It has a nave with aisles, three eastern apses, and on the south a wing containing a baptistery and two other chapels.

Hart-es-Zuweyleh.—A church with nave and four small aisles and four eastern chapels. A wing at the north-west angle contains a chapel dedicated to St. Mercurius, with three altars and a pulpit.

Farther away from New Cairo, and near the Nile, are two *dayrs* close together:—

Dayr Tedrush, containing two churches—(1) *St. Tedrush* (Theodore), and (2) *Abou Kir* and *Johanna* (St. John).

Dayr el Babloun (Babylon), containing the church of *Sitt Miriam*. In this *dayr* the ancient name of Old Cairo—*Babylonia*—still survives.

Farther south, up the river, are *Dayr Melek Michael* and *Dayr Miriam*, each containing a monastery and one church.

The above list includes most of the Coptic churches of Old Cairo, every one of which contains much that is interesting and beautiful both in the structure and plan of the building and in its furniture and various fittings. These last are, unfortunately, rapidly disappearing through the decay and neglect consequent on the present degraded state of the Coptic worship and the ignorance of the priests.

Of the many altars in each church, only one is ever used now; the altars themselves have become receptacles for rubbish; and MS. service-books, vestments, and sacred vessels are often stowed away in some dark corner, almost buried in dust, slowly rotting away or being destroyed by rats and mice.

I will now describe the furniture of the Coptic churches.

Altars.—The form of the Coptic altars is very curious; they vary in size, but in other respects are made on one model. They average about five feet long, three feet high, and a little more than three feet deep from back to front. They are built of brick or stone, generally stuccoed, and have a stone top, which, unlike the mensa

of the Western Church, is made of several stones, and does not project beyond the body of the altar. In the altar itself a large hollow is formed, with an arched opening at the back—probably meant originally to hold the relics of a saint, like the “sepulchrum” of a Western altar. Some of the early altars in Ravenna, which date from the eighth to the tenth century, have a similar arrangement. The mensa, or slab, rests on a great block of marble, which is hollowed out, and has a door, so that the relics could be inspected. In later times, in the Western Church, the relics were always carefully cemented up by the bishop at the time of consecration. In the Greek Church, also, the altars are built hollow; the cavity is called the *thalassothron*, because originally it was used as a piscina, in which to pour the rinsings of the sacred vessels at Mass. This custom became obsolete, and the hollow was then used as an aumbry to hold the Mass vessels and vestments.

To return to the Coptic altars. On the top there is a rectangular sinking in the mensa, about an inch deep, and generally about two feet long by nine inches wide. In this sinking is fitted a slab of wood, on which is incised a floreated cross within a circle; above it, the letters A and IC—XX; below it, XC—EC and ω.

At the celebration of Mass the chalice and paten are placed on this wooden board. This is a curious reversal of the Latin use, which provides that if the altar is of wood it shall have a piece of stone or marble let into it, on which the chalice and paten are to stand during the consecration of the elements.

The Coptic altars are vested in one tightly fitting silk cover over the whole; this is generally embroidered with a large cross in front.

The high altar of *Abou Sergeh* and other churches stands under a domed baldacchino, resting on four slender white marble columns. The dome is of stucco, decorated with painting. In some churches side altars, as well as the high altar, have a baldacchino over them.

Tanks for ablution.—These exist in every church. In *Abou Sergeh*, besides the well and sink in the choir, there is a tank three feet square in the women's compartment, and a large deep one, about eight feet long and six feet wide, in the narthex. These are generally covered over with loose boards.

The large one in the narthex is called the “epiphany tank,” and is used about midnight on the eve of the Festival of the Gheetas, when the male part of the Coptic congregation plunge into it to commemorate the baptism of Christ. The smaller tanks were used for ablutions before the services, and also for a ceremony on Maundy Thursday, when the priest washes the feet of some of the congregation. A somewhat analogous custom existed in early times in the Western Church. In the atrium of the early Roman basilicas there was a well at which the congregation washed before entering the church. Examples still exist, among others, in Rome at San Clemente, and in Milan at Sant' Ambrogio.

Lecterns.—These vary in number: in *Abou Sergeh* there are three in the choir. They are square stands with a slightly sloping book-rest, and have each a tall candlestick placed at their side. They are of wood, with fine panelling and lattice-work, with ornaments and inscriptions inlaid in ivory. The lower part forms a cupboard to hold the service-books. They stand facing east, not towards the congregation.

Vestments.—Special priestly vestments are, as a rule, only worn at the service of the Mass. On other occasions the priests wear ordinary oriental dress with black turbans, which they do not remove even on entering the Hâkel, though they take off their shoes before passing behind the veil.

The vestments now in use do not resemble those of the Western Church, though the old

pictures show copes, chasubles, and albs of the usual Latin form.

The present Mass vestment is something like a dalmatic; a maniple (*επιμανικιον*) like a short sleeve is worn on each arm, and a broad stole (*επιτραχηλιον*), the two strips of which are brought together and buttoned down the front, so as to form one wide band. These are all generally of silk, richly ornamented with rude figures of saints or flowing patterns and inscriptions, either in *appliqué* work or else embroidered in silk and gold thread. A few are of fine linen. Small square corporals are also used at Mass, worked with an elaborate cross in gold and coloured silks.

The close-fitting altar-coverings are embroidered in a similar way with figures of saints and angels, rude in outline, but executed with very beautiful minute stitches, either on a silk or linen ground. The veils which hang before the three doors of the iconostasis are generally of silk with a large cross in the middle, surrounded by embroidered figures of saints and inscriptions both in Coptic and Arabic. But very little of this fine needlework is older than the seventeenth century.

Altar plate.—The chalice and paten are of silver, but are in most cases modern. At the Communion the bread is put into the wine and both kinds administered together in a spoon. Most churches have several of these spoons, which are often not real silver, but a base white metal. Many of them have inscriptions in Arabic commemorating the fact of their being gifts to the church. The following is a specimen of these dedicatory inscriptions:—"A gift to the church of the glorious martyr, the Prince Tedrûah [St. Theodore], between the two hills; [for it] reward me, O Lord." The Copts mix cold water with the wine, not hot as the Greeks do. The communicants do not kneel, but receive the elements standing.

Fans.—For use at Mass to drive away flies or gnats lest they should fall into the chalice. These are still used in the Greek Church, and were used in early times throughout the West. The liturgy of St. Clement (*Apost. Constit.*, b. 8, c. 12) directs that two deacons, one on each side of the altar, are to hold fans (*flabella*) made of thin vellum, fine linen, or peacock's feathers. The Coptic fans, like the Greek ones (*βιβλια*), are made of silver. They are thin disks about seven inches in diameter, *repoussé* with rude figure of Cherubim, and scroll work patterns. They have a socket into which fits a wooden handle. Their original use is quite forgotten; and the Coptic priests now appear to use them only on the solemn occasions when the silver-cased textus, or book of the gospels, is set on a stand in the choir of the church with candles lighted round it. The silver fans are then stuck on iron prickets all round the book, and little wax candles are fastened on to them.

J. HENRY MIDDLETON.

(To be continued.)

NOTES ON ART AND ARCHAEOLOGY.

A COMPLETE re-arrangement of the pictures and sculpture in the National Portrait Gallery has been resolved on, and will be commenced forthwith. The portraits formerly in the British Museum and Hall of Serjeants' Inn will no longer be kept apart, but incorporated chronologically in the general series. Every picture will have, according to rule, a distinct statement, on the frame, of the donor's name. It is not intended to close the whole of the gallery during the alterations, but one portion or another will always be open to the public.

MR. WILLIAM SHARP is at present compiling a Catalogue of the works (in all mediums) of the late Dante Gabriel Rossetti, to form part of

his forthcoming volume on the poet-painter's work in art and literature. He will feel grateful if owners (other than those already communicated with) will address him at 13 Thorngate Road, Sutherland Gardens, W.

THE Rev. H. White, Chaplain of the Savoy Chapel Royal, has lately bought and restored to its place a very interesting early painting, which formerly belonged to the chapel. It is the centre leaf of a gabled triptych, painted on a walnut panel, with gilt gesso stamped enrichments. The style of the work shows it to be the production of some second-rate Florentine painter of the beginning of the fourteenth century. The subject is a Madonna and Child enthroned, with St. Peter and St. Paul at the sides; below are five other saints—viz., the Baptist, St. Mary Magdalene, St. Agnes, with a bishop and a female saint, both without any distinctive mark. The Virgin is clad in a green mantle lined with fur over a gold robe. The Baptist wears a crimson mantle over his camel-hair coat. The bishop has mitre, cope, and staff of gold, with jewelled orphreys and enrichments. The other saints are mostly clad in gold, with patterns stamped in the gesso ground. A great deal of the gold has perished, showing the red under-painting. The frame of the picture appears to be original, but has been repaired and regilt, so that the marks of the hinges of the side leaves are concealed.

THE first gift to Manchester Royal Institution, which, by its transfer to the corporation, must now be regarded as the art gallery of the city, has come from Sir Joseph Whitworth, who has presented four paintings by Etty. They represent "The Last Judgment," "Godfrey de Bouillon," "A Peacock," and a portrait of the artist. The institution may indeed be congratulated on its Ettys, for it already possessed in "The Sirens" and "The Storm" two fine and characteristic examples of his powers.

WE are able to give some further details about the forthcoming Writings of Leonardo da Vinci, which Dr. J.-P. Richter has for the first time edited from the autograph MS. preserved in so many libraries of Europe. They will be published in two volumes imperial octavo, with 220 original drawings reproduced by photo-engraving and about 450 other facsimile illustrations. All Leonardo's writings on painting, sculpture, and architecture will be given; also his observations on geography, geology, and astronomy, philosophical maxims, and miscellaneous notes on personal events, literature, &c. The price to subscribers will be eight guineas. The publishers are Messrs. Sampson Low.

THE last general meeting of the Hellenic Society for the current year will take place at 22 Albemarle Street on Thursday next, October 19, at 5 p.m., when papers will be read on "Explorations in Aëolis," by Prof. Sayce, and on "A New Statuette of Herakles," by Mr. A. S. Murray.

THE School of Art Wood-carving at South Kensington has re-opened after the usual summer vacation; and we are requested to state that free studentships in both the day classes and the evening classes are at present vacant. These studentships are maintained out of funds provided by the City and Guilds of London Institute for the Advancement of Technical Education. The school is open to amateurs as well as to those who intend to make wood-carving a profession.

WE understand that some time during the coming winter M. Lévy, the enterprising Paris publisher, proposes to arrange an exhibition of works of art at the Union centrale, in the Champs-Élysées, to which M. Dutuit,

so well known from his *Manuel d'Estampes*, of which two volumes have already appeared, will contribute, among other rarities, his fine and extensive collection of the etchings of Rembrandt. The details of the proposed exhibition are, we believe, not yet arranged; but the superbly illustrated catalogues of those held in 1869 and again in 1878 are sufficient to assure us that in the hands of MM. Eugène and Auguste Dutuit lies a storehouse of artistic wealth, alone sufficient to furnish a very considerable gallery.

M. LISCH, Inspecteur des Monuments historiques, thus announces, in a letter to a friend, his recent discovery of a Gallo-Roman town near Poitiers:—

"Je viens de voir dans ma dernière tournée des trouvailles magnifiques; c'est une ville entière gallo-romaine que l'on a découverte aux environs de Poitiers: elle renferme un temple de soixante-dix mètres de façade, sur cent quatorze de longueur; un établissement thermal qui couvre deux hectares, et qui possède encore ses piscines, ses hypocaustes, ses canaux, ses dallages, etc.; un théâtre dont la scène a quatre-vingt-dix mètres de large avec son enceinte de gradins, ses vomitoires; enfin des rues entières, des maisons, des hôtelleries; en tout près de sept hectares de constructions, et ce n'est pas fini de fouiller. C'est un petit Pompei au centre de la France. Je ne vous parle pas des sculptures qui sont du meilleur style et qui, selon moi, doivent dater du II^e siècle, enfin d'une quantité d'objets de fer, de bronze, de terre, etc. C'est merveilleux!"

SEVERAL provincial exhibitions are now open in France. Foremost among them, of course, is that of Rouen, which has long distinguished itself by its display of local talent and by the eminent artists it has managed to attract from elsewhere. Visitors to Normandy will be likely to find great interest in this year's exhibition, which opened on October 1. Some of the first names in French art appear in its Catalogue.

A NEW room has been opened in the exhibition of the "Union centrale des Arts décoratifs," devoted to modern furniture made within the last twenty-five years. The exhibition has also been thrown open to the schools of Paris, who are conducted through it by their masters.

EXCAVATIONS near Kōngen, in the Neckar district, have resulted in the discovery of ten Roman graves, containing urns, *amphorae*, coins, &c., and also of the lower part of an altar with an inscription.

WE have already noticed Mr. Holl's line engraving of Mr. Poole's effective picture called "A Midsummer Night's Dream," which appears as frontispiece in the *Portfolio* this month. In truth, this October number is more than usually rich and interesting. Besides Mr. Hamerton's description of some delightful mediæval houses in Autun, the views of which make one very discontented with the efforts of our modern Queen Anne restoration, there is a suggestive article on "D. G. Rossetti and Pictorialism in Verse," by Mr. W. Sharp; and another, on "Assisi," by Miss Julia Cartwright, full of her usual pleasant descriptions and suggestive musings.

WITH other excellent illustrations, the *Revue des Arts décoratifs* for September contains a choice specimen of Lemercier's chromolithography. The subject is a vase manufactured by M. Christofle and exhibited at the Bordeaux exhibition of this year. It is of "bronze polychrome," decorated with wisteria flowers and other ornaments. M. Victor Champier continues his review of the exhibition of the Union centrale, and M. Edouard Garnier his practical hints upon painting on china. M. Champier's article, which is this month devoted to "tissues," is abundantly illustrated.

SATURDAY, OCTOBER 21, 1882.

No. 546, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

Stories from Browning. By Frederick May Holland. With an Introduction by Mrs. Sutherland Orr. (George Bell & Sons.)

In this book the physical element, the speech and action of the characters, is given by Mr. Holland under the title of *Stories from Browning*; while Mrs. Orr, in her Introduction, presents us with a comprehensive essay on the spiritual element and psychology of the poems treated by Mr. Holland. The work of the critic is, moreover, curtailed, if not rendered unnecessary, by the skilful and graceful way in which Mrs. Orr has indicated at once the difficulties of Mr. Holland's task and the success with which they are met.

In his choice of material, there is probably no doubt that Mr. Holland has been thoroughly judicious. His treatment of "The Ring and the Book" gives us a story which, read by any intelligent person who had never even heard Browning's name, would yet interest him on its own merits, and go far towards making him wish to read the poem itself. Anyone who knows the poem will, on reading Mr. Holland's version, appreciate the manner in which, taking it as a whole, he has given due value to the various capacities of each of the secondary speakers in the poem for finding out the truth from the action of the principals concerned. Leaving these latter aside for the moment, the two lawyers are touched off concisely and well, though one may doubt the use of overloading the sketch of Bottinius with the Jewish legend of Peter, James, and Judas. The treatment of both Pompilia and Caponsacchi is also good; it was no easy task to retain the fine local and historical flavour of the original while giving us the essentials of what Browning wished us to see in the "warrior priest" and the girl wife. Mr. Holland has achieved this, and his sketch of Caponsacchi should make any reader ignorant of the poem feel that that sketch is inspired by one of the noblest creations of dramatic art. Mr. Holland has also given us a succinct and able word portrait of the Pope, in which not the least merit is that even to students of Browning it will be useful as an interpretation, read, as it should be, in conjunction with Mrs. Orr's pregnant observations at pp. xxxiii., xxxiv., of the Introduction. The description of Guido in his final impersonation is less happy. Mr. Holland has missed giving the motive which surely governs Guido's final struggle to escape his doom. In Caponsacchi and Pompilia, Browning has shown his power to portray the highest possibilities in man and woman, necessarily hampered and blighted by malig-

nant fate and the exigencies of a corrupt religion; in Guido, he has given us a more striking proof still of his power, by painting the complex workings of a nature thoroughly debased. Favoured by his birth, having fair chances in the Catholic Church, Guido is shown to us as choosing, short-sightedly ever, the path which leads from self-indulgence to trickery, from trickery to violence, from violence to crime. It is the history of a criminal from beginning to end; but the triumph of skill is in Browning's delineation of Guido's final agony. Never, until the last moment, does he lose his head; the whole of the long tirade, which Mr. Holland calls "screaming and foaming," is a calculated effort to shock his confessors into obtaining his reprieve on the ground of his impenitence. Through life he has played a crafty or desperate game, and his cunning is true to him until the last; and the picture of the sudden revulsion of abject fear, when all hope is cut from beneath his feet, is a masterpiece of insight, proving that only the genius which rises to the knowledge of the highest can plunge to the knowledge of the lowest of human phenomena.

Mr. Holland's rendering of the story of Sordello has been fully discussed by Mrs. Orr in her Introduction; and she has, in addition, given us a valuable treatise, though in a short space, on the poem itself. Still, it is only fair to say, in addition, that, while now for the first time the story of Sordello is told in a manner which "any school-boy" may understand, only by reading the poem itself can we learn how true is Mrs. Orr's delineation of its psychological features, and how skilfully Mr. Holland has unravelled the tangled skein of its narrative.

"The Adventures of Balaustion," too, call for the less criticism in that Mrs. Orr has given us nearly four pages of terse comment and remark on the characters of Aristophanes and Euripides as acting on each other and on the less clearly defined character of Balaustion. Mr. Holland has dealt with that part of his story which treats "Aristophanes' Apology" in a pleasant vein, which will help the uninitiated many to a fair idea not only of the gradual development of the Greek Drama, and the extraordinary hold it took on the popular mind of the time, but also of the progressive movement in both dramatic and plastic art, which even among a people so artistically open-minded as the Greeks found the opposition fated to meet progress in all ages.

Of the stories from the five true dramas which Mr. Holland has selected ("Strafford," "The Return of the Druses," "The Blot in the 'Scutcheon,'" "Luria," and "Colombe's Birthday"), little can be said that has not been well said by Mrs. Orr. They give, upon the whole, a correct prose narrative of plays in which the story, so far as plot and incident go, is too simple for effective prose treatment; while the mental drama and perpetual interaction of the various characters can only be found in the plays themselves. In "Strafford" even the historical setting seems mainly to frame a picture of love and friendship, powerfully and richly painted; but here it is true that those emotions gain much in dramatic interest from the influence they had in deter-

mining the political or patriotic action of the chief personages concerned.

"Pippa Passes" loses more than any of the others by being made into a story. Nearly a fourth of it is already written in Browning's own racy and emphatic prose, and will not bear paraphrase; the verse is vigorous, passionate, or melodious according to the exigencies of each scene, and always clear as day. Though Mr. Holland has done the best possible within the limits of his own plan, the very courage of his effort shows more clearly the difficulties in his way.

Taking the stories as a whole, then, Mr. Holland has done a difficult piece of work with fair success. But, in his effort to be concise, and at the same time to adhere as closely as possible to the phrasing of the original, he sometimes renders the poet's meaning obscure or dubious through clipping a metaphor or simile so as almost to make nonsense of it. Thus (p. 51), Luria is made to say, "You, lady, have black Italian eyes that have often seemed inclined to remove the barrier which Florence says that God builds up between us." Compare the original (vol. v., p. 88, ed. 1868):—

"You, Lady—you have black Italian eyes!
I would be generous if I might . . . oh, yes—
For I remember how so oft you seemed
Inclined at heart to break the barrier down
Which Florence finds God built between us both."

At p. 54, Puccio, according to Mr. Holland, says:—"I wish only to be a tool in your right hand, that your glorious heart may make mine beat doubly fast." In the play, Puccio says (vol. v., pp. 104, 105):—

"I am yours now,—a tool your right-hand wields!
God's love, that I should live, the man I am,
On orders, warrants, patents, and the like,
As if there were no glowing eye in the world,
To glance straight inspiration to my brain,
No glorious heart to give mine twice the beats!"

At p. 59, in the story of Balaustion's adventures, Mr. Holland says: "As he (Apollo) speaks, Death appears to claim Alkestis, and there is a fierce dialogue between this heap of blackness and the shining god." This rendering does but obscure Browning's grand and simple description of the two deities, in which he compares Death to an eagle who, in his swoop after the quarry, is caught and wedged in a chasm, and Apollo to a lion, "guarder of the gorge," confronting him (see "Balaustion's Adventure," p. 25, ed. 1872).

At p. 61 Mr. Holland makes Balaustion say of the hero typified by Herakles:—

"So he goes on rejoicing in his strength, for this is a true sign of likeness to the gods, that the hero blossoms into even fuller gladness at what he does for mankind. And when he suffers so much for men that the blossom of joy turns to sorrow, it has only become a seed, which drops into the ground and springs up once more to rejoice in doing good."

This is a rather loosely worded version of the simile used by Browning. The original passage is too long to quote, but should be read ("Balaustion," pp. 121, 122, ed. 1872).

At p. 62, Balaustion, imagining how an ideal poet would construct a new drama of Admetos and Alkestis, is made to say:—

"Such a poet would say Apollo taught Admetus not only to yoke lions and wild boars to the car in which he comes to win Alkestis, but also to

subdue his own lust and greed. *His wife admires this so much that she persuades Apollo to gain for her the privilege of dying for her husband.*

The original runs, in substance, thus :—Not only did Apollo tame wild beasts with his music, so that flocks and herds were saved from wrong and fright, but he so effectually tamed many a lust and greed in Admetos' heart,

"That, in the plenitude of youth and power,
Admetos vowed himself to rule thenceforth
In Phœria solely for his people's sake,
Subduing to such and each lust and greed
That dominates the natural charity."

And Alkestis, seeing him thus become a true ruler of himself and men, asks the boon of dying, to save a life so necessary for the people's good and the glory of Zeus.

Compare also (p. 63) Mr. Holland's phrase, "the pensive queen o' the Night . . . sends Alcestis back . . . saying the gods cannot suffer Admetos to possess all his wife's life as well as his own" with the original ("Balaustion," pp. 165, 166), where Koré says, in substance, to Alkestis, "By dying for your husband, you have left with him your soul to make him doubly strong"—

"Two souls in one were formidable odds.
Admetos must not be himself and you."

The gods, that is, will not allow the force of two souls to be concentrated into one, lest men lose the benefit of the need to strive with their own weaknesses.

There are a few slips in phrase, probably typographical, such as, p. 68, "A lark *embowered* in its crystal song," instead of "*embalmed*;" p. 223, "I should think it best to *warn* the Emperor" instead of "*waive*." The whole of this page (223) would gain by being recast, for the passage in the play is plain enough, while as much cannot at present be said for the prose version at this point.

Mrs. Orr's Introduction to the Tales has been already mentioned as containing valuable criticism on Mr. Holland's treatment of them. Her essay is of value, however, both to present and future students of Browning, on the quite independent ground that it gives a pregnant and thoughtful study of the heart of the mystery hidden in most of the poems or plays, stories from which form the bulk of the book—a study the more valuable as the outcome of a mind peculiarly open to the influence of Browning's genius, and pre-eminently qualified by intimate knowledge of his works to interpret them with force and clearness. One remark, however, of a critical sort seems necessary here. Many people may be somewhat puzzled by Mrs. Orr's apparently classing "*Sordello*," the two Greek poems, and "*Pippa Passes*" in one group of "argumentative poems." The phrase seems to be applied to poems which "serve to illustrate an idea deeply rooted in Mr. Browning's mind." This is true of such a large majority of his work that it is to be hoped students of Browning will at some future time learn from Mrs. Orr what gives the poems in question their special quality of "argumentativeness." The clearness and insight which in general characterise Mrs. Orr's essay render any obscurity or uncertainty of expression the more regrettable. J. T. NETTLESHIP.

Soliloquies in Song. By Alfred Austin. (Macmillan.)

UNDER this somewhat portentous title, Mr. Austin has collected his occasional and fugitive verse of the past few years, and the result is a volume of pretty and generally unpretentious poetry. It is characteristic of Mr. Austin's verse, as with most of our poets of to-day, that, in those effusions where his aim is modest and well within the range of common experience, the artistic success is most decided. In a graceful prelude he strikes the key-note to what is excellent in the present volume, and accurately ascribes to their true sources the tenderness and truth of his lyrics :—

"If e'er in my verse lurks tender thought,
'Twas borrowed from cushat or blackbird's throat;
If sweetness any, 'twas culled or caught
From boughs that blossom and clouds that float.
"No rare exotics nor forced are these;
They budded in darkness and throve in storm;
They learned their colour from rain and breeze,
And from sun and season they took their form."

Where his subject is unambitious in itself, his song is simple and unaffected in form, and circumspect and natural in diction; he is never guilty of diffuseness, and, having sung, does not mar his theme by a senseless fugal iteration of debilitating sound. Thus, in "Brother Benedict" and "Ave Maria" he has versified two ecclesiastical legends that are simple to baldness in their outlines; and these are treated in the only fashion admissible, unadorned by rhetorical graces and unburdened by speculative flourishes, agnostic or other. In the former poem the execution is excellent, and the legend, both on account of its inherent charm and its present form, might have gained the approbation of Southey. "A Farmhouse Dirge" and "Grandmother's Teaching" are also two poems which, within their limited compass, are fresh and spontaneous in utterance. In the first of these, the grief of the farmer's wife for the loss of her daughter is humorously and forcibly contrasted with her strong sense of the weight of domestic duties. There is much truth displayed, and a sound moral inculcated, in this sketch of sorrow prevented from degenerating into puling sentiment by the mere necessity of labour. A good example of Mr. Austin's lighter lyric manner is a poem entitled "Primroses," in which he addresses those pet flowers of poetry in some verses of very pretty fancy :—

"First you come by ones and ones,
Lastly in battalions,
Skirmish along hedge and bank,
Turn old Winter's wavering flank,
Round his flying footstep hover,
Seize on hollow, ridge, and cover,
Leave nor slope nor hill unharried,
Till his snowy trenches carried,
O'er his sepulchre you laugh,
Winter's joyous epitaph."

It is when Mr. Austin leaves the more familiar tracks, when the plains are forsaken and the aerial heights attempted, when, in short, he celebrates great occasions or commemorates his visits to historic sites, that disappointment is felt and a feeling of the consciousness of effort is discernible in his poetry. In the stanzas "At his Grave," written after the death of Lord Beaconsfield,

a lack of imaginative insight, and an altogether inadequate expression of emotion, are conspicuous. Greater opportunity for great verse could hardly be desired by the poet of politics, but Mr. Austin scarcely rises to the occasion in these meagre elegiacs. Again, in the poem "At Vaucluse," the poet seems neither to have experienced the guidance and influence of the *genius loci* nor to have imbibed the aromatic odours of the Petrarchian laurels. He fails, it seems to me, to exhibit that marvellous imaginative force which enables the writer to identify himself so absolutely with the subject of his contemplation that he re-vivifies the past, and his poem is informed with the genius he invokes.

In conclusion, the following impressive sonnet, although a little grandiose, may be given as a fair specimen of Mr. Austin's graver style :—

"A SLEEPLESS NIGHT.
"Within the hollow silence of the night
I lay awake and listened. I could hear
Planet with punctual planet oh! mingling clear,
And unto star star cadencing aright.
Nor these alone : cloistered from deafening night,
All things that are made music to my ear :
Hushed words, dumb caves, and many a sound-
less mere,
With Arotic mains in rigid sleep looked tight.
But ever with this haunt from shore and sea,
From singing constellation, humming thought,
And life through time's stops blowing variously,
A melancholy undertone was wrought;
And from its boundless prison-house I caught
The awful wall of lone Eternity."

J. ARTHUR BLAIRIE.

A Guide to Modern English History. By W. Cory. Part II., 1830-35. (Kegan Paul, Trench & Co.)

THE second part of Mr. Cory's work will enhance the reputation that he gained by the earlier volume, which dealt with the first fifteen years of the great peace. The reader will find in it the same sturdy common-sense, the same keenness of observation, the same freshness of thought; while the larger space which the author has allowed himself gives him room to display his powers to greater advantage than before. His incisive way of putting what he has to say will stimulate the flagging attention now as formerly. Those who need to be attracted to read history at all may think that they have every reason to be satisfied when they come across the passage in which Mr. Cory describes the treatment of the Bristol rioters :—

"A veteran Radical, who, in his cups, was ruffianly, but at other times respectable, was abundantly proved to have spent the two days in frantic abuse of bishops and vain entreaties for the destruction of churches; his weapon was an umbrella, which he used only to give emphasis to his swearing. As he was a moneyed man, . . . he was treated as a ringleader and hanged" (p. 191).

Hundreds of passages of this kind, however, do not go far to constitute an historian, and it is therefore only fair to add another which will show Mr. Cory at his best. That best is, perhaps, his recognition of the force given by the widest possible enlargement of the suffrage when those who obtain the right of voting can be brought to co-operate heartily with persons of wider culture and larger experience. "Virtuous and refined men," he

writes of the Boards of Guardians constituted by the new Poor Law,

"heretofore prevented by bashfulness and poverty from shining in London, were drawn into the regular promotion of thrift and industry, into patient, gentle, and cheerful co-operation with yeomen and shop-keepers. Farmers who had been wont to talk with farmers only, and seldom even with them, found, in their fortnightly visits to their market town, opportunities of comparing notes about human pains and doubts with men less tempted than themselves to the indulgence of prejudices. The Board was, to country people, a school of measured speech and sober decision. A parson got to know his flock better if he talked over cases with lay brethren. A game-preserving magistrate, in examining the applications for relief, studied the lives of cottagers through the questioning of housewives; for poor women, as well as men, came before the Board" (p. 428).

There is plenty of writing of this sort, and it is sure to be appreciated by readers weary of the commonplaces of political discussion. Unfortunately, however, to write a guide to history which shall be entirely satisfactory demands powers which Mr. Cory does not possess. It is not merely that he is frequently led into exaggeration by his anxiety to make a telling point, but that he throws his own personality too much into his writing to reach that dramatic indifference which is necessary in a guide. If a subject pleases him, he can write well and carefully about it. If it does not please him, he can descend into positive blunders. Mr. Cory dislikes Dissenters extremely, and he therefore does not care to know more about them than he can help. He states boldly that the Puritans of earlier times "were not shocked by anything in the office of matrimony, in the ring touched by the clergyman before the man puts it upon the woman's finger" (p. 524); and he thinks (p. 529) that Dissenting ministers now act as registrars when they celebrate marriages in their own chapels.

It is not, however, liability to error which is Mr. Cory's principal fault. He does not seem able to regard a complicated subject as a whole. In his account of the Reform Bill, for instance, he gives such prominence to his own special wish for the formation of electoral districts as to lead away the reader's mind from the reception of a true impression of the Bill itself. What he says of each point as it comes before him is always worth listening to, but the ignorant will hardly feel themselves guided to a knowledge of the relationship between one point and another. Still worse is the result when he goes beyond his own period. In past English history, and in foreign history, he is often hopelessly at sea. He says that "the hearsay carried by mendicants and monks" is "the stuff out of which mediæval history is woven;" and he talks of the Septennial Act as if it had been passed in the reign of William and Mary. Of his capacity to teach the student what to think of the great French Revolution the following passage will suffice. "It is true," he says,

"that the monarchy of France broke down in 1792, when a phlegmatic and undignified monarch, having been allowed by his advisers to greet a mob with hypocritical embraces, was deserted by the greater part of the well-born and enlightened families" (p. 128).

Ordinary students of French history have hitherto been under the impression that, however well-born these families may have been, they were not very enlightened; and they will be curious to know by what arguments Mr. Cory proposes to justify the contrary opinion.

On the whole, his work may be said to be not very well calculated to guide those who do not know a good deal of the way already, but to be admirably fitted to enable those who do to test those opinions which they have sometimes too hastily formed. It resembles those teas which are used to strengthen or flavour others, but which nobody thinks of drinking in their natural state.

SAMUEL R. GARDINER.

The Roxburghe Ballads. Edited, with Special Introduction and Notes, by the Rev. J. W. Ebsworth, with his Copies of all the Original Wood-cuts. Vol. IV., Part 1. (Hertford: Austin.)

Now that the long winter evenings are at hand, readers of an old-fashioned turn will welcome another of these Ballad Society volumes. This time its orange-tawny appropriately covers a store of antipapal verses of the days of the "brisk boys" of Shaftesbury. Two hundred years since, the Popish Plot was a serious matter. Then these innocuous curiosities were full of explosive matter, each ready to contribute its fizz and bang at the bonfire-question of the day. Now we can safely handle the cases of the burnt-out Roman candles. We are in no danger of Tyburn, nor of the amenities suggestively, if rudely, portrayed in these heading-(and hanging)-joints—not even if we call the plot a "sham." We turn the pages complacently; their ghastly adornments are a grim but conventional presentment of passed-away horrors. "That skull had a tongue in it, and could speak once." Doubtless; but the question now is what is the tune of the ballad below.

Mr. Ebsworth can tell us, if anybody can. Does he not here demonstrate that "*All Trades*" = "*Sir Simon the King*"? And he indulges as of old in many a frisk and gambol, taking head-line, appropriate motto, sly innuendo, and covert allusion. So brisk is he that we are fain to ask now and then with Benedick, "In what key shall a man take him to go in the song?" His transitions are apt to be puzzlingly abrupt, sometimes snatching at "a grace beyond the reach of art," and missing it. For it must be admitted that a false or jarring note is occasionally heard. He starts with the pleasant invitation to "get free from all the ills that bore us;" yet he twice recalls the Bradlaugh incident, of odious memory. Then we have a quiz on "El Hakim and his wine-cellar;" a sling at "one Bishop Fraser, of Manchester," coming oddly from so fierce a denouncer of the contemners of Church polity and Church officers; and a gratuitous attack on British Museum readers as a "London mob, coarse-handed and coarse-minded, too often indulging in petty larceny, requiring to be closely watched and reprimanded." He elsewhere styles them a "mixed multitude"—though he would not have them *all* ballad-editors, surely!

Leaving these modern irrelevancies—fewer in this book than of old—what shall we say to his minimising treatment of the Seven Bishops as little better than right reverend humbugs? His estimate of their danger is far too cavalier, in the modern meaning of the word; and, though he has just before (by implication) called them "jugglers," he takes them one by one, with a good word for each, to the number of five, and then hastily finishes the reckoning with "the rest were respectable."

There is a sprinkling of non-political ballads in the volume. The amatory specimens comprise some of the dullest in that kind that have passed under Mr. Ebsworth's hand, but (in Pepys's phrase) "it is a world to see" with what spirit he sets to work to make the very best of them. From all ballads, it appears, there are "lessons" to be learnt; and the editor's effort to extract these morals often supplies the whole entertainment. Once, indeed (as even Hercules must yield to odds), the dullness of a lampoon is so contagious that "an exposition of sleep" comes over "editor, reader, and all" in a passage unique in its drowsy emphasis. A ballad against Oates is in question:—

"By its coarseness it suggests the sensible warning of Dogberry, 'For such kind of men the less you meddle or make with them, why the more is for your honesty; I think they that touch pitch shall be defiled.' Libellers and lampooners might learn a useful lesson from the Constable, who was not written down that which he was irreverently called. England would have been happier in those Stuart days if there had been no worse men than Dogberry."

The political doctrine deduced from the ballads is simple, but comprehensive. Cavaliers were nearly always right, and Puritans were always wrong. Charles II., though not precisely virtuous, was not in fault. The Court was to blame. "Seeing what he saw, how could he retain faith in man or woman?" With artistic reticence, nothing is said of post-Worcester days, when scores of his subjects, in loyal conspiracy, saved his life at the risk of their own, and gave him ample experience of the nobler side of humanity. A similar delicate, courtier-like discretion is shown in the remark that Charles "fancied himself unable to save" Stafford, though he knew him to be innocent, and the very mob around the scaffold would have rejoiced at his deliverance. To call the Roman Catholic confession and communion of Charles on his death-bed "a doubtful declaration" is going very far, even if he had not avowed his conversion years before to Louis and to William. But the most ingenious (and daring) of the repeated white-washings is that at p. 278:—

"His calumniators have no conscience in their aspersions of him. He bore the [dis]credit of much that he never performed. Judicially weighed, the number of his irregular children . . . is truly moderate. Of these few 'incumbrances,' the paternal authorship must be honestly regarded as doubtful in the extreme in all cases except Nell Gwynne's. . . . We maintain that his was generally idle flirtation, and seldom vicious indulgence. It was an unfortunate habit, contracted in the days of his enforced exile, through lack of better employment; therefore, like most of the other evils of the time, fairly due to the Puritan rebellion."

Did not Conti's daughter ask her husband,

unduly positive about the "honour" of M^{de} de Maintenon, how he managed to be so sure of "ces choses-là"?

The Queen's many sorrows are justly said to "entitle her to sympathy and respect." There is no word of their source in Charles's brutality and neglect—as to which Scott, Tory as he is, speaks plainly enough in his *Life of Dryden*. Here we are above high-Tory mark. The ferocity of the anti-Papal ballad-mongers, with their "hunger for hanging," is fully and fairly displayed; but these strictures are curiously illustrated by their tail-piece, of Mr. Elsworth's own design—a gallows whereon depend representatives of Whigs in general and the Liberation Society in particular.

However, these things must not be looked at too seriously. The editor's enthusiasm hurries him up "all sorts of streets," as when he declares that, "the public journals giving but meagre information, details were sought in the broadside ballads." If so, they were not found; witness the account of the Coleman trial following this very remark:—

"The trial lasted for eight hours at least,
Where multitudes of people throng'd and prest,
Before my Lord Chief-Justice he was try'd,
And many other learned men beside."

To take the book rightly, we must not allow ourselves to be disturbed by any of the violent partisan outbursts in text or commentary. Rather let us, garlanded with odds and ends, resolutely enjoy the rich banquet of scraps here set forth. There is choice variety; now a quaint wood-cut, now a broadside or lines from some forgotten pasquil, now a cordial from the stores "kept for our private delectation" by the editor. As he pledges us in that nepenthe, we are back in the historic by-ways of old London, well known to our guide. He tacks now to right, now to left (which is his impartiality), along a road unfamiliar, yet not wholly strange. He is sure to take boat for Whitehall, where (as in York Place of old) the "heaven of beauty may shine at full upon him." With a true relish for the antique pomp and revelry of the Court, he will impart unto us a thing or two from his intimate knowledge of its scandals. In his company we enjoy the light and colour of the brilliant, ever-shifting masque, as Evelyn saw it on the memorable Sunday evening—the "gold lying in heaps upon the tables," the "French boy singing love-songs in that glorious gallery," and Charles toying with his concubines.

Since "a dream cometh by the multitude of business," Mr. Elsworth has good right to one of his own, were it as glorious as the Athenian weaver's. Notwithstanding the adverse circumstances sadly chronicled in the postscript to the Preface, he has lost no jot of heart or hope. He not merely promises two more "Roxburghe" parts for *Twelfth Night*, 1883—his date has a certain felicity—but is advancing with his "Cavalier Ballads," has in view a "History of Ballad Wood-cuts," and in further prospect an "Account of the Fugitive Poetry of the Seventeenth Century." All this is good news for the lovers of "auld knickknackets." They have not forgotten how he "flung wide the lattice-shutter" as he finished the "Drolleries." It is six years back, but that matters

not. Prolonging the old strain, he knows no weariness—

"no count of time he's reckoned :
Still seeking rest from here and now
In dreams of Charles the Second."

R. C. BROWNE.

SCHMIDT'S MORALS OF THE ANCIENT GREEKS.

Die Ethik der alten Griechen. Dargestellt von L. Schmidt. Zwei Bände. (Williams & Norgate.)

HERR SCHMIDT's learned work is not a review of systems or a history of Greek moral philosophy. It is an account, or rather a collection of materials for an account, of the moral ideas and terms of the Greek people, traced for the most part in their authors and occasionally in their inscriptions. Students of Plato, of Aristotle, or of other Greek moralists will find useful the history of the words which in those authors are crystallised or crystallising into a fixed meaning; and the compilers of future lexicons will have to reckon with Herr Schmidt's citations. But the reader who looks for a clearly outlined general sketch of what the Greeks felt about the conduct of life will look in vain. He will not be able to see the wood for the trees.

If, however, his memory be fairly strong, he may rise from the perusal of the book with the impression that scanty justice has hitherto been done to the moral perceptions of the Greek world. Point by point, the conviction will grow on him that Mr. Buckle's paradox about the Greeks having all our moral principles (if not all their applications) was nearer to the truth than the equally paradoxical essay in which Hume set forth how Athens approved of everything which London or Edinburgh reprobated; and is even nearer than the unfavourable picture which Mr. Mahaffy drew of Greek social life. All the virtues of which we know were inculcated by Greek writers. The morality of the Sermon on the Mount, to which Herr Schmidt makes occasional reference, is anticipated in all its points, or, at least, all its main points, in the several quotations which he gives. The forgiveness of injuries (ii. 311, 312) and the kindly treatment of animals (ii. 91) are rules which most readers will be surprised to find in the Greek code. Herr Schmidt, however, whose picture, though favourable, is not one-sided, admits that the Greeks were wanting in appreciation of the duty of man to man, as such (ii. 364), and were disposed to consider the rules of war applicable to the relations of individuals of different families (ii. 403). The view, too, of duty to oneself must have been a narrow one, if Aristotle's *μεγαλόψυχος* was thought to satisfy it. And it is singular that one reads so little about selfishness, as distinguished from self-love, in the earlier Greek moralists. The thing is unknown in Aristotle's *Nicomachean Ethics*, although it is mentioned (without a distinctive name) in the *Politics*, ii. 5, 9; and one hardly finds it as prominent among vices as it should be till one comes to Marcus Aurelius. Again—though, in saying this, of course we are passing from theory to practice—one would not say that the Greeks were remarkable for their family affection.

We read little of the duties of parents to children; Aristotle takes a lenient view of that remarkable family in which it was hereditary to drag one's father to the door; and Sokrates, sending his wife home before he drank the hemlock, was admirable in Plato's eyes. On the other hand, family life began to play a greater part from the time of the Macedonian conquest—a fact which is, according to our author, traceable even in art.

The Introduction is a very readable sketch of the chief Greek writers considered as authorities for facts of the nature here in question, and contains also some discussion of the causes of alteration in notions and terms. Changes in religious ideas, the development of the functions of the State, the gradual softening of manners, and the appearance of philosophy are duly noticed; and, we might add, the impossibility, even in quiet times, of keeping any word constant to its meaning. But Herr Schmidt's treatment of the subject is, perhaps, a little darkened by a theory that (if we understand him aright) "Homer" was modified by the rhapsodists out of opposition to various priestly ideas (p. 132), while yet the influence of priests had much to do with shaping the legends (p. 63). Again, he holds that Pindar "aus der delphischen Priesterschaft hervorgegangen ist," and had adopted the religious, moral, and political views of Delphi (a theory for which the evidence is not convincing, although M. Bouché-Leclerc, from his last volume, seems to accept it), and that Herodotus is always inculcating morality in an artfully concealed manner. He exhibits also a remarkable power of conjuring up much out of little in his praise of Demokritos as having grasped the whole province of morals, and in speaking of the cold and reserved Thucydides as giving us manifold information of what his contemporaries and what he himself viewed with praise or blame.

The first chapter deals with some of the points of contact between religion and morality, as the theory of a divine providence, the theory of a divine jealousy, the belief in another world, and the power of curses in this world. The second describes the motives to right action—*αἰδώς*, *αἰσχύνη*, love of honour, State-regulations, emulation, influence of poetry, and many other agencies, some of which at first seem irrelevant, but which Herr Schmidt presently compels us to acknowledge. But we cannot help thinking him wrong in his view of *Il.* ix. 458 *sq.* Surely Phoenix thought of killing his father, not because of the neglect of his mother, but because his father had cursed him.

The third chapter, on the causes of wrong action, beside enumerating divine temptation, love of glory, of pleasure, of gain, enslavement, anger, envy, and good fortune, gives a curious account of how all the modern theories of moral evil may be found anticipated in classical times. The fourth chapter, on the terminology of good and bad, goes carefully through the various terms, names of virtues, words of reprobation, and so forth, fixing the meaning of each at each epoch. An attempt of R. Hirzel (in *Hermes*, viii.) is mentioned, to distinguish *σωφροσύνη* from *δυσκοσύνη* in the *Republic* of Plato. It is not more successful than other attempts. But we have nothing of our own to add to

Herr Schmidt's chapter, except Herodotus' use of *κίβηλος* in reference to oracles.

The second volume takes a wider sweep. Its chapters are devoted to the circle of recognised duties; those of man to the gods, to the world of nature, the dead, the family, the State, his fellow-man, and himself; while separate consideration is given to property, and to ideas so important in the Greek world as those of hospitality (the *ξένος*) and friendship. It is likely that this volume will be of more general interest than the other. Yet one is occasionally irritated by the discussion of irrelevant questions. P. 134 is instructive on the advantages of having children, which is not to the point; and a general defence of Athens and her institutions (pp. 250, 251) seems out of place here, and unnecessary after someone has taken the trouble to translate Grote into German. Many an interesting glance, however, we get into Greek life and views. The want of police would seem to have led to most important consequences. Not only do people seldom think seriously of duties which are left to themselves to perform and are not enforced from without, but even what the State meant to enforce often fell through in consequence of there being no one whose special business was to see it carried out. It seems ludicrous when Herr Schmidt tells us of an inscription (*C. I. G.* 3044) in which the people of Teos solemnly curse their footpads; but one must remember that public opinion needs to be educated against various offences by their prompt and ignominious punishment. And when we take this fact about the Teians in conjunction with what Aristotle (*Politics*) tells us of the difficulty in getting magistrates who would face odium by enforcing sentences against their fellow-citizens, we see at once one more reason why Greek practice in morals fell a good deal short of Greek theory.

Herr Schmidt has left very little for those who come after him to glean; but we should have been glad to hear what the Greeks thought of commercial dishonesty in the chapter on "Man and his Property." Nero's failure to dig through the Isthmus of Corinth, with its reasons, might have been added to the case of the Knidians. Latin comedies based on Greek originals show how religious festivals gave the two sexes an opportunity of meeting, as our author says (ii. 168, 425), and illustrate some of the consequences. To other quotations about the political faithlessness of the Spartans might be added Herodotus' parenthetical remark that the Athenians knew them to be in the habit of saying one thing and meaning another. Herodotus' story of King Rhampsinitos' Treasure-house would be no bad illustration of "der Reiz des Räuberromans." One may differ from the author, too, on the value or the interpretation of particular passages. Hom. *Od.* ix. 39 *et seqq.*, for instance, does not seem a case of piracy; the Kikones were not the victims of Odysseus, but his enemies; they had joined in the war against Troy. If, again, because Alkinoos was his host—"Odysseus es als unpassend ablehnt sich mit dem Sohne des Alkinoos im Weltkampfe zu messen"—why did Odysseus compete against other sons? Lastly, we are glad of an opportunity to point out that Kallikratidas does not deserve

quite all the praise which many modern writers have given him. He said, no doubt, that he would enslave no Greek; but Xenophon, who tells us this, adds at once that he enslaved his Athenian prisoners. On such points as these, then, there is room for difference of opinion; but no reader of Herr Schmidt can possibly refuse him the credit of sound judgment, singular industry, and singular learning.

FRANKLIN T. RICHARDS.

NEW NOVELS.

Red Ryvington. By William Westall. In 3 vols. (Hurst & Blackett.)

Sweet Inisfail. By Richard Dowling. In 3 vols. (Tinsley Bros.)

Under the Downs. By Edward Gilliat. In 3 vols. (Sampson Low.)

Una Crichton. By the Author of "The Fortunes of Hassan." (S. P. C. K.)

Friar Hildebrand's Cross. By M. A. Paull. (Hodder & Stoughton.)

THERE are literary and other immaturities in *Red Ryvington*. The plot abounds in improbabilities and—which is much worse—inconventionalities of incident. Mr. Westall's humour borders on the farcical, and most of his efforts at character-sketching result in caricature. But the vigorous "action" in *Red Ryvington*, and the healthy enthusiasm which pervades it, will charm the ordinary reader of fiction, and ought even to disarm the cynical. "Red," otherwise Randle, Ryvington, a Lancashire manufacturer, rescues Lady Muriel Avalon, daughter of the Earl of Lindisfarne, from a terrible death in the valley of the Upper Rhone. Of course, she "loses her heart to the man who has saved her life;" and the two, after overcoming the proper amount of social and other obstacles, are married—what plot could be more commonplace? There is, too, a great deal of theological and political discussion—talk about High Church, Broad Church, and No Church, and revelations of the doings of revolutionary societies in Russia and of employers of labour in England—which seems almost too familiar; and Mr. Westall might certainly have spared us some of his quotations from Byron. Yet Randle Ryvington is a genuine Englishman, of the "thoroughly good fellow" type, and it is hardly possible not to take a warm interest in his adventures in love, trade, and politics. Even Sergius Kalouga, Russian revolutionist and prince in disguise, wins one's liking, although he poses too much; and Lord Lindisfarne is an excellent sketch of a peer of the old school, who, when he visits Lancashire and inspects its industries, is forced, like Lord Beaconsfield's Coningsby, to the conclusion that "the age of ruins is past." The female portraits, however, in *Red Ryvington* are the best. Randle's mother, Mrs. Ryvington, anxious to a fault, and with her good old-fashioned Lancashire prejudices about domestic economy, duty, "the business," "high teas," and the like, and his cousin Dora, full of *esprit* and affection and generous impulse, are very welcome as a relief from the odious matchmakers and in-

triguing sirens so abundant in contemporary fiction. As already hinted, Mr. Westall is not successful in drawing oddities in character; his self-made "Lancashire lads," in particular, are rather stagey. He fares even worse in representing vice and villany. "Red" Randle's cousin, who bears the same name, resembles him in appearance, and is distinguished from him mainly by the territorial designation of "Deep" Randle, descends with incredible rapidity from vulgarity and selfishness to forgery, personation, and drunkenness. There is, perhaps, as we have said, too much "religious" and "political" talk in *Red Ryvington*; but it is only fair to the author to say that the one never becomes altogether maudlin, nor the other altogether absurd.

Mr. Dowling cannot be congratulated on his new novel. *Sweet Inisfail* has been hurriedly written, and the chapter-spinning in the second and third volumes suggests the idea of working against time and space. There is no plot to speak of. The scene is laid in Ireland, but it is difficult to see why, for there is nothing Irish in the book, except perhaps the humour and dare-devil courage of a carman of the name of Doherty. Mr. Dowling has not, of course, lost the power he possesses, in common with the author of *The Duchess of Malfi*, of "moving a horror." But he has not learned the dramatist's art of "moving it quickly." The whole interest of *Sweet Inisfail* centres in the adventures of Frederick Manton, a felonious telegraph clerk, who ruins commercial travellers at billiards and so compels them to commit suicide, drugs and robs dwarfish money-lenders, and murders—at least, in intent—landed proprietors who have a bad habit of carrying the purchase-money of their estates on their persons. All this is well enough; but to devote a whole volume to Manton's sensations in a goods lorry, in which he escapes from the scene of his exploits, and to his mental and physical struggles in the bedroom of the man he thought he had murdered, is too much. The effect of the whole is disappointing. Mr. Dowling should return to his earlier style, write shorter stories, and devote more pains to them.

The reader of *Under the Downs* will be puzzled to make out whether it is an elaborate joke or a disguised homily against wife-beating, pigeon-shooting—and, for that matter, pointer-shooting—match-making, materialism, and other vices of the age. What can be made of this incident, which is typical of the book? Mrs. Hubert Breakspere, a lady with magnificent hair and ideas, not to speak of a husband with a "Shakespearean beard," after telling Mr. Norman Valence, whose bride has left him on their marriage day, that she has "taken him to her heart," warns him that he is "slowly but surely deteriorating." He naturally asks for an explanation, and gets one some half-dozen pages long. Its character may, however, be judged from the beginning, which is "We were moving in different orbits—you, through material science, towards scepticism; I, through neoplatonism, towards God;" and from the final closing and posing question, "How can you get to feel that you are one with the Divine

Principle, when you are ever letting yourself be vexed with the low views of Religionists?" Whatever Mr. Gilliat may have intended when he began *Under the Downs*, what he has actually produced is a grotesque hotch-potch of the poetry and the "philosophy," the fads and the philanthropies, of the day. The volumes abound in crude thinking and wild writing—one passage, indeed, on "British prudery," suggests the inspiration of Mr. Oscar Wilde. Most of the characters are unreal. Mr. Kent, the drivelling husband of a Greek wife, who gives his daughters and his clothes away with equal liberality, is a caricature that has not even the merit of humour. This description holds true also of Sir James Tripe, the cruel drunken cad, who marries Ionè Kent, although we can hardly conceive him descending to the vulgarity of "taking several toddies." On the other hand, there is a general air of vigour about *Under the Downs*; and it contains some fair landscape-painting. Dorothy Kent, a hoyden with both a heart and a head, is at least flesh and blood; and so is her Greek mother, in spite of her "back" and her Levantine unscrupulousness. Mr. Gilliat is pretty certain to do better work than this.

What is most notable, and perhaps also most commendable, in *Una Crichton* is its realism—a realism which, it is surely unnecessary to say of a book published by the Society for the Promotion of Christian Knowledge, is the very reverse of M. Zola's. Here are no absorbing enthusiasms, mad passions, or startling depravities, nothing very rich or very deep, but the somewhat thin-blooded delights, the mild *agapai*, and the commonplace conversations of respectable middle-class folks in London, who do their duty honestly enough, but talk rather too much about it. A visit which the heroine is compelled to pay to Dresden, where she meets her "fate" in an industrious artist, is somewhat of a relief to the monotonous prattle of school-girls and "Herr Professors" in South Kensington. The characters, though real, are singularly deficient in what an eminent politician has described as "go." Max Carljen, the artist and "fate" already mentioned, is a mere shadow; and Geraldine Willett, who at the beginning of the book is a vivacious school-girl, fades before the end into that most insipid of creatures popularly known as "the dearest and best of wives." One is indeed thankful for Una's mother, who has enough of spitefulness to make her character piquant, and who happily gets worse instead of better after she marries a second time. The publishers ought to bestow more pains on their illustrations. With the exception of one, representing a girl dressed in some light material and seated at the piano, those in *Una Crichton* are meaningless, or worse. Max Carljen, indeed, looks like a Mexican brigand in reduced circumstances.

The author of the collection of stories which bears the title *Friar Hildebrand's Cross* has shown considerable skill in investing it with a plot-interest. A dreamy Augustinian monk, living in "Tavystoke Abbaye" in the early part of the sixteenth century, comes across, at about the same time, certain MS. chronicles of the religious

house which shelters him, and also a rustic Saint Cecilia in the form of "the sweet maiden Cicely, who came from the Abbey farm with a most delightful nosegay of flowers to aid me in my illuminations." The result of this meeting is a hopeless passion, which it is Hildebrand's "cross" to bear uncomplainingly throughout life. He sees Cicely married to Walter Hawley, the miller, who had admired her as May Queen. He becomes the friend of the household; one of the sons is named after him; and, after the expulsion of himself and his brethren by the *malleus monachorum*, Thomas Cromwell, in the reign of Henry VIII., this lad accompanies him on his enforced travels, and closes his eyes in death. It is only when Hildebrand Hawley returns to his mother, then a widow, and living in an honoured old age with her family, that Cicely learns that, through a happy and devoted married life, she has been watched over by a second and single-hearted lover. Hildebrand's confessions are interwoven very ingeniously with the stories of the old Abbey; and some of these, especially the historical tragedy of Queen Elphreda and the burning of the Abbey by the Danes in 997, are told with spirit and fidelity to truth. The inevitable allusions to the religious movements in England at the Reformation period are also artistically managed. Thus Hildebrand is represented as secretly sympathising to some extent with his brother Augustinian, Luther, while he suffers from the high-handed procedure of Henry; and Walter Hawley turns out a Protestant in disguise, although his affection for Cicely prevents him from disturbing her faith or even her prejudices. Altogether, this unpretending little volume, so healthy in its tone, and so careful in all details of execution, deserves hearty commendation.

WILLIAM WALLACE.

RECENT SCHOOL BOOKS.

Stories for Children from English History. (Cassell, Petter, Galpin and Co.) We cannot attach much value to this elementary introduction to a study of English history, which, like the three books noticed below, has been prepared for the use of the Board schools to meet the requirements of the Code of 1882. English history has been well-nigh revolutionised by recent research, and we are well aware of the difficulty of presenting it in its new form in language suited to the intelligence of very young children. But the attempt ought to be made, if the subject is to be studied with any real profit. It is therefore much to be regretted that the writer of these stories has shirked the difficulty altogether, and has treated our history as if Mrs. Markham and her antiquated disciples were still trustworthy guides. The book, moreover, is badly proportioned. The first 127 pages bring us down to Sir Walter Raleigh, while only the remaining sixth part of the volume is devoted to the events that took place between the date of his death and our own time. Thus space is barely found for an account of the Civil War; and hardly a word is said of the English settlement in America, the American War, or our relations with Ireland. We were astonished to find no mention made of an episode that must prove so attractive to children as the Gunpowder Plot. A few distinct errors in points of fact are worthy of note. Edgar was not the grandson of Alfred the Great, nor was Godwin ever convicted of

the murder of Alfred the Ætheling. The style of narration is of fitting simplicity, and the introduction of maps is a praiseworthy characteristic; but, unless teachers use the book with caution, many erroneous notions must creep into the heads of its readers.

The Simple Outline of English History. (Cassell, Petter, Galpin and Co.) This sketch is intended to form a sequel to the volume just noticed, and has been prepared for the use of older children. Its treatment of its subject is immeasurably superior. The author has wisely endeavoured to give his youthful readers some glimpse of the new principles that should regulate a study of English history, and has emphasised its continuity and the gradual development of our institutions. A just importance is attached to the stirring events of the last century. Such chapters as those on the English in Asia and America, on the Irish Rebellion of '98, on the Reform of Parliament, and on the reign of the present Queen, although necessarily very condensed, are likely to excite among their readers an intelligent interest in the politics of our own day. We should imagine that some students older than those for whom the book is primarily intended might profitably peruse its pages.

English Historical Readers. Book I. (Chambers.) This simple "historical reader" is open to several of the objections we raised to the first book noticed. Far too much stress is laid on the Roman occupation, and far too little on the immigration of the Teutonic tribes. The latter portions of the volume are, however, much better than the opening chapters; and the brief accounts given of the abolition of slavery, the great exhibition of 1851, and the charge of the Light Brigade are good features of the work. The geographical notes and the spelling lists at the close of each chapter will, we think, be found of great utility by teachers.

English Historical Readers. Book II. (Chambers.) The plan of this book, which is intended for the same class of readers as the second on our list, differs from it materially in covering only one period of English history. It begins with "the British period," and concludes with the Battle of Bannockburn. There is a certain danger in restricting instruction in English history in our elementary schools to fragments of the subject, and it becomes especially great when recourse is had to its opening chapters only. All children before leaving school should have an opportunity, as the author of *Mæssa*, Cassell's *Simple Outline* has pointed out, of acquiring a knowledge of the main drift of our history; and, if text-books limited to special portions are placed in their hands, it is inevitable that all who fail to reach the highest classes will finish their education in ignorance of many of its important epochs. Nor will they possess a rough framework of information into which to fit any fuller knowledge they may find opportunities of obtaining in later life. Apart from such objections as these, we have not very many faults to find with this volume. We think that too many pages are devoted to "the British and Roman periods," and are likely to create an exaggerated idea of their importance to later history. Some attempt should have been made to explain the early institutions of our Teutonic ancestors. But the general style of the work is to be commended. The maps are clearly printed; and the familiar poems on the leading events, which are freely introduced, will, if committed to memory, impress them on the minds of young children.

Scott's "Lay of the Last Minstrel." Introduction and Canto I. By Prof. Minto. (Oxford: Clarendon Press.) This edition of "The Lay of the Last Minstrel" has been prepared, we believe, for

the use of candidates preparing for the Oxford Junior Local Examinations, and it certainly aims at no higher object. The greater part of the Preface and notes is drawn from Sir Walter Scott's own illustrations of the poem, which are to be found in every cheap reprint of his works; and most of the new philological comments with which Prof. Minto has burdened the notes would be out of place in any edition which was not intended to serve as a school-book. Unhappily, the editor does not seem always at home in explaining the simple archaisms that occur in the "Lay." He repeats Horne Tooke's antiquated derivation of "and" or "an if," without giving the slightest indication of his acquaintance with any other. It may be just possible for two opinions to exist as to the desirability of presenting young readers with one of Scott's poems in the guise of a school-book, but there can be only one as to the necessity of absolute accuracy in whatever annotations are thought to be essential to its thorough comprehension by boys and girls.

Outline of the History of the English Language. (Chambers.) This little work, which is published at an extraordinarily low price, is the best sketch of the history of our language that, considering its size, we remember to have ever opened; and few, except those who have made its subject a special study, could turn to its pages without gaining some fresh knowledge. Its information, although professedly elementary, is brought down to the present date, and reference is made to the introduction of such words as *clôture*, *boycott*, and *aesthete*. The writer has incidentally drawn attention to the inconvenience that attends the pedantic attempts of some English scholars to replace certain words of our Latin vocabulary by their lost English equivalents. We should have preferred that he had been thoroughly consistent with his objection, and refused admission to "head-rhyme" as an alternative for "alliteration." But with this slight exception we can find no fault with the execution of this admirable primer.

Latin Course. First Year. (Chambers.) This new Latin Grammar cannot be credited with any distinctive characteristics. Its arrangement resembles that of the majority of its predecessors; but it emphasises, with perhaps more than customary clearness, the difficulties that usually impede the beginner's progress. Exercises and vocabulary of the ordinary type are placed at the end of the volume.

Messrs. MACMILLAN AND Co. have sent us their new series of "Globe Readers," consisting of eight volumes in all, of which two are spelling "primers" for little children, and the remaining six are "readers" of the progressive type that has recently become common. All are abundantly illustrated. The editor of the series is Mr. Alexander F. Murison. Speaking generally, we think that he has been much more successful in the "Readers" than in the "Primers." Some of the stories in the latter strike us as absolutely foolish—especially that in Part II., about an ape and a lake. Nor are we reconciled to the system adopted for marking pronunciation even by the authority of Dr. (not Prof.) Bain. But for the "Readers" we have nothing but unqualified praise. A good many of these have passed through our hands lately, and we have no hesitation in saying that Mr. Murison's are far and away the best. Putting aside quality of printing and of illustration, the important point lies in the selection. And here the editor must always experience difficulties—both positive and negative—from the existence of copyright. We have before now complained that English children are taught a great deal too much American poetry. In this matter Mr. Murison seems to have been very judicious, and we by no means grudge to Mr. E. C. Stedman his

place in Book II. We also note with approval the prominence given to physical geography (chiefly from Geikie) and to political economy (chiefly from Jevons). On the whole, it may be said that these "Globe Readers" almost supply a liberal education in themselves, so far as extracts can do so. The child who uses them ought to be both a happy and a learned little mortal.

We have also received *A Skeleton Outline of the History of England*, by A. H. D. Acland and O. Ransome (Rivington); Chaucer's *The Squire's Tale*, Shakespeare's *Henry V.*, Macaulay's *Essay on Lord Clive*, all edited with notes, &c. (Chambers); in "Longmans' Modern Series," *The Illustrated Readers*, Fifth Book, and *Answers to Arithmetic*, Parts I. to VII.; Longmans' Modern Copy Books, by J. Tidmarsh, Nos. VII. to XII.; *Principles of Agriculture*, Stage I., by O. A. Buckmaster (Moffat and Paige); *Physical Geography of Mountains and Rivers*, by Thomas Page (Moffat and Paige); in "Collins' School Series," *Animal Physiology for Elementary Schools*, by Mrs. F. Fenwick Miller, with numerous illustrations, Stages I. to III.; *Outlines of Zoology for Junior Classes*, by William J. Collier (Dublin: Sullivan Bros.); in Chambers's "Reprints of English Classics," Scott's *Lady of the Lake*, Canto II., Coleridge's *Ancient Mariner*, Macaulay's *Armada, Ivy, and Evening*, with Notes; *Preparatory Book of German Prose*, by Hermann B. Boisen (Boston, U.S.: Ginn, Heath and Co.); &c., &c.

NOTES AND NEWS.

IN correction of a confused statement that has gone the round of the daily press, it may be as well to state that a pension of £150 on the Civil List has been granted to Mr. S. R. Gardiner, the historian of the Stuart monarchy.

PROF. SEELEY is lecturing at Cambridge this term upon "Napoleon Bonaparte."

PROF. MAX MÜLLER is now engaged in passing through the press new editions of his Hibbert Lectures and of his Introduction to the Science of Religion. The Lectures on India, also, which he recently delivered at Cambridge, will shortly be published in a volume.

MR. J. A. FROUDE has in the press a new volume of "Short Studies on Great Subjects," which will contain some of the papers he contributed to *Fraser* during his editorship.

THE Duke of Manchester has given permission to Mr. B. Beedham, of Ashfield House, near Kimbolton, to print "A View of the State of the Olergy within the County of Essex," circ. 1603, from the original MS. which is now preserved at Kimbolton Castle. The work is described as throwing no little light on the ecclesiastical life of the period, both in a religious and social aspect. It will be published by subscription, and the editor will add an Introduction, illustrative notes, and an Index. Intending subscribers are requested to communicate with Mr. Beedham at the above address.

THE opening number of *Longman's Magazine* will contain the first instalment of "Some Points in American Speech and Manners," by Mr. E. A. Freeman, and "The Black Poodle," by Mr. F. Anstey.

THE next volume in the "English Men of Letters" series will be *Macaulay*, which Mr. J. Cotter Morison has undertaken in default of the editor himself. This will be shortly followed by Mrs. Oliphant's *Sheridan*.

We hear that the Rev. Edwin Hatch's volume of Bampton Lectures on the Organisation of the Early Christian Churches is being translated into German under the superintendence of Prof. Harnack, of Giessen, one of the most dis-

tinguished of the younger school of German theologians. For German theological works to be translated into English is common enough; but the converse is comparatively rare, and we do not know that any course of Bampton Lectures has before met with this honour.

MESSRS. KEGAN PAUL, TRENCH AND Co. will publish next month an anonymous collection of poems entitled *Love in Idleness*. We understand that the volume is likely to have an especial interest for Oxford men. It will contain several new translations from the Greek Anthology, and an etching will be contributed by Mr. William Bell Scott.

WITH regard to the volume of "Essays on Aristotle," which was announced in the ACADEMY last week, we are informed that the essay on the *Ethics* has been entrusted to Mr. D. G. Ritchie, of Jesus College, Oxford. Prof. A. C. Bradley's engagements render it impossible for him to undertake it.

THE November number of Mr. Walford's *Antiquarian Magazine* will contain a paper by Lord Talbot de Malahide, on the connexion of Miles Corbett, the regicide, with Malahide Castle; and another paper, with illustration, by Mr. George B. Wright, on a portrait at Norwich, supposed to be the work of Cornelius Janssen.

THE Gloucester Cathedral Library has a nice little MS. "Abecedarium Diversarum Herbarum secundum ordinem Alphabeti" of the late fourteenth or early fifteenth century, which Mr. James Britten will probably copy for his herb volume for the Early-English Text Society.

WE hope it will not be thought out of place here to call attention to the forthcoming elections of the London School Board, and to give our humble support to the committee organised by Lord Aberdare, Sir John Lubbock, and others. A learned journal cannot be indifferent to the educational interests of a population larger than that of Scotland. Setting aside all questions of political or religious partisanship, of occasional mistakes in administration, and of so-called economy, the broad issue raised is one of educational efficiency, and of that alone. To promote efficiency, it is necessary to select good candidates and to support them when selected. On this point, one who has had experience writes to us: "If the same number of illiterate vestrymen get on the next Board as there have been on this, it will be simply impossible to find civilised people to serve." We believe that the committee referred to propose to circulate widely some important papers in the interest of the children of London.

MR. C. B. LOW is preparing for press a new and cheap edition of his *Memoir of Sir Garnet Wolseley* in two volumes (Bentley). The first edition, published in 1878, stopped with Sir Garnet's setting out to undertake the administration of Cyprus; this will continue his career in Zululand and the Transvaal, and will also give a sketch of the Egyptian campaign.

MR. ROBERT LANGTON, of Manchester, author of *Charles Dickens and Rochester*, is preparing for publication by subscription a new work on the childhood and youth of Dickens. It will be illustrated with more than sixty wood-engravings by the late William Hull, Mr. Edward Hull, and the author himself.

MESSRS. JOHN F. SHAW AND Co. announce:—*Red and White: a Tale of the Wars of the Roses*, by Emily S. Holt; *The Foster Sisters: a Story of the Great Revival*, by L. E. Guernsey; *Seeketh Not Her Own*; or, the *Workers of La Garaye*, by M. Sitwell; *Pretty Pictures for Little Paint Brushes*, with descriptive narratives, outlines by T. Pym; *Only a Cousin*, by Oatharine Shaw; *Lonely Jack and his Friends at Sunnyside*, by Emily Brodie; *Cripple Jess, the Hop-picker's Daughter*, by L. Marston; and

Little Freddie; or, *Friends in Need*, by E. E. G. For boys they promise:—*Gold and Glory*; or, *Wild Ways of Other Days*, by Grace Stebbing; *Garrick*; or, *His Own Fault*, by Yotky Osborn; *Hubert d'Arcy, the Young Crusader*; and *The Three Chums*: a Story of School Life, by M. L. Ridley. For smaller children:—*Jack and Jill*: a Story of To-day, by Mrs. Stanley Leathes; *Bertie's Wanderings, and What Came of Them*, by Ismay Thorn; *A Little Wild Flower*; or, *Rosy's Story*, by L. J. Tomlinson; *Living Water for Little Pitchers*, by the Rev. J. Stephens; and *Something for Sunday*, outline texts for the children to paint. And of religious works:—*In Defence*: the Earlier Scriptures, by Dr. H. Sinclair Paterson; *A Portrait from God's Picture Gallery*: Lessons on the Life of David; *The Glory of the Gospel*, by the Rev. W. Hay M. H. Aitken; *Shining Light*: Memorials of Caroline W. Leakey; *At Rest among the Laos*: Story of the Missionary Career of M. M. Campbell; and *The Compassion of Jesus*, by the Rev. Dr. A. Saphir.

As children in the first standard are now allowed to pass with forty per cent. of misspellings in their writing, it seems high time that a Royal Commission should enquire into the necessity of enforcing spelling at all. The spelling reformers intend to bring forward this matter at the next School Board elections.

"SPELLING REFORM NOTE-PAPER," headed with the "five rules of partial corrections" which we mentioned a few weeks ago, has been prepared by the English Spelling Reform Association for the use of its members and friends.

MR. EDWARD POCKNELL, author of *Legible Shorthand*, has in the press a small manual, to be called *Common Shorthand*, based on the rudiments of his system, and adapted to ordinary purposes.

A SERIES of papers entitled "Studies in Dublin Society" have been commenced in *Society*. They are written by one who is not unknown in the world of journalism.

THE session at Bedford College was opened last week with a lecture on "Scipio" by Prof. E. S. Beesly. At the close of the lecture Prof. Beesly announced the unprecedented success of the women students of Bedford College at the recent examinations at the London University—viz., that all the thirteen students that went up for the intermediate examinations in arts and science passed in either the first or second class; that seven of these went up for honours and all of them passed, two taking prizes in German and French, the only prizes awarded to women; also that the only woman who took honours in inorganic chemistry was a student of this college.

THE first meeting of the second year of the Browning Society will be held on Friday next, October 27, at University College, at 8 p.m. Papers will be read by Prof. E. Johnson, on "Browning's Development;" and by Miss Beale, of the Ladies' College, Cheltenham, on "The Religious Aspects of Browning's Poetry." The hon. secretary of the society is Miss E. H. Hickey, Clifton House, Pond Street, Hampstead.

WE quote the following from the *New York Critic* for October 9, though we confess that our experience does not bear out the moral that is implied. For example, this very number of the *Critic* reviews at length ten books, of which at least six are English, including the first three.

"In Scribner's fall and winter list, of thirty-five books, only two are English and two French. The remaining thirty-one are American. In Appleton's list of twenty-seven, there are twenty American books and seven English. Harper's list of thirty-seven books (including new editions, but excluding the volumes issued in the Franklin Square Library)

comprises one French, two German, five English, twenty-seven American, and two Anglo-American publications. In Macmillan's list of sixty-one works, there is only one of American origin—Mr. Crawford's forthcoming novel, *Mr. Isaacs*."

WE feel grateful to the *Literary World* of Boston, U.S., for the scrupulous care with which it generally acknowledges the source of its obligations to the ACADEMY. Yet, in quoting our article of August 5 upon the late Col. Chester's papers in its issue for September 23, it would have done better to leave Mr. Cockayne's name as he is pleased to spell it himself; and, better still, not to have described him as "Norway" King of Arms.

STUDENTS of heraldry will be glad to hear that Mr. J. B. Rietstap, of Amsterdam, is about to bring out a new edition of his *Armorial général*, first published in 1861, and now very scarce. The number of coats of arms described has been increased from 46,000 to more than 100,000. The work will be published in parts, probably twenty-five in all. Subscriptions are received in this country by Mr. Quaritch.

M. ERNEST DAUDET's prolificness in novels of "actuality" is overwhelming. But three months ago he produced *Défroqué*, already in its tenth edition; and this week he has published another, entitled *Pervetis* (Paris: Plon), which combines a love story with a sketch of the morals of French finance.

M. CALMANN LÉVY announces for early publication a new work by the Duc de Broglie, entitled *Frédéric II et Marie-Thérèse, d'après des Documents nouveaux*, 1740-42.

M. CHAMPELURY will publish immediately (Paris: Dent) *Les Vignettes romantiques: Histoire de la Littérature et de l'Art en 1830*, a facsimile reproduction of the most remarkable vignettes and engravings of the romantic school, together with a complete catalogue of the romances, dramas, and poems, illustrated with vignettes, which appeared between 1825 and 1840.

AMONG Messrs. Didier's announcements are: *Le Journal d'un Fourrier de l'Armée de Condé*, edited by Comte G. de Contades; a *History of Female Education*, by M. Paul Rousselot; *La Femmedans les Temps modernes*, by Mlle. Olariasse Bader; and second editions of the Comte de Baillon's study on Queen Henrietta Maria and of his selection from her correspondence.

THE French Société nationale et centrale d'Horticulture has offered two gold medals as prizes for the best works upon popular names of plants.

M. GACHARD, the well-known archivist at Brussels, has just published the fifth volume of his *Collection of Ordinances of the Austrian Netherlands*. It comprises 360 documents, covering the period from 1733 to 1744.

WITH reference to the word "pilgarlick," a correspondent, apparently of Scotch descent, writes that

"the word was in constant use in my family when I was a child—now more than forty years ago. 'Poor pilgarlick' was a term applied to any child who made a piteous face and fancied itself ill or unhappy."

HAVING seen an announcement in the ACADEMY of a forthcoming translation of Schopenhauer into English, Dr. David Asher, a personal disciple of the philosopher, writes to us from Berlin to express a hope that the English public will not take too much to heart Schopenhauer's denunciations of Judaism. Dr. Asher is himself a Jew, and he vouches that Schopenhauer reckoned several other Jews among his friends. We think that we may reassure our correspondent. To affirm that a "Judenhetze" will never be got up in England might be too hazardous; but we venture to prophecy that it will not be got up by readers of Schopenhauer.

GERMAN JOTTINGS.

THE enterprising firm of Herr Spemann has issued the prospectus of a truly gigantic literary undertaking, which will consist of a "Historisch kritische Ausgabe" of all the literary productions of Germany from the year 1100 to our own times. Critical and biographical notices will be prefixed to the works of every author, and each volume is to be provided with an Index. A general Index to the whole collection will be given on the completion of this truly national library, which bears the simple title of *Deutsche National-Litteratur*, and which will also be adorned with illustrations. The general editor is the well-known Prof. J. Kürschner, who has secured the services of a number of eminent literary historians, and the collection is expected to be finished within the space of three or four years. We hope to notice this vast undertaking more fully on a future occasion, when several of the "Lieferungen" have been issued.

HERR ZOLLING, editor of the *Gegenwart*, is preparing a critical edition of Kleist, and would be glad to hear from anyone who may be in possession of papers bearing upon the life or works of the poet.

MR. JOHN L. BASHFORD, of Trinity College, Cambridge, has been appointed Lector on the English Language in the University of Berlin, in succession to Mr. Napier, who, as we recently stated, has been elected to a Professorship at Göttingen.

THE thirteenth edition of Brockhaus' *Konversations-Lexikon* is in rapid progress, nearly one volume and a-half having been already issued. The last article completed is Barth. Among the contributions we notice one from Prof. J. Oppert on Assyria. Five excellent maps and twelve full-page plans accompany the text.

HERR J. J. HONEGGER is publishing *A History of Universal Civilisation* (Leipzig: Weber) which is to fill five volumes. The first instalment, containing the prehistoric section, has already appeared.

HERR J. DIELITZ has published (Goerlitz: Starke) the first part of an alphabetical catalogue of military insignia, battle cries, &c., from the middle ages down to the present time. The work will be completed in nine more parts.

THE second volume has appeared (Strassburg: Trübner) of Herr Fr. Kluger's *Etymological Dictionary of the German language*. It begins with "Elfenbein," and ends with "Hahnen."

A GAZETTEER of Germany, dealing with the political and administrative changes of the new empire, has been published under the title *Geographisches Lexikon des deutschen Reichs* (Bibliographisches Institut: Leipzig). The work has been edited by Herr Neumann, of Eberswald, and is fully illustrated with maps and plans based upon Ravenstein's *Spezialatlas*.

ORIGINAL VERSE.

AN AUTUMN REMINISCENCE.

A RADIANT garden rises in my view
Keplete with loveliness: there sunrays fall
Softly through boughs of old: a brooklet's brawl
Rumbles o'er pebbly beds of gray and blue,
And deftly carved in calm they never knew
Heroes of old the green slopes keep in thrall—
Whereon grow lilies, and proud dahlias tall,
And shapely ferns, and flowers of varied hue.
Small wonder that these storied warrior forms
Should now in sculptured stone have peace:
When I,
Oft battling in the surge of Life's loud sea,
Find here successe of all tempestuous storms—
Where still and silent 'neath a placid sky
All nature in repose lies tranquilly.

H. T. MACKENZIE BELL.

OBITUARY.

DR. A. C. BURNELL.

Oxford: Oct. 18, 1882.

To the Editor of the ACADEMY.

DEAR SIR,—

You ask me to send you a short account of Mr. A. Burnell, the eminent Sanskrit scholar, whose death was announced in yesterday's papers. Personally, I knew little of him, and what I knew would hardly interest the readers of the ACADEMY. I believe his family was of Dutch origin, and that his father had changed his name. I also remember the death of his aged mother in the early part of this year. Some years ago I met Mr. Burnell in London, as I thought, for the first time, but he told me then that he had been examined by me when he was a candidate for the Indian Civil Service. He had taken up Tamil; and it seems that, while examining him, I had remarked that he would find Sanskrit by no means a stiffer fence to take than Tamil. "This," he said, "stuck to me, and I went at Sanskrit with all my might." And this indeed he did, and we very soon saw the results of his labours in India. He knew how little had really, as yet, been done in the study of Sanskrit literature, how small a portion of it was known, even to the best scholars in Europe, compared with what remained entirely unexplored. His first object was to collect materials, and to rescue whatever could be rescued of ancient Sanskrit MSS. He was employed in the South of India; and the Dekhan is richer in Sanskrit MSS. than is generally supposed, for it formed the refuge of Sanskrit learning when it was driven out of the Northern provinces by the Mohammedan conquest. There are old colleges in the peninsula which have never been explored—the very college over which Mādhava presided, and the centre of that great revival of Sanskrit scholarship in the fourteenth century A.D., of which the gigantic commentary on the Rīgveda forms but a small specimen. Of the treasures which Mr. Burnell collected he published a catalogue in 1870—"Catalogue of a Collection of Sanskrit Manuscripts," by A. C. Burnell, Part I., Vedic Manuscripts; and he afterwards presented, I believe, the whole of that collection of MSS. to the Library of the India Office. Few Vedic texts have been published since for which Mr. Burnell's valuable Grantha MSS. were not placed under contribution.

Nothing could exceed Mr. Burnell's helpfulness and liberality while in India. No one wrote to him in vain for information; and he often sent ten times more than one ventured to ask for. I well remember, when I had asked him about some *lacunae* which occurred in all the eleven MSS. of Mādhava's commentary on the Rīgveda, how he started off for the College of Sringeri, surrounded as it was by pestilential swamps, and procured for me from the living successor of Mādhava the information I was in need of. I possess several MSS. which he obtained for me in India, and for which he would accept no payment; and I shall be glad to send them to whatever library may secure the literary treasures which he possessed at his death.

His work was everywhere the work of the pioneer; and who can call himself a Sanskrit scholar at present unless he has explored at least one inch of ground that was not explored before? Mr. Burnell never touched what had been touched by others. Sakuntalās and Nalās hardly seemed to exist for him. He collected the Brāhmanas of the Sāmaveda, the very name and number of which had been contested, and published them one after the other. They were very dry reading, so dry that he did not venture to translate them for fear of the sneers of aesthetic critics, who cannot bear anything primitive, unless it is "pretty." But his

work was appreciated by scholars; and the new University of Strassburg was well advised when it elected him one of her first honorary doctors for the substantial, though by no means showy, work which he had done before he was thirty.

In 1874 appeared his *Elements of South-Indian Palaeography* (second edition, 1878), opening an avenue through one of the thickest and darkest jungles of Indian archaeology, and so full of documentary evidence that it will for long remain indispensable to every student of Indian literature. It forms the foundation of Holle's *Tabel van Oud- en Nieuw Indische Alphabetten*, published this year at Batavia.

His next work, *The Andhra School of Sanskrit Grammarians* (Mangalore, 1875), propounded a new theory on the development of grammatical science in India which, if it has not met with general acceptance, has at all events set scholars thinking and working in a new direction.

But his *magnum et ultimum opus* was the Catalogue of the Sanskrit MSS. in the Palace of Tanjore, finished in 1880. He was appointed to this work by Lord Napier in 1871; but so great was the number of MSS. to be examined (12,376 in all), and so scanty the leisure which the Government would allow its valuable servant, that he had to spend nearly ten years of often-interrupted labour on this arduous undertaking. It is, no doubt, the most comprehensive and most useful catalogue of Sanskrit MSS. that has ever been published; but, I am afraid, it simply killed him. In every letter which I received from him he complained of overwork; but there was a kind of dogged perseverance in him which knew of no surrender, till at last the doctors had to send him away by main force. He then spent some time in a villa which he had bought on the Riviera, still carrying on his old works and planning new ones. But it was too late; and he died, as many a good and brave man has died in the Indian service, unrequited except by the consciousness of having sold his life dear, and having done some work which will live on for good though the worker's name may be forgotten. There is much more to be said about Mr. Burnell's small, but often very weighty, contributions to Indian scholarship, but that must be reserved for another time. Let me add that, besides the University of Strassburg, the Royal Danish Academy honoured itself by electing him a foreign member.

F. MAX MÜLLER.

MAGAZINES AND REVIEWS.

If any reader has supposed that *Mind* was devoted to the interests of the empirical school of philosophy, the present number will certainly disabuse him of the idea. Of the four articles which make up its principal contents, only one can be said to tend in the direction of the dominant English school. This is a continuation by Mr. Edmund Montgomery of his ingenious enquiries into the meaning of causation from the point of view of the evolutionary biologist. The writer is clearly following in the lines of Mr. Herbert Spencer's argument that all forms of knowledge are determined by the nature of the organism, which has been constituted by innumerable interactions with the environment. This is, we think, a legitimate psychological view of the genesis and history of knowledge as we find it. Yet the line needs to be carefully drawn between this psychological conception and a properly philosophical conception of the value of knowledge and the conditions of its validity. It is with this philosophical problem that the remaining articles are more or less directly concerned; and this problem they all aim at solving in a manner

opposed to that of empiricism. The first, and longest, of these is headed "Scientific Philosophy: a Theory of Human Knowledge," and is from the pen of Mr. Francis Ellingwood Abbot, a gentleman whose name we do not remember to have met with before. His essay has the distinct advantage of having a simple and definite idea to enforce, and of a clear and direct style wherewith to enforce it. All philosophy, according to Mr. Abbot, is concerned with the problem raised by the realists and nominalists: Is there a knowledge of universals or only of particulars? Modern speculation, from Descartes downwards, has been a development of nominalism, of which conceptualism is only a modified form. The philosophising of Locke and his followers on the one hand, and of Kant and his successors on the other, has this in common—that, denying the objective reality of universals, it tends to reduce (each in its own way) all general knowledge to a subjective source. On the other hand, modern science distinctly assumes the objective validity of its general concepts and laws. Hence arises a contradiction between the methods of science and of philosophy, the sense of which has alienated scientific men from philosophic enquiry. The *εἰρησυχία* must be found in a "scientific philosophy" which bases itself on the method of science. This, the writer thinks, will take the form of a scientific realism or "relationism," a theory which, subsuming under itself what is true in the opposed doctrines of realism and nominalism, declares that not only individual things, but the general relations among these, have independent objective existence. It is refreshing in these days, when so many scientific men look on at the discussion of philosophic problems with only a languid curiosity as at something wholly barren of practical result, to meet with a writer who approaches these problems with a touch of a religious earnestness born of the conviction that philosophy must either directly controvert or support the well-assured conclusions of science. Yet it may be doubted whether the writer in his praiseworthy effort to effect a *rapprochement* between science and philosophy, has clearly apprehended their difference of aim. When so able a man of science as Prof. Huxley, as soon as he begins to philosophise, frankly avows his conviction that all that we can know resolves itself ultimately into mental states and the relations between these, it seems exceedingly doubtful whether there is any necessary connexion between modern physical science and philosophic realism. Passing from this article, and leaving aside a well-written paper by Mr. Thomas Davidson on "Perception," in which he seeks to lead the discussion of the theory of knowledge on to the point of view of his favourite philosopher, Rosmini, we reach an essay from the pen of Mr. Henry Sidgwick, bearing the ominous title, "Incoherence of Empirical Philosophy." This short paper contrasts curiously in method and in style with Mr. Abbot's article. In the course of eleven pages Mr. Sidgwick manages, in that painstaking way of exhaustive search which his admirers know so well, to show that the fundamental position of empiricism—namely, that all valid knowledge is either immediate cognition of particular approximately contemporaneous fact, or a legitimate inference from this—is an unstable one. It is beset with apparently insurmountable difficulties, as that of determining how many and what persons' immediate cognitions are to be accepted, who is to judge of the immediacy of a given person's *soi-disant* "immediate" cognition, and so on. The paper, though perhaps hardly an adequate treatment of the subject, ought to do good by sending back empiricists, materialist and idealist alike, to reconsider and reformulate their fundamental assumptions.

THE *Revista Contemporanea* of September 30 is scarcely up to its usual level. An article by D. Ramon Jordana, on the "Discovery of the Philippine Islands," is a careful *résumé* of names and dates. Señor Muñoz y Mansano begins an interesting but too laudatory biographical sketch of the painter Goya. A Montaberry romance on the story of Buckingham and Anne of Austria in "La Juventud Dorada;" and Becerro de Bengoa tells a well-entitled "Incredible History" in the style of Poe or Hoffmann.

A NEW CELTIBERIAN INSCRIPTION.

Madrid: Sept. 27, 1882.

YOUR readers will doubtless remember the long Celtiberian inscription found some time since at Luzaga, which I published in the *Boletín* of the Real Academia de la Historia, vol. ii. p. 36 (see also *ACADEMY*, February 4, 1882). This has given rise to fresh researches. I had indicated the territory of the Lusones, whom Strabo locates from the eastern frontier of Celtiberia to the sources of the Tagus, as that of the tribe which has left us this inscription in its native language and writing; but I must modify my opinion in face of another Celtiberian inscription discovered within the last few days.

Luzaga, situated near the River Tajuña (*Tayuvlos* of Plutarch), is outside of the vast knot of mountains spreading out like a horse-shoe which forms the district of Molina d'Aragon. It is here that the two veritable sources of the Tagus lie concealed—the one towards the south, which keeps the name of the river; the other to the north, called Gallo (Gaulois). The high road which descends from Sigüenza to Lower Aragon crosses the Tajuña near Luzaga. It climbs the mountain, and at the summit passes by Luzon, whence it descends to Molina, which is bathed by the Gallo. It then follows this stream, and, having arrived at its source, abruptly enters the province of Terner by the high watershed of the Sierra d'Albarracín (mountain and peak St. Christopher), which separates Castile from Aragon.

To this last district belongs the Celtiberian inscription just found. Its characters do not belong to the palaeographic group so clearly indicated by the bronze of Luzaga. This latter belongs to the Arévaco; it is Segontin, so that "Luzaga" can hardly be explained by the Lusones of Strabo, but by the *Xeropia Adra* of Ptolemy, which is known also from Celtiberian coins. On the contrary, this inscription of Luzon presents the free and open type of characters which is remarked along the whole of this southern chain or border, which Strabo describes so well: *ὑπερβαλόντα δὲ τῆν Ἰουβδαίαν ἢ Κελτιβερία παραρρήμα* (iii. c. iv. 12, ed. Müller et Dubner). The inscription is on stone, but, unfortunately, it is much defaced. After the system of Señor Zobel, it should read l. r. p. k. e. l. or perhaps l. r. b. k. e. l. But the nearest station to the spot on the Roman road was, it appears to me, Urbica, which in a native mouth may have been pronounced Lurbiaca.

The stone itself will shortly be detached from the wall of a country house, the owner of which purposes to continue the researches which he had begun in the neighbouring fields just before seed-time. One fact is certain: the field nearest to the farm-house is a very ancient cemetery. More than forty tombs have been laid bare, hollowed in the ground, and formed by enclosures of unmortared stones. The skeletons are of gigantic size. The corpses were buried, and the skulls were traversed by an iron nail—a circumstance which is found also in an old cemetery at Bullas (Murcia), at Gibraltar, and elsewhere.

I have mentioned the system of Señor Zobel. In my opinion it is the most rational, for it

starts from a series of well-established facts, properly classified and arranged according to true scientific method. His work, *Estudio histórico de la antigua moneda Española desde su origen hasta el imperio Romano* (three volumes, Madrid, 1879-80), is neither diffuse nor arbitrary. It traces the development of the coinage with Iberian characters, and avails itself of all material means to ensure accuracy in copying the legends. It distinguishes four chronological periods (230, 214, 204, 184 B.C.) in the coinage of Hispania Oritior, the type of which is also separately studied in geographical regions. One happy idea is to give a syllabic value to certain letters, a value which has been confirmed by bilingual inscriptions. This system is doubtless susceptible of improvement, especially in its lines of geographical demarcation, as the two inscriptions of Luzaga and of the Gallo have just shown; but I do not think that the general plan will undergo any essential modification. It still remains to classify the longer inscriptions on stone and metal in a similar way. But it is not easy to control the copies by photographs, squeezes, or by the originals themselves. Señor Fernandez-Guerra, in his noble work *Geografía antigua de España*, the publication of which has already commenced under the auspices and at the cost of the Minister of Public Instruction, will supply this need. As soon as we have a trustworthy collation the work will advance, fresh monuments will be sought out, and it is evident that light will sooner or later spring from the clash of learned and scientific discussion.

With regard to this I must direct your attention to the memoir of Don Eduardo Saavedra inserted in vol. ix. of the *Memorias* of the Real Academia (Madrid, 1879). This volume opens with a *compte-rendu* of the labours of the Academy since 1852. It would interest all your countrymen who desire to follow the contemporary march of historic studies in Spain. It is unsigned, but the author (it is well known) is Señor Saavedra, a writer as modest as he is well informed. His memoir, crowned at the competition of the Academy in 1861, entitled *Descripción de la vía Romana entre Umana et Augustobriga*, is followed by fine plates, which show the area and distance, the plan of the stations, the archaeological remains, the inscriptions, and the coins found along the whole road. A tumular inscription is dedicated to the manes of Lucius Terentius Rufinus Rufi filius IRRICO (ratensis?) (cf. Hübner, ii. 2843). I see in this Gentile name that of "Numantia" revealed by the coins and by the bronze of Luzaga (arregorat). The site of Numantia is designated in mediaeval documents under the names of Gorrahe or Garraha. This is now the town of Garray, on the left bank of the Douro, a little below the confluence of this river with the Tera. I suspect that this name is formed like that of Argentoratum (Strasbourg). Arregorat should be the city of the river. Arrego, whence the Spanish "arroyo" (brook), is found all over Aragon—Arago, Erga, and a hundred other river-courses.

CORRESPONDENCE.

DARWIN'S RELIGION.

Brighton: Oct. 16, 1882.

The text of the letter from Charles Darwin to a young student at Jena, reprinted in the *ACADEMY* of last Saturday from the report of Prof. Haeckel's lecture in the *Deutsche Rundschau*, contains a mispunctuation which, if it do not positively pervert Darwin's views, destroys the point of his confession. It stands thus in the *ACADEMY*:—

"As regards myself, I do not believe that any revelation has ever been made. In respect to a future life, every man must make his decision between contradictory and undetermined probabilities."

Evidently the full stop, if anywhere, should be after "life." What Darwin had it in hand to say was that the curtain which veils the future had, in his view, never been lifted. He was the last man in the world to say that no revelation

of any sort had ever been made. The text should run thus:—

"As regards myself, I do not believe that any revelation has ever been made in respect to a future life. Every man must make his decision between contradictory and undetermined probabilities."

C. M. INGLEBY.

A PASSAGE IN THE "FAERY QUEEN."

18 Bradmore Road, Oxford: Oct. 10, 1882.

Spenser, describing the gate of the "Bowre of Blisse" (*Faery Queen*, ii. 12, 44), says:—

"Yt framed was of precious ivory,
That seemd a worke of admirable witt;
And there in all the famous history
Of Jason and Medasa was ywritt;

The wondrous Argo, which in venturous peeces
First through the Euxine seas bore all the flower
of Greece."

What is the exact force of the expression "in venturous peeces"? I suppose there is no doubt that the word "peeces" has here the common Spenserian meaning of fortified structure—cf. *F. Q. i. 10, 59*; ii. 11, 14—but how is the preposition to be understood? I would suggest that the locution is a Gallicism of Spenser's, "in venturous peeces" meaning "in the character of, as a venturous peeces"—cf. Fr. "agir en père." This is like the well-known Hebrew construction with the *Beth essentialis*—cf. Exod. vi. 3: "I appeared to Abraham as God Almighty," where the Hebrew has "in God Almighty," i.e., in the character of God. Compare the Welsh *yn* (of apposition)—"Y mae Arthur yn frenin," Arthur is a king, lit. Arthur is in the character of a king.

A. L. MAYHEW.

THE SPELLING OF ROMANY.

Oct. 11, 1882.

'Will the author of the Gipsy letter printed in the ACADEMY of September 30 listen to a slight remonstrance? As Romany is acquiring something like the status of a written language, would it not be better to give it a more consistent orthography?

In the words *pamor* (brothers), *drummor* (roads), &c., the combination *or* is intended to represent the sound *aw*, the plural termination, in accordance with the common English treatment of the letter *r*. This might perhaps be allowed to pass, though really misleading, but there is no excuse for the spelling *mawr*, which stands for the prohibitive particle *má* (Greek *μή*). Here the letter *r* is not only not radical, but is quite useless phonetically. *Mor* might pass, *maw* would be better, but *mawr* is absurd. On the other hand, in the word *tchaw* (grass) there really is a radical *r*, so that the word had better be written *chor*. Again, the vowel sounds in *boot* (very) and *mush* (man) are the same; why should they be written differently? Two or three lines from the end we have this discrepancy exhibited in the same word. "Good luck" is *kushko bok*, "good men" is *koeshki mawhaw*. (Why not, by-the-way, *mooahor*?)

I should like to submit further that, if *tchitche* or *ferrader* means "nothing is better," we still want a negative particle. An old woman in a red cloak once observed to me, "They're *KEK kushki* for *tchitche*," not good for anything—meaning the Hunstanton excursionists. This was more idiomatic.

There are, I suspect, more Romanising aficionados, even in learned circles, than Dr. Mayman is aware. Heaven only knows the *vellit* of Bohemianism hidden under many a grave face! It would hardly be too much to ask that the language be written in accordance with some principles, philological or phonetic; but let it be at least spelt consistently.

"LILLEGRO."

MR. STEWART'S "ADVANCED GREEK COURSE."

Kath, N.B.: Oct. 12, 1882.

In the ACADEMY of October 7 I observe a notice of a little book I published some time ago. I am accused of imitating Mr. Sidgwick's excellent book, and am somewhat ill-naturedly set down as ignorant of the uses of the optative, and, with a taste (?) which I did not expect to find in a leading literary paper, am referred to somebody's Greek grammar.

I should be glad to think that my book was even an imitation of Mr. Sidgwick's. Imitation is the sincerest form of flattery, they say. But, unfortunately, I cannot plead guilty. My book was practically completed before I had the good or, apparently, bad luck to see the other. Any one who has ever tried the work knows that a school-book is practically a judicious compilation of the most valuable material available. I laid no claim to originality except in the way of arrangement, which is entirely different both in principle and detail from Mr. Sidgwick's book. In fact, it is a development of the syntax notes in my *First Greek Course* published several years ago. As to the optative question, the statement referred to has the highest authority. It is too bad to condemn it in such an indefinite way. If the book is bad, by all means say so, and say where and why; but abuse is worthless. It almost looks as if the critic had some personal dislike, or some interest in the sale of Mr. Sidgwick's book. I never dreamt of my little book being a rival to his work—certainly not in England, where Scotch efforts are pooh-poohed and repressed; but I expected at least a fair and honourable opinion, and not vulgar and insolent abuse.

T. A. STEWART.

The first thing that struck me on opening Mr. Stewart's book was its resemblance—though on a smaller scale—to that of Mr. Sidgwick. As I examined it more carefully, I became satisfied that it was very largely founded upon Mr. Sidgwick, and that the debt ought to have been acknowledged. Mr. Stewart denies that in fact there was any such debt. Of course, therefore, I withdraw and regret the charge of plagiarism. But I cannot admit that the works are as dissimilar as he says. I must insist that there is a most remarkable similarity between them.

As to the optative, it is impossible to discuss at length such points in a short review. I thought, and still think, Mr. Stewart's view, that the present and aorist optatives in wishes denote respectively wishes as to the present and wishes as to the future, wholly erroneous, and implying ignorance of conclusions on which scholars are now practically unanimous as to the true distinction between a present and an aorist. I thought, and still think, that anyone acquainted with the valuable standard works on Greek syntax to which I referred could hardly have maintained the view in question. And Mr. Stewart's contemptuous description of one of the most eminent of living scholars as "somebody" does not convince me that he can afford to ignore that scholar's writings. If Mr. Stewart really wishes for a more definite account of what I believe to be the accepted view on the point, I am quite willing to give it. All optatives expressing a wish refer to the future, but the present refers to a future process, the aorist to a future occurrence; εἴθε λούομαι denotes a wish to "be loosing," εἴθε λύομαι a wish to "loose." A wish as to the present—e.g., "I wish I were now loosing"—employs the imperfect indicative. Rightly or wrongly, I believe that this distinction is the true one, that it is generally accepted by scholars, and that the writer of an "advanced Greek course" ought either to have refuted it or recognised it.

Mr. Stewart's insinuations as to my motives are wholly unjustifiable. I have no "personal dislike" to him; I never met him, nor heard of

him till I reviewed his book; I have no idea even now who he is, or what position he holds. I have, as I need hardly assure you, no "interest" whatever "in the sale of Mr. Sidgwick's book."

I did not say that Mr. Stewart's book "was a bad one." To say so, would not have been to express my view. I thought it one which, in the absence of Mr. Sidgwick's, would have been useful; though on particular points, one of which I specified, unsound and requiring revision. Believing it to be based on Sidgwick, and the debt unacknowledged, I used language intended, at least, to be that of "fair and honourable criticism," and by no means of "vulgar and insolent abuse."

THE REVIEWER.

THE NATIONALITY OF THE ROUMANIANS.

London: Oct. 16, 1882.

With regard to Mr. Fairfield's letter upon the above subject, I am glad that an incidental remark of mine in the *Nineteenth Century* should have afforded him an opportunity for the display of so much curious learning. I am even more impressed by the ingenuity which has converted a single phrase into the occasion required. An isolated extract can be made to mean anything; but, if Mr. Fairfield will read the paragraph through, he will see that, instead of suggesting that "experts" should now take account of the evidence furnished by the Slavonic element in the Roumanian tongue, I have said that since 1848 the National Party have been aware of that evidence, and have tried to suppress it. The statement that, according to popular tradition and belief, the Roumanians are neither more nor less than the descendants of the Roman legionaries is quite true, as well as the assertion that the erroneous theory is repeated in histories and geographies. The matter lay outside the subject of my paper, and I was not called upon to dilate upon it.

C. F. KENNY.

THE NEW TESTAMENT OF 1575.

Buddersfield: Oct. 16, 1882.

I have a copy of John Crespin's quarto Bible of 1568. It does not differ from the common Genevan version; the readings quoted by Mr. Pinchard may be found in any "Breeches" Bible. The 1568 was issued three successive years with different title-pages. Even this can hardly be considered a peculiarity, as great difficulty was found in disposing of many of the early editions of the English Bible, and most improper expedients were resorted to in order to force them into circulation. All that has been written about "Bible thirsty England" is pure myth, as far as the first half of the sixteenth century is concerned.

J. R. DORE.

"THE DIGBY MYSTERIES."

3 St. George's Square, N.W.: Oct. 14, 1882.

I thank my friend Prof. Zupitza for his correction of the curious oversight of the other friend who prepared the Glossary to *The Digby Mysteries*, and myself, as to the meaning of *jaff*. It is of course "Jaffa" or "Joppa," and occurs in scores, nay, hundreds, of places in Early-English work. Two I may quote from my own edition of Andrew Boorde for the Early-English Text Society.

P. 220.—"When you come to port *Iaffe*, you shal go a foote to Ierusalem, except you be sick, for at port *Iaffe* you enter in to the Holy Land."

P. 348.—"At *Iaffe* begynnyth the holy londe. . . . In *Iaff*, Seynt Petir reysid from deth, Tabitam, the sarvaunt of the Apostolis"—Sir R. Torkington's Diary, 1517.

F. J. FURNIVALL.

THE MERCHANT TAYLORS' REGISTERS.

West Hackney Rectory, N.: Oct. 16, 1882.

Mr. Round—whom I thank for his kindly words—misses the point of my reply. He accused me of the *cacothes emendandi* in suggesting that *Yeilding* meant *Ealing* (an opinion in which I am confirmed); but, in doing so, he substituted his own "hamlet" for Dugard's "pariah," and thus became himself an emendator!

CHARLES J. ROBINSON.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, Oct. 23, 7.30 p.m. Aristotelian: "Spinoza," by Mr. W. R. Dunstan.
8 p.m. Royal Academy: "The Joints of the Human Body," by Prof. J. Marshall.
TUESDAY, Oct. 24, 8 p.m. Royal Academy: "The Muscles of the Human Body," by Prof. J. Marshall.
8 p.m. Browning: "Browning's Development," by Prof. E. Johnson; "The Religious Aspects of Browning's Poetry," by Miss Seale.
8 p.m. Quakett: "The Fibro-vascular Bundles in Ferns, and their Value in determining Generic Affinities," by Mr. T. W. Morris.

SCIENCE.

A Treatise on the Distillation of Coal-tar and Ammoniacal Liquor. By G. Lunge. (Van Voorst.)

THIS very valuable monograph on coal-tar is marked by the same characteristics as those which were so conspicuous in Dr. Lunge's previous treatise on *Sulphuric Acid and Alkali*. While the author never loses sight of the technical or manufacturing aspect of the subject under discussion, he is careful to present its purely scientific features in well-defined outline. The book is fully illustrated, and contains, in abundant foot-notes, references to industrial papers, scientific memoirs, and patents. The materials and processes employed in the coal-tar industry in different countries are compared and contrasted in a way which is possible only to a writer having an extensive knowledge of the literature of his subject, and a minute acquaintance with the working details which must be gained in the factory.

The order in which Dr. Lunge treats his materials and marshals his facts, and the scope of his volume, may, perhaps, be gathered from a summary of its contents; but, to form any adequate conception of the author's patience in enquiry, soundness of judgment, and completeness of discussion, the book itself must be read, or rather studied. There are eleven chapters in the volume, with some notes, corrigenda, and tables in the form of an appendix. The book opens with a chapter on the origin of coal-tar, in which are discussed the materials from which it is obtained, the several processes in use, and the differing qualities of the product. The properties of coal-tar and its constituents are described in chap. ii., which contains concise accounts of the crowd of compounds which have been already detected in this complex mixture, and the mere names of which take up three pages (25-27). The more important bodies, such as benzene, naphthalene, anthracene, and carbofic acid, are described with a proportionately greater degree of fullness. Chap. iii. contains a brief digest of the facts concerning the direct utilisation of undistilled coal-tar in the making of gas, the preservation and waterproofing of building materials, the preparation of asphalt, the treatment of roofing-felt, the

manufacture of lamp-black, and the consolidation of patent fuel. The title of the next chapter (iv.) shows that here commences the detailed description and discussion of the actual treatment of coal-tar by distillation—it is "The First Distillation of Coal-tar." Here we see a picture of the first rough fractional separation of its constituents into great groups; and then in the seven succeeding chapters we learn all about the properties of "pitch," "anthracene oil," "creasote oil," "carbofic acid," "anthracene," "light oil and first runnings," "benzol and naphtha," and "ammoniacal liquor." All through these chapters we are presented by Dr. Lunge not merely with the history and developments of processes and apparatus, but with the applications of the various products and with the best modes of determining their amounts and values.

In concluding this too brief notice we cannot refrain from congratulating Dr. Lunge on the remarkably interesting and instructive treatise which he has given to the manufacturing world so soon after the completion of his standard work on *Sulphuric Acid and Alkali*. The position of England with regard to the output of coal and the utilisation of coal-tar renders a trustworthy *résumé* like that under review of particular importance to this country.

A. H. CHURCH.

SOME MATHEMATICAL BOOKS.

A Treatise on the Theory of Determinants. With Graded Sets of Exercises for Use in Colleges and Schools. By Thomas Muir. (Macmillan.) Mr. Muir is well known by his own contributions on determinants to more than one of our mathematical journals; and now he adds to his previous claims on the favourable consideration of mathematicians by bringing out a very good *résumé* of the elementary results arrived at by his predecessors in this branch of study, and by a concise, but clear, statement of the more advanced parts of the subject. The scope of the book is entirely limited to the algebra of determinants; the student will not find here any excursions into the region of geometry. We start with an Introduction and a chapter on determinants in general, extending over more than half of the book, which gives in more than one form most, if not all, of the important properties, frequent recurrence being made to the original definition. These chapters are written in such a way that no student of any algebraical ability can fail to master so much of the theory as comes under treatment. The worked-out exercises, and those left for the student to solve, afford plenty of practice to test his knowledge of the principles of the subject. Chap. iii., which occupies one-third of the book, gives in a concise form an account of continuants, alternants, symmetric determinants (axisymmetric, persymmetric, and others), Skew determinants, of which we have Pfaffians, then compound determinants, followed by Jacobians, Wronskians, and Hessians. As we have intimated above, much of the author's work in this direction is already known; but he has here summarised his previous results and incorporated some other matter, and illustrated the whole with a further set of excellently chosen examples. Under the heading "Pfaffians" there is some particularly good and suggestive work. We cannot close our notice without congratulating Mr. Muir on the completion of a task well accomplished, and students upon having such a guide and friend to direct their early steps in the study of

determinants. We feel sure that the author will soon have the pleasant task of preparing a new edition for the press, and that he will then see his way to still further extending his work. Possibly, also, he may feel justified in enlarging the interesting historical and bibliographical summary which now occupies chap. iv. by incorporating therewith the "List of Writings on Determinants" which is now difficult of access to many students who do not possess copies of the *Quarterly Journal of Mathematics* for October 1881. The size of the work is, unfortunately, not well adapted for the long formulae which are printed in it.

The Theory of Equations. With an Introduction to the Theory of Binary Algebraic Forms. By W. Snow Burnside and A. W. Panton. (Dublin: University Press.) This joint production of two Fellows of Trinity College, Dublin, quite maintains the reputation already acquired by writers of the Dublin school as exponents of mathematical subjects. The theory of equations and the allied branches treated of here have for a long period held a conspicuous place in the college curriculum, and it would be difficult to find elsewhere a more extensive collection of applications of the principles of this branch of study than is to be found in the university examination papers. Bearing in mind these facts, we expected a good work, and our expectation is not disappointed. There are in all seventeen chapters, and rather more than half of these are occupied with the familiar branches which have a place in all elementary treatises. We note here and there an occasional novelty, with, as might be supposed, a very free discussion of the biquadratic equation. As preliminary to the investigations akin to those given in Dr. Salmon's *Higher Algebra*, chap. xi. is devoted to an elementary sketch of determinants; and through this gate the student is led to chapters on symmetric functions of the roots, elimination, covariants and invariants, transformations, and the complex variable. This last chapter is but a short one; its object is to lead up to Cauchy's theorem as to the number of roots of any polynomial comprised within a given plane area. The other chapters, the titles of which we have given above, present results given in the works of Clebsch, Fais de Bruno, and Dr. Salmon in an interesting and clear manner. There are three historical notes—algebraic solution of equations, solution of numerical equations, and determinants. These do not call for special comment, the last note striking us as being rather meagre, and adding nothing to what is easily accessible elsewhere. A copious supply is given of illustrative and well-selected exercises upon all the divisions of the work. We consider Messrs. Burnside and Panton's treatise a valuable and suggestive one.

An Elementary Treatise on Conic Sections. By Charles Smith. (Macmillan.) This is an analytical treatise on the sections, and we can say of it that it is the best elementary work on these curves that has come under our notice. A student who has mastered its contents is in a good position for attacking scholarship papers at the universities, and also for completing his acquaintance with the subject in Dr. Salmon's book. We have examined nearly the whole of the book-work, and like the arrangement and matter so much that we have formed the verdict pronounced in our opening sentence. There is ample store of exercises, and many useful examples are worked out in a very suggestive manner. A goodly number of these questions, from, we suppose, recent college papers, are novel to us; and so the work is fresher to us than if we had had to run our eyes over the well-known *habitués* of text-books on this subject. But if the judgment of one who has acquired a reputation as a writer of college

text-books is a true one, what is the use of praising such a work as this, since it will sooner or later pass "into the obscurity which is the fate of all academical text-books"? In the meantime, however, and notwithstanding this verdict, we heartily recommend Mr. Smith's *Conics* for use in the higher forms of our schools, and by students generally.

A Synopsis of Elementary Results in Pure and Applied Mathematics: containing Propositions, Formulae, and Methods of Analysis, with Abridged Demonstrations. By G. S. Carr. Vol. I, Sections VIII. and IX. (Hodgson.) It is not necessary to dwell upon this part at any length, as we have sufficiently pointed out the scope of the work in our previous notices. We may state, however, that we consider these sections to be as useful as any that have gone before them. A handy work of reference, such as this, to results in the integral calculus must, if its results are thoroughly reliable, save students much trouble. The author has taken extra pains in getting out these pages, and has used, on his own statement, more than one method of verifying his formulae. This is as it should be, for if the reader cannot depend upon the author's accuracy the book is practically worthless. We have come across a few inaccuracies, but they are all easily rectifiable, and would not cause a student any trouble. We hope that the other slips—and doubtless there are some—are not more mischievous. Perhaps Mr. Carr will supply a list of errata with subsequent parts of his work.

Geometrical Exercises for Beginners. By Samuel Constable. (Macmillan.) We have before received two similar collections of exercises, which hailed also, as this work does, from the Dublin University—viz., McDowell's *Exercises and Casey's Sequel to Euclid*. Mr. Constable's work is not so ambitious as those of his predecessors in the field. It is addressed to junior students, and consists of a good collection of exercises, many of which are worked out on purely Euclidian lines, and others are left, with accompanying texts, to be solved by the reader. The proofs may be pronounced to be, on the whole, neatly put, and are likely to be suggestive and useful to the young geometer. We have detected but very few slight mistakes—a good feature of an elementary work. There are five chapters concerned with, respectively, fundamental propositions; loci, with their application to the construction of triangles; maxima and minima; miscellaneous propositions; and miscellaneous examples. We have not been able to detect the author's method in the arrangement of his exercises, but the fault may lie with us; otherwise, we can commend the book as a handy and good one for preparing candidates for many examinations.

Conic Sections Treated Geometrically. By S. Holker Haslam and J. Edwards. (Longmans.) This is a handy and interesting little book, the treatment not at all on the lines of Besant or Drew, but more on that of O. Taylor. The authors, however, appear to us to be singularly ignorant or disingenuous when they write thus: "Conics are here defined as *plane loci*, and the general properties are deduced immediately from this definition by the aid of a circle, which we have called the *Auxiliary Circle of a Point*, since its definition includes the circle on the transverse axis of an ellipse or hyperbola."

It is not stated here, nor in the body of the work, that this circle is the same as that employed by Boscovich, and called by G. Walker "the generating circle," and by Charles Taylor "the eccentric circle of the point." Having had our grumble, we are disposed to think that the authors' further application of it to a method of *plane projection*, which they call *focal projection*, is novel; and we agree with them in thinking it

simple and powerful. The examples are ranged in sections at the end. Some of the figures are clumsily drawn, but, on the whole, the book is neatly got up.

The Great Giant Arithmos: a Most Elementary Arithmetic. By Mary Steadman Aldis. (Macmillan.) A small book, written in a very interesting and able style for small people. We have heard objections made to it in some quarters, but, for our part, we cannot see the force of these complaints; and we believe that such a difficult subject as this must always be for beginners should, especially at a time when so many counter-attractions abound, be written in a lively style. We doubt not that many a mother or governess will be glad to avail herself of the help herein given. We need only say that, when the book is carefully gone through, many of the difficulties that have to be contended against before the mighty giant is overcome will have been surmounted, and a good fund of strength acquired in reserve for further encounters. The book is put out in a very attractive dress, and is calculated to excite a thirst for information as to what it is all about.

American Journal of Mathematics. Vol. IV., Nos. 2, 3. (Baltimore.) The whole of No. 2, and rather more than a third of No. 3, are taken up with the famous memoir of the late Prof. B. Peirce, entitled "Linear Associative Algebra," originally read before the National Academy of Science in Washington, 1870. This treatise was previously only accessible to mathematicians through a limited number of lithographed copies struck off for private circulation. The editor of the *Journal* remarks that its publication will

"supply a want which has been long and widely felt, and bring within the reach of the general mathematical public a work which may almost be entitled to take rank as the *Principia* of the philosophical study of the laws of algebraical operation."

Throughout the work are now interspersed addenda and notes by the author's son, Mr. C. S. Peirce, whose own communications in the *Journal* and elsewhere are well known, and have been well received by mathematicians in this country. Among the addenda is a note by the author on "The Cases and Transformations of Linear Algebra," in which he refers to Mr. Spottiswoode's "fine, generous, and complete analysis" of his treatise in his valedictory address to the London Mathematical Society (*Proc.*, vol. iv., pp. 147-64). He also refers to Clifford's labours, and mentions Clifford's proposal of "the appropriate name of *quadrates*." He is, however, in error as to the date of this suggestion, as it was made at the January 1871 meeting, and not at the 1870 meeting. The other communications in No. 3 are short. Two by the editor are entitled "On Tochebycheff's Theory of the Totality of the Prime Numbers comprised within Given Limits" (Prof. Sylvester lectured in the early part of the present session on the theory of numbers) and on "The Solution of a Certain Class of Difference or Differential Equations." Prof. Cayley also contributes two notes—on "The Analytical Forms called Trees" and "Specimens of a Literal Table for Binary Quantics, otherwise a Partition Table." Mr. G. W. Hill has a note on Hansen's "General Formulae for Perturbations." Then follow notelets on "Symbols of Operation," Prof. Crofton; on "Segments made on Lines by Curves," Miss Ladd; on "The Multiplication of Certain Determinants," Mr. T. Muir; on "Newton's Method of Approximation," Mr. Franklin; simple and uniform methods of obtaining Taylor's, Cayley's, and Lagrange's series; and also forms of Rolle's theorem, Mr. J. C. Glasham. The *Journal*, it will be seen, is doing excellent and varied work.

B. TUCKER.

A CATALOGUE OF THE SANSKRIT MSS. AT PUNA.

We quote the following from the September number of the *Indian Antiquary*:—

"Prof. Keilhorn has submitted to the Government of Bombay a proposal for the cataloguing of the valuable collection of Sanskrit MSS. in possession of the Dekhan College at Puna. These MSS. have been mostly purchased for Government since the inauguration in 1868 of Mr. Whitley Stokes's admirable scheme for searching out and purchasing or copying rare MSS. The result has been that the Dekhan College Library has now obtained 3,111 MSS., which, with about 550 received from the old Sanskrit College, makes a total of about 3,660 MSS. 'Considering that the Bodleian and the Berlin Libraries contain each about 1,500, and that even the library of the India Office owns only about three thousand MSS.,' Prof. Keilhorn says he 'cannot be wrong in stating that the Dekhan College possesses the largest collection of Sanskrit MSS. in the world which is generally accessible to scholars. Nor is this collection inferior to any other in point of quality; as regards the literature of the Jainas, it is admittedly unrivalled; its palm-leaf and Bhurjapatra MSS. are unique; and the daily increasing applications from European and native scholars prove that no important work can be published to-day either in Europe or in India without consulting the MSS. of the Dekhan College.'

"Such a collection is well deserving of a thoroughly good catalogue; and Prof. Keilhorn proposes 'that a certain number of MSS. should, from time to time and for a limited period, be sent to Europe through the India Office, and that scholars who might be willing to assist in the undertaking' should be invited to do so. 'Certain branches of Sanskrit literature should be assigned to such scholars as are known to excel in them, and every scholar should be made individually responsible for his share of the work, and his own name should be given on the title-page of the part of the catalogue prepared by him.' Prof. Keilhorn places his own services at the disposal of Government to assist in the work, and expresses the hope that, within five or six years, an excellent catalogue of all the MSS. hitherto collected will be completed, and at very little expense."

SCIENCE NOTES.

PROF. C. W. O. FUCHS has contributed to the last number of Tschermak's *Mineralogische und petrographische Mittheilungen*, published in Vienna, his seventeenth annual report on earthquakes and volcanic phenomena. It appears from this record (which excludes the earthquakes of Japan) that during the year 1881 there were forty-one earthquakes in January, twenty-nine in February, twenty-six in March, twenty-four in April, eighteen in May, twenty-three in June, seventeen in July, fifteen in August, fourteen in September, thirteen in October, forty-seven in November, and thirty in December, making a total for the year of 297. Notwithstanding the care taken in collecting materials for these reports, it is almost impossible to ensure that the lists shall be complete, inasmuch as earthquakes frequently occur in parts of the world from which it is difficult to receive regular news. The volcanic phenomena of 1881 were neither frequent nor violent. Prof. Fuchs records eruptions at Mauna Loa, Vesuvius, Etna, the Azores, Santorin, the Albay in Luzon, the Serra de Azusco in Mexico, and near Mount Idaho, U.S.A. Of these eruptions the most important was that of Mauna Loa in Hawaii, from which vast streams of lava were extruded.

PROF. A. NEWTON is lecturing this term at Cambridge upon "The Evidence of Evolution in the Animal Kingdom."

THE family of the late Prof. Balfour, of Cambridge, have presented his scientific library to the university, for the use of the morphological laboratory. It consists of five hundred

volumes, besides more than eleven hundred pamphlets bound up into seventy-seven volumes. This latter portion is specially valuable, as Balfour had taken great pains to collect from *Journals and Transactions* all the most important papers in morphology and embryology, and to arrange them according to their subjects. To-day (October 21) a meeting was to be held at Cambridge to take steps to establish in the university a memorial of the late professor.

THE Cambridge University Press will shortly publish a work on the fossils and palaeontological affinities of the neocomian deposits of Upware and Brickhill, by Mr. Walter Keeping, illustrated with plates, being the Sedgwick prize essay for 1879.

A NEW edition, rewritten and enlarged, of Mr. Lewis D'A. Jackson's *Hydraulic Manual* is announced for early publication by Messrs. Crosby Lockwood and Co. The same publishers also promise immediately a new edition of Mr. Michael Reynolds' *Stationary Engine Driving*; and the following scientific and technical works in their "Weale's Rudimentary Series":—*Land Drainage*, by Prof. Scott; *The Smithy and Forge*, by W. J. E. Crane; *Details of Machinery*, by Francis Campin; *The Metallurgy of Iron*, by H. Bauerman, fifth edition; *Plumbing*, by W. P. Buchan, fourth edition; *Rudimentary Astronomy*, by the late Rev. R. Main, revised and corrected to the present time by W. Thynne Lynn; *Navigation and Nautical Astronomy*, by J. B. Young, new edition; *The Kitchen and Market Garden*, compiled by O. W. Shaw; and *Quantities and Measurements*, by Alfred Charles Beaton, sixth edition.

THE new volume in the "Bibliothèque scientifique internationale" (Paris: Germer-Baillière) is *L'Origine des Plantes cultivées*, by M. de Candolle. Out of about 140,000 known species of plants, it appears that mankind make use of only 300 at most; and, among other things, we learn that the cherry was known both in Greece and Italy long before the time of Lucullus.

PHILOLOGY NOTES.

PROF. GUSTAV OPPERT, of Madras, who has just published his valuable *Contributions to the History of Southern India*, part i., "Inscriptions," is at present in Germany on leave of absence, and will soon pay a visit to Oxford, where he was formerly employed in the Bodleian Library.

MR. J. F. FLEET, of the Bombay Civil Service, to whom we are indebted for the learned editing and translating, in the *Indian Antiquary*, of more than one hundred "Sanskrit and Old Canarese Inscriptions," has recently printed for the *Bombay Gazetteer* a short, but very comprehensive, memoir of the "Dynasties of the Kanarese District of the Bombay Presidency, from the Earliest Period to the Muhammadan Conquest, A.D. 1318," deriving his data from the large number of inscriptions which have passed through his hands during the last ten years. He has divided his essay into fourteen sections, corresponding with as many separate dynasties. We recently announced that Mr. Fleet has been appointed, for the next three years at least, to the special task of preparing for publication the more important of the monumental records in the West and South-western parts of India.

THE Cambridge University Press have ready for immediate publication an edition of *Cicero Pro Rabirio*, edited, with notes, Introduction, and Appendices, by Mr. W. E. Heitland, of St. John's College. The editor has paid special attention to the important constitutional and legal questions raised in this speech. The same publishers have also in the press an edition of

Demosthenes against Androtion and against Timocrates, edited, with Introductions and English commentary, by the Rev. W. Wayte, late Professor of Greek at University College, London.

HERR WEBER, of Leipzig, will issue shortly an elaborate work by Rudolf Falb on *The Land of the Incas in its Importance for the Primitive History of Speech and Writing*, treating of the prehistoric and historic antiquities, the religion, mythology, and language, &c., of ancient Peru.

WE have received the first part of Aizquibel's *Diccionario Basco-Español*, published by subscription at Tolosa. The work is well printed in folio. It is not a scientific dictionary, but an extensive vocabulary, marking dialectic differences, and occasionally giving useful examples of inflection. It is thus, perhaps, more useful than a premature but more scientific attempt would have been.

DR. A. LÜBBEN, the compiler of a dictionary of Middle-Low-German, has just published (Leipzig: Weigel) a Grammar of the same dialect, with a chrestomathy, mainly from MS. sources, and a short glossary.

MEETINGS OF SOCIETIES.

NEW SHAKSPEARE SOCIETY.—(Friday, Oct. 13.)

F. J. FURNIVALL, Esq., in the Chair.—This was the opening meeting of the tenth session of the society.—Miss E. M. Hickey read a paper on "Julius Caesar." After touching upon the internal evidence for the play's being Shakspeare's middle-period work, Miss Hickey said she failed to see the indebtedness to Appian's *Chronicle* for act III., so. ii., which had been brought forward. She noticed the relation in which Shakspeare stood to Plutarch, Englished by North, as wholly different from that in which he stood to other originals of his. Shakspeare follows Plutarch closely; sometimes, even, his wording is almost a metrical arrangement of North's words, and yet the gift given us by Plutarch, passing through Shakspeare, is, though the same, not the same; the "pasture of great souls" yields delight and nutrition, but we come to Shakspeare and receive more and greater abundantly. We note specially the influence of the Renaissance on Shakspeare in the deep imbuings of his mind with a sense of "the grandeur that was Rome." Throughout his plays we see that he felt how great Rome must have been. His imagination seems to have been most strongly impressed by Julius Caesar; several allusions in other plays than that which bears the conqueror's name point to this. In considering the common impression that not only is Brutus the hero of the play, but that Caesar is represented in an unheroic light, his speech disfigured by "thraconical brag," his mind swayed by superstition, his physical defects brought forward, it seemed to Miss Hickey that a good deal of this impression arose from our lack of careful study of context and our habit of using a nineteenth-century standard in judging other century development of character and art. Allowing for the difference in ideal brought about by three centuries, Caesar did not seem to Miss Hickey a braggart. As to the superstition, is not Caesar wrought on by his love for Calpurnia rather than by regard for her dreams? and was not the English belief in Shakspeare's day in sympathy with that of the heathen world? As to the stress said to be laid on Caesar's physical defects, it is Cassius who lays this stress, and is it not a sign of a defect in Cassius' nature? Does he not appear, in his narration to Brutus of Caesar's "weakness," somewhat thick-witted and somewhat thin-hearted? Caesar is the hero of the play because he is the dramatic centre of it, and all converges to him, whether in life or death. What first sets Brutus apart is his relation to Caesar. Miss Hickey analysed the character of Brutus, dwelling on his nobility and singleness of purpose, and pointing out the errors in judgment which bring ruin on the cause—that was to him the cause of freedom. She compared him with Cassius and Antony; and contrasted Dante's view of him—in

which he, with Cassius, ranks only next in infamy to Judas Iscariot—with the verdict of others, quoting the passage from "Casa Galdi Windows" which speaks of

"That dim bust of Brutus, jagged and grand,
Where Buonarrotti passionately tried
From out the close-clenched marble to demand
The head of Rome's sublimest homicide."

Miss Hickey considered that it was rather the burial of the Republic than her death that was set forth here. After all, the interest of "Julius Caesar" is not so much the interest of an historical drama as of a tragedy. There is a war of principles; but the principles are incarnate, and, if incarnation be in one sense a veiling, in another it is a revelation.

FINE ART.

GREAT SALE of PICTURES, at reduced prices (Engravings, Chromos, and Olographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—Geo. BEER, 116, Strand, near Waterloo-bridge.

BRENTANO ON THE SITE OF TROY.

Troja und Neu-Ilion. Von E. Brentano. (Heilbronn: Henninger.)

WHEN will the war about the walls of Troy ever cease? The city has been taken long ago; Helen was carried home by her husband, and the Greeks had it all their own way. Why on earth did they not settle the dispute finally? For here are we, without even the excuse of a Helen to fight for, spending our time and labour on this eternal conflict. In Greek classical days, the question seemed settled. The poets and one of the orators gloated over the complete and total destruction of the city by their ancestors. The modest pretensions of the poor people who had occupied the smoking ruins, or returned there from their refuge in the mountains, were no more than an interesting intimation of the local site. People went to sacrifice at the venerable shrine, which claimed such remote antiquity; nobody thought of raising critical doubts and difficulties. But when, in the days, and by the favour, of Alexander, and still more of Lysimachus, the town rose from obscurity to importance—when the inhabitants began to claim ancient precedence over their neighbours, and the vulgar sentimentality of Roman tourists demanded the usual stock of fabrications from local *ciceroni* to fill up the gaps created by age and forgetfulness, then the Ilions were no longer to remain in undisputed possession of their privileges.

The attack came from Demetrius, a learned man of Skepsis, who, with profound though unconscious irony, called his work *Τρωικὸς διάκοσμος*. *Διάκοσμος* indeed! *Τρωικὴ διατάξις* would have been nearer the mark. Since that day the controversy has never ceased; nor is it likely to cease when the several combatants have taken to attacking the moral character of their opponents. Demetrius began it, by attributing personal bias to Hellanicus, the main ancient authority who flatly contradicted him. But he has been paid off in his own coin; and the party of Hellanicus freely denounce the Skepsian as an envious pedant, a jealous neighbour, a narrow-minded archaeologist, who tried to defend the claims of Skepsis against those of Ilion at any cost. On the other side, Dr. Brentano and his party call him a wonder of learning and accuracy; while Hellanicus

was a silly and random annalist, full of blunders and prejudices. As the works of each author are irretrievably lost, such a controversy is likely to endure till both sides are tired out.

This is quite plain since Dr. Schliemann's discoveries have settled that Hissarlik is the only site in that part of the Troad inhabited since prehistoric times, and, in fact, the only possible site for the ancient Troy about which Homer sang, if he sang about anything at all definite. Even this will not satisfy the combatants, and they must carry on their battle over the question what the old Greeks thought about it—whether they indeed recognised the Ilians as the occupiers of Troy or not. Dr. Brentano goes yet farther; and, having committed himself in 1877 to the theory that Dr. Schliemann's researches were untrustworthy, and that Hissarlik was not a prehistoric site at all, he keeps up a continual fire of pamphlets on the subject, in which he reiterates his arguments with wearisome pertinacity. In this last he is delighted to find an ally in Prof. Jebb. But Dr. Brentano seems to have been in such a hurry to have his pamphlet ready as a counterblast to Dr. Schliemann's address at Frankfurt, where it was circulated among the assembly with unenviable taste, that he has not taken the trouble to follow the course of the controversy in England. As my reply to Prof. Jebb's article, also printed in the *Hellenic Journal*, was unknown to him, I need not discuss his arguments, most of which are there answered beforehand. He will find that Prof. Jebb's arguments, which he considered final, and as having "sobered" the other side, have not yet allayed, and are not likely to allay, the controversy. The old habit of confusing the *total* with the *final* destruction of Troy, and of quoting the exaggerations of poets and rhetors against historical facts, re-appear in his tract in their most exaggerated form. In this *τῆς κρήνης* he produces but one new argument, or rather assertion, that the Augustan and post-Augustan writers had acknowledged the validity of Demetrius and Strabo's arguments, and had abandoned the belief in the claims of New Ilium. I will only here cite an opposing authority of far greater weight—Friedländer—who knows this Latin literature better than any other living man, and who asserts (*Sittengesch. Roms*, ii. 122 sq.) that there is no trace in it of any adoption of Strabo's paradox, except one passage in Lucan.

There is, indeed, little chance of converting so extreme—we may almost say, so blind—a partisan as Dr. Brentano. Thus he considers any statement of Hellanicus as *ipso facto* suspicious. "Die Glaubwürdigkeit dieser Angabe ist indess zweifelhaft, da sie dem anschein nach von Hellanicus herrührt" (! p. 41, note). A passage of Ennius, which awkwardly and flatly contradicts his theory is "stark rhetorisch gefärbt. Sie hat ohne Zweifel eine politische Tendenz" (p. 57, note). And yet Lucan's bombast is cited as historical evidence. So, again (p. 38), "nun berichtet aber auch Strabon ausdrücklich," that the old site was avoided. In the foot-note we find Strabo's expression *ἐκάζουσι δὲ (οἱ νεώτεροι)*! This sort of handling of authorities will never carry conviction.

It is earnestly to be wished that attacks on the moral character and veracity of the other side should at least be confined to Strabo, Demetrius, Hellanicus, and other such ancient personages. The tendency of Dr. Brentano, and of perhaps other combatants in the fray, is to pass from ancient to contemporary opponents, and to insinuate that the alleged crimes of the former are reproduced in their successors. The sooner respectable scholars leave the field when this sort of fight begins, the better. As I have said, until he reads my reply in the *Hellenic Journal*, and answers it, his arguments are out of date; but, in illustration of the total ruin of a city being compatible with its continued historical life, I must thank him for having afforded me a fresh instance. Orosius and St. Augustin (and Appian) describe (after Livy) the treatment of Ilion by Fimbria. The one says, "Ipsam urbem Ilium, antiquam illam Romæ parentem, funditus caede incendioque delevit;" the other, "Urbem totam cunctosque in ea homines incendio concremavit;" and yet Orosius adds, "Sed eam Sulla continuo reformavit." The obstinate adherence to old sites was such that I believe this prompt resettlement to have taken place almost in every case. I am persuaded the body of Hellenic opinion assumed it in the case of Troy.

J. P. MAHAFFY.

THE DESTRUCTION OF CAIRO.

THOUGH saved from present pillage and incendiarism, Cairo is none the less a doomed city. Its destruction, instead of being accomplished in the rough-and-ready style adopted at Alexandria, will now be performed systematically, thoroughly, and yet with more than sufficient rapidity. Twenty years ago, Cairo—the Cairo of the Kaliphs—was intact, save for the ravages of time. Its fairy minarets, its traceried mosques and street-fountains, its noble gates, though crumbling slowly away in a land where nothing is ever done to arrest the progress of decay, were more lovely in the pathos of their gradual dissolution than they could have been even in their prime. Then came Ismail Pasha, and with him an era of "improvement"—in other words, of travesty and demolition. To Haussmannise Cairo was his darling ambition. The plans for this gigantic act of Vandalism were actually drawn and sanctioned; and, but for his Highness's fortunate financial collapse, he would undoubtedly have driven miles of yawning Boulevards and dozens of formal French thoroughfares through the shady and romantic labyrinth of his ancient capital. Short of this consummation, however, he did what mischief he could while his reign lasted. A distinguished French writer, whose archaeological enthusiasm is as delightful as his literary style, has been at some pains of late to go over the ground, notebook in hand; and the result is a tolerably serious indictment against the late régime. The following are a few out of many instances of "embellishment," "restoration," and "repairs."

The modern art of embellishment as pursued in Cairo is rapid, economical, and startlingly effective. For external embellishment, the materials are red ochre and whitewash in unlimited quantities. Applied in broad alternate horizontal bands, this decoration speedily effaces every distinction of age and style, and produces an indescribable effect. In 1869, when the opening of the Suez Canal brought a tide of distinguished visitors to Cairo, the beautiful and mellow stone-work of more than four

hundred mosques, minarets, and public buildings was disguised under a coating of this absurd livery. For internal embellishment, vermilion, cobalt, and emerald-green oil-colours are employed. The most delicate and lace-like wood-carvings, panels inlaid with geometrical patterns of exquisite subtlety and intricacy, and wall surfaces encrusted with ornaments of carved ivory and enamel disappear beneath thick coats of these three colours, and are for ever obliterated.

In works of "restoration," two methods are employed. The first and simplest is to entirely demolish the ancient structure and then to rebuild it in a base imitation-Italian-Gothic style. The second is to pull it partly down; to strip the ceiling of its carved wood-work, and the walls of their precious tiles and panellings; then to replace the former with cement and stucco, and the latter with slabs of polished granite or alabaster. In either case, the tiles are sold to tourists and *bric-à-brac* dealers, and the carved wood-work comes in usefully to light the workmen's fires when they make their coffee. The mosques of Sittah Zeyneb and El Hassaneyn are among those which have been restored according to the first method; the mosques of Keyssoon, El Moaiyud, and El Youssef, or Esbek, are cited as specimens of the second. Even the famous tomb-mosque of Kait-Bey, which Mr. Ferguson ranks above the Alhambra for elegance and perfection of style, has not wholly escaped patch-work restoration of this barbaric kind. Scores of the loveliest mosques in Cairo—including the noble tomb-mosque of Sultan Hassan, the Western mosque of El-Ghóree, and Merdānee, which is contemporary with Koesoon and probably designed by the same architect—are falling, or have fallen, into hopeless ruin. All might have been saved by a few cheap and timely repairs; but ruin is better than ignorant and vulgar restoration. Such "repairs" as are occasionally executed consist in pulling down the dilapidated part of a building, and leaving the rest to fate. A vast number of beautiful minarets have, on this system, been ruthlessly truncated, and, in many instances, unnecessarily sacrificed. The city-gates, being more solidly built, have, as a rule, escaped better than the mosques; but even the gates have suffered. The Bab-el-Azhab, the Arab gate of the citadel, is reported as having been lately smothered by external additions in hideous taste; while the safety of the noble Bab-az-Zuweyleh has been seriously imperilled by the removal of its massive lintel-stone, and the substitution of a wooden beam. This was done because the level of the thoroughfare immediately under the gateway had to be lowered each year on the occasion of the procession of Mecca pilgrims, the arch not being high enough to allow for the passing of the Mahmal, or sacred litter. As the street is not paved, it may be conceived how easily it was lowered and remade when necessary. To spare this trifling expense, however, the lintel-stone was torn from its place a year or two ago. When too late, the authorities were astonished to find that the structure overhead was giving way; so the stone was replaced by a temporary wooden beam. About £800 is now required to repair the damage; and if that sum is not soon forthcoming, the Bab-az-Zuweyleh will some day come down upon the heads of the passers-by. If left to the Egyptian Minister of Public Works, whoever he may chance to be, the money will in all probability never be forthcoming; in which case the gate is doomed.

Such are a few of the facts related by M. Arthur Rhoné in his series of papers on the present condition and future prospects of Cairo contributed to the *Chronique and Gazette des Beaux-Arts*. The latter (of which we learn with pleasure that it is to be republished in a *tirage*

à part) is enriched with a number of admirable sketches of street views, interiors, figures, &c., from the pencil of M. Paul Ohardin.

It is earnestly to be hoped that the late troubles, and the decline of French influence in Egypt, may not have caused the final dissolution of last year's newly formed Committee for the Preservation of the Monuments of Arab Art. Many of the native members of that committee, including Fehmy-Pasha, are at this moment awaiting their trial for treason; but it is difficult to believe that some vitality should not remain in a body to which Mr. E. T. Rogers, M. Ambroise Baudry, M. Jules Bourgoïn, and M. Arthur Rhoné had lent their active support. Unless this society, or a similar one, affiliated possibly to our own Society for the Preservation of Ancient Monuments, should intervene to stay the destructive march of modern Oriental progress in Cairo, it may be safely affirmed that in twenty-five years' time it will matter not at all whether that beautiful city was burned by the rebels, or saved by the British, in 1882.

AMELIA B. EDWARDS.

CORRESPONDENCE.

THE PAINTER PIETER CLAESZ, OF HARLEM.
Cambridge: Oct. 18, 1882.

Students of Dutch art are aware that the source from which the famous pastoral painter Nicolaas Berchem derived his surname is uncertain, inasmuch as he was the son of a father who has been styled in histories and dictionaries Pieter Claesz (or Klaeze) Berchem, but who styled himself simply Pieter Claesz (for Claessoon, i.e., son of Claes or Nicolaas). Various entries have been published by Van der Willigen from the registers of Harlem (*Les Artistes de Harlem* 1870, pp. 76, 77) relating to the marriage of this Pieter Claesz, the births of his children, and his death. From these entries we learn that he was married on May 19, 1617, to Geertjen Hendricks; that his wife bore him a daughter christened Riekje on March 25, 1618, and a son christened Claes on October 1, 1620 (this is no other than Nicolaas Berchem); and that he was buried on January 1, 1661. In the register of deaths he is described as Pieter Claesz, painter, and in the invitations to the funeral is expressly mentioned as the father of Claes Pietersz Berchem.

Apart from these recently discovered biographical facts, our previous knowledge of Pieter Claesz rested entirely on the text of Houbraken (*Grooten Schouburgh*, &c., part ii, para. 110), who says that he was a painter, in the first instance of fishes, and afterwards of small pictures, "in which he constantly introduced a little table with various kinds of dessert sweets in a silver bowl or porcelain dish, or the like" ("daar doorgans ein tafeltje in kwam met allerhande soort van suikerbanket, in een silveren schaal of porceleinen schootel, enz").

So far as I know, there do not exist in public galleries any pictures attributed to the hand of the painter thus described, nor does his name appear in catalogues. My object is to call the attention of students to certain works which may, I think, be henceforth assigned with something approaching certainty to his hand. One example of this class is in the Fitzwilliam Museum (no. 294, bequeathed by Mr. Mesman). It is a panel nine inches and a-half high by twelve inches broad, and represents a table covered with a plain dark-green cloth, on which are a shallow embossed silver bowl, gilt on the inside and standing on a broad foot, a lemon cut in slices, a dessert knife, and a drinking-glass lying on its side; the background is dark. It is a vigorous and skilful enough little piece of still life, painted with a precise and firm touch,

thinly in the darks, and with a strong impasto in the lights, in a manner nearly allied to that of another still-life painter of Harlem, W. C. Heda. On the left hand side appear the monogram and date, of which a facsimile is given in the margin. This monogram is not unknown to the compilers, and has caused them some perplexity. It figures as no. 1419 in part i. of Brulliot, *Dict. des Monogrammes*, ed. 1832, and as no. 512 in vol. ii. of Nagler's *Monogrammisten*. Brulliot had originally suggested in connexion with it the name of Cornelius Poelemborg, to which (as being in truth wholly out of the question) he afterwards substituted the non-existent one of Cornelius Pottenburg; then followed the not more fortunate conjectures of Clara Peeters, and the animal painter Christophorus Puitlink. Finally, Dr. Nagler proposed the name (whence derived I know not, as it is not to be found in the lists of Houbraken, and is unknown to Immerzeel or Kramm) of Jan Pieter Calemans. All these conjectures may, I think, be safely dismissed, and the name of the obscure still-life painter who was Berchem's father be with confidence substituted for them, now we know from documents that his regular style and signature was Pieter Claesz. The picture at the Fitzwilliam Museum corresponds perfectly to the unusually precise description of his manner which I have quoted above from Houbraken. So, it would seem, does another example bearing the same monogram, with the date 1636, which is in the gallery at Schleissheim, and is described by Nagler as representing a table on which stands a half-emptied wine-glass, with olives, lemons, oysters, and a couple of plates. A third picture seen by Brulliot, he does not say where, bore, together with the same monogram, the date 1648. We thus obtain three dates, 1630, 1636, 1648, which are perfectly consistent with the career of a painter ascertained to have been married in 1617, and to have died in 1661. Neither is there any other known painter of similar subjects during the same period to whom these initials O. P. or P. C. can with reasonable probability be referred.

I shall be glad if any of your readers, in England or abroad, who may have had under their observation pictures of the character described, and bearing a similar monogram, will kindly communicate particulars of them to me, in order that something like a full list may be compiled of the paintings of this hitherto unrecognised master, whose work, if my conjecture as to his identity be as well founded as I believe, derives an interest beyond its own from his relation to the distinguished name of Berchem.

SIDNEY COLVIN.

CHRISTMAS CARDS.

We have received large packages of Christmas and New Year cards from two art publishers, Messrs. Hildesheimer and Faulkner and Messrs. W. A. Mansell and Co. Both exemplify the change that has come about in these productions within the memory even of children. Like Christmas books, Christmas cards are now issued for grown-up people. They have become a minor branch of art, and as such they must be judged. For ourselves, we are not glad of the change; but we are content to draw consolation from the hope that the present fashion may not be permanent. It is, we fancy, of American origin.

Last August Messrs. Hildesheimer had a competitive exhibition of designs for Christmas cards. They offered prizes to the aggregate amount of £5,000, and obtained the services of Messrs. Millais, Storey, and Marcus Stone as judges. They now announce a similar com-

petition, with ladies as judges, for albums and other fancy articles into which the cards are to be fitted, with £1,000 as prizes. These facts will show the extent to which the Christmas card fashion has developed. To speak the plain truth, we cannot congratulate the publishers upon the result of their enterprise. To dispute the verdict of the judges would be impertinent, even if we had all the materials before us. We are ready to admit that the original designs merited the prizes they have received. But, if so, what are we to say of the reproductions? The majority of those before us, including several of the prize winners, are undeniably coarse in execution. In our humble judgment, the outlines on the back are often by no means the least artistic part. It may be charitably supposed that these have not suffered so much in the process of indefinite multiplication. That process is throughout chromo-lithography. It is pleasant to be able to select for praise two sets of floral studies by Mrs. M. E. Duffield (Nos. 648 and 670), similar subjects by Mme. Victoria Dubourg (709) and Mr. W. G. Sanders (797), and a cottage exterior by Mr. George Marks (798). This last obtained one of the two £100 prizes. All of these are real works of art, both in design and in reproduction; but we cannot admit that they possess any appropriateness for the occasion.

Messrs. Mansell's cards exhibit much more variety in design and also in method of execution, though they sometimes fail to satisfy the primary definition of a "card." Some are photographs, some water-colours, some etchings. But, on the other hand, there is an evident attempt in many of them to remind us both of the wintry season and of the desires of children—the two things that most of us associate with Christmas. The etchings, which form a set of three, are by Mr. Walter Seymour, and show at least that he knows the limitations of his art. All represent river scenery, that with an old church being the most successful, both in what it expresses and what it suggests. The photographs are very good, whether of landscapes or of flowers. So also are a series called "figure-subjects," consisting of female heads, mostly drawn by Mrs. Barnard, after the style popularised by Mr. Walter Seymour, and printed in platinum. The mounts of all of these are exceedingly handsome. Our only criticism is that the subjects should be stated on them. The least successful of all are the comic cards—a department which seems to have been worked out. It remains to add that Messrs. Mansell likewise have an exhibition of Christmas cards now open, which contains the productions of other publishers.

LÉCTURES ON ART.

At Cambridge this term Prof. Sidney Colvin will lecture on "The Italian Sculptors of the Fifteenth Century," and Dr. Waldstein on "Greek Sculpture after Pheidias."

MR. W. M. CONWAY will deliver on Saturday, October 28, at Hampton Court Palace, the first of a course of nine lectures on "Early Florentine Painters" in connexion with the society for the extension of university teaching. The lectures will be continued on every Saturday of the eight following weeks. In the early part of the present year Mr. Conway paid a long visit of study to Florence.

A LADY lecturer, Miss Harkness, has just finished delivering the first of a series of lectures to ladies on Assyrian history and art in the Assyrian Gallery of the British Museum.

On Monday last, October 16, Dr. Joseph Anderson, curator of the Museum of the Society of Antiquaries of Scotland, began the third of a course of lectures on "Scotland in Pagan Times," which he is delivering at Edinburgh in

connexion with the Rhind Trust. The subjects of the six lectures are Bronze age burials, Stone circles, culture and civilisation of the Bronze age, Stone age burials—the horned cairns, chambered cairns of circular form, culture and civilisation of the Stone age in Scotland. We may add that these lectures, which will doubtless be printed in a volume like the two former courses, are being fully reported in the *Scotsman*.

On Wednesday, October 18, Mr. A. F. Brophy delivered the first of a course of lectures on "Furniture" at the Technical College, Finsbury, in connexion with the City and Guilds of London Institute. This course, which will consist of about forty lectures, to be continued every successive Wednesday, begins with Egypt and ends with the Georgian period. The fee for the whole is only ten shillings, and apprentices are admitted at half-price.

NOTES ON ART AND ARCHAEOLOGY.

MR. PERCY GARDNER, of the British Museum, and the new Disney Professor of Archaeology at Cambridge, has in the press a work on *The Types of Greek Coins*. It will be published by the Cambridge Press, with sixteen quarto auto-type plates containing photographs of coins from all parts of the Greek world.

M. MEISSONIER is said by the Italian papers to be at present at Venice working in the church of St. Mark.

THE editor of the *Magazine of Art* has issued a programme of the features which will characterise the new volume commencing with the November part. Among these we notice the following:—Prof. Sidney Colvin will contribute an article on Dante Rossetti, and articles on some painters represented in the Fitzwilliam Museum; a poem by Mr. E. W. Gosse; Mr. Austin Dobson will contribute a "Ballad of the Thrush;" Mr. William Morris, Mr. Grant Allen, Miss M. A. Wallace-Dunlop, and others will undertake a series of papers on "Beauty in the Home;" Mr. Basil Champneys will write upon "The Great Builders of England;" Mr. Cosmo Monkhouse, Mr. H. V. Barnett, and others will contribute papers on "Art for the Practical Workman." There will also be special contributions on "Women's Career in Art," including engraving, china-painting, needlework, tapestry-painting, carving, decoration, painting on glass, &c.

MR. GEORGE SCHAEFF, than whom no better authority lives on such subjects, is strongly of opinion—indeed, he may be said to have proved—that the fine group bought for the National Portrait Gallery at the Hamilton sale is not by Pantoja de la Cruz, to whom it was assigned in the Catalogue, but by the Flemish painter Marc Gheeraerts, to whom are attributed three other portraits in the Gallery—namely, those of "Cecil Lord Burghley," Ben Jonson's "Countess of Pembroke," and "William Camden" the antiquary. Mr. Schaff thinks that the picture was sent by James I. as a present to the King of Spain, and that hence arose its attribution to a Spanish painter.

THE Society of British Artists announces that the days for receiving pictures intended for its winter exhibition are October 30 and 31.

MR. MARTIN COLNAGHI's sixth annual exhibition of paintings by Continental artists will open on Monday, in the Guardi Gallery, in the Haymarket. The winter exhibition in the French Gallery does not open till the following week.

THE death is announced of Comte Clement de Ris, a well-known writer on art in France. He was a constant contributor to the *Gazette des Beaux-Arts*. Only last month we noticed his enthusiastic article on Quentin de Latour as the pleasantest in the number.

THE STAGE.

SHAKSPERIAN COMEDY AT THE LYCEUM.

AT the Lyceum Theatre, with "Much Ado about Nothing," Mr. Irving has made his first venture in the region of pure Shaksperian comedy. "Hamlet," and "Macbeth," and "Othello," and "Richard the Third," and "Romeo and Juliet" have shown the different phases of his art in romance and tragedy; and by the very dignity that he bestowed upon Shylock he endowed that also with the colours of tragedy. The next thing was to have been "Coriolanus;" but Mr. Irving has been excellently well advised in abandoning that choice, and not only because the discovery of a Volumnia would have taxed his enterprise and his research. In giving us "Much Ado" he has presented a piece well within the compass of his company's powers, and has added to his own repertory, of which one of the characteristics is its range, a rôle in which his success must be quite unquestioned. He has never done anything more complete than his Benedick. He plays it with the keenest sense of enjoyment and appreciation, and with that authority of interpretation which comes most readily when a man possesses the agreeable consciousness that the authority will be recognised and accepted. The element of satire in the part—the conception of a robust humanity boasting its own strength and swayed, even while it boasts, by the lightest of feminine charms—is much in his own humour. The chivalry of the character suits him, and so does the graciousness of the character, and so does its quiet and self-analytical wit. He is excellent in speech and as excellent in by-play. If Beatrice "speaks poignards," this newest Benedick can look them. In a word, Mr. Irving was made for Benedick, or Benedick for Mr. Irving. It is seldom that a success is so unmistakeable, though, in this case, we cannot consider it to be surprising. When the public has grown familiar with Mr. Irving's Benedick it is not likely that, during the present generation, any other Benedick will go down. The character fits him as Rip Van Winkle fitted Joseph Jefferson, as Ophelia fitted Miss Kate Terry, as Galatea or the Squire fitted Mrs. Kendal—as Beatrice fits Miss Ellen Terry, we are happy to add.

For this is certainly the second great success of the piece. Nearly all that Miss Ellen Terry can do quite perfectly she can do in Beatrice. Of all her best notes, only one is missing, and that is the note of extreme and simple pathos, which she touches best in "The Vicar of Wakefield" in the scene of good-bye to the children. And the notes not within her range are happily absent. She is not here called upon for Juliet's abandonment to passion or despair. Beatrice's seriousness is permitted to be half a jest. The sorrows she deals with are the sorrows of comedy, and she is beset by no perplexities which may not be easily removed. Hero's character she requires to have vindicated, and a vindication is promptly forthcoming. At other times due leisure is allowed her to form a whimsical attachment, and to say defiant things brilliantly, and with the utmost good nature.

So it is that Mr. Irving and Miss Terry succeed in their parts entirely. Not one point of importance is lost by either of

them, and in both the transitions of mood are rapid and strongly marked. It is this that helps to give vivacity to comedy—the action of comedy is often mental action, taking the place of a drama's development of intrigue. A criticism of detail on their performance would seem to us superfluous. Having tried to carefully indicate that, except within certain limits, the characters are not exacting, there is nothing too tremendous in our praise when we say that in the interpretation of these characters it would be difficult to put our hand on a weak spot.

The play is generally well performed, though not always with quite the wit or judgment, quite the matured strength or acquired grace, which might perhaps have been secured. In some respects even more, but in some respects less, keenness of perception than usual has been displayed in the choice of exponents. Mr. Howe's is a most genial presence, and he looks always as if the weather had been satisfactory and the harvest good; but for the character of Antonio, brother of the Governor of Messina, it would not have occurred to us to consider him peculiarly adapted. Mr. Fernandez as the Governor, and father to Hero, is very unequal. Often, both by his bearing and his habit of the stage, he is fitted for the part's requirements, but for the delivery of lengthened addresses of an emotional character—such as that which is spoken by Leonato in the church—he does not appear to have completely qualified himself. In such matters he wants, as we conceive it, variety of intonation. A monotony attends both upon his lamentations and his threats of vengeance. Mr. Terriss, on the other hand, has never been seen to greater advantage than as Don Pedro, a part in which the vigour of his manliness is not over-emphasised. He is sympathetic and well-bred. Mr. Forbes Robertson plays with excellent discretion the unthankful part of Claudio—on the whole, one of the least attractive of Shakspeare's young men, and Shakspeare's young men were rarely very wise. To moderns it may conceivably occur that the young gentleman was unnecessarily revengeful, as well as unnecessarily hasty, when he proposed to denounce his love in the place where he was to have married her. The scene was hardly in good taste—he might have cancelled his engagement after a more tranquil fashion. To moderns, also, his immediate acceptance of a near relative in her stead, when the particular fair one on whom he had first set his choice had been, as he understood, stung to death by his accusations, does not altogether commend him. It was not, however, within Mr. Forbes Robertson's province to represent him as either more sagacious or more tolerant than he actually was. With Mr. Robertson's acting and appearance, one likes him as much as it is possible to do, and one remembers that Claudio had the advantage of impulsiveness and the disqualification of youth. Mr. Mead, an accustomed player of those elocutionary parts which have little to do with the drama's action, represents Friar Francis with the severe demeanour of a Southern ecclesiastic and the ugliness of an ecclesiastic painted by Legros. Miss Millward plays Hero with distinct intelligence, but with

indications of a gentleness and a pliability of nature which we should say were almost excessive, were it not that the negativeness of character they disclose is at least a good foil to the positiveness of Beatrice.

Dogberry and Verges are somehow less effective, as a couple, than we have before now seen them. Of these two, Dogberry's is especially the speaking part, and Verges' the looking part. But Dogberry, after all, must look his part as well as speak it, and Mr. Johnson moves in the rôle with too much alacrity, and his countenance, though heavy of make, is not made sufficiently dull of understanding. Mr. Calhaem looks Verges far more completely. Verges is led by Dogberry, not because Dogberry is wiser, but because Dogberry is fussier and Verges more infirm. Verges is the older of the two. That he is so is a tradition of the theatre, and it is justified by the text. In a word, Dogberry is a satire upon chronic incapacity in official place, and Verges is a satire on the retention of place by those upon whom incapacity has come with age. Dogberry bumbles with complete self-assurance and content; Verges bumbles with painful conscientiousness, and with fear and trembling. He is possessed of an excellent disposition not to withhold from the public service the last dregs of his senility.

FREDERICK WEDMORE.

STAGE NOTES.

We hear that the "Ajax" of Sophocles will be acted at Cambridge during the present term.

At the conclusion of the run of "Drink" at the Adelphi Theatre next month, Mr. Charles Warner will, we believe, retire from the theatre for a while; and during his absence Mr. Charles Reade's new play, in which there is no part for him, will be placed upon the stage.

We understand that a series of sketches of the London theatres, by Mr. George Wilman, under the title of *Play-going London*, will shortly be published.

MUSIC.

CRYSTAL PALACE AND MONDAY POPULAR CONCERTS.

A NEW work from the pen of Brahms is always sure to arouse the curiosity of musicians, for this composer, conscious of his high vocation, always writes with a purpose, and all his productions bear traces of careful study and earnest meditation. He is the champion of classic form, and would have us believe that instrumental music has not yet reached its ultimate stage of development. Brahms has slowly, but surely, won a high position, and among educated artists he is looked upon as one of the most renowned musical figures of the present age. The new concerto in B flat for piano and orchestra, heard for the first time in England at the Crystal Palace last Saturday, is one of his latest and most ambitious efforts. His concerto in D minor, an early composition, was played here ten years ago. The somewhat laboured character of the work, and the difficult and unthankful writing for the solo instrument, militated against its success either with the public or with pianists, and it is very rarely performed. The new concerto, with regard to the piano part, is worse than the first; the difficulties are enormous, and but few players would care to grapple with the risky arpeggios,

the uncomfortable shakes, and the formidable octave passages which it contains. Pianists, of course, expect to find difficulties in a concerto. Chopin and Schumann, in works of a similar kind, gave plenty of trouble to the solo performer; but they had the true secret of pianoforte technique, and, in their treatment of the solo instrument, studied to write in an original, effective, and yet, as concerned the player, practicable and interesting manner. A composer might at least think of the comfort and convenience, if not of the glorification, of the pianist. The practical side of art, too, should be considered; exceptional difficulties demand exceptional players, and the new Brahms concerto, full of such obstructions, is not likely to be often performed. Mr. Oscar Beringer, the pianist last Saturday, acquitted himself of his task in a most creditable manner. In the first movement he was not perhaps at his best; but he gradually warmed to his work, and in the *scherso*, *andante*, and *allegro finale* played with marked precision, refinement, and brilliancy. The commencement of the first movement with a horn solo is decidedly original, though the same can scarcely be said of the principal themes; they are, however, exceedingly clear in rhythm, very melodious, and are subjected to some interesting and elaborate treatment. A pure and noble spirit breathes through this movement, but we miss the fiery force, the dramatic energy, and the powerful contrasts of a Beethoven *allegro*: hence, though the music greatly pleases, it does not thoroughly satisfy, and, so far as we may venture to speak of it from a first hearing, it seems somewhat long. A *scherso* (for the second movement, though not so styled, is a *scherso* in reality) is most unusual in a concerto; and, as it is the least interesting of the four sections, the departure from the Mozart form does not seem altogether a happy one. The *andante* is very charming, and the *finale*, in Hungarian style, bright and sparkling. Of the four movements, the two last are the most effective, and perhaps the most successful. The orchestration throughout the work is very effective. The concerto occupied forty minutes in performance. We shall soon have another opportunity of hearing it, for it is to be given at one of the Richter Concerts in November at St. James's Hall. The programme included also "The Voices of the Forest" from "Siegfried." The performance was not all that could be desired; but, even with a perfect rendering, the music must necessarily lose much of its interest and meaning apart from the stage. Mr. Edward Lloyd sang in his best style the "Hymn to Happiness" from "Lelio," and Walther's "Prize Song" from "Die Meistersinger." The concert concluded with Beethoven's symphony in A (No. 7).

The Monday Popular Concerts have commenced somewhat earlier than usual. The first took place last Monday, and, in spite of the unfavourable weather, the attendance was good. Mr. Chappell, in opening his twenty-fifth season, announced no startling novelty, for he has learnt by experience that a programme of acknowledged masterpieces—such as Brahms' sextett in G major, Haydn's quartett in D minor (op. 42), and Mendelssohn's "Variations sérieuses" for pianoforte—is sure to attract, and also to satisfy, the musical public which frequents these gatherings. We need not discuss the performance of the concerted pieces; they were safe in the hands of such artists as M^{me}. Norman-Néruda and M^{me}. Ries, Hollander, Zerbin, Pezze, and Piatti. M^{lle}. Janotha, in the Mendelssohn solo, gave great satisfaction; she showed, however, zeal rather than discretion in the rate at which she took some of the variations. Miss C. Elliot was the vocalist, and Mr. Zerbin, as usual, the conductor.

J. S. SHEDLOCK.

MISS BRADDON'S CHRISTMAS NOVEL.

PRICE ONE SHILLING.

Illustrated with Four Whole-page Engravings, printed separately, on toned paper, and with Eight Half-page Engravings worked in the Text, designed by Mr. Henry Trench, and engraved by Messrs. Sheares, Symmons, Cooper, Batterahall, and Knight.

FLOWER AND WEED:

AN ORIGINAL NOVEL.

By the Author of "LADY AUDLEY'S SECRET," &c.
Being the New Issue of the

MISLETOE BOUGH.

Produced in the highest style of Fine-Art Printing, and certain to be the best value and the choicest ever attempted.

POPULAR DRAMATIC NOVELS.

Now ready, never before published, the New Novels founded upon Lord Lytton's Dramas, price 1s.; cloth, 1s. 6d.; post-free, 2d. each.

1. THE LADY OF LYONS.

2. CARDINAL RICHELIEU.

3. MONEY.

4. THE HAPPY MAN.

By SAMUEL LOVER.
Author of "Rory O'More," "Handy Andy," &c.

MISS BRADDON'S ILLUSTRATED ARABIAN NIGHTS.

Superbly Illustrated by Gustave Doré and other Artists, and thoroughly Revised by the Author of "Lady Audley's Secret," &c. Price 2s.; ornamental cover, cloth gilt, bevelled edges, 3s. 6d.

POEMS BY A NEWSPAPER EDITOR.

Immediately, crown 8vo, cloth gilt, price 5s.; post-free, 5s. 6d.

HOMESPUN YARNS. By Edwin Coller, many years of the "Essex Weekly News."

Contents.

Black Sir Ralph: an Essex Legend
Beside and I
An Autumn Evening's Dream
Sir Rupert
Not in the Programme
Slain at Colchester
Bodgy

Margery's Valentine
Glenmorven
In the Good Old Times
Mrs. Jones's Lodger
A Rogue and a Vagabond
The Land of Gold
Sal Parker's Ghost
Told at the Falcon

CHEAP UNIFORM EDITION OF MR. ST. JOHN'S NOVELS.

Price 2s.; cloth, 2s. 6d.; never before published.

MY BEAUTIFUL DAUGHTER: a Novel.

By PEROY B. ST. JOHN, Author of "The Arctic Crusoe," &c.

Also ready, by same Author, uniform.
Arctic Crusoe | Sailor Crusoe
Snow Ship | Young Buccaneer
Mr. St. John's other Novels will follow in due course.

BY THE AUTHOR OF "A LUMP OF COAL," &c.
Price One Shilling.

THE CHRISTMAS HAMPER.

"Full of the jolliest of good cheer."

ADMIRABLE GIFT-BOOKS.

THE BEST GIFT-BOOK FOR GIRLS.

Entirely New Edition. Illustrated with upwards of 250 New and Original Engravings. Complete Repository of Amusements, Studies, and Employments.

Price 6s., extra cloth, richly gilt side, back, and edges.

THE GIRLS' OWN BOOK.

THE BEST GIFT-BOOK FOR BOYS.

Entirely New Edition. Illustrated with 500 Descriptive and Original Engravings: comprising—1. Science.—2. Drawing.—3. Painting.—4. Constructive Wonders.—5. Rural Affairs.—6. Wild and Domesticated Animals.—7. Outdoor Sports and Indoor Pastimes.—8. Repertory of Home Amusements and Healthful Recreations.

Price 5s., extra cloth, gilt edges, side, and back.

THE BOYS' OWN TREASURY.

MOST DELIGHTFUL GIFT-BOOK.

Entirely New Edition. Illustrated with several hundred Engravings by eminent Artists. Written by GEORGE AUGUSTUS SALA and other Authors.

Price 3s. 6d., cloth gilt.

THE BOYS' BIRTHDAY BOOK.

London: J. & R. MAXWELL, Shoe-lane, E.C.

SATURDAY, OCTOBER 28, 1882.

No. 547, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

Recollections of Dante Gabriel Rossetti. By T. Hall Caine. (Elliot Stock.)

THIS is a book which lies outside the pale of contemporary criticism. It is the record of personal intercourse with one of England's famous men in art and letters, written by a friend who enjoyed some years of closest intimacy with the subject of the "Recollections," who tended Rossetti on his bed of sickness, and who was with him when he passed away. Mr. Hall Caine introduces the public for the first time with any fullness of details into the secrets of a singularly secluded life. He lifts the curtain with a bold hand, but also in the reverent spirit of a true disciple, from the inmost chambers where a great and an unhappy artist passed his days and nights. His book is one to which students of English literature and painting will have to have recourse, and for which, therefore, a future commensurate with that of Rossetti's fame is secure. The time must come for it to bear the test of kindly and unkindly criticism; for its statements to be weighed by comparison with other records; for its taste in minor matters to be challenged; for the personalities in which it deals—the *intimité* that gives it life and movement—to be sifted. To anticipate this, the inevitable fate of a book thus fashioned, is no part of me duty. Yet, as a student of literature, I will not here withhold my opinion that memoirs like these are of the highest value. Written in the fervour of discipleship, while the memories which they enshrine are vivid, and while the master whom they celebrate is yet warm in the grave, they convey a certainty, a strength, of portraiture for which we sigh impatiently in vain when dealing with how many mighty men of the departed! It may also be permitted me to add that Mr. Hall Caine in these pages reveals no common powers of observation and description, a clear and trenchant style of character-delineation, adequate critical faculties, and that indescribable sympathy with things and thoughts and words and persons which gives vivacity to literary talent.

The Preface sets forth the motive of the book, and records the *imprimatur* indirectly given to it by Rossetti:—

"One day, toward the close of 1881, Rossetti, who was then very ill, said to me:

"How well I remember the beginning of our correspondence, and how little did I think it would lead to such relations between us as have ensued! I was at the time very solitary and depressed from various causes; and the letters of so young and ardent a well-wisher, though unknown to me, brought solace."

"'Yours,' I said, 'were very valuable to me.' 'Mine to you were among the largest bodies of literary letters I ever wrote, others being often letters of personal interest.'"

"And so admirable in themselves," I added, 'and so free from the discussion of any but literary subjects, that many of them would bear to be printed exactly as you penned them.'"

"That," he said, 'will be for you some day to decide.'"

"What numbers of my letters you must possess. They may, perhaps, even yet be useful to you."

The volume of "Recollections" contains two separable threads of interest. One concerns the biography and domestic habits of Dante Gabriel Rossetti; the other, and in some respects the most important, because the least liable to modification, depends upon the series of letters addressed by Rossetti to Mr. Caine. A public devoted to personalities will be eager to hear the history of Rossetti's changes of residence; to be introduced into the interior of his house at Chelsea, with its curiosities of books and furniture; to see its inmate of the massive brow, doubly bespectacled; to listen to the deep melodious intonations of his voice; to know what hours he kept, what clothes he wore; to read the famous story of the sonnets buried with his wife, and disinterred for publication; to learn how far the use or the abuse of chloral undermined his health; even, perhaps, to view the painter-poet at his ease, outstretched upon a sofa, with both feet upon its back. Students of artistic psychology will be grateful for the rare but telling anecdotes relating to Rossetti's boyhood and his habits of composition in mature life; while lovers of his poetry will welcome the information that he wrote the "Blessed Damozel" at eighteen, the first draught of "Jenny" at about twenty, "Sister Helen" at twenty-four, and the translations from early Italian lyrics between the ages of seventeen and twenty-one (1845-49; date of birth, 1828). These are evidences of precocity in the poetic art even more remarkable than that furnished by the production of a considerable picture, the "Girlhood of Mary," in his twenty-first year. The history of some of Rossetti's later poems, especially the ballads, with their alterations and the poet's own comments on them, excites our curiosity in another way. Mr. Caine has furthermore been able to enrich his pages with some hitherto, so far as I am aware, unpublished verses. The sonnet on Keats in its earliest form is particularly noticeable. It may be said in passing that Mr. Caine's "Recollections" touch more upon the master's poems than his paintings, and give the impression that, of the two arts Rossetti cultivated with success so distinguished, poetry had for him the stronger natural attraction. Though not quite so new as the personal reminiscences, Mr. Caine's brief account of the pre-Raphaelite movement, and of Rossetti's leading part in it—the *Oxford and Cambridge Magazine* and the *Germ*—together with its just sequel in the direction given by Rossetti at Oxford to Morris, Swinburne, and Burne Jones in 1856, will be read with pleasure by those who long have recognised in him the founder of our latest school of English poetry and art.

The decisive turning-points in Rossetti's life seem to have been the death of his wife in 1862 after but two years of marriage, and the publication of Mr. Robert Buchanan's article on the "Fleshly School of Poetry" in 1871. After the former of these events he suffered much in health, became the victim of sleeplessness, and finally contracted the habit of depending upon chloral. The latter inflicted a wound upon his sensitive nature—"sensitive to attack," says Mr. Caine, "beyond all sensitiveness hitherto known among poets"—from which it never wholly recovered. Quite late in life he said:—"Of this conspiracy to persecute me—what remains to say but that it is widespread and remorseless—one cannot but feel it." The jar his nerves received in 1871 so checked his powers of composition that he only regained them after a considerable lapse of time, and with great difficulty. Not the least amusing part of Mr. Caine's book is his account of the ruse by means of which Mr. Theodore Watts induced the poet to resume his pen. Not the least touching is the tribute paid to that friend—the "hero of friendship," as Rossetti styled him—at this and other critical periods. His reclusive habits now became so inveterate that it was no exaggeration when he very forcibly described his own life as "the hole-and-cornerest of all existences." It is but fair to Mr. Buchanan to allude here to the full and ample palinodes which, "on better judgment making," he penned in verse and prose, and which Mr. Caine has duly cited (pp. 71, 294).

No estimate can yet be formed by one who did not know him of Rossetti's character. We will only venture to say that Mr. Caine has made considerable contributions toward such an estimate by showing us the man in his habitual moods of shy reserve, intense intellectual absorption, almost morbid sensitiveness, pre-occupation with his own doings and position as an artist-poet, studious curiosity, practical irresolution, and quick impulsive yieldings to emotion. He has enlarged our conception of the artist, or fortified those larger views of him which were already gaining ground, by revealing the depth of spiritual intention which underlay his sometimes sensuous presentation of human feeling, and by enabling us to comprehend as the bravado of juvenile self-consciousness those outbursts of moral petulance which puzzled men accustomed to the reserved manners of the world.

What remains of space in this article must be devoted to extracts from Rossetti's letters, selected with the view of illustrating their wealth of literary criticism. To do more than what the curiosity of readers is beyond my purpose. Speaking of the right principles for judging highly finished works of art like his own sonnets, he writes:—

"You have much too great a habit of speaking of a special octave, sestet, or line. Conception, my boy, FUNDAMENTAL BRAINWORK, that is what makes the difference in all art. Work your metal as much as you like, but first take care that it is good and worth working. A Shakespearean sonnet is better than the most perfect in form, because Shakespeare wrote it."

This is an excellent reminder to the critic, and is specially valuable in illustrating

Rossetti's standard of poetical perfection. Concerning his own attitude toward art and life, he says:—"To speak without sparing myself—my mind is a childish one, if to be isolated in Art is child's-play." The admission marks a man at once absorbed in his life-work and conscious of its dignity. It is the position of the serious craftsman. Verdicts on the poets of the past are plentiful and highly interesting. To Wordsworth, Rossetti was not so much indifferent as antipathetic.

"I grudge Wordsworth every vote he gets." "A reticence almost invariably present is fatal in my eyes to the pretensions on behalf of his sonnets. Reticence is a poor sort of muse; nor is tentativeness (so often to be traced in his work) a good accompaniment in music."

For Coleridge he had an unbounded admiration, except when he appeared as sonnet-writer.

"About Coleridge (whom I only view as a poet, his other aspects being to my apprehension mere bogies) I conceive the leading point about his work is its human love, and the leading point about his career the sad fact of how little of it was devoted to that work."

Of Keats he says: "He was among all his contemporaries who established their names the one true heir of Shakespeare." Leigh Hunt receives this just tribute:

"Hunt was a many-laboured and much-belaboured man, and as much allowance as may be made on this score is perhaps due to him—no more than that much. His own powers stand high in various ways—poetically higher, perhaps, than is at present admitted, in spite of his detestable flutter and airiness for the most part."

Chatterton, in his estimation, ranked among the greatest English poets.

"He is in the very first rank! . . . Not to know Chatterton is to be ignorant of the true day-spring of modern romantic poetry. . . . The finest of the Rowley poems rank absolutely with the finest poetry in the language, and gain (not lose) by moderation."

On Elizabethan literature, with the exception of Shakespeare's sonnets, he is, roughly speaking, silent; yet we find this luminous remark on Donne: "There is hardly an English poet better worth a thorough knowledge, in spite of his provoking conceits and occasional jagged jargon." Coming to poets of our own day, he passes a warm eulogium on Miss Rossetti as a sonnet-writer, which all real lovers of her pure inspiration and rare workmanship will receive with emphatic welcome. For Mr. Theodore Watts he has this fame-conferring verdict: "I knew you must like Watts's sonnets; they are splendid affairs." It would be interesting, did space permit, to pursue in detail his criticisms of sonnets by Shakespeare, Milton, Coleridge, Keats, Blanco White, and others whose names are less familiar, and to gather from his various utterances a complete theory of that form of verse in which he was acknowledged prince of poets. Many readers, remembering the perfection of his own method, will be surprised by the catholicity of his taste no less than by his liberality of view on some moot points of sonnet-structure.

The closing pages of Mr. Caine's "Recollections" are devoted to a narrative of Rossetti's last weeks, days, and hours. They

will be read with reverence. To comment on them would be out of place. The book is one which no one who has English literature at heart should fail to study.

J. A. SYMONDS.

Asia. With Ethnological Appendix. By Augustus H. Keane. Edited by Sir Richard Temple. (Stanford.)

THE present volume has been appropriately entrusted to a writer who, besides his qualifications as an ethnologist, must, as the translator of the work of von Hellwald upon which this series is based, be specially familiar with the requirements and difficulties of the task. Not the least of these was the need for condensation, if the great variety of subjects comprehended under the title of *Asia* was to be efficiently treated within the same limits as the other volumes of the series; and it is further required of such a book that, to use an impertinent but necessary word, it be readable. Bearing in view the numerous topics on which the reader may look for information, it must be allowed that the work goes far to satisfy all reasonable expectations. We venture to think that here and there, in the topography and description of routes, he may fail to follow intelligently, his difficulty being, however, partly due to the smallness of scale of some of the maps. There is a certain amount of repetition, caused, perhaps, by a somewhat too great subdivision of the headings under which each country is treated. It is obvious that, under "Relief of the Land," "Hydrography," and "Natural Divisions," the same fact may easily be stated three times over. On the other hand, we are struck by the comprehensive and artistic *coup d'œil* which the author presents; first of the continent as a whole, and, next, of its separate divisions. Thus he points out that, whereas in Europe and in Africa the contour of the continent is such that hardly any inland drainage takes place, in Asia the river systems over nearly one-fourth of the area have no outlet seawards. He then shows how the basin-like formation which causes this result characterises several regions of the continent; and from a like comprehensive survey of large tracts of country he shows the bearing of their physical conditions on the climate, on the productions of the land, and on the habits and character of the people. Then, taking each country separately, he discusses first its physical geography, and afterwards its political and ethnical conditions, showing how far these depend on, or coincide with, or differ from each other, and how far their influences extend beyond the national boundaries. It would be difficult within the limits of a quotation to give an idea of the author's mode of treatment, but the opening sentences of his description of Persia may serve as a specimen of his manner.

"East of the Persian Gulf and of the Mesopotamian basin, which may be regarded as its northern extension, the land rises abruptly to a vast upland region, occupying the whole space between the Tigris and Indus valleys. From its earliest known inhabitants, the Aryan branch of the Iranian race, this region has received the name of the Iranian plateau. In relation to the general highland system of the Eastern hemisphere, it must be regarded as forming the

connecting link between the great central and western table-lands. For it is united through the Paropamisus and Hindu-Kush eastwards with the Great Pamir, the focus of the Asiatic system, and through the Armenian highlands westwards with the Anatolian table-land, whence the uplands are continued across the Aegean to the Balkan ranges and the Alps, the focus of the European system.

"This vast table-land, which has a total area of about one million square miles, presents the form of a trapeze, enclosed on the south by the Arabian Sea, on the north by the Aralo-Caspian depression, eastwards by the Indus valley, westwards by the Persian Gulf and Mesopotamian basin. It is encircled on all sides by distinct mountain ranges, which descend everywhere abruptly to the surrounding waters and depressions, except in the north-west, where they merge in the still more elevated Kurdistan and Armenian highlands. Through these the plateau is supposed to be connected with the Caucasus range traversing the Ponto-Caspian isthmus. But here there is a deep intervening depression through which the Kûr (Cyrus) flows east to the Caspian, while farther west the valley of the Rion (Phasis), draining to the Euxine, forms a less marked line of separation between the two systems.

"The Iranian plateau thus forms a clear geographical unit. But, ethnically and politically it is a divided land. Although the original home of Aryan peoples, it has for ages been the battle-field of 'Iran' and 'Turan'—that is, of the rival Caucasian and Mongolo-Tatar races. This struggle, combined with the spread of Islam in the seventh century, has brought about a final rupture of the old Persian empire, which formerly gave political unity to the land. The eastern section of the plateau is thus at present occupied by the independent States of Afghanistan and Kelât (Baluchistan), the western by all that now remains of the ancient Persian monarchy, which at one time stretched from the Bosphorus to the Indus. And even here the sceptre of the 'king of kings' has passed from the old native Persian dynasties to a house of the intruding Turanian race."

Ingenious and interesting speculations are scattered through the volume, some more curious than practical, such as the comparison, which has been made before, of the three southern peninsulas of Asia with those of Europe, of the Anatolian peninsula with the Asiatic continent, or of the Caucasus with the Pyrenees. There need be no particular limit to such comparisons, which are the delight of geographers, but are apt with the profane to recall Fluelen; but we find others which afford, perhaps, equally pleasant, while more solid, food for the imagination.

"The various grades of human culture, broadly described as the hunting, pastoral, and agricultural states, depend in Asia rather on soil and climate than on race. . . . But if social culture is chiefly conditioned by the outward surroundings, religion, on the other hand, is still largely determined by race and nationality,"

both which propositions are supported by numerous instances. Mr. Keane quotes the Afghans as illustrating the difference between a "race" and a "nation." The Afghans are a race, but they are as yet only in the tribal stage, not having reached the national, the conception of which they cannot yet grasp, and have thus been successfully resisted by lesser tribes who have greater national cohesion.

These pages leave a powerful impression of the vast extent of the Russian dominions in

Asia, and of the variety of climate, scenery, and races which they contain. The great Northern rivers, though they terminate in a practically inaccessible region, yet afford, owing to the diagonal course of their upper streams, a navigable highway from East to West across nearly the entire breadth of Siberia. Here the Slav population is gradually ousting the native races, although itself still numbering, over that vast area, less than a million of people; but they have a valuable outlet and a great future on the Amur River. Of their progress on the Caspian and along the north frontier of Persia towards Afghanistan Mr. Keane gives the latest information, while abstaining from political comment. Possibly he feels that the facts may be left to speak for themselves, which in truth they are very competent to do. As an ethnologist, he is naturally tempted to dwell on the problems of the Caucasus, and to regret the disappearance of the names of ancient races and kingdoms, superseded by those of the Russian administrative districts. His description of the Chinese empire, and his summary of Indian statistics and of the results of British rule, are also ably drawn up. His account of Islam is concise and fair, though he speaks of the Mohammedans of India as a constant "source of danger." Sir R. Temple, in a passage quoted, writing with less freedom and more responsibility, substitutes, we observe, "anxiety" for "danger."

It is not surprising that in a work of this kind certain slips should escape correction. For instance, Mysore is described in one passage as a British province; in another we are told of its restoration to native rule. The Khmers of Cambodia, and even the hairy Ainos of Japan, are, we know, considered by Mr. Keane to be Caucasian, and they are so classed in one part of the book; while in another we are told that their affinities are doubtful. And there are other similar contradictions. There are discrepancies in spelling, too, especially as between the text and the map. Thus we have Urmia and Urumiyah, Jaipur and Jyepur, Shibbergan, Shibirgan, and Shabirkhan. And why, in an English work, write Sendshu for Sanju? The author alludes satirically to the "graceful curve" which on most maps represents, quite inaccurately, the boundary between Syria and Arabia. But the graceful curve remains on his own map. It is hardly correct to describe the Indian opium revenue as levied by "high taxes on exportation," nor, we think, to say that the Khanates of Afghan Turkestan are "absolutely controlled, and even administered, by Kabul;" nor, again, that Siam is under British suzerainty. The administration of the Russian province of Ferghana was not moved from Khokand to Tashkend, but only to Marghilan. Fa-hian lived, not a thousand, but nearly fifteen hundred years ago. That the Hindoo remains in Cambodia are Buddhist, and that they are two thousand years old, will certainly be disputed. Nor can we accept without question the explicit assertion of the derivation of Oxus—Vak-shu = Ak-su—or of the name of Kila Panja, in Wakhan, as the "Five forts." Mr. Keane says that the people of Wakhan are fire-worshippers. There are certainly traces still of the old pre-

Islamite faith, but only, we imagine, as certain pagan customs linger in the villages of Italy. The people of Swat, we think, can hardly be "pagans," their ruler holding a high position among Mohammedans. We can understand his grounds for classifying these peoples as Galchas; his grouping of the Tajiks with Afghans, however, rather than as Galchas, seems more questionable.

Mr. Keane derives the word typhoon from the Chinese, ignoring the Arabic (and Indian) *tufán*. But an Arabic origin for such a term (through the Portuguese or otherwise)—*cf.* monsoon, simoom—seems much more probable than a Chinese. The old English spelling, "tuffoon," may recall the Greek *τυφών* (with which the Arabic is probably connected), though this Mr. Keane considers a mere coincidence. But it is hardly the part of criticism to pick isolated holes in a work of this kind, of which the general structure and composition are as meritorious as we have described them to be; and some, at least, of the mistakes—or what we consider as such—have probably arisen from a laudable effort at concentration.

Mr. Keane gives, without vouching for it, a curious natural history statement about the lemmings of Siberia. It seems that

"in Kamschatka a lasting alliance has been struck between them and the natives. Whenever the latter are driven by distress to draw from the supplies of their provident little friends during their absence on some distant expedition, they are always careful to replace the stores in more prosperous times. It is also said that, to guard against similar plunder by other less scrupulous marauders, the lemmings conceal their underground granaries with poisonous herbs."

More startling is his statement that in Eastern Tibet "the lark soars to the height of 15,000 feet." How the altitude of the lark is taken he does not tell us.

We have not referred to the fact that the work is "edited" by Sir R. Temple, whose *imprimatur*, at least as regards that important section of "Asia" with which his name is honourably associated, lends authority to the work. The extent of his connexion with it, however, is not very evident. The illustrations, with few exceptions, do not add much value or interest. COURTS TROTTER.

A Study of Spinoza. By James Martineau. (Macmillan.)

THIS volume was originally intended as a contribution to Prof. Knight's series of "Philosophical Classics." About a hundred pages are given to the Life of Spinoza; and, as the extent of our authentic information on this subject is pretty generally known, it is easy to conclude how far Dr. Martineau has been tempted to indulge in hypotheses concerning the man, and pictures of the age, of a kind which, after all, are but a sorry substitute for real biography. Neither Mr. Pollock nor Dr. Martineau has really added anything to the vividness of the impression conveyed by the worthy Coler, though Dr. Martineau rather strangely goes beyond the malicious mention of Dr. Meyer by the latter, and seems to think there is something suspicious about the circumstances of Spinoza's death. As it

would be too absurd to suspect the doctor of murdering his illustrious friend for the sake of a silver knife and a few coins, he hints at the possibility of the philosopher and the physician having agreed upon a method of euthanasia, apparently forgetting that Spinoza had gone out of his way to condemn the infirmity of suicide. Dr. Martineau seems to have read Coler as implying that Meyer did not await the return of the Van der Spijcks from church, but left them to discover the fact of Spinoza's unexpected death for themselves—a view which the text by no means warrants, the imputation being only that Meyer went away, as if unconcerned, instead of remaining to watch by his deceased friend. Another incident on which Dr. Martineau lays more stress than Mr. Pollock is the extent of Spinoza's intercourse and intimacy with members of the semi-heretical confraternities of "Remonstrants" and "Collegiants."

The rest of the work consists of a very able, if not very sympathetic, summary and analysis of the chief points of Spinoza's philosophy. As a text-book for the study of the Ethics as they stand, it is, perhaps, superior to anything that has been written; but it may be doubted whether any considerable class of students do, or need, wish to master the subtleties of Spinoza's thoughts merely for the satisfaction of seeing, as a matter of history and criticism, how far he was in the wrong. Modern admirers of Spinoza are attracted chiefly by the undercurrent of mysticism or the undercurrent of positivism which they recognise in his philosophy, and they attach little importance to occasional flaws in the formal reasoning towards results which they hold to be independent of deductive proofs. Dr. Martineau, on the other hand, seems chiefly attracted by his purely metaphysical power and grasp, and criticises with unflagging interest one abstract conception after another, without apparently realising that there is no school of Spinozistic metaphysicians needing to be convinced or confuted.

Little is to be gained at the present day by discussions of the fallacy involved in "relying on a purely deductive method for discovery in nature." To apply the geometric method to the physical world implies exhaustive knowledge of all concrete matters of fact, and their actual arrangement. Given this knowledge, we could argue irrefragably from the qualities of the things known. It is less impossible now than it was in Spinoza's day to estimate roughly how much or how little of the whole unattainable sum of knowledge is practically within reach; how wide, or how narrow, are the particular deductions it will warrant. If Spinoza's generalisations were prematurely full and correct, if he set forth as matter of intuition or "innate" knowledge conclusions which have since been shown to rest on verified experience, his works are only the more interesting now for the flights of genius which broke the formal correctness of his argument. No thinker, however eminent, would venture to generalise now with Spinoza's confidence about all the qualities of real existence; but the singular felicity and breadth of his apprehension of these qualities is at least as remarkable as

their audacity. Thus the fundamental postulate of an "essence involving existence" is a compendious statement of the *a posteriori* truth that every idea founded on fact (*i.e.*, true) implies the reality of the corresponding fact, or, in other words, that there is a real parallelism between the order and connexion of thought and things.

Dr. Martineau admits that certain passages "fully justify the emphasis with which Mr. Pollock insists on the physiological background of Spinoza's psychology;" but he continually loses sight himself of the importance of this background, and so constantly fails to appreciate the liberal truth of fact which, by whatever means it may have been reached, is implied in some of Spinoza's most abstract statements. This is especially the case in the criticism of Spinoza's theory of self-consciousness or the inevitable existence of the *idea ideas* on p. 138, which concludes—"this identification of ideas from bodily affections with ideas of them is the key to several riddles in Spinoza." The hypotheses of modern physiology are a still better key to such riddles. It is not, of course, maintained that Spinoza had arrived at a complete and unimpeachable theory of the interaction of body and mind; but he brushes away, in passing, some fruitful sources of mistake. If one cause produces invariably *two* inseparable effects—*e.g.*, a material modification of the brain and a mental modification of the consciousness—the *vera causa* of the mental affection is not the bodily affection, but the external somewhat which is the antecedent of both. The affection of the nerves or brain produced by a sane perception of some real object has a degree of objective veracity which scientific philosophy can recognise as absolute; and the parallelism between thought and things is kept up because the qualities of a normal mental impression condition the adjacent impressions as the qualities of the object itself condition the modifications of adjoining objects. But the mental state of perceiving a tree, and the mental state of thinking about the perception of a tree, are numerically and qualitatively distinct. If the parallelism of thought and things is to be complete (as Spinoza throughout assumes), the material affection answering to the perception of a tree will determine another material modification, answering to the thought of the perception, and so the mind's ideas become as truly "objects" of thought—realities impressing themselves on our consciousness—as any external things. In aiming at the most general formula possible, even statements of known facts are apt to become unrecognisably abstract. It is Spinoza's singular distinction to have so often given an acceptable general formula for facts which he did not and could not know.

Even the fifth book of the Ethics is subjected to a somewhat schoolmasterly kind of criticism. The propositions concerning the "intellectual love of God" are paraphrased

"The mind's love towards God = God's love towards himself = God's love towards men. To estimate the contents of this reasoning, we must ask how it is made out that the middle term is tantamount to the first. This is done by tacking on a *quatenus* to the word 'God,' so that 'God's love' = 'the human mind's love,'

and 'himself' = 'man.' With these substitutes, the equivalence is so effectually established that all the propositions say the same thing."

Spinoza is about the last writer to lay himself open to this easy kind of refutation, because each of the few words he uses has behind it always a clear vision of some massive reality. In reducing these propositions to equivalence, Dr. Martineau omits the vital affirmation as a fact of the union or identity between God and man. There is field for endless debate as to all that Spinoza means by the affirmation, and it is possible that he chose deliberately to drop a mystic veil over the abyss where the accustomed clear insight failed him. But it is not worth while discussing his obscurest passages unless we recognise in them the wrestlings of one of the greatest of minds with the most arduous of intellectual problems, and expect to catch some ray of light for ourselves from the study of his struggles.

The criticism of the mind's "eternal part" is more serious, and leads to the only possible conclusion—that Spinoza, whatever else he meant to affirm, did not affirm the immortality of the individual mind. Dr. Martineau offers no alternative of his own to Mr. Pollock's ingenious, but rather unsubstantial, interpretation, and, after all, it may be doubted whether there is much need for interpretation; whether Spinoza was not this once deliberately using words to express his own thoughts, which may have been the best words for his purpose, but which necessarily suggest other thoughts and associations than those present to himself. The substitution of the impersonal "eternal" for the more usual "immortal" may have seemed, to a writer who weighed his words, hint enough of a disinterested meaning. Anyone who reads Spinoza as a scientific philosopher rather than as a metaphysician, constantly translates "mind" or "thought" by "force;" he might not have cared to demonstrate the indestructibility of force as such, but the eternity of *thought as a force* is an idea which we should have expected to occupy just the place actually given to the argument concerning the "eternal part" of the human mind.

Altogether, this able little volume is to be recommended as a help to those who wish to study Spinoza for themselves rather than as an account of his doctrines dispensing from such study. The criticism is sufficiently candid not to mislead those who have the text before them; but those who do not care to undertake this labour had better be content with unprejudiced ignorance, or commit themselves to the more sympathetic guidance of Mr. Pollock.

EDITH SIMCOX.

LITHUANIAN POPULAR SONGS.

Litauische Volkslieder und Märchen aus dem preussischen und russischen Litauen. Gesam-melt von A. Lieskien und K. Brugmann. (Strassburg: Trübner.)

How few of the many travellers to St. Petersburg are aware, as the mail train which bears them speeds its way between Insterburg and Wilna, that they are passing through the midst of a people who speak a language reputed to be the oldest in Europe and the

one most closely related to the speech of our common Aryan forefathers!

Although Lithuania has long ceased to be even a "geographical expression," at all events in official language, and though its part must be considered played out, nevertheless it had a place in European history, although it is only occasionally that we are reminded of it. Subject to the Russian princes as early as the tenth century, the Lithuanians not only threw off their yoke, but even conquered considerable territory from their former masters, and performed such exploits as the capture of Kieff and the pillage of Moscow. No sooner, however, had they made themselves respected on the East than they had on the West to encounter the Teutonic Order and the Order of Swordbearers, who, during the thirteenth and fourteenth centuries, waged relentless wars against them. In one of these wars Henry IV. of England, while yet Earl of Derby, took part against the Lithuanians. Henry fought gallantly and won high distinction under the walls of Wilna. According to the custom of the times, he challenged Prince Czartoryski, the King of Poland's brother, to single combat, and killed him on the spot. Henry's name was long feared and remembered by the citizens.

The Poles, too, were among the enemies with whom the Lithuanians had to reckon until, in 1386, both nations were joined under one sceptre. This union was finally settled at the Diet of Lublin in 1569, and endured till the partition of Poland in 1772. A small portion of Lithuania—the territory between Insterburg and the present Russo-Prussian frontier—was then allotted to Prussia; but Russia of course swallowed the largest share, corresponding in area with the five governments of Grodno, Vitebsk, Wilna, Mogilef, and Minsk. Lithuanian is spoken at the present day by probably about four millions of people. The literature, however, is but scanty; and the language itself is gradually but surely dying out. The extension of German on the west and Russian on the east threaten its extinction at no very remote date; and many practical considerations of modern life militate against its perpetuation as a living tongue. There are, it need scarcely be said, no such powerful influences at work in the case of Lithuania as those which south of the Carpathians, within the last few decades, imparted such a vigorous impulse to the language of the Magyars. These circumstances, however, render it all the more desirable to commit to the *litera scripta* all that can be gathered from the lips of the present generation in the way of popular traditions and tales, and invest with a double value such records of folk-lore as the present collection.

The volume before us contains 153 songs in the original, followed by a short grammar and glossary. The task of adequately rendering these songs seemed to present so many difficulties that the editors, as stated in the Preface, did not think it advisable to append a translation. Then follow forty-six stories in Lithuanian, accompanied by a German version; a short, but valuable, bibliography of Slavonic fairy tales, where similar stories appear; and, lastly, copious notes by W. Wollner. Here we feel that we are on safe

ground, and can follow the editors with certainty. Dr. Brugmann's well-known name as a scholar and a linguist is a sufficient guarantee that he has discharged the task of translation with ability. The German is clear, simple, and free from long-winded sentences; it frequently reminded us of the delightful story-telling style of Grimm. This is as it should be. We are anxious to study fairy tales just as they are told by peasants, without any literary trimming or pruning.

As in other fairy collections, animals also play a prominent part. Thus in one story a peasant creeps into the ear of an enchanted horse and comes out through the other transformed into a goodly knight; and a girl puts flax into one ear of a cow and pulls it out through the other as ready-woven linen. Wolves, foxes, dogs, &c., also perform wonders for their favourites. Very pathetic is the story of a brother whose sister betrayed him and consented to his death for the sake of her lover. The attempt failed, the lover is killed, and the unnatural sister is tenderly reproved: "Sister, dear, I have always loved you, and nursed you in my arms, and now you have tried to kill me; but I forgive you this sin." In another tale the sister, for the same offence, meets with different treatment. She is put in irons, a large tub is placed before her, and the brother says: "When you have filled up this tub with your tears, and the chains are eaten away by rust, then your sins will be forgiven you." Students of folk-tales will find this collection very useful for the purposes of comparison and analysis. It is, perhaps, a pity that a better glossary has not been supplied, as the book then could have been used as a Lithuanian Chrestomathy.

By the publication of this volume, a boon is conferred not only upon students of folklore and comparative mythology, but also upon those who are interested in the language and literature of the Lithuanians, of whom our knowledge is exceedingly limited. The best works upon the subject are in Polish and Russian, languages comparatively little known even in our world of letters. We therefore gladly hail the appearance of the present collection of Lithuanian popular songs and legends, and are grateful to the eminent editors for the pains they have taken in preparing this important contribution to the rapidly increasing materials for the study of popular traditions. JOHN T. NAARÉ.

NEW NOVELS.

Weighed and Wanting. By George MacDonald. In 3 vols. (Sampson Low.)

Bell and the Doctor. By Thomas Shairp. In 3 vols. (White.)

A Fearless Life. By Charles Quentin. In 3 vols. (Bentley.)

Gladys. By Tramio. In 3 vols. (Tinsley.)

Coming: a Tale. By Selina Gaye. (Seeley, Jackson & Halliday.)

Once again, under the guise of a weaver of fiction, Dr. MacDonald discharges the duties of a preacher of righteousness and an expounder of the eternal verities. The chief interest of this story centres in Hester Ray-

mount, the daughter of a worthy gentleman who lives in Addison Square, Bloomsbury, and ekes out a small fortune by helping to fill the pages of magazines and reviews. Hester is a girl of singularly noble impulses; and the question at once arises, Will she find a man worthy of her choice? Her brother Cornelius, who is the very opposite in all moral qualities of his sister, is the means of introducing to her Mr. Vavasor, a fellow-clerk in a London bank. Vavasor is heir to a moneyless Earl, and is a man of polished and urbane manners, but utterly vain and shallow. Gradually an intimacy springs up between the ill-assorted pair; then comes liking, and, finally, love. The mental processes by which this result is reached form an interesting psychological study. As the courtship continues, the worldly position of the lovers changes; Mr. Raymount inherits an estate in Cumberland, and young Vavasor becomes Earl of Gartley. The wooing at last ends and the marriage is fixed; and then a shadow falls over the Raymount family. Cornelius defrauds his employers, and Hester is despatched from the North with a blank cheque to repay the bank and do her best for her brother. Arrived in London, she fulfils her mission as far as pecuniary atonement is concerned, but has much difficulty in finding Cornelius. It so happens that small-pox is raging in the poor districts round Addison Square, and this visitation affords Hester an opportunity for appearing as an angel of mercy. Her self-denying labours among the wretched outcasts of a great city are described with a vigour which invests her personality with an air of reality not often to be found in the novels of to-day. It is now that the author first clearly accentuates the impassable moral gulf between the heroine and her betrothed, and this episode is the means of bringing the inauspicious engagement to naught. We may now fairly leave the author to finish his own story. As a work of art, the book suffers from being a novel with a purpose. The characters are all drawn with breadth and distinctness, and some of them are masterpieces in their kind; the dialogue is always natural, and sometimes striking; but its volume, and especially its strong didactic flavour, prevent the perfect concealment of art. As a matter of fact, *Weighed and Wanting* is a sermon, and a very eloquent sermon, on the moral perfection which can only be attained by complete self-renunciation. God created—that is, gave birth to—the world in love. In love there is life. But man, made in the image of God, loves naught but himself, and in selfishness is death. It is by casting out the love of self that man can be at one with God. This is the sum and substance of Dr. MacDonald's philosophy of life, and it is expounded with wonderful fervour and lucidity. Whether the homily gains force from being clothed in parable is another question. The preacher does not speak only of the redemption of the universe; he will now and again wrap up an axiom of commonplace morals in some new shape. Here is one example: "As wrong melts and vanishes away in the heart of Christ, so does the impurity she encounters vanish in the heart of the pure

woman; it is there burned up." We have said that some of the characters are finished studies. Hester, though a rare type of womanhood, lives and moves; the features of Lord Gartley have little expression, but the man is a living reality. In their way, the elder Raymount and the ill-bred, good-hearted Major Marvel are equally striking. Nor must humbler personages be passed over. The gin-weazened face of Blaney, the drunken tailor, with its silly smirk, is lightly touched, yet it stands out sharp and clear. Franks, the robust and healthy-minded acrobat, is a creation of wonderful truth and power. From great things to descend to small, we must insist that in a novel at least consistency is a virtue. Why Mrs. Raymount should reproach her son with wasting his time at college in p. 14 of vol. i.; and why in pp. 292, 293, the father should remark that his son's disinclination to study had prevented his sending him to Oxford, we leave the author to explain.

Bell and the Doctor is a pleasant book, in spite of the fact that its plot is concerned with a most unpleasant subject. The scene is laid in the old Court suburb, where Belinda Conway lives with her father, an Anglo-Indian General. Bell, to use her every-day name, is engaged to a handsome, but vacuous, curate, Jasper Iddles. Scarcely has the heroine pledged her hand to Jasper when she is obliged to refuse a friend of her youth, Casway Akers. This gentleman, who is a rising man in the medical profession, and a recognised authority among toxicologists, is worth ten such mannikins as the Kensington curate. But Bell is bound to the selfish and empty Jasper, and is really deceived into believing him a hero. One day, while the lover and friend are dining with the General and his daughter, Bell, who usually enjoys excellent health, suddenly turns pale and faint. She soon recovers, but on a second and third occasion the faintness comes back under similar conditions. The father's distress is terrible, and—influenced by his butler, an old and privileged servant, who inherits from his mother Hindu blood—he fancies that Akers has caused his daughter's discomfort by mesmeric glances, and politely forbids him the house. Presently the toxicologist, by a combination of natural wit and professional knowledge, turns the tables on the butler, and proves to the horrified General that his trusted servant has been administering to Bell a slow and subtle, but deadly, Oriental poison. What had driven a man who had received nothing but kindness from his master to this crime, and how he was ultimately the means of rescuing Bell from a future of misery, is very well told. The plot of the book leaves little to be desired; the characters, if not conceived by a subtle humanist, are thoroughly consistent and natural, and the dialogue is both unstilted and adequate.

Mr. Quentin's book is the story of an unconventional heroine, whose end is not altogether happy, as the world counts happiness. Its literary workmanship is above the common; and, but for a certain cynicism of tone, it might be accounted pleasant reading. The scene is laid on the Cornish coast, and the descriptive passages dealing with wild waves, winds, and rocks are powerful and vivid.

Gladys is a study of English country life, varied by a glimpse of the London season and a dissertation on the humours of a small market town. The heroine, whose Christian name gives the story its title, is engaged to a cousin, a young man whom the most exacting and ambitious matron could not but desire to call her son. Oliver Farquhar is under thirty, has been favoured with an aristocratic face, laughing blue eyes, and a light moustache which barely conceals a well-formed mouth, and is blessed in the possession of a substantial rent-roll. But, alas for human happiness! Gladys is secretly beloved by Sir Reginald Dartrey, a young baronet of ancient descent and ample fortune; so, on the very eve of the wedding, Gladys' betrothed is drowned while skating. Sir Reginald has the painful duty of breaking the ill news to the heroine, who for months is absolutely inconsolable. In time the baronet becomes a suitor, but the inevitable climax is delayed by misunderstandings such as are always ready to trouble the course of true love. The workmanship of *Gladys* plainly betrays a feminine hand, and is an indifferent sample of second-rate quality. With the exception of the heroine and her vain, selfish sister Winnifred, the characters have but little individuality, and their conversation, though grammatical, is singularly insipid. As a compensation, the tone of the book is healthy, and some of the descriptive passages reveal the germs of literary skill. By the help of a little patience, *Gladys* may be read to the end.

In *Coming* we have a tale of life in the Tyrolean Alps, pervaded by a religious tone which does not degenerate into mawkish sentiment. The motives are of the very simplest, and the characters, for the most part, do not rise above the level of the ordinary peasant story; but the authoress writes with freshness in thoroughly unaffected and easy English.

ARTHUR R. R. BARKER.

SOME FOREIGN BOOKS.

Biographisches Schriftsteller Lexikon. Von Franz Bornmüller. (Leipzig: Bibliographisches Institut.) This dictionary of living and lately deceased writers forms part of Meyer's series of "Fachlexika," or special dictionaries, and is a companion volume to the guides already published to German and general literature. It deals in a succinct form with the salient facts in the literary life of every author of any importance now living, and does not omit writers who have died during the past twenty-two years, provided that their work is still of interest. Necessarily, the number of such writers diminishes with the lapse of years since 1870. It would be difficult to over-estimate the value of this book to the student of general literature. On account of the restricted size of this series (each volume is a small octavo) it has been impossible to give more than a concise summary of each author's work; but the articles are very far from being dry and unmeaning catalogues of dates, facts, and titles. They generally convey a distinct idea of the relative importance of their subjects. The greatest pains have been taken to collect all facts as far as possible from original sources, and the editor has been able to command the services of the most competent critics who wield the German tongue. The French section of the work of Dr. Emil Landsberg, the Ger-

man of Prof. Mähly, the Italian of Prof. Robert Hamerling, the English of Dr. Eugen Oswald, while Spain and Portugal have been the care of Dr. K. von Reinhardt-Stöckner. The English portion entirely satisfies us. Among other articles will be found adequate notices of Lord Acton, Sir John Addy, William Barnes, Col. F. Burnaby, Henry Fothergill Chorley, Eliza Cook, Thomas Keightley, John Critchley Prince, George R. Sims, and Oscar Wilde. We must also call attention to a very kindly and appreciative article on the late Dr. Appleton. The principle which has guided the editor and his staff has been that of excluding, as far as possible, authors whose works deal with what is not of general, but special interest. Of course this rule has been frequently relaxed, and, so far as we can see, with good effect. In this dictionary, the reader will find a handbook more concise, manageable, and trustworthy than either Vapereau or De Gubernatis. On the other hand, its limited space precludes the critical estimates which are afforded by larger books. At the end is a useful Index to literary pseudonyms.

Geschichte der Französischen Litteratur. Von Eduard Engel. (Leipzig: Friedrich.) This compact handbook, although complete in itself, purports to be the first volume of a "history of the world's literature." Whether Dr. Engel will ever find time to carry his somewhat ambitious project to completion does not much affect the value or interest of the present publication. Mr. Saintsbury's new *History of French Literature*, "short" though it be, will do something to remove the stigma so deservedly cast on English letters, that we have no good, or even indifferent, handbooks to the literary history of neighbouring nations. As is well known, our German cousins are plentifully supplied with such works; so much so, indeed, that one is somewhat surprised that another, especially of French literature, should have been called for. An inspection of Dr. Engel's work, however, proves that it has a *raison d'être*. Not only has he carefully summarised and condensed the labours of his many predecessors, and made use of the most recent discoveries and criticisms, but he has brought down his epitome to the very moment of publication, thus enabling him to include much of interest, especially for contemporaries, not previously contained in any single volume. He has also classified his authors in a manner which, if it be concise, is certainly clear and affords all the information one would require or look for in a one-volume work. An English translation is to be desired; without being a rival, it would most decidedly be a useful companion to Mr. Saintsbury's book.

La Russia Sotterranea. Profili e bozzetti rivoluzionari dal vero di Stenhiak. (Milan: Fratelli Treves.) This remarkable little book purports to present in 281 pages a succinct history of Russian Nihilism, and portraits of some of its more eminent exponents. The writer, who was formerly editor of *Zemlia e Volia* (Land and Liberty), enjoyed the best opportunities for watching the rise and growth of the revolutionary movement in Russia. According to his own admission, he has been for years an active conspirator, and among his most intimate friends were some of the individuals who killed the late Tsar. The book bears the stamp of truth, and its portraits are obviously drawn from life. It is interesting to know that the term Nihilism was invented by Tourgenieff, and that the party who thereafter were known as Nihilists were the fathers of the revolutionists of to-day. The author states:—

"Primitive Nihilism was a philosophical and literary movement which flourished in the decade immediately following the serf emancipation—that

is, from 1860 to 1870. . . . Nihilism was a struggle to free man from every kind of moral servitude; . . . its essential principle was the absolute freedom of the individual. It repudiated . . . every species of coercion exercised against individual liberty by society, family, or religion. Nihilism was a passionate and powerful reaction, not against political despotism, but against a moral despotism which weighed on the individual soul and conscience."

It is added that, although this movement was non-political, its apostles were animated by the same burning zeal which actuates their descendants. The first object of attack was the national religion, which crumbled like a rotten shanty before the gospel of Büchner; at the present day (if we are to believe the author), educated Russians are, without exception, what is known in this country as advanced Materialists. Gradually, from the Nihilist was evolved another type—the Socialist. After the Paris Communists had been suppressed by Thiers, the Socialists of Russia became more and more determined to give practical effect to their theories, and commenced a propaganda in the villages and small towns. The Government soon took alarm, and war to the knife was declared between the Tsar and a certain section of his subjects. In proportion as the means adopted for the suppression of the Nihilists became more severe, so the organisation of the revolutionists seems to have grown more coherent and its spirit more aggressive. Not the least interesting chapters are those giving personal reminiscences of Demetrius Lissagub, Peter Krapotkin, Sofia Perofskaja, Vera Zassulich, and other leading Nihilists. The book is written in excellent Italian, and is constructed with some literary skill.

Zeiten, Völker und Menschen. Von Karl Hillebrand. Band VI. Zeitgenossen und Zeitgenössisches. (Berlin: Oppenheim.) Herr Hillebrand's periodical volumes of collected essays are always welcome to the reader of German literature who recognises in Herr Hillebrand a writer whose influence is great in bringing the literature of Germany into literary relation with that of other countries. Herr Hillebrand has done much to naturalise in Germany the form of essay so common in France and England. The volume before us is not remarkable for profundity, but for ease of style and all those qualities which tend to make a book readable. Herr Hillebrand knows how to serve up the contents of other works and make them into pleasant articles. His subjects are mostly French—Sainte-Beuve, Guizot, Philaret Chasles, Count Circourt, and the like. Some of them are English; one especially on English journalism, which is both appreciative and accurate. Perhaps the two most interesting papers deal with the social problems of Germany at the present day. One is headed, "Deutsche Stimmungen und Verstimmungen;" the other, "Halb-bildung und gymnasial Reform." It is characteristic of the German mind that even a German so cosmopolitan as Herr Hillebrand seeks the solution of social problems in educational reform. A system of education that aims at "the universal development of mental capacities" is to remedy Germany's discontent. No doubt, if it were possible, the scheme might answer. But the idea that an educational system can be imposed on a people in such a manner as to work a political and social regeneration is peculiarly German. To the Englishman, social and political life form the most important part of the education of the nation. In the eyes of the German, a nation has to be trained by school-books. Perhaps Germany and England would both be improved if their ideas could be modified by each other's.

Un Agent politique de Charles Quint. Par E. Beauvois. (Paris: Leroux.) This is a

book which has several claims of interest on the student of French literature and French history; and, indeed, on anyone who likes to see what may emphatically be called a good book. It is not exactly intended for the general reader, but it may be described as being of the class of books without which those intended for the general reader could not exist. It is workers like M. Beauvois who make general histories, political and literary, possible. His subject is a certain Claude Bouton, a gentleman of Burgundy, who, when the province was transferred territorially to France, "opted," as Frenchmen would say now, for his legitimate Sovereign, and distinguished himself in the service of the Regent Margaret and of Charles V. Bouton had some not small connexion with England, and students of the Record Office publications will find his name mentioned there both as a soldier and as a diplomatist. He was a literary man, too, in his way; and M. Beauvois has reprinted here his *Miroir des Dames*, a characteristic enough piece in the *rhétoriqueur* style of the time. Besides all this, and a copious Life, there is an abundant Appendix of *pièces justificatives*. Altogether, the book, which appears under the auspices of the Historical Society of Beaune (how many English towns of the size of Beaune have publishing historical societies?), is a capital specimen of a very useful kind of monograph.

La Papouasie, ou Nouvelle Guinée occidentale. Par le Dr. Comte Meyners Destrey. (Paris: Challamel.) This volume contains little that is new, but is a useful *résumé* of information not always readily accessible, collected chiefly by Dutch expeditions to that western half of New Guinea which is nominally under Dutch sovereignty. The knowledge obtained about the country refers, however, almost exclusively to the sea-board. The tribes observed differ greatly as to height, features, character of the hair, and also as to language. Those of the coast are generally in a position of superiority to those of the interior, but the reverse is sometimes the case. Great differences in character are also observed. Some resent all interference; others profess to desire the establishment of Dutch stations, probably as a protection against the slave-hunting raids of the Malays in the neighbouring islands. Cannibalism and head-hunting occur here and there. The claims to supremacy over this vast island which have been asserted for centuries past by the Malay rulers of such relatively insignificant spots as Tidore, Batjan, and Misol are curious. In at least one instance, too, the population of the mainland is said to have come originally from a small neighbouring island. It is on the shadowy claims of these rajahs that the Dutch, as their superiors, base their own territorial title. The illustrations seem to be adapted from van Rosenberg's *Reistochten*.

Til Statersadstaben. Af Johannes Norman. (Copenhagen: O. A. Reitzel.) This is a novel of very considerable power and interest, the scenes of which are laid in Norway. As may be inferred from the title (which we have not ingenuity enough to translate), the story is largely concerned with political struggles and ambitions; and the period to which its incidents belong is so recent that the author will be suspected, justly or otherwise, of having intended to portray some of the living celebrities of Christiania. However this may be, the interest of the book does not depend mainly on its politics or on its personal allusions. The characters are really well drawn, and the story—a mournful one—is told skilfully and with genuine pathos. Something in the manner of treatment suggests the influence of Spielhagen; but Herr Norman's personages leave, on the whole, a much pleasanter impression than those to which we are introduced by the author of

Problematische Naturen. The book certainly deserves something more than an ephemeral success.

NEW EDITIONS, ETC.

THIS is the season not only of new books, but also of new editions; and these latter are often the better indication of the course of current literature.

It would seem that there is a special run just now upon the "Arabian Nights' Entertainments." Mr. R. L. Stevenson, who knows his public, borrowed the name for his recently published collection of clever stories of modern life. We hear that the first volume is now ready for issue to subscribers of the "complete translation" upon which Mr. John Payne has long been known to have been engaged, not without the distinguished co-operation of Capt. R. F. Burton. There has already reached us a reprint of Lane's translation, as edited by his nephew, Mr. E. S. Poole, and first published in this form in 1859. It has the original woodcuts from drawings by Harvey, and a Preface by the inheritor of the family traditions, Mr. Stanley Lane-Poole. It is published by Messrs. Chatto and Windus in three volumes, at a very low price, the copyright, we presume, having expired. This standard work needs no recommendation now. Messrs. Nimmo and Bain have their own edition, being the old translation of Dr. Scott, in four volumes, with nineteen etchings by Lalauze. We notice, also, that Messrs. Sonnenschein, who have a speciality for fairy tales, announce a volume of "Tales not included in Galland and Lane," edited by Mr. W. F. Kirby.

A SEASONABLE book, though of a very different nature, is *Reform of Procedure in Parliament*, by Mr. W. M. Torrens, of which Messrs. W. H. Allen have brought out a second edition. This is a very thorough review of the question, by one who cannot be accused himself either of party prejudice or of a desire to favour obstruction.

THE many friends of the late George Brimley, librarian of Trinity College, Cambridge, must be gratified to find that a third edition of his collected *Essays* has been called for since his death in 1857. At first only a memorial volume, it has now taken its place as a model of literary criticism, which the hasty critics of to-day would do well to study. The book, which is published by Messrs. Macmillan, has for frontispiece a portrait engraved on steel which would of itself attract most people to examine further.

FROM Messrs. Macmillan we have also received, as a volume in their "Nature Series," a reprint of the memorial notices of Charles Darwin that appeared in *Nature* immediately after his death. The introductory notice is by Prof. Huxley; the life and character, by Mr. Romanes, who likewise treats of his work in zoology and psychology; Dr. Geikie writes from the point of view of geology, and Mr. Thimelton Dyer from that of botany. Whatever may be written on Darwin some day, this little book will never lose the special value that attaches to the work of friends whose feelings are yet warm. It ought to be read by everyone who honours the name of the foremost Englishman of this century. The portrait, engraved by the late C. H. Jeans after a photograph by Rejlander, first appeared in *Nature*, if we are not mistaken, some years ago.

We also welcome a new edition, issued at a cheap price for teachers, of Mr. J. G. Fitch's *Lectures on Teaching* (Cambridge: University Press), which was reviewed in the ACADEMY of May 21, 1881. We are glad to see that these courses of lectures, begun by the Rev. R. H.

Quick in 1879, are still being continued by the University.

OF the revised edition of Mr. J. D. Lewis's *Juvenal*, with translation and notes, we may take another opportunity of saying something. It is published in two handsome volumes by Messrs. Trübner, the text and translation in one, an introduction to each satire, and notes, in the other.

We have also received *The Whole Science of Double-Entry Book-keeping*, designed for the use of merchants, clerks, and schools, by Daniel Sheriff, third edition (W. H. Allen); *Questions and Exercises for Classical Scholars*, new edition, revised (Oxford: Thornton); *Thoughts on Theism*, with Suggestions towards a Public Religious Service in Harmony with Modern Science and Philosophy, ninth thousand, revised and enlarged (Trübner); *Molière's L'Avare*, by Gustave Masson, eighth edition, entirely revised (Hachette); &c., &c.

NOTES AND NEWS.

WE hear that it has been decided to place a memorial tablet to the late Dr. Burnell in the Positivist chapel in London. We hope to print next week some further details of his life, sent us by one who knows him well.

DR. SCHLIEMANN has returned to his home at Athens, and writes to a friend:—"Thanks to the Greek gods, our beautiful Attic spring weather, the daily rides to the sea, and the sea-baths, I am quite recovered." He has not yet been able to obtain permission to make the elaborate plans of Troy he has in contemplation, owing to an inhibition from the grand master of the artillery at Constantinople; but he hopes to overcome this difficulty shortly through diplomatic intervention. A French version of his *Ilios*, with the addition of a narrative of this year's exploration, is now in the press.

MR. GLADSTONE will shortly complete fifty years of public life, having been first returned to the House of Commons, as member for Newark, on December 13, 1832. In commemoration of this event, a "jubilee edition" of Mr. G. Barnett Smith's *Life of Gladstone* will be issued immediately by Messrs. Cassell, Petter, Galpin and Co., at the price of one shilling, with a portrait, and several new chapters bringing the biography down to the present date.

WE hear that Miss Mathilde Blind's biographical sketch of *George Eliot*, which is to be the initial volume of Mr. John H. Ingram's forthcoming series of "Eminent Women," will be chiefly composed of new material. It will give, and for the first time, a faithful account of George Eliot's early life, refer to much of her unknown literary labours, identify the characters in her novels, and furnish new and interesting correspondence.

MESSRS. KEGAN PAUL, TRENCH AND Co. will publish next week the *Adventures of a Tourist in Ireland*, in which Mr. Joynes, assistant-master at Eton, recounts how he went to Ireland for a vacation ramble and, in company with the author of *Progress and Poverty*, was arrested and imprisoned as a suspect.

MRS. BISHOP, formerly Miss Isabella Bird, has a new book nearly ready for publication. Its title will be *The Golden Khersoness and the Way Thither*, being taken from a line in "Paradise Lost."

A NEW edition of Mr. Browning's Works, in seven volumes, is promised at once by his American publishers, Messrs. Houghton, Mifflin and Co., of Boston. It is much to be wished that his English publishers would follow the good example.

MESSRS. MACMILLAN AND Co. will shortly

publish a selection of sermons, mostly preached in the chapel of Harrow School, by the late Rev. T. H. Steel, who is well known through his long connexion with Harrow. The volume will contain a Prefatory Memoir by Prof. H. Nettleship.

THE veteran poet, Mr. Richard Hengist Horne, who must now have passed his eightieth year, has written a new work, and also prepared a fourth edition of his *Cosmo de Medici*, which first appeared in 1875. Both books will be published shortly by Mr. George Redway.

MESSERS. CHATTO AND WINDUS have in the press a work on Arabian society in the Middle Ages and to-day, by the late E. W. Lane, the author of the *Modern Egyptians* and the Arabic Lexicon. It is an arrangement of all the more important notes appended to Mr. Lane's translation of the *Thousand-and-one Nights*. Scholars, as well as ordinary readers, have often expressed a wish that the notes could be obtained in a separate and convenient form; and, to meet this wish and render the notes more widely serviceable, Mr. Stanley Lane-Poole has arranged them in a series of chapters, which will form the most complete picture existing in any European language of the manners, beliefs and superstitions, social habits, and literature of the Mohammedans as they were in the days of the Mamluks, and as they are still to a great extent in Cairo and Damascus and Baghdad. The book will be a sort of Moslem encyclopaedia.

WE understand that Mr. H. Schütz Wilson is the writer of the article in the current number of the *Westminster* upon "Count Struensee and Queen Caroline Mathilde."

THE Cambridge Press announce two works on jurisprudence. One is a *Commentary on Austin*, by Prof. E. C. Clark; the other is an edition of tit. i. lib. vii. of the *Digest* "de usufructu" by Mr. J. H. Roby, with an Introduction and Notes.

MISS MARY LAMBERT has placed at Mr. Ronald Bayne's disposal for his Life of Bishop Fisher for the Early-English Text Society a copy of Hall's sixteenth-century Life of the bishop that she found in the library of one of the Jesuit colleges.

MR. ALFRED T. HALL has undertaken to compile a "Pedigree of the Devil," and to illustrate it with a series of elaborate drawings. The work will be published shortly by Messrs. Triebner and Co.

MR. E. A. PETHERICK has nearly completed a *Bibliography of Australasia* upon which he has been at work for many years. The arrangement will be chronological, and the work will include books, pamphlets, and articles in periodicals, &c., in all languages. A pamphlet by Alexander Dalrymple, relating to New Zealand, dated 1771, is the first separate work noticed.

MESSERS. WILSON AND McCORMICK, of Glasgow, will shortly publish a new volume of poems, chiefly lyrical, to be called *Wayside Songs*, by the author of *Song Drifts*—a book which several years ago met with considerable success, and in which appeared some lyrics since set to music.

The Scope and Charm of Antiquarian Study is a revised and enlarged reprint of some articles contributed to the *Antiquarian Magazine and Bibliographer* by Mr. John Batt, author of *The History of Rothwell* and other kindred works. Mr. Batt, who is one of those folk Mr. Dobson styles "gleaners after time," has clearly and concisely summed up, in the space of a few pages, all the various objects which may legitimately be considered to come within the scope of antiquarian study. Should Mr. Batt elect to publish his brochure, for it is only

privately printed, he may rely upon increasing the number of those willing to be charmed by the pursuits which he himself indulges in so enthusiastically.

Rva Lester, a new novel by the author of *The Garden of Eden*, will be published shortly by Messrs. Bentley.

MR. GEORGE REDWAY will shortly publish:—*Sandracottus*: a Drama, by Mr. W. Theodore Smith; *The Angelic Pilgrim*: an Epical History of the Chaldee Empire, by Mr. W. H. Watson; *The Handbook of Palmistry*, by Miss Baughan, with illustrations; a work on *Chirognomy*, by the same author; new editions of *The Rising Generation*: a Political Treatise, and *Sketches by a Curate*, by Mr. Robert Overton; and a reprint, with additional matter, of Mr. Fred G. Kitton's *Memoir of Phiz*, with original illustrations, which was noticed in the ACADEMY of September 30.

THE Cambridge University Press will publish on November 1 a cheaper edition, at prices ranging down to eighteen pence, of the *Parallel New Testament*, being the Authorised Version of 1611 arranged in parallel columns with the Revised Version of 1881. The same publishers have also nearly ready, as the new volume of their "Bible for Schools," *The Acts of the Apostles*, edited by Prof. Lumby, which will be followed by Canon Farrar's *Epistle to the Hebrews*.

THE history of Thomas Gent, the famous York printer, who wrote Histories of York, Ripon, and sundry other places, is related in an article which will appear in the November number of the *Bibliographer*.

THE seasonable articles in the *Antiquary* for November will be one on "Martinmas, or the Period of St. Martin's Little Summer," and another on "Curious Corporation Customs," most of which refer to the month of November.

THE Dean of Chichester has acknowledged the authorship of the articles which have been appearing in the *Quarterly Review* upon the Revised Version of the New Testament and upon Drs. Westcott and Hort's text; and they will shortly be published in one volume by Mr. John Murray. Should any of our readers fear that this attack might be calculated to depreciate the value of Drs. Westcott and Hort's work, they may be re-assured by the following quotations. In the *Bulletin critique* of Paris for January 15, 1881, the learned Louis Duchesne opens a review of Westcott and Hort with the words: "Voici un livre destiné à faire époque dans la critique du Nouveau-Testament." To this Catholic testimony from France may be added German Catholic approval, since Dr. Hundhausen, of Mainz, in the *Literarischer Handweiser*, 1882, No. 19, col. 590, declares: "Unter allen bisher auf dem Gebiete der neutestamentlichen Textkritik erschienenen Werken gebührt dem Westcott-Hortschen unstreitig die Palme." And in the *Theologische Literaturzeitung* of Leipzig, 1881, No. 21, cols. 487-95, Carl Bertheau commends the whole work most warmly, and, referring to the attack above mentioned, says that the edition needs no defence from him against that reviewer.

In proof of the general diffusion of the name "Hamlet" in England in Shakspeare's time, Mr. Furnivall tells us that, in glancing through part of the first volume of the Indexes to the Wills in the Gloucester Probate Court lately, he saw, under 1594, "Johannes Hamlett" and "Margeria Hamlett."

PROF. F. POLLOCK will deliver his inaugural lecture on "Jurisprudence" at University College, on Tuesday next, October 31, at 6 p.m. The public will be admitted without payment or ticket.

THE usual monthly meeting of the Carlyle

Society will be held next Friday, November 3, at 8 p.m., when Dr. Eugen Oswald will read a paper on "The Personal Relations of Carlyle with Goethe." The secretary of the society is C. O. Gridley, Esq., 9 Duke Street, S.E.

MR. ROWLAND HILL is giving a course of readings and expositions of "Richard II." at the Assembly Rooms, Bedford. He devotes one hour on each Saturday evening to one act, and comments thereon.

THE Olifton Shakspeare Society began the work of its eighth session on October 14. Mr. John Williams was elected president for the year. The work for this session is as follows:—"Hamlet" (two months), "Measure for Measure," "Troilus and Cressida," "Othello," "Lear," "Macbeth," and "Timon of Athens."

THE influential literary society of Vienna, called the Concordia, has passed a resolution favouring the discontinuance of Monday newspapers on the ground that the work for them must be done on Sundays; and this resolution has been vigorously applauded at a mass meeting of Viennese printers. The practice on this point is very irregular. Throughout the Continent nearly all papers are published on every day of the week, Sundays and Mondays included. In this country we are not aware of a single daily paper that appears on Sunday; but we have heard of good people in Scotland who decline to read their papers on Monday mornings. As to America, we can only say that the *New York Herald* always chooses Sunday for an advertisement "boom." The number for Sunday, October 8, now before us, calls itself a "septuple." It consists of no less than twenty-eight pages, including 110 columns of advertisements. The price is raised from three to five cents, which must be awkward for "constant subscribers."

THE third and concluding volume of Prof. Villari's historical work, *Machiavelli and his Time*, has just been published by Hoepli, of Milan.

SOME unpublished works of Ferdinand Freiligrath will shortly be issued by Göschen, of Stuttgart, under the title *Nachgelassenes*. The volume contains two pieces of the poet's youth—"Der Eggesterstein" and a translation of Byron's "Mazeppa."

CONSIDERABLE literary activity seems to exist in Little Russia. Goethe's *Faust* has lately been translated into this dialect by Ivan Franko, and it is stated that the poet Pantelejmon Kulisz is engaged upon a complete version of Shakspeare.

WITH reference to the word "pilgarlick," another correspondent writes that, when he was young, he constantly heard it used in Cork of anyone looking miserable, especially of a child; but that he has never come across the word of late years.

MR. PERCY M. THORNTON, author of *Foreign Secretaries of the Nineteenth Century*, has written us a long letter upon a matter raised by a review of the third volume of his work in the ACADEMY of September 30. Doubt was there thrown upon Mr. Thornton's statement that a secret agreement had been signed in 1844 between the Czar Nicholas on the one part and the Duke of Wellington, Sir Robert Peel, and Lord Aberdeen on the other with reference to the Holy Places. We are unable to print at length the arguments which Mr. Thornton now sends to us in support of that statement. The strongest arguments are not intended for publication, for they consist of personal assurances and private letters. It is due to Mr. Thornton to state that these last corroborate his contention. But the subject is one to which a literary journal cannot give more space.

DR. EUGÈNE HUBERT, author of *Etude sur la*

Condition des Protestants en Belgique depuis Charles Quint jusqu'à Joseph II., noticed in the ACADEMY of October 14, writes to point out that we were in error in stating that he attributed to Joseph II. the honour of having been the first to introduce the principle of religious liberty into the public law of Europe. As a matter of fact, we did not ascribe to Dr. Hubert quite so preposterous a statement. We merely protested against the emphasis he laid on the importance of Joseph II.'s schemes in the subsequent development of religious liberty in Europe, to the apparent exclusion of previous workers in the same field who had met with more signal success. We had in our mind a passage in Dr. Hubert's Introduction, to which he makes no reference in his letter. If, however, as he now affirms, he referred throughout his book to the effects of Joseph II.'s policy in the later history of Belgium only, we should have been less inclined to dispute his assertion.

FRENCH JOTTINGS.

It is said that a hitherto unknown MS. of Proudhon has been discovered. It will be published immediately under the title of *Le Césarisme et l'Histoire*.

A PROPOSAL has been made to celebrate next year the fifth centenary of the death of Louis XI., the real founder of French unity. The proposal is supported by M. Laffitte, the *Positiviste directeur*.

A FRENCH *Saturday Review* is now appearing in Paris, which deals with the whole field of literature, science, politics, &c.

M. PAUL BOURGET contributes to the current number of the *Nouvelle Revue* (October 21) a paper upon "The English Lakes," founded upon a recent visit.

AUTOBIOGRAPHICAL reminiscences seem to have become the fashion in France. Not long ago we noticed the papers in the *Nouvelle Revue* in which M. Alphonse Daudet described the genesis of his popular novels. M. Francisque Sarcey, the critic, is now contributing to the *Revue politique et littéraire* a series of articles entitled "Comment je suis devenu journaliste." In the first two that have appeared he has not got farther than the *École normale*, which was indeed in his time (1846-48) the cradle of men of letters. It is sufficient only to mention Taine, "qui était notre chef de section, notre cacique, comme nous disions en notre argot;" About, "le plus vif, le plus pétulant, le plus indiscipliné de nous tous;" Prévost-Paradol, of whom "on aurait pu dire qu'il écrivait comme l'oiseau chante et comme l'eau coule;" Ordinaire, "un des esprits les plus primesautiers et des plus gaulois que j'ai connus;" Challemeil Lacour, Weiss, Paul Albert, Assolant, Yung, Maxime Gaucher, Gréard, &c., &c. Could any Oxford or Cambridge man recall a more brilliant and successful list of contemporaries?

M. J. LOISELEUR is about to publish (Paris: Plon) a work entitled *Trois Enigmes historiques*, dealing with the Massacre of St. Bartholomew, the poisoning affair and M^{me}. de Montespan, and the Man in the Iron Mask.

FATHER FORBES' French translation of Mr. Mallock's *Is Life worth Living?* has reached a second edition.

THE Comte H. de La Ferrière has published (Paris: Calmann Lévy) an historical work upon the marriage projects of our Queen Elizabeth.

M. JULES COUSIN, librarian of the Douai University, has just published (Paris: Pedone-Lauriel) a book on the organisation and administration of public and private libraries,

which is intended to serve as a theoretical and practical manual for the librarian. An Appendix gives the ministerial regulations, &c., relating to university, circulating, and popular libraries. The work is illustrated.

OBITUARY.

J. ARANY.

By a mournful coincidence, the Hungarians have only just inaugurated the statue of one of their greatest poets when the death of another is announced. The fates of the poetic friends were strangely contrasted—to Petöfi, sudden death at the zenith of youthful fame; to Arany, the long years of patient, but painful, endurance. Such events always come as a shock when they do come; yet, in one sense, Arany's death was not unexpected. The last four years of his life had been one continued martyrdom from extreme ill-health. He had long lost the use of his eyesight—at least as far as reading was concerned; and latterly his hearing began to fail him.

John Arany (Arany János) was born, in 1817, at Szalonta, a small town in the county of Bihar, on the borders of Transylvania, a part of the country in which the Reformed Church is particularly strong. To this Church belonged his parents—poor cultivators, but owning their house and the plot of land on which they laboured. The future poet was the child of their old age; with the exception of their eldest daughter, who was already married, their other children had died before he was born. The parents were God-fearing people, and brought up their child with peculiar care, keeping him from school and teaching him at home as long as practicable. It was his father who taught him the *paternoster* and *credo* in Latin. To his home-training we must attribute the extreme modesty, the Puritan scrupulousness, the calmness and constancy under trying circumstances, which characterised his whole life. The mediaeval association of learning and poverty still exists to some extent in Hungary. In the days of the poet's youth it was in full force, and the young Arany struggled desperately to obtain his education without remaining a burden to his parents. He was thus for two years preceptor in the collegium at Szalonta; and then, finding the life of a student at Debreczen too expensive, he engaged himself (1834) as teacher at Uj Szállás. There he spent a year, being assisted in his studies by the kindness of the rector of the college, M. Török, now one of the superintendents of the Reformed Church. Provided by him with excellent testimonials, he again went to Debreczen, where the professors managed to give him such assistance as enabled him to live and learn. But the future poet had too much of the poetic temperament to persist to the end of the regular course; and, after a few months of wanderings and experiments, he returned home. He there found his mother had died, and determined at all costs to stay with his gray-haired father during the few years of life that remained to the old man. This resolution seems to have commended him to his fellow-citizens, who first made a place for him in the college, and afterwards in the town hall. In 1840 he was appointed "notary," or, as we should say, town-clerk; and in the same year he married. He had by this time read Shakspeare in German, and struggled hard to read Homer in the original; while in French he had got on to Molière. On his marriage, however, he resolved to put away such studies as idle things, to stick to his official work, and become an ordinary person like his neighbours. For a couple of years or so he kept to his resolution, but the arrival at Szalonta of a schoolfellow who had gained three prizes awarded by the Kiskaludy

Society led to a change. This friend continually conversed with him on literary subjects; lent him, almost forced upon him, his books—among others an English grammar; and urged him to compete as translator of the Greek tragedians. In consequence, Arany wrote some translations both of Sophocles and of Shakspeare; but his serious entry on the literary career was rather an exemplification of Juvenal's *facit indignatio versus*. Scandalised at the disorders of a county election, he had begun to write a bitter satire in the form of a burlesque epic, entitled "The Lost Constitution," when his attention was struck by a prize proposed by the Kiskaludy Society for a burlesque epic upon some subject taken from Hungarian life. He finished his poem, sent it in, and won the prize (1845). The censorship prevented its publication till many years afterwards. In 1847 he gained another prize by "Toldi," a narrative poem. This work—perhaps the best he wrote—obtained for him at once the esteem of all judges of Hungarian literature, though the political troubles that coincided with its publication delayed the full recognition of its merits by the public at large. Before the troublous times of 1848-49, Arany had written two other long poems, all the four, as he himself tells us in one of his Prefaces, being composed for the most part at night, in the hours which he could steal from hard official work. The misfortunes of his country caused his future productions to be often of a fragmentary character, though the sharpness of his satire and the depth of feeling displayed in them made them well worthy of the admiration of his countrymen, and caused their author to be universally recognised as the first of Hungarian poets. From 1851 to 1860, Arany was one of the professors at the Reformed college or high school at Nagy-körös; but when the Kiskaludy Society was revived, he became its director. In 1865 he exchanged that post for the secretaryship of the Hungarian Academy. This he resigned on account of ill-health in 1879; nor could he be persuaded to continue to receive the salary when incapable of doing the work, although the Academy still continued to give him the honorary title. Immediately after his coronation, the King conferred on him the Cross of St. Stephen, an honour never before attained by any Hungarian poet. In the same year (1867) a complete edition of his original poems appeared in three stout volumes. To the Hungarian translation of Shakspeare he contributed the "Midsummer Night's Dream," "Hamlet," and "King John." He published, after 1867, a volume of essays, chiefly on the older Hungarian literature; a translation of Aristophanes, remarkable for its painstaking fidelity; and a third poem on the legend of Toldi, entitled "Toldi's Love." This poem, and its connexion with its two predecessors, were noticed in the ACADEMY (March 5, 1881, No. 461, p. 171).

Arany was a popular and a national poet in the primitive sense of those words, and consequently extremely difficult to translate. His vocabulary is exceedingly rich, and his verses bristle with allusions intelligible only to those who have an intimate acquaintance with Hungarian provincial life, the life of the peasant and the small noble proprietor, who live far from cities and the "German." A few of his smaller poems have—for the most part with but indifferent success—been translated into German. The only English translation we know of is that of a canto out of "Buda's Death," by Mr. E. D. Butler.

ARTHUR J. PATTERSON.

Two or three persons of some note in the antiquarian world have been lost to us within the last few days. The Rev. William Palin, the Rector of Sufford, in Essex, since 1834, died at his rectory-house on October 18. He was the

author of several clerical tracts, and of a History, somewhat wanting in historical research, of the Church of England from 1688 to the last Act of Convocation in 1717; but the works by which his name will be kept in remembrance are the two volumes descriptive of Stifford and its neighbourhood (1871-72). They chronicled with great minuteness the social history and the habits of the inhabitants of that district during the last two centuries; and anyone desirous of compiling a History of rural life about 1750 should give them a diligent perusal.

MR. LEWIS POCOCK, F.S.A., died on October 17. In 1837 he aided in founding the Art Union, and remained one of its honorary secretaries until his death. He compiled a treatise on the nature of assurances upon lives (1842); and he added to it, at a time when bibliography was less fashionable than it is now, an Appendix of forty pages giving a catalogue of the works written on that subject. For a great part of his life Mr. Pocock was a diligent purchaser of everything that bore on the biography of Dr. Johnson; but, if we remember aright, his collections were dispersed by auction some few years since.

On October 21 Mr. George Alfred Carthew, another member of the Society of Antiquaries, died at Milfield, East Dereham, aged seventy-five. The family was of Cornish origin, and Mr. Carthew was descended from a branch which settled in Norfolk at the beginning of the last century. As a solicitor in the Eastern counties for nearly fifty years, he had acquired great stores of information on the changes of property in Norfolk and Suffolk. The first part of his History of the *Hundred of Launditch and Deanery of Brisley* was received with great favour as an admirable specimen of a county History, skilfully planned and skilfully executed. It is to be hoped that the other parts have been left in such a state as to justify their publication. In 1848 Mr. Carthew edited a selection of extracts from the diary of Peter Le Neve, the able, but caustic, antiquary whose comments on the mushroom knights and squires of his generation are well known. More recently he superintended the publication, for the Norfolk and Norwich Archaeological Society, of *The Visitation of Norfolk in 1563* which was taken by W. Harvey, Clarenceux King of Arms.

MAGAZINES AND REVIEWS.

THE first thing noticeable in the opening number of *Longman's Magazine* is its bulk, which is swollen by advertisements to a portentous size. That is a matter which concerns the publishers alone, but we must enter a protest against the illustrations *hors texte*. The next thing to be observed is the proof given of the tendency to run after great names. The *Fortnightly* of the future, as we sadly anticipated, is to become a second *Nineteenth Century*; and *Longman's* will be a third, only on a more popular scale. Politics, however, are seemingly to be excluded. In light literature, this number is certainly strong. The opening chapters of Mr. James Payn's novel do not quite satisfy us; they are too strongly reminiscent of the *Gentleman's* or *Belgravia*. Mr. R. L. Stevenson contributes a "Gossip on Romance," though why a "Gossip" we fail to understand. He has the rare gifts of having something to say, and of knowing how to say it. His point here is that incident and not character is the supreme subject of literary production. He has no convinced us, but he has made us think. We are not sure whether "The Black Poodle" will sustain Mr. F. Anstey's reputation; it would make the reputation of anyone else. The heavier articles are the least successful. Prof.

Tyndall delivers a lecture on "Molecules" from his Alpine retreat; Prof. Owen administers a very professorial rap on the knuckles to Mr. Grant Allen; and Mr. Freeman writes about America what will be read only because it is by Mr. Freeman. There is a great deal more in the American contribution of Mr. W. D. Howells, though we think he might have arranged his material with a little more care. *Fraser* is dead, long live *Longman's*!

THE *Monatsschrift für Geschichte und Wissenschaft des Judenthums* is characterised by the length of the series of its articles. Dr. W. Bacher has not yet (October) completed his researches on the Agada of the Tannaites (the "repeaters" and continuators of the tradition). The August number introduced us to the controversies between Eliezer ben Hyrkanos and Joshua ben Chananya, famous disciples of a famous master, Johanan ben Zacobai. The October number deals with the exegetical peculiarities of each. More interesting to most readers will be the legendary account of the conversations between Joshua and the Emperor Hadrian ("curiositatum omnium explorator," according to Tertullian). The anti-Semitism went so far at the neighbouring Avignon as to forbid Jews even to touch articles of food in the market. In several of the preceding numbers, Dr. D. Kaufmann has given a series of extracts from the Iggereth habbossem of Abraham ben Asriel; and, in that for September, Dr. Grätz, the editor, has supplemented a previous investigation of the origin of the vowel-points by an elaborate study on the origin of the accentual signs. As usual, he pours scorn upon Ewald, who gives the impression in his grammar that the accentual system was fully formed at once, whereas the Babylonian system of accents can only be accounted for on the assumption that the accents, like the vowel-points, arose gradually. Both came into existence in the seventh century, but the accents later than the vowel-points.

CORRESPONDENCE.

DARWIN'S RELIGION.

Embleton Vicarage, Chatham, Northumberland:
Oct. 28, 1882.

Mr. Ingleby is at liberty to propose conjectural emendations of Darwin's letter as given by Prof. Haeckel in the *Deutsche Rundschau*. But the original text will not admit of his proposed change of punctuation. He proposes to read:

"As regards myself, I do not believe that any revelation has ever been made in respect to a future life. Every man must make his decision between contradictory and undetermined probabilities."

The text of the *Rundschau* runs:

"Was mich selbst betrifft, so glaube ich nicht, dass jemals irgend eine Offenbarung stattgefunden hat. In Betreff aber eines zukünftigen Lebens muss Jedermann für sich selbst die Entscheidung treffen," &c.

It is obvious that the German sentence does not admit of the punctuation which Mr. Ingleby suggests for the translation.

At the same time it may be noticed that the letter given by Prof. Haeckel ought not to be pressed as any valuable evidence about Darwin's opinions. It was written in answer to repeated questions from a young student; we are not given the questions to which it returns the briefest possible answer. We are not told whether the letter was written in German or in English; it is called a "Brief von folgendem Wortlaute." Such a document hardly admits of exegesis. M. CREIGHTON.

THE END OF SHAKSPEARE'S PLAYHOUSES.

3 St. George's Square, N.W.

In the Philipps collection at Thirlestane House, Cheltenham (formerly Lord Northwick's house), is a copy of the 1631 edition of *Stow's Annales, or Chronicle*, continued by E. Howes

with some twenty pages of MS. additions at the end, entitled

"A Note of such passages as have been omitted in, and I have seen, since the Printing of *Stowes survey of London* in 4° 1618, And this *Cronicle* at large. 1631."

Among these additions is a short account of the end of the theatres for which Shakspeare wrote and at which he played, and also of the other theatres of his day. It may have been in type before, but, if so, has escaped me; and, as it interested me, I think it will interest other readers of the ACADEMY who have not come across it elsewhere. F. J. FURNIVALL.

P. 16. "PLAY HOUSES. The Globe play house on the Banks side in Southwarke, was burnt down to the ground, in the year. 1612. [Thomas Lorkin and John Chamberlaine both give the date as June 29 1613.] And now built up againe in the year 1613 at the great charge of King James, and many Noble men and others. And now pulled downe to the ground, by Sr Matthew Brand, On Munday the 15 of April 1644., to make tenements in the roome of it.

"The Blacke Friers players play house in Blacke Friars, London, which had stood many yeares, was pulled downe to the ground on Munday the 6 daye of August. 1655. and tenements built in the roome.

"The play house in Malabury Court, in fleet-streete, was pulled downe by a company of Souldiers, set on by the Sectuaries of these sad times. On Saturday the 24 day [MS. day day] of March. 1649.

"The Phenix in Drury Lane, was pulled downe also this day, being Saturday the 24 day of March 1649, by the same Souldiers.

"The Fortune Playhouse betweene White Croose streete and Golding lane was burned downe to the ground in the year 1618. And built againe with brick worke on the out-side in y^e year 1622. And now pulled downe on the in-side by the Souldiers this 1649.

"The Hope on the Banks side in Southwarke, commonly called the Beare Garden, A Play house for Stage Playes On Mundayes, Wednesdayes, Fridayes and Saturdayes, And for the Batting of the Beares On Tuesdayes and Thursdayes, the Stage being made to take up and downe when they please. It was built in the year 1610. And now pulled downe to make tenements, by Thomas Walker, a Petticoate Maker in Cannon Streete, on Tuesday the 25 day of March 1656. Seven of Mr. Godfries Beares, by the command of Thomas Pride, then his Sheriefe of Surry, were then shot to death, On Saturday the 9 day of February 1655, by a Company of Souldiers."

PS.—I have copied the whole of these "Additions," and shall print them in the fourth part of my Harrison's *England* for the New Shakspeare Society.

POPULAR FLOWER-NAMES.

Brackley, Northamptonshire : Oct. 21, 1882.

In Messrs. Sonnenschein's list of new publications will be found a volume by me on *Flowers and Flower Lore*. As more than one reference to this subject has appeared in the pages of the ACADEMY, I should be glad to call attention to an interesting word I have just added to my list of names associating flowers with Puck, which only came to hand after the chapter entitled "From Pixy to Puck" had been revised and returned to the printer. I was seated a few days ago with a number of friends around a wedding-breakfast table, when the conversation turned upon the subject of bouquets and flowers. A lady present, well informed in questions botanical, asked me if I had ever heard a flower called Pug-in-a-primmel. I said I had not, and asked what flower it might be. She replied that on the borders of Northamptonshire, Oxford, and Bucks (where I now reside), an "oxlip," or polyanthus, found in gardens, was so called on account of the petals being enveloped in a ragged or crumpled bordering of green. The flower is too well known to need description, but the name is

peculiarly interesting for two reasons. First, it gives us a valuable relic, in the form of "primmel," of the old word from which "primrose" is derived. In Chaucer and Gower we read of the "primerole," from the French *primverole*, Italian *primaverola*. This has been modernised into primrose, and explained as "the first rose of spring." Sometimes the local name retains the *r* sound, and so we hear of Pug-in-a-primmer. At other times it takes the form already referred to. Secondly, we have another instance of the popular association of Puck with flowers. As the *Nigella damascena* bears the name of "Devil-in-a-Bush," so this polyanthus is appropriately designated "Puck-in-a-Primrose." The softening of Puck to Pug is interesting, the latter form not appearing in any of the glossaries or dictionaries I have consulted. The second chapter of my forthcoming work is entirely devoted to the discussion of this branch of flower-lore, but this example has not been inserted. HILDEBRIO FRIEND.

MISS MITFORD'S LETTERS.

Fairfield Lodge, Exeter: Oct. 23, 1882.

In the ACADEMY of October 14 appears a letter of Miss Mitford's, written in 1853, in which she asserts that the letters signed "An Englishman," abusing the Emperor of the French, which appeared in the *Times* of that year, were "written by an undergraduate at Oxford a lad called Vernon Harcourt." Most people would conclude, as your reviewer has done, that the lad in question was the present Sir W. Vernon Harcourt.

If the letters in question were written by him, he certainly was not an undergraduate at Oxford in 1853, as he took his degree at Cambridge in 1851. Nor was he "a lad" at that time, as he had attained the age of twenty-six, an age at which many more finished compositions than the letters of "An Englishman" have been produced.

However, it seems more probable that it was Miss Mitford, and not the *Times*, that was "taken in." I have always understood it was an open secret that the letters of "An Englishman" were written by Mr. Kinglake, with whose acknowledged opinions regarding the Emperor Napoleon III. and his satellites they very closely agreed.

A. H. A. HAMILTON.

SPENSER'S USE OF "IN."

Manchester: Oct. 22, 1882.

Mr. Mayhew's suggestion of a Spenserian *in* equivalent to *en* in *agir en père* is interesting, but it is surely unsupported, save by a misinterpretation of a somewhat obvious passage. When Spenser writes—

"The wondred Argo, which in venturous peece
First through the Euxine seas bore all the flower
of Greece,"

the phrase "in venturous peece" is clearly to be taken closely with the following line, the *in* expressing the relation, not of the "Argo" to the "venturous peece," but of "the flower of Greece" to the wooden walls—properly enough called "peece"—which carry them. The line is an instance, not of Spenserian "Gallicism," but of the more familiar and prevalent Spenserian redundancy. It may be added that, though there are a good many pure French words in Spenser, his use of French constructions is extremely rare, even when he is most closely following Marot or du Bellay; and that the use of *in* in the proposed sense is as unexampled in him elsewhere as it is in Shakspeare. O. H. HERFORD.

CASSELL'S "STORIES FROM ENGLISH HISTORY."

London: Oct. 23, 1882.

Will you allow us to correct a slight error which occurs in the notice of our *Stories from English History* appearing in the last number of the ACADEMY? Your reviewer remarks, "We were astonished to find no mention made of an episode that must prove so attractive to children as the Gunpowder Plot." If you will refer to p. 126 (para. 7) you will find this event briefly described.

CASSELL, PETTER, GALPIN & Co.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, Oct. 30, 7.30 p.m. Educational: "The Relative Value of Internal and External Examinations," by Mr. F. Storr.

8 p.m. Royal Academy: "The Muscles of the Human Body," II., by Prof. J. Marshall.

WEDNESDAY, Nov. 1, 7 p.m. Entomological.

THURSDAY, Nov. 2, 8 p.m. Chemical: "Some Halogen Compounds of Acetylene," by Dr. R. T. Phipps; "Dihydroxy Benzoic Acids and Iodoacetylic Acids," by Dr. A. K. Miller; "Crystalline Molecular Compounds of Naphthalene and Benzene with Antimony Chloride" and "Additional Evidence that Quinoline belongs to the Aromatic Series of Organic Substances," by Messrs. Watson Smith and G. W. Davis; "Oxidation and Some of the Other Dioxotoluenes," by Mr. E. H. C. Neville and Dr. A. Winther.

8 p.m. Linnean: "Ants, Bees, and Wasps," X., by Sir John Lubbock; "Medicinal Plants of Queensland," by Mr. W. A. Armit; "Malformation Leaves of *Besleria opaca*," by Mr. J. G. Otto Pepper; "Hybridisation of *Salmo fontinalis*," by Dr. F. Day; "Teratological Notes on Plants," by Mr. H. N. Ridley; "Remarks on Marine Fauna of Norway," by Prof. Lunkester.

FRIDAY, Nov. 3, 8 p.m. Royal Academy: "The Muscles of the Human Body," III., by Prof. J. Marshall.

8 p.m. Philological: "English Words in the Anglesa Dialect," by Mr. William Jones.

8 p.m. Carlyle: "The Personal Relations of Carlyle with Goethe," by Dr. Eugen Oswald.

SCIENCE.

Etyma Græca. By E. R. Wharton. (Livingtons.)

WITHIN the last eight years a number of scholars—it is hardly necessary to mention their names here—have made a change in Indo-European philology. Though, in one sense, wanting in the "collective tendencies" which constitute a school (for the *jung-grammatiker*—Karl Brugman, Osthoff, and others are on many points opposed to Fick, Bezzenger, and Joh. Schmidt) these writers still, as Delbrück has said, owe their importance to the common element in their efforts. They have instituted a stricter method, and reached certain definite results which are gaining general acceptance, and go far to establish new laws of sound-change, a new table of the correspondence of sounds, and a new pro-ethnic alphabet, as rich in vowels and consonants as our own tongue. Their views have wrought as great a difference in philology as Darwinism has in philosophy; and, if some of them are not cautious or consistent, the same may be said of some recent German evolutionists.

Mr. Wharton collects the fruits, so far as Greek is concerned, of these recent labours in a condensed, perhaps over-condensed, *résumé* of 180 pages. He promises an *Etyma Latina* on a similar plan. The work was needed; the English text-books now in use are out of date; and beyond scattered notices and articles, such as two papers by Prof. Bloomfield in the *American Journal of Philology*, since reprinted in an *American Etymology of Greek and Latin*, or the chapters in Delbrück's *Introduction to the Study of Language*, there was no English account, nor, indeed, any summary in any language, of recent philology. It is needless to say that

the work—no easy one—is carried out with great accuracy and thoroughness. There will be little need for derivations in a new edition of Liddell and Scott. The contents are—etymologies (part i.), so far as they can be given, of all the Greek words in use before 360 B.C., with (part ii.) a brief exposition of the phonetic processes involved, and two Appendices containing lists of onomatopoeic and loan words. Proper names are almost all omitted, though they do not really differ from ordinary words.

Perhaps the best way to deal with part i., the body of the book, may be to quote a few etymologies taken at random. It must be premised that Mr. Wharton gives no "roots," or pro-ethnic forms, though he sometimes prints what are really the same, in Greek letters—e.g., γερμω for βάλω. Considering the many ways of representing the letters of the original speech, and the present state of investigations into roots (cf. Fick, *Göttische gelehrte Anzeigen*, 1881, 440) and the dialects of the *Ursprache*, he is practically right. Ακούειν, then, is analysed—is the derivation Mr. Wharton's own?—into ἀ-σκοF-, cf. θυόσκοος κοεῖν (add Gothic *us-skavaz*), which, if not unassailable, is better than Pott and Fick's ἀκα-, οὐς. Τῆλε is connected (following Collitz) with Sanskrit *ciras*, Latin *procul*, and πάλαι; πέλομαι in this case, if belonging here, must have taken its π either from a dialect or from the analogy of πόλος (cf. *cis*, τίς, ποῦ). Fick's suggestion that initial με, νε, νο, &c., can become a gives etymologies to ἄγαν (μέγα), ἀνθρωπος (μενθήρη Hesych., thought), ἄμμες (*ἄσ-μες, i.e. *νο-σμες, cf. νωί), and, it may be added, to ὄχα (Sanskrit *māhi*, great), which Mr. Wharton considers formed by false analogy from ἔσοχα. Mr. Ellis supplies a solution of περιχαμπτά (Aesch. *Suppl.* 878) by conjecturing περὶ χάμψα (crocodile); and Prof. Sayce explains αἶα as due to a false division of γαῖα. Ἰσθμός, to add one more, is derived, with Egger, from *vid*, to divide. Two examples of stricter method may be added. Βράσσων (K. 226), which Curtius was forced to refer, against the sense, to βραχός, is here explained, after Fröhde, from Sanskrit *jālu* = **jardhu*, giving a Greek positive *βραθύς. Ὄνομα is connected, not as by Curtius with γνῶναι, for loss of the γ seems improbable, but with Sanskrit *nāman*, Irish and Gaelic *ainm* (Welsh *enw*), Latin *nuncupare* (= *nomn-cupare*, Havet *Mem. Soc. Ling.* iv. 231).

On some points it is naturally possible, in a work of such range, to criticise Mr. Wharton's etymologies more decidedly, though the brevity and absence of reference render this difficult or unfair. Copulative α seems to sometimes take the place once held by the prosthetic α; it is suitable in ἀδελφός, ἀγαθός; hardly so in ἀδελφείν (δάκνειν) ἀτάσθαλος ἀίσσειν. Τράπεζα is explained as *τε-τράπεζα; but Schmidt's view, quoted by Mr. Monro (*Hom. Gr.* § 103), seems the better; otherwise we should expect τράπ-, as μῶνυξ. Βάθος cannot stand for βήθος; it must be formed by analogy from βαθύς. Πονή (Zend *kaēna*) cannot be connected with the Latin *punire* (Collitz, *Bezz. Beitr.* iii. 198). Πέντε is very ingeniously explained as *πεμπεμ, cf. *quidque*, "all the five fingers;" but, passing over Benfey's plea for an older final α in

πέντε, there is no apparent reason for the dissimilation of the two halves of *πεμπεμ, or for the irregular representation of original *qu* by π, nor is the loss of μ final in Greek proved. Νήδυμος, "a false division for -ν ἡδυμος," is attractive; but ἡδυμος had an initial F, so that the ν ἐφελκυστικόν, even if used without reference to hiatus, would hardly be attached to its first syllable. There are also some words omitted—θραυσμένων (lately cleared up by de Saussure), ἀνδρότης (Hom.), βῆτα, and some dialectic forms, needful for explaining the Attic, δάλλειν, βόλομαι (e.g., ἀ 234) μείς. Βορβός, given as Doric for ὀρβός, must be a slip; βορβός is, I think, the correct form (e.g., Cauer 7).

Part ii., indispensable if only to correct the idea of etymology common in popular textbooks—that the "root" and the word alone are of value—is most excellent, but too short. The rules, for example, for the regular interchange of ο and ε, or the difference between σσ from χχ, κκ, which does not become σ, and σσ from θθ, ττ, which does (cf. *μῆθος, μέσος, μέσος), are unnoticed. Of other rules only a curt explanation is given in the Preface. Indeed, brevity is the one fault of the book. Throughout, no references or authors of the derivations are given, and some of the etymologies are obscure from shortness. There is, e.g., nothing to show that, in θράσσειν, the θ is original, and not due to "metathesis;" "θεός: φεύς," with a reference to the rule that σ between vowels falls out, needs explanation. Πλάες (= *πλεγεσες, Mahlow, *langen vocalen*, 46) is omitted. It is perhaps from a desire for brevity that forms are put together which seem not exactly to correspond—μέγας and magnus, θύρα and dvār. Something might have been said, too, of the accent. One may hope Mr. Wharton will give fuller aid in his *Etyma Latina*. Fröhde's investigations, if their results are accepted, are not very simple. It may be hypercriticism to object to the terms "close" and "open" to distinguish the vowels *i* and *u* and *a e o*, but Havet and Sievers (*Phonetik*, 192) have pointed out that "open and close" exactly describe "short and long" vowels.

One or two general points may be touched on. The number of cognate Latin words Mr. Wharton has found to quote is very small. Some, indeed, which might have been expected are omitted—*severe servus* (bound) by side of εἶρεν εἶπερον, cavilla by κόβαλος; but others are included which seem unconnected—e.g., *loqui* agrees with λάσκειν (= λάκ-σκεν) neither in sense nor in sound, since *qu* = π here. Of the few cognate words, fewer are words in common use; and, as Prof. Nettleship has pointed out, the terms of moral, political, and social life are unrelated. Comparisons of vocabularies prove little as to the connexions of languages; but what proof there is here fully accords with the mass of evidence against Mommsen's (still unaltered) view of an Italo-Greek period.

Again, there is an absence of "popular etymologies," like ἀμφίσβαινα for ἀμφίσθαινα (double-necked), due partly, perhaps, to the literary character of our Greek. The borrowed words naturally supply several; e.g., the Persian *khaz* = κάστωρ has seemingly taken its form from the unconnected but familiar god's

name. The loan words themselves—as many as 480 in number—have been collected in a valuable list, far fuller than, e.g., Vanček's (Leipzig, 1878). Hehn and others have pointed out the light they throw on the relations of Greece with the "barbarians." A few may be quoted here: θρόνα, χλαῖνα (Sanskrit); καθάρα, κίων, ὄνος, χαλκός (Semitic); κασσίτερος (Assyrian); λόγχη, κόφινος (Keltic). A well-known example is οἶνος, which Mr. Wharton, after Hehn, refers to the Hebrew *yāgin*, itself said to be a loan word. It has been argued (*Bezz. Beitr.* i. 294) that the Semitic word could not have come into the Greek form; perhaps the analogy of Οἰνός may obviate this. Prof. Sayce has, I believe, suggested that βασιλεύς also is borrowed, being a Phrygian word, like ἀναξ, βαλῆν. Certainly it has been explained from no Indo-European root. Mr. Wharton calls it a "diminutive" of βάσιλος; but this scarcely helps, though neither Bezzenberger nor Week have satisfactorily gone farther. It would seem that, while the Italians adapted old words to new needs, the Greeks borrowed them, just as at a certain period they borrowed their art.

It remains only to add that the book is unusually well printed. On p. 136 the accent of ὦρα has fallen out; p. 33, s.v. βάλω, for *beto* read *basto* (Havet).

F. HAVERFIELD.

NOTES OF TRAVEL.

It is with much regret that we announce the death of Mr. E. Duffield Jones, of the Royal Geographical Society, which occurred on Thursday last, October 21, after a long and painful illness. Mr. Jones was M.A. of St. John's College, Cambridge. For some years he was attached to the consular service in China, but resigned his appointment in 1870. He was a regular and valued contributor to the *ACADEMY*, and also wrote for other periodicals. As an official of the Geographical Society his loss will be much felt.

WE learn from the *Monthly Notes* of the Library Association that a start has been made with the printing of the general map catalogue of the British Museum, and that the work is to be carried straight through to the end. It is being done under the supervision of Prof. R. K. Douglas.

THE first meeting this session of the Royal Geographical Society will be held on Monday, November 13, when Mr. A. R. Colquhoun, of the Indian Public Works Department, will read a paper on his recent journey of exploration through Southern China, from the mouth of the Sikiang to the banks of the Irawadi. We understand that Mr. Colquhoun has also accepted an invitation to address the Société géographique at Paris on December 3.

SCIENCE NOTES.

NOTHING could be more appropriate than the studentship which it has been decided to found at Cambridge in memory of the late Prof. Balfour. Its value is to be not less than £200; it is to be open to the world, though connected with Cambridge; it is not to be awarded by competitive examination; the holder is to devote himself to original research in biology—especially animal morphology. Despite the instructions given to the two University Commissions, this is, we believe, the first distinct recognition of "original research" at either

Oxford or Cambridge. As has been pointed out in the ACADEMY, both the Owens College and Edinburgh University have shown the way in this matter. What is important now to insist upon is that other branches of learning are at least in as great need of encouragement as physical science.

A VERY useful encyclopædia of geology and the cognate sciences, edited by Prof. A. Kennigott, of Zürich, is in course of publication as part of the *Encyclopædie der Naturwissenschaften*, issued by E. Trewendt, of Breslau. The characteristic feature of the work is the treatment of the subject in a comparatively few comprehensive articles, alphabetically arranged, rather than in a multitude of minor articles which break up the reader's attention, and destroy the continuity of the subject. The geological articles are in the hands of Dr. von Lasaulx, while the palæontology is contributed by Dr. F. Rollé, and the mineralogy is reserved for the editor's own pen.

We have received the *Transactions* for 1881-82 of the Penzance Natural History and Antiquarian Society. The papers of widest or most permanent interest seem to be those of Mr. E. Marquand on "The Wild Bees of the Land's End District;" a full list of the mosses of West Cornwall, by Mr. Curnow and Mr. J. Ralfs; a useful article on the "Hepaticæ of West Cornwall," by Mr. Curnow; and a discussion by Mr. Ralfs of that very perplexing genus, *Euphrasia*. He finds three well-marked forms in Cornwall, and probably others in Gloucestershire and Norfolk. His arrangement is different from that adopted by Sir Joseph Hooker and Prof. Babington; but we are inclined to think he is very likely right—at least as to the Cornish forms.

PHILOLOGY NOTES.

MR. E. B. NICHOLSON, Bodley's Librarian, is about to publish at Oxford a series of fasciculi entitled *New Homeric Researches*, containing his investigations on the metrical peculiarities of the Homeric poems and the light they throw upon Homeric questions and upon the earlier stages of the Greek language. The first of these will be "On Supposed Metrical Mimicry in the Homeric Poems," and will be ready in a few days.

We understand that Mr. W. J. N. Liddall, advocate at the Scottish Bar, will be a candidate for the Celtic chair in Edinburgh University. Mr. Liddall was formerly a Muir prizeman in Sanskrit in the University of Edinburgh. He has for some time been engaged upon the Celtic MSS. in the Advocates' Library, and has published several papers on Celtic place-names.

M. MASPERO, before returning to Egypt, gave a long account of his last year's work to the Académie des Inscriptions at its meeting on September 22, which may be read in the last number of the *Revue critique* (October 16). We are glad to hear that he has found everything in the Boolak Museum in perfect order.

M. DERENBOURG has communicated to the Académie des Inscriptions a reply to M. Halévy's paper upon the Jewish belief in the immortality of the soul, noticed in the ACADEMY of October 14. He maintains that the genuine religious beliefs of the Jews must be looked for, not in the superstitions they borrowed from their pagan neighbours, but in the teachings of the prophets, which contain no allusion to another world. He thinks that the conception of a future life among the Jews came from the Platonist philosophy, and was introduced at a comparatively late date from Alexandria.

MEETINGS OF SOCIETIES.

SOCIETY OF HELLÆNIC STUDIES.—(Thursday, Oct. 19.)

C. T. NEWTON, Esq., V.-P., in the Chair.—Prof. Jebb gave an account of his recent visit to Hissarlik in company with Mr. Calvert, Prof. Goodwin, and others, and stated it as the unanimous opinion of the party that no such stratification of the ruins as is implied in Dr. Schliemann's theory of successive cities exists. Prof. Jebb examined the question in what sense any site can be said to be that in the mind of the author of the "Iliad," and how far we may expect the poem to tally with the evidences of actual remains. He expressed his own opinion that more than one site in the Troad has left its impression in different parts of the "Iliad."—This view was supported by Prof. Colvin and Mr. F. Pollock.—An account by Prof. Sayce of a journey in Aëolis, and a description by Mr. Murray of a statue of Hercules, sitting, found in the palace of Sennacherib at Koyunjik, were, in the absence of the writers, taken as read.—Mr. Lewis Farnell read part of a paper discussing the frieze from Pergamon representing the battles of gods and giants, now at Berlin. The writer discussed in detail the two chief groups of that frieze, of which Zeus and Athene respectively are the centres, comparing them with earlier and later treatments of the same subject, and so eliciting what was peculiar to the Pergamene conception of the subject.

NUMISMATIC SOCIETY.—(Thursday, Oct. 19.)

W. S. W. VAUX, Esq., V.-P., in the Chair.—Prof. Gardner read parts of a paper dealing with the coins of Samos, discussing their types from the point of view of mythology, and arranging them in chronological sequence.

THE MANTUA AND MONTSERRAT MEDAL FUND.—(Saturday, Oct. 21.)

A. M. MOCATTA, Esq., in the Chair.—This was the annual meeting of the Mantua and Montserrat Medal Fund, and was held at Exeter Hall. According to the Report of the council, the income of the fund is £3,700 a-year. The medals were originally instituted to reward the labours of painters, poets, and scientific men four centuries ago by the Marquises and Dukes of Mantua. A roll was exhibited on which were inscribed the names of Raphael, Michelangelo, Mantegna, Dante, Galileo, Copernicus, Shakspere, Milton, Racine, Molière, Camoens, Erasmus, Camden, Rubens, François Bacon, Lope de Vega, Napier the inventor of logarithms, Edmund Spenser, and about a thousand other eminent men of all nations, to whom these medals had during four hundred years been awarded. They had been granted by the council during the past year to the following:—Prof. Owen, John Ruskin, Alfred Tennyson, Longfellow, the Earl of Shaftesbury, Prince L.-L. Bonaparte, the Duke of Argyll, Card. Manning, the President of the Royal Academy, the President of the Royal Society, Prof. Tyndall, J. A. Froude, Henri Milne Edwards, of Paris, Mr. W. Holman Hunt, Mr. J. E. Millais, the Earl of Kennishton, and Sir Joseph D. Hooker. An old scrap-book, bound in the thirteenth century for Louis Gonzaga, the first captain of Mantua, was exhibited, which contained above one thousand letters from all the eminent men specified collected during the four centuries during which the House of Gonzaga reigned in Mantua. The volume had descended to the representatives of the family. A portrait, by Raphael, of Louis Gonzaga, the founder of the Mantuan medals, based upon a sketch by Giotto, was also exhibited. The funds of the society are exclusively devoted to the encouragement of workers in science, literary research, and art, and are distributed without regard to nation or creed. A list of sixty persons in America, Japan, China, Asia, Africa, and Europe, recipients from the fund, was read. The money is mostly expended in the purchase of books and scientific apparatus to aid them in their researches; and they, in return, send specimens and notes for the use of the curators of the museum of the Prince of Mantua and Montserrat.—Prof. Crane, director of the museum, remarked

on the number and high value of the specimens. He also alluded to the museum as being the earliest in Europe of paintings, sculpture, and natural history, and to the important researches which the House of Gonzaga had made during the time they resided in Mantua.

FINE ART.

THE GATES OF BALAWAT.

The Bronze Ornaments of the Palace Gates of Balawat. With Introduction by Dr. Birch, and Descriptions and Translations by Mr. Pinches. (Published by the Society of Biblical Archaeology.)

It has often been the subject of remark that Assyrian sculptors, with all their practice in bas-relief, very rarely attempted to produce a figure actually in the round; and the explanation usually given has been that Assyrian sculpture was essentially pictorial. The fact cannot be gainsaid that the long lines of reliefs which they have left behind are, above all, pictorial representations, or rather illustrations, of common or current events. At the same time, it is still an open question whether the amount of real sculpture displayed in these reliefs represents only an endeavour to help out the pictorial element, or whether it does not rather represent an actual knowledge of sculpture lowered, so to speak, to admit of its being combined with painting. In favour of the latter alternative, it may be urged that the oldest of the reliefs now surviving are of an artistic character, which presupposes a long antecedent practice of sculpture in this form. Obviously, it does not follow that painting was not still older, and had not been from the beginning the parent of sculpture in relief, as many appear to believe.

It is easy to imagine that, in an early stage of painting on stone, it was a simple step, where shadows were not obtainable by colour, to obtain them by sculpture. But it was not easy to imagine this till the thing had been done. So far, indeed, was that from being the case that we are obliged to assume a previous acquaintance with actual bas-relief before such a step could have been thought of. It is on this point that the whole question turns.

With regard to the origin of bas-relief, the first difficulty is to comprehend how a solid substance like stone, which lends itself readily to sculpture in the round, could have ever suggested to an artist the possibility of its being worked in relief. The answer to that is given clearly by the bronze gates from Balawat. A thin plate of bronze or copper possesses a natural elasticity, which suggested the possibility of its being beaten up into a design—that is to say, into a bas-relief. The extent of the elasticity determined the extent of the relief; and thus bas-relief, instead of being a chance result of artistic taste, may be said to have originated in the nature of a material. Once produced in bronze, it was an easy step to transfer it to marble; and Semper (*Der Stil*, i. 431) will be admitted to have been right when he described bas-relief as "bronze repoussée metamorphosed into stone." On this and some other points I called the attention of readers of the ACADEMY (August 1878) to the gates of

Shalmaneser II. when they reached the British Museum.

It is sometimes, and perhaps justly, made a matter of surprise that the finest Greek reliefs in marble—for example, the frieze of the Parthenon—were not only coloured, but had also numerous accessories of glittering metal, such as the reins and bridles of the horses. But then it is forgotten that the Greeks had derived their notions of bas-relief through artistic tradition from times and places where its true nature and origin in bronze were recognised. It was in obedience to these traditions that they employed colour and metallic accessories on their marble.

Under these circumstances, the bronze platings from the gates erected at Balawat by Shalmaneser II. (B.C. 859–824) become a striking landmark in the history of ancient art, quite independently of their importance for Assyrian studies. The publication of them in a series of large, finely executed photographic plates by the Society of Biblical Archaeology is a service which cannot be too gratefully acknowledged. It has been more the habit of that society to deal with literary and historical questions than with matters relating to art; and, in fact, the present publication, with its text of the inscriptions on the gates by Mr. Pinches, amply sustains the unique character of the society in this respect. We hope this is a new departure. With its resources and its successful management, the society may be expected to overtake much that in recent years has been accumulating and remaining unutilised, in a thorough sense, for want of enterprise.

The subject represented on these gates is war in all its horrors for the vanquished and delights of spoil or vengeance for the conquerors. Storming of fortresses, conflagrations, impalements, beheadings, fighting from chariots, on horseback and on foot, strings of prisoners, captured herds of cattle, spoils, submissions, presents—these are the principal items, and most of them recur sufficiently often to have taxed the invention of the artist to avoid monotony. From his work altogether he must be admitted to have had the command of a very large number of artistic motives. But, if we take up a special section of his subject, it will be found generally that he himself was conscious of a want of resource in the invention of motives, and struggled against it by introducing varieties of detail which might withdraw attention from what is really a repetition of a motive already used. For example, in the first scene (A, 1–7) we may notice (1) a group of two horsemen riding over a fallen enemy, which occurs twice with only varieties of detail; (2) a group of an Assyrian seizing an enemy by the crest of his helmet, also repeated with slight variation; (3) a group which is found three times within a short space, but always with some alteration: it consists of an Assyrian who has overpowered one of the enemy, but still stands on his defence against another, who aims his spear at him. A similar result could be obtained from the other scenes. The battle from which these examples are chosen is perhaps the most interesting of all on the gates from the fact that the enemies of the Assyrians are there represented as armed with

the Greek helmet, circular shield, and spear. They are slighter men than the Assyrians, and their stronghold is a mountainous country into which the Assyrians have penetrated with chariots, horsemen, and bowmen. The explanatory inscription which accompanies this scene places it, we are told, in the region of Armenia. There are theories which trace the immigration of the Greeks along the North of Asia Minor, and finally down into their settlements in Greece proper. But whether it can be proved, from language or otherwise, that these original migrating Greeks were possessed while in Asia Minor of the armour by which they were characterised I am not able to say. An alternative would be to regard these Greek-armed enemies of the Assyrians as settlers who had returned from Greece to an earlier seat of their race. If it were not that the localisation of this enemy seems to be certain, it might be argued, from the fact of their being associated in one place as prisoners with other prisoners of an Ethiopian type, that they belonged to a district nearer to Greece and more accessible to Greek mercenaries.

The artist of the gates has met with difficulty in rendering horses. When they are at a gallop, with heads and forelegs in the air, he succeeds fairly well. But when they are to be represented at a walking pace he begins equally by placing their heads near the top of his available space, and, finding afterwards that their forefeet must reach the ground, he produces an animal which is not unlike a giraffe. He ought to have simply enlarged the scale of his horses in such cases. But that would have entailed an enlargement of the chariots also, and would seriously have broken up the uniformity of his design. He was a victim, in the first instance, to the law of isokephalism, which prevails also to a large extent in Greek reliefs, where the composition is confined, as it is here, to long, narrow bands.

In composition, the gates are inferior to the somewhat earlier friezes in the British Museum representing the conquests of Assurnazir-pal (about B.C. 880), but they appear to be of the same school. In finish, also, the gates are behind this frieze, though in some measure the opposite might have been expected, considering how readily a bronze surface lends itself to the expression of minute details as compared with the alabaster of the frieze. The figures are, in fact, often very carelessly finished.

It will thus be evident that the artistic interest of the gates is not so much in the beauty of workmanship bestowed on them—though in that respect also they have many charms—as in the fact that they present us with a reasonable explanation of the origin of bas-relief. Again, both the material and manner of execution are obviously such as would be attractive to industrial art in the production of armour, vases, and other articles useful for export. When compared with the designs on objects found in the oldest tombs of Greece, the spirit of design and the technical processes on the gates are seen to have exercised very great influence on the first examples of artistic production with which the Greeks became acquainted.

A. S. MURRAY.

THE COPTS OF EGYPT AND THEIR CHURCHES.

IV.

(Conclusion.)

Silver-cased textus.—Most of the churches have a MS. copy of the gospels, covered on all sides with plates of silver, decorated with *repoussé* work, like that on the fans. The book is completely sealed up in this silver box and secured with nails, so that it can never be opened or even seen. There is generally a cross in the middle of each back, surrounded by the emblems of the evangelists, cherubim, and flowers; a Coptic inscription forms an ornamental border. Some of these are quite modern, and none appear to be older than the sixteenth or seventeenth centuries.

Crosses.—Many churches have fine large processional crosses of silver or bronze, engraved with figures and inscriptions—in many cases in Greek. There are also in all the churches a number of small crosses made of silver or base metal, and generally engraved with a dedicatory inscription like those on the sacramental spoons. They are held by the priest at Benediction, and are used at the consecration of the water for baptism.

Lamps and candlesticks.—Some of the lamps which hang before the pictures and relics and in front of the Hâkel are enriched with beautiful work, *repoussé*, engraved and pierced. Some are of silver, and others of bronze.

Until the last few years, some of the Coptic churches possessed exceedingly beautiful glass hanging lamps, made probably at Damascus in the fourteenth and fifteenth centuries for the use of mosques. They had sentences from the Koran, and very delicate arabesque patterns painted on them in enamel colour, some thin and transparent, and others, almost opaque, laid on so thickly as to stand out in perceptible relief. These lamps—the most beautiful specimens of the glass-worker's art ever produced—have quite disappeared from the Coptic churches. The last one was brought to England four or five years ago, and is now in the British Museum. There are also three very fine ones in the Kensington Museum, but these came out of mosques. A few glass lamps of plain clear glass, but of very graceful form, still remain. There is a fine large one in the church of Abou Sergeh. It is only brought out on Good Friday. The tall-standing candlesticks by the lecterns are generally of wood with turned mouldings; a few are of bronze or wrought iron, with three branches and prickets. At the church of St. Menas are two curious bronze candelabra, set in niches before pictures. They are each formed of two winged dragons with tails crossing; in the upturned mouths and along the backs are rows of sockets for candles, seventeen in all. One of these appears to be fifteenth-century work; the other is a later copy.

Censers and incense boxes.—The censers now in use resemble in form those used in the West during the fourteenth and fifteenth centuries. They are made of silver or bronze, ornamented with pierced and *repoussé* devices. The incense boxes are generally round, and of wood or ivory richly carved with interlacing patterns and Arabic or Coptic inscriptions. A few are square-shaped boxes made of beaten silver, decorated in the same fashion as the fans and *textus*-covers.

Chismatories, for the holy oils.—But very few remain. In the church of Anba Shenouda there is a curious one cut out of a solid cylindrical block of wood, eight inches and a-half in diameter, in which are sunk three holes to contain the little glass phials for the three holy oils. The lid revolves on a central pivot, and has only one hole in it, so that only one bottle is exposed at once. At present the Coptic priests use only one holy oil, and are quite

ignorant that there ought to be three distinct kinds. At baptism, instead of putting the oil on the child, they pour some of it into the font.

Tabernacles.—After the consecration, the elements are placed in a wooden box decorated with paintings of the life of Christ and the saints. This box stands on the altar. None appears to be of any great age. The custom of "reserving" the Host does not now exist among the Copts. Tradition says that it was given up because a serpent once got into a church and ate the Host. A curious instrument (the kooba, or in Greek *κοοπίκος*), made of two semi-circular pieces of metal crossing each other, is used at Mass to prevent the corporal from touching the bread after consecration.

Musical instruments.—Cymbals, triangles, and small bells without clappers, struck with a piece of wood, are used to accompany the hymns. The commencement of the service is sometimes announced by the priest striking a wooden board with a mallet, as in the Greek Church. A few bronze bells were used, but they are rare—probably because the Mussulmans dislike them.

Crutches.—Owing to the great length of the services and the absence of seats, both priests and laity have wooden crutches to lean upon. The top is like a tau cross. The Patriarch has a fine massive silver one, which is carried before him, like the archbishop's cross in the Western Church.

Among the church furniture may be counted ostrich eggs, which are hung from the roof as ornaments. They are generally supported by metal bands, with ornamental engraving on them. Some churches have, not real eggs, but porcelain imitations.

Silver diadems, or narrow fillets of thin repoussé or engraved work, are among the belongings of many churches. They are used to crown the bride and bridegroom at the marriage service.

A wine-press for making the sacramental wine, and an oven for the bread, exist in some churches. The korbān, or sacramental bread, is a small round loaf, stamped with many crosses, and the inscription ΧΡΙΣΤΟΣ ΑΓΙΟΣ ΙΧΥΙΟΣ ΑΘΑΝΑΤΟΣ—"Christ the Holy, the Powerful, the Immortal."

Oil-presses for making the holy oil are also occasionally to be found in one of the out-buildings of the church.

Relics.—All the churches have relics of the saints wrapped up in rolls of silk, the size and shape of a bolster. The outer covering is richly embroidered. They are generally placed in niches formed in the various screens, often in the iconostasis, and, as a rule, have pictures behind them. In some cases, they are put in wooden shrines, standing on four legs, with pictures hung round them. The bundle containing the relic is seen through a small grating in front, before which an embroidered curtain hangs.

Paintings.—There are a great number of pictures in all Coptic churches; they may be divided into three classes. *First*—The most ancient are those painted "a secco" in tempera, on plaster or on marble. The best and earliest examples of these are some life-sized figures of saints in the apse of the western baptistery of Abou Sergeh. They are thoroughly Byzantine in style, the drawing being hard and stiff, and the folds of the drapery treated in a very conventional manner. They are probably not later in date than the eighth century. They are interesting as showing that the early vestments of the Copts were almost the same in form as those used in the West. When Christ is represented, his nimbus generally has the letters Ο ΩΝ (ens entium) on it. *Second* in date come pictures on panel, often with gold grounds. The long row of pictures which is fixed along the top of every iconostasis are generally large

half-length figures of Christ, the Apostles, and other saints. Some of them have scenes from their lives, many figures to a small scale crowded together, but often painted with miniature-like delicacy. In style the better ones resemble the thirteenth-century works of painters of the Umbrian or Sienese schools. *Third*—Paintings in oil on canvas, chiefly of the seventeenth and eighteenth centuries. These have little or no merit as works of art.

Owing to the stereotyped style of art which has for so long prevailed in the East, it is impossible in many cases to fix the date, or even the century, of these paintings. Even now monkish painters in Greece and Russia are producing works which have many of the characteristics of the thirteenth-century Italian painters, especially in their use of greenish tints in the flesh shadows and the sculptural folds of the drapery.

Service-books.—These are mostly MSS.; some churches, especially those in Lower Egypt, have a large quantity of them—several hundreds sometimes. They mostly lie piled in heaps on the ground in some unused chapel or rubbish hole in the church, and are very useful to the mice, who make their nests of the leaves. But a small proportion are on parchment—most are written on a beautiful vellum-like paper (carta bombycina). They are in the Coptic language, with Arabic rubrics: the Arabic is often an addition, the older MSS. being almost without rubrics. Later MSS. have some of the prayers in Arabic. Coptic is now quite a dead language, and is but little understood even by the priests who have to read it. It is regarded as the hieratic language, and, though Arabic may be used for prayers and lessons outside the sanctuary, within the veil of the Hékel nothing but Coptic (or Greek) must be pronounced.

Three liturgies are used by the Copts—those of St. Basil, of St. Gregory the Theologian, and of St. Mark, also called after St. Cyril because it was altered and re-arranged by him.

The following list of MSS. taken from a large heap in the church at Seney, near Luxor, may be taken as a sample of the service-books which occur the oftenest:—

Canons of the Coptic Church, on vellum, twelfth century.

Book of the Gospels, on vellum, thirteenth century.

Lectionary, on vellum, fourteenth century.

The rest are all on paper.

Consecration of Monks, 1358.

Consecration of the various Orders in the Church, a MS. of the fifteenth century—viz., Psalmos (Cantor), Anagnostes (Lector), Sub-deacon, Deacon, Arch-deacon, Priest, Hegumenos (Abbot), Chorepiscopus (Visitator), and, lastly, the Consecration of the Episcopus, Metropolitā, and Patriarcha, the same service being used for all three.

Psalter for the Canonical Hours, sixteenth century.

Euchologion or Benediction Service, sixteenth century.

Minor Prophets, sixteenth century.

Funeral Service, sixteenth century.

Mystagogia (Confessio), sixteenth century.

Consecration of Chrism and Oil for the Lamps, sixteenth century.

Order of Baptism and Consecration of Altar Vessels, seventeenth century.

Consecration of Altars and Fonts, eighteenth century.

With many others, of various dates, of the Gospels, the Epistles, the three Liturgies, and the various Consecration Services.

But very few are older than the sixteenth century. Those that have dates are dated from "the year of the martyrs"—i.e., A.D. 284.

They are written with a reed pen in a fine bold hand, and generally have no ornaments,

except a few large capitals in black and red, and a large elaborate cross of interlaced lines on the first page. They are bound in brown calf-skin, stamped with graceful arabesque patterns, with a flap to protect the front edge of the book. J. HENRY MIDDLETON.

NOTES ON ART AND ARCHAEOLOGY.

IN about a fortnight's time, the Fine Art Society will open an exhibition of curious interest—a gallery in which all the space will be devoted to the portrayal of Venetian life and scene. Venice, of course, has always been beloved of painters. Not a gallery, but a series of galleries, would be required for the adequate exposition of canvases and drawings inspired by Venetian experience. But Turner and James Holland will be excluded from the forthcoming show, which will be that of living painters only; or, rather, one single exception will be made. Mr. Bunney, whose Venetian work Mr. Ruskin so long encouraged, will be fully represented; and he died a few weeks ago. Among other painters in oil and in water-colour who have been lately much devoted to Venetian themes, and who will contribute considerable works, are Van Haanen and Rousseff, not to speak of Miss Olara Montalba, Mr. Fildes, Mr. Woods, and Mr. McWhirter. There will also be some sketches by Mr. Ruskin.

PROF. C. T. NEWTON will deliver a public lecture at University College on Friday next, November 3, at 4 p.m., on "Greek Painters from the Earliest Times to the Age of Polygnotus."

The following notes of movements may be of interest:—Mr. Hubert Herkomer and Mr. Seymour Haden have sailed for America, where they both intend to spend some little time; Mr. Cosmo Monkhouse is now on a short visit to Florence, whence Mr. Frederick Wedmore has just returned; Mr. G. A. Sala is expected soon at Rome.

MR. JOHN CROWDY contributes to the *Companion to the British Almanack* for 1883 a review of the art sales of the present year, which have been of exceptional importance.

THE two great French painters of battle pieces, MM. Edouard Detaille and de Neuville, are engaged upon a joint panorama destined for Vienna. They have lately visited the battle-fields round Metz, and have chosen for their subject an incident in the day of Rezonville honourable to the defeated side.

M. LISCH, the discoverer of the Gallo-Roman town near Poitiers, to which the name of Sanxai has been given, has proposed that the State should purchase the site; and his proposal is supported by the Commission des Monuments historiques, of which M. Antonin Proust, the late Minister of Art, is president.

THE French provincial museum at Nancy has just been enriched by a large gallery of pictures collected by a M. Poirer. A long notice in the *Courrier de l'Art* speaks of many of them as being authentic works of the greatest Italian masters.

THERE are two articles this month in the *Gazette des Beaux-Arts* upon the present exhibition of the Union centrale, the one being devoted to the furniture, which makes a goodly show, several rare pieces in sculptured wood having been lent; and the other to the ancient tissues exhibited, to which South Kensington has contributed several interesting pieces. But reading about exhibitions is always dull work; and the article, we think, that will be found of most interest in the number is the continuation of M. Théodore Duret's account of the illustrated books of Japan. Keisai-Yesen, the chief rival of Hokusai, Hokkei, Kona-setsu, and

other illustrators are described, but none come near to the incomparable Hokousai in fertility of imagination and power of ludicrous association. The chief skill of Keisai-Yesen seems to have lain in being able to represent things with a single stroke of the brush. He was a true impressionist. We could wish to hear more of these Japanese artists, but M. Duret finishes the subject in this number.

L'Art gives this week, instead of its usual etching, a Dujardin heliogravure from a drawing by Mr. Burne Jones called *Le Chant d'Amour*. It is reproduced with great softness and delicacy.

MESSRS. SHEPHERD BROS. will open on Monday next their annual winter exhibition of modern pictures in their gallery in King Street.

THE STAGE.

"THE OVERLAND ROUTE" AT THE HAYMARKET.

MR. BANCROFT has much confidence in the works of deceased authors; nor are rising dramatists abundant enough in London to disturb his preference for Robertson and Tom Taylor. Tom Taylor's "Overland Route" has lately been revived at the Haymarket with that attention to realism of detail which may be taken as a sign of the expectation of a long run. And, indeed, already the piece is understood to be a commercial success. Had it been otherwise, we should have been surprised; not that "The Overland Route" is an excellent piece, or even a piece which shows to the best advantage Tom Taylor's faculty of adroit construction or his facility in seizing the conventional humours of the lower middle class. But it shows his ready skill in other departments of labour—it evinces undoubtedly an ingenious command of aged material, a faculty for bestowing modernness upon antique observation of character. The persons of the drama in "The Overland Route" are not conspicuously original; but they are placed in new situations, which is almost enough to ensure them originality for the stage. The circumstances are undoubtedly entertaining, even if some of them are impossible.

The earlier scenes—that is, the two first acts—of Taylor's drama are those which must be deemed the best. It is here that in the conversation there is the closest approximation to the dialogue to be listened to on the quarter-deck or in the long saloon of a P. and O. steamer—to the dialogue, that is, of the Anglo-Indian during a period of enforced leisure. Here there is much harmless small-talk, some scandal, and a measure of wit. Such scenes are sure to be popular; and there is no sufficient reason why they should not be as popular to-day as when it first occurred to Tom Taylor to write them, something like a score of years ago. It has been said that, after all, "The Overland Route" is but a collection of such scenes, and not a play of serious interest. That may possibly be true; but the tolerant critic will not see in its truth an occasion for reproach. The public of the theatres—especially the public of the stalls—grows more and more indifferent to the interest of a serious intrigue. It demands more and more an opportunity for light amusement, and "The Overland Route" might have been framed to supply that demand. It is not very strong as a comedy, but it is strong as a medium for realistic effect. And this strength Mr. Bancroft has utilised; and, in doing so, will find his reward. Most people nowadays have had some experience of a P. and O. steamer. If they have not actually sailed in one, they have heard stories of

the voyage, or have perhaps gone down to Tilbury to see their friends off, and have said good-bye and turned homewards as the last box of specie was stowed away in the hold just before the bell rang for "tiffin." It is pleasant to recall the experience, and the modern stage knows well how to recall it. There are the kind of people who are wont to assemble on deck, and there are the lithe Orientals—Lascars and the rest who will work the ship; the cook who is even now engaged in the preparation of the curry. The complete realisation of scenes which every traveller knows to be at all events striking excuses the absence of serious interest in the plot, the absence of probability in the development of action. Besides, the acting is good where it can be. If Mr. Bancroft is not quite as well fitted with a part as he has often been aforetime, he shows skill in the character he assumes. Mrs. Bancroft provokes laughter by the genuineness of her gestures and accents of comedy; and Mr. David James is as droll when he is somewhat doleful as when he is conspicuously merry. The "character-acting" of Mr. Alfred Bishop is generally of marked excellence. A daughter of the actress known as Miss Lydia Thompson appears in the piece, and very acceptably. They will play "The Overland Route" for several weeks yet.

STAGE NOTE.

WE are pleased to hear that an excellent cast has been secured for Mr. Tennyson's new prose play, which is to be brought out at the Globe Theatre in about a fortnight's time. The scene of "The Promise of May" is laid in Lincolnshire, where was laid also the scene of "The Northern Farmer," and it may be inferred that the Farmer Dobson of the new work will not be lacking in that strength of characterisation which attends Mr. Tennyson's rustic portraits. This part will be played by Mr. Charles Kelly. For Mr. Hermann Vezin, an actor whose wide range makes it a comparatively easy task to fit him with a rôle, a promising part has been reserved. The heroine, Dora—but the heroine of a play by the author of "Dora" ought, for clearness' sake, to bear some other name—will be represented by Mrs. Bernard Beere, an actress of refined taste and excellent discretion. And for the part of the heroine's sister a choice has been made which we cannot doubt will prove a wise one. It is that of Miss Emmeline Ormsby, whose two principal appearances in London—first, as the mistress of the melodramatic villain in "Lights o' London," and then as the gipsy girl in "The Romany Bye"—have given us occasion to remark on the welcome advent of a young actress of real dramatic instinct and picturesque effect.

MUSIC.

JOACHIM RAFF'S SYMPHONY IN D MINOR, ETC.

ON November 14, 1874, Raff's "Lenore" symphony (No. 5) was performed for the first time at the Crystal Palace, and was received with enthusiasm. This composer's works were for several years very popular. The "Im Walde" symphony (No. 3) at the Philharmonic Society in 1875 created a most favourable impression. Nos. 2, 3, 4, 7, and 8 have figured on the Palace programmes, so that, counting No. 6, in D minor, op. 189, even of the nine published symphonies have been heard here. There is a tenth now in the press, and one in MS.; in all, eleven. As regards number, Raff has thus surpassed his great predecessors Beethoven and Schubert, and his illustrious contemporaries Mendelssohn, Schu-

mann, Berlioz, and Brahms. But quantity is nothing, and quality everything. Raff's writing is unequal; his career as a composer was not, like that of Beethoven, one of gradual development and constant progress; some of the movements of his symphonies are very fine indeed, while others are either laboured or commonplace. His powers of thematic treatment were great, his contrapuntal skill wonderful, and his knowledge of orchestration thoroughly sound; but he was unfortunately often tempted to waste these gifts on subject-matter of little or no importance. His music, therefore, though attractive and interesting to students and musicians, often fails to create a really satisfactory and lasting impression. The symphony in D minor, chosen for performance last Saturday, bears the following inscription in lapidary style: "Gelebt, Gestrebt, Gelitten, Gestritten, Gestorben, Umworben" (One who lived, aspired, suffered, struggled, died, and acquired fame). The labour of life is depicted in solemn and suggestive strains in the first movement; the workmanship is most elaborate and ingenious. Raff evidently meant to represent in tones the struggles and aspirations of a noble mind; the sense of effort, which is at times felt, is therefore perhaps consistent with the programme which he sought to illustrate. The long and impressive *coda* forms a worthy termination to the movement. It is difficult to understand exactly what meaning the composer wished to convey by the *vivace*, which is in form a *scherzo*. The gloom and restlessness of the opening section have passed away, and a light and joyous scene presents itself before us. The music is bright and the scoring very effective; but it must be confessed that the themes are somewhat trivial. The third movement is a funeral march. The principal theme is simple and plaintive, while the middle subject appeals to us in soft and soothing tones. Towards the close the two themes are combined in a very skilful manner. This march is the most striking part of the symphony, and altogether one of Raff's most successful efforts. The *finale* is disappointing. The themes are wanting in character, and, though there is much cleverness displayed in the working-out, the movement is not successful. The symphony was magnificently performed under the direction of Mr. Manns, and was well received. The programme included Mendelssohn's concerto in G minor played by M^{lle}. Ida Bloch, and the ballet airs from "Carmen." Miss Ella Lemmens was the vocalist.

At the Popular Concert last Monday M^{lle}. Janotha made her third appearance. She played as solo Beethoven's sonata in E minor (op. 90). Her rendering of this romantic work was not quite to our taste. Some of the phrasing in the first movement was not satisfactory, and the lovely *allegretto* was taken at too rapid a rate. The audience were, however, satisfied. In answer to loud and continued applause, M^{lle}. Janotha played Thalberg's "Home, Sweet Home." It is scarcely the sort of piece one would expect to hear at the Monday Popular Concerts, but the return of the troops from Egypt probably suggested, and perhaps excused, its appearance in a classical programme. Sig. Piatti played, for the first time, an interesting sonata for violoncello of Porpora, the rival of Handel and the teacher of Haydn. The music is full of vigour, and not without charm. The pianoforte accompaniment, written by Sig. Piatti, was in the safe hands of Mr. Zerbini. The programme included Beethoven's tenth quartett and Schumann's sonata in A minor. The latter work was admirably interpreted by M^{lle}. Janotha and M^{me}. Norman-Néruda. Miss Santley was the vocalist. She sang a song by Handel, and two by Maude V. White; the latter were accompanied by the clever composer.

J. S. SHEDDOCK.

SATURDAY, NOVEMBER 4, 1882.

No. 548, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

"ENGLISH MEN OF LETTERS."

Sterne. By H. D. Traill. (Macmillan.)

MR. TRAILL brings to the study of Sterne's work a sympathetic attitude of mind, and to the consideration of his character no ordinary powers of observation and analysis. Of course he has not been able to make any material additions to the biography of his subject. A zealous bibliographer might perhaps hunt up out of obscure places a few scattered reminiscences like those of the discredited French valet Lafleur, together with an odd story of early years, like the ridiculous one of the whitewash mischief perpetrated at school—for ridiculous it is from Sterne's sentimental point of view, though it has suggested to Mr. Traill the smart reflection that "the trick of befouling what was clean (and because it was clean) clung to him tenaciously to the end." But the period of Sterne's life that is at all valuable to the biographer is confined to eight years, and the incidents of those years are few and easy of record.

Mr. Traill's view of Sterne's character as a man may be said to hold the mean between Mr. Fitzgerald's *Apologia* and Thackeray's unsparing attack. He does well in directing attention to that cheerful courage under the prostration of pain, which revealed perhaps the noblest, and certainly the manliest, side of Sterne's nature. Thackeray overlooked this; he spoke tenderly enough of that "cry for pity and pardon" which the unclerical romancer in real life penned in sincerity when he knew his end was near; but he permitted himself to forget the many incidental passages scattered over the letters disclosing the fact that Sterne was a good deal of a hero as to physical suffering, and a true son of the "good-natured, peppery, debt-loaded, light-hearted, shiftless" ensign of Chudleigh's regiment of foot, who, when pinned to the wall in a duel, had the cheerful courage and grim presence of mind to beg his adversary to wipe the plaster off his sword before pulling it out of him. After breaking a blood-vessel in the lungs, Sterne takes a hopeful view of life, and either believes, or pretends to believe, that he "continues to mend;" and when he is already within hail of death he writes: "I know not what is the matter with me, but some derangement presses hard upon this machine. Still, I think it will not be overset this bout." As much allowance as we can reasonably make on the score of manly courage and

cheerful resignation Sterne is certainly entitled to.

Mr. Traill is at one with all previous biographers in thinking Sterne was childishly vain of his social and literary successes, and vain no doubt he was; but more than enough has perhaps been made of the remaining evidences of his vanity. The letters on which is founded the portentous accusation of his having regarded with over-inflated complacency the visits of "great people of the first rank," first in London and afterwards in Paris, were written almost exclusively to his daughter, to Miss Fourmantelle, Mrs. Draper, and David Garrick; and, in inferences drawn from the slightly ridiculous air of his self-delineation, we must remember that he was writing to persons for whom, as he well knew, such substantial tributes were likely to have a powerful appeal. In estimating Sterne's acknowledged transgressions on the side of morality, Mr. Traill has observed a judicious reticence. He neither endorses Warburton's "irrevocable scoundrel" nor Thackeray's "wretched, worn-out old scamp" as epithets befitting the man. He is content, with the late Walter Bagehot, to regard Sterne as an "old flirt;" and no doubt these short and expressive words tell the whole truth. The key to Sterne's sensibility to love, as he knew it, is no doubt found in that letter to "dear Eliza" in which he frankly says, "I must ever have some Dulcinea in my head; it harmonises the soul." It is almost certain that Sterne belonged to the small number of men cropping up in every generation who never could enjoy the "freshness of feeling" on which they dwell so much, and who dawdle about pretty women with the questionable hope that in time their morals may come to be suspected. It would be wrong to say that Sterne did not at one period love his own wife, and equally unjust to his amatory pretensions to say that he wholly failed in his determined efforts to compromise the character of the young wife of the counsellor at Bombay; but in the case of the former affection his soul was probably chiefly occupied with the harmonising process he alludes to, and in the case of the latter with the imbecile sentimentality that prompted him to support an appearance of indulging insidious vice. "Talking of widows," he writes, in a letter which Mr. Traill does not quote,

"pray, Eliza, if ever you are such, do not think of giving yourself to some wealthy Nabob, because I design to marry you myself. My wife cannot live long, and I know not the woman I should like so well for her substitute as yourself. 'Tis true I am ninety-five in constitution and you but twenty-five, but what I want in youth I will make up in wit and good humour."

"Dear Eliza" was then on her way from Deal to Bombay; but before the lady could reach the side of her husband Sterne was immersed in an intrigue with a mysterious Mrs. H., and like a sneak was writing meanwhile gay letters to his friends with "sneering allusions to the poor, foolish *Bramino*." It was the appearance of profligacy, and not the reality, that Sterne enjoyed; and in a purer state of society than that in which his works first appeared his licentiousness would have

fallen, as Coleridge said, like a stone in snow.

After devoting a chapter to the charges of plagiarism contained in Dr. Ferriar's *Illustrations* (which is as much as they deserve), Mr. Traill proceeds to the consideration of Sterne's style, of his general characteristics, of his humour and sentiment. He thinks that to talk of the "style" of Sterne is as though one should say "the form of Proteus," so uniformly eccentric and regularly irregular he considers him. He thinks Sterne's mode of expression is destitute of precision, and in many cases a perfect marvel of literary alipshod. This is no doubt just criticism; and in all essential features Sterne's writing resembled his talk, which has been described as always animated, often brilliant, rarely correct, and never clerical. His "style" was no doubt consciously founded upon that of Rabelais; and certainly, in discursiveness, in deliberate buffoonery, in extravagant eccentricity, and in solemn and ingenious pretence of a measureless profundity of meaning where no meaning whatever existed or was intended—in a word, in brilliant sense, and yet more brilliant nonsense, the style of Sterne does gravitate towards that of the master of wits. It is hardly necessary to say that the parallel goes no farther. Between the occult truths, political and philosophical, which Rabelais was often compelled to hide behind a masquerade of pure buffoonery, and the transparent absurdities which Sterne, as a mode of attracting attention, concealed behind a veil of mysterious significance, there is indeed a whole world of purpose which forbids that we should unite the names of these writers. The real excellence of Sterne's writing, however, is obvious enough, his sputterings, dashes, blank pages, and countless affectations notwithstanding. He excels, perhaps, as Walter Bagehot said, all other writers in simple and direct description of common human action; and therein his genius was continually developing, the *Sentimental Journey* being superior to *Tristram Shandy* in that form of realistic force. Mr. Traill is justly severe on Sterne's claims as a man of sentiment; he thinks nearly all the pet bits of pathos on which the writer prided himself, and for which he has been extolled are complete failures as serious appeals to the heart, and failures traceable to Sterne's artistic error of obtruding his own personality, and begging the reader to "turn from the picture to the artist, to cease gazing for a moment on his touching creation, and to admire the fine feeling, the exquisitely sympathetic nature, of the man who created it." No doubt there is truth in this, but it is not the whole truth. It is not a fact that the primary condition of success in realistic pathos is that the writer should erase himself from the reader's consciousness altogether. It will be found that the most profoundly moving passages in fiction are concerned not only with the sad or tragic events they record, but also, in a secondary degree, with the emotions of the spectator or narrator who, from first to last, floods his dramatic narrative with subjective passion. This interposition of an outside intelligence seems always necessary to interpret our feelings to ourselves, and to make us realise that the pathos of the recorded scene comes from someone, instead of

living merely in an atmosphere of cold drama. In Sterne the "artistic error" lies deeper than Mr. Traill indicates in his just strictures on Sterne's confusion of artistic methods. Sterne is as self-conscious a humorist as the melancholy Jacques; but he is as deliberate a jester as Touchstone. He loves to suck melancholy out of any passing event "as a weasel sucks eggs;" but he also delights to thrust constantly before our eyes the cap and bells; not that he intends the smile to compete with the tear, but that he prides himself on his personal freedom from the torturing sensibilities over which he claims to have absolute command. Immediately after one of his famous sentimental outbursts, he tells us how good the inn is at Moulins. This is an outrage of a kind he delighted to perpetrate. It seems to say: "Behold! what a master I am! How I can harrow up your feelings! and now I'm off to eat a mutton-chop." It is the grimace of a bad actor before the tragic business is over, before he quits the stage, and while his face is still turned towards his audience. Of Sterne's humour Mr. Traill does not seem to say much that is new. He speaks of it as Cervantic; and, in estimating the net sum of Sterne's creative power, he says the writer will live by virtue of his one individual creation—Capt. Tobias Shandy. He cannot mean that the humour of Uncle Toby's character is the Cervantic element in Sterne, for that is obviously centred in the elder Shandy. Walter Shandy is the only Don Quixote of English fiction, and, therefore, the only character in Sterne that is essentially Cervantic, the humour of Uncle Toby and of Sterne's own character being distinctly Shakspearean.

That Thackeray should have denied to Sterne the character of a great humorist, and attributed to him only the qualities of a great wit, proves how astoundingly untrustworthy the criticism must be that is founded on, and begins with, an illiberal estimate of personal character. Sterne was vain; he was licentious; he was insincere. Be it so. On the other hand, he was courageous under bodily suffering; he was totally free from literary envy; and he never pretended (his accidental clerical functions out of the count) to be a better man than he was. He stole unblushingly from earlier writers, but never from lack of originality; and his plagiarisms are only more obvious than other people's because more undisguised. In short, neither in the bad qualities he had nor the good qualities he had not can he be considered much more reprehensible than writers before him and after, whose ill-luck it never was to be held up to the ridicule of popular audiences by the brilliant satirist who loathed and despised Sterne, and read his more sentimental utterances with a mock solemnity of tone that made his hearers laugh until the tears rolled down their cheeks.

Mr. Traill has done his work well; his book is admirable in writing, reliable and well-digested as to facts, and interesting and valuable in criticism. T. HALL CAINE.

Social Life in the Reign of Queen Anne. Taken from Original Sources. By John Ashton. In 2 vols. (Chatto & Windus.)

MR. ASHTON has selected an interesting subject, and has done justice to his choice. His volumes consist of extracts on the manners and customs of the age, culled from a variety of contemporaneous books and MSS. and strung together by a slight connecting narrative. If the words in the Preface are to be taken in their natural sense, they would imply that the composition of the book has been preceded by a perusal of "all the newspapers" and "all the literature of the time;" but such a suggestion could not have been intended. With every reasonable deduction from such an inference, there can be no doubt either of Mr. Ashton's diligence in collecting his materials or of his good sense in refraining from intruding himself unnecessarily upon the reader. We are grateful to him both for his industry and his reserve. Even a man who is well versed in the diaries and correspondence of Queen Anne's time will find something that is new to him in every chapter. The novice will be furnished with an abundance of amusement, both in the letter-press, and in the engravings which are scattered throughout both volumes.

The two writers who have contributed the greatest number of bricks to the house which Mr. Ashton has built are Misson and Ned Ward, a typical Monsieur and a typical John Bull of the period. They are both of them graphic writers, not free perhaps from a slight exaggeration for effect's sake, but still confining their exuberance within moderate limits. What struck the lively foreigner the most was the habits of his English friends at dinner. "They eat," he naïvely remarks, "a great deal at dinner," and he clearly thought that it would have been better for their health had they been content with a smaller quantity of animal food. For the affection of his English hosts for meat there was considerable excuse in the fact that fish was "dearer than any other Belly-timber," and that vegetables were very scantily supplied to the London market. Oysters were sold in abundance, and at prices which nowadays seem almost ridiculous. The choicest, from Colchester, were supplied at a tariff ranging, according to the size of the delicious esculent, from 3s. to 1s. 8d. a barrel; and the wheelbarrow vendor in the streets was a sufficiently common person to figure in one of Lauron's sketches of the cries of London. With pardonable partiality for his own country, Misson compared the cooking of England with that of France, and condemned the English tables as "not delicately served." No doubt his criticisms were justified by fact, for Dr. King acknowledges in his *Art of Cookery* (how is it, by-the-by, that this amusing satire is not quoted oftener in Mr. Ashton's pages?) that some cooks, "to show the largeness of their soul," would oft "prepare you muttons swol'd and oxen whole." Still, the Cavaliers who had travelled on the Continent during the reign of the second Charles had brought into high life a taste for the more delicate fare of other countries, and French cooks were beginning to find a home on English soil. The great restaurant of London, where

Swift dined at a cost of seven shillings (re-cording the fact with a pang), was kept by a Frenchman, who imported the choicest clarets; and the view of the coffee-house (i. 215) shows that it was fitted up after the fashion of the French, and presided over by a *dame de comptoir* in true Continental style. Coffee-houses and taverns abounded in London—the names of more than five hundred are printed by Mr. Ashton in an Appendix, and he quotes from a contemporaneous writer a passage which states that London possessed "near three thousand such nuisances"—and those who frequented them might be found there transacting their business or pursuing their pleasure, as is still the custom of the foreigner, every morning and every evening. The wit, the physician, the stock-jobber, the clergyman, all had their favourite coffee-houses; and the leading politicians of the day dined in them, after having sent to their houses for their own wine.

For the Queen Anne houses of the present age Mr. Ashton has a strong contempt, and in one passage he even speaks disrespectfully of the architecture of the buildings known as Queen Square, Westminster. Nevertheless, with true sympathy for the ignorant reader, he is kind enough to say that two good specimens of the best houses of the age can still be seen in Austin Friars. Sometimes, but not often, he seems to us to draw an inference which is scarcely warranted by the text. The statement, on p. 63, that a staircase "capable of accommodating two people abreast was a novelty" is a long deduction from the house-agent's advertisement on the previous page. Houses, he remarks two pages later, "were not always let by agreement," and possibly there were exceptions to the general rule that they were held on annual tenancies. Still, the only advertisements which he quotes in corroboration of his statements show that the occupants did dwell in them as annual tenants, the leases referred to by the house-agent or auctioneer being those under which the houses were held on ground-rents from the original owners of the land. Houses were wonderfully cheap both in town and country. The rent on the north side of Pall Mall was but £40 per annum, and the price of a suburban villa a few miles out of town was considerably less than £10 a-year. Swift only paid eight shillings a-week for first-floor lodgings in Bury Street, and he complains that they were "plaguy deep, but I spend nothing on eating." The streets of London were unpleasant by day and dangerous by night. All the satirists of the age—Swift and Steele, Gay and Tom Brown—tried their hands on descriptions of City life, the bad pavements, the "dashing torrents" from the roofs after rain, the dangerous pent-houses, and the swinging signs which threatened danger to the head of the wayfarer. These were the discomforts of the day, and at night the Mohocks came out from their places of retreat. The most inoffensive of men might find his nose slit by a Mohock or a Hawkubite; and, if Lord Mohun or one of the numerous Irish gentlemen of the age was in a quarrelsome mood, the protection of the feeble old watchman was of slight avail. The amusements of the simple-minded Londoner were but few. The ordinary sights for his country-

cousin were only three—the lions at the Tower, the tombs in the Abbey, and the lunatics at Bedlam; and, when he had satiated himself with these, he must repair to the dwarfs and giants who were brought to England from abroad—Hungary and Spain seem to have been selected as the most appropriate countries for their birth—or run the gauntlet of abuse from the rejected watermen if he desired to hire a boat to visit the curiosities at Don Saltero's coffee-house in Cheyne Walk.

On these subjects, and on every curiosity of Queen Anne's reign, Mr. Ashton has much to say, and he tells his story with good taste and without unnecessary amplification. His volumes will serve a double purpose. They will amuse the ordinary reader of the day, and instruct the student of English manners in the habits of a time which has never failed to attract.

W. P. COURTNEY.

A History of English Rhythms. By Edwin Guest. A New Edition, edited by the Rev. Walter W. Skeat. (G. Bell & Sons.)

EVERYBODY that has ever read Dr. Guest's *English Rhythms* must have heard with lively pleasure that a new edition was in preparation. It ought to have been an epoch-making book when it was published forty-four years ago, but, whatever the explanation may be, it was not. The few in academic circles who thought that there was anything worth studying in the forms of the English language, or that English verse had any method and was not a thing entirely lawless, must have appreciated Dr. Guest's extraordinary combination of bold and original theorising, cautious verification, scholarship at once broad and exact. But they were very few. Without reading the evidence given before Royal Commissions by men of academic standing, the present generation would find it hard to believe how the English language was regarded by university men a very short time ago. For many years compilers of histories of the English language and literature have quarried in Dr. Guest and appropriated his results, without the slightest risk of detection. It is said that Dr. Guest would not consent to the issue of a new edition of his work during his lifetime. The reluctance can easily be explained without supposing him to have abandoned any of his theories about English prosody. It remains to be seen whether, now that the interest in the formal study of English is more widely diffused, this remarkable achievement of erudition and speculative force will meet with a worthier reception. The work is as fresh as if it had been written yesterday, for Dr. Guest's plagiarists, while adopting his results, give no idea of his method, and they have left untouched the most original and suggestive of his theories. When we remember how many of the writings from which Dr. Guest drew his examples existed at the time only in MS. and in rough unscholarly editions, it is surprising how little, even in details, so accomplished a scholar as Mr. Skeat has found to correct in his new edition. Mr. Skeat has made many minute corrections, it is true; his task has been far from a light one; but his main labour as an editor has consisted in supplying more precise references, giving

book, chapter, page, or line where the original edition gave only the name of the author. The conscientious discharge of this extremely laborious duty sufficiently accounts for the delay in the issue of the edition. Mr. Skeat deserves the warmest thanks for having imposed such a duty on himself.

In the case of a book so long out of general reach, it would be rash to take for granted that even readers of the *ACADEMY* are acquainted with Dr. Guest's strikingly original analysis of English rhythms. So far as I am aware, it has been either ignored by all subsequent systematic writers on the subject, or expressly repudiated as an antiquarian crotchet. The chief support hitherto given to the theory—no contemptible support, certainly—has been from the practice of Mr. Tennyson. Once a scheme of prosody has caught the ear, one almost ceases to be capable of judging other schemes impartially, but Mr. Tennyson seems to me to observe very closely, consciously or unconsciously, what Dr. Guest declared to be the traditional rules of English verse, handed down from Anglo-Saxon poetry and continued in spite of foreign influences down to the present time. The centre of Dr. Guest's theory is the doctrine that the basis of English metre is not a foot but a section, a section composed of a definite arrangement of accented and unaccented syllables. These sections, he held, are the elementary versicles out of which verses are built up. The accentual length of the versicles is strictly determined; they must contain at least two accents, and they can never be legitimately lengthened to more than three accents. In scanning English verse we have not to attend to the number of syllables or the number and kind of feet in the verse, but to the number and kind of sections in the verse, and the arrangement of accented and unaccented syllables within the section. Our ear must treat the section as a whole, and learn to hearken first for the completion of it, next for the combination of sections in the complete verse, and then for the combination of verses in stave or stanza. Such a line, for example, as

"Forest and field and flood, temples and towers,"

he would not have treated as a combination of various feet in a line, but as a verse composed of two sections, and he would have marked the scansion of it as follows, using a colon to mark the division of the sections, and putting a bar after each accent:—

For | est and field | and flood | : tem | ples and
tow'rs | .

The theory was most probably first suggested to Dr. Guest by the marked measure of English alliterative verse, and the custom of marking the middle pause in MSS.; but he followed it out inductively, and sometimes perhaps dogmatically, with amazing patience through the whole range of English poetry.

At first sight this supposed supremacy of the sections might seem to be a very narrow and cramping rule, productive of intolerable monotony. But we can no longer think so when we understand the full variety of rhythm permissible within the section, under the rules which Dr. Guest drew from the practice of our poets ancient and modern. His restrictions affect the number of unaccented syllables before, after, and between the

accents; there must not be more than two unaccented syllables before the first accent, or after the last, or between two adjacent accents. A simple arithmetical calculation will show that, under these restrictions, there are eighteen possible varieties of versicles or sections of two accents, and thirty-six possible varieties of sections of three accents. It is no wonder that Dr. Guest failed in the attempt to coin characteristic names for each variety of section, and had to fall back on a somewhat perplexing device for indicating them by numbers. The number of possible varieties in a verse of five accents, when the position of the middle pause is varied, is almost fabulous—1,296.

One great obstacle to the acceptance of Dr. Guest's system is its complexity, which naturally becomes greater when he has to take account of compound sections and sectional pauses. It may be questioned whether there is much utility in any minutely analytical system of prosody. Studying the laws of verse is like studying the dynamic laws of wave-motion. Most people will think twice whether it is likely to add to their enjoyment of verse before attempting to master so intricate a system as Dr. Guest's. The reward for studying him is found in a perception of delicate beauties of rhythm, and artful accommodation of its movement to the sense, where the ear that listened only for what Puttenham calls "the iambic stroke" would find nothing but dissonance or monotony. One may sometimes suspect him of preferring an intricate to a simple scansion of a line when he is in search of an example of one of his rare varieties of section, and of imposing upon a verse a rhythm that the author never intended. But we must remember that he always scans a line with reference to its substance and its setting; and one often finds, in the case of a scansion that does not at once commend itself or even seems ridiculously forced, that a reference to the context produces entire assent.

Mr. Skeat very properly mentions as worthy of careful perusal a criticism of Dr. Guest's system by Prof. J. B. Mayor in the *Transactions* of the Philological Society. The criticism is strong, but too hasty and impatient. "By his system of disregarding the number of syllables in the line, and making everything turn upon the accents of the section, he has succeeded," Prof. Mayor says, "in throwing together lines regular and irregular, possible and impossible, in the most bewildering confusion." Bewildering, perhaps, if we take a collection of examples without referring each of them to the context. Mr. Skeat, happily, has made this reference very much easier. But it is somewhat misleading to say that Dr. Guest makes everything turn upon the accents of the section, if it conveys the impression that he is entirely indifferent to the number of syllables. It would be more correct to say that he regards the rhythm as depending on the form of the section. Prof. Mayor admits that in Shakspeare's time "there was sufficient remembrance of the two original sections to allow of the insertion of an extra syllable between them." Dr. Guest's contention, as I understand it, is

that this tradition of the rhythmical semi-independence of the sections was never entirely lost in practice; and in support of this theory he has produced an overwhelming amount of evidence. The theory is not overthrown by producing a few examples of lines satisfactory enough to the ear in which the middle pause is disregarded. Whether Dr. Guest is, or is not, justified in his censures of single lines as disregarding the middle pause or the final pause, or making an illegitimate use of stops, or violating the true accent, or bringing accents together in the middle of a section without intermediate pause or syllable—this is a different question. "Where there is a discrepancy between a system of prosody and the practice of the poets, it is the system which is condemned, not the practice of the poets." Nobody would have admitted this more readily than Dr. Guest. His system of prosody was not an *a priori* system; he could hardly have been more painstaking than he was in his inductive verification. But he would not have admitted that an occasional licence, even when it justifies itself to the ear, can be called the practice of the poets. And he held rightly that a poet in accentual rhythm has no more title to a false accent than a poet in temporal rhythm has to a false quantity. I doubt whether it would be possible to find in Mr. Tennyson or Mr. Swinburne an example of any of the faults that Dr. Guest condemns, while pages might be quoted in support of his leading rules.

WILLIAM MINTO.

A Map of Eastern Equatorial Africa, between Latitude 10° North and 20° South, and East of Longitude 25°. Compiled by E. G. Ravenstein, and published under the authority of the Royal Geographical Society. (Stanford.)

THE second portion of this large map is now issued, including sheets 12 to 18, except sheet 15, which was published with the first issue. The present part contains the central belt of the great Lake region, or from the Equator to 10° south latitude. The principal features in the interior of this tract are as follows:—(1) The Victoria Nyanza, except its northern shore. (2) Lake Tanganyika. (3) The Luta Nzige Lake, only sighted by Stanley at Beatrice Gulf. Perhaps it is the same as the Chowembe, some accounts of which reached Livingstone; Stanley is probably right in suggesting its connexion with Sir S. Baker's Lake Albert, although the Luta Nzige is much higher. (4) The Lualaba, or Upper Congo River, as far down (north) as Stanley Falls, and as far up (south) as above Lake Kasali or Lincoln and Lake Moero. From those respectively the two main branches flow, which are supposed to unite in Langi Lake, and then form the Lualaba. (5) The northern end of Lake Nyassa. (6) The lofty and reputed snowy mountains—Kilima-Njaro and Kenia. (7) The coast from the Jubb River in sheet 15, to the port of Lindi, with the Island of Zanzibar midway.

Geographers must look with admiration, if not with astonishment, at the amount of scientific observation and research which is

recorded in these sheets, the work having been almost entirely executed during the last quarter-of-a-century by men of whom some are still alive. It is, indeed, fifty years ago that the Portuguese officers Gamitto and Monteiro reached the Kazembe's capital in 1831-32; but their labours, together with the writings of Cooley and his rival, Macqueen, relate chiefly to other parts of the map. The first attempt by a European to penetrate into this region from the East Coast was made by M. Maizan, of the French Navy, in 1845. He advanced about a hundred miles to Degla Mhora, on the Kingani River, where his career was brought to a fatal close by a native chief.

Kraft and Rebmann began their work at Mombasah in 1847. In the same year Kraft penetrated to the mountainous district of Teita; and, in 1848, Rebmann discovered Kilima Njaro, the altitude of which has been ascertained to be 18,681 feet above the sea; while Kraft reached Fuga in Usambara. In 1849, Rebmann attempted in vain to reach the unknown Lake of Unyamwezi; while Kraft advanced to Kitui and the River Tana, at the southern base of lofty Mount Kenia. It is in the direction of Kilima-Njaro that the new expedition of the Royal Geographical Society is to proceed under Mr. Thomson.

In January 1856, the Rev. Jakob Erhardt wrote his brief memoir on the Lake region, combining his own researches with those of the Rev. Johann Rebmann, both of them being fellow-labourers with Dr. Kraft under the Church Missionary Society. Erhardt's memoir, illustrated by a remarkable map, appeared in Petermann's *Mittheilungen* at the time. Much interest was excited, particularly by the map, as it displayed a great inland sea stretching from the Equator to 12° south latitude. The bulk of these waters appeared to be at a distance of about seven hundred miles from the East Coast of the continent; yet, by a great bend, its southern part was brought, with much contracted breadth, within 250 miles of the coast, in the latitude of Quiloa or Kilwa.

The evidence in favour of the existence of great inland waters somewhere in the interior was too strong to allow this report, with its striking map, to pass unchallenged. Various circumstances tended to promote exploration; and, before the end of the same year, Capt. Richard Burton, whose fame as an African traveller was already established, persuaded the Royal Geographical Society to engage him as the leader of an expedition into the unknown Lake region. On his way to Bombay, in November 1856, he was joined by Capt. J. H. Speke, who was subsequently permitted to accompany the expedition. The long and painful struggles by which Lake Tanganyika was first discovered and explored, the Victoria Nyanza reached by Capt. Speke at its southern extremity, and the final retreat effected in 1859 are ably told in the four sections of the Preface to Capt. Burton's masterly monograph on the Lake regions, which must ever take the lead in the ample literature accumulating year after year on the subject. The gallant and learned explorer lives to see the marvellous progress that has already followed from his daring and almost fatal adventure; and we cannot allow the oppor-

tunity to pass without expressing regret that his services have not hitherto been more highly honoured by the Government as large contributors to the expenses of the expedition.

Burton's great achievement was promptly followed up by a continuous succession of explorers. His companion, Speke, won the good graces of Sir R. Murchison, and was chosen to follow up the discovery of the Victoria Lake. Speke, followed by Grant on the main track, started in 1860, and returned by the Nile in 1863. He sighted a great lake at widely separated points, and found its outlets in a stream which he partly traced; but, in treating that stream as the main river, he was mistaken, inasmuch as the main recipient of a basin must necessarily occupy its lowest level from source to mouth. But Speke's Somerset River, or Victoria Nile, as he afterwards named it, flows across a plateau, and descends, by the considerable waterfalls of Karuma and Murchison, for seven hundred feet into Sir S. Baker's Lake Albert. The latter has been absurdly called a backwater, with the design of diminishing the importance which is due to it as a part of the line of lowest level or main channel of the Nile basin so far as it is known at present. The observations for altitude which disclosed this fact were made by Sir S. Baker; but that explorer has persistently refused to attribute to them their just significance lest he should appear to depreciate the labours of his friend Speke.

Livingstone's final labours were exerted through long years of hardship in the region under review. He reached the Kazembe's capital in 1867, and continued constantly exploring the lakes and rivers from Bangweolo to Tanganyika till October 16, 1871, when he reached Ujiji, on the eastern coast of Tanganyika, almost at death's door, only to find that his agent had stolen his goods and left him destitute. In this state he was luckily found by Stanley on November 10 following. Livingstone had been unheard of for more than two years when Stanley arrived at Zanzibar, in January 1871, on a mission from the *New York Herald* to seek out the veteran explorer and give him whatever succour he required. Stanley's mission was a great success, though it was not at first justly appreciated. On his return to Zanzibar on May 7, 1872, Stanley met another expedition preparing to start in search of Livingstone, despatched by the Geographical Society; but, the work having been done, it proceeded no farther. Livingstone did not long survive Stanley's welcome aid. He died on the southern shore of Bangweolo or Bemba in May 1873. In the same year, Lieut. (now Capt.) Cameron, of the Royal Navy, commenced his great journey from Zanzibar across the continent to Benguela on the West Coast. His route passes through the present maps as far as Usamibi on sheet 16. In 1874, on hearing of the death of Livingstone, Mr. Stanley resolved to return to Africa and devote himself to the continuation of the great traveller's work. This time the *Daily Telegraph* joined with the *New York Herald* in supporting the enterprise; and Stanley circumnavigated Lake Victoria and Lake Tanganyika, discovered Lake Muta Nzige, struck the Lualaba at Nyangwé, and proved

that stream to be the Congo by descending its waters to the Atlantic Ocean.

The many other explorers who have contributed to the contents of these sheets cannot be noticed on this occasion. Mr. Ravenstein has attached their names to their respective routes; and in a volume which he is preparing to accompany the map there will be a complete bibliography, with notices of all the leading travellers.

TRELAWNEY SAUNDERS.

NEW NOVELS.

Talbot's Folly. By W. B. Guinee. In 3 vols. (Tinsley Bros.)

Lost in the Crowd. By the Author of "Recommended to Mercy." In 3 vols. (White.)

Mrs. Raven's Temptation. By the Author of "Dr. Hardy's Marriage." In 3 vols. (Bentley.)

A Chelsea Householder. 3 vols. (Sampson Low.)

Misterton. By Unus. (W. H. Allen.)

Out of the Shadows. By Crona Temple. (S. P. C. K.)

Talbot's Folly is a story on a very old theme, which Terence has treated at least once, and which was probably not new even in the hands of Menander, from whom he borrowed it. It is the tale of the young man of family and station who offends his father by rejecting a wealthy marriage, and engaging himself to a beautiful foundling in a humble station, who turns out to be his own kinswoman, and an heiress. The writer makes no pretence at novelty of plot, and is, in fact, frank enough to mention Terence spontaneously, but he has handled his subject with freshness; and, if this be his first effort in fiction, it is full of promise. The chief fault is one which is so rare that a critic who set it down as a merit would not be very paradoxical. It is that in giving some really clever character sketches of certain social types—the pompous and stupid Parliamentary bore, the sharp-witted, underbred, pushing Irish adventurer in Parliament, and the eccentric little old maid who has nearly crazed herself, and quite crazed her diction, by poring over sentimental novels of the old Minerva Press class—he has accentuated the colours a little too strongly, and rather as if designed for a farce than for a novel. Thus, Mr. Grantley Welbore, the stupid M.P. and heavy father of the book, is represented as dragging the language of the House of Commons into domestic life, and as addressing his wife and children as "honourable members," and so forth. Now this is just how it would have to be done for the stage, where a certain amount of exaggeration is necessary, but it fails in a novel, which is designed as a picture of real life. And, in real life, the man who was husband and father long before becoming a member of Parliament would have had his habits of conversation at home too firmly established to undergo so much change. He might possibly enough talk continual shop at his club, or even out at dinner, but not at home. But given the farcical point of view, and there is good workman-

ship; as there is also in a humorous account of the plucking of a political goose in a contested election for an Irish borough, where the author has wisely not attempted too much in the way of local colour, and has emphasised just the points which can be made to tell without much aid of that kind. The close of the story is not quite so well managed as the earlier part, and is over-melodramatic, but the whole book is readable, and the faults are surface ones; such, for example, as the oversight of describing a man who has been expelled from the army for cheating at cards, and has acquired an estate by marriage with a widow under very suspicious and suspected conditions, as serving the office of high-sheriff of his county.

The author of *Lost in the Crowd* is cursed with a taste for fine writing, not always attended with knowledge of the meaning of the words employed; so that such combinations as a "somniaferous pony" and "carnivorous diet" meet the reader's eye occasionally; while his faith in the French learning freely aired in the story is shaken by vocabularies like *morale*, *chaperone*, and, frequently, *bête noir*. The sentences are often tangled in construction, and a course of the late Dr. Hodgson's *Errors in the Use of English*, particularly the section on the collocation of words, would be a wholesome prescription. But, on the other hand, there is some capacity for framing a plot, telling a story, and depicting characters which are not merely wooden lay-figures. The main situation in this book is a strong one. A wealthy Englishman, travelling in the Southern States of America before the Civil War, forms a connexion with a beautiful octo-roon, whom he purchases from her father, and a son is born to them. She is apparently lost overboard in a storm on Lake Ontario, and he returns to Europe, where he marries an English girl, whom he persuades to adopt the boy, and let him pass for her own, while his succession to the unentailed estates is otherwise secured. The husband and wife die of malarial fever in Italy; and the story thenceforth centres around the boy, who has grown up in ignorance of his origin. His mother, who has married an Austrian prince, turns up again in search of him; and the latter part of the narrative is taken up with the effects of the discovery of the secret on all the persons concerned. The writer seems to exaggerate a good deal the degree of importance which would be attached in England to so slight an admixture as one-sixteenth part of Negro blood; but has got over this difficulty by making the tokens of coloured descent revive manifestly in the children of the hero's marriage, while, of course, the illegitimacy and supposititiousness remain in full force as food for the carrion crows of society. The whole conception is melodramatic and forced, but not weak.

Mrs. Raven's Temptation belongs to the school of Mrs. Henry Wood. It is also very similar in style, save that there are not so many details of toilet and table, of what the ladies wore, and of what everybody had for breakfast, lunch, dinner, tea, and supper, as usually occur in that lady's writings. It is perhaps most nearly akin to the

Shadow of Ashlydyat in handling; but the main situation of the plot is one which forms the turning-point of Henry Kingsley's best novel, *Ravenshoe*—save that there is a tangle of two or three children belonging to other persons than their ostensible parents and guardians, whose genealogies have to be cleared up, and their heritable rights settled, instead of but one, as in *Ravenshoe*. The interest of the story depends entirely on the unravelling of these puzzles; but there is one character of which something is made, though of an unpleasant kind—Evelyn Agate, a foundling brought up by poor but refined people, on whom she looks down, holding herself to be of superior station, and a probable heiress, while she is not only incurably self-seeking, but radically vulgar, under her surface veneer.

As the scene of the first volume of *A Chelsea Householder* lies entirely in the New Forest, and of all but a few pages of the third volume in Norfolk, while part of the second is in Whitechapel, the title is not a very helpful one. There is no plot, and but little incident, and yet the book, being written in an honest, realistic style, with occasional touches of higher quality, is pleasant reading enough. The "Chelsea Householder" is a young lady artist of considerable private means, who ends by going to live in the country as the wife of a clergyman of no particular brilliancy, but of manly character and much fondness for hard work. Such materials are of the slightest, but they have been treated so as to yield more than they seem to promise; and with a stronger theme next time the writer ought to produce a solid piece of work.

Misterton is a little story of the contention of two young ladies, one a fair angel, the other a dark semi-demon, for the possession of an eligible curate. The fair one contents herself with looking pretty; the dark one sets herself to win by active measures, and chiefly by nursing the hero through a brain fever which would have been fatal but for her care. Both are daughters of rectors, the dark one's father being incumbent of the parish where the hero has been working; the fair one's papa, Rector of Misterton, dying in convenient time for the patron to give the living to the hero, so that the fair young lady is enabled to return as mistress to the home of her childhood; whereas the dark one, turned out of house and home by her father as a punishment for her escapade in going off to nurse the curate, is dismissed to a sisterhood. That is the plot—no very striking one; and, short as the book is in mere bulk, the style is such as to make it very tedious, by reason of the prolix moralisings and other digressions which occur in its course.

In *Out of the Shadows* we have a kindly little religious story of a girl who, over-estimating her own claims, and dreaming of rising to some station higher than that of a village schoolmaster's daughter, rejects with angry indignation the offered suit of a young farmer, but finds good reasons for changing her mind later on. But it is rather hard on the model schoolmaster of the tale to put the vulgar solecism "different to" into his very first speech, which would justify his dismissal as

incompetent to teach English at any rate. The wood-cuts, of which there are three, are a marked disfigurement to the book, and would be better away.

RICHARD F. LITTLEDALE.

GIFT-BOOKS.

Sea Pictures, by James Macaulay, editor of the *Leisure Hour*, is the last, but by no means the least, of the "Pen and Pencil Series" issued by the Religious Tract Society. In selecting a subject of such wide and varied scope, Dr. Macaulay undertook a task of truly formidable dimensions, and he has executed it with the skill and mastery which might have been expected of so experienced a *littérateur*. The work is divided into four principal parts, the poetry, physical geography, harvest or natural products, and history of the sea, so that readers of both literary and scientific tastes will find plenty of congenial entertainment. Each part is so rich in well-selected material that it is hard to say which deserves most praise. It seems to us, however, that the chapter on physical geography is worthy of special mention, for, while containing much power of attraction, and even fascination, it goes so much deeper into the subject, and the style is altogether so much higher, than the average annual of the same class that it gives distinction to the whole work. It is impossible here to go through Dr. Macaulay's *Sea Pictures* in detail, but those who do so will be amply repaid. We need only add that the book is handsomely bound, and copiously illustrated with excellent engravings by eminent artists. Altogether, it is a gift-book of unusual merit, and can hardly fail to awaken an interest in, and create a desire for, a more thorough and personal knowledge of the sea. And therefore it is calculated to encourage that maritime enterprise which, in the words of the late Lord Beaconsfield, "has ever distinguished the English people, an object which must always be appreciated by all true Englishmen in all time."

Rosy. By Mrs. Molesworth. (Macmillan.) This book has to do with somewhat older children than those to whom Mrs. Molesworth usually introduces us, and is therefore, to grown folk at least, not quite so interesting. Whether young heroines of the school-room will like it better it is impossible to say. There is certainly one little boy in it of the "Carrots" and "Herr Baby" type; but Fie is kept in the background, and is not nearly so charming as his predecessors. Nor is it desirable, in our opinion, to reveal to children qualities of meanness and deceit in their elders. Children are so entirely trustful by nature that it is always a pain to them to find their trust destroyed, even in story-books. They delight in hearing about naughty children; but it will be a shock to most of them to find a governess can be untruthful and "pretending," as Rosy rightly calls Miss Pink. There is no particular story; but the conversations are so natural and easy that children will delight in them, especially as they are not broken by long descriptions and didactic phrases. There is a good lesson, however, to be learnt from *Rosy*, which is explained on the title-page by the motto—

"Smallest helps, if rightly given,
Make good impulse stronger."

Brothers of Pity, and other Tales of Beasts and Men. By J. H. Ewing. (S. P. C. K.) The tales that are told so prettily in this little book have all appeared before in the pages of *Aunt Judy's Magazine*, but young readers who are not fortunate enough to possess Aunt Judy's bountiful volumes will, we feel sure, welcome this collection. The story that gives its name to

the book is about a little boy who saw a picture of two men, belonging to the Florentine Order of Fratelli della Misericordia, carrying a bier. On being told the meaning of the picture, he forthwith resolves to imitate these kind "brothers of pity," and goes about in a black robe and mask burying all the dead birds, mice, or insects he comes across. This makes him acquainted with the burying beetles, who are at once admitted into his Order, and some interesting information about them is added in a note.

Wee Babies. Printed in Colours from Original Designs by Ida Waugh. Poetry by Amy E. Blanchard. (Griffith and Farran.) When Charles Lamb was asked by an over-curious lady how he liked babies, he replied, "B-b-b-boiled, ma'am." The baby à la Charles Lamb is about the only conceivable dish omitted from the menu of Ida Waugh. On the cover we have thirty distinct specimens; and this design is repeated—after the style known to babies' fathers on cheques—no less than one hundred times. The first picture inside introduces us to twins, while the frontispiece has already warned off the male intruder by its graphic realism. Need we say more to scandalise the disciples of Malthus, or to stir the longings of all mothers? In all seriousness, there is here a surfeit of babies—babies good and babies naughty, babies unclothed, babies long-clothed and babies short-coated, babies white and babies black. From these last we fancy that the artist must be an American; and not the less because she depicts all her nurses as *bonnes* and her mothers as fine, but somewhat sickly, ladies. Her drawing of children is excellent, as might be expected from so much practice; the grown people are somewhat Brobdingnagian. The rhymes are worthy of the pictures, and we can give them no higher praise. Altogether, in these days of aesthetic children's books designed really for the critics, the freshness and vigour of *Wee Babies* ought to win for it a wide success among the juvenile and matronly public.

The Kitten Pilgrims; or, Great Battles and Grand Victories. By R. M. Ballantyne. Illustrated by the Author. Engraved and printed by Edmund Evans. (Nisbet.) Mr. Ballantyne, as we have learnt from the title-page, is the author of the immortal history of "The Three Little Kittens who lost their Mittens," for which he deserves to receive a grant of kittens rampant for his supporters. But we cannot think that he has been well advised to venture on a continuation. The present book is an allegory, representing the fight against evil passions and vices. To make a kitten fight with spear and sword, and to give him a puppy dog for his faithful squire, is too much. Yet the book is by no means a failure. It consists of three parts—a narrative in prose, the same condensed into verse, and many illustrations, both in coloured plates and in wood-cuts—all from the same hand. Of these, the wood-cuts are distinctly the best; but none are bad, when the incongruity of the story has once been got over. Children will probably like the book more than grown-up people.

Cities of the World: their Origin, Progress, and Present Aspect. By Edwin Hodder. Illustrated. Vol. I. (Cassell, Petter, Galpin and Co.) To criticise this book closely, from the point of view of its subordinate title, would be unjust. It is a compilation, and not an original work, and a compilation for the benefit of the omnivorous reader. Only so much history is introduced as is capable of being rendered interesting; and not a few traditional myths are reproduced in all soberness. But, after making due allowances, we have here an excellent volume to put into the hands of an intelligent boy who wants to fill up the skeleton information of his geography book. The

descriptions are vivid and picturesque; and the same may be said of the illustrations. Of these latter all are good, but those relating to Venice strike us as very much above the usual standard of such a work. The American descriptions have been properly left to an American.

The Son of the Constable of France; or, the Adventures of Jean de Bourbon. From the French of Louis Rousselet. With Illustrations. (Sampson Low.) We have here the imaginary life of a son of the famous Charles de Montpensier, Constable of Bourbon, who fell at the storming of Rome in 1527. He is carried off by Moslem pirates, spends a few years as a slave at Oairo, performs prodigies of valour in restoring the crown of Abyssinia to its rightful owner, and finally becomes a great personage at the Court of Akbar. Here are sufficient materials for a story to win the suffrages of all true boys. And M. Rousselet is the very man to tell it. He has all the sprightliness of his compatriot, M. Jules Verne, without the superfluity of description into which M. Verne has fallen in his latest books. Our only complaint is that the rush of incident is almost too unceasing. Why is it that no Englishman has yet opened to English boys the romance of the East? We shall soon find them spelling Indian names in the French way, as our map-makers not unfrequently do in the German way. It may be worth noticing that *bhong* is not "a drink containing a large quantity of opium." The pictures are not more than tolerable.

FROM Messrs. Sampson Low we have also two more "books for boys," both of which (as also *The Son of the Constable of France* noticed above) have already appeared in the pages of the *Union Jack*. They are entitled *Winning his Spurs*, by Mr. G. A. Henty, and *The Midway on Board the Ship "Leander"*, by Mr. Bernard Heldmann. The former tells again the ever-fresh story of Richard Cœur de Lion, his wife Berengaria, and the minstrel Blondel. The latter is, we believe, its author's first attempt in what we may call the romance of adventure. Hitherto we have only read his narratives of school-boy life, and they were very good of their kind. We hope he will pardon our suggesting a little more attention to details. Boys require the epoch to be fixed by some historical allusions they can identify, and local scenes to be connected with names in their geography. We may add that the illustrations to Mr. Heldmann's book come out much better now than on their first publication; those to Mr. Henty's book are too small. The present young generation will have nothing but full-sized plates.

MESSRS. BLACKIE AND SON have sent us three of their books for boys—*Under Drake's Flag*, by Mr. G. A. Henty, sufficiently described by its title; *Facing Death*, by the same author, which tells how a pit-boy rose to be a colliery owner, though the main part of the story has rightly to do with his earlier days; and *In the King's Name*, by Mr. G. Manville Fenn. This last is a naval, and not a police story, the scene being, with praiseworthy originality, laid in the Jacobite times. Taking them together, the three stories are first rate in their class; but what has most attracted us to them is the quite unusual excellence of the pictures. We cannot find that the draughtsman's name is given, but it ought to be. The process of reproduction we take to be some kind of tinted lithography. It is not unworthy of notice that the paper and the printing are also far above the average. About stories by writers of proved popularity it is not easy to say much; but we have never seen their work more handsomely issued than in this case.

The Good Ship Barbara: a Tale of Two Brothers. By S. W. Sadler. (S. P. C. K.) This

is a capital book for boys, somewhat after the style of the late W. H. G. Kingston. The scene of the story is laid principally on the West Coast of Africa during the worst days of the slave-trade. The two brothers are, one a midshipman in the Royal Navy; the other, an apprentice in the merchant service. Their adventures—by land and sea, with sharks, wild beasts, savages, and slavers—are told in a way that will fill the school-boy's heart with delight. The volume is very neatly bound, and the illustrations are fair, though we are inclined to think the artist has not read the story closely. The author tells us at p. 186 that one of the lads has been robbed of his jacket and waistcoat by the Fann, and we are reminded of this fact at p. 211. He appears, however, fully dressed in the picture illustrating p. 204.

Battery and Boiler: an Electrical Story, by R. M. Ballantyne (Nisbet), is quite equal to any of the former books which have won for Mr. Ballantyne so well deserved a reputation. There is rather more instruction combined with the story than usual, but it is so cleverly inserted, that the interest never flags; and now, when the subject of electricity is attracting so much attention, there are many boys who will be glad to find some slight information on the subject in language which they can understand.

Fly-away Fairies and Baby Blossoms (Griffith and Farran) is a book of large coloured pictures of the Christmas card kind, prettily designed by Miss Clarkson. They will be likely to delight young children who do not always appreciate the more artistic works that are nowadays provided for them.

Adé: a Story of German Life. By Esme Stuart. (S. P. O. K.) A little novelette representing the ill-effects of mercenary and loveless marriage. The scenes are not characteristically German, and the story might have happened anywhere, but it has already appeared too often with the surroundings of English fiction.

The Illustrated Poetry Book for Young Readers. (T. Fisher Unwin.) A collection of modern and comparatively unknown poems arranged in a progressive order with regard to the age of children, adorned with many small illustrations. There are many verses that might well have been left in oblivion and without illustration, though we can pardon some worthless rhymes for the sake of such ballads as "The News Boys' Debt" and "Jack Chiddy," which the book contains.

Alone in Crowds. By Annette Lyster. (S. P. O. K.) There is an immense amount of life at high pressure in this story. That the father of the hero should have branded his brother, have killed a school-fellow, have been accused of murdering a priest, have been wrecked on a desert island, and have fallen overboard on his homeward voyage would be enough incident for most stories; but this is all crowded into the first few pages, and afterwards we have the hair-breadth escapes and almost miraculous adventures of his son, Amyas. The story is easily written, as if the wonders in it were not very wonderful, but the effect of the whole is to make us rub our eyes and ask if we have been dreaming of the long-haired stranger from the desert island.

Hector: a Story for Young People. By Flora L. Shaw. (George Bell.) A story of an English boy in French country life; delightfully told, and full of picturesque scenery and suggestive teaching. The sketches of French peasants, of the stern *Sœur Amélie*, of the little French heroine and her hero, the English Hector, are vivid and charming; and one picture after another of forest life and foreign customs is brought before the reader, who is sorry to see the number of pages to be read diminishing all

too quickly. Hector, the brave, bright English boy, with his high thoughts, his love of the wild birds, his respect for honest labour, and his chivalrous sympathy with the distressed, is exactly the type of hero that it is good for children to have before them, and will meet with sympathy and admiration; while the scrapes he falls into so readily will make the children feel that there is no "goodness" in him to awake their antagonism. We could wish that French people were not represented as talking broken English in their own country—a habit which is too common among those who write of foreign life, and spoils the illusion.

NOTHING could be more welcome than the reprints of Washington Irving's *Old Christmas* and *Bracebridge Hall*, each with more than one hundred of Mr. R. Caldecott's illustrations, which Messrs. Macmillan have just added to their sixpenny editions. Except for permanency, we would as soon have them as the original editions at six shillings. Mr. Caldecott has won many triumphs since, but he has never had a subject more congenial to his pencil. Of the publishers also it deserves to be said that they have not allowed the demand for "people's editions" to induce them to issue any but works of the first class in this form. It is very important that this literature should maintain its reputation, and not become merely cheap literature.

NOTES AND NEWS.

CAPT. R. F. BURTON has unexpectedly been ordered on a temporary mission to the neighbourhood of Egypt. The precise object of the mission has not yet transpired.

We understand that Mr. Browning has finished enough fresh minor poems to form a thin volume like the two last that he has published; but it is probable that he will keep them back till he has completed a longer poem to come out with them.

We are glad to learn that the share which the late Dr. Burnell was to have contributed to Col. Yule's *Indian Glossary* was practically completed before his death. The work only awaits a few months of the leisure which Col. Yule finds it so hard to obtain to be ready for the press. It is also good news to hear that Dr. Burnell's translation of the *Laws of Manu*, in Trübner's "Oriental Series," has been left ready for printing. Dr. Burnell talked at one time of leaving his magnificent library, on which he must have spent several thousand pounds, to the Strassburg University; but, under the terms of his will, we believe that it will be sold in London, after having first been elaborately catalogued by Messrs. Sotheby.

DR. WHITLEY STOKES, the well-known Celtic scholar, has been elected an honorary fellow of Jesus College, Oxford.

We understand that Mr. Robert Brown, jun., the indefatigable author of *The Great Dionysiak Myth*, is now working at the origin of the extra-zodiacal constellations. He hopes to be able to publish early next year a monograph on "Eridanus, River and Constellation," in continuation of his *Law of Kosmic Order*.

MESSRS. W. H. ALLEN have in the press, and hope to issue before Christmas, a *Life of Admiral Lord Hawke*, by Prof. Montagu Burrows, of Oxford, whose connexion with the naval profession has given him peculiar facilities for dealing with the career of the victor of Quiberon. The family papers have been placed at his disposal; and there will be as frontispiece an engraving from an excellent picture of the Admiral in the possession of his descendants. He has included in the book two independent treatises upon the origin of the English wars in the reign of George II., and upon the state of

the Royal Navy. The courts-martial on Admiral Mathews and his officers, on Gen. Sir John Mordaunt, and on Admirals Byng and Keppel will receive illustration from original sources in the body of the work, which will also comprise some account of the career of all the leading naval officers of Lord Hawke's time.

MESSRS. SMITH AND ELDER announce for speedy publication a new work by Mr. Reginald Stuart Poole (Keeper of the Coins in the British Museum), entitled *Cities of Egypt*.

MR. GEORGE BADEN-POWELL is seeing through the press a volume in part embodying articles that have appeared in the *Nineteenth Century*, the *Fortnightly*, and other Reviews, and having for its main subject-matter recorded results of "State Aid and State Interference" with reference to industry and commerce.

WE notice with pleasure that Canon Barry's "Boyle Lectures," delivered in 1876, have been translated into German. This circumstance, among others, is a gratifying sign that the German theological world is beginning to pay more attention to the productions of contemporary English divines than has hitherto been the case.

MISS JANE LEE, the Sanskrit scholar, and Lecturer on French and German Literature at Nuneham College, is editing the first part of *Faust* for Macmillan's series of Foreign Classics.

NEXT week Messrs. Simpkin, Marshall and Co. will publish a little gift-book which cannot fail to be welcome, wherever it goes, from its wholesome and stimulating contents. It is to be called *The Book-Lover's Enchiridion*, and will be in the form of the dainty *Elsevir* classics so popular in the seventeenth century. The subject of the volume is "The Solace and Companionship of Books," and what has been said on this subject from the time of Solomon down to Carlyle and Ruskin. The passages given are selected from the best writers—from Chaucer and Bacon downwards—including some of the most eminent names of the present century. The most distinguished American authors also contribute their thoughts to the general store. Living writers, and representatives of those who have recently passed away, have given the compiler permission to use the works in which they have a vested interest. The compiler has gone to the original sources for his matter, and has in one or two cases only resorted to existing collections of extracts. The accuracy of the text may therefore be relied on. The Edinburgh publisher is Mr. David Douglas; the Glasgow and Manchester publishers are, respectively, Mr. David M. Main and Mr. J. E. Cornish. The volume will go by post to any part of the kingdom for twopenny.

MR. UNWIN will publish in a few days a novelty in Christmas story-books, entitled *The Prince of the Hundred Soups: a Puppet Show in Narrative*, edited by Vernon Lee. The editor, whose studies and essays on art in Italy are well known, contributes an Introductory Preface, showing how the story is written in the manner of the mask-comedies, popular in France and Italy during the seventeenth and eighteenth centuries, which suggested to Watteau the designs for his celebrated album.

MESSRS. GRIFFITH AND FARRAN will shortly publish a translation of Henrik Ibsen's *Doll's House*, under the title of *Nora: a Norwegian Drama of Social Life*. Miss Frances Lord has made the translation, which will be prefaced by a sketch of the life and works of Ibsen.

MESSRS. CHATTO AND WINDUS will publish, at the end of this month, a novel by Mr. Henry W. Lucy, entitled *Gideon Fleyce*. It has been described in some quarters as a political novel; a designation which, we understand, the author

himself does not adopt. Mr. Lucy has taken advantage of exceptional opportunities to narrate some political episodes and to sketch some types of political character. But the novel depends for its main interest upon a wider range of incident and character.

THE Religious Tract Society are about to issue the following works:—*Romanism*: an Historical and Doctrinal Examination of the Creed of Pius IV., by Rev. R. C. Jenkins; *Historic Landmarks in the Christian Centuries*, by Richard Heath, author of the *Life of Edgar Quinet*—this work will be profusely illustrated, and form a valuable gift-book. The first edition of Dr. Hanna's *Life of our Lord* being already exhausted, the society propose to issue forthwith a new one on larger paper. They also have in preparation a volume on *Ancient Religions*, by Canon Rawlinson; a sketch of the life and work of St. Peter, entitled *Horae Petrinae*, by Dean Howson; *Ants and their Ways*, by Rev. W. Farren White; and a little volume for children on scientific subjects, entitled *Twilight Talks*; or, *Easy Lessons on Things about us*, by Miss Agnes Giberne.

MESSES. GILBERT, of Southampton, will shortly publish, by subscription, *A Royal Warren*; or, *Picturesque Rambles in the Isle of Purbeck*, by Mr. Charles E. Robinson, illustrated by Mr. Alfred Dawson.

We understand that Messrs. Hildesheimer and Faulkner will issue this month an illustrated gift-book of poems for children, by Mr. F. B. Weatherly, entitled *Sixes and Sevens*, with coloured illustrations by Jane N. Dealy.

A PICTURE-BOOK in chromo colours and chromo tint, entitled *The Tiny Lawn Tennis Club*, by the designer of the *Children's Kettle-drum*, will be issued shortly by Messrs. Dean and Son. The chromo printing has been done by Mr. L. Van Leer.

THE annual collective meeting of the five sections that form the Institut de France took place on Wednesday, October 25, the anniversary of the day on which the Institut was constituted in its present form in 1795. The meeting was presided over by M. J.-B. Dumas, the eminent chemist, who happens to fill the office of *directeur* of the Académie française. He took as the subject of his address the history of the five sections of the Institut. Each of these, in their turn, were represented by one of their own members chosen to deliver an address on their behalf. For the Académie des Inscriptions et Belles-Lettres, M. Edmond le Blant read a paper on "The Christians amid Pagan Society during the Early Days of the Church;" for the Académie des Sciences, M. A. Milne Edwards on "Deep Sea Explorations made on Board *Le Travailleur*;" for the Académie des Sciences morales et politiques, M. Glisson on "The Origin of the Dress of the Magistracy;" for the Académie des Beaux-Arts, M. Ch. Gounod on "The 'Don Juan' of Mozart." This last was naturally the most popular address of all. The remaining section of the Institut is the Académie française. On the same occasion was announced the award of the prix Volney—the highest distinction in France for philology. Seven works had been submitted, and the successful ones, though not by Englishmen, are at least both written in English. A gold medal of the value of 1,500 frs. (£80) was awarded to Dr. Rudolf Hoernle for his *Comparative Grammar of the Gaudian Languages* (Trübner, 1880); and a medal of 300 frs. (£12) to the Rev. J. G. Christaller for his *Dictionary of the Asante and Fante Language* (Basel, 1881).

DR. EDUARD LOHMEYER, of Kassel, has just published a dissertation on the life, works, and MSS. of Ulrich von Türlheim, one of the continuers of Wolfram von Eschenbach's *Willehalm*.

MR. W. J. BOLFE has added "Troilus and Cressida" to his pretty series of Shakspeare's plays, which is now nearly complete. As this play, like "Timon of Athens," is not suitable for school use or for social reading, the text is given without expurgation, he says. He takes his critical comments from Coleridge, William Godwin (*Life of Chaucer*), Verplanck, Dowden, Grant White, and Furnivall. The notes contain full extracts from Chaucer's "Troilus," Chapman's "Homer," Caxton's "Troy Book," &c., and much excellent material. The carefulness of the collation may be judged of by the note on "Distains," I. iii. 241: "The Var. of 1821 prints 'disdains' in text and notes, not recorded in the Camb. ed." It is needless to say that Mr. Rolfe does not follow Mr. Hudson in spoiling Shakspeare's "the secrets of nature have not more gift in taciturnity," by inserting Heath's "even" after "secrets."

We were wrong in conjecturing last week that the copyright of Lane's "Arabian Nights" has expired. Messrs. Chatto and Windus inform us that they have bought both the copyright and the wood-cuts of the revised edition of 1859, of which their recent issue is a reproduction. The more credit to them for issuing it at such a low price.

WITH reference to the letters in the *Times* of 1853, abusing the Emperor of the French, and signed "An Englishman," which are attributed in the recently published volume of Miss Mitford's Correspondence to "an undergraduate at Oxford, a lad called Vernon Harcourt," and which a correspondent in the *Academy* of last week claimed for Mr. Kinglake, we have reason to believe that the writer was really Mrs. Grote.

EPIGRAMS.

I.

'Tis human fortune's happiest height, to be
A spirit melodious, lucid, poised, and whole:
Second in order of felicity
I hold it, to have walkt with such a soul.

II.

Our lithe thoughts gambol close to God's abyss,
Children whose home is by the precipice.
Fear not thy little ones shall o'er it fall:
Solid, though viewless, is the girdling wall.

III.

To Art we go as to a well, athirst,
And drinking see our shadow, and the sky's,
But wholly 'neath the water must be mersed
To clasp the naiad Truth where low she lies.

IV.

Think not thy wisdom can illume away
The ancient tanglement of night and day.
Enough, to acknowledge both, and both reverse:
They see not clearliest who see all things clear.

V.

I close your Marlowe's page, my Shakspeare's ope.
How welcome—after gong and cymbal's din—
The continuity, the long slow slope
And vast curves of the gradual violin!

VI.

To keep in sight Perfection, and adore
The vision, is the artist's best delight;
His bitterest pang, that he can ne'er do more
Than keep her long'd-for loveliness in sight.

VII.

The children romp within the graveyard's pale;
The lark sings o'er a madhouse, or a gaol;—
Such nice antitheses of perfect poise
Chance in her curious rhetoric employs.

VIII.

If Nature be a phantasm as thou say'st,
A splendid fiction and prodigious dream,
To reach the real and true I'll make no haste,
More than content with worlds that only seem.

IX.

Who never knew a sorrow grow his friend
And half regretted from his threshold wend?
Who never longed his tear-scorch'd eyes to lave
Rather with any than with Lethe's wave?

X.

Tolling and yearning, 'tis man's doom to see
No perfect creature fashioned of his hands:
Insulted by a flower's immauculacy
And mocked at by the flawless stars he stands.

XI.

'Tis meet the Poet sometimes walk, unchild,
In vagueness of the word-spun veil half-hid.
'Tis meet the mountain sometimes be allowed
To cloak its heaven-conversant peaks with cloud.

XII.

The gods man makes he breaks; proclaims them
each
Immortal, and himself outlives them all:
But whom he set not up he cannot reach
To shake His cloud-dark sun-bright pedestal.

W. W.

MAGAZINES AND REVIEWS.

As was to be anticipated, the *Fortnightly* has become another *Nineteenth Century*—shall we say, a second or a third? The new editor has succeeded in bringing together an earl, a pair of M.P.'s, a baronet, a knight, a head of a house, a professor, and one or two more. He has also got two anonymous Conservatives to vilipend their leaders in a style that has hitherto been confined to another class of journalism. Lastly, he concludes with a review of "Home and Foreign Affairs" which is almost a caricature of what used to appear under this heading. No doubt, this is what the public likes, and we have no right to complain. But we shall not readily abandon the tradition—now only a hope—of a magazine with an editor and a staff who not only possess vigour of thought and vigour of expression, but certain ideas in common and a common aim. Of all the articles, we feel disposed to notice only that of Mr. Bryce, which gives the best possible defence of political corruption in the United States—and poor is the best (we mean the best defence).

THE *Contemporary* gives the second of Prof. Max Müller's Cambridge Lectures upon India, this one being devoted to "The Truthful Character of the Hindus." Here he enters upon new ground, and boldly throws down a challenge which we venture to say no one will take up. Whether we go back into history, or examine the evidence of those Englishmen who know the country best, the moral character of the Indians comes out worthy of their ancient religion. The accusation of habitual lying is of very modern origin. After what Prof. Max Müller here says (not undeservedly) of Mill's *History*, why will not somebody undertake a new one? The materials are rapidly accumulating, and it is absurd to wait longer until everything be made clear. Before passing on, we must protest against Prof. Max Müller's curious perversion of the word "Positivist," as if it were synonymous with "materialistic" or "sensually selfish." Two other articles—by M. Jules Simon and M. Emile de Laveleye—should also be read.

Le Livre for October has to offer its readers, besides the usual ephemeral matter and the conclusion of M. Mourant's articles on "Jamet le Jeune" (articles which have been extended to a length at least not too scanty for the importance and interest of the subject), a long original paper of a curious and rather novel kind. This is nothing less than a sketch of his own literary career by M. Arsène Houssaye, illustrated with a portrait *hors texte* which is surrounded with an *encadrement* not unworthy of the subject's beloved eighteenth century, and

which, by-the-way, bears a certain resemblance to the late Lord Lytton. One need not take M. Arsène Houssaye at a very serious literary valuation to enjoy this *Histoire de ma Plume*, as he calls it. That it is full of personal traits will be sufficient to commend it to one class of readers; that it is written in its author's light and lively style will attract others; while the recollection that M. Houssaye has been the friend of hosts of men not a few of whom have been greater, though less fortunate, than himself will engage a third.

THE most notable article in the *Revista Contemporanea* of October 15 is "Madrid in Danger," by Dionisio Chañoli. He shows that the mortality of Madrid is increasing at a portentous rate—from 46·5 per 1,000 in 1881 to 71 per 1,000 in January 1882—and this in spite of improved sanitary conditions. The cause lies in vicious social habits and in an impaired morality. Señor Muñoz y Manzano continues his interesting biography of Goya. Luis Barthe has a fantastic dramatic scene, "Imaginary Space," in which the hero, a visitant from another world, unconsciously satirises the society he meets here. The fourth lecture in the Natural Science course is by F. Iniguez, on the nebular theory of Laplace, and its developments.

OBITUARY.

ANTON EDZARDI.

ENGLISH papers did not mention at the time—last June—the death of Prof. Anton Edzardi, of Leipzig; and to many the brief reference in the *Literarisches Centralblatt* to Mogk's obituary notice in Storm and Bugge's *Archiv* will have been the first intimation of the great loss German philological and mythological studies have thereby sustained. Though still young—he must have been well under forty—Edzardi was one of the recognised leaders of the new German philological school—a position well deserved by the laborious accuracy, the keen insight, and the fine enthusiasm of his critical studies. His independently published work is comparatively small. In 1875 he brought out the standard critical edition of the *Kluge*, following it up in the next year with his *Untersuchung über das Gedicht von St. Oswald* and two small volumes—*Schön Helga und Gunnlaug* and *Bilder aus deutscher und nordischer Sage*—in which his poetical talents and power of reproducing what is best in Northern song were strikingly exemplified. For the next few years he was a frequent contributor to the *Germania* and other philological journals, but above all to Paul and Braune's *Beiträge*, not a volume of which but was made notable by some contribution of his. In 1880 he published the work by which he will perhaps be best remembered—a revised edition of F. von der Hagen's translation of the *Volsunga, Ragnar, and Nornagest Sagas*, with full critical apparatus, and a masterly introduction dealing with the genesis and development of the Teutonic Heldensage. Last year appeared his translation of the *Volsunga Saga* alone, without the apparatus and notes of the larger edition. An ideal Edda editor has, it may be feared, been lost in him. During the period of purely destructive criticism which Jessen inaugurated, and which culminated in the extravagances of Bugge and his pupils, Edzardi did not, like some other scholars, lose his head. While fully recognising the value of much of the new criticism, he maintained a "möglichst conservative" position, to use the words of his friend and pupil, Mogk. Indeed, his refutation of Vigfusson's theory, that the majority of the *Saemund Edda* lays were composed along the Northern and North-western coasts of the British Islands, had much to do

with the discredit into which the new views have fallen.

Englishmen have especial reason to deplore his loss. He had taken up the study of Celtic, and was working at it to the last with his wonted ardour. What progress he had made may be seen by the able essay he published in the *Beiträge* on the relationship of Celtic and Scaldic metres. We might reasonably have hoped, from his thorough mastery of the best methods of comparative philology and mythology, to have received at his hands a Celtic Mythology worthy of standing by the side of Grimm's great work. It is sad to think of so much promise which can never be fulfilled. But Edzardi's labours have at least been immediately fruitful. He leaves behind him a worthy array of devoted pupils to carry on his work. And many who only knew him through his writings felt the influence of his scholarly spirit, and thank him for the encouragement he unknowingly gave them.

ALFRED NUTT.

IN MEMORIAM

THE LATE DR. A. BURNELL.

Guernsey : Oct. 25, 1882.

MY personal knowledge of the late Dr. A. Burnell enables me to fill some of the blanks which Prof. Max Müller acknowledges in his obituary notice. He has given you the Sanskritist—the kind, helpful scholar; I would like to give some idea of the man. I first knew Dr. Burnell in 1863, when (both of us newly arrived in India) we met at Calicut, where he was assistant magistrate. He took great interest in the language, the customs, the history of the Malayalam country; and his acquaintance with Sanskrit soon became so remarkable that he was known by the people of the country as "Burnell Shastri." I doubt not that his being first stationed at the place where Vasco de Gama landed—where the Portuguese and Dutch contested the dominion of India—led him towards his historical studies. He was well acquainted with both their languages—indeed, he had a most remarkable talent for languages, European as well as Oriental—and he was thus able to study the original accounts of early travellers in the East. After some years' separation, I met him again when he was judge at Mangalore. I was then engaged in exploding the myths and sensational stories about Indian snakes, and reducing ophiology to a reasonable basis; he was, if I may mention his great work in the same breath with my humble efforts, engaged in clearing Sanskrit studies from the myths which encumbered them, and which delude the unwary. (Witness M. Fontane's *Inde védique* and other works with more pretensions to Sanskrit scholarship.) We had thus a common principle of work, however different the direction. We afterwards found a stronger bond of union in harmony of religious opinion. Dr. Burnell first became acquainted with Positivism in 1867—and in no superficial way; the philosophical system had full influence over him. In the Preface to his edition of the *Sāmavedhānabrāhmaṇa*, he had considered some curious Vedic superstitions from this point of view. His religious sympathies, ripe for a later adhesion to the Positivist religion, had always been rather Catholic, while his family was of Jewish origin. I mention this because he never concealed it from his intimate friends, and disliked the practice, common among persons similarly circumstanced, of concealing their descent. He took great interest in the colony of Indian Jews at Cochin, and founded a scholarship in their school.

Prof. Max Müller has given a sketch of his work as a scholar—hard, ungrateful, pioneer work, clearing away myths, and making ready the ground for future scholars; I will only

speak of the works not mentioned in the obituary notice. When I returned to India in 1877, I found Dr. Burnell finishing a *Glossary of Indian Terms*, which he had undertaken in collaboration with Ool. Yule. This cost him great labour, and necessitated the formation of a special library at an immense expense. For this work he had read all the earlier Portuguese and English writers on India—above two hundred in number. The year before, he had made an archæological visit to Java, and there he met another devoted worker, Miss North, engaged in her paintings of tropical plants and scenery. Owing to his Dutch connexions, he had exceptional facilities for observing the condition of Java; and he returned to India more dissatisfied than ever with the English management of the country—vexed also at the treatment he received from the Madras Government, which, becoming somewhat awake to the eminence of Dr. Burnell, encouraged him in his great undertaking of cataloguing the Tanjore MSS., but had, not very considerably, doubled his official work by amalgamating the Tranquebar with the Tanjore court. The worry which this caused him precipitated the utter break-down of his health. At the end of 1877 I had the pleasure of seeing him at Tanjore at the time when Miss North passed through on her Indian travels. Dr. Burnell took the greatest pleasure in facilitating her work. In his encyclopædic knowledge, natural science had no small place; he knew the history of every Indian tree, and was enabled to procure for Miss North most of the sacred plants of India. The beautiful museum with which she has endowed Kew Gardens contains many reminiscences of Tanjore as shown to her by Dr. Burnell.

In the meantime, his labours on the Catalogue of the Tanjore MSS. were telling severely on his health; he was struggling to last out the twenty years of India which would earn him a competent retiring allowance, but this he never actually accomplished. In 1879 he was obliged to make a flying visit to England for medical advice, and he returned to his work rather shaken than improved. The Catalogue, which he often declared was killing him, was finished at last, though the errata and addenda were not published until the year following. He appreciated highly the recognition of his work by learned societies; but its recognition by the Indian Government was hardly of the kind to afford him much gratification. At the beginning of 1880, there was a distribution of Stars of India and Companionships of the Indian Empire; and he found himself included in the inferior category of notables. No sooner did he get the millstone of the Catalogue off his neck than he took to lighter work. He formed the generous idea of reprinting some of the rarer books of the Positivist Library; and he began with Adam Smith's *History of Astronomy*, which was printed at Mangalore for the use of his co-religionists. He also began working at the translation of Manu for the Clarendon Press. In April he wrote—

"I am hard at work on Manu, but am now sure that it is not older than the fourth century A.D., though founded on much older materials. I have also nearly finished printing a small quarto (of some 150 pages) which has cost me much labour; it is a tentative list of books and MSS. relating to the history of the Portuguese in India proper. I only print fifteen copies, as I hope to bring out similar lists for the Dutch, French, and English. I hope eventually to make them good books. Historians nowadays neglect the most important materials through ignorance."

Of this kind were all Dr. Burnell's labours. He toiled that others after him might work with ease, content to devote himself to ungrateful tasks if only they were useful to others.

But his Indian career was soon to close. In

the middle of 1880 he was attacked with partial paralysis, and was hurried away by his medical advisers. The voyage home did him good, and he went on to Carlsbad, where he improved, until an attack of pneumonia drove him to San Remo for the winter. He was hardly settled there than he began work again. In December he wrote, "What little work I am allowed to do is devoted to preparing Hippocrates on 'Air, Water, and Situation,' with a Latin, French, and English version, for the Positivist Library." He made an excursion to the chief cities of Northern Italy in search of rare books, principally for this work. In March 1881 he wrote to me:—"The printing is going on, and I have nearly everything printed about Hippocrates to refer to—many a huge folio; how I shall get them to England I don't know." While at Venice he found the Italian version of the letter from the King of Portugal to the King of Castille giving an account of the voyages and conquests in the East Indies. This rare letter he reprinted, with valuable notes, in a small presentation edition. He came over to England in the autumn of last year to visit his aged mother; I saw him then. He was to have come over this year in order to take the Sacrament of Maturity in the Church of Humanity on the occasion of his attaining his forty-second year. But he was, I believe, hurried over by the last illness of his mother, and, while staying on at the house where she had lived, he was apparently seized by one of his old enemies, pneumonia. I knew nothing of his last illness; suffering for years past, he had become accustomed to pain and disease. He made light of them, and caused his friends the greatest anxiety by his lonely life. Always anxious to avoid spreading pain, he never used to tell me of his illnesses until they had passed, and thus I was surprised by the news of his death. It was a severe shock to learn through the common death-column of a newspaper that this bright life had passed away unperceived. For to great learning he joined a buoyancy of spirits which was astonishing to witness; he had the sweetest temper, the greatest eagerness to help, and the utmost modesty. He made light of his labours:—"That I do anything at all is simply because I live a reclusive life necessarily, and want amusement." And now that he is gone, I cannot but feel how unappreciated he lived, what a life of devotion has now closed, what a great mind has passed away. Truly of him it may be said—

"Entro v'è l'alta mente u' al profondo
Saver fu messo, ohe, se il vero è vero,
A veder tanto non surse il secondo."

EDWARD NICHOLSON,
Surgeon-Major A.M.D.

PS.—There is a good photograph of him taken last year by Lombardi, of 13 Pall Mall East.

CORRESPONDENCE.

DARWIN'S RELIGION.

Jena: Oct. 28, 1882.

Da im No. 545 der ACADEMY (p. 279) der wichtige Brief von Charles Darwin über Offenbarung nicht richtig wiedergegeben, sondern nach einer englischen Rück-Übersetzung aus der deutschen Uebersetzung copirt ist, so ersuche Sie hierdurch im Interesse der Wahrheit, die ganz getreue Copie der englischen Original-Textes in dem nächsten Nummer der ACADEMY reproduciren zu wollen. Sie finden dieselbe auf p. 60 der beifolgenden Separat-Ausgabe meiner Eisenacher Rede (Note 17). [Die Naturanschauung von Darwin, Goethe und Lamarck, Jena: Fischer.] Ich bemerke noch

ausdrücklich, dass im Englischen-Original ein deutscher Punkt hinter "Revelation" steht, und dass der folgende Satz völlig getrennt, mit einem:—"As for a future life" &c. beginnt. Die geistreiche Interpunktions-Hypothese, welche Mr. O. M. Ingleby in No. 546 der ACADEMY (pp. 296, 297) versucht hat, ist mithin völlig irthümlich.

Ich hatte den englischen Original-Text des Briefes—gleichzeitig mit meiner Eisenacher Rede—am 18 Sept. an die Nature gesandt; leider hat dieselbe aber bloss letztere, nicht erstere, zum Abdrucke gebracht.

Professor Dr. ERNST HAECKEL.

"To Nicholas Baron Mengden.

"June 5, 1879.

"Down, Beckenham, Kent.

"Dear Sir! I am much engaged, an old man and out of health, and I cannot spare time to answer Your question fully—provided it can be answered. Science has nothing to do with Christ; except in so far, as the habit of scientific research makes a man cautious in admitting evidence. For myself I do not believe, that there ever has been any Revelation. As for a future life, every man must judge for himself between conflicting vague probabilities.

"Wishing you happiness,

"I remain, dear Sir, Yours faithfully,
"CHARLES DARWIN."

In the National Reformer for October 29, 1882, is the account of a visit paid to Darwin in the autumn of last year by Dr. Ludwig Büchner and Mr. Aveling. Darwin is there reported as having said:—"I am with you in thought, but I should prefer the word 'agnostic' to the word 'atheist.' . . . I never gave up Christianity until I was forty years of age"—and in reply to a question why he had given up Christianity: "It is not supported by evidence."

RÂM MOHUN ROY.

33 Hamilton Road, Highbury, London, E.:
Oct. 30, 1882.

The want of an adequate biography of the Râjâ Râm Mohun Roy, the founder of the Brâhmo Samâj, has long been felt by a great number of persons who, from various stand-points, are interested in the religious life of India. Having been a warm admirer of the Râjâ ever since his visit to England about fifty years ago, and having worked in connexion with the Brâhmo Samâj for the last thirteen years, I have gradually become acquainted with many Bengali friends and correspondents among the members of his own Church. From some of these I have received very valuable information concerning him which is scarcely known out of his own country, and (with the entire concurrence of these friends) I have decided upon compiling a biography of him which shall combine the substance of these Indian materials with other original information which I have been so fortunate as to procure from English sources. But there are, or at any rate there have been, two collections of papers in England which have hitherto baffled all my efforts to discover.

Râm Mohun Roy was domiciled for nearly two years (1831-33) in the house of Messrs. John and Joseph Hare, of 48 Bedford Square, London, brothers of the well-known educationist David Hare, of Calcutta. The Rev. James Long (formerly of Calcutta) has informed me that he was told in 1847, by Mr. John Hare, that he had then in his possession a quantity of papers which would be of great service to any biographer of the Râjâ. About eighteen or nineteen years later, after the three Hare brothers were all dead, the late Miss Carpenter, of Bristol, received a somewhat similar intimation, which she thus described in the Appendix

to her *Last Days in England of the Rājā Rām Mohun Roy* (pp. 254, 255), published in 1866:—

"During the preparation of this work, information has been received from one of the family of the late Joseph Hare, Esq., 'of whom the late Rājā was the intimate friend and guest, that she has in her possession letters and documents which are of the utmost importance for such a work.' These have not, however, been entrusted to the editor.

"A box of papers, labelled 'Rāmmohun Roy,' exists also in the keeping of a widow lady, the father of whose late husband was an intimate friend of Rāmmohun Roy, who entrusted them to him. It is thus possible that important writings of Rāmmohun Roy's may yet be discovered and given to the world."

I have consulted Miss Carpenter's relatives and friends concerning both these statements, but they are unable to identify either of the parties to whom she referred. Who was the "widow lady," no one can conjecture. As to the Hare papers, I have traced out a solitary surviving member of the family, but she has no knowledge whatever upon the subject, and can give me no clue to the identity of Miss Carpenter's informant. It is now sixteen years since this last assurance was received of the continued existence of these papers, and what has become of them, no one can tell. But as all private search has failed, I write this letter in the chance of its meeting the eyes of some person who may be able to throw light on the subject. If either of these collections of papers have been preserved, it must surely have been in the hope of future use. Should their unknown possessors read this letter, I earnestly request them to communicate with me at my above address. I think I can give sufficient proof that I have been honoured with the confidence of Rām Mohun Roy's real friends in India, as well as in England, who encourage me in the project of compiling his biography, and will rejoice if I am permitted to look over these precious papers, and take copies of all that may be useful for my work. One document which I especially want is the journal which he kept of his Western voyage and travels with the express intention of publishing it for the benefit of his countrymen.

There are two other documents which I very much want, which have been printed, but appear to be now inaccessible—(1) Those numbers of his Bengālī periodical, the *Sangbād Kāmuḍī*, in which the Rājā published his recollections of his early travels in Tibet; (2) The English translation of the discourse (not by himself) which was delivered at the opening of the first Brāhmo Somāj in November 1828. Of this discourse, the Rājā presented copies to Capt. Froyer, Mr. James Pattle, and Dr. Tuckerman, of Boston, U.S., as is recorded in letters to those gentlemen; but the discourse itself I have not been able to obtain. Yet this (either in English or Bengālī), and also his Thibetan reminiscences, may be preserved in some Indian library, in which case I beg of their possessors to let me borrow them.

For any well-attested facts or personal reminiscences of the Rājā with which any of his Indian or English friends will be so kind as to supply me, I shall also be extremely grateful.

SOPHIA DOBSON COLLET,

Editor of the *Brāhmo Year-Book*.

BEDD GELERT.

Becton, Wark, Northumberland: Oct. 28, 1882.

In looking through the Vinaya Pitaka of the Chinese Buddhist collection of books, I came upon a story which bears a marked likeness to the tale of the dog Gelert. The Chinese book dates from the time of Fa-hien (412 A.D.), who translated it from an Indian original which he had brought from Paṭāliputra. It was there

supposed to date from the time of Asoka's Council (say, 230 B.C.). The story runs thus (it arises from the history of Bimbāsāra's repentance):—

Nor was it only on this occasion that the King Bimbāsāra repented of his fault; but in years gone by there was a certain Brahman who, being very poor, had to beg daily for food enough to keep him alive. This Brahman's wife had borne him no child; but there was a young Na-ku-lo (Nakula, a mongoose) in the house, of which the master had made a pet as if it were his son. After this it came to pass that the wife of the Brahman bore him a son, on which he thought thus: "Certainly it was lucky for me when I took this mongoose as my child, for by this means [in consequence of this] my wife has borne me a child." Now, on one occasion, the Brahman, wishing to leave home to beg some food, enjoined on his wife, if she went out, to be sure to take the child with her, and not to loiter about, but to return home quickly. It happened, however, that, having fed the child, she went to grind at the mill, and forgot to take the baby. In her absence, a snake, attracted by the smell of the cream (butter) which the child had eaten, came towards the spot, and was about to kill it with its fang, when the mongoose, seeing the danger, thought thus with itself: "My father has gone out, and my mother, and now this poisonous snake would kill my little brother;" and so it is said:

"The poisonous snake and the nakula,
The little (flying) bird and the hawk,
The Shaman and Brahman,
The step-mother and the child of a former wife,
All these are mutually opposed and at enmity,
And desire, as with poison, to destroy one another."

At this time the mongoose attacked the poisonous snake and killed it, and tore it into seven parts. Then the mongoose thought: "I have killed the snake and preserved the child; I ought to make my father and mother acquainted with it, and rejoice their hearts." So he went out of the door and stood there with his mouth covered with blood. At this time, the Brahman, coming home, saw his wife in the outside house (where the mill was) without the child. On this he was angry, and expostulated with her. And now, as he entered the door, he saw the mongoose there with his mouth covered with blood. On this he thought: "Alas! this creature, being hungry, has slain and eaten the child;" whereupon, taking up a stick, he beat the mongoose to death. On entering his house, he saw the little child sitting upright in his cradle and playing with his fingers, while the dead snake in seven pieces lay by its side. Beholding this, he was filled with sorrow, and said, "Alas! for my folly! This faithful creature has preserved the life of my child, and I have hastily and without consideration killed it!" Then a Deva in the void took up the strain, and said:

"Let there be due thought and consideration,
Give not way to hasty impulse,
By forgetting the claims of true friendship
You may heedlessly injure a kind heart (person).
As the Brahman killed the nakula."

Moreover, Buddha said, "The Brahman was, at that time, Bimbāsāra rāja, and his repentance then was but his present condition of repentance for his faults, &c."

[The Vinaya Pitaka, according to the Mahā-saṅghika School, Kiñon iii., fol. 4.]

This story is probably the oldest form known of the Panchatantra tale, and of the Bedd Gelert. There is another version of this story to be found in *Past Days in India* (p. 92).

S. BEAL.

THE WORD "ROSE."

18 Bradmore Road, Oxford: Oct. 25, 1882.

Prof. Skeat in his *Etymological Dictionary* (s.v.) asserts with emphasis that the word "rose" is in its origin Arabic. We read, "The Greek *ῥόδον*, Aeolic form *ῥόδον*, is not even an Aryan word, but is of Semitic origin, from Arabic *ward*, a rose;" and in support of this statement references are given to Curtius' *Gr. Etymology*, sect. 515, and to letters written by Prof. Max Müller in the *ACADEMY* for 1874, vol. v., pp. 488, 576. Strange to say, neither of the authorities appealed to has one word in favour of a Semitic origin of "rose." No derivation for *ῥόδον* is suggested by Curtius himself; there is merely noted the fact that an Iranian (that is, of course, an Aryan) origin has been claimed for the word by some German scholars.

Prof. Max Müller is wholly for an Aryan derivation, and in his final reply to Prof. Wright, who had seemed at first to maintain that the Arabic *ward* was a Semitic word pure and simple, remarks that the matter in dispute between them was settled by the Cambridge professor's "admission that the word *ward*, though thoroughly Semiticised, came, very probably, from an old Persian word *vareda*." For Aryan cognates of *vareda* see Fick, ii. 423.

A. L. MAYHEW.

[Is not the word really of Armenian origin? See Wharton's *Etyma Græca*.—ED. ACADEMY.]

EUSKARIAN.

L'Espinet, Libourne, Gironde: Oct. 24, 1882.

Although the discussion in your columns about the proposed term "Euskarian" may seem to be exhausted, I trust you will allow me space for a short answer to Mr. Isaac Taylor's letter in the *ACADEMY* of October 14. I cannot agree with Mr. Taylor when he regards it as highly probable, if not as quite demonstrated, that Western Europe and Northern Africa were once peopled by races speaking languages of the Euskarian type. Such a theory may be supported by venturesome etymologies like those cited by Mr. Taylor; but to it there are numerous objections. We must first ask what is "the linguistic Euskarian type," since it is not dissimilar to that of the Finnish, Dravidian, and American. Why, then, should the term "Euskarian" be preferred to others? It will be sufficient to observe that in the actual state of linguistic studies the most probable hypothesis concerning the languages spoken in prehistoric times in the above-mentioned countries is not that of their unity or analogy, but, on the contrary, of their variety and diversity. Human languages appear to have grown like trees in a wood, which, in the first stage, are as numerous as possible, but are soon reduced to a few individuals, of which a very small number attain their full term of life. Numerous as were at first the local manifestations of human beings, the primordial languages were as innumerable. Primitive tribes had hardly any connexion with each other; many perished without leaving any traces; and it is only at a relatively recent age that examples are found of peoples or races spreading themselves over large spaces of territory. Such must have been also the case with languages; and I can hardly believe that any such "generalisation" can have taken place before the arrival of the Aryan in Western Europe.

JULIEN VINSON.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, Nov. 6, 7.30 p.m. Aristotelian: "Leibnitz and Wolf to Kant," by Miss M. S. Handley.
8 p.m. Royal Academy: "The Proportions of the Human Body at Different Ages," by Prof. J. Marshall.

TUESDAY, Nov. 7, 8 p.m. Biblical Archaeology: "A Demotic Papyrus containing the Malediction of an Egyptian Mother on her Son embracing Christianity" and "Two Demotic Documents of the Reign of Darius referring to a Marriage Contract," by M. Eugène Réville; "Some Recent Discoveries bearing on the Ancient History and Chronology of Babylonia," by Mr. Theo. G. Pinches.

WEDNESDAY, Nov. 8, 8 p.m. Microscopical: "Observations on *Strophomena sericea*," by Mr. T. B. Rositer; "Some Organisms found in the Excavation of the Domestic Goat and the Geese," by Dr. R. S. Maddox.

THURSDAY, Nov. 9, 8 p.m. Mathematical: President's Address; "In- and Circumscribed Polyhedra," by Prof. Forsyth; "The Explicit Integration of Certain Differential Equations," by Sir J. Cockle; "Compound Determinants," by Mr. R. F. Scott; "Quantic Curves in Space," by Dr. W. Spottiswoode; "Derivation of Elliptic Function Formulas from Confocal Conics," by Mr. J. Griffiths.

8 p.m. Telegraph Engineers: "The Munich Electrical Exhibition, 1882," by Mr. W. H. Preece.

FRIDAY, Nov. 10, 8 p.m. Royal Academy: Demonstration, "The Foot and Leg," by Prof. J. Marshall.

SATURDAY, Nov. 11, 8 p.m. Physical: "Three Historical Notes on Physics," by Prof. S. P. Thompson; "Conservation of Energy and the Theory of the Central Forces," by Mr. W. R. Browne.

SCIENCE.

Text-Book of Geology. By Archibald Geikie, Director-General of the Geological Survey of Great Britain and Ireland. (Macmillan.)

FOR some time past teachers of geology have found it no easy matter to recommend a text-book to their classes. If only a short manual suited to beginners were required there was no difficulty, but to find a book adapted to the wants of the more advanced was impossible. There was, indeed, the *Student's Manual* of the late Prof. Jukes, edited and enlarged by Dr. A. Geikie himself; but this work, though excellent in some parts, left much to be desired in others, and, further, has been for some time out of print. Lyell's *Student's Elements*, like the work just named, is rather unequally balanced, and, for some reason or other, is a difficult book to "get up." Of Prof. Green's *Geology for Students*, good as it is in some respects, one volume only has been published, and the other has been expected in vain for some years; so that a serious want has existed, which Dr. Geikie's work is intended to remedy.

It is a bulky octavo volume of nearly a thousand pages, with 435 illustrations, new and old. A large outline drawing, admirably executed, of the plateau and cañons of the Colorado forms the frontispiece. The work is divided into seven books of unequal length, corresponding with the principal divisions of the subject. The first treats of the Cosmical Aspects of Geology. In this a clear statement is given of the views which have been entertained regarding the internal constitution of the earth and the stability of its axis of rotation, concluding with a sketch of Dr. Croll's opinions as to the effect of astronomical change upon climate, drawn up by that author for use in this volume. The reasonings in these varied and difficult questions are clearly and lucidly put; but in regard to the last point we think it would have been well to have given a brief statement of Lyell's argument, as restated by Wallace, for the effect of geographical changes on climate, instead of simply referring to it in a note.

The second book, "Geognosy—an Investigation of the Materials of the Earth's Substance," after a brief notice of the composition of the atmosphere and of the ocean, passes on to discuss the constituents of the earth itself. The broader features of its contour are first simply described, without

any suggestions as to their possible origin, the discussion of which is reserved for a later part of the volume; and then Dr. Geikie enters upon an investigation of the mass itself. A remarkably lucid account is given of the various opinions which have been entertained as to the condition of the earth's interior, after which the materials of the crust are investigated. Of these, only the commoner minerals are described, such as are likely to meet the eye of a geologist. This portion is generally all that could be desired, but we think that in one or two respects a more satisfactory order might have been followed, and we have observed an unfortunate slip in giving chalcedony as an example of a colloid mineral. Opal must be meant, for chalcedony consists mainly, if not wholly, of crypto-crystalline quartz. Obsidian, also, notwithstanding the authority of some books of mineralogy, ought not to be termed "vitreous sanidine," unless the whole is to be called by the name of its part. After a description of the prevalent structures which may be noticed in rocks, Dr. Geikie passes on to define the various species, as they may be called, illustrating in some cases their microscopic structures. We find here one of the special excellences of the work. As a rule, the lithological and petrological chapters in an English Geology leave much to be desired, and confuse quite as much as they aid the student. Terms are defined with unnecessary vagueness—sometimes absolutely wrongly; unimportant varieties are made prominent; important species are omitted; there is but little attempt at classification; and it is evident, as a rule, that this section is a mere compilation from authorities of dubious value, which the author has brought to an end with a sigh of relief. Dr. Geikie writes both as one who has studied and one who knows; and, though in one or two points of controversy here and in the fourth book we should ourselves have preferred slightly more guarded statements, the student will be able to learn what lithological names really mean, and is no longer in danger of being sent off—without a word of warning, as we were ourselves—to Charnwood Forest to see slate pass into syenite, to North Wales to see conglomerates melting down into felstone, and to Ayrshire to see transitions between about half-a-dozen lithologically distinct rocks. We think, however, that in the classification of the rocks Dr. Geikie will do well in his next edition to present the student with some kind of tabular grouping, and, in the case of rocks of igneous origin, to separate more clearly those which have undergone a marked amount of secondary mineral-change from those remaining nearly in their original condition. There are in nature metamorphic rocks of igneous as well as of sedimentary origin, and it would be well, we think, to call the student's attention to this at an early period.

The third book is devoted to the consideration of Dynamical Geology, which is treated under the two heads of Hypogenous, or internal action, and Epigenous, or superficial action. The former commences with an excellent description of volcanoes, volcanic products, and the phases of volcanic action,

treated with remarkable fullness and clearness. Then, after a brief sketch of the distribution of volcanoes, Dr. Geikie discusses the causes of volcanic action, in which he inclines to assign a greater importance to the late Mr. Mallet's plausible and ingenious hypothesis of heat generated by local crushing of the crust than would be approved by some geologists. For ourselves, we should be of opinion that Mallet's theory is "supported by independent geological testimony" only to a very slight extent, while instances to the contrary are far from rare. It would also have been well to have warned the student that some of that author's "proofs" were founded on geological mistakes. A good description of earthquakes, and of the slow, insensible changes of level of the earth's surface, then follows, concluded by a sketch of some of the latest views on their physical causes. An important and well-arranged section comes next, discussing the hypogenous changes in the texture, structure, and composition of rocks. Metamorphism and its extent, questions as to the relations of rocks thus affected, and those commonly believed to be igneous, have for some years past much exercised the minds of students, and been among the burning questions of geology. Dr. Geikie, while evidently still retaining some of the prepossessions, which seem to have been epidemic among the officials of the English Survey, in favour of the conversion of sedimentary rocks into so-called igneous, expresses himself with much caution, warning the student that the question cannot yet be regarded as decided. It is almost needless to say that the part upon Epigenous, or Surface, Action is admirably written, for that is a branch of geology which Dr. Geikie has already made peculiarly his own. The effects of air, of water in its various modes, and of life, whether destructive, conservative, or reproductive, are elaborately and admirably discussed; and the student will find the whole of this book a perfect storehouse of information. The vexed question of ice-erosion is very temperately stated, though we think it would have been well to have informed the student that the existence of *gründ-moraine*, except as a phenomenon of very secondary importance, is doubted by some geologists who have given considerable attention to the study of glacial action.

The fourth book treats of Geotectonic Geology, or the architecture of the earth's crust; that is, of stratification and its accompaniments, of joints, of the inclination, curvatures, cleavage, and dislocation of rocks. These are generally excellently worked out; but we could wish that Mr. Gregory Watts' notions as to the prismatic structure of basalt, &c., had been relegated to a foot-note, if not to the limbo of defunct hypotheses, for they tend much, as we have found by experience, to produce confusion in the minds of students. The connexion, also, of spheroidal structure with contraction should, we think, have received a rather fuller notice. Chapters then succeed devoted to the modes of occurrence of the igneous rocks as a part of the earth's crust, and others devoted to the crystalline schists, including the phenomena of regional and contact metamorphism. In these a large amount of information has been collected, and the vexed questions connected therewith are

handled with much fairness, though it would have been better to have informed the student that the Lower Silurian age of the schists of the Scotch Highlands, like that of the Taconic schists of America, is still regarded by not a few geologists as open to question.

The sixth book treats of Stratigraphical Geology, to which nearly three hundred pages are devoted. In the space at our disposal it is impossible even to sketch out the details of this portion. Suffice it to say that, after some valuable preliminary remarks, the stratigraphy of Great Britain is worked out elaborately, and succinct accounts are given of corresponding deposits in other parts of the world. In dealing with the many controversial questions which arise, Dr. Geikie holds the balance between contending parties with great fairness, though of course there are now and then points, such as in the treatment of Scottish and Welsh geology, where a little bias is pardonable. The student will find here, for the first time in any of our textbooks, a full account of the Archaean rocks.

In conclusion, we desire to express our sincere thanks to Dr. Geikie for this valuable aid to students, and our hearty admiration of his work. That it should be clearly and attractively written is a matter of course in anything that comes from his pen. There are, however, two points in the book which we may single out as imparting to it a special value. The one is its frequent reference to the geology of other countries. In this, doubtless, it is not without a precedent. The work of Lyell contained a large amount of information about the geology of other regions, and Dr. Geikie had already attempted the same in his edition of the late Prof. Jukes' *Manual*; but in the present volume there is a fullness and a clearness of treatment which places this far ahead of any other work. The other point is that the book is an incentive and a guide to further work. Every chapter displays the utmost research, which perhaps only his fellow-labourers can fully appreciate, but we may mention that the list of authors quoted or referred to occupies four full pages. It has been brought as far as possible up to date, and—perhaps most valuable of all—abundant references are given in foot-notes. There is hardly a topic of importance in which the reader will not find himself directed to some of the most important and most recent memoirs. In this respect Dr. Geikie's volume will be of high value not only to students, but also to their teachers and to all who are commencing any line of independent research.

T. G. BONNEY.

ORIENTAL PHILOLOGY.

PERSONS who wish to learn all that can be yet ascertained about the land in which the Avesta is generally supposed to have originated, and the manners and customs of the people which the Avesta portrays, would do well to read the *Ostirānische Kultur im Altertum*, von Wilhelm Geiger (Erlangen: Deichert). In identifying the sixteen lands of the Vendidad, Dr. Geiger prudently adheres to the long-established theory that the order in which they are named bears some relation to the order in which their inhabitants received the Avesta faith, either voluntarily or through conquest.

This theory allows more latitude for apparent irregularities in the order of the names than any theory of their being a mere irregular enumeration of the lands which had adopted the faith. An enumerator would naturally be inclined to mention the lands nearly in the order in which they stood on the earth's surface, but conquest and religion spread in a much more irregular fashion, often breaking forth in a new direction from some point on their former course. Dr. Geiger is also quite right in rejecting the Bundahish as a guide to the geography of these ancient times. The Bundahish tries to adapt the ancient geography to that of Sasanian times; and, although it may owe much of its information to the Dāmdād Nask, even that book is hardly traced by tradition farther back than the time of Darius, when the Avesta religion was already established south of the Caspian, and several of the old names had apparently been transferred to new localities. Dr. Geiger carefully describes the present condition of the supposed localities of these sixteen lands, from Airyana Vaejō, in the alpine country at the head waters of the Zarafshān, south-westwards and westwards to Bagha near Teheran, and from Vaēkereta at Kābul to Hāstumat in Seistān, showing that their inhabitants must have been then, as now, hardy races, able to endure extreme alternations of cold and heat such as are rarely experienced in other parts of the world. Then follows an investigation into their manners and customs, their occupations and civilisation, their social habits and government, so far as we can learn them from the scanty references to such matters in the Avesta texts. A work of this description must of necessity be very much a compilation from various sources, a laborious collection of widely scattered facts brought into a small compass; but, at the same time, it is thickly interspersed with the results of innumerable investigations and studies of the texts, effected by the author himself, and is illustrated by a carefully drawn map of the countries described. Altogether, it contains a mass of well-arranged information which cannot be otherwise than useful, even to those who may not agree with the author's opinions.

THE publication of the third volume of Dastur Jamaspji's *Pahlavi, Gujarati, and English Dictionary* (London: Trübner) affords some opportunity of estimating the possible extent of this voluminous work, which has now explained nearly 7,100 Pahlavi words in 762 pages (of which 322 are contained in the present volume). In the arrangement of its words this dictionary follows the order of the Sanskrit alphabet, and it has now reached the words beginning with *airar*; but to compare this progress with the position such words would occupy in a Sanskrit dictionary would be altogether erroneous, because the Pahlavi letters used as vowels also represent several consonants. Owing to their different alphabetical arrangement it is also difficult to compare this dictionary with previous Pahlavi vocabularies, but it appears to have completed nearly one-tenth of the words contained in the Ardā-Vīrāf Glossary and to have multiplied them about thirty-sixfold. It does not, however, follow from this that the dictionary will extend to seventy thousand words, because the additional words beginning with the other letters of the alphabet are likely to be less numerous than those beginning with the first letter. This third volume is quite equal to its predecessors, and presents the same features for comment. The learned Dastur has undertaken the almost impossible task of explaining all the words of MSS. that have not yet been satisfactorily deciphered, in addition to those which are well understood, and under these circumstances several of his explanations have to be received with caution. He has also collected numerous

clerical peculiarities and blunders of individual copyists, for which Pahlavi scholars will hereafter have occasion to thank him; but his arrangement of the various readings and meanings of the same combination of Pahlavi letters are not always such as would be preferred by Europeans, though he frequently gives valuable information regarding religious matters, as in his explanations of *ayastakard* (p. 491), *astōm* (p. 547), *airpad* (p. 755), &c.

Danseres en Kōning. "Malavika en Agni-mitra." Vertaald door Dr. J. Van der Vliet. (Haarlem.) A pupil of Prof. Kern, Dr. J. Van der Vliet, has published a Dutch translation of Kālidāsa's play, "*Mālavikāgnimitra*." The translation is the work of a young scholar; and the translator has carefully availed himself of the labours of his predecessors. Our first acquaintance with this play was due to Wilson, who gave a short account of it in his *Select Specimens of the Theatre of the Hindus* in 1827. Next followed Tullberg's edition of the Sanskrit text, in 1840, of which Dr. Van der Vliet speaks with far too great severity, forgetful evidently of the fact that to edit a Sanskrit text in 1840 meant something very different from translating a Sanskrit text in 1882. He deals more gently with Prof. Weber's rendering, published in 1856; but he omits all mention of Mr. Tawney's valuable translation, published in 1875; nor does he seem to have availed himself of Haug's *Zur Texteskritik und Erklärung von Kālidāsa's Mālavikāgnimitra* (1872) or of Bollensen's edition. He gives full credit to Shankar P. Pandit's edition of this play in the "Bombay Sanskrit Series," and agrees with him in his vindication of Kālidāsa's authorship against the doubts expressed by Wilson. A little more careful revision would have removed such mistakes as the change of the Sunga into a Gunga dynasty, and of the elegy, "*Meghadāta*," into an epic poem.

NOTES OF TRAVEL.

THE cause of geographical exploration has lost its most scientific, and by no means its least enthusiastic, representative in Capt. William Gill, B.E., of whose death in the desert of Sinai we have no longer room to doubt. The greater reputation of Prof. Palmer has somewhat unduly overshadowed the name of Gill, much of whose best work was not of a nature to reach the public eye. For a detailed account of his career we may refer our readers to Col. Yule's full and sympathetic letter in the *Times* of October 31, which must be looked for in the outer sheet. We will only add that among Gill's contemporaries at Brighton College was Margary, also a Chinese explorer, and also cut off by a cruel fate. Of Prof. Palmer it would be improper to write an obituary notice so long as his most intimate friends persist in thinking that he may yet be alive. If he be alive, Col. Warren and Capt. Burton may be trusted to find him and bring him back. Many must now be saying to themselves—Why was not Capt. Burton sent at first?

THE information on the Egyptian Sudan which has reached Europe through Dr. Schweinfurth is calculated to fill us with apprehension as to the fate of European travellers on the Upper Nile. On September 15 Abd-el-Kader, the Governor-General, found himself surrounded by the insurgents led by the Mahdi at Khartum; El Obeid, the capital of Kordofan, was daily expected to surrender, and all communication with Dar Fur had ceased. Of Emin-Bey and Lupton no news appears to have reached Europe since the former left Khartum in March last; and Dr. Junker's and Capt. Casati's latest letters are dated December 1881. It is gratifying, under these circumstances, to receive a sign of life from J. M. Schuyver, whose recent

journey to the country of the Legha Gallas we have already referred to. In a letter to the editor of Petermann's *Mittheilungen*, that intrepid traveller announces his return to Famaka, on the Blue Nile, after an excursion into the countries to the east of that river which occupied from the end of April to June 20, and in the course of which he penetrated to the frontier of Abyssinia and the Upper Dinder. On a lofty mountain, three days' journey to the east of Famaka, the Dutch traveller came upon the Sienetje, a "yellow" tribe, speaking a distinct language. A former letter, accompanied by a map and vocabularies, has never reached Europe.

M. MIKLUKHA-MAKLAI, who lately arrived in Russia, has been delivering to crowded audiences, in the hall of the Geographical Society, St. Petersburg, a course of four lectures descriptive of his anthropological researches in the islands of the Indian Archipelago. The lectures were illustrated by the exhibition of a series of maps and drawings. At the conclusion of his fourth lecture, M. Maklai intimated that he expected to be able to publish his memoranda in the course of two years, and in the Russian language. The MS. was already completed, and only required a final revision and the translation of certain passages which had not been written originally in Russian.

We are sorry to hear that that excellent Swiss weekly serial, the *Neue Alpenpost*, will cease publication with the end of the present year. It was founded in 1870 by Walter Senn, and was for some time richly subsidised by the late Nationalrath B. von Planta. It passed afterwards into the hands of the well-known Zürich firm, Orell-Füssli and Co., and was edited by two most capable Alpinists, J. J. Binder and Pfarrer J. G. Grob. In spite of its good topography, good illustrations, and capital matter, it has never succeeded in finding a sufficiently large circle of readers to ensure its commercial success, and appears to have been always carried on at a loss. Not the Swiss Alpenklub alone, but many English, German, and Austrian subscribers will regret its cessation after its twelve years of manful struggle for existence.

In the October number of Petermann's *Mittheilungen* will be found a geological map of the Balkan Peninsula, by Dr. Franz Toula; an article on the new Russo-Persian frontier; a paper on the geographical distribution of *Aurora Borealis* in the United States, and a translation of the Rev. W. S. Green's account of glacier expeditions in New Zealand, from the *Alpine Journal*. The article on the Russo-Persian frontier is accompanied by a map in the main copied from that which appeared in the *Istvestiya* of the Caucasian section of the Russian Geographical Society, and is much more detailed than the maps hitherto published in England.

SCIENCE NOTES.

As Mr. S. Roberts's term of office as president of the London Mathematical Society is expiring, the following changes in the council for the ensuing session will be submitted to the society at its meeting on Thursday next, November 9—viz., Prof. Henri, president; Sir J. Cockle and Mr. Roberts, vice-presidents; Messrs. E. B. Elliott and Dr. J. Hopkinson to be new members in the room of Messrs. R. C. Rowe and Lloyd-Tanner. On vacating office, Mr. Roberts will read an address—"Remarks on Mathematical Terminology and the Philosophical Bearing of Recent Mathematical Speculations concerning the Realities of Space." His principal thesis is that mathematics are neutral in philosophy. He will also announce to the society the estab-

lishment of the De Morgan memorial medal and the conditions of its award.

THE relation between geology and engineering is especially marked in the discussion of questions bearing on water-supply. Mr. J. H. Blake, in delivering the presidential address at the last anniversary meeting of the Norwich Geological Society, dealt with a group of cognate subjects, the information on which, though often looked up in Blue-Books, cannot be too widely disseminated. A reprint of his address lies before us. On the conservancy of rivers and the prevention of floods, on drainage and water-supply, he has collected and condensed a great amount of useful information, which, from his training as an engineer and from his present position as an officer of the Geological Survey, he is peculiarly competent to discuss. It is obvious that, by bringing subjects of such vital importance before local scientific societies, public opinion is educated, and much practical good accomplished.

PHILOLOGY NOTES.

THE Clarendon Press will publish shortly *The Gospel of St. Mark in Gothic*, according to the translation made by Wulfila in the fourth century, edited by Prof. Skeat. This work is intended to serve as a Gothic primer, and to introduce the beginner to fuller and more complete works on the subject. The Introduction gives all necessary information concerning the MS., the author, and the sources of the alphabet, with some account of the pronunciation, phonology, and grammar. The glossary not only explains all the words occurring in Mark's Gospel, but is extended to all the more important words of the language, especially such as are most required by the student of English etymology, for whom some knowledge of Gothic is indispensable.

At a meeting of the Biblical Archaeological Society to be held on Tuesday next, November 7, M. Eugène Révillout, Keeper of the Demotic Papyri at the Louvre, who is now in London, will read two papers of great interest—(1) on a demotic papyrus containing the malediction of an Egyptian mother on her son embracing Christianity; (2) on two demotic documents of the reign of Darius referring to a marriage contract.

THE *Proceedings* of the fifth congress of Orientalists, held last September at Berlin, are now ready for publication. They may be obtained from either Asher or Weidmann, of Berlin. They consist of two volumes, divided into three parts, containing the papers read in every section in the original language—German, French, or English. The price of the whole is twelve marks.

MR. ALBERT S. GATSCHE, of Washington, has sent us a little fly-sheet containing some excellent "linguistic notes" upon what has been done recently in making known the obscure languages of America. First he notices, with high approval, a translation of Luke's Gospel into Yahgan—a hitherto unknown tongue spoken in the extreme south of the continent—which has been printed by the British and Foreign Bible Society; next a translation of John's Gospel into Kechu—spoken in the interior of Peru—done by the Rev. J. H. Gybbon-Spilsbury, and published at Buenos Ayres by the same society. He also comments upon a paper on "Names of the Gods in the Kiche Myths, Central America," read by Dr. Daniel G. Bruntton before the American Philosophical Society in Philadelphia; and he adds some new facts to those given in the *American Antiquarian* (iv. 76) upon "Mal-banohia" as a native name for the Mississippi. But perhaps the greatest novelty is an account

of a populous tribe who call themselves Akal'man and inhabit the town of Huehela, in Vera Cruz, Mexico. They were visited last year by M. Alphonse Pinart, who has brought back a vocabulary and also texts which seem to show that their language differs from those of all the surrounding Indians. The scholarly manner in which Mr. Gatschet has compiled these notes is worthy of all praise.

A YOUNG student of Anglo-Saxon literature—L. Botkine—born in Paris, but of Russian parentage, died lately in that city. His first work appeared in 1876, when the author was in his twenty-third year, under the title of *Beowulf, Analyse historique et géographique*, and was followed soon after by *Beowulf, Epopee anglo-saxonne*, the latter being the first French translation of the poem. His last work—*Chanson des Runes*—was published in 1879. A recent number of *Anglia* contains some appreciative remarks on Botkine and a few biographical details.

MEETINGS OF SOCIETIES.

BROWNING SOCIETY.—(Friday, Oct. 27.)

FRANCIS STORR, Esq., in the Chair.—Papers were read by the Rev. Prof. E. Johnson on "Browning's Development," and by Miss Beale on "The Religious Teaching of Browning." Prof. Johnson treated of Browning's earnest conviction, of Browning as the historian of the soul, as the diviner of the soul, of Browning's dramatic method, of the objective and subjective in Browning, of Browning's peculiarities as an artist, his supposed unintelligibility, of his conception of the poet's function, and of Browning as pre-eminently the seer. Miss Beale considered Browning as a deeply religious poet, the unseen being ever present to him. She looked on him as a prophet, God-given to our storm-tossed age. In "Saul" and "Caliban," Browning seems to have sought to illustrate the deep truth that according to our moral standard are we able to receive divine light and truth into our being. It is not historical propositions about divine truth with which he is dealing, but the faith which lifts us out of the region of the phenomenal and transitory and imperfect into the real, the eternal, the inwardly true. As in "Saul" we have the truly human, in "Caliban" the bestial type, so in "An Epistle" we have the spiritual, the supernatural man, and his theology. There is a musical trilogy corresponding with the three poems above mentioned—"Hugues of Saxe-Gotha" with "Saul"; "Caliban," the debased, the bestial, with the "Toccata of Galuppi"; "Abt Vogler" with Lazarus in "An Epistle," the glorified, spiritualised man.—In opening the discussion the Chairman said that, broadly speaking, Browning might be called a Christian poet, but he thought that Miss Beale had perhaps a little unduly emphasised this element, not making allowance enough for Browning's dramatic, or semi-dramatic, method.

FINE ART.

GREAT SALE of PICTURES, at reduced prices (Engravings, Chromos, and Olegraphs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—Geo. REED, 114, Strand, near Waterloo-bridge.

A Pilgrimage to the Shrine of Our Lady of Loreto. By George Falkner. (Elliot Stock.)

DURING the fourteenth and fifteenth centuries no religious duty was more widely acknowledged than that of performing a pilgrimage to some one of the holy places of the Christian world. The shrines then most frequented by pilgrims were the Holy Sepulchre at Jerusalem; the holy city of Rome; the tomb of St. James the Greater at Santiago de Compostella, in Galicia; the shrine of St. Thomas à Becket at Canterbury; and the

Holy House of Loreto, on the Adriatic coast, near Ancona. The right of wearing a special badge was won by a visit to each of these places. Jerusalem conferred the palm branch; Rome, the cross keys; Santiago, the scallop-shell; Canterbury, a small lead flask, or *ampulla*, containing some of the celebrated Canterbury water from the holy well where St. Thomas's body had been washed; and Loreto, a medallion embossed with a figure of the Virgin Mary. The Holy House of Loreto had its English facsimile. One of the most popular shrines in this country, that of St. Mary of Walsingham, was a copy of the Holy House, and was held in almost equal reverence with the original. Among its latest pilgrims was Henry VIII., who, in the second year of his reign, walked barefoot to Walsingham, bringing to the shrine a gift of valuable jewellery. Lapse of time and the unaccountable changes of fashion have diminished or destroyed the popularity of some of these holy places, yet the Holy House of Loreto is still as much visited by pilgrims as at any period of its history.

Mr. Falkner gives a brief and popular account of its aspect as viewed by the modern non-Catholic tourist. His little book is prettily printed in brown ink, with lithographic copies of the Criblé wood-cut borders from one of Thielman Kerver's vellum-printed Books of Hours. It is illustrated with lithographs; but, excepting the first two views—that of the town of Loreto and the outside of the Apostolic Palace—these are very poor and inartistic. The text gives a readable, though superficial, account of the city and its church, unfortunately marred by many inaccuracies, such as the statement that "the church is in the Romanesque style," whereas it is, in reality, a poor specimen of that dull pseudo-classic style introduced by the later architects of the Renaissance. Many words, too, are mis-spelt, such as "Assisi" for "Assisi," "Bremante" for Bramante, "Anibale" for "Annibale," &c. More information of real use and to the point is to be found in the pages of Murray's Guide.

According to the mythical history of the Holy House as published in a Bull of Leo X. in 1518 (a better authority than the modern account largely quoted by Mr. Falkner), this small stone chamber, once at Nazareth, was the scene of the Annunciation and of Christ's early life. In 1291, to save it from the Saracens, it was carried by angels to Dalmatia, and then, in 1294, brought, also by angels, across the Adriatic to the Italian coast. This happened during the short Pontificate of Celestino V., whose brief reign and cowardly abdication are referred to by Dante, *Inf.* iii. 59:

"Vidi l'ombra di colui,

Che fece per vilate il gran rifiuto."

In 1295 it was again moved a short distance to its present site, which was a grove belonging to a widow named Laureta—whence the name Loreto, just as at Athens the grove Academia took its name from its former owner, Academos.

The chief point of interest at Loreto is the marble casing which enshrines the plain stone house—a casing adorned with a wonderful series of sculptured reliefs—a monument of the talent of one man, whose influence on

art did not cease with his death, but was carried on by many pupils of great technical skill, though inferior to their master in power of design and composition. This man was Andrea Contucci del Monte Sansovino (or San Savino), the last years of whose life, from 1513 to 1528, were spent in the execution of some of these sculptures, and in the designing of nearly all. They consist of figures in niches of the prophets and sybils, with alto-reliefs of scenes from the life of the Virgin, and the adventures of the Holy House. They are among the most important of the last good works of sculpture produced before the complete decay of the plastic art; and, fine as they are, they are not free (especially the reliefs by Sansovino's pupils) from the over-realism and excessive striving after dramatic effect which did so much to give true art its death-blow. Mr. Falkner writes vaguely of Sansovino, without distinguishing him from Jacopo Tatti, a pupil of his, also a very able sculptor and architect, who took his master Andrea's name, and is also known as Sansovino. The younger Sansovino's chief works are at Venice and Padua, where he worked till his death in 1570. Andrea Sansovino was a pupil of Pollaiuolo, and was much influenced by the sculpture of Donatello. Even in these latest works of his, the influence of the earlier and purer style is apparent. His pupils, Raffaello da Montelupo, Girolamo Lombardo, Tribolo, San Gallo, and others, would have done well if they had followed the same guiding as their master, and not allowed themselves to be dazzled by the quite exceptional and inimitable splendour of the great works of Michelangelo.

J. HENRY MIDDLETON.

AN ANCIENT MONUMENT AT SAMOS DESCRIBED BY HERODOTUS.

PRESUMING that any fresh proof of the truth and accuracy of Herodotus's statements will prove of interest to your readers, I beg to report a discovery recently made in the ancient city of Samos, where I have verified on the spot his description of a monument which has been lost sight of for ages and well-nigh forgotten.

After recording the history of the island in the time of Polycrates, and the fruitless siege of the city by the Lacedaemonians, he excuses himself for dwelling so long on the affairs of the Samians because they had made three of the greatest and most wonderful works ever constructed by Greeks. He specifies them thus:—First and foremost, a tunnel of great length hewn through the mountain, and conveying water to the city of Samos; secondly, a mole in the sea around the harbour more than two stadia in length, and twenty fathoms in depth; and, thirdly, a temple (the Heraeum) the largest of all the temples known to the Greeks—i.e., in his day. He gives the place of honour, however, to the aqueduct, and is much more minute in his description of it than of the other two Samian monuments. He describes it as

"a tunnel made through a mountain 150 *orgyiae* [about nine hundred feet] high, leading upwards, with an opening at each end. The length of the tunnel is seven stadia [1,540 yards], the height and width each eight feet. Through its entire length is sunk another channel twenty cubits deep and three feet wide, in which the water from a copious spring is conveyed by means of pipes to the city. The architect of this tunnel was Eupalinus of Megara, son of Naustrophos" (iii. 60).

Some two months ago a priest from Vathi, the

modern capital of the island, discovered, it is said, by chance, the existence of this aqueduct on the slope half-way up the mountain side on which the ancient city was built. At the depth of about six feet he unearthed some stone slabs, on removing which he disclosed the ancient water channel sunk in the rock, and running parallel to the ridge above it, or almost due east and west, through the ancient city. He followed the course of this channel upwards by opening a series of pits at short intervals, till, as the channel approached the steep and rocky height which dominates the western end of the city, it turned northwards towards the base of that height. On clearing away the *débris* at this spot it was found that the channel penetrated the hill-side in a tunnel, the mouth of which was a narrow passage, just high and wide enough for a man to pass through, paved with slabs, flanked by masonry of small polygons, and roofed overhead by the leaning to of the upper blocks on each side—a mode of construction indicating a high antiquity. This opening in the mountain side is very similar to the sewers commonly cut in the cliffs beneath the ancient cities of Greece and Etruria; but on passing through it I found myself, after a few paces, in a much wider passage roughly hewn in the rock, and of the dimensions assigned by Herodotus to the tunnel, about eight feet high and eight feet wide. Through the centre of this tunnel was sunk a narrow channel, barely three feet wide, and, as I was informed by my guide, ten mètres deep, a measurement which agrees closely with the twenty cubits of Herodotus. The tunnel, I was told, ran thus through the heart of the mountain for 1,270 mètres, out through the rock, and generally of the dimensions stated, though in parts somewhat varying, and at the farther end expanding into a spacious chamber. This length of 1,270 mètres does not differ greatly from the seven stadia of Herodotus, the latter being equal to about 1,416 yards, and the mètres stated to about 1,385 yards. But the agreement between the two measurements may well turn out to be still closer when the tunnel on the inner or northern side of the height has been cleared out, as the opening or mouth on that side referred to by Herodotus is still choked with the *débris* from the slopes above, which have accumulated in the course of ages. As there is no water in the narrow channel nowadays, and no traces of the spring within the tunnel, it probably communicated with open channels in the mountain slope through which water from the heights to the north or east was conveyed through the tunnel to the city on the south of the range. In the Admiralty chart No. 1530 an aqueduct is marked as running from the mountains east of the village of Khora into the ancient city; but it is represented as entering Samos on its southern slope.

Unfortunately, my recent visit to Samos was so hurried that I had no time to take exact measurements, to explore the tunnel to its extremity, or to ascertain the position of "the copious source" from which the city was anciently supplied with water.

I should state that the height of the mountain pierced by the tunnel is given by Herodotus as about 900 feet; the Admiralty chart gives it as 747 feet. But the height as stated by Herodotus was probably a mere guess, as the ancients were not acquainted with the means of calculating altitudes with accuracy.

In the article "Samos" in Smith's *Dictionary of Ancient Geography*, it is stated that Prof. Ross saw subterranean passages hewn in the rock in the neighbourhood of the harbour; and Prof. Rawlinson, in his note to the passage of Herodotus descriptive of the aqueduct, states that "one of the mouths of the tunnel, that to the north-west of the present harbour, had

already been discovered, but it remained little known till M. Guérin, a short time ago, rediscovered it, and cleared out the sand and stones to the distance of about 540 paces." But the tunnel opened by Guérin, who wrote in 1856, is on the opposite extremity of the city to the aqueduct I have described above, and must not be confounded with it. Guérin's tunnel is in all probability the secret underground passage constructed by Mæandrius leading from the acropolis down to the sea to secure for himself a safe retreat from the island when threatened by the Persians (Herod. iii. 146). The *Asypalaea* is the isolated height at the eastern extremity of the range, and immediately above the harbour; whereas the tunnel through which ran the aqueduct pierced the mountain at the opposite extremity, much farther to the west. There can be no doubt that the monument I have just seen is that described by the "father of history" as one of the greatest and most wonderful works of the Greeks of his age. GEO. DENNIS.

CORRESPONDENCE.

MORE TREASURE-TROVE FROM DAYR-EL-BAHAREE.

Westbury-on-Trym: Nov. 1, 1882.

I have the pleasure of announcing the identification of another group of important relics from the tomb of the Her-Hor family discovered in 1881 at Dayr-el-Baharee. This time the canopic vases of Princess Nasikhonsu, wife of the Prince-Pontiff Masahirti, have come to light. These vases are of fine alabaster, surmounted by wooden covers, admirably carved and painted, representing the heads of Amset, Hapi, Tuatmut, and Kebhsenef, the four genii of Karneter, or Hades. Each vase is inscribed with a short dedicatory prayer in four vertical columns of hieroglyphs.

The vases were originally purchased by Andrew McCallum, Esq., when at Thebes in 1874; and to him I am indebted for the rubbings which have enabled me to identify them.

AMELIA B. EDWARDS.

THE SLOANE COLLECTION, BRITISH MUSEUM.

Severn House, Henbury, Bristol: Oct. 20, 1882.

In a list* of the objects forming the collection of Sir Hans Sloane in the British Museum, the number of "vessels, &c., of agate, jasper, &c.," is given as 542. What has become of all these wrought objects? To Sir Hans was bequeathed the collection of his friend Mr. Courten, which Evelyn, in his Diary, describes as very valuable, especially in crystal, &c., vessels, and as surpassing most of the collections he had seen abroad. I have carefully searched in the Mediaeval department of the British Museum for traces of some of these objects, but can discover only two wrought crystal bowls belonging to the Sloane Collection. As is well known, the British Museum is singularly deficient in vessels wrought of such precious materials as agate, jasper, crystal, &c., while the Sloane Collection appears to have been particularly rich in them.

The following are extracts from an old guide to the British Museum, 1784:—

"Collectio Sloaniana." "A great variety of crystals manufactured into vases, cups, boxes, beads, and balls, &c. Some pieces of coral finely cut in various shapes. A deal of amber curiously manufactured into bells, bottles, handles for instruments, &c. Various utensils of agate, jasper, &c., as spoons, necklaces, pendants, rings, boxes, buttons, &c., &c."

Some of these objects may be in the Mineral

department, but there is certainly no great number of wrought objects there.

It would greatly enhance the value and interest of the Museum if all objects belonging to the historic collections were so labelled. This is done in the Mediaeval and Ethnological departments as regards articles from the Sloane and some other collections; though occasionally, as regards the former, merely the abbreviation *SL* is used, which does not convey any information except to the initiated. Labelling, both for the purposes of instruction as well as for that of connecting the articles with the original donors or possessors, should, to some extent at least, be more fully carried out. I suggested not long ago to an assistant in the Mineral department of the British Museum that the original specimens of the Sloane collection should be labelled "Sloane Collection," but received the reply, "This is a scientific collection, and it is not the custom to indicate specimens that have not been presented." When our national collections come to be regarded as existing for the instruction of the public and not merely for the special delectation of so-called "scientists," then, and not till then, will labelling, not only for purposes of instruction, but also to record the history of the collections, be regarded as essential. SPENCER GEO. PEROEVAL.

PS.—I may here observe that what is wanted to render our national collections more instructive is a greater number of assistants to carry out the mechanical duties of the curators, such as labelling and arranging the specimens, so as to meet the requirements of education, and also to excite in the public an interest in the collections.

THE EXHIBITIONS AT TOOTH'S AND AT MACLEAN'S.

As certain of the galleries in possession of the organised societies offer us exhibitions of diminishing value, the shows of the principal dealers are wont to increase in importance. Mr. Tooth has an excellent exhibition this winter; and in Mr. Maclean's gallery, if the very diversity of the work brings a measure of confusion into the mind of the spectator, there is at all events proof that tastes of all kinds are catered for. We will speak of Mr. Tooth's gallery first—it is there that the oil pictures are assembled—and will afterwards append notes on Mr. Maclean's gathering of water-colours.

M. Bastien Lepage's picture "Le Père Jacques"—one of the most considered examples of his art, and a distinct and legitimate sensation in last year's Salon—is a chief attraction at Mr. Tooth's. It is a large picture of rustic life, as the title almost implies; and it is incomparably ahead of the big canvas with the gaping peasant-girl exhibited at the Grosvenor, and of the equally gigantic and equally dull picture of "Le Mendiant" seen not very long since at the French Gallery. It has occasionally been an error of M. Bastien Lepage's—one which, alas! many a modern artist besides M. Bastien Lepage finds it pecuniarily profitable to share—to occupy an important canvas with an unimportant picture, to devote an absurd surface to an insignificant theme. His "Mendiant" was a big, broad sketch, not half-sufficiently realised for a thing of its size. It was a forcible thing to some extent, but it was an ugly thing, and there seemed no reasonable cause for inflicting upon us its huge uncouthness. But the quality of work that is reached in "Le Père Jacques" is of an order that justifies the scale of the design. We take a permissible interest in the thorough realisation of the character—shrewd, kindly, humorous—and admiration is well bestowed on the learned adroitness with which the features of the woodland are indicated.

Inanimate Nature is here something more than a background. It is a presence which we welcome.

In technical skill, two other foreigners come next, we should surmise, to Bastien Lepage. These are Jimenez and De Blaas. The first-mentioned name is fairly familiar already to frequenters of picture galleries. De Blaas is Roman by birth; Venetian, we understand, by present residence, and certainly by that sentiment of noble colour which dominates his art. It is the privilege of the painter in Venice to be surrounded by a population of born models; models not by borrowed grace or artfully measured pose, but in virtue of their natural gifts of form and of hue and of expression that is either vivacious or naive, enduringly demure or acceptably impudent—but at all events *marked*, which is the chief business, after all. Now, De Blaas has made the best use of two highly refined models in his picture of august colour. This canvas alone justifies him in claiming fellowship as a colourist with Van Haanen, and for a colourist, in the present day, there is no greater praise. Jimenez is more piquant than a great Venetian, or even a modern Venetian, would care to be, and it is never for refinement or chastity of sentiment that he shows himself conspicuous. He is an observer. He observes the world of the Parisian studio—its idle and luxurious and over-prosperous patrons, the people for whom the subjects are painted, and the people who are themselves the subjects for the painter. In "The Visit of the Patron"—a picture which, like M. Bastien Lepage's, was in the Salon—he has proved most completely his skill of observation and his command of difficult draughtsmanship. In expression it is not easy to be subtler than Jimenez has been with the faces of the concerned artist and the elderly patron; in draughtsmanship it is not easy to be more expressive than Jimenez has been with the foreshortening of the figure of the model. Among other foreign work of a profoundly secular imagination one would name Jaquet's three brilliant heads of "Spring," "Summer," and "Autumn." Many living men, and of perfectly commonplace minds, have tried to do what M. Jaquet has done; and the only difference between their work and his is, that they have never done it quite so well. The most agile of his performances brings him within measurable distance of Boucher, and this might be the Pompadour's grace and affectation that is so smartly recorded.

In Mr. Maclean's gallery we are driven to the discussion of what has often been discussed before; and so the place is not a pleasant place for a writer, though it is well enough for a visitor who has simply to enjoy. He will see a sufficiency of that which is excellent; little of that which is novel in kind. The frequenter of galleries knows Mr. Birket Foster and Miss Clara Montalba as he knows the palm of his hand, and he has heard all that is to be said about them. Nor is Mr. Foster quite at his best in his big "Spring Time" in Mr. Maclean's gallery. Rarely, it is true, has his composition had more of care and of suavity, but rarely have his weaknesses of a workmanship over-minute for the things it is to express been more completely apparent. His art in "Spring Time" is popular and pretty. It is terribly pretty. It has no vigour at all. But vigour, it may be said, is surely no characteristic of Mr. Foster. It is no characteristic, but it is not always lacking to him. In one at least of the important drawings which this long accepted artist exhibited among Mr. Vokina's great show of his work there was visible the vigour which is generally less apparent than the refinement. "Spring Time" is nevertheless, as far as regards its treatment, though not as regards its scale, quite of that order of his work which the

* See Edwards' *Lives of the Founders of the British Museum*.

public knows the best. Mr. Vokins was fortunate enough to be able to display those rarer instances of a dainty art applied where daintiness is most of all commendable.

Among the more forcible drawings—and typical instances they are indeed of the abandonment of accurate detail for the union of picturesque effect with truth of impression—are the many contributions of Miss Montalba and the two of the late Cecil Lawson. Cecil Lawson's are the more novel. His water-colours have been seen but little in public. We do not even know that they exist in great numbers. But of the two now exhibited one is of real interest—that potent and passionate design of "The Haunted Mill," in which the spirit of a landscape, its changes of weather and wind, is brought into connexion with the chosen theme. "A Haunted Mill" is of blotaque character; it derives from Constable and from Ruysdael, and yet it is individual and new, because it is sincere. Much display is made in Mr. Maclean's gallery of drawings by certain Dutchmen (who were of old, as far as England is concerned, a speciality of Goupil's), and of one very skilled and agreeable Englishman—Mr. Carter, of the Institute, whose water-colours show, in theme as well as in treatment, the pretty direct influence of Israel's hand. Israel is of course a notable master, though of limited range. He leads a school at the Hague, as Van Haanen does at Venice, the work of the one being devoted to the realisation of splendid colour and of the brightness and vivacity of contemporary life, and the work of the other to all that is saddest in the life of the humble and to hues that are sombre and melancholy. A more truly refined little Israel than "Waiting and Watching" it would be difficult to see. Were it new in theme or in arrangement, we might undertake the task of describing it; as it is, we must leave it to be seen, insisting only on the completeness and delicacy of the triumph we do not analyse. Artz and Blommers and Neuhuys follow Israel in his final abandonment of all life but the humblest life. One or two of them, however, permit themselves such excursions into colour as he persistently avoids. Mr. Carter's drawing is of a peasant of the coast, looking with much satisfaction upon offspring whose beauty would be lost to the common eye. The refined, yet homely, person he has sketched as the young wife lends a measure of charm to the mere subject of his work, and delicacy and restraint are as visible in his artistic method as in the best of those *dramatis personae* to which the present instance of his art is devoted.

FREDERICK WEDMORE.

THE DUDLEY GALLERY.

THIS is, we believe, the last exhibition to be held under the management of the present committee, the Dudley Gallery exhibition passing next year into the hands of the Dudley Gallery Art Society. During its sixteen years' career, the Dudley has done good service in first bringing before the public the works of many painters who have afterwards achieved eminence; and there are pictures in the present exhibition which lead us to suppose that this function may be still to some extent performed; but there is clearly need for both a more rigorous standard in the admission of works and for an effort to impart more variety and interest to the exhibitions. The pictures this year, however, seem to us to compare as a whole not unfavourably with those of last year. There is not much that is really bad, but there is a great deal that is only passably good. We shall notice those pictures which appear to us to rise above the prevalent mediocrity.

Foremost among these we should place Mr. Napier Hemy's powerful and truthful sea-

picture, "Rowing for the Port" (161). The colour and swirl of the water are admirably given; and, although we fancy we discern some uncertainty in the painting of the rocks, we must admit that when the picture is seen at the proper distance they come out right. The sky seems to us the least satisfactory part of this excellent work. "The Morning Catch" (176), by the same painter, is remarkable for the success with which a peculiar effect of light on the sea is given by the use of what may be termed a "trick," but is certainly an effective trick. The stones of the pier in the foreground are carefully and truthfully painted. Another clever sea painter, Mr. Edwin Ellis, has only one picture—"Whitby" (233). We have here a truthful representation of the sky on a fresh breezy summer morning, and the whole picture is vigorous and dashing in a high degree. But is there not some danger of vigour degenerating into mere coarseness of execution, and of originality of colouring becoming eccentricity? We have watched Mr. Ellis's career with so much interest that we should deeply regret if our apprehensions in this respect should prove to be well founded. To turn now to a wholly different subject, we have in Miss Bertha Newcombe's "White Calves" (321) a singularly daring and clever study. Against a nearly white background a number of white calves are coming up to a little girl—whose figure, by-the-way, is very unsatisfactory as regards drawing. But nothing could be more masterly than the way in which the soft white coats of the calves are given, or than the skill with which, without the least garishness, the white animals are brought out from the light background. If Miss Newcombe continues to show the originality and power evinced in this picture, she has, we think, a great future before her. A word should be said, while on the subject of animals, about Mr. Thomas Blinks' "Look Out" (346)—a fox-terrier in the act of jumping towards the spectator over some high grass and flowers. The action is extremely well given; but are the hind legs correctly drawn? We merely propound the question, not having had any recent opportunity of observing the appearance of the hind legs of a jumping terrier. They certainly look odd in the picture. We hope the Society for the Prevention of Cruelty to Animals will not make too minute enquiries as to how Mr. Blinks induced his model to "sit." Two careful and solidly painted studies, "The Beginning" (354) and "The End" (364), by Mr. P. S. Holland, placed near the door, attract and deserve attention; and there is a very humorous and clever Irish sketch by Mr. J. Watson Nicol (150), based upon some lines of Charles Lever's. The expression of the tenant-farmer, who is considering that

"the land ye see from the steeples
Belonged to us all from the Flood,"

is inimitable. Mr. George Clausen's "Peasant Girl" (166) is a pleasing example of his well-known style. We may sum up some of the other notable pictures very shortly. Mr. F. A. Winkfield has a careful little picture, "In the Painter's Hands" (40), and Mr. E. J. Humphrey sends an exceedingly pleasant, and in many respects interesting, study called "On the Wey, Surrey" (288). Mr. Hayes, R.H.A., has a clever little picture of "Hastings Beach" (301); and M. Fantin has an excellent flower-piece, "Fleurs de Poirier et Cerise" (415), and two other good studies of flowers.

NOTES ON ART AND ARCHAEOLOGY.

THE Manchester Literary Club has issued a circular advocating the purchase, for the benefit of Manchester and other large towns, of the collection of Leech's drawings which remains in the hands of the artist's sisters. The proposal

has already obtained the support of Mr. Ruskin and many other well-known names. Mr. Ruskin writes:—

"It is with the greatest pleasure that I accept the honour of having my name placed on the committee for obtaining funds for the purchase of these drawings; and I trust that the respect of the English public for the gentle character of the master, and their gratitude for the amusement with which he has brightened so many of their days, will be expressed in the only way in which expression is yet possible by due care and wise use of the precious possessions he has left to them."

THE Royal Academicians have decided to take upon themselves a task that is likely to be of great service in the study of English art. This is the reprint in volumes of all the Catalogues of their exhibitions from the foundation of the Royal Academy in 1768 to the present time. Careful indexes will be made, and everything done to render the work useful for reference. No one, perhaps, who has not experienced the trouble of searching through old Catalogues to find some particular fact of unknown date can estimate the advantage of such a compilation as this. To the biographer and collector it will be invaluable. It will be published, it is stated, at a price that will merely repay costs.

WE understand that the Prince of Wales, on seeing a copy of Mr. G. Barnett Smith's portrait of Thomas Carlyle, immediately subscribed for it. The Earl of Derby and the Earl of Fife are also among the subscribers to the work. We referred to this etching—an almost life-size head—some time ago; and we may add that those who knew Carlyle well speak highly of it. It may still be obtained at the published price from the artist, Cuba Villa, Bickerton Road, N.

M. BONNAT is at work upon a "Martyrdom of St. Denis," intended for the decoration of the Panthéon. The picture will probably be exhibited at the next Salon.

ANOTHER enormous panorama has just been executed by the French painter Carrier-Belleuse. It is at present exhibiting for a short time in Paris, but is intended for the town of Lourdes. It is strange that the rage for panoramas which has seized upon Paris and Brussels should be so much less developed in London.

M. FALQUIÈRE has been elected Professor of Sculpture at the Ecole des Beaux-Arts, in succession to M. Jouffroy. This school re-opened last month with 661 architects, 285 painters, and 184 sculptors on its list of pupils. In one of its vestibules has just been placed a series of copies from Michelangelo, made at Rome by M. Paul Baudry.

THIS week's number of *L'Art* is likely to be especially interesting to English readers, for it contains the beginning of a biographical and critical sketch, by Ernest Chesneau, of Ford Madox Brown, one of our greatest, though unfortunately least known, painters. An account of the early pre-Raphaelite movement and its brilliant, daring, but short-lived Review, called the *Germ*, introduces the subject. Although we cannot quite agree with Mr. Chesneau that English criticism generally found in the early works of the pre-Raphaelites "elevation of thought, originality of conception, refinement of taste, and a curious effort at finished execution," still, even from the first, there were not wanting a few instructed writers who, amid the general scorn and laughter, recognised the significance of the pre-Raphaelite movement in English art. The rest of the number is chiefly taken up by a description and illustrations of the monument to Victor Emanuel at Rome.

WE have received from Messrs. Colnaghi, chromo-lithographic reproductions of the water-colour drawings which Mr. William Simpson made for the Queen of the two Volunteer reviews held last year. As is but right, in the

Windsor review the royal element predominates; in the Edinburgh review, the architecture of the city and the fearful storm of rain that marked the day. The subject is only one degree less ambitious than that which overwhelmed the powers of Mr. V. Prinsep; and Mr. Simpson is greatly to be congratulated on the measure of success he has obtained. In every respect we think the Scotch picture the finer of the two. Not a point here is missed. The wide expanse of the Queen's Park turned to a swamp; the familiar outlines of the Calton Hill, Holyrood Palace, and the Castle, with the black tempest threatening, but not enveloping all—make up a scene that demanded and stimulated the true artist. The process of reproduction has been most skilfully performed, though how much of the credit ought to be assigned to Mr. G. Maculloch and how much to Mr. C. F. Kell we cannot say. Doubtless, Mr. Simpson's own practice in lithography contributed not a little to produce a result which is itself a work of art, admirable both in softness and variety of tone and in general effect.

THE STAGE.

Of the two stage events of the present week, neither is of the first importance. "Betsy" was revived at the Criterion on Saturday, in place of "Little Miss Muffet." As it affords occasion for that continual stream of hilarity which has become an essential in pieces produced under the direction of Mr. Wyndham, and is, indeed, distinctly witty, "Betsy" will have, no doubt, a second successful run. At Toole's Theatre, which, though it has given us one or two good pieces, is generally too much associated with what are called "one-part plays," there has been brought out a new drama by Mr. Pinero. Mr. Pinero, being an actor as well as an author, is steeped to the lips in a knowledge of the requirements of the scene; but whether from a lack, on the present occasion, of homogeneity in the piece, or from the deficiencies of more than one performer, the play did not impress so strongly as had been expected. It is a relief to see Mr. Toole acting neither the part of a serving-man nor that of an excessively illiterate tradesman who has become quickly enriched; and his performance of the cobbler, who is at the same time a village schoolmaster, has many points of quaint humour, so that he may continue to please. But an air of reality by no means invariably attends upon the character Mr. Pinero has sketched and Mr. Toole has embodied. Still, as we have implied, the popular comic actor can have pretty much his own way with his audience. Many people, however, prefer his comic song in the after-piece, "The Speaker's Eye," to any of his efforts in his more considerable part. Mr. Garden and Mr. Billington are engaged in the main play; Miss Ely Kempster plays a village girl who loves the cobbler, and Miss Myra Holme enacts with some touches of forcible melodrama the part of a young woman who has been engaged to ride in a circus and wishes to give it up. It must be said that on the present occasion Mr. Toole has certainly not been supplied with a one-part piece, the author having been minded to arouse a serious interest in the fortunes of Gilian, who was once at the circus, and of her lover.

For the moment we must confine ourselves to barely recording the decided success which the new *opéra comique* by Planquette, "Rip Van Winkle," has met with at the Comedy Theatre. Its production on the London stage has been the occasion of quite an inroad of Parisian visitors, anxious to hear the *partition* of a composer of extreme promise, and the rendering of the play by English actors of note in this order of performance. We shall shortly speak of this success at greater length.

MACMILLAN & CO'S NEW BOOKS.

BY ARCHIBALD GEIKIE, F.R.S.,
Director-General of the Geological Surveys of the
United Kingdom.

A TEXT-BOOK OF GEOLOGY.

With numerous Illustrations. Medium 8vo, 28s.
"It will certainly step at once into the foremost rank among our
standard text-books."—*Athenæum*.

A NEW NOVEL.

MRS. LORIMER: a Novel. By Lucas
MALET. 2 vols., Crown 8vo, 12s.

ANNIE KEARY: a Memoir. By Eliza
KEARY. With a Portrait. Crown 8vo.
[In a few days.]

A LITTLE PILGRIM: in the Unseen.
Crown 8vo, 2s. 6d.

LECTURES ON ART. Delivered in Support
of the Society for Protection of Ancient Buildings. By
REGD. STUART POOLE, Professor W. B. RICHMOND,
E. J. POYNTER, B.A., J. T. MICKLETHWAITE, and
WILLIAM MORRIS. Crown 8vo, 4s. 6d.

MILTON'S POETICAL WORKS. Edited,
with Introductions, Notes, and Memoir, by Professor
MASSON. 3 vols., Fcap. 8vo, 15s.

MACMILLAN'S SIX-SHILLING POPULAR NOVELS.
New Volume.

LOVE and LIFE: an Old Story in Eight-
teenth-Century Costume. By CHARLOTTE M. YONGE.
With Illustrations by W. J. Hennessy. Crown 8vo, 6s.

Now Ready, New Issue, price ONE GUINEA.

THE LITERARY HISTORY OF ENGLAND,
in the End of the Eighteenth and the Beginning of the
Nineteenth Century. By Mrs. OLIPHANT. With
Preface. 3 vols., Demy 8vo, 21s.
"Her three volumes abound with passages of eloquence and insight, and to the young student of English literature will be of the utmost value as suggesting new points of view, and stimulating interest and enthusiasm for the subject."—*British Quarterly Review*.

THE TURKISH DEBT: Report on the
Administration of Ceded Revenues in Turkey. By
EDGAR VINCENT, Member of the Council of Adminis-
tration to the Ottoman Public Debt. 8vo, 1s.

NEW PICTURE-BOOKS FOR CHILDREN.
MRS. MOLESWORTH'S NEW BOOK.

ROSY. By Mrs. Molesworth, Author of
"Carrots," "Herr Baby," &c. With Illustrations by
Walter Crane. Globe 8vo, 4s. 6d.

By THE SAME AUTHOR.
Uniform with the above, with Illustrations by Walter Crane,
price 4s. 6d. each.

"CARROTS." THE CUCKOO CLOCK.
THE TAPESTRY ROOM. TELL ME A STORY.
GRANDMOTHER DEAR. A CHRISTMAS CHILD.

NEW BOOK BY THE AUTHOR OF "WHEN I WAS
A LITTLE GIRL."

WHEN PAPA COMES HOME: the Story
of Tip, Tap, Toe. By the Author of "Nine Years Old,"
"Pansie's Flour Bin," &c. With Illustrations by W.
J. Hennessy. Globe 8vo, 4s. 6d.

ARITHMETIC OF ELECTRIC LIGHTING.

By R. E. DAY, M.A., Evening Lecturer in Experimental
Physics at King's College, London. Fcap. 8vo, 2s.

FUNCTIONAL ELEMENTS of an ENG-
LISH SENTENCE, AN EXAMINATION of the. To-
gether with a New System of Analytical Marks. By
Rev. W. G. WRIGHTSON, M.A. Cantab. Crown
8vo, 5s.

TACITUS.—THE ANNALS. Edited, with
Introductions and Notes, by G. O. HOLBROOKE, M.A.,
Professor of Latin in Trinity College, Hartford, U.S.A.
Maps. 8vo, 16s. (Macmillan's Classical Library.)

MACMILLAN'S MAGAZINE.

No. 277. NOVEMBER. 1s.

CONTENTS OF THE NUMBER.

THE WIZARD'S SON. By Mrs. OLIPHANT. Chapters I.—III.

AN INDIAN FESTIVAL. By ALMA STRETTILL.

THE PEDIGREE OF WHEAT. By GRANT ALLEN.

SHOOTING the FALLS. By M. K.

THE POEM of PENTAIR. By MARGARET L. WOODS.

HOME RULE under the ROMAN EMPIRE. By G. T. STOKES.

HEINRICH HEINE: a Plea. By Mrs. MAGNUS.

ON HISTORY AGAIN. 'An Address delivered before the Historical

LITERATURE.

The Merv Oasis: Travels and Adventures East of the Caspian during the years 1879-80-81, including Five Months' Residence among the Tekkes of Merv. By Edmond O'Donovan. With Portrait, Maps, and Facsimiles of State Documents. In 2 vols. (Smith, Elder & Co.)

THESE volumes contain an extremely graphic description of one of the most remarkable feats in geographical enterprise of our time. Merv had long been the goal of the Central Asian explorer, and the desire to visit its ruined mounds had been shared by every lover of adventure. Forty years ago several English officers made the journey and returned in safety, bringing back with them the only direct information on the subject we possessed until the other day. But after the close of the first Afghan war, and the return of Dr. Wolff from his fruitless visit to Bokhara, a cloud descended over Merv, then about to pass through the interesting and not unimportant phase in its fortunes of being transferred to the Tekés. Neither Vámbéry nor any of the English officers who have visited Sarakhs and the borders of Dereges and Kuchan were able to pierce this cloud; and Merv, under its new masters, the marauding Teké Turcomans, seemed likely to remain a mystery to us until cleared up by Russian conquest. Mr. O'Donovan was fortunate not only in being the first Englishman to visit Merv for more than a whole generation, but also in getting there before the thing had been done by Russian officers. Very soon the journey to Merv will have become quite an ordinary performance; and it is more than probable that before long the Turcoman stronghold will be one of the recognised halting places on the route from the Caspian to Turkestan. Mr. O'Donovan both saw Merv and lived there before it lost its freshness and native colour, and while yet the hope was strong among its people that the wave of Russian invasion might be resisted and repelled. Moreover, although we shall doubtless hear much from M. Lessar and his companions and from their successors, it is highly improbable that any future writer will succeed in giving us anything approaching the realistic picture which Mr. O'Donovan has drawn of the Teké capital and its inhabitants.

The obstacles in the way of a visit to Merv were not merely the difficulties of the desert and the reputed ferocity of the Turcomans themselves. The dislike of both the Persian and the English Governments to sanction a journey that might not improbably have a

fatal ending for the traveller proved in most cases an effectual bar to those who regarded the other drawbacks as the necessary whets to give zest to the adventure. Mr. O'Donovan was more fortunate than those who had preceded him; but, at the last, he had to give the slip to the guardians of the Persian border, and to ride boldly into the desert in the direction of Merv. The distance was covered as rapidly as possible, partly in fear of pursuit from Dereges, and partly through apprehension of attacks by some roving party of the Akhale who had just been defeated by Gen. Scobeleff at Geok Tepeh. When Mr. O'Donovan took this final plunge into the desert, he had already been travelling for more than two years in the countries east of the Caspian. He had visited the two Russian harbours or landing-places, Krasnovodsk and Chikishlar; he had ascended the Atrek to Chat; he had explored the Persian border districts of Dereges and Kuchan; and he had resided in the cities of Teheran and Meshed. The whole of the first and a portion of the second volume are taken up with the narrative of this part of Mr. O'Donovan's experiences; but, although the interest is fully sustained throughout the work, it is, of course, in the details of his residence at Merv that people are particularly interested. It is to the consideration of these that we shall devote our main attention.

If, as seems probable, the idea generally held of Merv is that it is only a temporary camp in the midst of a desert, this idea is erroneous, as a glance at the general map of the Merv district given opposite p. 202 of the second volume will reveal. The Merv oasis is, indeed, a highly cultivated and thickly populated district of about six hundred square miles, with a computed number of nearly half-a-million inhabitants. Irrigation is carried throughout this tract of country by numerous canals and channels from the main course of the Murghab River, which is dammed at three places for the purpose of making the most of its volume within a limited space. The ruins of old Merv lie at the most eastern point of this territory, on the recognised caravan route to Charjui and Bokhara, but the present town is situated on the Murghab itself, some thirty miles south-west of the ancient cities. Old Merv consists of the ruins of Giaour Kala, Sultan Sanjar, and Bairam Ali; but the Merv of the Tekés is a straggling collection of *kibitkas* round the fortifications constructed by the late Khan Kouchid, which are known from his name as Kouchid Khan Kala. Merv, strictly speaking, is now nothing more than the fort of the late chief of the Toktamish, or principal branch of the Teké Turcomans. Scattered throughout this work are various descriptions of all these sites, of which the following passages, culled from different parts of the volume, appear the most important. On Mr. O'Donovan's first arrival at Merv, he writes:—

"Another hour brought us to the banks of the Murghab, which I now saw for the first time. We crossed it upon a rickety bridge, supported on unhewn tree-trunks planted vertically in the river bed, the roadway being four feet wide, and devoid of anything in the shape of a parapet. This structure was nearly fifteen feet above the

surface of the river. The stream follows an extremely winding channel in a shallow ravine varying from twelve to eighteen feet in depth. . . . I found myself in the midst of about two hundred huts ranged in rows of two or three hundred yards in length. In front of one of the foremost waved a small red banner from a lance-shaft lashed to the top of a pole. This marked the residence of the Lohtyar, or executive chief, elected by the leading persons of the entire Merv district. Five hundred yards distant to the northward loomed a long line of earthwork forming a front of a mile and a-half in length, and shutting out the prospect in that direction. This line formed the chord of an arc described by the river, and constituted the new Turcoman stronghold, Kouchid Khan Kala."

Among the Turcomans, and in Persia generally, there is a strong prejudice against re-occupying the site of a ruined city. This superstition has resulted in none of the old towns of Merv which were destroyed by successive conquerors being built upon. Four towns which have been known to different ages as Merv or Merou, from the Margiana of the Parthians to the Bairam Ali which was destroyed by the Bokharans, lie in ruins within the compass of a few miles on the verge of the desert, at a considerable distance, as has been explained, from the administrative centre of the Tekés. Mr. O'Donovan paid a special visit to these ruins, accompanied by one of the Turcoman chiefs. Some of his impressions are conveyed in the following passages:—

"In the midst of all this waste of crumbling palaces and baths and ramparts, excepting the snakes, a few birds, and an occasional jackal, no living creature is to be met with, save, indeed, an occasional Ersari robber or treasure-seeker; for here, as in almost every other part of the East, the popular imagination enriches these ruined vaults and foundations with secret treasures stowed away beneath them. We left Bairam Ali by its eastern gate, for the double enclosure has two entrances. Immediately in front, and a thousand yards away to the eastward, rose a long line of earth bank indicating the site of Giaour Kala, as the oldest of the Merv cities is now called. . . . The great earth ramparts by which it is surrounded closely resemble in size and construction those of Kouchid Khan Kala, which would almost seem to have been copied from them. At a distance the ramparts of the old town exactly resemble a great railway embankment. . . . Almost in the centre of Giaour Kala stands a large mound, on the summit of which are the traces of walls and towers. This was probably an old palace, or a defensive work of some kind. The *arg*, or citadel proper, was here, as in every other ancient town in this part of the world which I have examined, in its north-eastern angle, and consisted of a square enclosure, of which the northern and eastern sides were identical with the main rampart itself. . . . Standing on the ramparts of this old city, the view ranges far away to the eastward over slightly undulating ground largely covered with tamarisk growths, while here and there are traces of ruined walls and buildings, scattered sparsely in the present wilderness. This Giaour Kala is the oldest of the three remains, and was doubtless the first walled city erected upon the spot. It was destroyed by the Arabs towards the end of the seventh century, when the lieutenants of Omar, having overrun Persia, pushed away northward towards the Oxus."

Mr. O'Donovan excels in describing individuals and in bringing before his readers the details of Turcoman domestic life. Proof

of this is furnished at every turn, and where there is so much of excellence it seems invidious to make a selection. We may, however, quote his portrait of the notorious Tikma Sirdar, who has given in his adhesion to the Czar, and who formed the most prominent member of a Turcoman deputation that was sent to St. Petersburg last year:—

"The stranger was no other than the celebrated Tokmé Sirdar, the chief military leader of the Akhal Tekké, and the man by whose energy and ability the defence of the Turcoman territory and fortress had been so long prolonged. He was slightly under the middle height, broadly built, very quiet, almost subdued, in manner, his small gray eyes sometimes lighting up with a humorous twinkle. His features, though not at all regular, had that irregularity which is often seen in a distinguished *savant* of the West, and bore the impress of thought. Had I met him elsewhere, and clothed in European garb, I should not have been surprised to learn that he was an eminent member of the Bar or of some other learned profession. For some time he said but little, being evidently engaged in examining me closely. At length he seemed satisfied that I was not a Russian, having probably had sufficient experience of Russians to enable him to form a sound opinion. He went on to say, what I had so often heard from Tekké lips, how disappointed they were that the English troops had stopped short and not come on *vis à vis* Herat to the Turcoman country. Then he proceeded to review the general situation and its bearing on the Turcoman question."

With regard to] the home life of the Turcomans, perhaps no passage could be more expressive than the following, which narrates some of the incidents met with during a visit to the country house of Aman Niaz Khan, the chief of the Otamish tribe. His description of a Turcoman villa is something quite fresh:—

"Some twenty acres of ground, copiously watered by branches of the Alasha Canal, were enclosed by a tall [?] mud wall. One half of this was under clover, which here grows to a very great height; the remainder was devoted to *arps* [barley] and melon; while around the house and enclosing the vineyards were pretty extensive groves of apricot and peach. The Khan's house, situated in the centre of a small grove, was an oblong structure of unbaked brick, plastered over with fine yellow loam, and still exhibiting some attempts at decoration about the entry and windows. It was two stories in height, flat roofed, and about fifty feet by twenty long and wide, and fifteen in height. The Khan told me that he seldom inhabited this, as he preferred living in an *ev*; moreover, he used it as a storehouse for corn and fruit. . . . Close to the Khan's house were numerous villages, also surrounded with fruit trees and vineyards. They were inhabited by the chief's own immediate clansmen, the Kethkods of each being a close relation of his own. He took infinite pains to show me over his grounds, of which he appeared to feel very proud."

While Mr. O'Donovan is careful to dwell upon the faults and vices of the Turcomans, such as voracity in eating, covetousness, and similar failings, which they share in common with other Easterns supposed to rank higher in the scale of civilisation, he also records much to their credit. Both the Akhals and the Tekés are evidently attached to their homes, and are consequently not nomads in the strict sense of the word. The

statement may appear too optimistic, but it is certainly supported by many facts in the author's experience, that their reclamation from a lawless life would not be a matter of much difficulty when once taken seriously in hand. The marauders appear to be in a minority; and of late the principal chiefs have seen that their true policy consists in restraining the propensity of their followers to harry the lands of their neighbours. What the mere hope of English support sufficed to ensure, the conviction that therein lies the only way to secure good terms from the Russians will render imperatively necessary. In this event it will become an anachronism to speak of the dwellers on the Murghab banks as incorrigible freebooters and as the pest of the border-lands of Iran and Turan. Under the direct auspices of the Czar, they seem destined to become as dutiful subjects and as careful agriculturists as the Cossacks of the Don. Already many of the Western Turcomans have settled down as Russian subjects. Not merely have they paid the poll-tax required of them—they have even fought the battles of their new master. The Tekés told Mr. O'Donovan that they were more afraid of the corps raised from among the Yomut Turcomans than of the troops recruited in Circassia or Little Russia. And, if such has already been the case with the Turcomans on the brink of the Caspian, the task of assimilation promises to be not very difficult with those of the Tejend and Murghab valleys.

Mr. O'Donovan is very careful to avoid politics, and he steers clear of many controversial points. The information he furnishes throws, however, much light on the subject, and will be quoted by both schools in favour of their views. The main conclusion appears, however, obvious. The Turcomans were willing to accept British aid against Russia, and, in the event of receiving it, to oppose Russia to the bitter end as our allies. This point, after reading Mr. O'Donovan's pages, does not admit of the shadow of a doubt. But that condition of things is buried in a past that cannot be recalled. The Turcomans always hesitated between playing two games—one for the British, the other for the Russian, alliance. They have played the former, and there has been no result. Discouraged by Mr. Thomson's enigmatical replies to their proffers of faithful service to the English Padishah, and disgusted, it must be added, by Mr. O'Donovan's silence in his capacity of their appointed ambassador and advocate, they are now probably more bitterly disposed towards England than before they were friendly. Unless Russia resorts to an unnecessary and foolish violence, they are already her pledged auxiliaries, ready to execute any project in which their services as irregular cavalry may be needed. Hope of their assistance in checking the Russian advance must therefore be definitely abandoned; but our consideration for Mr. O'Donovan's service to Central Asian knowledge is not to be qualified by the fact that he was the first to bring home to the minds of the Teké Turcomans, by practical proof, the unreality of English support when a distant community is menaced by a foe at its very door.

DEMETRIUS CHARLES BOULGER.

Homespun Yarns. By Edwin Coller. (J. & R. Maxwell.)

No apology, such as Mr. Coller offers in his Preface, is needed for the collection and publication of these legendary ballads, which have appeared from time to time in sundry magazines and journals. Written, as their author informs us, "during the scant leisure that falls to the lot of a hard-working provincial journalist," they are so evidently of genuine inspiration and the product of happy, if brief, leisure—and possess, moreover, in a high degree, the rarer qualities of the class of poetry to which they belong—that they should be welcome to all admirers of popular song. The legends that form the subject-matter of many of them are, it is true, slight and of secondary importance, being neither of profound archaic interest nor in any sense typical, as many legends are, of certain phases of monastic and feudal life invaluable to the archaeological historian. It is in the telling of these stories that their chief merit lies; and Mr. Coller frequently displays a dramatic power and a direct and simple force in narration that are remarkably akin to the native strength and naïf charm of our older ballads. In those of his poems where he has freed himself from the beguiling influence of Barham and Hood his work may fairly be compared with the best of Wordsworth's early "Lyrical Ballads," always setting aside, as beyond the parallel of comparison, the infrequent imaginative touches of those ballads. Like those, however, these lyrical ballads are told in the vernacular, are distinguished by an uncompromising adherence to nature, are spontaneous in lyrical utterance, and unaffected in expression. In their form there is but one incongruity to note, and that is occasional interpolations of rather hackneyed quotations that mar somewhat the *ensemble* of those poems that treat of "time long past."

Mr. Coller's powers are decidedly more advantageously shown in those ballads where he has taken modern life for his theme than in those where he remodels the old form of ballad and illustrates legendary lore. Such pieces as "Bessie and I," "Not in the Programme," "Bodgy," and "A Rogue and a Vagabond" are instinct with dramatic art, and are told with unforced humour and genuine pathos. In the first-mentioned ballad the speaker relates to a friend how, returning from a German university, he meets again his playmate of old, now grown to a beautiful woman, how he misconceived her affection for him, and fled from her presence to continue his studies, which eventually occasioned his entire loss of sight. Through love and pity, she marries him; and he, many years after, discovers signs of return of sight, is cured by an oculist, and reveals the truth to his wife and children in the form of a fairy tale, told with simple and touching pathos. Still wearing his blue spectacles, he proceeds to his country home:—

"You can easily guess what my feelings were when I got back home at last;
And how, as I trod on the threshold here, my heart beat thick and fast;
And how I had nearly told her all in a burst o' passionate bliss,
As my darling flew to welcome me home with a loving clasp and kiss.

"Dear heart, 'twas the same sweet bonnie face,
 nay, bonnier than before,
 With the old soft charm in the lustrous eyes that
 had won my heart of yore !
 Sweet eyes that were moist with tender tears,
 that it went to my heart to see,
 God knows that I never knew till then the depth
 of her love for me.

"She put my hat and my stick away, and with
 tender and wifely care
 Led me, who seemed so helpless and dark, to my
 old accustomed chair ;
 And there she left me a minute or so, with a kiss
 and a gentle word,
 While she ran to bring the children down ; and
 my heart was strangely stirred

"As I looked about at the pleasant room, and out
 on the garden view,
 That all seemed so familiarly strange, so old and
 yet so new ;
 And I dropp'd back into my chair once more,
 with a longing akin to pain,
 As I heard the children come skurrying down to
 welcome me home again."

Then follows the happy revelation, which is
 too charmingly told and at too great length to
 be truncated by quotation.

If Mr. Collier excels in pathos in such
 ballads as "Bessie and I" and "A Rogue
 and a Vagabond," he displays a dramatic
 intensity in "Not in the Programme" which
 is almost more remarkable, and which in
 competent hands should prove highly
 effective on the platform. The story, told
 by a strolling player, is related with masterly
 command of the passionate and fiery force
 with which it is charged ; and this energy is
 never forced ; the climax is reached naturally
 in the course of a narrative in which the
 speaker's powerful reminiscent sense of the
 melodramatic incident he relates is revealed
 by the quiet, subdued glow, rather than the
 unsteady flame, of enthusiasm. Among the
 other ballads a word of notice is due to
 "Margery's Valentine," "An Autumn Even-
 ing's Dream," and "In the Good Old Times."
 The second of these is a meditative poem,
 notable for the success with which the strain
 of retrospective reverie is sustained, and
 replete with finished pictures of rural calm
 and beauty. The perusal of this volume
 should cause Mr. Collier's promised Second
 Series of "homespun yarns" to be awaited with
 interest by all who admire our ballad litera-
 ture.

J. ARTHUR BLAIRIE.

*Conversations and Journals in Egypt and
 Malta.* By Nassau W. Senior. (Sampson
 Low.)

THESE two volumes contain the late Mr.
 Senior's diary of his visit to Egypt and
 Malta during the last two months of 1855
 and the first few months of 1856. It was
 the fortune of Mr. Senior to accompany, by
 the invitation of M. de Lesseps, the inter-
 national commission of specialists which was
 appointed, at the request of Saïd Pasha, to
 examine the technical feasibility of the Suez
 Canal. The history of the Suez Canal is
 a thrice-told tale ; and in this respect Mr.
 Senior's diary is of but little interest. But the
 author, as was his habit, sought the company
 of the most intelligent men in Egypt, and
 by skilful examination elicited a marvellous
 amount of information as to its social and
 political condition.

Day by day these conversations were put
 on paper, and arranged with no common
 literary skill. As a chronicler of important
 gossip, Senior stands high in English
 literature. Under favourable conditions he
 might have rivalled St-Simon. The fact
 that this testimony was gathered from the
 mouths of independent and hostile witnesses
 renders it of special value. An Oriental
 invariably regards every ruler or man in
 authority from a personal point of view.
 The ideas of responsibility to the State, of
 the rights of individuals, of the existence
 of any law beyond the will of the Sovereign,
 are in the East in a rudimentary condition.
 It is true that the Koran and the traditions
 of Islamism have built up a somewhat vague
 code of political and social morality, known
 as the "sacred law," by which the conduct
 of Mussulman rulers is supposed to be regu-
 lated ; but in practice this code is very elastic.
 It prevented one of the earlier Sultans from
 touching a recalcitrant Sheik-ul-Islam with
 the sword, but it allowed of his being pounded
 to death in a mortar.

The statements which Mr. Senior took
 down from the lips of his informants are one
 and all coloured by personal prejudice ; but,
 placed side by side, they afford an accurate
 account of the social and political condition
 of Egypt under Saïd Pasha, the grandson of
 the founder of the dynasty, Mehemet Ali.
 So far as we can judge, the subjects of
 Saïd were in many respects worse off than
 those of the contemporary Sultan, Abd-ul-
 Medjid. Private property was far less secure
 than in Turkey. The Egyptian tribunals
 were corrupt even from a Turkish point of
 view. The kadis openly sold their decisions
 without hearing evidence. A kadi of Ana-
 tolia or Syria would frequently take money
 to delay his decision ; he would seldom decide
 against the evidence. If he did, he ran a real
 risk of being dismissed by the Sheik-ul-Islam,
 if the unsuccessful litigant chose to appeal to
 that functionary.

Not the least interesting passages are those
 which give estimates of the character and
 capacities of Mehemet Ali and his two im-
 mediate successors. The founder of the
 reigning family was truly a freak of nature.
 By birth a barbarian, he possessed all the
 qualities which distinguish civilised man from
 the savage—industry, love of knowledge, and
 the sagacity which gives up present advan-
 tages in the hope of securing distant results.
 This was M. de Lesseps' opinion of Mehemet
 Ali :—

"As a man of creative and administrative
 genius I put him very high ; indeed, I am not
 sure that I do not put him higher than Napoleon
 himself. Napoleon belonged to the most highly
 civilised nation on the Continent, and received
 the best education which that nation could give.
 . . . He had excellent materials, the civilisation
 of ten centuries, to work on, and excellent in-
 struments to work with. Mehemet Ali had to
 create everything—he had almost to create
 himself.

"Few men have passed a youth of greater
 hardship. Even after he had obtained some
 influence by his services in Egypt, and used to
 dine with my father—who early detected his
 talents—often, instead of going home at night,
 he slept near the door. One day, as he told
 me, a silver dish was stolen. He thought that
 the suspicion had fallen upon him, as the poorest ;

guest, and it was with great difficulty that he
 could be prevailed on to return to the house.

"He never could write, and did not learn to
 read till he was forty-seven, and then imper-
 fectly. I remember his puzzling over a des-
 patch ; and when I remarked on the difficulty
 of reading Turkish, he answered : 'My difficulty
 is not to read Turkish, but to read anything.
 You will see how quickly my secretary will
 read it.' And yet this man, ignorant and
 uneducated, valued as highly as any European
 the knowledge which he did not possess. . . .
 He established schools in all the towns and
 large villages—places in which at that time not
 an Egyptian could read, and in which know-
 ledge was so unpopular that mothers blinded
 their children to keep them from school."

Had he altogether escaped the besetting
 sins of Eastern despots—suspicion, and
 indifference to human life and suffering—he
 would have been more than human.
 Although he massacred the Mamelukes,
 and would sometimes order wholesale
 executions, he was never cruel without pur-
 pose. His nature was kind. Once he had
 occasion to order one of his bailiffs 300 blows
 for some misdeed. The man died on the fol-
 lowing day. His master was moved to tears,
 and provided for the widow. Abbas Pasha,
 Mehemet Ali's grandson and successor, had
 been bred up in the harem, and was a per-
 fect type of the Eastern tyrant—ignorant,
 hating knowledge and everyone who pos-
 sessed it, suspicious, timid, cruel, and aban-
 doned to the most loathsome vices. He
 abolished nearly all his grandfather's schools,
 disbanded the army, and employed 120,000
 men in covering Egypt with palaces, built
 with curious passages through which he
 might escape in case of a revolt. Ultimately
 he was assassinated. His successor, Saïd, had
 received a fair education, and lived in Europe.
 He was well intentioned according to his
 lights, sought to equalise the burdens of
 taxation and conscription, and to make the
 Bedaween amenable to the law. But he was
 a man of limited capacity, and knew no other
 but barbarian methods of working his ends.
 He abolished slavery, and decreed other re-
 forms which remained, and have remained, in
 a chrysalis state. In one respect his European
 travels were of use to his subjects. The con-
 trast between France and England made him
 a free-trader, and he placed the external and
 internal tolls of Egypt on a non-protective
 basis. His support of the Suez Canal was
 probably due to a shrewd suspicion that its
 accomplishment would loosen his bonds in
 Constantinople.

After saying so much of the governors it
 will be fair to let Mr. Senior speak of the
 governed. The following anecdote, told by
 M. Kuny, a French doctor in the service of
 the Egyptian Government, will not seem
 strange to those who know anything of the
 Fellaheen and their surroundings :—

"A few months ago, as I was accompanying
 Latif Pasha, the Governor-General of Upper
 Egypt, on a tour of inspection, two men came
 to complain that the sheikh of their village
 had had one of their relations strangled, and
 had seized his land. They brought the corpse,
 sewed up in its shroud. 'How long,' I asked,
 'has he been dead ?' 'Some hours,' they said.
 I desired it to be stripped, and found it still
 warm. I felt the wrist, and the pulse was still
 beating ; so was that of the temporal artery, and
 very little disturbed. The eyes were shut, and

there did not appear to be any voluntary motion. I prescribed an application of the Korbág (whip) to the soles of the feet, which, as a counter-irritant, would relieve the head if life was not extinct. The dead man overheard me, opened his eyes, and asked for water. 'God is merciful,' said the complainers, 'and has restored him to life.' The Pasha, however, took a more matter-of-fact view of the case, and ordered them to be bastinadoed; while this was being done, I whispered to the corpse, 'Your turn will come next: you had better slip away.'

"It threw off its shroud, and ran off. It was caught, however, and received its punishment. Having thus disposed of the fraudulent pleading, the Pasha heard the merits of the case; and it appeared that the man had really been unjustly dispossessed by the sheykh, though he had thought it advisable to strengthen his case by adding an accusation of murder to one of unlawful eviction."

Mr. Senior's journals contain some remarks on Egyptology and many excellent descriptions of Nile and desert scenery, but their one lasting merit consists in their faithful and graphic presentment of Egypt at a very important crisis in her history. The book has no index, and this deficiency is only partially supplied by an analytical table of contents at the beginning of each volume.

ARTHUR R. R. BARKER.

Oxford. By the Rev. Edward Marshall. "Diocesan Histories." (S. P. C. K.)

There can only be one opinion—and that a high one—as to the general manner in which Mr. Marshall has performed his task in the compilation of this little book. He has approached the subject, which is by no means a simple one, in a scholarly spirit; and the information he has gathered together is at once accurate and complete. In a volume that is professedly a handbook rather than a complete history, we should have hardly expected to meet with the results of original research; but Mr. Marshall has more than once had recourse to recondite and hitherto unprinted authorities. And he evinces, as a rule, a sufficiently acute sense of proportion to prevent his erudition from weighing too heavily on his reader's attention. But we must confess that at times, and especially in the earlier chapters, we could well have desired less learning and greater lucidity of arrangement. The difficulties incidental to the subject, however, almost form in themselves an apology for such blemishes as we can detect in Mr. Marshall's work; and we doubt if the greatest of our historians, had some unlucky fate turned him in this direction, could have altogether surmounted them.

Examined from a purely historical point of view, the diocese of Oxford presents few prepossessing features. It lacks the note of gradual development that alone can give internal consistency to the history of any institution. Neither in its material extension nor in the enlargement of its moral influence has it experienced a continuous growth, but it has been constantly subject to sudden advances and repulses not readily capable of brief explanation. Some of the episodes that accompany its exaltation and depression are attractive enough, but they are often less closely connected with the diocese than with

the university, whose position at its centre frequently overshadows its importance; and, even if we admit their strict relevancy, we seek in vain among them for a connecting thread to give to the history, as a whole, a well-sustained and organic interest. Far more than in the case of other diocesan histories, the facts only lend themselves to chronological grouping, and any broad generality of treatment is practically impossible.

The early fortunes of the diocese are characteristic of the irregular movements, both progressive and retrograde, of its whole career. Soon after the conversion of the West Saxons in the early part of the seventh century, Oxfordshire became the central district of a diocese. Geographically speaking, it mainly differed from the form it subsequently assumed in the fact that the bishop's chair was placed at Dorchester, and not at Oxford—of which, it must be remembered, hardly any mention is made in early historical authorities before the final wrestle of England with the Danes, when it played a part that has been compared to that which it played in the Great Rebellion. For forty-two years a regular succession of bishops continued at Dorchester; but with the close of the seventh century the kingdom of Wessex was divided into the great bishoprics of Winchester and Sherborne, and the see of Dorchester was absorbed within the latter. Oxfordshire ceases for nearly two centuries to have any claim on the attention of the ecclesiastical historian. During that interval the county passed from the kingdom of Wessex into the hands of the Mercian kings, and the see in closest proximity to it was that of Leicester. But at the end of the ninth century Dorchester for a second time became the home of a bishop, and at a later date the sees of Lindsey and Leicester were abolished, and those dioceses came under his control. But in its re-established and extended form the Oxfordshire diocese was doomed to no lasting existence. After the conquest of the Normans the bishops' chairs throughout the country were removed from the smaller to the larger towns, and Dorchester was abandoned for the city of Lincoln. For five hundred years the shire formed one of the archdeaconries of that distant see. As a diocese Oxford no longer existed, and has no history; and Mr. Marshall has been forced to fill the wide gap with accounts of the clerical foundations of the city of Oxford and its neighbourhood, which only roughly concern the general subject of the book, but without which, we will admit, the general reader would have a right to complain of its incoherence. It was only, indeed, in 1542, a few years after the dissolution of the larger monasteries, that the bishopric of Oxford was permanently established. And it was not until 1545 that the bishop's chair, which had originally been set up in the Abbey of Osney, was brought to Christchurch. Nor, in consequence of the confused religious movements of the century, is it before 1604 that the see can boast an uninterrupted succession of bishops. So uncertain was the basis of its existence for more than seven centuries after its first foundation.

There are few noticeable events to signalise the early history of the diocese and to relieve

the weariness of tracing its involved development. Mr. Marshall has dwelt at length on the trials of Cranmer, Ridley, and Latimer in the Divinity Schools and St. Mary's Church; but, although he could not have been expected to omit them, the episode is only accidentally, owing to the presence of the university, brought into local relations with the diocese. The Bishop of Oxford, so far as we know, took no active part in the tragedy. And a similar remark would apply to the events that stirred Oxford in later times. If any one cause might be assigned for the want of identity in the leading fortunes of the two institutions, it might be sought in the feeble character of most of the bishops. Little profitable information can be gathered from following out in detail the even tenor of their lives. They withheld themselves (with a slight exception in the case of the Oxford Methodists) from the many religious revivals of which Oxford was the first home from the time of Wicliffe to that of Newman; and, although their conduct always indicated on their part a desire to do their duty very respectably, it often showed a strange ignorance of the spiritual needs of the time, and deprived them of such influence over the movements as would have made them leading features of the history of the diocese.

To the student of ecclesiastical architecture, however, the diocese of Oxford will appear in a very different light to that in which it is regarded by the historian. A better field could hardly be found for studying the subject under its various aspects. Of Norman, Early English, Perpendicular, and Jacobean work, Oxfordshire can show some of the best extant examples; and Mr. Marshall has not neglected the advantages that this fact has given him. Nor has he confined his architectural comments wholly to the county that gives the see its name. During comparatively recent years the neighbouring counties of Berks and Bucks have been annexed to the diocese of Oxford, and thus Windsor has been included within its boundaries. In summarising the early history of these annexations, Mr. Marshall has added a fairly good account of their points of architectural interest.

S. L. LEE.

NEW NOVELS.

Damocles. By Margaret Veley. In 3 vols. (Smith, Elder & Co.)

The "Lady Maud" Schooner Yacht. By W. Clark Russell. In 3 vols. (Sampson Low.)

A Golden Bar. By the Author of "Christina North," &c. In 3 vols. (Hurst & Blackett.)

Julian Ormonde. By W. Charles Maughan. In 2 vols. (Paisley: Alex. Gardner.)

Under Orders. By the Author of "The Invasions of India from Central Asia." In 2 vols. (W. H. Allen.)

My Beautiful Daughter. By Percy B. St. John. (J. & R. Maxwell.)

WHATEVER else may be said of *Damocles*, it is certainly very different from all the novels we have recently read. Except that it is

written in a conversational form, it might almost as well be entitled a Treatise on the Philosophy of Life and Death. The author has a good deal to say upon both those important subjects, and it is now and again said in a weird and original manner. The working out of the characters suggests a mixture of the styles of Charlotte Brontë and Nathaniel Hawthorne. The book, on the whole, regarded in the proper light, is a terribly sombre and earnest one. Miss Veley has apparently set herself the task of showing that a far deeper happiness is possible to the human soul than that commonplace thing in whose quest the world shows such feverish eagerness. Rachel Conway is a solitary and, in some respects, a grand figure; and she is a perfectly original creation. She is well matched in the hero, Adam Lauriston, who reaches to a lofty height of self-sacrifice which is only comprehended fully after his death. He was worthy of the love of such a woman as Rachel, and he has it, for she lives apart for his sake, keeping his memory eternally sacred, although no actual words of love had ever passed between them. But they were two of those rare human beings fitted and adapted exactly to each other from the outset. There is also a capital sketch of a little boy who does not want to be a missionary, but anxiously enquires whether, if he is good until he grows up, he may become a highwayman! *Damocles* is unusually well written; but, more than that, it cannot be perused without stirring thoughts far deeper than those usually stimulated by contemporary fiction.

Mr. Clark Russell may be termed the lawful successor of Cooper; indeed, in America itself, as regards sale, he is said to have already given that distinguished sea-writer the go-by. Now we have a genuine admiration for Mr. Russell's writings, but in breadth and literary power we hold them inferior not only to the works of Cooper, but also to the *Two Years before the Mast* of Dana. Mr. Russell writes with much *verve*, and his sea-yarns are full of excitement and interest; but, in the delineation of character, he must yield by many degrees to the Americans. Take the present story for example. The adventures of the "Lady Maud," with the narrative of her loss on one of the Bahama Cays, are all that could be desired in the way of a thrilling story, which progresses in interest as it moves along to its culminating point. But when it comes to character, that is another matter. Scarcely a single person in this novel is possessed of any strong individuality. Under other conditions and in other circumstances they would fail to move us. Still, we must not expect too much. Mr. Russell is unquestionably a powerful and most entertaining writer, and at the present moment is *facile princeps* in his own field. In *Lady Maud* he has added to his attractive list of novels another story which will probably be as popular as any of its predecessors.

The author of *A Golden Bar* is one of that band of novelists (far too select) who eschew sensationalism, fiery passion, and black-hearted villainy. And yet, by the aid of quiet, sober colouring, she manages to attain

effects which are really charming. The few opening chapters of this novel may appear too subdued, but if the reader will persevere he will be repaid by the admirable study of character he will find in the heroine, Iris Durant. Her lover is more shadowy, and less satisfactory. But there are other studies of human nature which are very good, not the least clever being that of Mrs. Heseltine, a woman of the world who dreads fever, and who, if she is doomed to be seized with mortal illness, prefers "a dignified disease," and not one of the "infectious, and often disfiguring, illnesses." The motive of the work is found in the old adage that "the course of true love never did run smooth;" but in the end the quicksands are avoided, the rocks safely rounded, and the lovers find the placid waters. The author exhibits no straining after effect in her style, and the narrative flows on in a very agreeable and entertaining fashion. It is a relief to turn to a work which can be inherently interesting without being wildly improbable.

Julian Ormonde has apparently been written for the purpose of bringing in sketches of scenery in California, India, China, Japan, &c.; and we are far from saying that these are not faithfully done, though in some instances there may seem to be a little too much brilliancy in the colouring. But Mr. Maughan's mistake has been in not writing a book of travels pure and simple. In attempting to weave a story into his narrative, he has produced something which is neither "fish, flesh, fowl, nor good red-herring." The plot is of the most ordinary description; the heroine is extremely "goody," and even when in the supposed raptures of love can moderate her transports to warn her lover of his latter end. The hero is rather a washed-out repetition of a character frequently met in works of fiction—a rich man who is supposed to be an enigma to his kind, and who will turn up quite calmly at a moment when he is believed to be at the Antipodes. He is a cynic in politics, of course; and, although he does not say it in words, he leaves the reader to infer what fools men are—with one solitary exception. In his first interview with Violet Rivours, the conversation takes an extraordinary turn, considering that the two have just met accidentally in the grounds of Montford; but then he knew her to be "animated with high aspirations." It is a peculiarity of most of the characters in this story, by-the-way, to be constantly paying each other the most fulsome compliments. Then, too, the furniture, the decorations, the china, the chandeliers, &c., &c., of the fine old mansions of Montford and Riverscourt are described with a minuteness of detail which would have caused a pang of envy to shoot through the bosom of George Robins. Mr. Maughan undoubtedly gives some information regarding foreign countries which will be new to most readers. It is when he comes to speak of things in our own land that he seems to lack novelty. For example, he tells us that lawn tennis is a "really healthy exercise and graceful game," and that it "has recently taken its place among the institutions of our land." And this text gives him room to enlarge

upon the games of the French, the Italians, the Spaniards, &c. Then, again, in speaking of the chief-engineer of the *Manzanita*—in which vessel almost all the characters of the story make a voyage round the world—the author says he came from the Clyde, which he describes as an "historic river," and one "so famous in the annals of shipbuilding." Mr. Maughan pays likewise a good deal of attention to dress—a very careful inventory being given of the changing costumes of the several members of the yachting party. It was, therefore, with some astonishment we read concerning a young American lady, Miss Miranda Philbrick, that she "was attired in a becoming hat and feather." We can scarcely think this was all, notwithstanding Mr. Maughan's carefulness in describing dress. The printers—for we are afraid our complaint must lie against them—have served the author badly in setting up this work. We get *cheft doevre*, *agrèments*, *recherchè*, and *recherohè* (in neither case the accents being given correctly); and in English words, iridescent, grievous (grievous), sufferage (suffrage), &c. To write a novel successfully, some grasp over human nature, and some capacity to grapple with human emotions, are necessary; and, judging from the present work, Mr. Maughan does not possess these.

Under Orders is in two volumes only, but those volumes contain respectively 452 and 479 pages, so that we are given quite as much matter as in a long three-volume novel. It is written by one who evidently knows India well, and has his own views upon its administration. But, though so much is taken up with a special subject, we must do the author the justice to say that he has not spoilt his narrative by it, as is too often the case when novels are written with a purpose. The chequered career of Colonel George Bellasynne and Verona Aston is not without interest. They are put through some heavy trials, but all at last ends happily. In the first volume we have some excellent pictures of life at an old English country house, and the characters who are introduced to us here are well defined. The hero of this novel makes his lady-love a somewhat unusual present. Instead of a ring, or any little trifle of that kind, he gives her a dagger, bearing the name and arms of Bellasynne, and the date 1650 inlaid upon it. Some of the names of high Anglo-Indian officials with whom the story is concerned are but thinly disguised, and students of Indian politics will be able to read between the lines. Altogether, while *Under Orders* does not evince particular talent of any kind, it is very readable as novels go.

My Beautiful Daughter is one of the volumes in a cheap, uniform edition of Mr. St. John's novels. We shall not attempt to criticise it seriously, but we can honestly say that it is not lacking in excitement. There are burglaries, conspiracies, mysteries, and abductions *galore*. The villain—"Captain Rupert Leslie, alias Ralph Morton, alias Chevalier Mentine, alias Chevalier Sapira"—with a suitable representative, would make the fortune of any transpontine theatre.

G. BARNETT SMITH,

CURRENT LITERATURE.

The History of the Year: a Narrative of the Chief Events and Topics of Interest from October 1, 1881, to September 30, 1882. (Cassell, Petter, Galpin and Co.) It is, we suppose, useless now to protest against the prevalent habit of anticipating the calendar dates in all serial publications. By far the majority of weeklies are not published on the Saturday which appears on their front pages; not a few of the monthlies, besides committing the same anachronism, begin their year with November; Christmas books sometimes reach us in October. The "year" chosen for this volume is a peculiarly artificial period of twelve months, as may be seen from the subordinate title; but at least the volume has appeared with praiseworthy promptitude, just one month after that period has closed, thus setting a good example to its old-established rival, *The Annual Register*. Further comparison we do not care to enter into. Enough that the book now before us aims distinctly at a popular character. It includes the fashions, and also athletics, though not sport in its wider sense. The section dealing with religious history is very broadly conceived. Literature has been inevitably compressed, but not a few valuable comments are made upon the books selected for notice. The section on science strikes us as exceptionally well done; and it is noteworthy that more space has been allowed to foreign countries collectively than to the United Kingdom. The tables at the end are useful, especially those that give comparative statistics. But it is awkward to have the gross revenue contrasted with the net expenditure. Room ought to be found in the next issue for a third table, showing the balance-sheet. We have also a complaint to make of the Index, which is too much like an alphabetical table of contents. By reducing the length of its headings, the additional advantage of larger type would be gained. The general get-up of the volume, and notably the strength of the binding, deserve a word of praise.

Journalistic London. By Joseph Hatton. (Sampson Low.) This is a reprint, with some additions and modifications, of certain articles originally published in *Harper's Magazine*. They are chiefly concerned with the history of the greater London dailies, and with personal details of their more prominent contributors. Mr. Hatton is a fluent writer; and it is likely that his book will interest many persons who spend an hour over their morning paper, but know little of the way it is produced. The author commences with a dissertation on the antiquities of Fleet Street; then follows the history of *Punch*, warmed up from some articles contributed to *London Society* in 1875, and a few remarks on the comic, or would-be comic, press. An essay on country papers clearly brings out the fact that the telegraph has raised the level of the provincial leading articles by placing the country editor in immediate relation with imperial politics, and making him independent of London editorial comment. The history of the *Daily News* shows that this journal was founded in 1846 to expound the advanced Liberal views of that day, that its first editor was Charles Dickens, and that one of its chiefs, by having the war news of 1870-71 telegraphed word for word, revolutionised the art of newspaper correspondence. The mechanical appliances of the *Times*—type-setters, telephone, and what not—are noticed; and a gossiping chapter on the *World* and *Truth* recounts the history of the modern "Society papers." The internal economy of the *Daily Telegraph*, as also of the *Standard*, is fully discussed; and the story is told of the evolution of the *Daily Chronicle*—the only London daily which approximates to the ideal of a journal of metropolitan news—out of the *Clerkenwell News* and

Daily Chronicle. Class and trade papers receive some attention; and one of the most readable chapters deals with the early history of the *Illustrated London News*, and states that the *Graphic* was founded in a fit of spleen. It is recorded that the *Morning Post*, in lowering its price to one penny, returned to the original charge. *Journalistic London* is in no sense a history of the metropolitan press. It is a collection of traditions, statistics, and personal gossip concerning some London papers and newspaper writers grouped in lightly touched essays. Great pains seem to have been taken to give accurate information, but we notice some slips. Personal details, as might have been expected, fill many pages. Undoubtedly, many readers will be interested to learn that one journalist, who began life as an engraver, rejoices composers by his neat copy, and that the proprietor of a certain daily paper was in youth regularly taught to set type. Other readers may care to know that, with few exceptions, journalists are poor speakers, and that there flourishes a leader-writer who, when he has taken off his coat, waistcoat, and boots, lit his pipe, and got a shorthand writer by his side, can deliver himself of an article in half-an-hour. The book is beautifully printed on toned paper, and profusely illustrated with wood-cuts in the best style of American periodicals. The portraits are copied from photographs; so far as we can judge, some are good, many are passable, and a few indifferent.

Readiana: Comments on Current Events. By Charles Reade. With a steel-plate Portrait. (Chatto and Windus.) The idea of this book was to collect those not few writings which Mr. Charles Reade has addressed to the public in his own name, and as speaking for himself. Such are his famous letters on copyright, or "the rights and wrongs of authors," which appeared in the *Pall Mall*, his contemporary comments on the Tichborne case and other causes célèbres, most of which were contributed to the *Daily Telegraph*, and his retorts upon his critics *passim*. To these have been added some papers that seem incongruous with the original design. The letters on "Cremona Fiddles" every one will be glad to find reprinted in whatever connexion. But we cannot conceive why Mr. Reade has permitted the republication of the vulgar story that opens the volume. We call it "vulgar" advisedly, whatever reprisal Mr. Reade may have in store for us. On p. 68, the once well-known name of Mr. Darbishire is twice misprinted. For the rest, we know no book more characteristic of a great character. The portrait is excellent.

American Humourists. By the Rev. H. R. Haweis. (Chatto and Windus.) A series of lectures does not make a book, and it would be unjust to Mr. Haweis to criticise his last production seriously. On the platform it may pass to say that "humour is the electric atmosphere, wit is the flash." Such a half-truth there has its effect, but to expose the larger half of error it contains lies beyond our present object. It is enough to say that Mr. Haweis writes, or rather speaks, with that combination of fluency and self-satisfaction which pulpit practice can alone give. We can well believe that he held his audience at the time, but we doubt whether he caused them to think much afterwards. He is generally lively, never profound, and sometimes sinks into the grossest platitudes. He is at his best, we think, in "Artemus Ward" and "Mark Twain;" less good in "Bret Harte;" and entirely out of his depth when estimating the literary charm of Washington Irving, Holmes, and Lowell. It is to be regretted that he should have caught the contagion of some of the most artificial devices of American humour.

Ogilvie's Imperial Dictionary. New Edition.

Edited by Charles Annandale. Vol. III. I.—Scream. (Blackie and Son.) The admiration for this work which we expressed on reviewing the first volume has increased after the use to which we have put it. We have applied some rather severe tests of comprehensiveness, and it has failed in none. It is pleasing to notice that, while the editor has done his work so exhaustively, the publishers have likewise maintained the promised rate of publication with praiseworthy punctuality. In these days of promiscuous book-making, it is as rare as it is commendable to find all parties to a literary enterprise thus continuing to give us of their best work. Perhaps no great fame is to be earned thereby; but all students and working men of letters will know how to divide their gratitude for the assistance rendered to them between Mr. Annandale and Messrs. Blackie and Son.

Capturing a Locomotive: a History of Secret Service in the Late War. By Rev. William Pillenger. (W. H. Allen.) This, it should be stated at once, has nothing to do with the recent "military operations" in Egypt, but is an absolutely veracious account of an incident in the American war between the North and the South. The writer was one of a small party of Federal soldiers, all from Ohio, who attempted a railway raid into Georgia in 1862, at the very beginning of the war. They were unsuccessful, and fell alive into the hands of the Confederates, who seem to have treated their prisoners with great barbarity. Some were hanged as spies, others escaped, and the remainder (among whom was our author) were exchanged after a captivity of eleven months. It is noteworthy that not one of them succumbed to his sufferings in prison. The story is not written for an English public, but we confess to having read it with much interest. The behaviour of the men in prison is really a most instructive study of human nature. The wood-cuts are evidently of American manufacture. The binding might have been stronger. We always quarrel with, and ultimately rend, a book that will not remain open.

Life of Jean-Frédéric Oberlin, Pastor of the Ban de la Roche. By Mrs. Josephine E. Butler. (Religious Tract Society.) Oberlin said of his own life "that it had none of the elements of a romance—it would be lost in future history;" but his latest biographer has certainly brought together many romantic incidents in the suggestive and sympathetic sketch which she has just made of the venerable "apostle of humanity." That saintly life among the Vosges mountains, with its quiet spirit, its deep attachments, its practical attention to detail, and its entire self-abnegation, is one which can never cease to stir the heart as long as it is known. Mrs. Butler has cleverly woven together all the salient points of the story, illustrating it with his own words as much as possible, so that she has succeeded in putting before us a vivid picture of the various stages through which the ardent young student became the "Papa Oberlin" of the dwellers in the Ban de la Roche. Such work as Oberlin did falls to the lot of few. To leave outside the mountain walls of a secluded valley all ambition, all prospect of worldly success, or even of ease, and to devote every energy to humanising and elevating the inhabitants of that valley alone, required a rare amount of force and of concentration. To work with his own hands at making a road in the valley and a good bridge across the river gave him a right to speak to his people of the faith which could move mountains. To find them feeding on roots and grass, and hardly able to distinguish those which were poisonous, and to teach them to plant fruit trees (not allowing any child to be confirmed until it had successfully planted and

gathered fruit from two trees), gave a new meaning to the words "By their fruits shall ye know them." Mrs. Butler, while she shows with much power the magnetic attraction which pervaded all that Oberlin did, delights to dwell on his practical benevolence and remarkable power of organisation. The vigour with which he dug and hewed and planted was only increased when he turned his attention to the education of the children, and built schools and improved dwellings; and Mrs. Butler has shown strikingly how the hostility with which his first efforts were received changed to passionate devotion as time went on. She has also drawn together many instances of his calm courage, both in individual cases and in the whole of his conduct during the Reign of Terror, when, by the will of his people, he still addressed them from the pulpit, ingeniously preaching his own sermons on the subjects supplied by the Republic. Not the least interesting parts of the story are those which relate to his noble-minded wife, whom he courted so oddly and loved so well, and to the faithful nurse, Louise. The mellowing old age, the humorous self-analysis, and many pleasant anecdotes carry us, almost before we are aware of it, to the peaceful end; and we feel as we close the book that we have been in the presence of the greatest of all types of character—a founder of humanity.

Andrew Fuller. By his son, Andrew Gunton Fuller. (Hodder and Stoughton.) This is a new volume of the series called "Men Worth Remembering," in which we recollect having already received Lives of Henry Martyn and William Carey. It cannot be said that Andrew Fuller takes rank with these, either in popular estimation or in work done. But he deserves to be remembered as part founder, and first secretary, of the society that sent out the Baptist missionaries to Serampur. His son, who must now be a very old man, tells again in simple language the simple story of his father's life, which we believe he prefixed to an edition of his complete works published in 1848. Many people will probably feel most interest in his religious development, and in the series of letters addressed to India which are here reprinted. For ourselves, we have been attracted to the incidental description of the Fen country a hundred years ago, and of the kind of men by whom it was inhabited. Fuller came of a line of Cambridgeshire farmers with whom Puritanism was hereditary. His wife told a story, traditional in her family, of how her ancestress in the fourth degree had concealed her brothers and sisters from Rupert and his Cavaliers. Fuller's tractate on "The Gospel Worthy of all Acceptation" (1785) seems very strange now; but an account of the surroundings amid which he was born and bred helps us to explain its production. Here is a characteristic story:—When asked by a friend to admire the architecture of the Oxford colleges, he replied, "What is your idea of justification? Let us go home and talk about it. That is more to me than all these fine buildings."

NOTES AND NEWS.

WE are to have another new monthly magazine with the new year.

PROF. SAYCE AND MR. FRANCIS PERCIVAL will leave England in the last week in November for a tour in Algeria and Tunis. They intend to visit Constantine and (if possible) Kairwán; and they will also go to Malta and Gozo in order to examine the Phœnician antiquities in these two islands.

MR. GRANT ALLEN will spend the winter in the Riviera; but we are glad to be able to say that he has determined to do this rather as a precaution than under pressing necessity.

M. JULES OPPERT, of the Institut, is at present in London, studying at the British Museum the tablets containing the Babylonian juridical texts.

SHORTLY before his death the late Dr. Burnell presented his valuable collection of Tamil MSS. to Prof. Monier Williams for the benefit of the Indian Institute at Oxford.

MR. E. W. GOSSE will deliver two lectures at Newcastle, before the Literary and Philosophical Society on December 4 and 6, upon "Hans Christian Andersen" and "English Poetry a Hundred Years Ago."

SIR GEORGE BOWYER's letter to the *Times* of Monday, suggesting the acquisition by the country of at least some part of the Hamilton MSS., if possible, was to some extent anticipated, not to say stifled, by the announcement by the *Standard*, the same morning, of the intelligence that it is "the present intention" of the Prussian authorities to offer both to the English and French Governments a portion of the Hamilton MSS. On the principle that half a loaf is better than none, this is indeed good news.

THE volume of *Earliest English Wills in the Royal Court of Probate*, which Mr. Furnivall has now all in type for the Original Series of the Early-English Text Society this year, will contain fifty wills, ranging in date from 1387 to 1439 (with a priest's will of 1454), and in testators and subjects from the Countess of Warwick, the grandmother of the king-maker, and rich men who entail large landed properties on their children, to a wax-chandler's servant and other poorer folk, a Hackney yeoman who gives his two daughters a bullock each as a marriage portion, and others who don't think an old brass pot or a pair of sheets, an iron rack to toast eggs on, or a towel-roller, too paltry things to be left by a separate bequest. The volume, though not of the importance of the Surtees Society's Northern wills, or the Camden Society's Bury ones, inasmuch as it contains no inventories and valuations of goods—there are no early ones accessible in the London office—will yet add material of value to the series of books which for the last twenty years Mr. Furnivall has been editing on the social condition of Early and Tudor England for the Roxburghe Club, the Early-English Text Society, the Chaucer, Ballad, and New Shakspeare Societies.

THE provincial Browning Societies have all begun their meetings again this autumn. Cheltenham opened its campaign on September 26, with Miss Beale's paper on "The Religious Aspects of Browning's Poetry." Bradford followed, having fifty-four members, on October 24, with a paper by Mr. James F. Sheringham on "Characteristics of Browning's Poetry." Then came Newnham College, on November 4, with a discussion of Browning's play, "The Return of the Druses." Next the Oxford Browning Society, with a paper by Mr. W. L. Courtney, of New College, on Mr. Browning's dramas, Mr. B. F. Horton being the host of the evening. At Newnham, on November 10, "James Lee's Wife" was discussed. The Gorton and Cambridge University Societies will meet shortly.

MR. WALTER RYE has just unearthed among the Isham Correspondence a collection of news-letters dated 1688.

MISS HARRIETT JAY (author of *The Queen of Connaught*) will appear on Wednesday next, at a society matinee, in Mr. Buchanan's "Madcap Prince," to be followed by the last act of the "Nine Days' Queen," in which play Miss Jay had so great a success eighteen months ago. It will, we believe, be the lady's first appearance in pure comedy, though, if we may trust

provincial reports, her comedy scenes in "Lady Clancarty," in which she starred in company with Mr. George Rignold, were admirable. It is possible that she may appear on a subsequent occasion as Rosalind in "As You Like It."

A PATHETIC interest attaches to the publication of Mr. Edwin Coller's *Homespun Yarns* (J. and R. Maxwell), which is reviewed in another column. The author, after being employed on the Essex press for nearly a quarter-of-a-century, has recently been struck down by a serious illness which threatens to incapacitate him permanently from all literary work—and this with a wife and young family entirely dependent on him. A subscription has been opened on his behalf, under the patronage of the Bishop of St. Alban's, Sir H. J. Selwin Ibbetson, Lord Eustace Cecil, Miss Braddon, Mrs. Stirling, Dr. A. Neubauer, &c. It is also proposed to hold a series of benefit entertainments, in which Mrs. Stirling, among others, has promised to take part, and at which recitals from Mr. Coller's own works will form a prominent feature. Mr. Thomas Saltmarsh, 49 Frances Terrace, Victoria Park, will be glad to receive subscriptions.

WE hear of a new series of biographies of great military commanders, in which Lieut.-Col. Spalding and other competent professional writers will take part.

THE October number of the *New York Genealogical and Biographical Record* has an article on the late Col. Joseph Lemuel Chester, with a steel portrait, which is described by the *Nation* as "much the fullest account of him we have yet seen." It is written by Mr. John J. Lattung.

WE understand that Mr. Rennell Rodd has a new volume of poems in the press. He is anxious to disclaim any connexion with the "aesthetic" school, with which he has been identified.

MESSRS. CASSELL, PETTER, GALPIN AND CO. will shortly publish the conclusion of Sir Gavan Duffy's *Young Ireland*, under the title of *Four Years of Irish History, 1845-49*. It deals with the most memorable incidents in the modern history of Ireland—the Secession, by which the marvellous authority of O'Connell was overthrown; O'Connell's compact with the Whigs; the great famine; and, for the first time, the secret history, minutes of council, and private correspondence connected with the abortive insurrection headed by Smith O'Brien. It is written not only from close personal knowledge, but founded on unpublished documents and the correspondence of nearly everyone prominently concerned in these transactions.

MESSRS. KEGAN PAUL, TRENCH AND CO. will shortly publish a work by Mr. John Nicholas Murphy, author of *Terra Incognita*, entitled *The Chair of Peter*; or, the Papacy considered in its Institution, Development, and Organisation, and in the Benefits which for over Eighteen Centuries it has conferred on Mankind.

ONE of the forthcoming volumes of Messrs. Trübner's "English and Foreign Philosophical Library" will be a translation of Spinoza's *Ethics* by Mr. W. Hale White. It will be accompanied by a Preface and Index.

WE understand that *Studies in the Life of Christ*, by Principal Fairbairn, of Airedale College, has been translated into Dutch and edited with a Preface by Prof. Chautepe de La Saussaye, of Amsterdam.

THE Christmas number of the *Pictorial World*, to be published on November 21, will consist of a story by the dramatist Mr. Paul Meritt, entitled "The Hidden Million," which is described as ultra-sensational. It will be illustrated with fourteen full-page pictures by as many different artists, including Messrs. Robert Macbeth, Hal Ludlow, and John Leigh-

ton. The last-mentioned artist has also designed a cover for the number, to be printed in colours. Finally, there will be a coloured plate, after a picture by Mr. Frederick Barnard representing a duel in the snow.

We regret the omission of the New Shakspere Society's meeting this week from our last list of meetings. It was fixed for Friday evening, November 10, for a paper "On the Relation of Quarto 1 to the Second Quarto of 'Hamlet,' and on the Textual Difficulties of the Play," by Miss Teena Rochfort-Smith, the editress of the four-text edition of "Hamlet" now preparing for the society.

The Royal Historical Society has removed to 11 Chandos Street, Cavendish Square, W., where it will hold its first meeting for the session on Thursday next, November 16, at 8 p.m.

A GERMAN spelling-reform association (Deutsche Orthographie-Reform-Verein) has been founded to work on the phonetic basis laid down in the official *Schulorthographie*, published by order of the Prussian Government. Prof. Wilmanns, the editor of this work, has joined the society. Its official organ will be the *Zeitschrift für Orthographie*, which is edited by Dr. Wilhelm Viëtor (now of Liverpool), and published in Liverpool, Rostock, and Wiesbaden. Contributions should be addressed to Herr W. Werther at Rostock. The yearly subscription, which also entitles members to the journal, is two marks.

MESSRS. WILLIAMS AND NORGATE have sent us a volume entitled *Spinoza: Four Essays* by Land, Kuno Fischer, J. van Vloten, and Ernest Renan, edited by Prof. Knight, of St. Andrews. We have also received a note from Dr. J. P. N. Land, a Leyden professor, disclaiming all responsibility for any errors that may be found in his share of the work, which is ascribed to "T. Land." Apparently, Prof. Land, Dr. van Vloten, and the other contributors to the memorial volume had sanctioned the publication of an English version of their lectures and speeches; but, the editor of the volume having failed to communicate with them as to its final form, they are dissatisfied with its arrangement, and distrustful, not without reason, of the vagaries of his printers. The editor's Preface, for example, concludes with a well-known quotation from the theologico-political treatise advising the student "humanas actiones (et sermones [!]) non ridere, non lugere, neque detestari, sed intelligere," but the printer's error is inexcusably overlooked, and the text reads *videre*. And the same carelessness appears in the title-page of M. Renan's *Éloge*, which is described as having been delivered on the occasion of unveiling Spinoza's statue, instead of on the bicentenary of his death, the two dates being six months apart. It is a pity that the accuracy and authenticity of an interesting and useful little volume should have been called in question owing to the want of a little superficial care and caution.

We have received from the two university presses a pile of New Testaments and Bibles, numbering seven in all, which represent fresh combinations of old materials. Both Oxford and Cambridge have issued a pocket edition of the "Parallel New Testament," containing the versions of 1611 and 1881 side by side, at the low price of eighteen pence. With the exception of the title-page, these have evidently been printed from the same plates, or rather from a common matrix; but there is a difference in thickness of paper and in clearness of impression, as to both which points Oxford has the superiority. Of this edition, Oxford has also sent us a second copy, handsomely bound in Turkey morocco. Again, the two presses have each issued a "Parallel New Testament" with the two versions on one page and the Greek

text opposite, forming handsome volumes in crown octavo, minion type. But the Greek texts differ. Oxford has chosen the text edited by Archdeacon Palmer, which may be said to consist of the third edition of Stephanus (1550), with the new readings of the Revisers incorporated and the displaced readings in the margin. We thus have substantially the Greek text followed (if not adopted) by the Revisers. Cambridge, on the other hand, has taken the text edited by Dr. Scrivener. In this case, the standard is Beza's fifth edition (1598), which it may be reasonably supposed that the makers of the Authorised Version had before them, with something less than two hundred alterations, as to which it is clear that those makers must have adopted other readings; and the readings adopted by the Revisers are relegated to the margin. Here, therefore, we have substantially the Greek text of the Authorised Version. In addition, Oxford has sent us two copies of the "Parallel New Testament," very handsomely bound with the Old Testament and the "Helps to the Student," which composed the "Reference Bible." Unfortunately, what is old in these copies has been printed on paper that is isabelline in colour and poor in quality. We could wish that the Apocrypha were included, but probably this complaint has been made before.

AMERICAN JOTTINGS.

A DRAMATIC poem which Longfellow left ready for publication will appear in an early number of the *Atlantic Monthly*. Its subject is "Michel Angelo."

MESSRS. DODD, MEAD AND CO., of New York, announce a volume of *Selections from Browning*, with an Introduction by Mr. Richard Grant White.

THE *Nation*, we regret to learn, does not appreciate Mr. Browning. Commenting upon Prof. Corson's paper before the Browning Society on "Browning's Idea of Personality" (which has now been published separately), it says:—

"But the attempt to present Browning as a great teacher can have but little effect; if he be such, it is only for the few, for his defects of expression make his philosophy a sealed volume even to the cultivated. If he be a great thinker, he has failed to convey the truth through beauty as a poet ought."

After this, who shall say that our Browning Society has not justified its existence?

We would recommend to Mr. W. Clark Russell the plan of publishing his novels by instalments in American magazines. That is the only way we know of by which he can ensure any payment. The danger of losing English copyright by prior publication abroad can be escaped by a very simple device. Not a few of our most popular writers have learnt this. Among others, we notice that a new novel by Mr. Anthony Trollope, called "The Two Heroines of Plumbington" has just begun in *Harper's Bazar*. Mr. Phil. Robinson also seems to be making favour in this way, being commonly described as "the new English humorist."

WHEN the Tariff Commission was sitting recently at Philadelphia, the Book Trade Association of that city (which includes such well-known publishers as Messrs. Porter and Coates) presented a memorial praying for an increase in the duty on imported books. At present, that duty is twenty-five per cent. *ad valorem*; and what is asked instead is a specific duty of twenty cents (10s.) per pound weight, with the same for stereotype plates and casts of wood-cuts. There seem to be only two arguments in the memorial:—(1) That the raw materials of printing are so heavily taxed that more protection is wanted for the finished product;

(2) that foreign (i.e., English) publishers can afford to sell a portion of their original editions in America at a cheaper rate than that at which the native publishers can manage to reprint them. With regard to the first point, the *New York Post* points out that the duty on good printing paper (at the rate of twenty per cent. *ad valorem*) amounts to only two cents (1d.) per pound weight; and that newspapers and magazines are already admitted at the postal rate of eight cents (4d.) per pound weight. These matters are of interest to English authors as showing the protectionist difficulties with which they have to contend. For ourselves, we have long been of opinion that the only remedy is to be found in free trade, subject always to universal copyright all the world over; and that this copyright could best be enforced by a system of royalties. Such a system would certainly be complicated and also difficult of enforcement, but none of the proposals we have seen are more practicable. The Americans are just as likely to grant us free trade as to grant us copyright. English authors cannot expect the absolute control implied in normal copyright over their editions for a foreign market; it would be enough if they could enforce a just rate of remuneration.

THE editors of the *New York Critic* think that it would have been better if Dickens had spelt his pseudonym of "Boz" with a final "e"—Boze (*sic*), in order to mark the right pronunciation.

MESSRS. L. R. HAMMERSLEY AND CO., of Philadelphia, announce a *Chronological History of the Origin and Development of Steam Navigation, 1543-1882*, by Rear-Admiral George H. Preble.

EPIGRAMS.

XIII.

IMMURED in sense, with fivefold bonds confined,
Rest we content if whispers from the stars
In waftings of the incalculable wind
Come blown at midnight through our prison-hall.

XIV.

The statue—Buonarroti said—doth wait,
Thralled in the block, for me to emancipate.
The poem—saith the poet—wanders free
Till I betray it to captivity.

XV.

Brook, from whose bridge the wandering idler peers
To watch thy small fish dart or cool floor shine,
I would that bridge whose arches all are years
Spanned not a less transparent wave than thine!

XVI.

Momentous to himself as I to me
Hath each man been that ever woman bore;
Once, in a lightning-flash of sympathy,
I felt this truth, an instant, and no more.

XVII.

In youth the artist voweth lover's vows
To Art, in manhood maketh her his spouse.
Well if her charms yet hold for him such joy
As when he craved some boon and she was coy!

XVIII.

In mid whirl of the dance of Time ye start,
Start at the cold touch of Eternity,
And cast your cloaks about you, and depart.
The minstrels pause not in their minstrelsy.

XIX.

I roamed through streets with human ruins strewn
Where mirthless laughter hid Sin's wailing heart.
The lamps shone round me; o'er me shone the moon:
And earth and heaven seemed very wide apart.

XX.

His rhymes the poet flings at all men's feet
And whose will may trample on his rhymes.
Should Time let die a song that's true and sweet
The singer's loss were more than matched by Time's.

XXI.

I know the tenebrous moods that interpose
Thick solid horror 'twixt our eyes and Day!
Who scape them? Sages? Saints? Perhaps: and
those
Rapt hogs, in heaven of hog-swill, o'er the way.

XXII.

One musk maketh its occult abode
In all things scattered from great Beauty's hand;
And evermore the deepest words of God
Are yet the easiest to understand.

XXIII.

The Poet gathers fruit from every tree,
Yea, grapes from thorns and figs from thistles he.
Plucked by his hand, the basest weed that grows
Towers to a lily, reddens to a rose.

XXIV.

Enough of mournful melodies, my lute!
Be henceforth joyous, or be henceforth mute.
Nong's breath is wasted when it does but fan
The smouldering infelicity of man.

W. W.

MAGAZINES AND REVIEWS.

No one should miss Dr. Jessopp's article in the *Nineteenth Century* upon "Superstition in Arcady." To be fully appreciated, it ought to be read in connexion with two earlier papers that appeared in the same Review; but even when taken by itself it stands forth as both the most valuable and the most interesting of all the contributions to the magazines this month. It may be described as an original record of social history, discovered and interpreted by its author. Most of us have at one time or another lived in the country, but who can boast Dr. Jessopp's art of reading the rustic mind, and depicting its apparent simplicity but real depth? The rustics of George Eliot and of Mr. Thomas Hardy are mere creatures of fiction by the side of Dr. Jessopp's faithful portraits. And, above all, we have the charm of his gossiping style, which would carry the dullest reader through a long volume.

In the *Cornhill Magazine*, Mr. Proctor reassures astronomical novices against the dangers of the "Menacing Comet." An article on "A Corner of Devon" continues the series of papers on place-names and early ethnology which is becoming a feature of the *Cornhill*. "A Gaelic Helen" gives an account of Grainne, the heroine of an old Celtic romance. "A Roman Penny-a-liner of the Eighteenth Century" sheds a curious light on politics and society in Rome under Clement VII. The paper is founded on researches into Roman documents, and contains much interesting matter. "The Decay of Literature" is an attempt to codify the alarms which are sometimes felt by those who compare the literature of the present day with that of preceding periods. We doubt if it be possible to apply a uniform standard to work complete and work in the process of construction. The only result in the present case is a feeble wail on the part of the writer, who, in his anxiety not to give offence, has only managed to become dull, without being suggestive.

In *Macmillan's*, Mr. Julian Hawthorne's story has been suspended for two numbers. Perhaps his characters have struck, and refused to be finished off. Meanwhile, Mrs. Oliphant begins a novel under the title of "The Wizard's Son," though "wizards" seem out of place in a period when Mr. Gladstone is represented as overthrowing the institutions of the country. The first instalment has introduced us to four extremely unpleasant people. Mr. Grant Allen writes on the "Pedigree of Wheat," tracing its evolution as a degraded lily. Mrs. Woods gives a poetical rendering of portions of the Egyptian poem of Pentaur, the most ancient heroic poem in the world. Mr. Stokes has

written a valuable article on "Home Rule under the Roman Empire." He calls attention especially to the Assembly of Asia, as illustrating the amount of local independence which Rome allowed. Mrs. Magnus writes a needless "Plea for Heine," to defend him against the charge of being a "blackguard." A man who is not convinced by Heine's writings will not be convinced by those of Mrs. Magnus. Prof. Seeley, in an address to an historical society at Birmingham, repeats with needless iteration his arguments in favour of scientific history. Surely the science of history is like all other sciences: the student appeals only to students, the picturesque historian appeals to the indolent public. Prof. Seeley, like Goldsmith, is hurt that the crowd look at the tricks of a mountebank while a man of his parts passes by unnoticed.

MR. GOMME, so well known as a student of our ancient municipal and village life, contributes an important paper on "Curious Corporation Customs" to the November number of the *Antiquary*. We hope it is but one of a series, though he gives us no indication that it is to be followed by other papers of a like character. We believe, if due search were made, it would be found that few of our old municipalities have not preserved until recent days traces of their origin from the village community. The Rev. M. G. Watkins contributes an amusing paper on the "Philobiblon" of Richard de Bury. He is fully impressed with the interest of the book, but makes far too much of what has been called Richard's bad Latin. Richard wrote in the manner of his time, which was a very different manner to that of the men we call classical; but his style has beauties of its own which should not be overlooked, and it is as unfair to compare his style with that of Cicero as it would be to compare a modern author with Hooker or Bacon. There is an unsigned paper on "Yorkshire Parish Registers" which gives useful information, and furnishes further proof of the necessity that all documents of that nature of an earlier date than 1837 should be carefully preserved, and either the originals or full transcripts deposited in a central office where they could be consulted by students. A paper by A. P. A. on "Guernsey Folk-Lore" contains curious facts not, as far as we know, hitherto recorded. The reviews given are too short to be of much value; but the reports of meetings of antiquarian societies and the "Antiquary's Note Book" contain facts which will be very useful to the historical workers of the future.

IN MEMORIAM

CAPT. W. GILL.

THE cause of Oriental scholarship and Oriental exploration suffers a grievous loss by the untimely deaths of Prof. Palmer and Capt. Gill. The scholar and the traveller are never so closely allied as in the field of Asiatic research. Each has come to be so dependent upon the other that they can hardly exist apart. Let us not wonder unduly when they die together.

Capt. Gill was beyond question an exceptionally ardent and intrepid explorer, but I am certain that he was not rash or imprudent. He was dissuaded without great difficulty from undertaking a journey through Kashgaria in time of war, although he had set his heart upon the project, and accompanied me across China with that very view. Abandoning his first purpose, he turned aside and accomplished that journey along the Tibetan border which established his geographical reputation, and is recounted in the pleasant chapters of his *River of Golden Sand*. He had made several other expeditions, notably one to the Persian frontier, and even to the last was still bent on travel. A letter from him, dated July 14, but delayed

in transmission, which reached me, strangely enough, on the very day when the sad certainty of his death was made known, contains these almost prescient words:—

"I am tearing my hair that I am not in Egypt; but, if there is any sort of military expedition, I shall go there either on duty or on leave; and I think that, peace having been concluded, my next wanderings will be in Asia Minor or in Syria; but God knows, I seldom go to a place that I have thought about."

His life was one of ceaseless action, and he had a horror of old age as being a period of inactivity. In answer to the argument that age is the time of literary enjoyment, and that there is pleasure in watching the labour of others, which is only the continuation and completion of our own, he would reply: "No, life is worthless without activity. I do not wish to live long."

The conscientious accuracy of his scientific work as a traveller is unquestionable; indeed, he has been charged by no less an authority than Baron Richthofen with being careful beyond measure, and with abating "from laying down on his map whatever was lying at some distance from his road." But this reproach—if reproach it be—cannot be maintained; the Baron was unaware that in the region in question (the Tibetan border) the routes follow the bottom of gorges, and that the opportunity of a spacious prospect is as rare as it is delightful. Nor, when occasion required, was Gill wanting in the power of broad and bold generalisation. His scheme of the orography of Eastern Tibet, as exhibited by the contour lines of his map, is an undeniable proof of his ability in this respect.

Mr. Kreitzer, the geographer who accompanied Count Szechenyi along Gill's Tibetan route, has not yet published the results of his astronomical observations; but there is no indiscretion in quoting his determinations of the two important points of Litang and Batang in confirmation of the excellence of Gill's survey. They were communicated to me by the Abbé Desgodins, and may still require some slight correction:—

	East Longitude.	North Latitude.
Litang	100° 38' 41"	29° 57' 22"
Batang	99 26 57	29 56 16

A reference to Gill's route map, published in the *Journal of the Royal Geographical Society*, will show how closely these determinations accord with his positions.

A like deplorable fatality seems to have attended the bravest explorers of Western China—Margary, Cooper, and Garnier—all suddenly done to death in their country's cause by obscure hands in the dark places of the earth. And now poor Gill must be numbered with them. I know he was a good son, a good friend, a good soldier, and a most accomplished traveller. Let those who remember him be proud of him and glad of him, and not waste his memory in weak and fruitless regrets.

CORRESPONDENCE.

AITCH-BONE, OR EDGE-BONE.

Cambridge: Oct. 31, 1882.

I suppose this is almost the earliest dialectal word with which I became acquainted, from seeing a picture of "an aitch-bone of beef" in a cookery book, of which I lost sight only too many years ago. I have been waiting ever since for the explanation of it to turn up, and now, at last, it has appeared to me.

Webster tells us that it is properly *edge-bone*, because it is "the bone of the rump, which, in dressed beef, presents itself *edge-wise* to the view." This is just the sort of popular etymology in which the general public delights, holding to all such explanations with a tenacity which would be incredible if it were not so common. It is also just the kind of explanation which the student of English feels instinctively to be false.

The various spellings of the word are curious. Miss Baker, in her Northamptonshire Glossary, cites *aitch-bone* from Moor, Cooper, and Halliwell; *ice-bone* from Forby; *nache-bone* from Carr's Craven Glossary. Ray gives: "*Ice-bone*, a rump of beef, *Norfolk*." Thoresby, in 1703, notes: "*Ize-bone*, the huckle-bone, the coxa." But a far older instance occurs in the *Book of St. Albans*, A.D. 1486, fol. f. 3, back: "And kerue vp the flesh ther vp to the *hach-boon*"—i.e., up to the bone of the rump.

It will be at once obvious that the original word was not *edge*; for a pure English word like that could never have been so corrupted; neither has *edge-bone*, begging Webster's pardon, any intelligible sense.

It will also be obvious to any who have had some philological experience, that the oldest form is probably *nache-bone*, as in Carr, since this form is the fullest. Initial *n* is a very slippery letter in English, being sometimes added, and sometimes dropped. Moreover, the original sense was simply "rump-bone." It remains to be seen if *nache* ever meant the rump.

The answer is, yes. Strictly speaking it meant the half of it, a buttock; the reason will presently appear.

And first, as to the word itself, which is not in Halliwell.

"If thou shalt bye fatte oxen or kye, handel them, and se that they be soft on the fore-crope, behynde the shulder, . . . and upon the huchbone, and the *nache* by the taylor;" Fitzherbert, *Book of Husbandry*, sect. 57. "A big *nach*, round and knotty;" said of one of the points of an ox: G. Markham, *Husbandry, Of Oxen*. "The *catch*, or point of the rump. . . . The *nache* in some writers": *Annals of Agriculture*, xxx. 198, 377, cited in Britten's *Old Farming Words* (E. D. S.).

The word is merely the Old-French *nache*, a buttock, given in Roquefort and Burguy, but not in Ootgrave. And both are clearly right in explaining the pl. *naches* (which is more common) from a Low-Latin pl. acc. *naticas*, dimin. of Latin *nates*. WALTER W. SKRAT.

WHO WROTE "THE WHOLE DUTY OF MAN" ?

12 Park Crescent, Oxford: Nov. 6, 1882.

It is a curious proof of the fact that some branches of English literature have not hitherto been studied in a scholarly and scientific spirit that the subject of the internal evidence contained in *The Whole Duty of Man* and the other treatises of the author is still almost virgin soil. Every fragment of Greek or Latin, though its sole interest lie in its obscurity or its corruption, is critically scanned by trained scholars; but this series of tractates, which constitutes one of the chief problems of English letters, which is historically at least full of interest, and which generations of English men and women revered as their guide to the higher life, seems to have gone of late years practically unstudied and unread even by those who have handled the vexed question of its authorship. How otherwise can we account for so strange an assertion as that of an *Edinburgh Reviewer* (vol. xlv., p. 5) concerning these treatises that, "after the lapse of 170 years, they contain scarcely a word or a phrase which has become superannuated"? Such a remark would be extravagant if referring to *The Whole Duty of Man*,* which bears on its title-page that it is intended especially for the meanest reader, and is therefore comparatively

* Mr. Solly, in his admirable article in the *Bibliographer* for August, expresses his suspicion that the seven tracts were not all the work of one author. Of course the burden of proof rests with those who maintain this view; to my mind, the internal evidence is absolutely conclusive against it.

free from difficulties of every kind. It is singularly inapplicable to the six other tracts of the author, which teem with archaisms, with peculiarities of expression, and with terms derived from the technical vocabulary of the time. I cannot claim to have made as yet by any means an exhaustive examination of the internal evidence. But I hope to be able at least to show that it is in this direction that we must look for the solution of the problem, and that even an imperfect investigation of this class of evidence will lead to somewhat definite results.

A casual glance at the first edition of, say, *The Government of the Tongue* (1674), which happens to be lying before me, will reveal certain idiosyncrasies of spelling which are obviously not accidental. To give a few instances, gathered almost at random, the eye soon lights upon "bin," "attemt," "waies," "stomacos," "royalty," "repeted," "alwaies," "praiera," "pleasures," "plaies," "stuf," "treasure," "conveied," "judg," "don," "edg," &c. These and scores of similar spellings are of constant recurrence throughout the early editions of all the tracts printed at Oxford, and traces of them may be found surviving in editions printed late in the eighteenth century. To what spelling reformer among authors, transcribers, editors, compositors, or readers are they to be attributed?

I think that there can be little doubt that they are due to Dr. John Fell, though I am not aware that I have been anticipated in this tolerably obvious attribution. In the most valuable and interesting Letters from Humphrey Prideaux to John Ellis, published by the Camden Society (1875), we find Prideaux (p. 38), under date of March 20, 1675, writing from Oxford as follows:—

"A Bible hath lately come forth from us; if you hear anything of it, pray inform us. I must confess, since Mr. Dean has taken the liberty of inventing a new way of spelling and using it therein, which I think will confound and alter the analogy of the English tongue, y^e I do not at all approve thereof; and I could hardly wish that he would be a loser by the experiment, that we may have noe more of it."

The editor, Mr. E. Maunde Thompson, points out in a note that one of the peculiarities in Dean Fell's quarto Bible of 1675—the first Bible, by-the-way, printed in Oxford—is the substitution of *i* or *ie* for *y*, as in "eies," "maiest," "daies," "alaieth," "alwaies," "staied," &c. This is one of the distinctive notes of the spelling of the early editions of the Oxford-printed treatises.

Again, in the Hatton Correspondence (published by the same society, and under the same accomplished editorship, in 1878) several of Dr. Fell's letters are printed. In a singularly diplomatic reply to Lady Hatton, who had questioned the Bishop as to the genuineness of a spurious work attributed to the author of *The Whole Duty*, the following unusual spellings occur among others:—"daies," "outdon," "attemt," "enquir," "bin," "uad." In other letters in the same collection Dr. Fell writes "mesures," "temptations," "receite," "infinet," "improvements," "treasure," "equipage," "praiera," "conveiance," "affectionat," "employment," "repete," "gon," &c. The same spellings, or others equally striking, occur in his two sermons of 1675 and 1680, copies of which I have examined in the Bodleian Library. I think that this justifies me in assuming that all these later treatises passed, in some way, through Dr. Fell's hands—that they were at the very least corrected by him—before they appeared in print.

With regard to *The Whole Duty of Man*, the case is not so clear at first sight; but there is, I think, a strong presumption that it likewise was originally printed from MS. in Fell's

spelling. And here I must express my great obligations to Mr. Edward Solly, F.R.S., who has favoured me with some specimens of the comparative spelling of the first three editions of *The Whole Duty*—those of 1658, 1659, and 1659-60—to which I have not had access. There are certain spellings in the *editio princeps*, often repeated, which are in many cases altered in the second edition, and in almost all cases altered in the third. Some of these are obviously misprints, or are possibly due to the traditions of the obscure printing-office where this popular book was first set up. Others are as clearly not the result of ignorance or of carelessness. Of this latter class are:—"acknowledg," "divels," "bin," "injoy," "judg," "injoying," "al," "wil," "abridg," "relie," "imbrace," "grudg," "incom," "sacredledg," "shal," "inrich," "privatly," "knowledg," "wholy," "lest," "meeknes," "fift," "befal." The family resemblance between these spellings and those of the Dean and Bishop is unmistakable; and I would submit that we may, on this evidence, which I have here presented in the merest outline, shrewdly suspect that Fell was in some way connected with the publication of the first edition of *The Whole Duty of Man*, as well as of other treatises of the "pious and learned author" thereof.

Must we then needs rest content with the ground we have gained, without defining further the exact nature of Fell's connexion with the anonymous works? I think not. I have examined the important MS. in the Bodleian of *The Causes of the Decay of Christian Piety*, to which "Foras" has called attention in the *Bibliographer* for November. I have no pretence whatever to the skill of an expert in such matters; but I am decidedly of opinion, especially having regard to the *consensus* of Aldrich and Hearne, that that MS. is in Fell's handwriting. It is *incontestably* in his spelling; and we may therefore pretty safely conclude that this, the longest, the most elaborate, and in many respects the most characteristic of the seven treatises, was transcribed by Fell for the printer. The same is almost confessedly the case with *The Ladies' Calling*, in the letter prefixed to which Fell (for he is admitted to be the writer) expressly states that "it was needful to transcribe the whole before it could safely be committed to the press." So that it may be taken as beyond dispute that two at least of the seven treatises by the author of *The Whole Duty of Man* were printed from Dr. Fell's MS., or from copy prepared under his immediate supervision; while the occurrence of Fell's spelling in the first editions of other works raises a strong presumption that the same was the case with the rest likewise.

And here I have to announce a discovery, or rather an identification, of my own which strongly confirms the view I had already been led to form. In the Bodleian Library is a MS. (Rawlinson 700 C) which is described in the Catalogue as "A Treatise on the Government of the Thoughts [*sic*], by Bishop John Fell." Prefixed is the following note:—

"This which followeth is a true copy of some papers which are in the hands of Mr. Jones, who was amanuensis to the Right Reverend Father in God John, Lord Bishop of Oxford. The original, being all written with the said Bishop's own hand, was not long before his death, which happened July 3, 1686, by him deliver'd to Mr. Jones to be by him transcribed, and from that original was this copy taken and carefully compared. 1687."

"This is the account of my Lord Hatton's manuscript, of which this is a faithful copy."

¹ Doubtless Fell's nephew, Henry Jones. See *Seventh Report of Historical MSS. Commission, Appendix, p. 692a*.

² An error: Fell died July 10.

³ See the Hatton Correspondence, *passim*. Lord and Lady Hatton were among Fell's most intimate friends.

On reading this my thoughts at once recurred to the passage in the Preface to the collected works of the author of *The Whole Duty of Man* wherein Fell thus speaks of an unfinished treatise of which the death of the author had deprived the world:

"Indeed had Almighty God lent longer life to this eminent person, we might have received many and ample benefits by it; and particularly a just treatise, which was design'd and promis'd, of the *Government of the Thought*; an argument which none had more deeply consider'd in its utmost extent, or was better prepar'd fully to comprehend or give direction in; for as 'tis the prerogative of Omniscience to know the thoughts of others; so it requires a great measure of divine assistance and purity of heart to understand ones own. And certainly had this work bin finish'd, 'twould have equal'd, if not excell'd, whatever that inimitable hand had formerly wrote."

A careful examination of the MS. has convinced me, as I am confident it will convince anyone acquainted with the manifold peculiarities of the treatises before us, that this essay on *The Government of the Thought* was assuredly written by the author of *The Whole Duty of Man*. If that essay was indeed written by Fell, there would be no further cause for controversy; for Fell would stand fully identified as the author of *The Whole Duty of Man*. But there is no evidence to this effect in the MS. It was undoubtedly transcribed by him, for, though it is but a copy of a copy of his original, his own spellings (sometimes misunderstood and altered by the copyist) meet us on every page. The importance of this fact as confirming the hypothesis of Fell's intimate connexion with the genesis of the whole series need not be pointed out. I may add that I hope to obtain the consent of the Curators of the Bodleian Library to the eventual publication of this treatise, which, imperfect as it undoubtedly is, is, I think, worthy of Fell's eulogium and of the author. It need hardly be said that it is entirely different from the spurious *Government of the Thoughts* (*sic*) published in 1694.

I hope that we may now regard the closeness and intimacy of Fell's relations with the author of *The Whole Duty of Man* and his works, to an extent hitherto unproved if not unsuspected, as satisfactorily established. The question yet has to be answered, Can we in the matter of authorship get behind Dr. Fell? I was at one time inclined to believe that he was himself the sole author, and that his statements on the subject were not worthy of entire confidence. But further investigation has convinced me that his assertions, in the main, are strictly accurate in their literal sense, and that while Fell did all but write the seven (now increased to eight) treatises, yet the first draft of them, in a more or less complete shape, came to him from another person. Who that person was I hope to indicate next week, by confronting certain acknowledged writings with the internal evidence of the anonymous works, and by an examination of Fell's statements concerning the author, his life, character, and writings.

CHARLES E. DOBLE.

PRIMITIVE MAN.

Salisbury: Nov. 4, 1882.

In noticing the first number of *Longman's Magazine*, you remark that Prof. Owen deals me "a very professorial rap on the knuckles." May I call attention to the fact that one of the two sentences which Prof. Owen makes the text of his article, and which he attributes to me, is a quotation taken directly from Prof. Schaafhausen, and is marked by me as such in my paper? It is scarcely just of Prof. Owen to criticise it as though the words were my own. The other sentence, though not directly quoted from Prof. Rolleston, is yet taken from him,

and his authority is immediately cited for it. It would be presumptuous in me even to possess an opinion upon the anatomical question in opposition to Prof. Owen's. Still I may fairly venture to quote the authority of two such distinguished specialists as Rolleston and Schaafhausen. Surely Prof. Owen would hardly have assumed so very professorial a tone if he had attributed the words in question to their authors, instead of choosing to gain an easy victory over me. It seems to me ungenerous of him not even to mention Schaafhausen's name, who is responsible for the statement, and whose authority may perhaps balance his own. The deep respect which I feel for Prof. Owen's work makes me regret the necessity for calling attention to this matter; but, as he has quoted Prof. Schaafhausen's words and attached my name to them, I feel that a question of principle is involved.

GRANT ALLEN.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, Nov. 12, 7.30 p.m. Educational: "How Examinations can be made of Greatest Use in School Work," by Mrs. Bryant.

8 p.m. Royal Academy: Demonstration, "The Knee and Thigh," by Prof. J. Marshall.

8.30 p.m. Geographical: "Exploration through Southern China, from the Mouth of the Shiang to the Banks of the Irawadi," by Mr. A. R. Colquhoun.

TUESDAY, Nov. 13, 8 p.m. Civil Engineers: "Recent Hydraulic Experiments," by Major Allan Cunningham.

8.30 p.m. Zoological: "Additions to the Society's Menagerie," by the Secretary; "Supplementary Notes on the Anatomy of the Chinese Water-deer," by Mr. W. A. Forbes; "Notes on the Habits of the Aye-Aye of Madagascar in its Native State," by the Rev. L. Baron; "The Natural Position of the Family Dipodidae," by Mr. G. E. Dobson.

WEDNESDAY, Nov. 14, 8 p.m. Royal Academy: Demonstration, "The Trunk," I., by Prof. J. Marshall.

8 p.m. Arts: Opening Address by the Chairman of Council, Dr. C. W. Siemens.

8 p.m. British Archaeological: "A Hoard of Bronze Bracelets at Brading," by Mr. G. Roach Smith; "Antiquarian Features of the Recent Meeting of the Horners' Company," by Mr. C. H. Compton.

8 p.m. Geological: "The Drift-Beds of the North-west of England and North Wales, II., their Nature, Stratigraphy, and Distribution," by Mr. T. Mellard Reade; "The Evidence of Glacial Action in South Brecknockshire and East Glamorgan," by Mr. T. W. E. David.

THURSDAY, Nov. 15, 8 p.m. Historical: "Pestilences, their Influence on the History of Nations," by Mr. J. Foster Palmer.

8 p.m. Linnean: "Flora of Madagascar," by Mr. J. G. Baker; "Cerebral Hemologies in Vertebrates and Invertebrates," by Prof. Owen; "Passiflora from Ecuador and New Granada," by Dr. Maxwell Masters; "Pinsch's Fruit Pigeon," by Mr. E. F. Ramsey; "Malurus of the Challenger Expedition," XVI., by the Rev. E. Boeg Watson.

8 p.m. Chemical: "Contributions to the Chemistry of Tartaric and Citric Acids," by the late B. J. Grosjean; "Constitution of Lignin and Bactose," and "Action of Nitric Acid on Cellulose," by Messrs. C. F. Cross and E. J. Bevan; "Contributions to the Chemistry of Plant Fibre," by Messrs. C. F. Cross, E. J. Bevan, and S. S. Webster; "The Constitution of Some Bromine Derivatives of Naphthalene," by Mr. R. Meldola.

FRIDAY, Nov. 17, 8 p.m. Royal Academy: Demonstration, "The Trunk," II., by Prof. J. Marshall.

8 p.m. Philological: "The Dialects in the Anglo-Saxon Dictionary of Prof. Bosworth and Toller," by Mr. James Platt.

SCIENCE.

COUAT'S ALEXANDRIAN POETS.

La Poésie alexandrine sous les trois premiers Ptolémées (324-222 B.C.). Par Auguste Couat, doyen de la Faculté des Lettres de Bordeaux. (Paris: Hachette.)

The author of this important work is already favourably known to scholars by his book on Catullus, reviewed in the *ACADEMY* soon after its appearance in 1875. That he should have been led by his study of the Roman poet to a detailed examination of the literature which largely moulded him will surprise no one; but the views put forward in his earlier volume have been considerably modified in the interval.

So far as is known to the present writer, M. Couat's is the most complete account yet

published of the Alexandrian poets. It contains, indeed, one omission of gravity. There is no mention of Lycophron, whose *Alexandra* represents a unique but, at the same time, un mutilated type of a work which, if rare in Europe, has had various counterparts in Oriental literature. It is true that few, whose special studies have not guided them thither, care to deviate into that obscurest corner of Greek poetry; but the few who have will be disappointed to find nothing in M. Couat's pages on a subject where there was so much to be said that was new.

The work contains an Introduction on the foundation of Alexandria and the Museum, with its celebrated Library, and a second chapter on the chronology of the poets and librarians connected with it. Then follow, in five books—(1) the Alexandrian Elegy, Philetas, Hermesianax, Phanocles, Alexander Aetolus, Callimachus, with a short chapter on the Epigram; (2) a discussion on the Hymns of Callimachus, the circumstances of their composition, their differences of style and argument; (3) the Alexandrian Epics, the *Argonautica* of Apollonius Rhodius, the *Messenica* of Rhianus, the *Hecale* of Callimachus; (4) Theocritus; (5) Aratus and Eratosthenes. As epilogue is appended a chapter on the literary quarrel between Callimachus and Apollonius, which is said to have occasioned the *Ibis* of the former poet, and was thus indirectly the cause of the similarly named poem of Ovid.

The book is written throughout with care, and the last fault which can be alleged against its author is negligence. The latest authorities on Alexandrian poetry have been studied and weighed. These are, as might have been expected, nearly always German; scarcely an English name is to be found among them. In particular, the most recent editor of Callimachus, the late Otto Schneider, is treated with a respect considerably beyond the merits of his performance. We may perhaps be permitted to express a hope that the countrymen of Bentley will sooner or later return to a field in which German philology shines with a very dull light indeed. To pass from Bentley's clear and incisive notes on the Callimachean fragments to Otto Schneider's conjectural piecings and thoroughly non-Greek supplements of the same is as dreary a task as a philologist can well have before him.

M. Couat's chapters on the Hymns of Callimachus are perhaps as good as any part of his work. He shows with considerable ingenuity that each of the six was prompted by some special occasion, and in all probability directly ordered by Ptolemy Philadelphus. This is, we believe, a new theory, and it ought to give new interest to the study of these, for the most part, rather tame compositions. Tame, we mean, as regards poetical inspiration; for rhythmically, and as exhibiting to the full the Alexandrian artifices of language and metre, as well as the Alexandrian condensation of learned allusion, they have an interest of their own. We should, however, have liked to see a more detailed discussion on two questions which they inevitably suggest:—(1) Were they grouped in sectional parts corresponding to the various moments of the religious cere-

mony which they accompanied? (2) Are the allusions to visible phenomena, such as the spontaneous opening of the gates of Apollo's temple, the shaking of the sacred laurel, the nodding of the palm, the singing of the swan, to be interpreted literally, or as the mere fancy of the poet? It is true that to settle such points would need a longer disquisition than M. Couat could well find room for; yet the short remarks which he devotes to the subject are unconvincing, and will, we think, in view of such candid notes as that on p. 248 on the fondness of this school for arithmetical combinations, suggest to many the probability of the antagonistic hypothesis.

Most readers, we think, will consider that too much space has been given to Callimachus as compared with the greater names, Apollonius and Theocritus. Those who have toiled through Schneider's second volume will know what elaborate attempts have been made to reconstruct the *Altra* and *Hecale*; and M. Couat has taken the trouble to discuss these poems at some length and to give a theoretical reconstruction of both. No doubt the erudition of these parts of his work atones to some extent for their want of general interest; for the reconstruction out of a few fragments of originals, which were probably not very great at their best, must needs be somewhat unattractive. The Epic of Apollonius is preserved to us entire; it influenced Roman literature perhaps more than any other poem of antiquity; its importance is attested by a large body of ancient and unusually valuable scholia; its poetical merits are of a very high and, it may be added, of a very rare order. Yet to this fine work M. Couat devotes only a single chapter of little more than twenty pages, and scarcely allows it any merit except in the episode of Medea. There is, indeed, throughout his criticism of Apollonius a tone of unfairness which contrasts singularly with the general candour of his work.

"Supprimez tout à tour du vaste récit d'Apollonius l'histoire de Cyzique, celle des Bébryces, celle des Amazons, celle du séjour chez les Hylléens ou du séjour en Crète, ou tout autre accident du voyage: personne n'en souffrira, ni Jason, ni le lecteur, ni peut-être le poète."

And how, we might ask, will the *Argonautica* be true to its name? Each of the above-mentioned incidents was a familiar and inseparable part of the story; to omit it would have been to damage the character of Jason as a hero, to disappoint the reader of something he looked for, to derogate from the skill of Apollonius as a poet. Nor can the poem in any sense be called *vast*. Four books of 1,500 or 1,600 lines each is far removed indeed from such a title. Nay, it is the very reverse of the truth; Apollonius' narrative is one of the most condensed that have come down to us; its shortness is one of its chief merits. How much longer, for instance, is the far inferior *Argonautica* of Valerius Flaccus; how much longer Morris's *Life and Death of Jason*!

On the other hand, M. Couat is too fond of speaking of lost works as if they were still surviving. Rhianus wrote an epic on the second Messenian war, the hero of which was Aristomenes. Of this poem, six fragments are extant; but the course of the war as

described by Pausanias may (for this is all we can know) have been drawn from it. On the strength of this, M. Couat not only reconstructs for us the poem, but ventures to speak of Rhianus as "wishing to write a modernised Iliad in which history and romance blended with fable" (p. 333), and goes on to compare Aristomenes with Achilles, and *Il. xii. 17 sqq.* with a divinely raised storm which seconded the attack of the Lacedaemonians on Ira and nullified the attempts of the Messenians to repulse them.

These are minor blemishes in a book full of curious information and, on the whole, of temperate criticism. It ought materially to raise the reputation of its author.

R. ELLIS.

NOTES OF TRAVEL.

WE understand that Dr. Coppinger, who was the naturalist on board H.M.S. *Alert*, has written an account of the recent scientific voyage of that ship, which will be published in January by Messrs. Sonnenschein. The book will be illustrated with a large number of woodcuts, from photographs taken on the spot, including several reproductions of curious aboriginal drawings. The *Alert* was commissioned at Sheerness in August 1878 by Capt. Sir George Nares, who had previously commanded her in the Polar expedition of 1875-76; in the following year Capt. Maclear succeeded to the command; and the ship returned to England in the first week of last September. The object of the commission was a voyage of circumnavigation and scientific discovery, which has lasted for just four years. Among the places surveyed and explored were the western coast of Patagonia, the islands of the South Pacific, Torres Straits, and the little-known group of coral islets in the South Indian Ocean called the Amirantes. Special provision was made for obtaining zoological collections; and these (chiefly of marine fauna) have been presented by the Admiralty to the British Museum, where they are now being studied and classified.

PROF. EDUARD SACHAU will shortly publish (with Brockhaus, of Leipzig) the results of his journey through Mesopotamia, which was undertaken with the assistance of the Prussian Government.

THE same publisher has in the press a work by Gerhard Rohlfs, describing his recent travels in Abyssinia.

SCIENCE NOTES.

THE Delegates of the Clarendon Press have determined to issue a series of translations of important original papers in foreign languages on biological subjects, and have committed the editing of these memoirs to Dr. Michael Foster, Dr. Pye-Smith, and Dr. Burdon Sanderson. It is proposed that the series should begin with a single volume of about 750 pages, to be divided into three parts: the first to comprise the treatise of Prof. Heidenhain on "The Physiology of the Process of Secretion;" the second a series of four papers by Prof. Goltz on "The Functions of the Brain," and a memoir by N. Bubnoff and Prof. Heidenhain on "Excitatory and Inhibitory Processes in the Motor Centres of the Brain;" and the third a series of memoirs by Prof. Engelmann on "The Structure and Physiology of the Elementary Contractile Tissues." Each part will be complete in itself, and will also be published separately.

PROF. GEORGE M. MINCHIN will publish very shortly at the Clarendon Press a work on

Uniplanar Kinematics of Solids and Fluids, with Applications to the Distribution and Flow of Electricity. It aims at supplying a deficiency in the course of mathematical physics usually pursued by the higher-class students in our colleges and universities, by enabling them to enter into the study of kinetics with clear notions of acceleration and other leading conceptions which belong to the province of kinematics.

PHILOLOGY NOTES.

THANKS to Emeritus Professor Blackie, the chair of Celtic in Edinburgh University is now definitely constituted. The total endowment amounts to £14,000, which will provide an annual income of about £580. According to the terms of the deed of foundation, the professor to be appointed

"shall be bound to deliver a course of lectures on Celtic languages, history, literature, and antiquities, or some of them, during the winter session each year; and, as part of his teaching, provision shall be made for a practical class in the uses and graces [*sic*] of the Gaelic language, so long as that language shall be a recognised medium of religious instruction in the Highlands of Scotland."

Candidates should send in their names to the hon. secretary to the curators by December 1.

MR. H. SWEET has sent to press nearly the whole of his Introduction to the Epinal MS., together with the transliteration which will accompany the photo-lithographic facsimile of what is probably one of the oldest MSS. containing English words in existence. Mr. Sweet completed his transliteration and collected the material for his notes and introduction more than two years ago, and the delay has been caused by the difficulty he has experienced in getting a facsimile ungarbled and untouched by hand.

WE are able to give some further details about the *Chronicles of the Mayas*, which we announced recently that Dr. Brinton, of Philadelphia, intends to publish as the first volume of a "Library of Aboriginal American Literature." It will contain five brief chronicles in the Maya language, written shortly after the Spanish conquest of Yucatan, carrying the history back several centuries. Four of these have never before been printed. They will be given in the original, with an English translation and notes. An Introduction will precede, treating of the history of the Mayas, their language, calendar, and numeral system; and at the end will be a vocabulary.

THE recent numbers of Bursian's *Jahresbericht* present reports by the following scholars on the progress of research in various departments:—Kussner on the Roman historians, except Tacitus (conclusion); Genthe on the Roman epic poets; Iwan Müller on the rhetorical works and the speeches of Cicero; Reifferscheid on the history of Roman literature (conclusion); Hiller on the Greek lyric poets; Rzach on the post-Homeric epic; Holm on the geography and topography of South Italy and Sicily; Gubrauer on ancient music; Deecke on Latin grammar; Stein on Herodotus; Lorenz on Plautus (conclusion); Friedländer on the Roman satirists; Voigt on Roman private and religious antiquities; Keller on natural history in antiquity; Biese on Ovid; Deecke on the Oyprian, Pamphylian, and Messapian dialects, and on the ancient Italian languages; Georges on Latin lexicography.

MEETINGS OF SOCIETIES.

ARCHAEOLOGICAL INSTITUTE.—(Thursday, Nov. 2.) LORD TALBOT DE MALAHIDE, President, in the Chair.—In opening the first meeting of the session, the noble Chairman spoke of the loss the Institute

had sustained in the deaths of Mr. E. P. Shirley and Mr. Carthew, and referred in terms of great satisfaction to the meeting that had lately been held at Carlisle, and the cordial support that had been extended to the society by the antiquaries of the great Border city.—The Rev. H. Whitehead sent a paper on an ancient paten from Hamsterley, Durham, which was exhibited. This would appear from the date-letter to be the earliest piece of hall-marked plate that has hitherto been noticed, and to bear the mark of the year 1439, seven years earlier than the Pudsey spoon.—Mr. R. S. Ferguson sent a paper on a parchment pedigree of Raby Coat, Cumberland, which also was exhibited.—Mr. W. M. Flinders Petrie read a paper, the first of a series, on the domestic remains of ancient Egypt, in which he considered the condition of the mass of the people as shown by their dwellings and remains, describing the barracks of the Pyramid masons uncovered by him at Gizeh, the private houses at Memphis and Tel-el-Marna, the barracks of the Theban garrison, and the Ptolemaic and Roman sites near Gizeh; examples of very rude stone implements from the latter sites were exhibited. The general parallel of the history of Italy and Egypt was also sketched, and attention drawn to the great changes in ancient Egyptian history and the importance of studying it at first hand and not through the medium of Greek ideas.—The Bishop Suffragan of Nottingham sent some notes on the discovery of three tree coffins in Grimaby churchyard, which he thought were probably either of the Saxon or Danish period.—Precentor Venables laid before the meeting a sketch of a Roman sepulchral inscribed stone recently found in Hungate, Lincoln, with notes upon it by himself and the Rev. J. Wordsworth. Mr. Venables also sent a sketch of an early sepulchral slab, exhibiting interlaced work, lately found in lowering the ground at the west front of Lincoln Cathedral, with remarks upon this memorial.—Mr. Stuart Knill exhibited a drawing of excavations in Leadenhall Street, showing considerable remains of a Roman pavement lately discovered.—Mr. J. H. Middleton exhibited a drawing of a chalice at Little Faringdon, circa 1470, and made some remarks thereon.—Among other objects exhibited were a bronze mortar lately found at Colchester with Roman remains, by Mr. E. Peacock; a British urn of great size, fragments of two others, and a quantity of bones, discovered a short time ago at Acton, by Mr. Hedges; a beautiful knife handle decorated with *nielli* of Italian character, found in the moat at Kirkstead, Lincolnshire, by Mrs. Cartwright; five old swords by Mr. H. Hems; drawings of the font at St. Peter's, Ipswich, by Miss M. Burton; and a drawing of the west end of Ashford Carbonell church, Salop, showing an arrangement of a very unusual kind, by the Rev. J. S. Tanner.

CARLYLE SOCIETY.—(Friday, Nov. 3.)

A PAPER on the "Personal Relations of Carlyle with Goethe" was read by Dr. Eugen Oswald, who quoted several letters that had passed between Goethe, already an old man, and young Carlyle, who as yet worked without fame or recognition in his lonely home at Craigenputtock. Goethe was one of the first, if not the first, literary man who prophesied for Carlyle a great career.—The second part of Dr. Oswald's paper will be read after the president's address at the annual special meeting of the society on Carlyle's birthday, December 4.

FINE ART.

The Life and Works of Thomas Bewick. By David Croal Thomson. (The "Art Journal" Office.)

MR. THOMSON has brought to his task much enthusiasm and the most patient and painstaking study. His knowledge of the art of the great wood-engraver seems to be both wide and accurate; he has made himself thoroughly acquainted with what Hugo, Bell, Atkinson, and the rest have written on Bewick; he has visited the localities where

the artist spent his life, and realised the surroundings amid which his work was executed; and he has collected not a few new particulars regarding the man and his productions, incorporating in his volume, along with much else that is of value, unpublished letters lent by Mr. Pocock and Prof. Corfield, and an interesting account of a visit to Bewick in 1825, from a MS. of J. C. Bowman's.

The book in which Mr. Thomson has embodied the results of his study and research is certainly the most complete and satisfactory account of Bewick which has yet appeared, and one which for all practical purposes may be regarded as sufficient and final. Its author has steered a middle course between the method of the professed cataloguer, who writes with dry methodical accuracy for the collector alone, and the more popular and purely literary method, which aims exclusively to place before the ordinary cultivated reader some human and realisable image of the artist dealt with, and to explain and emphasise the main tendencies and characteristics of his work. Of the former way of treatment, the *Bewick Collector* of the Rev. Mr. Hugo may be regarded as a typical example. To its production the worthy Rector of All Saints', Bishopsgate, brought the most unwearied research, examining, as he tells us with proper pride, "about seven thousand books and upwards of fifty thousand wood-blocks" in preparation for the Supplement alone; and proceeding to detail with unflinching insistence the five or six thousand items—cuts, good, bad, and indifferent—which enriched or encumbered those shelves and cabinets of his which contained "the largest and most perfect collection ever formed." The work is a monument of painstaking labour, and has its use for the omnivorous Bewick collector. Mr. Thomson has kept his enumeration of the engraver's works within more reasonable limits. His Index specifies some four hundred items; but of these only about a hundred and fifty have been considered of sufficient importance to call for special reference in the letterpress. At the same time, we have not found that any work of real importance, either for artistic excellence or as marking an epoch in the artist's career, has been omitted; and the really great subjects, like those of the *Quadrupeds*, the *Birds*, and the *Fables* receive intelligent and detailed description and criticism. With much that Bewick executed, with much at least that issued from his workshop, the enlightened admirer of the engraver need have no concern; and he would do well to imitate the stout Northumbrian's own contempt for the mere *dilettante*, and refuse to countenance "the whimseys of collectors." For Bewick, widely different in most respects from the early Italian painters, was like them in this, that he was first of all a craftsman—readier than Giotto himself to design the arms of any most plebeian imitator of the Bardi who might seek his aid—undertaking, with much good-will, bar-bills, coal-bills, shop-cards, newspaper-headings, and any homeliest piece of work which his customers might favour him with, and executing his really memorable subjects of the *Quadrupeds* and the *Birds* amid many dis-

tractions, being constantly, as he writes to a friend in his pithy phrase, "taken off with other jobs." Now Bewick was great as an observer and a delineator of Nature and of man; he had no supreme gift as an ornamentalist, no exceptional and precious powers as a master of pure design, and his works dealing with this class of subject have no claim to be preserved as classic of their kind. Even the delicate foliage and herbage with which he so frequently adorned his book-plates, excellent as they always are in their immediate truth to Nature, are inappropriate in their application—want the selection and abstraction proper to a work of decorative design.

There is a close and curious unanimity in the various accounts of the character and personality of the great wood-engraver. His own delightful memoir and the narratives of the present author and of previous biographers all agree in presenting us with a very definite image of the grandly gifted rustic. We seem to see the man, to realise his daily life, to trace the current of his common thoughts. We can picture the stout craftsman, much "like a better sort of gardener or small farmer," who trained himself, with what help might be received from Beilby, the silver-chaser, to be one of the greatest artists of his time; who came to London, and, finding it little to his taste, soon returned to his old provincial ways, and led his life surrounded by the Nature which he had known and loved from childhood, executing much of his most precious work in spare moments saved from the business of the day—after dinner, perhaps, when his friends were chatting with him over their wine, or in the evenings when the candles were lit and the curtains drawn, and recreating himself with pipe and newspaper at "The Blue Bell in the Side," or with sober talk at "Swarley's Club," or in still quieter fashion by his own fireside, watching his daughters dancing to the music that his son made on the Northumbrian pipes. A personality this, fascinating in its sturdy homeliness; a life of blameless probity and simplicity, the life of one reverent towards all that he felt to be worthy of veneration, yet full of self-possession and self-respect, and upheld always by a very real, though most unconventional, trust in the favour and protection of the "God who loves all honest men."

Nothing is more characteristic of Bewick's art than its originality, its directness. He saw Nature for himself; never through the eyes of some bygone master. Filled as his autobiography is with descriptions of Nature and reflections on humanity, its three hundred pages contain, so far as our memory serves us, but one single reference to any of the renowned artists of the past; and here he mentions Dürer only to advance a most untenable explanation of a detail of the German's *technique*. "Art for Art's sake" was never a motto of Bewick's; truth to the thing represented was his first and main aim; and, as he says, "the sole stimulant was the pleasure I derived from imitating natural objects." And so it comes that his style and methods possess the most admirable directness, the most complete and instinctive adaptation of means to end, as has been well

indicated by Mr. Thomson at the very opening of his book.

There is one little point connected with Bewick's *technique* regarding which we should have been glad of more definite information. At p. 88 we are informed that he executed certain engravings on metal by a peculiar method which has been fittingly styled "wood-engraving on copper." We might reasonably have been furnished with such details as would have enabled us to appreciate the appropriateness of the phrase. One remembers the "wood-outs on copper" from which Blake printed the groundwork of his *Songs of Innocence*, and other autographic works; and here the quaint title was not ill chosen, for the design was sketched on the copper in a varnish impervious to the acid which was afterwards used to bite away the surrounding metal, and it remained as a raised surface, which was printed in the manner of a wood-block. But evidently no analogous process was used by Bewick; and, indeed, judging from the example reproduced at p. 89, the result which he obtained does not materially differ from that which is yielded by a plate executed by the ordinary union of engraved and etched lines.

In a volume like the present, dealing with so many and so minute matters of detail, it is of course impossible altogether to avoid inaccuracies. One, which should be corrected in future editions, we observe at p. 223. It is there indicated that the portrait of Bewick recently etched by Flameng was the work of (Isaac) Nicholson, one of the wood-engraver's pupils; but in the announcement of the print it is ascribed to William Nicholson, doubtless with perfect correctness, for the original drawing is identical in style with the many very delicate water-colour portraits painted by the latter artist—a native of Newcastle, and one of the founders of the Royal Scottish Academy—from which he himself etched a selection of the more notable subjects in 1817 and the two following years.

The chapter devoted to the water-colours of Bewick will be read with interest, as this is a department of his work which has been little commented upon by the artist's former critics, and was, indeed, almost unknown to the general public till 1880, when the Misses Bewick exhibited in the rooms of the Fine Art Society that rich collection of drawings which has since been presented to the British Museum by the surviving sister.

The volume is excellently illustrated with many impressions from the original wood-blocks of the brothers Bewick, including such admirable subjects from the *Select Fables* as that charmingly bright, sunny interior, with its excellently posed figures, given at p. 80. The electrotypes and facsimiles from the *Birds* and the *Quadrupeds*, while they inevitably miss something of the last delicacy and refinement of the originals, are yet carefully executed, and sufficiently representative for purposes of reference.

We shall look with interest for future works from Mr. Thomson's pen, and we do not doubt that they will be distinguished by the growing literary power which comes with practice, and by the careful study and research which have given value to the present volume.

J. M. GRAY.

EXHIBITION OF WATER-COLOURS

It is recorded that, by their exhibition in London and the provinces for the space of about a year, the proprietors of John Martin's "Great Day of His Wrath" and its companions made thirty thousand pounds; yet we doubt if these sensational and impressive works are really among the most interesting of the goodly assemblage now gathered at 53 Pall Mall. The exhibition in what has hitherto been the gallery of the Institute is, in truth, more noteworthy by reason of the Copley Fieldings and De Wint—not to say the Leitches, the Wylds, the Carricks, the Charles Greens—which are now upon the walls. One very beautiful De Wint, representing the flowing of a gray and placid river under perturbed skies, may fairly strike the beholder and arrest attention. A charming Copley Fielding, or more than one, is worthy of notice. By the late Edward Duncan there is a singularly luminous view of an English lake. The veteran Leitch betrays what has been his inheritance from the yet older masters of water-colour, Barrett and the rest. William Wyld is admirably represented by a whole series of views of Southern cities and scenes; nor is Bonington—a master from whom in his town views Wyld shows he has learnt something—ignored in an exhibition that is irregular, but at all events extremely comprehensive. Carrick is no juvenile member of the Institute; we are pleased to see so many examples of his control of luminous atmosphere. By Charles Green and by Linton there are drawings which may with interest be compared with their later effort. Here is Green's somewhat elaborate sketch for his yet more elaborate drawing of "The Rehearsal;" and here is his "Morning Post," a glowing little gem of colour. In Linton's work, nothing can possibly be more expressive than his drawing of two girls, of whom one is radiant with expectation of a social triumph, and the other gloomy at her exclusion from it. "Siena" represents Mr. Fulleylove, a colourist indeed, and, in his presentation of architecture, above all things an artist. More than one attractive single figure comes from the hand of Towneley Green. And by George Clausen—to come to an end and make short work of an exhibition whose interest we fully allow—is a characteristic example, seen now not for the first time with pleasure. In it are discovered two rustic figures, a young man and a boy, faggot-laden, making steadily for home, across the fields of advanced autumn. The artist by his choice of types has reconciled the claims of truth and refinement. The quiet colours of his work are not more remarkable than its undisturbed harmony. The show we have been briefly noticing is thoroughly worth a visit.

THE FRENCH GALLERY.

THERE are several interesting pictures here, and one of great power, although of small size; we allude to M. Seiler's "A Freischütz Bargain" (56). Nothing more skilful in design, drawing, and expression can, we think, be imagined than the figures of these two Tyrolean peasants examining an old fowling-piece in the shop of a dealer in odds and ends. We have our doubts about the dealer's legs, but in every other respect the drawing is masterly; and the colour is charming. The companion work by the same artist, "Arguing out the Point" (62), is less interesting, but almost equally faultless in drawing and colour. Prof. Müller's "Guardian of the Sacred Well" (60) is a firmly and admirably painted picture. There is a door behind the guardian's figure the colour of which seems to jar; but, with this exception, the colouring is as pleasing as the execution is

skilful. There is a clever picture by M. Julien Dupré entitled "In the Fields, Brittany—Labour" (15), which gives a peculiar effect of light on hay. The figures are very well painted. Two sketches of heads by M. E. de Blaas—"Ripe for Mischief" (47) and "From the Sunny South" (72)—strike us as careful and original; and Mr. Bartlett's "Mussel Gatherers, Venice" (22), has considerable merits, though the general result is not completely satisfactory. Mr. Edwin Ellis has deserted his favourite ocean waves, and gives us here a piece of river scenery—"An Old World Corner" (170). The subject is a difficult one, and it is dealt with in Mr. Ellis's most vigorous style. Seen from the other side of the room the effect is good, but surely the picture might have been made more truthful in detail without loss of the vigour and freshness which are so valuable in the works of this artist. We must not omit to mention Mr. Johnson's "Laying in Stores for the Winter" (59)—a well-painted and powerful landscape.

THE GUARDI GALLERY.

THERE are some admirable works by Hermann Phillips in this exhibition. "The Troubadour" (4), though inky in colour, is well drawn and well conceived. "A Study" (29) is a charming female head; the flesh tints are especially good. "La belle Fruitière" (40) is, however, we think, the gem of the collection. In grace of figure and combined delicacy and vigour of execution this picture leaves little to be desired. "Une Musicienne vénitienne" (57) is also a brilliant piece of colouring. Among other noticeable works are Mr. W. H. Bartlett's "A Cabaret in Normandy" (3)—a carefully painted and truthful study of a dreary interior, only marred by some bad perspective in the lines of the floor; and "A Street Scene in Holland—Winter" (39), by W. Koekkoek—a rather hard, but finely painted, and singularly elaborate study. The houses on the right should be specially observed. There is also a little picture by Rubens Santoro, "Iachia" (117), in which the glare of the mid-day sun is admirably caught.

CORRESPONDENCE.

A POSTSCRIPT ON PIETER CLAESZ.

Fitzwilliam Museum, Cambridge: Nov. 5, 1882.

Referring to my letter published in the *ACADEMY* of October 21, I have the satisfaction to inform your readers that my proposed identification of the author of certain Dutch still-life pieces bearing the monogram P. O. (the O. passing through the tail of the P.) with Pieter Claesz of Harlem, the father of the famous painter Berchem, was well founded, and may now be taken as beyond doubt. M. A. Bredius, the learned and indefatigable Director of the Nederlandsch Museum at the Hague, informs me that, in the beginning of this year, he had established the same identification on the strength of ancient inventory-papers and other documents, and had set forth his conclusions in an article which still awaits publication in Lützow's *Zeitschrift für bildende Kunst*. The third and quite recent (abridged) edition of M. de Stuers' Catalogue of the Royal Museum at the Hague, which I had not seen, contains, in a foot-note on p. 30, a brief reference to M. Bredius's discovery. M. Bredius further calls my attention to the fact that pictures by the same master are catalogued at Dresden under the name of C. Pottenburg, and at Berlin under that of Christoffel Pierson (this attribution being queried in the last edition of the official Catalogue); while three, one of them dated 1653, are in the well-known collection of Dutch pictures belonging to the Marchese Mansi at Lucca; others at Deesau, &c. So that in the new name of Pieter Claesz thus added to

the history of Dutch art we have that, not merely of a recognisable and characteristic, but also of a busy and prolific, painter. I should still be glad if any of your readers could give me information of other pictures by his hand existing in England.

SIDNEY COLVIN.

WOODEN COFFINS AT GREAT GRIMSBY.

Barnoldby-le-Beck Rectory: Nov. 4, 1882.

In digging the foundations for a new chancel at St. James's, Grimsby, the men have recently stumbled upon the remains of two wooden coffins, hollowed out of an oak's stem, with a covering of oak planking over them, fastened down (as joiners yet pin together oak) by means of oaken pins. The workmen had destroyed all traces of bones or stone implements when I saw these singular relics. The bark yet remains on the longer fragments (about two feet in length); the pins also remain. At the two ends of the coffin (or coffins) which I saw, the upper rim was cut into a handle with much symmetry, running nearly the whole length of the foot-board or head-board. Of what age are these wooden coffins? They came out of a close bed of clay. Wilson (*Prehistoric Annals of Scotland*, ed. 1851, p. 462) quotes from Mr. R. Gray an account of the removal of a tumulus, a few years since, on the estate of Cairngall, Aberdeenshire, when two oaken cists, which exactly correspond to these remains, were discovered.

"They had been hollowed out of solid trees; the sides were parallel, and the ends were rounded and had two projecting knobs to facilitate their carriage. The bark of the trees of which they had been formed remained on them, and was in the most perfect state of preservation."

Wilson, following Worsaae, ascribes such interments to the end of the later Scotch Iron age, very nearly corresponding with the introduction of Christianity into Scotland, say about the end of the fourth century. Can any closer approximation be made to the age of these oaken coffins at Grimsby?

M. G. WATKINS.

NOTES ON ART AND ARCHAEOLOGY.

WE understand that several new features will be introduced into the new issue of *The Year's Art*, which is now in preparation, Mr. D. O. Thomson joining Mr. Huish in the preparation of the annual. There will be, among other things, a record of some interest in the history of art—that is, a complete list of members and associates of the Royal Academy since the year 1768. The publishers are Messrs. Sampson Low.

THE winter exhibition of water-colour drawings and etchings at the City of London Fine Art Gallery, in Gracechurch Street, will open on Monday, December 4. The private view is on the previous Saturday.

MR. W. W. STORY, the eminent American sculptor, has been commissioned to execute a statue of Chief Justice Marshall, to be placed at Washington. The history of the proposal, which has now at last been put in execution, as related by the American journals, is extremely remarkable. Nearly fifty years ago a committee of the Philadelphia Bar issued a circular asking for subscriptions towards the statue. Only 2,500 dollars were raised; and, as this was quite insufficient, the money collected was placed in the bank, and the matter went to sleep for nearly half-a-century. Recently it was discovered that the sum deposited in the bank had increased to nearly 20,000 dollars, and Congress thereupon added 5,000 dollars to the fund. It is further remarkable that the work of executing the statue should have been entrusted to the son of the eminent judge who was Chief Justice Marshall's colleague and intimate friend.

M. GUSTAVE DORÉ has just finished the monument to Alexandre Dumas destined to be placed in the place Malesherbes. The unveiling of it is postponed until April of next year.

THE School of Art Wood-Carving held at the Royal Albert Hall continues to make good progress. The amateur element, so largely visible at the beginning, is giving place to sound professional work. Indeed, many even of the lady pupils have now adopted wood-carving as a profession, in spite of the hard work it involves, and are executing panels, &c., for decorators and cabinet-makers. We have lately seen a book-cover that one of these pupils—Miss Amabel Cane, who took the silver medal at the Peterborough Exhibition—has executed on commission from the Queen. It is carved in low relief, with a rich Renaissance tracery, and in the centre is the head of Athene. The work is very delicate and true, and shows not only taste, but considerable skill.

AN important and interesting head of Apollo in the archaic style, of Parian marble, has been lately discovered in a shed at The Cottage, St. Lawrence, Ventnor. It evidently belonged to the collection of Sir Richard Worsley, by whom The Cottage was built. In the arrangement of the hair it bears a close resemblance to the head of the Ochoseul-Gouffier Apollo in the British Museum. The head is surrounded with a plaited diadem, while the hair falls in curls on the forehead; the hair is well preserved, but the nose and mouth are, unfortunately, greatly injured. A marble pedestal has been also discovered, richly ornamented with carved acanthus leaves on four sides.

THE Council of the Shetland Literary and Scientific Society have resolved to sell their valuable collection of antiquities and curiosities, now at Lerwick, to the Edinburgh Antiquarian Museum. The reason assigned is lack of funds to maintain the collection properly. But, if we are not mistaken, a large sum of money has recently been expended upon decorating the Lerwick Town Hall. Surely the Shetlanders have enough local feeling to keep in their own islands the memorials of their own history. On the other hand, there is no museum whose contents are put to better use than that at Edinburgh.

THE severe line engraving that forms the chief illustration of the *Portfolio* this month carries us back to the old days when the *Art Journal* gave the best that could be had of this kind of work. The present engraving is not, however, by any of our brilliant English engravers, but by a Frenchman named Simon Rochard, who died at the beginning of the century. This plate, left in the hands of his widow, has never been published before. It is from an academic picture by Gérard representing "Belisarius." The reproduction of a rough pen-and-ink sketch of two fishing boats by Mesday offers a complete contrast to the smoothness and finish of the engraving. The text of the *Portfolio* contains very little beside the continuations of "Yorkshire Abbeys" and Julia Cartwright's "Assisi."

THE current number of the *Revue archéologique* opens with an article by Miss Margaret Stokes, explanatory of a map showing the distribution of the principal Irish dolmens. It is pointed out that they are, for the most part, to be found along the river valleys, thus corroborating the conclusion which M. Bertrand had arrived at for France—that these megalithic monuments are the work of an invading race.

THE subject chosen by the Académie des Inscriptions for the prix Fould to be awarded in 1884 is "the history of the arts of design up to the age of Pericles." This prize is of the value of 20,000 frs., and is open to foreigners.

THE third of the series of monographs on the

medallists of the Renaissance is devoted to the medallists of the House of Este—Marescotti, Lexignolo, Petrecini, Baldassare, Estense, Coradini, and anonymous medallists working at Ferrara in the fifteenth century. It is from the pen of M. Alois Heiss. The monographs already published deal with Pisano, and Francesco Laurana and Pietro da Milano.

VEUVE A. MOREL ET CIE, of Paris, are publishing in ten livraisons a series of compositions and designs by the late Viollet-le-Duc. The price of the complete work is 125 frs.

THE new part of R. Eitelberger von Eidelberg's *Quellenschriften für Kunstgeschichte* contains a translation of Leonardo da Vinci's "Book of Painting" from the Codex Vaticanus by H. Ludwig.

MESSRS. W. A. MANSELL AND CO. have sent us a print of an etching by Mr. T. B. Kennington after a painting by Mr. Edwin Hughes entitled "The Rivals." The subject is cleverly hit off for popular illustration, and the general effect of the etching is good. Of the technical skill of Mr. Kennington we could speak better if we had an earlier state before us.

ADOLF LIER, the distinguished German landscape painter, and professor at Munich, died recently at the age of fifty-five. A short, but appreciative, obituary of him is given in last week's *Kunst Kronik*. Lier paid two visits to England and one to the Scottish Highlands, where the severe melancholy character of the scenery greatly impressed him, and was for some time reflected in his works. He was, while in Paris, a pupil of Jules Dupré's, and his landscapes have much of the poetic feeling of that master. Several of them have been seen at our London exhibitions. His "Evening on the Iser," which was much noticed at the Paris Exhibition of 1878, was bought for the Berlin National Gallery.

THE STAGE.

"RIP VAN WINKLE" AT THE COMEDY.

"RIP VAN WINKLE" at the Comedy Theatre is at least the best comic opera we have had since the "Cloches de Corneville," whether one judges it by story or by music; and one may say this, and yet be fully alive to the faults that disfigure it. What the chief faults are we will say to begin with. It is feeble in comedy if it seldom verges upon farce; and yet its serious interest, though largely insisted on, is never worked up quite strongly enough to hold attention as a drama. People have compared it with the "Cloches," not so much because it is by the same composer as because in the "Cloches" likewise much was made of the serious interest, and the "Cloches" has been praised for those almost tragic passages which were really of questionable taste amid their inevitable surroundings. Now, as a matter of fact, the graver interest in "Rip Van Winkle" is of a much more appropriate order than in the "Cloches," though it is less considerable, not to say less overpowering. That was a wonderful scene in the earlier opera in which the miser is beheld sordid and miserable, but it was too dreadful for *opéra comique*—what had it to do with sparkling scenery, shapely figures, tights, cheerful jigs, romantic music? In "Rip Van Winkle" there is no such forced and tremendous contrast; but, on the other hand, that great scene did hold you in the earlier piece, and what is meant to be the corresponding interest of the later piece fails to hold you. Another fault—what we have been already speaking of is, perhaps, only a deficiency—in the newer drama is the stupidity of the part of the Innkeeper, played by Mr. Lionel Brough with patiently heroic effort to create something out of nothing. Patiently heroic effort, we said,

and yet effort sometimes horribly misplaced, for something of the dialogue uttered by Mr. Brough is vulgar without art; was any joke ever more repulsive, for instance, than that wretched one about the woman who was so inconveniently fat? For our part, we hold that it is a mortal pity that an actor like Mr. Brough, who is clever if uncouth, and experienced if not always of fine judgment, should be given such a part in such a piece. Let him play low comedy, like Mr. Toole, in its proper place, and be welcome. Mr. Leslie, the other actor of note and popularity at the theatre, is far better provided for. Rip's is an excellent part, a part of many opportunities and of startling surprises, and Mr. Leslie, on the whole, makes the best of it. What he fails to do, as we almost hinted at the beginning in saying that the serious interest was never quite absorbing, is to force on us a complete acceptance of the changes wrought in Rip by the long sleep from which he at last awakes. But then it would be ridiculous to ask Mr. Leslie to be Mr. Joseph Jefferson—to ask the hero of comic opera to be the quite pathetic artist that comes to us once in a generation. On the whole, Mr. Leslie is good. He is gallant and engaging at the first, and tender afterwards; and, at all events, discreet and restrained where the work waxes more difficult. Miss Sadie Martinot, who plays the village coquette, is not altogether coquettish. She was chosen, perhaps, for her singing. But in singing, as well as in acting, she must, not to say it disagreeably, be allowed to be outdone by the impersonator of Gretchen, Rip's young wife, in the first act, and of Alice, Rip's young daughter, in the last. We mean, of course, Miss Violet Cameron, whom even French criticism asserts to be, as a heroine of comic opera, superior to all but the very heads of the profession in France, and who, in England, as "The Mascotte" and now again "Rip Van Winkle" prove, is easily chief. Miss Cameron was agreeable to begin with. But in "The Mascotte" she showed that she had developed her talent; and in "Rip Van Winkle" she shows that she has developed her voice. Her voice is of excellent power, of sufficient compass, of admirable flexibility and expressiveness. Her acting is not only irrepressibly vivacious where vivacity is to be suffered at all. It has moments of seriousness, and is on the way to become an art. Without over-stating the matter, it may be said that from her first entrance to her last exit she gives people exactly the kind of pleasure for which they nowadays repair to the theatre. Her performance and her appearance retain freshness and charm. The music in the piece is not very catching, but it is full of grace and expressiveness. Among the more memorable numbers are the "Legend of the Kaatskills" for Gretchen; the pathetic air, "These little heads, now golden," for Rip; the ballad for Gretchen, "Now the twilight shadows are stealing;" and the admirable letter song for Alice, "True love, from o'er the sea." There is likewise a very little ballet music that is undeniably pretty and fanciful. "Rip Van Winkle," interpreted as it is at the Comedy, will be heard for a long time on the same boards, and upon its own merits it may be said of it that M. Planquette has endowed the stage with another comic opera that will live and circulate.

MUSIC.

RECENT CONCERTS.

THE programmes of the Crystal Palace concerts are, as a rule, strictly carried out. On October 28, however, owing to the sudden illness of Mr. Carrodus, Weber's clarinet concerto in F minor, dedicated to his life-long

friend, Heinrich Baermann, was put in place of Mendelssohn's violin concerto, and performed in a most successful manner by Mr. G. A. Clinton. The slow movement is very charming; and the whole work is written in an effective manner for the solo instrument. The magnificent rendering of Schumann's symphony in D minor (No. 4) deserves special mention. The loud and prolonged applause testified to the delight of the audience. It is, indeed, scarcely possible to realise the fact that only a few years ago Robert Schumann's music was considered dry, diffuse, and difficult of comprehension; that it was rarely performed, and, when given, was received with indifference or coldness, or even hostility. Schumann is now rapidly becoming one of the classics. The first performance at these concerts, and in England, of the prelude to "Parsifal" excited great interest. The rendering of the piece was exceedingly good; and, with lowered lights and the orchestra removed from sight, one might almost have imagined one's self at Bayreuth.

The changes of programme at the concert on November 4 were somewhat unfortunate. A movement from Mendelssohn's MS. symphony No. 10 was played instead of the one from No. 12 indicated in the book; and the recitative and air from Mr. A. C. Mackenzie's dramatic cantata "Jason," recently performed at the Bristol Festival, were omitted. Only the instrumental *intermezzo* "On the Waters," from the same work, was played. This is one of the composer's most successful efforts; the scoring is interesting, and the tone-picture of the voyage of the Argonauts to "the home of the rising sun" very graphic and effective. It is programme-music of a high order and of a legitimate kind. The programme, in commemoration of the anniversary of Mendelssohn's death, included, besides the movement mentioned, the "Fingert's Cave" overture, the "Hymn of Praise," and the *scherzo* in E (op. 16, No. 2) scored for orchestra by H. Hoffmann. The last-named is one of the composer's most characteristic piano-forte pieces; and, though the transcription for orchestra is skilfully effected, we much prefer to hear the *scherzo* in its original form. As a proof of the popularity of Mendelssohn's music, we may mention that the concert-room was filled in every part.

Mr. Walter Bache gave his annual pianoforte recital on Monday afternoon, November 6, at St. James's Hall. Last year part of the programme was devoted to Beethoven and part to Liszt; but this year the whole to Liszt. Mr. Bache has, for a long period, sought to incline the heart of the public to the compositions of his master and friend. He should, however, be careful not to carry matters to excess. Variety is pleasing; and a programme entirely from the works of one composer, even the greatest (Beethoven), is open to the charge of monotony. Liszt's music has not yet been accepted as of equal value with that of the great classical writers; but time works wonders, and may prove a revealer of secrets hidden from many of the present generation. The programme commenced with a prelude and fugue on the name of Bach; a rhapsody or free fantasia would have been, we think, a more correct title. This was followed by the sonata in B minor. An able analysis from the pen of Mr. C. A. Barry which was given with the programme enabled the audience to understand the plan of the work and the peculiarity of the developments. Two characteristic songs were well rendered by Mr. A. Oswald, and charmingly accompanied by the concert-giver. After these came some lighter pieces, including the "Pesther Carnival." Mr. Bache's playing was all that could be desired; he is certainly one of the best interpreters of Liszt's music in this country. The recital was well attended.

No. 550, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscripts.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

The Renewal of Youth, and other Poems.
By F. W. H. Myers. (Macmillan.)

To the lovers of Mr. Myers' poetry this volume will, in one sense, be a disappointment. It is, in large measure, a reprint of the poems with which they are already agreeably familiar. Nearly all the old favourites (except "S. Paul," now as, I think, at first, separately published) re-appear, and form a large part—I am inclined to think, the finest part—of the volume. "The Renewal of Youth," from which the volume takes its name, stands at the very end, closing the second part, and forming a reply to an earlier poem, "The Passing of Youth." These two poems are in Mr. Myers' most characteristic manner, which may be defined as the enthusiastically didactic. To each of them he has prefixed an argument, tiresome because purely unnecessary to poems of such very moderate length, and adding somewhat to the discomfort of feeling ourselves instructed while hoping to be fascinated.

"The Passing of Youth" consists of reflections arising in the Campo Santo of Pisa—"that dejected city," as Landor happily called it—before Orcagna's fresco of "Death at the Festival." Let us die young, before the time of disillusion: there is no pain like the consciousness of our emotions being exhausted. And yet the sense of approaching annihilation forces on us the eternal question:

"Crushed, as by following wave the wave before!
To have lived and loved so little, and live no more!

Call this not sleep; through sweet sleep's longest scope

Rans in a golden dream unconscious Hope;
Hope parts the lips and stirs the happy breath,
And sleep is sleep, but endless Death is Death.
Hereat the soul will evermore renew
To that great chance which makes herself for her;

If but the least light glimmer and least hope glow
From that unseen place which no soul can know—
Whereof so many a sage hath spun in vain
Thoughts fancy-fashioned in a dreaming brain—
Whereof the priests, for all they say and sing,
Know none the more, nor help in anything;

If by some gleam uncertainly indeed be lit
That land, and God the sun and moon of it,—
How easy then, how possible to bear
The thoughts that come at night and are despair."

If this be not poetry, it is at least rhetoric of a very imaginative and eloquent sort. Its defect, so far as I can judge, is one common to all Mr. Myers' didactic poems. The thought, always elevated, is constantly expanded and reiterated, precept upon precept, antithesis after antithesis, till one finds the book rather cloying than satisfying.

The stronger hand of Mr. Browning has shown us identically the same thought as the above extract, but in a form far more restrained, far less verbose, and therefore, as it seems to me, far more impressive:—

"I, I the feeling, thinking, acting man,
The man who loved his life so overmuch,
Shall sleep in my urn. It is so horrible,
I dare at times imagine to my need
Some future state revealed to us by Zeus,
Unlimited in capability
For joy, as this is in desire for joy,
To seek which, the joy-hunger forces us."

("Oleon.")

"The Renewal of Youth" is an attempt to answer some of the problems which "The Passing of Youth" left unsolved except by the expression of a stern Lucretian resolve—

"There is a courage that from need began,
And grows with will and is at last the man;
Which on thro' storm, thro' darkness, thro' despair,
Hopes, and will hope, and dares, and still can dare."

In the "Renewal of Youth," an "assured hope of immortality" has taken the place of a faint anxious wish for it; and the spiritual, as opposed to the material, conception of the universe is treated as attainable, if only by an inward discipline the soul be purged—

"On her own deeps must the soul's gaze begin
And her whole Cosmos lighten from within—
Showing what once hath been, what aye must be,
Her Cause at once and End, her Source and Sea."

Here, as in other passages, the influence and manner of Pope are clearly discernible; their admixture with Mr. Myers' fuller enthusiasm creates an unpleasant and grating discord. It is pleasant to turn to a simile, contained in the most striking passage of the poem, and perhaps of the whole volume, in which the soul's final hope is compared, by an imaginary doubter, to the Isle of San Borondon, the Aprositus of Ptolemy, seen, but never reached, from Teneriffe:—

"Too happy! hard to find and hard to keep
Such mythic haven in the guideless deep!
Ye think ye find; and men there are who thus
Themselves the enchanted Isle Aprositus
Have seen from Teneriffe; to them was known
The eastward shadow of its phantasmal cone,
And the blue promontory, and vale that fills
That interspace of visionary hills:
They saw them plain, yet all the while they wist
That San Borondon is but of the mist,
And such bold sailors as have thither prest
Come bootless back from the unrewarding quest;
Or if, they say, they touch it, they are driven
Far forth by all the angered winds of heaven,
And nevermore win thither, nevermore
Tread with firm feet that legendary shore,
Retrack the confluent billows, or survey
From poop or prow the innavigable way."

All the latter part of the poem is verse of this high and fascinating kind. "In Memoriam" showed us what poetry lay in the attitude that "faintly trusts the larger hope." Mr. Myers here trusts the larger hope without any faintness at all, but with an ardent and rhetorical devotion. Always didactic, he is never oppressively dogmatic, and dwells on the hopes, and not the horrors, of his creed. Here is a passage that cannot fail to touch many hearts aching from this year's experiences in Switzerland and Egypt:—

"Their peace no kings, no warring worlds destroy,
No strangers intermeddle and mar their joy;
These lives can neither Alp on Alp upborne
Hurl from the Glooming or the Thundering Horn,

Nor Nile, uprisen with all his waters, stay
Their march aerial and irradiant way;
Who are in God's hand, and round about them
thrown
The light invisible of a land unknown;

What matter if thou hold thy loved ones prest
Still with close arms upon thy yearning breast,
Or with purged eyes behold them hand in hand
Come in a vision from that lovely land,—
Or only with great heart and spirit sure
Deserve them and await them and endure."

"The Renewal of Youth" can hardly, perhaps, be regarded as a great poem; two-thirds of its ideas are perfectly trite and familiar. But it would be difficult to point to any recent volume, either in verse or prose, where trite and familiar ideas have been treated with such wealth and pomp of language and rhythm.

Of the other poems, the already well-known "Translation of Faith" is perhaps the most powerful. "Ammergau" is distinctly disappointing. A subject admirably fitted, one would have said, to Mr. Myers' bent of thought, is here treated as merely suggestive of other and personal trains of ideas and reminiscence, eloquently expressed, as always, but with no special relevance to a subject and spectacle well worthy of the full devotion of a *vates sacer*.

Few painters of the present day have had the good fortune of Mr. Watts in obtaining the poetical interpretation of Mr. Myers. The "Stanzas on Mr. Watts' Collected Works" breathe the very inmost spirit of that impressive exhibition. The fascination of those wonderful portraits can hardly be realised better, by those who have not seen them, than in these verses.

"Faces there were that won him yet,
Fair daughters of an Iron Age:
In Iron truth portrayed he set
Warrior and statesman, bard and sage.
From hidden depths their past he drew,
The ancestral bent of stock and stem;
More of their hearts than yet they knew
Thro' their own gaze looked out on them."

And the supreme effect of Athenian art, and poetry, and scenery, even upon the ordinary mind, may surely be recognised and felt in the stately close of this remarkable poem:—

"So gazed on Phidias' warrior-maid,
Methinks, Ægina's kingly boy:—
She stood, her Gorgon shield displayed,
Too great for love, too grave for joy.
All day her image held him there;
This world, this life, with day grew dim;
Some glimmering of the Primal Fair
Pre-natal memories woke in him."

"Then as he walked, like one who dreamed,
Thro' silent highways silver-hoar,
More wonderful that city seemed,
And he diviner than before:—
A voice was calling, All is well;
Clear in the vault Selene shone,
And over Plato's homestead fell
The shadow of the Parthenon."

I can only hope these verses may give to many as pleasant and as keen a reminiscence of that unique scene as they bring to the present writer.

The shorter poems seem hardly to have the stuff of immortality about them. There is a delicate rhythmic grace in the studies of national beauty, such as "Elodia," "Gabrielle," as there is in "Nora" and "Hesione." The best, perhaps—one regrets in the case of Mr. Myers to find the best

among the earlier poems—is the untitled poem (p. 166) beginning "When summer even softly dies." The "Stanzas on Shelley" give one rather an inadequate picture of the poet—too much of his voluptuous sense of beauty, too little of his more generous enthusiasm; yet the last verses will be read with pleasure:

"Yet, with an Orphic whisper blent,
A Spirit in the west-wind sighs;
Gaze from the conscious firmament
Some God's unfathomable eyes:
He saw, he felt them: 'Thou be mine
As I am thine, thou primal whole!
Ye elements, my life enshrine,
Enfold, entomb me, soul in soul!'

"He called; they heard him; high in air
The impetuous Winds came whirling free;
Dashed on his brow, swept through his hair
Untamed carresses of the Sea;
The Fire up-leapt in ardent birth
To her thin substance his to win;
That heart of hearts the dead Earth,
Her own unfolding, drew therein."

What an old-world scene that seems; and how strange to think that it is little more than a year since the leading and most devoted actor in it left the land of living men! One might wish that Trelawny could have read this graceful elegy. But when shall another "Adonais" be written for Shelley?
E. D. A. MORSEHEAD.

Asiatic Studies, Religious and Social. By Sir Alfred C. Lyall. (John Murray.)

UPON another occasion it might be worth while to protest against the growing habit of making books out of magazine articles, which is no less hurtful to the interests of serious literature than the kindred practice of publishing lectures. The reading world, as representing more than a single generation, has a right to ask of those who claim to be its teachers not only that they shall give it of their best, but also that they shall arrange what they have to give in a continuous and ordered form, fitted for permanency. But in the present case such a complaint would be most unjust. Sir Alfred Lyall has for twenty-five years devoted himself to the business of Indian administration; and neither the work nor the climate of India allow so much leisure and ease as our own civil servants enjoy. If he has been able to snatch some hours for the composition of occasional papers upon subjects outside the scope of his daily duties, we are thereby pure gainers. So much might be said of the by-work of every Indian official. But all who have read even one of these papers on its original appearance know that Sir Alfred Lyall's literary recreations would suffice to found the reputation whether of a philosopher or of a professional man of letters. By republishing these scattered articles, he has put us under a fresh obligation to acknowledge them as the most valuable contributions to the history of religious thought and social development that have yet reached us from India.

Englishmen have ruled India for more than a century; but it is only within comparatively recent years that we have either recognised the weight of our responsibility, or attempted to study seriously the immense complications of our position. To our forefathers the fact of conquest was enough, and the elementary

duties of civil government were somehow performed. Yet no one should blame the early race of Anglo-Indians. They did their duty, as they saw it, and with the means at their disposal. Occasionally there arose an administrator like Munro or Thomason, or a scholar like Colebrooke or Prinsep; but sympathy and devotion were often misdirected because knowledge was lacking. Sir Alfred Lyall, we believe, was one of the last batch of Haileybury students, and landed in India before the outbreak of the Mutiny. Yet none the less may he be taken to represent the new order of things which dates from the transfer of the government to the Crown, and is associated with the competition system. The political revolution has brought with it a far more direct and more burdensome sense of duty; the comparatively small change in the mode of appointing civilians may be said to have introduced into India the influence of Western learning and culture. J. S. Mill and Comte, Max Müller and Maine, are the teachers, not only of the natives educated in English colleges, but also of the great body of their rulers. From such teaching sprang the late Dr. Burnell, whose brief life was devoted to learning everything that could be learnt about Southern India, with the fatal enthusiasm of Browning's "Gramscarian." From such teaching has sprung Sir Alfred Lyall, Burnell's senior by some few years and still in harness, whose good fortune it is to unite administrative talent of the highest order with the temperament of the philosopher. To continue the contrast further. Just as Burnell found it necessary first to clear away the mist that hangs over the beginnings of Sanskrit literature before he could commence his own proper work, so Sir Alfred Lyall is no blind disciple of any of those teachers named, but has struck out original truths of his own by following their methods of research in a new field.

By far the larger number of these eleven essays deal with the history of religion, as illustrated by what the author has seen passing under his own eyes in India. Of the Vedic beliefs of the primitive Aryan immigrants, and of the marvellous revivalism associated with the name of Buddha, philologists have lately told us much, and doubtless have much more to tell. But the religion of India is not a dead creed, to be studied only in books. Being based upon polytheism, rather than upon Nature-worship or morality, it is like a fountain ever gushing forth in fresh streams. Some of these streams, out of an infinite number, Sir Alfred Lyall has watched as they flow; has analysed their component elements; and has demonstrated that their source is to be found in the universal tendency to anthropomorphism. Another set of essays, by no means less interesting though only two in number, treat of the social organisation of the Rajputs. This subject likewise has not been neglected hitherto, though it may have been misunderstood. We have here the oldest aristocracy in the world, the bluest blood of the Aryan family (if there be such a thing as an Aryan family), who have preserved both their independence and their institutions from the remotest antiquity. When Tod wrote his *Annals of Rajasthan*, the romantic glamour

of Scott was predominant; and it was natural that he should find among the Rajputs all the apparatus of mediæval feudalism. Sir Alfred Lyall writes as a sociologist, who has studied Maine and McLennan. With him agnates take the place of barons, and exogamy has superseded knight errantry. But while he finds the clan everywhere, he has not failed to notice the influences that tend to decompose it. Specially instructive are the words of warning in which he points out the probable result of English imperialism in breaking up the old State system, and reducing to Oriental serfdom almost the only race of political free men yet remaining in India.

In reading this book, it is always necessary to bear in mind that the author, though disposed to extend his generalisations to the whole of Asia, has yet drawn most of his materials from a comparatively limited tract of Central India in which he happens to have been stationed. We do not urge this as a reproach, but only as a caution. India is so vast and so multiform that no one can pretend to know it all. Very rarely, indeed, has anyone attained in any single part of it to that intimate acquaintance with currents of religious thought and with changes of society which our author evidently possesses. Not only is his knowledge so great, but he possesses the yet rarer gifts of being able to discriminate between what is worth repeating and what not, and of bringing all his facts into harmony with the widest philosophical principles. Add to this a pure English style, which frequently rises into eloquence and never fails to be both rich and precise, and we have a combination of qualities which ought to make Sir Alfred Lyall at once the most popular and the most trusted of writers upon the deeper questions stirred by the name of India. That his views are always correct we do not believe, still less that they will hereafter all be accepted as final. But this is not the time or the place to criticise them. Enough to have pointed out that here is a book at once as learned and as interesting as Lecky's *History of Rationalism*, which took us all captive now seventeen years ago.

As it is the privilege of a reviewer to find some fault, we will content ourselves with calling attention to a strange misprint on p. 202, by which *Mazzini* is represented as the typical prime minister under a queen regent. And we must not conclude without expressing a hope that the success of this venture may induce Sir Alfred to prepare for the press a second volume, containing those poems of Indian incident and thought which live in the memory of everyone who has once read or heard them.
JAS. S. CORROX.

The English in America: Virginia, Maryland, and the Carolinas. By J. A. Doyle. (Longmans.)

THIS volume, while forming a distinct work in itself, is intended as an instalment towards a complete History in three volumes of the English colonies in North America during their period of dependence on the mother country. The next volume, Mr. Doyle tells us in his Preface, will deal with the New England colonies to the end of the seven-

teenth century; and the third and concluding volume will comprise the remaining colonies, and the history of the whole group from the beginning of the eighteenth century down to the separation. Mr. Doyle has already shown his capacity to write the history of our American colonies by the publication of two smaller books the substance of which he has in some measure incorporated with this work.

We may at once say that the volume before us—because of the author's knowledge of the subject, based upon study and thorough research—the best and most authentic History of these Southern American colonies that we have yet met with. Mr. Doyle is never satisfied with accepting a statement at second-hand; but, like a thorough historian, invariably goes, whenever practicable, to the fountain-head of all history, the contemporary MS. records themselves. Nor does he ever rely upon printed authorities so called, without, in the first place, thorough examination, and then telling his readers his own estimate of their value. One of the most notable instances of this excellent practice is that the name of the greatest living historian of America is not once mentioned in Mr. Doyle's book—and for the simple and obvious reason that Mr. Doyle has made a complete study of all (and more than all) the early MS. records which were available, or had been brought to light, when Mr. Bancroft wrote his *History of America*.

There is, and always will be, a peculiar charm in reading a book conscientiously founded upon the evidence of contemporary writers and actors in the scenes set before us. But, while making due allowance for an amount of enthusiasm in his subject—without which, we believe, no author can accomplish his task successfully—we think that one who has worked so hard as Mr. Doyle to instruct and amuse would do well to avoid as much as possible statements of opinion at variance with those of other historians who have laboured in the same field, unless such opinions are sustained by the clearest possible evidence. Otherwise, their expression tends to shake the confidence of readers in other statements which are not open to the same objections, because founded upon indisputable authority. In illustration of these remarks, we will quote the following vigorous passage at pp. 242, 243:—

"When we think of James' public crimes, of the death of Raleigh, of the living entombment of Arabella Stuart, still more when we recall his private life, and that Court where the foul creatures of Eastern despotism—the intriguer, the favourite, the poisoner—found honour and reward, we may well echo the prayer of the Roman satirist, and wish that such trifles as the overthrow of the Virginia Company had furnished full work for that mean mind and bad heart."

We have no wish to become a champion of King James I.; nevertheless, history has not yet taught us that the first of the Stuarts, with all his faults, had a "mean mind and bad heart."

To read the history of the early settlement of Virginia is to read an historical romance, so full is it of every kind of incident. Stories of hardship and suffering, of starvation and massacre, appear side by side with deeds of

heroism and examples of all the great and good qualities of our race struggling and battling against some of the worst of humanity, many of whom, fresh from gaol and steeped in vice, were sent over by the Home Government, in their want of prudence and foresight, to help people the infant colony. It says much for men like Dale, Yeardley, and Wyatt that they set themselves vigorously to work, and were able ultimately to remedy the evils which ensued from such a state of affairs. Their letters, while giving full descriptions of the difficulties with which they were beset, are likewise full of schemes for the advancement of Virginia, which in the end were successful, and "left the colony in great prosperity and peace."

Capt. John Smith comes in for a large share of Mr. Doyle's attention; and his arguments in reference to the trustworthiness of Smith's narrative are clearly and fairly stated, and are, we think, conclusive. As Mr. Doyle pertinently remarks, no impostor or mere adventurer, however plausible, could have held the position that Smith did and retained the good opinion of competent judges. To those especially interested in Capt. John Smith's credibility, we would also refer the address of Mr. William Wirt Henry, Vice-President of the Virginia Historical Society, at their annual meeting in February last (printed in their *Proceedings*), in which he completely disposes of "the late attacks upon Capt. John Smith, Pocahontas, and John Rolfe" made by Charles Deane and those few who have followed in his wake. Mr. Doyle draws attention to a singular mistake made by Dr. Palfrey in his *History of New England*, who says, in his account of Smith, that Capt. John Smith found his way to Tattersall's in London, drawn thither probably by his love of horses. The "Tattersall" of Smith's story was a place in Lincolnshire, the country seat of the Earl of Lincoln. The better-known "Tattersall's" did not come into being till Smith had been in his grave for more than a century.

It is well known that when a fresh charter was granted to the Virginia Company in 1612 that company was not only released from the payment of all import or export duties whatsoever, but it was empowered to increase its funds by the establishment of lotteries. In the collection of printed broadsides belonging to the Society of Antiquaries of London—a Catalogue of which (compiled by the late Robert Lemon) was printed in 1866—there are notices of two of these lotteries, one of which was drawn on May 10, 1613, "for the establishing of the gospel there and the honour of our King and Country a little standing Lotterie consisting but of 12 pence for every Lot;" the other "the Great Standing Lotterie for Virginia," the drawing of which took place on June 26, 1616. On this last notice is a curious wood-cut, given in facsimile in the Catalogue, showing some of the principal prizes—viz., a large sack containing £1,125 and two smaller sacks with £500 in each sack. There is also a man seated upon a stool showing how the tickets were to be drawn from two barrels, one on either side of him. On the other side of this broadside are portraits of the Indian chief Elakintomine and his wife Matahan.

For the early history of the Carolinas, Mr. Doyle has had the advantage, not enjoyed by any previous writer, of consulting a mass of original papers generously given by the Earl of Shaftesbury to the Public Record Office. We notice at p. 446 a misprint, 1667 for 1669, when Locke, on behalf of the Lords Proprietors of Carolina, drew up the first set, as they were called, of the Fundamental Constitutions for the government of the settlement. The open question, so long discussed, of the authorship of these Constitutions was finally set at rest by the discovery among these "Shaftesbury Papers" of a priceless miniature MS. volume in a vellum cover, in the handwriting of John Locke, which is full of alterations and corrections, also in Locke's own hand. It is certain, from the many copies of letters from the Lords Proprietors to the governors of Carolina in Locke's writing among the "Shaftesbury Papers," as also by his endorsements on almost every letter received from the colony, that the great philosopher was not only the chief author of its Constitution, but that he took a prominent and active part in the administration of its government and in everything tending to the welfare and prosperity of the settlement.

That Mr. Doyle's book will be widely read and sharply criticised we have no doubt. An author who uses the newest and best materials for his work is sure to command attention; and when at the same time he expresses boldly his own convictions, they must sometimes clash with those of others. We shall look forward with pleasure to the publication of Mr. Doyle's second volume.

W. NOEL SAINSBURY.

Specimen Days and Collect. By Walt Whitman. (Philadelphia: Rees Welsh & Co.)

"ECHOES AND ESCAPADES," "Drifts and Cumulus," "Notes of a Half-Paralytic"—these and other titles for his bundle of jottings, made during and after the war, were rejected by Whitman; and for a while he hovered about a title which would have suggested a comparison between this cluster of open-air thoughts and observations and the berries of the wild cedar-tree of America.

"A melange of loafing, looking, hobbling, sitting, traveling—a little thinking thrown in for salt, but very little—not only summer but all seasons—not only days but nights—some literary meditations—books, authors examined, Carlyle, Poe, Emerson tried (always under my cedar-tree, in the open air, and never in the library)—mostly the scenes everybody sees, but some of my own caprices, meditations, egotism—truly an open air and mainly summer formation—singly or in clusters—wild and free and somewhat acrid."

The acrid taste is no more than a pleasant sharpness now and again; and in the main these "Notes of a Half-Paralytic" are sweet and sane and nourishing, more, perhaps, than their writer knows or can know. No diary of an invalid is wholesomer reading than this; never a groan or a growl, never a word of complaint; but every bright hour, every breeze of health, every delight in flower and bird and stream and star, and in the kind voice or hand of a friend, remembered and

recorded. Always, in this invalid's diary, the pure, fresh air, and the sky overhead; never the blinds drawn down, the table crowded with medicine bottles, and the foot of the spiritual medicine-man upon the threshold:

"Doubtless in the course of the following, the fact of invalidism will crop out (I call myself a *half-Paralytic* these days, and reverently bless the Lord it is no worse) between some of the lines—but I get my share of fun and healthy hours, and shall try to indicate them. (The trick is, I find, to tone your wants and tastes low down enough, and make much of negatives, and of mere daylight and the skies.)"

From 1876, when Whitman began to get over the worst of the tedious and baffling illness, ascribed by physicians to his exertions in the hospitals during the war, he spent portions of several seasons at a secluded haunt in New Jersey—Timber Creek, its stream (almost a river) entering from the great Delaware twelve miles away, "with primitive solitudes, reclusive and woody banks, sweet-feeding springs, and all the charms that birds, grass, wild-flowers, rabbits and squirrels, old oaks, walnut-trees, &c., can bring." Down the long farm-lane he would hobble to a lonely pond, where the creek expands and the kingfishers dart and turn; and so, still sauntering on, "to the spring under the willows—musical as soft-clinking glasses—pouring a sizeable stream, thick as my neck, pure and clear, out from its vent, where the bank arches over." And here, enveloped for the month of May in the droning of bumble-bees, listening to the clear quail-notes in June, or the roulades and pensive refrains of the hermit-thrush, Whitman would take his seat on log or stump, and (the journalist's ruling passion strong in age and disablement) would jot down his notes—notes not for the buoyant and healthy alone, but meant just as well for ailing folk:—

"Who knows (I have it in my fancy, my ambition) but the pages now ensuing may carry ray of sun, or smell of grass or corn, or call of bird, or gleam of stars by night, or snow-flakes falling fresh and mystic, to denizen of heated city-house, or tired workman or work-woman?—or may-be in sick room or prison—to serve as cooling breeze, or Nature's aroma, to some fever'd mouth or latent pulse."

Sometimes he would run down by rail to the New Jersey sea-shore; and on those flat and odorless sea-prairies, their sedgy perfume in his nostrils, he would revive the sights and sounds and smells of his Long Island youth, the "stretch of interminable white-brown sand, hard and smooth and broad, with the ocean perpetually, grandly rolling in upon it, with slow-measured sweep, with rustle and hiss and foam, and many a thump as of low bass drums." Or, back again in his Camden home, he would cross and recross the Delaware, helped by the friendly pilots ("Eugene Crosby, with his strong, young arm so often supporting, circling, conveying me over the gaps of the bridge, through impediments, safely aboard"), and would enjoy the stir and play of the delightful "human comedy," or would invite his soul, and absorb the spectacle of the starry heavens.

"A January Night.—Fine trips across the wide Delaware to-night. Tide pretty high, and a strong ebb. River, a little after eight, full of ice, mostly broken, but some large cakes making

our strong-timber'd steamboat hum and quiver as she strikes them. In the clear moonlight they spread, strange, unearthly, silvery, faintly glistening, as far as I can see. Bumping, trembling, sometimes hissing like a thousand snakes, the tide-procession, as we wend with or through it, affording a grand undertone, in keeping with the scene. Overhead, the splendor indescribable; yet something haughty, almost supercilious, in the night. Never did I realise more latent sentiment, almost *passion*, in those silent interminable stars up there. One can understand, such a night, why, from the days of the Pharaohs or Job, the dome of heaven, sprinkled with planets, has supplied the subtlest, deepest criticism on human pride, glory, ambition."

We have record of visits to New York, and a sail in the bay, with a little lyrical cry at sight of the schooner-yachts going in a good wind—"those daring, careening things of grace and wonder, those white and shaded swift-darting fish-birds (I wonder if sea or shore elsewhere can outvie them), ever with their slanting spars, and fierce, pure, hawk-like beauty and motion." But the procession of gentility and wealth in Central Park is not altogether to Whitman's liking; and in his criticism of modern society, although at bottom he believes that the American people remains sound, there are pages (to quote Mr. Ruskin's words with respect to Whitman's writings) "deadly true—in the sense of rifles—against our deadliest sins." More than once Whitman voyaged up the Hudson to the honeysuckle-and-rose-embowered cottage of John Burroughs, the delightful writer of *Wake Robin and Pevacton*; and in September 1879 he found himself strong enough to begin a long jaunt to the West, seeing Missouri, Kansas, and Colorado, at Denver turning south, and then east again. The sea-like spread of prairies, the wild gorges, the streams of amber and bronze, brawling along their beds with frequent cascades and snow-white foam, the fantastic forms of mountains bathed in transparent browns, faint reds and grays, the free handling and absolute uncrampedness of the landscape, the superb physique of the miners, their character shaped by their victorious tussles with savage nature (but alas, the genteel ladies of the West, copying unsuccessfully their Eastern sisters!)—these, with a few inevitable reserves, were all acceptable to, and accepted by, the author of *Leaves of Grass*. A later journey to Canada, the sight of Niagara, a visit to the hospitable house of his friend Dr. Bucke at London, then up the black waters of the Saguenay a hundred miles, the region more grim, more wildly beautiful, "with a sort of still and pagan *scaredness*," than any he had seen yet, comprised the last of Whitman's wanderings. A Sunday service with the insane at the asylum under the care of Dr. Bucke brought Whitman face to face with some of those "laggards" in the race who have ever been dear to his heart:

"I was furnish'd with an arm-chair near the pulpit, and sat facing the motley, yet perfectly well-behaved and orderly, congregation. The quaint dresses and bonnets of some of the women, several very old and gray, here and there like the heads in old pictures. O the looks that came from those faces! There were two or three I shall probably never forget. Nothing at all markedly repulsive or hideous—

strange enough I did not see one such. Our common humanity, mine and yours, everywhere—

"The same old blood—the same red, running blood; yet behind most, an infer'd arriere of such storms, such wrecks, such mysteries, fires, love, wrong, greed for wealth, religious problems, crosses—mirror'd from those crazed faces (yet now temporarily so calm, like still waters), all the woes and sad happenings of life and death—now from everyone the devotional element radiating—was it not, indeed, the *peace of God that passeth all understanding*, strange as it may sound?"

Connected with the notes of convalescence in this volume are Whitman's previously published memoranda of the war; and the national frenzy and agony (with underlying sanity and strength) of the one period goes well with the tender calm and restorative happiness of the other. His lecture on Lincoln, a record of his visits to Emerson and Longfellow, a reminiscence and a criticism, severe, yet sympathetic, of Edgar Poe, will interest readers who care to see great or distinguished persons through a poet's eyes. At Emerson's grave he muses:

"A just man, poised on himself, all-loving, all-inclosing, and sane and clear as the sun. Nor does it seem so much Emerson himself we are here to honor—it is conscience, simplicity, culture, humanity's attributes at their best, yet applicable, if need be, to average affairs. . . . How shall I henceforth dwell on the blessed hours when, not long since, I saw that benignant face, the clear eyes, the silently smiling mouth, the form yet upright in its great age—to the very last, with so much spring and cheeriness, and such an absence of decrepitude, that even the term *venerable* hardly seemed fitting?"

The tribute is made of more worth by Whitman's keen perception of the limitations of Emerson's genius. Elsewhere there is eloquent recognition of the work done for American literature by Longfellow, Bryant, Whittier. I miss from this collection of notes an admirable piece of criticism on Burns, published in *Our Land and Time* (January 25, 1875). In Edgar Poe, Whitman finds neither the genius for perfect and noble living and thinking, morally without flaw, happily balanced in activity, nor "that other shape of personality dearer far to the artist-sense (which likes the strongest play of lights and shades) where the perfect character, the good, the heroic, although never attain'd, it never lost sight of, but through failures, sorrows, temporary downfalls, is return'd to again and again" (so with Burns, Byron, George Sand):

"Almost without the first sign of moral principle, or of the concrete and its heroisms, or the simpler affections of the heart, Poe's verses illustrate an intense faculty for technical and abstract beauty, with the rhyming art to excess, an incorrigible propensity towards nocturnal themes, a demonic undertone behind every page—and, by final judgment, belong among the electric lights of imaginative literature, brilliant and dazzling, but with no heat. . . . In a dream I once had, I saw a vessel on the sea, at midnight, in a storm. It was no great full-rigg'd ship, nor majestic steamer, steering firmly through the gale, but seem'd one of those superb little schooner-yachts I had so often seen lying anchor'd, rocking so jauntily in the waters around New York, or up Long Island Sound—now flying uncontrol'd with torn sails

and broken spars through the wild sleet, and winds and waves of the night. On the deck was a slender, alight, beautiful figure, a dim man, apparently enjoying all the terror, the murk, and the dislocation of which he was the centre and the victim. That figure of my lurid dream might stand for Edgar Poe, his spirit, his fortunes, and his poems—themselves all lurid dreams."

Beside "Democratic Vistas," known to all who value Whitman, this volume contains the recent articles by him in the *North American Review* ("Poetry to-day in America" and "A Memorandum at a Venture"), the prefaces to the several editions of his poems, and some pieces written in early youth—short tales and poems—printed now to avoid the annoyance of a surreptitious issue which had been announced.

Among other restoratives of health one could wish that Whitman would some time try a voyage across the Atlantic. With Mr. Tennyson, Mr. Ruskin, Mr. Rossetti, Mr. Symonds, Mr. Swinburne, Mr. W. Bell Scott, Mr. R. Hengist Horne, Mr. Robert Buchanan, Mr. Robert L. Stevenson, the Hon. Roden Noel, and others known and unknown, desirous to give him friendly greeting, he might have among us, in American phrase, "a good time." EDWARD DOWDEN.

CAGNAT'S TAXATION UNDER THE ROMANS.
Etude historique sur les Impôts indirects chez les Romains jusqu'aux Invasions des Barbares. Par M. R. Cagnat. (Paris: Imprimerie nationale.)

By confining to his title-page and Preface the distinction between direct and indirect taxation, M. Cagnat tacitly recognises that such purely modern ideas are useless instruments in historical investigation. No matter how well applied, they would have been out of place in a work of this kind; but it was doubly fortunate that M. Cagnat abandoned them, for he has so far misconceived the distinction as to include among indirect taxes the *vicesima libertatis* and the *vicesima hereditatum*. This very confusion, however, has had one good result. It has led him to discuss those parts of the subject of Roman taxation of which English histories give the least satisfactory account. At every step he cites the works of German and French specialists; but a casual reference to Gibbon or to Smith's Dictionary is the only indication that Englishmen have done anything in what Gibbon himself called the more useful as opposed to the splendid parts of history. In gathering together, as it does, everything at present known about a somewhat inaccessible subject, this work, therefore, cannot fail to be of considerable service to English students.

In a modern sense, the most interesting part of the book is the account of the *portorium*—that is, of Roman customs, octrois, and tolls. Much more is known about this than about the two *vicesimae*, which seem to have been abolished by Diocletian, while the *portorium*, which dates from the time of the Kings, was still in vigour in the Middle Ages. In many points it recalls the system of to-day. Like us moderns, the Romans preferred it to a direct tax, being moved, no doubt, by Montesquieu's reason that a duty on merchandise

makes people pay taxes without knowing it. So the vital distinction between articles of commerce and articles for personal use is probably as old as the *portorium* itself; travellers and traders declared their goods at the custom-house, and had to submit to search; they smuggled as we do, used the same artifices, ran the risk of similar penalties; and, thinking more of the manner in which a tax is levied than of its amount, they grumbled at the officiousness of their *portitores* as we do at that of ours. But the tax was levied upon them more oppressively than it is upon us. There was no bonding system in those days, and no right of free transit was recognised. Consequently, the same article might pay duty over and over again. And such was the case:—

"On ne se contentait pas de réclamer un droit une seule fois, à l'entrée dans la circonscription ou à leur sortie: on multipliait les stations sur la limite des différentes provinces qui la composaient, sur les fleuves et les rivières qui la traversaient, sur les routes qui la sillonnaient, bref partout où le Trésor pouvait espérer tirer quelque profit du commerce et des commerçants."

Realising how heavily such a system, when fully developed, and administered with a notorious rigour, must have borne upon commerce, we cease to receive with incredulity the well-known statement of the elder Pliny that merchandise coming from India to Rome increased in price a hundredfold.

M. Cagnat traces back the *portorium* to an octroi for the city of Rome. Similar isolated octrois were found existing in various countries—in Gaul, for example, in Egypt, and in Illyricum—at the time they came under Roman sway; and, except in the case of certain favoured towns, the revenues of these native octrois were diverted into the Roman treasury. New stations were established, no longer as octrois at the gates of cities, but as custom-houses at frequent intervals along the commercial routes. Finally, great districts or provinces were sketched out for the purposes of taxation, binding together these stations into a vast network that stretched to the farthest limits of the Roman world. This division into provinces seems to have been determined purely on geographical considerations; but, as bearing on the theory that Roman taxation had a political as well as a financial side, it is worth noting that the vast district called Illyricum, extending from Belgic Gaul to the shores of the Black Sea, differed from the others in this respect, that each of the provinces of which it was composed was separated from the neighbouring provinces by an internal line of customs. In the case of Italy, which formed one of the districts, there is satisfactory proof that, at any rate after their re-establishment by Caesar, *portoria* were levied only on articles of luxury. If this be so, it makes perfectly intelligible Marcian's otherwise strange list in the Digest. That list contains the names of such articles as cinnamon, silks, precious stones; and the probability is great that it was meant as a list of the articles which paid duty in Italy, and that it was copied from a *lex censoria*.

Of the *portorium* in the later Empire not much is known with certainty. If M. Cagnat is right in his opinion about the *octava*, a

great change must have taken place. Following Marquardt, he holds that the *octava* is not older than the immediate predecessors of Justinian, and that it was intended as a uniform substitute, applying to the whole Empire, for the various rates of two, two and a-half, and five per cent. To account for the passages of earlier date in which it occurs in Justinian's Code, M. Cagnat considers that the word has been interpolated. His argument, unfortunately, is marred by the statement that the *octava* is not mentioned in the Theodosian Code, a circumstance which he rightly feels to be of great weight. But among the portions of the Theodosian Code deciphered by Peyron from the Turin palimpsest, there occurs, almost exactly as it stands in Justinian's Code, one of the suspected passages; and the *octava* is still present. In substance, however, M. Cagnat's view is probably sound. The *octava* may have at first existed with a limited application, and may have at length become universal. In the fifth century the revenue from the *portorium* began to fall off; the growing strength of the outlying tribes made its collection more and more difficult, the fruitful *vicesima hereditatum* and the less important *vicesima libertatis* had long since been abandoned, and to impose higher dues may well have seemed the only way of keeping the treasury full.

M. Cagnat's book covers a much wider ground than I have yet indicated; but of the rest the mere headings must suffice. Having sketched the history of the *portorium* and told us all that is known of each province and even of each station, M. Cagnat goes on to describe the farming out of the tax, the way in which it was collected, and the officials employed in the service. Next he treats of the merchandise and the persons exempted from the tax, of the checks upon smuggling, of the measures taken to restrain the extortion of the *publicani*, and of the destination of the revenues, concluding his account of the *portorium* with a short notice of tolls and octrois. I stop to notice only one point. The usual statement that the *societates vectigalium* were composed of *equites* holds good only up to the time of Hadrian. In his reign, whether owing to the abandonment of the *lex censoria*, or more probably from the growing necessity of supervising with greater strictness the collection of the taxes, special procurators (distinct from the regular provincial procurators) were appointed, partly to assist the *publicani* and partly to act as a check upon them; and these procurators were chosen from among the *equites*. Thenceforth the names of freedmen appear in the inscriptions as members of the *societates*. The account of the *vicesima libertatis* and the *vicesima hereditatum* is traced out in similar lines, but much more briefly; and the volume ends with some meagre notes upon the taxes on sales by auction, on sales of slaves, and on lawsuits. It is of some importance to observe that in the case of the taxes on manumissions and inheritances the system of farming was abandoned about the beginning of the second century A.D. There is no later reference to *publicani* in connexion with them, and about that time imperial procurators appear as direct collectors. G. P. MACDONELL,

GIFT-BOOKS.

Pan-Pipes: a Book of Old Songs, Newly Arranged, and with Accompaniments by Theo. Marzials; Set to Pictures by Walter Crane; Engraved and Printed in Colours by Edmund Evans. (Routledge.) It is only by setting out the title-page—or at least the printed portion of the title-page—that we can apportion our gratitude to the three makers of this book, which is destined to be the gift-book of the season, so many tastes does it gratify. Not that we can say that it reaches throughout the high standard which it has set to itself. Upon the musical setting of Mr. Marzials a constitutional incapacity forbids us to pronounce; and Mr. Marzials' reputation is in no need of praise from such a one. The words we know and love—barring an unfortunate misprint on p. 9. While on this point, we may mention that the printed type is frequently "battered," and not easy to read. But it is to the pictures that everyone will turn first, and look longest. Never before has Mr. Crane lavished upon us more profusely the treasures of his facile pencil. Paper cover, binding, fly-leaves—all witness to his inventiveness. Indeed, some of the plain pencilled outlines seem to us among his happiest designs. In truth, as well as in grace, he has rarely done anything better than the lady on the preface page. But Mr. Crane is deplorably unequal, as another modern lady on the same page may show. And it is not to be denied that his pictures to the songs—though all showing both labour and invention—vary much in their success. It may be only an individual opinion, but we may say that "The Hunt is Up," after the style of tapestry painting, is the most perfect; next we should place "The Girl I've left behind me" and "Sally"—though not Sally's young man. Indeed, we cannot admire Mr. Crane's men in general, with a doubtful exception in favour of "We be Soldiers Three." His "Sweet William" is quite bathetic. But it is only when judged by a reference to himself that Mr. Crane can thus be criticised. There is no one else who would have dared to do what he has done here; or, if he had dared, would have done it one quarter so well.

Stories from Livy. By the Rev. Alfred J. Church. With Illustrations from Designs by Pinelli. (Seeley.) All who have been accustomed for half-a-dozen years to welcome each Christmas a volume of "Stories from the Classics" from Mr. Church will be grieved to hear that he has been ill and unable to give the last touches to the present book. But, even after making some deduction on this score, we cannot think that *Stories from Livy* is equal to certain of its predecessors. Mr. Church himself admits that the ornate diction of Livy is not easily transformed into his own simple paraphrase. It is not only a question of style, but of matter as well. The old legends of Rome, as we know them, are really literary creations as much as the myths of Oharlemagne and Arthur. They cannot stand being reduced to the bald narrative form which sets off the genuine storytelling of Homer or Herodotus. The phraseology of the Old Testament, which Mr. Church affects, is felt to be out of place. It must also be said that the illustrations after Pinelli show a falling off. We doubt about the faithfulness of the Roman armour. The Gauls certainly are not in their traditional garb. And the wolf that suckled the twins, and the horse on which Curtius leaped into the gulf, are both conspicuously out of drawing. Yet we ought not to part from this book with harsh words. Its subject can never stale, and we know no one who could have treated it better—at least in prose—than Mr. Church.

Monthly Maxims. By Robert Dudley. (De La Rue.) Nothing has been spared that could make this volume luxurious. The binding,

though cloth, is a very good imitation of vellum, and is stamped in gold with a graceful design; the pages are of the finest ivory card-board, and linen hinged; the style of printing and of chromo-lithographic reproduction leaves nothing to be desired. But, we add with reluctance, the contents are not worthy of this superb setting. Of the poetry we cannot suppose that even the author himself feels very proud. It is simply doggerel, pervaded by an unsuccessful attempt at wit. The illustrations are another matter. Not a few of them are open to the objection that they do not illustrate the poetry. But, at least, Mr. Dudley can draw; and, when fortunate in his subject, he can compose a very pretty design—as witness the frontispiece and the coloured plate for December. But here again he has laboured under the temptation to be funny. His humorous pictures are almost as poor as his humorous poetry.

THE imagination must be somewhat sluggish that requires to be stimulated by pictures of Sir Roger de Coverley and his friends and servants, and of his surroundings, especially nowadays when curiosity-shops are so common and Queen Anne is more popular than at any date in her popular reign. But if Sir Roger was to be illustrated, Mr. C. O. Murray has done it well, with his etched frontispiece and many cuts in the text—well and sympathetically, and so thoroughly that he has commented on almost every incident of the knight's career. Messrs. Sampson Low, who publish the volume, have done well to give us the spelling and capitals of the early editions; but we should have liked a bolder type and a less modern style in the letterpress, that the divinity of Queen Anne might have been more present. Many will buy the volume, and it must be owned that they could scarcely do better, for Sir Roger is a *très bon* *et* *est*.

THE handsomest *édition de luxe* which has yet reached us is that which Messrs. Rivingtons have published of the well-known *Sacred Allegories* of the late William Adams. It is enough to say that the volume contains "The Shadow of the Cross," "The Distant Hills," "The Old Man's Home," and "The King's Messengers." Of these, by-the-way, "The Old Man's Home" is an allegory only by interpretation. The illustrations, we fancy, have appeared before, though probably not in a single volume. As is so often the case, the landscapes are better than the figures; and among the landscapes, the bits by Mr. Birket Foster are pre-eminent. For the engraver, at least, Mr. Birket Foster has no rival among living landscape painters. We have also received from the same publishers four dainty little waistcoat-pocket volumes, each containing one of the allegories mentioned above.

UNDER this category we may fairly notice the last addition to Messrs. Kegan Paul, Trench and Co.'s "Parchment Library," which is *The Christian Year*, with an etching by Lowenstam after the familiar portrait by the elder Richmond. Besides the superfine print, paper, and binding to which the publishers of this series have now accustomed us, the pages are here set off with the additional grace of red head-lines and initials. Altogether we can imagine no more appropriate setting, and no more beautiful gift, than this.

MR. R. CALDECOTT'S "Picture Books" for this Christmas, which Messrs. George Routledge and Sons have sent us, show no falling off either in the grace of his pencil or the fertility of his imagination. To the former we have become accustomed; the latter is always a fresh surprise. He differs from all other illustrators by the creative genius with which he breathes new life into an old-world story; and, fortunately, there are many of these old-world stories

that he has not yet touched. One of the subjects he has chosen this year is "My Pretty Maid;" and we venture to say that he has transformed the verses henceforth for all English-speaking people. The way in which the lover deteriorates as the milk-maid improves—both culminating in the "Nobody asked you"—is itself a stroke of genius. Notice also the by-play represented all through by the "two dogs." But, despite the immortal "Mad dog," and the no less immortal dog in "The House that Jack Built," we cannot think that Mr. Caldecott is so uniformly successful in his dogs as in some of his other animals. In his other book this year, the little dog that laughed to see such fun is an absolute failure; but the cat and the dish and the spoon make up for all. The "Baby Bunting" will be specially charming both to children and mothers. The picture "Gone" is in Mr. Caldecott's happiest vein; so also is the conception of the quarter from which the rabbit-skin was fetched.

AFTER Mr. Caldecott, all else palls, especially when the attempt to imitate him is apparent. And this is apparent in both of two "Picture Books" we have received from Messrs. Tho. De La Rue and Co. *Bumpelstiltskin*, by Mr. George R. Halkett, is sometimes both quaint and pretty; but the illustrator has erred in adding new features to the story, which confuse rather than strengthen the familiar outlines. *The May Pole*, by G. A. Konstam, E. Casella, and N. Casella—which we take to be the names of three young ladies—is both a bolder and a more successful enterprise. The subject is the old English ballad, of which at least the first lines, "Come, lasses and lads," are known to all. The costume is, of course, that of a century back; but there is something perplexingly Irish about the men. The scenes are too crowded, and occasionally incongruous elements have been introduced. The uncoloured sketches in pen-and-ink are by no means the least elaborate. The cover of this book is an admirable example of what chromo-lithography can do.

Grandma's Garden; with many Original Poems. Suggested and Arranged by Kate Sanborn. Illustrated by Walter Satterlee. (Boston, U.S.: Osgood.) The text of this does not come to much. The first idea seems to have been to collect some American verses which should all refer to a grandmother who had a garden, and who appears in rather glaring colours on the cover. Afterwards—and not unwisely—the collection must have been extended to include passages upon old-fashioned gardens generally, whether in prose or verse, and mostly by English writers. Hence we have Milton, Bacon, Miss Mitford, and George Milner side by side with Edna Dean Proctor and Hezekiah Butterworth. But the real value of the book lies in the consummate finish of the production. The initial letters, and the head- and tail-pieces, are models of both drawing and printing; and the paper is worthy of them. Not less admirable are the flowers on the back of the cover. These are surrounded by the autographs of the American contributors, which suggests the remark that they must one and all have had excellent writing masters. The binding is effected by means of a silk cord. We have seen this plan before in an American art book. It is very pretty, but we more than doubt whether it will be permanent. The publishers in England, provided that no question of copyright arises, are Messrs. Trübner.

Curfew Must not Ring To-night. By Rosa Hartwick Thorpe. Illustrated. (Boston, U.S.: Lee and Shepard.) It appears that this poem has had such a vogue in America as to claim an *édition de luxe*. This success it must owe to its subject rather than to any exceptional merit of

execution. The illustrations, which are by Messrs. F. T. Merrill and E. H. Garrett, have been engraved in the finest style of American wood-cutting, and possess considerable value in themselves. The binding and printing also deserve a word of praise.

Red Cloud, the Solitary Sioux: a Story of the Great Prairie. By Col. Butler. (Sampson Low.) This is sure to be a popular book with all boys and girls who care for tales of travels among Red Indian tribes. Col. Butler not merely narrates the adventures that befell his heroes in an interesting and graphic manner; he has himself been in the country which he describes, and is acquainted with the life of its inhabitants. Hence he can tell us minutely and accurately, in a way impossible for writers who have only their imaginations and the accounts of others to rely upon, the means by which the Indian in the chase outwits the deer and the buffalo, the spot which he selects for his winter quarters, and other characteristics of the same kind. What lends an additional charm to his book is his own genuine love of adventure and his sympathy for all living animals, extending not to the hunter alone, but also to the hunted beast. The following description of the great prairie is clearly written by a man who has had the scene before his eyes:—

"The sight upon which we gazed was, in truth, almost sublime in its vast desolation. The sun, just descended beneath the rim of the western prairie, cast up into the sky one great shaft of light. The intense rarity of the atmosphere made the landscape visible to its most remote depths. A few aspen clumps and the three trees already mentioned grew near the standpoint from which we looked; but in front no speck of tree met the eye, and the unbroken west lay waiting for the night in all the length and breadth of its lonely distance. Never before had I beheld so vast an extent of treeless ground. The other prairies over which we had journeyed were dwarfed in my mind by the one now before me. I seemed to be standing upon the shore of a rigid sea—an ocean whose motionless waves of short mown grass appeared to lie in a vast torpor up to and beyond the sunset itself; and this sense of enormous space was heightened by the low but profound murmur of the wind as it swept by our standpoint from vast distance into distance still as vast."

Heroes of Science. "Botanists, Zoologists, and Geologists." By Prof. P. Martin Duncan. (S. P. O. K.) This is the first of a series intended to attract the young to science by means of the interest that always attaches to biographical details. The idea is a good one, but we cannot congratulate Prof. Duncan upon the manner in which he has made a beginning. That he should have limited himself to the work of a compiler, we do not complain; and he deserves credit for scrupulously indicating his authorities. But he has not expended sufficient labour upon his materials to make the result interesting. We miss also that literary skill which sometimes succeeds in producing an original book out of second-hand information. In aiming at simplicity of expression, he has sometimes become slipshod. Such comments as the following seem to us out of place. Murchison "was knighted in 1846, an honour which was appreciated in those days, but which is not compatible with the proper simplicity and nobility of science at the present time." In the chapter on Lyell are two misprints—"Dean Coseabear" (p. 314), and "Ruffelhorn" (p. 337). It is curious to observe how large a proportion of the men distinguished in these branches of science have been of good family, if not wealthy. This has been especially the case with the Frenchmen—Buffon, Tournefort, and Lamarck; and scarcely less with the Englishmen—Willoughby, Pennant, Hutton, Murchison, and Lyell. Darwin does not have a place in Prof. Duncan's book,

Old-Fashioned Fairy Tales. By Juliana Horatia Ewing. (S. P. O. K.) Mrs. Ewing takes pains in her Preface to defend her book against the attacks of those who disapprove of placing fairy tales in the hands of children. Such tales, she maintains, convey wider ideas than can be acquired from stories dealing merely with the nursery and the school-room, while they at the same time inculcate moral lessons. Possibly her youthful critics may find in some of her own stories the attempt to teach them a moral lesson too evident. She writes, however, always in a simple and pleasing manner; and her book, which is both illustrated and well printed, may be safely recommended as an acceptable gift to children of nine years of age and under.

A Brave Fight. By the Rev. E. N. Hoare. (S. P. O. K.) The author here tells the story of the invention of the stocking-frame, and the trials which its inventor encountered. A slight thread of romance runs through the book, rendering its somewhat dry details more palatable to the youthful reader.

Under the Blue Flag, by Mary E. Palgrave (S. P. O. K.), gives a brief, but interesting, sketch of Monmouth's rebellion, which ought to charm the young folks. The illustrations are the best we have seen of this series.

The Rosebud Annual. Containing Three Hundred Illustrations. (James Clarke and Co.) This is the bound volume of a children's periodical which is new to us, and the origin of which has, we confess, puzzled us a good deal. The illustrations, which are lavished most bountifully, are unmistakably American—we have nothing so good in England—but the letter-press seems as unmistakably English. However, the country of domicile does not so much matter provided that the product is satisfactory. And we are glad to say that we have been entirely satisfied with this annual. The pictures are simply first rate. The subjects are intelligible to the youngest capacity, the designs are clearly conceived, and the reproduction is a model of wood-cutting. The stories also appear to be excellently adapted to a juvenile taste, having chiefly to do with incidents of daily life and domestic animals. Altogether, this is a capital book. Our only complaint is that words of more than one syllable are unnecessarily divided, which we have not found to be of any advantage to beginners.

African Discovery and Adventure. By O. Bourne. In 2 vols. Illustrated. (Sonnen-schein.) These two volumes give an account of the discoveries made in Africa, beginning with those mentioned by Herodotus, and carrying on the narrative down to a very recent period. The larger portion is taken up with the travels of Livingstone and Stanley; but a considerable space is given to other African explorers, Englishmen and foreigners. The author's style would have been much improved had he made a less frequent use of the ambiguous "he." Both volumes are copiously and well illustrated. Unfortunately, our first volume is spoilt, through the binder having inserted two copies of pp. 113-28, the second being substituted for pp. 145-60.

Nat the Naturalist; or, a Boy's Adventures in the Eastern Seas. By Geo. Manville Fenn. Illustrated. (Blackie.) This is a capital book for boys, especially for those who have a taste for "collecting," though they cannot all expect to have such an uncle as Nat had. This uncle is a sort of Carl Bock, who takes his nephew with him to find birds of paradise in the Spice Islands. There they fall in with a man Friday, without whose constant help they would have fared but badly. We doubt whether all the scenes are quite true to nature in that little-known quarter of the globe; but who shall

correct our author? At least he has made a most interesting story of it. The pictures, as we have remarked before of Messrs. Blackie's books, are far above the average, both in drawing and in reproduction.

Battle and Victory. By Mrs. O. E. Bowen. (Griffith and Farran.) This is a tale that has Salvator Rosa for its hero, but it ought to be distinctly understood that it is a story and not a history, there being very little foundation for the romantic legends that have gathered round Salvator's name.

The Adventures of the Pig Family. Illustrated. By Arthur S. Gibson. (Griffith and Farran.) This belongs to a very old class of children's books, in which animals are habited like men and suffer human vicissitudes. The rhymed story and also the pictures are by Mr. Gibson; and both are fairly creditable to him. The only picture that really lives is that of the fight between the father pig and the mastiff.

The Baby's Museum of Rhymes, Jingles, and Ditties. Newly Arranged by Uncle Charlie. (Griffith and Farran.) Another book of an old-fashioned type, but none the less welcome. Some of the rhymes have fared badly at the hands of the arranger, and not a few of the pictures are manifestly inappropriate. Still, for the price, this is a wonderfully good book.

MESSRS. SONNENSCHNHEIN have sent us a very large parcel of books for the young, which it will take us some time to digest. Some, however, do not seem to require elaborate notice. Four of them, each published at sixpence in quarto boards, form a sort of series. —*The Book of Shadows*, unless we are mistaken, originally appeared in *Punch* (either in whole or in part) about thirty years ago. It is well worth re-issuing; but even children's books ought not to be totally destitute of bibliographical hints. —*Cat and Dog Stories, as Told to One Another*, is a re-issue, in a fresh form, of a book which reached us last year; but we speak under correction, for this may be the same book. As usual with Messrs. Sonnen-schein's publications, there is no date on the title-page. We recollect thinking both the text and the pictures very clever. —*The Three Foolish Little Gnomes* is possibly new, but more probably based on a German original. —*The illustrations to Pussy Cat Purr* are undoubtedly by a German artist. We venture to conjecture that the text of these three last is from the same pen.

NOTES AND NEWS.

M. FR. LENORMANT has returned from his archaeological tour in Southern Italy; but we regret to hear from him that the fatigues there incurred have prostrated him with a serious illness, which threatens to confine him to his bed for a long time. He still promises to let the ACADEMY have the first-fruits of his discoveries, which have been as important and interesting as we ventured to predict.

We also regret to learn that Dr. Schliemann has again been laid up by his Troad fever since his return home to Athens. Archaeological exploration is not free from its own risks.

MR. OLIVER WENDELL HOLMES, who is now in his seventy-fourth year, has resigned the chair of anatomy in Harvard University.

THE appearance of the late Dr. Burnell's translation of *Manu* is now quite ensured, the MS. having been found absolutely perfect in a fair copy with the translator's final revisions. The important Introduction which Dr. Burnell lived to finish has also been found ready for the press.

THE *English-Persian Dictionary* left by the late Prof. Palmer in an unfinished state will be

completed and carried through the press by Mr. Guy Le Strange, one of the joint-editors of the Persian play entitled "The Vazir of Lankuran."

MR. EDWIN ARNOLD's new poem, *Pearls of the Faith*, will be published by Messrs. Trübner on December 20. The American publishers will also have a large edition ready for Christmas sale.

MR. EDWIN WALLACE is, we understand, preparing a third edition of his *Outlines of the Philosophy of Aristotle*. The work, which will include a fuller analysis of Aristotle's Logic than was given in the last edition, will be published in the "Pitt Series" of the Cambridge Press, and will probably appear early in 1883.

WE believe that Walt Whitman's *Specimen Days and Collect*, reviewed in another column, is now published by Mr. David Mackay, and not by Messrs. Rees Welsh and Co. The first edition was sold out before it was actually issued. Is there no English publisher who will undertake the responsibility?

A CORRESPONDENT has sent us a poem from an American paper, the *Christian Guardian*, signed "Robert Browning," entitled "Sometime, Somewhere," beginning

"Unanswered yet? The prayers your lips have pleaded
In agony of heart these many years?"

and ending

"Faith . . . knows Omnipotence has heard her prayer,
And cries, 'It shall be done,' sometime, somewhere."

Our correspondent asks us if it is genuine. On the authority of the poet himself, we can assert that Mr. Browning never heard of the poem before, and never wrote a word of it. This is not the first time that such liberties have been taken with his name.

DR. GORDON HAKE's new poem, *The Serpent Play*, will be published almost immediately by Messrs. Chatto and Windus.

MR. HENRY CRAIK's *Life of Swift* will be published immediately. Among the more notable features of it will be some hitherto unpublished letters, fresh light upon the origin of the "Battle of the Books," and a careful analysis of the evidence bearing on Swift's presumed marriage with Stella.

MR. S. L. LEE is preparing a bibliography of the fugitive Shakespearian literature that has appeared in England and America during the present year for the *Shakespeare-Jahrbuch*, to be published by the German Shakespeare Society at Berlin early in 1883.

AMONG forthcoming additions to the Clarendon Press series is a volume of *Selections from the Dialogues of Plato*, with Introductions and notes, by Mr. John Purves, and a Preface by the Master of Balliol. The object of this work is not to encourage any premature study of philosophy, but to enable the young scholar to make himself acquainted with the style of Plato in its most perfect form.

THE Hon. D. A. Bingham has now ready for the press the whole of the MS. of a new work which may be regarded as a sequel to his *Marriages of the Bonapartes*. It will probably be published in the course of 1883.

MR. GEORGE SAINTSBURY has edited, for the French section of the Clarendon Press series, Corneille's play of "Horace," with Introduction and notes. A prominent feature of the book is the Prolegomena, which consist of short essays on the life and writings of Corneille, French tragedy before Corneille, the tragedy of Corneille and Racine, French tragedy after Racine, and the stage in the time of Corneille.

MR. CORNELIUS WALFORD has just completed

a new work on *Ancient and Modern Fairs*. It will be published shortly by Mr. Elliot Stock in the first series of the "Antiquary's Library."

MESSRS. HURST AND BLACKETT will issue shortly a new novel by Mary A. M. Hoppus, entitled *A Story of Carnival*; and, during December, *Fettered yet Free*, by Alice King. Both will be in the orthodox three volumes.

The Gospel of the Secular Life is the title of a work by Canon Fremantle, Rector of St. Mary's, Bryanston Square, which will shortly be published by Messrs. Cassell, Petter, Galpin and Co.

THE first number of the new quarterly, *The Scottish Review*, which is to appear on Monday, will have articles on "The Progress of Theology in Scotland" and "Letters in America." A special feature is made of the summaries of foreign Reviews. The publisher is Mr. Alexander Gardner, of Paisley.

DR. GEIKIE's *Life and Words of Christ*, of which no less than twenty-four editions have already been sold, will in future be published by Messrs. Hodder and Stoughton, who will issue a new edition in a few days.

ANOTHER volume of the works of Mrs. G. Linnæus Banks will shortly be issued by Messrs. Heywood, of Manchester. It is a collection of her shorter stories, and is called *The Watchmaker's Daughter*.

MR. JOSEPH HUGHES will publish, on November 22, a new educational monthly entitled *The Little Learner*, specially adapted for the first three standards of elementary schools.

"THE name of Ellenor SHAKESPEARE is among the Marriages of 1593"—in the first volume of the Registers of the parish of Amwell Magna, Hertfordshire—says the *Hertfordshire Mercury* of November 11. "The name of Wicliffe occurs in 1632;" and

"There is a long note on the occasion of the burial of William Warner, the friend and contemporary of Shakspeare:—'Mr. William Warner, a man of good years and of honest reputation; by his profession an attorney at the common pleas: author of *Albions England*; who dined suddenly in the night in his bedde without any former complaynte or sickness, on Thursday night, being the 9th daye of marche [1609], was buried the Saturday following, and lyeth in the Church at the upper end under the stone of Gwallter Fader.'"

AT the meeting of the Clifton Shakspeare Society held on November 11, Reports in connexion with "Hamlet" were presented from the following departments:—Animals, by Dr. J. E. Shaw; Sports and Pastimes, by Mr. L. M. Griffiths; and Rare Words and Phrases, by Mr. Francis F. Fox. A paper by Miss Constance O'Brien, on "Lucianus' 'Charm-Lines,'" was also read.

THE Rev. Alfred Ainger will read and comment upon Shakspeare's play of "Richard II.," in a course of five lectures to be given at Queen's College, Harley Street, on Fridays, beginning November 17, at 4 p.m.

AT a recent meeting of the Cambridge Antiquarian Society, a communication was read from Dr. Pearson, calling attention to the fact that the "Three Pigeons" inn, at the point where the road from Thame to Abingdon crosses that from London to Oxford, is probably the site where Goldsmith laid the scene of "She Stoops to Conquer."

MR. RUSKIN has changed the subject of the lecture he is announced to deliver at the London Institution on December 4. It will not be on "Crystallography," but on "Cistercian Art."

MR. GLADSTONE has recommended Mr. David Wingate, a Lanarkshire poet, for a pension of £50 on the Civil List; and it is also stated that he did not do this until he had first read Mr. Wingate's poems.

PROF. BUTCHER has printed as a pamphlet (Blackwood) the inaugural address which he delivered on opening the Greek class at Edinburgh University on October 31. The subject chosen is "What we owe to Greece," and it is treated with not a little both of freshness and eloquence.

THE December number of the *Viestah Evropu* will contain a new production by Ivan S. Turghéniev, entitled "Stikhi v Proze" ("Prose Poems"). These "poems" were written by the author during his late serious illness, and consist of a series of imaginative sketches based on the events of the past six years. It is expected that they will contain, at the same time, a good deal of autobiographical material.

A NEW novel by Georg Ebers, entitled *Zin Wort*, will be published next week by the Deutsche Verlags-Anstalt, at Stuttgart. The scene is laid in the sixteenth century, and the hero is a banished German.

A POEM by Heine, hitherto unpublished, is said to have been found in his autograph copy of the *Buch der Lieder*, which is now advertised for sale at Berlin.

THE second portion of Prof. von Treitschke's *History of Germany in the Nineteenth Century* has just appeared (Leipzig: Hirzel).

A NEW German version of Ariosto's "Orlando Furioso" is in preparation by Herr Otto Gildemeister, the translator of Byron. It will fill four volumes. The first is nearly ready.

ROMAGNOLI, of Bologna, announces a reprint of the *Bibbia Vulgare*, following the very rare edition of Niccolò Jenson (Venice, 1471).

SIG. BONGHI, formerly Italian Minister of Public Instruction under the Right, has in preparation a series of school-books, dealing with ancient history, literature, and art. They will be published by Morano, of Naples.

MESSRS. LETTS, SON AND CO. (LIMITED) have sent us a parcel of their diaries, calendars, and pocket-books for 1883, containing fourteen articles in all. It is not easy, or necessary, to say more than that no better are published. Quite apart from the contents and the general style, a word of praise must be given to the plain but strong binding. This is a matter that many publishers unduly neglect.

Correction.—In the paragraph about the Countess of Warwick in our last number, p. 345, col. 2, for "grandmother" read "mother-in-law" of the king-maker.

FRENCH JOTTINGS.

THE Académie française has fixed December 7 as the date for filling the two *fauteuils* vacant by the deaths of Charles Blanc and the Comte de Champagne. Up to the present, MM. Pailleron and Charles de Mazade are the only candidates.

As was expected, M. Jules Simon has been elected permanent secretary to the Académie des Sciences morales et politiques, in room of M. Mignet, the historian, who has held that post since 1837, and is now in his eighty-fifth year. The remuneration is a salary of £240 a-year, with rooms in the Palais Mazarin.

THE Prince de La Moskowa, the son of Marshal Ney, who died recently in Paris, is said to have left a volume of autobiographical reminiscences, with instructions that it shall not be published for some years.

A FRENCH paper claims M. Duclercq, the present Prime Minister, as having at one time been "reader" in a newspaper office. Pierre Leroux, François Buloz, and Proudhon are also in the same category.

It is announced that the private papers of the duc de Morny will shortly be given to the world

by his two secretaries, MM. Fournier and de Morpon.

M. ALPHONSE DAUDET has written yet another novel of Parisian life, which is to appear in the *feuilleton* of the *Figaro*, beginning in December.

M. ALBERT WOLFF, of the *Figaro*, announces for publication next February *Un Quart de Siècle à Paris*, mainly based upon the *chroniques* he has contributed to that paper during the past twenty-five years. It will be in two volumes, the first dealing with Paris under the Empire, and the second with Paris under the Republic.

PROF. EMILE DE LAVELEYE, of Liège, has published (Paris: Hachette) a text-book of political economy—*Éléments d'Économie publique*—for use in schools. He has not scrupled to depart somewhat from the usual lines, with the object of showing the close connexion between his subject and the kindred "études humanitaires"—philosophy, ethics, history, and geography. To every principle he has appended an illustration, a fact, a maxim; and he has paid special attention to the burning questions of socialism, capital, commercial crises, and population.

M. ALBERT SOREL, the well-known historian, has just published a volume of Essays in history and criticism, dealing with Metternich, Talleyrand, Mirabeau, Elizabeth and Catherine II., England and the French Emigration, the diplomacy of Louis XV., the Prussian colonies, the Russian alliance and the Restoration, the policy of France in 1868-67, and diplomacy and progress.

M. PH. TAMIZEY DE LARROQUE, as a byework of the great undertaking he is engaged upon for the resuscitation of Pèirese and his friends, has reprinted as a pamphlet (Bordeaux: Chollet) the funeral oration pronounced upon Gassendi in the cathedral church of Digue, where the philosopher at one time held the post of Provost. The original is excessively rare, no copy of it being in the Bibliothèque nationale.

BUSTS of the following have recently been placed in one of the vestibules of the Institut:—Jules Favre, Michelet, Littré, de Saey, Vicomte de Rougé, Olande Bernard, Deville, and Félicien David.

EPIGRAMS.

XXV.

Shelley and Harriet Westbrook.

A GREAT star stoop'd from heaven and loved a flower
Grown in earth's garden—loved it for an hour:
Let eyes which trace his orbit in the spheres
Refuse not, to a ruined orbend, tears.

XXVI.

The Ruined Abbey.

Flower-fondled, clasp'd in ivy's close caress,
It seems allied with Nature, yet apart:—
Of wood's and wave's inensate loveliness
The glad, sad, tranquil, passionate, human heart.

XXVII.

An Epitaph.

His friends he loved. His fellest earthly foes—
Cats—I believe he did but feign to hate.
My hand will miss the insinuated nose,
Mine eyes the tail that wagged contempt at Fate.

XXVIII.

A Parable.

A deft musician does the breeze become
Whenever an Aeolian harp it finds:
Hornpipe and hurdygurdy both are dumb
Unto the most musicianly of winds.

XXIX.

Anthony at Actium.

He holds a dubious balance:—yet that scale,
Whose freight the world is, surely shall prevail?
No: Cleopatra droppeth into this
One counterpoising orient sultry kiss.

XXX.

On Longfellow's Death.

No puissant singer he, whose silence grieves
To-day the great West's tender heart and strong;
No singer vast of voice: yet one who leaves
His native air the sweeter for his song.

XXXI.

"Subjectivity" in Art.

If, in the Work, must needs stand manifest
The Person, be his features, therein shown,
Like a man's thought in a god's words expressed—
His own and somehow greater than his own.

XXXII.

The Cathedral Spire.

It soars like hearts of hapless men who dare
To sue for gifts the gods refuse to allot;
Who climb for ever toward they know not where,
Baffled for ever by they know not what.

XXXIII.

Written in a Volume of Miss Christina E. Rossetti's Poems.

Songstress, in all times ended or begun
Thy billowy-blossomed fellows are not three.
Of those sweet peers the grass is green o'er one;
And blue above the other is the sea.

XXXIV.

The Metropolitan Underground Railway.

Here were a goodly place wherein to die:—
Grown lately to sudden change averse,
All violent contrasts fain avoid would I
On passing from this world into a worse.

W. W.

MAGAZINES AND REVIEWS.

THE *Journal* of the National Indian Association for November (Kegan Paul) is exceptionally interesting. It opens with a full analysis of the last Administration Report of Travancore, the model native State in Southern India. Then we have a history of the vernacular press in Bombay, contributed by a Parsi gentleman, which is deficient only in dates and figures. It is curious to learn that there are several monthly magazines in Guzerati, half-filled with translations from English. A translation from the German upon "The Diamond Fields of India" is full of learning, and we shall be glad to read the continuation of it.

THE *Revista Contemporanea* of October 30 reproduces an inedited "General Project of Reform," by the first Marquis of Victoria in 1747, which remarkably anticipates many modern improvements. The writer advocates a general national synod to deal with ecclesiastical abuses, especially with the exemption of the Church property from taxation; he inveighs against the false ode of honour in Spain, especially as regards the nobility not engaging in commerce; he defends the luxury of the rich, which promotes manufacture and art; and lays down the principle of free trade "of buying in the cheapest foreign market the things which it would cost Spain more to produce, and selling there that which she can produce the cheapest." A few lines of "Contemporary History" by Gen. de Letona mark the date of Serrano's government of Cuba, and of his own post as civil governor there under him for six months. Señor Muñoz y Manzano concludes his study of Goya by assigning him a very high place as a colourist, realistic painter, and satirist, but utterly lacking in tenderness and religious sentiment. The scientific paper is on "The Life of a Plant," by Maximo Laguna.

OBITUARY.

E. H. PALMER.

FROM day to day I have waited for news that might relieve me of a sorrowful task; but at last the faint hope that remained of Professor Palmer's escape is destroyed. It seems that his Syrian dress and his wonderful command of Arabic deceived his murderers, and gave rise to that persistent report of only two Englishmen having been killed in which Palmer's many friends have tried to find comfort. There is now no doubt that he fell with his companions, Gill and Oharrington, and that his death was to the full as gallant as any that are recorded among the golden deeds of Englishmen. To calm the fanaticism and lull the suspicions of the Bedawis was his mission; and it was given to him because there was no other man in Europe who could execute it. Alone, and trusting solely to his marvellous influence with the desert Arabs, he undertook that perilous first journey by which our army was secured from an attack in the rear of its position on the Suez Canal. The chief work and danger was over when he started on the second expedition, which ended so disastrously and so unexpectedly. No true sons of the desert took his life we may be sure; but rascally Turks, acting under orders from Constantinople or Cairo. It was no case of robbery, for the gold they carried was found untouched: it was political murder after the Turk's own heart. The little party, which faced the dangers of desert travelling with no adequate escort, met the tragical fate which Palmer in his earlier solitary journey had braved and escaped. They were overwhelmed, captured, and murdered:—shortly, I trust, to be avenged in the true Arab fashion; for this once, at least, let the blood-revenge sleep not! Meanwhile, scholars may be proud to remember that this was no trained soldier, but a scholar like themselves—weak, too, and small of stature—who faced death undaunted in his country's service, and fell triumphing that he had done something "for our side." He did, indeed, "for our side" what none other could do; he turned back a Bedawy invasion of the Suez Canal; and he never counted the cost. Such gallantry and courage demand more public recognition at the hands of those who entrusted him with his perilous task than has yet been given. The Government have had no truer or braver soldier in the Egyptian campaign than this Cambridge Professor. Let them not forget it.

The loss of a brave heart is enough to grieve for; but we who are students and Orientalists have another cause for sorrow. Palmer was the rarest of men, a born linguist. It would be hard to say what language within reach of the North Sea and the Mediterranean and the Indian Ocean he did not know. He was so perfectly at home in Arabic that the Bedawis took him for an Eastern born. Persian and Hindustani were as English; and all the tongues of modern Europe seemed to come naturally to him. Readers of Mr. Leland know that "the Palmer" was wholly at his ease in Romany. I never met his equal as a linguist, and I do not believe that equal lives. And I may quote the opinion of one who was admittedly the chief of Arabic scholars and the most Eastern of Orientalists, and say that Lane frequently told me that he had the highest expectations of Palmer, and knew he would do great things, because he had a "genius for Arabic"—an instinctive apprehension which is beyond all book-learning and grammatical precision. Palmer was the reverse of precise, the most careless of writers—he could never detect misprints and inconsistencies. There is scarcely a book of his that I have not reviewed, in the *ACADEMY* or elsewhere, and not one in which I could help noticing the host of trifling slips and

overnights. This was a part of his nature. He could not grind at grammar, and, indeed, he was more fitted to teach it than to learn. As soon as he had gained an insight into one language, he was off to another. Those who prize literal scholarship more than linguistic genius shook their heads at him, and it was no wonder. But others, like Lane, saw deeper. In Arabic, genius is the first thing. Without the spirit of the East—the Oriental instinct—mere scholarship avails little. You may know all the rules and exceptions and learn the dictionary by heart, and yet be confounded by a phrase which to men of Lane's and Palmer's stamp is perfectly simple and natural. I couple the two names together because, though Lane was accuracy and precision itself in his scholarship, they had this in common, that they both knew the East, so to speak, from the inside, and went by nature and not by syntax.

I have written thus much on Palmer's Arabic scholarship because it was his chief study, and because it is that part of his work on which I am best entitled to speak. His Arabic Grammar, in its three scales, is brilliant, luminous, thoroughly natural and native—native, too, in method and want of precision—but emphatically an admirable book to begin upon, if some other scholar would add a list of *errata*. His *Qur'an*, again, in "The Sacred Books of the East," often as I am compelled to disagree with individual renderings, is a work of genius—it gives a new insight into the Mohammedan Bible. His books on Arabic literature are simply charming. The translation into easy and spirited English verse (in itself a remarkable feat) of the poetry of Bahâ-ed-dîn Zuhayr, of Egypt, is an admirable example of Palmer's genius for Arabic; and his Life of Harun Er-Rashid in the "New Plutarch Series" is one of the most delightful of books. His insight into mediæval Arabian society, and his sympathy with the Golden Prime of Arab literature, were unmatched; and the various articles he contributed to magazines and weekly and daily papers would form a most instructive, and not less amusing, study of the Augustan age of Mohammedan letters. The middle period of Arabic literature attracted him more than the ancient poets of the desert, and his most successful pieces in the *Song of the Reed*—a little volume containing many gems of verse—are from the later Arab or Persian writers. In Persian, indeed, he was as completely at home as in Arabic; and it is devoutly to be wished that his translation of Hafiz, which has long been announced by Messrs. Tribner, is sufficiently advanced to be published. None, I believe, could render Hafiz more appreciatively than Palmer.

But of his varied work I have no space to write; of his labours for the Palestine Exploration Fund, and his *Desert of the Exodus*, the results of two journeys (in 1869 and 1870) into Sinai and the Tih desert (the latter in company with Mr. Tyrwhitt Drake, on foot, without escort or dragoman) during the *Wanderjahre* which divided his early student life, of which we know so little and would like to know so much, from his last ten years of unremitting production. Until 1867, when he took his degree at the age of twenty-seven, and St. John's College, Cambridge, honoured itself by electing him to a fellowship on the ground of his Oriental scholarship, he was a hard student, even during the period when he essayed a commercial career. Then, for a few years, he was a bold and venturesome traveller, picking up new dialects wherever he went, and making friends with the rough desert tribes as though an Arab born. Finally, with his appointment to the Lord Almoner's Professorship of Arabic in 1870, he entered upon his last phase of activity. He became a university lecturer, an examiner, a writer of many books, and, for the last year, a journalist. I believe there was

nothing that Palmer could not have done, if he had given his mind to it. He was a barrister for the amusement of going on circuit, an actor, a conjuror, a "thought-reader," something of a draughtsman; at once, a man of learning and a thorough Bohemian; a Cambridge professor who taught the Koran, and an improvisatore who delighted the Rabelais Club; a man who could preach in a mosque, sing Persian ghazels, and chaff gipsies in their own tongue. And, with all this, Palmer had no grain of conceit or self-importance. He was the quietest and most unassuming of men of genius; he never set himself to shine or spoke for effect. To other students, as I can heartily testify, he was ever helpful and kind; he would take any trouble to explain what to others, but not to him, were difficulties; and I have always found his illustrations and comments luminous and suggestive. Orientalists must mourn a leader; but there are many, and every week swelled their number, who grieve for the loss of a true and generous friend—one who in learning forgot not human-kindness, who could be both a scholar and a noble-hearted man, who could love and enjoy life well, and yet, when his hour came, knew how to die.

STANLEY LANE-POOLE.

RITTER FRANZ VON KOBELL died at Munich, his native city, on Sunday last. He was the son of a Bavarian privy-councillor, and was born in July, 1803. He has been Professor of Mineralogy in the University of Munich for nearly half-a-century. He was appointed in 1834, but he held a post in the Konservatorium der mineralogischen Sammlungen as early as 1823. He received his earlier education in Munich, but studied natural science at the University of Landshut. He made repeated journeys in Greece, Italy, and elsewhere in the interests of his science. As a mineralogist, however, F. von Kobell was known only to a limited circle; but as a poet, and especially as a dialectic poet, his name is renowned throughout Germany. His first volume of poems, *Gedichten in oberbairischer Mundart*, appeared in 1839, and an eighth edition was published about six years ago. In 1844 he issued a volume of poems in the dialect of the Rhenish Palatinate, *Gedichten in pfälzischen Mundart*, a sixth edition of which appeared in 1876. His "High-German" poems, of which he published a succession of volumes, were less original and less successful.

CORRESPONDENCE.

WHO WROTE "THE WHOLE DUTY OF MAN"?

II.

12 Park Crescent, Oxford: Nov. 14, 1882.

It will probably now be conceded that Fell was, from the first, fully in the confidence of the author of *The Whole Duty of Man*. It is also pretty evident, from the existence of the MS. of *The Government of the Thought* in his handwriting in 1687, combined with his own language concerning that treatise, that he was the anonymous author's literary executor, as well as his intimate friend during life. The reader who has any acquaintance with Fell's biography will at once perceive to whom these facts point. Fell, through the exigencies of his position, and, doubtless, partly through natural temperament, dwelt very much apart; yet there was one friend with whom his earliest years were spent, with whom he seems to have shared every thought, and who, dying a few years before him, left his papers and remains to his disposal. But, before proceeding further, let me quote those passages of the Preface to the collected works which refer to the unknown author.

"Our excellent Author having wrote the Tracts which make up these Volumes, at several times, as the exigence of the Church, and the benefit of Souls directed their compoensure; did likewise publish them apart, in the same order as they were made. . . .

"... it is here solemnly declar'd; that these Tracts which we here exhibit, are the genuine and the only Writings of our Author."

Taking this with the context, I do not understand Fell to state that the author of the seven treatises wrote nothing else; but simply that these are all his works *qua* author of *The Whole Duty of Man*. It is impossible to say whether Fell had, when he wrote this Preface, transcribed and determined to suppress *The Government of the Thought*, or whether that tract was taken up and put into shape in the interval between the publication of the works and Fell's death,

"Indeed had Almighty God lent longer life to this eminent Person, we might have receiv'd many and ample benefits by it; and particularly a just treatise, which was design'd and promis'd of the Government of the Thought. . . .

"Therefore it may justly be esteem'd as a particular recommendation of what is here deliver'd, that it was practis'd before it was speculation, and that we literally have the authors works. *The whole Duty of Man* had its first, and most correct edition in life and practice; and the *Tongue was Govern'd* and *Contentment* gained before they were describ'd; nor was there any thing in this whole Volume wrote by guess and at adventure, but from long experience and evidence of fact. . . .

"The pious Votary will by this method, more intimately acquaint himself with the Writings of these Tracts, than he could do by any the most punctual account of his Name and Family and Person, that a Herald, Historian or Painter could contrive. Let him be wise and humble, temperate, chaste, patient, charitable, and devout; live a whole age of great austerities, and maintain an undisturb'd serenity in the midst of them; and then he will himself become a lively picture of our Author."

It is here distinctly implied that the author was recently dead; and certain definite qualities are attributed to him. The "whole age of great austerities," at all events, is a characteristic that could scarcely be ascribed to everybody in the reign of Charles II.

In 1684 there was printed at the Theatre in Oxford a small folio volume entitled *Forty Sermons, whereof twenty-one are now first publish'd, the greatest part preached before the King and on solemn occasions*. The author is RICHARD ALLESTREE, D.D., "King's Professor in the Chair of Divinity in the University of Oxford, Provost of Eton, and Chaplain to his Majesty." Prefixed is his Life, confessedly written by Fell, and in this and in the Sermons I am persuaded that we have the key to the authorship of *The Whole Duty of Man*.

It has often been pointed out that Allestree died in 1691, and so far satisfies Fell's description in the Preface. He had lived a life of uncommon austerity. Fell shall speak for himself on this point:

"In the evening after he had wearied himself with the studies of the day, which he generally continued till eight of the clock at night, during the many years he held the Chair, soon after which he was to be call'd away to the night prayers of the College; this short interval he made as easy as he could to himself and those that were with him: and he had great reason to relax his mind at this time with a little cheerful discourse, there being no person who more literally verified the saying of the wise Man, that much study was a weariness to the flesh. After his daily work he was wont to be as faint and spent, as if he had bin laboring all the time with the sieve or flail; and his intention of thought made such wast upon his spirits, that he was frequently in hazard, while at study, to fall into a swoon, and forc'd to rise from his seat, and walk about his room for some time, before he could recover himself.

"To render secure from the inordination of intemperance, he frequently abstain'd from lawful satisfactions, by the stated returns of fasting and abstinence; and continuance in celibacy during his whole life. Nor had his singular abilities and endowments the usual effect to make him proud and contentuous; all his discourses were with deference and respect, and were spoke with weight becoming a Professor, but the softness of a Learner."

So then, both the author of *The Whole Duty of Man* and Dr. Allestree were "wise and humble, temperate, chaste, patient, and devout;" both "lived a whole age of great austerities." As to Allestree's charities, Dr. Fell gives many particulars:—

"His content of the world was very extraordinary, as in his large and constant Charities, both by settled Pensions to indigent persons and families, and occasional Alms; so also his bounteous

hospitality. . . . Yet a higher instance hereof will be his giving away a fixt and constant revenue that he might have fairly retain'd, to the value of above three hundred pounds by the year. . . . But the uncontrollable proof of content of the world, is the dying poor, and not to have collected any thing against the hazards of fortune, and commonly pretended exigences of old age and sickness; which was in a remarkable manner Dr. Allestree's case."

Nine days before his death, in reply to an enquiry from Fell concerning the disposal of his MS. lectures, Allestree wrote—Fell quotes his exact words, only casting them into the *oratio obliqua*—

"that if the Bishop had not writ, and for that he himself would not go out of the world without satisfying him in every thing, he had resolv'd to have sent for his papers and burnt them; but that now he gave them up all to the Bishop upon this inviolable trust, that nothing of them should be publish'd as a Scheme of his, but to be made use of to serve any other design the Bishop should think fit."

In the Life of Prideaux, we are told that Fell's description of the author quoted above was "generally understood to be meant of Dr. Allestree, who was then lately deceased." I think that it would be difficult to understand it otherwise.

There is only one passage in the entire works of the author of *The Whole Duty of Man* where the writer throws off the mask, and makes a definite statement with regard to his own personal experience, which at once excludes many of the competitors for the authorship. It occurs in the seventh tract, *The Christian's Birth-right*, sect. vii., paragraph 2, and is important enough to be quoted *verbatim*:—

"I would not be hasty in charging Idolatry upon the Church of Rome, or all in her communion; but that their Image-worship is a most fatal snare, in which vast numbers of unhappy souls are taken, no man can doubt who hath with any regard travaill'd in Popish Countries, I myself and thousands of others, whom the late troubles, or other occasions sent abroad, are and have been witnesses thereof."

Dr. Fell records several visits of Allestree to the Continent; first, to France soon after the end of the war to settle the affairs of Lord Newport; secondly, to Charles II. at Rouen after his defeat at Worcester; and, thirdly, "after several difficult journeys successfully perform'd, in the Winter before his Majesties happy restauration he was sent over into Flanders." I cannot help remarking, as one of the many indications that all the seven treatises are from the same hand, that Saint-or Image-worship is the one practice of the Roman Church which is condemn'd in *The Whole Duty of Man* (Sunday v., § 37). When *The Whole Duty* was published, Allestree had paid at least two visits to the Continent.¹

I think, then, that we may here regard it as established that Fell, solemnly and by unmistakeable indications, points to Dr. Allestree, then dead, as the author of *The Whole Duty of Man*. Is there documentary evidence to confirm his statement? In other words, do Dr. Allestree's acknowledged writings carry on the face of them evidence of various kinds, derived

¹ It is a curious instance of the inattention with which the internal evidence has been examined that Hearne says (*Reliquiae*, iii. 88), "the author had been at Rome;" and Dr. Michael Lort (whose remarks quoted in Nichols' *Literary Anecdotes* are among the best contributions to the investigation of the subject hitherto published) quotes the author as "mentioning" that he had been in France eighteen years before. He no doubt was; but he does not say so. Dr. Lort remarks casually (*L. A.* ii. 603) that Dr. Allestree's sermons may be compared with the treatises; but he seems to have carefully avoided taking his own hint.

from similarities of language and expression, "undesigned coincidences," identity of view, resemblance of literary form and method, sufficient in quantity and quality to turn the presumption raised by Fell's statements into certainty? I would submit that they do. That Fell manipulated the MS. after it left Allestree's hands there can be no manner of doubt. Prideaux (Life, p. 8) noticed that, while one of the treatises was printing at the Theatre at Oxford, "he often found whole lines, and sometimes two or three together, blotted out, and interlineations in their stead which he knew to be of Bishop Fell's handwriting." But if we wished to form a correct notion of Fell's view of the rights and duties of an editor, we should only have to put Anthony Wood in the witness-box (see, e.g., Life, p. 237). I have no doubt that Fell edited, and edited severely; and yet I have as little doubt that the first draft came from Allestree. A very rapid and imperfect sketch of the internal evidence which has led me to form this opinion I hope to be allowed to lay before the readers of the ACADEMY next week. CHARLES E. DOBLE.

COPYRIGHT IN TITLES.

The inconvenience, and sometimes the loss, entailed on authors and publishers by the adoption of titles which have been previously used for books or periodicals, or for articles contained in the latter, will, I hope, speedily inspire those who are most interested to make an earnest and united effort to remedy the evil. The remedy will be found in the establishment of such a system of registration of titles as will protect the rights of their inventors, and, at the same time, be so readily comprehensible as to avoid the duplication of them within the term of copyright. The uselessness of Stationers' Hall for this purpose is well known.

The importance of a title is in many instances so great, and it is so frequently invented before the work to which it is to be attached is completed, that there should be distinct recognition of property in a mere title when duly registered. At present no such right exists, although there is a common belief that it does. I have not got the papers here to enable me to give the exact date, but I believe it was on November 9, 1876, that the Master of the Rolls decided, in the case of *Henderson v. Macnall*, that a book or a periodical was non-existent until after publication. Therefore the registration of a title at Stationers' Hall even five minutes before publication did not secure copyright; but the registration, even one minute after publication, did secure it. So that titles registered before publication must be registered again after publication in order to become property in the eye of the law. To meet this difficulty it is allowable to register again at Stationers' Hall any time before commencing an action, and even when in court on payment of a penalty. A title ought to have protection as soon as it is discovered; but only for a limited period, say two years. If publication of the book or periodical did not follow within that period, all rights to the title to lapse. If publication ensued within the period, the proprietorship to continue for the usual term of copyright.

I would suggest that there should be a meeting of authors and publishers at an early date to consider the whole question of the best means of securing copyright in titles and of establishing an efficient system of registration.

CHARLES GIBBON.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, Nov. 20, 7.30 p.m. Aristotelian: "Locke to Berkeley," by Mr. G. White; "Berkeley to Hume," by Mr. A. M. Ogilvie.
8 p.m. Royal Academy: Demonstration, "The Shoulder and Arm," by Prof. J. Marshall.

TUESDAY, Nov. 21, 7.45 p.m. Statistical.
 8 p.m. Civil Engineers: Discussion, "Recent Hydraulic Experiments," by Major Allan Cunningham.
 8 p.m. Colonial Institute: "The Indebtedness of the Australasian Colonies in Relation to their Resources," by Sir Francis D. Bell.
 WEDNESDAY, Nov. 22, 8 p.m. Royal Academy: Demonstration, "The Fore-arm and Hand," by Prof. J. Marshall.
 8 p.m. Society of Arts: "Ice Making and Refrigeration," by Dr. John Hopkinson.
 THURSDAY, Nov. 23, 8 p.m. Telegraph Engineers: "The Telegraphs used during the Operations of the Expeditionary Force in Egypt," by Lieut.-Col. Webber.
 FRIDAY, Nov. 24, 8 p.m. Royal Academy: Demonstration, "The Neck, Head, and Face," by Prof. J. Marshall.
 8 p.m. Browning: "What is *The Flight of the Duchess*?" by Mrs. Owen; "The Songs in *Pippa Passes*," by the Rev. John Sharpe.
 8 p.m. Quaker: "The Stateblasts of the Freshwater Sponges," by Mr. B. W. Priest.
 SATURDAY, Nov. 25, 8 p.m. Physical: "Liquid Slabs," by Dr. F. Guthrie; "Rainbows formed by Reflected Light," by Mr. W. Achroyd.

SCIENCE.

The Concepts and Theories of Modern Physics. By J. B. Stallo. "International Scientific Series." (Kegan Paul, Trench & Co.)

THIS is a book which every physicist and chemist ought to read. No one who reads it, however much he may differ from many of the conclusions which the author arrives at, can fail to be impressed by the brilliancy of the style and the ingenuity and incisiveness of many of the arguments. It is designed, we are informed, as a contribution, "not to physics, nor certainly to metaphysics, but to the theory of cognition." The common belief among men of science in this day is that modern science has not only made its escape from the cloudy regions of metaphysical speculation and discarded its methods of reasoning, but that it has likewise emancipated itself from the control of its fundamental assumptions. Mr. Stallo's conviction is that this belief is but partially conformable to the fact. The scientific mind is still fettered by the metaphysical prepossessions of the Middle Ages. And this he endeavours to show by examining the foundations of the theory of physical action, known as the atomo-mechanical theory—which, in some form or other, is held by all modern physicists—and by enquiring how far the postulates of that theory are in agreement with the data of observation and experiment. The present volume is a proof that the author is well qualified to carry out this enquiry. His wide and intimate acquaintance with philosophical and scientific literature enables him to speak with equal force and ease, whether he is discussing the laws of thought or the theory of Laplace's invariable plane or the properties of pseudo-spherical space.

The early chapters of the book are occupied by a statement of the mechanical theory of the universe, and a comparison of its demands with the results of sensible experience. The theory makes the assumptions that the primary elements of all natural phenomena are *mass* and *motion*, that these are indifferent to and independent of each other, and that they are constant. From these assumptions follow certain consequences (e.g., that the elementary units of mass are hard, inelastic, and absolutely inert), which are examined in detail. Here the theory of gravitation comes under consideration. The hydro-mechanical theory of Challis, Lesage's impact theory, and other theories are examined, and the total inadequacy of any and all of them to explain the facts of gravitation pointed out. Gravita-

tion is as inexplicable as is mass or motion. The seventh chapter treats of the theory of the constitution of matter. One of the postulates of this theory is that matter must consist of discrete parts, the constituent atoms being separated by void interstitial spaces this requirement being necessary to account for the phenomena of the dispersion and polarisation of light. This gives the author an opportunity of discussing the undulatory theory of light, and exposing its weak points. One of these is the following:—If matter is continuous, rays of light of all colours ought to pass through it with the same velocity. Now, white light, in passing through a refracting medium, becomes coloured, and the theory accounts for this by assuming the different coloured rays to be unequally retarded in passing through such a medium. But how is this to be reconciled with the cogent requirement of the theory that rays of all refrangibilities must travel with the same velocity? The difficulty is (*quoad hoc*) found to be removed by the assumption that refracting media are not continuous, but consist of discrete parts. Cauchy found, from mathematical analysis, that in such media the velocity of the propagation of a ray depends upon its colour. But here another question arises:—Have we any direct evidence that rays of different colours travel with unequal velocities? No, next to none. And so the difficulty—and it is a formidable one—remains.

In the chapter on the kinetic theory of gases, the author begins by discussing the true nature and function of a scientific hypothesis, and lays down not only the criteria of its value, but also the conditions of its validity. These conditions, he maintains, are not fulfilled by the kinetic theory. The theory assumes that a gas is composed of perfectly elastic solid particles. The property of elasticity thus assumed in the constituent solid includes the very fact to be accounted for in the gas.

"The resilience of the gas against reduction of volume is obviously a simpler fact than the rebound of a solid against both diminution and increase of volume, in addition to the reaction against change of figure. The resistance to several kinds of change implies a greater number of forces, and is a more complex phenomenon than the resistance to one kind of change."

The assumed free rectilinear motion of the particles is declared to be not only unwarranted by experience, but out of all analogy with it; and a protest is entered against the extraordinary assumption of discontinuity between the violent action attributed to the particles during the few instants of time before and after the collisions, and their total freedom from mutual action during the comparatively long periods of their rectilinear motion in free paths. The author also objects to the statistical method applied by Maxwell to the velocities of the particles in order to account for the laws of Boyle and Charles, and asks, "On what logical, mathematical, or other grounds is the statistical method applied to the velocities of the particles in preference to their weights or volumes?" And he concludes his examination with the condemnation—

"The kinetic theory has none of the character-

istics of a legitimate physical theory. Its premisses are as inadmissible as the reasoning upon them is inconclusive. It postulates what it endeavours to explain. It is a solution in terms more mysterious than the problem," &c., &c.

Chaps. x., xi., and xii. treat of the character and origin of the mechanical theory. The author attributes many of the erroneous and inconsistent assumptions previously discussed to the fact that our minds are still tram-melled by the metaphysical prepossessions of the Middle Ages. He points out that neither motion nor mass (*i.e.*, inert matter) can by itself be an object of sensible experience, and asserts that neither of them is substantially real, but both are concepts, or, rather, constituents of a concept—the concept *matter*.

"The mechanical theory is guilty of one of the old fundamental errors of metaphysical speculation; it takes not only the concept matter, but its two inseparable constituent attributes, and assumes each to be a distinct and real entity. It is a survival of mediæval realism."

"A body cannot indeed move itself, but this is true for the same reason that it cannot exist in and by itself. The very existence of a body in space and time, as well as its motion, implies interaction with other bodies, and therefore *actio in distans*. Consequently all attempts to reduce gravitation and chemical action to mere impact are aimless and absurd."

Another metaphysical error into which, as the author alleges, the mechanical theory has fallen is that which identifies the genesis of the order of concepts with the genesis of the order of things; and an illustration is derived from the theory of the constitution of matter, the argument being as follows:—It is assumed that of the three states of matter—the solid, liquid, and gaseous—the two last are simply complications of the first; that a gas is a cluster of solids, like a cloud of dust; and that if these three states are considered as evolved the one from the other, the order of evolution is from the solid to the gas. But this view is inconsistent with facts. Evolution proceeds from the indeterminate to the determinate, from the simple to the complex. A comparison of the gaseous state with the solid shows that the former is not at the end, but at the beginning of the evolution. A gas is not only comparatively indeterminate, without fixity of volume, without crystalline or other structure, but, in its functional manifestations, exhibits that simplicity and regularity which are characteristic of all primary forms. This is seen at once by comparing the physical and chemical aspects of a gas with those of a solid or liquid. "What, then, is the origin of the prevailing delusion respecting the constitution of matter?" The following is the answer given to this question:—The intellect is liable, by reason of the laws of its growth, to confound the order of the genesis of its ideas respecting natural objects with the order of the genesis of those objects themselves. The most obtrusive form of matter is the solid, and in the early stages of history the solid alone was apprehended as material. It was long before the *air* came to be known as a form of matter. Thus, while the progress of evolution in nature is from the æiform to the solid, the progress of the evolution of knowledge in the minds of men was the converse.

"What does the demand of the atome-

mechanical theory—to admit no interaction between bodies other than that of impact—imply? Nothing less than this—that the first rudimentary and unreasoned impressions of the untutored savage shall stand for ever as the basis of all possible science.”

In chap. xiii. is discussed the theory of the absolute finitude of the world and of space. It is shown that the assumption of the atom as an absolute minimum leads to the assumption of an absolute maximum of material existence. The views of Lobatchewsky, Riemann, Clifford, &c., on many-dimensional and curved space are discussed, and afford our author an opportunity of condemning “another flagrant instance of the reification of concepts.” Chap. xiv. treats of cosmological speculation. Sir Wm. Thomson’s theory of the dissipation of energy is discussed somewhat fully, and the difficulties and discrepancies involved in the nebular hypothesis pointed out.

The conclusion stated by the author in the final chapter is that the atomo-mechanical theory cannot be the true basis of modern physics. The theory is not only (as is conceded) incompetent to account for the phenomena of organic life, but proves to be equally incompetent to serve as an explanation of the most ordinary cases of inorganic physical action. And the claim that it resorts to no assumptions and operates with no elements save the data of sensible experience is wholly inadmissible.

Mr. Stallo has shown that it is easy to pick holes in the mechanical theory. He has urged with force and ingenuity many valid objections against the kinetic theory of gases, the undulatory theory of light, and other applications of the general theory. But he cannot deny the enormous services these theories have rendered to science. They have led to new facts and discoveries, opened out fresh fields of research, and extended the boundaries of our knowledge in many directions. They may not be true; but they have proved themselves to be admirable working hypotheses, and in this lies their value.

A. W. REINOLD.

PHILOLOGY NOTES.

MR. E. A. SONNENSCHNEIN has recently found another volume of MS. notes and emendations by Bentley upon Plautus. They are inscribed in a copy of the Vulgate (1669), which passed from Bentley’s library into the possession of Gilbert Wakefield, and was purchased by the Bodleian at the Wakefield sale (1802) for the sum of 2s. 6d. The notes form a recension of the text parallel to that of the copy of Pareus in the British Museum, and will be shortly issued by the Clarendon Press.

THE Bishop of Durham is preparing a notice of eleven Coptic MSS. in the Cambridge University Library, which have been entrusted to him for that purpose.

MR. JAMES PLATT has undertaken to copy and edit for the Early-English Text Society, from the unique MS. in the old royal collection in the British Museum, Bede’s *Liber Scintillarum*. This treatise contains many Anglo-Saxon words which are found in the dictionaries of Lye and Somner, but which have not yet appeared in any printed text.

MR. PLATT is also preparing a paper, for the Philological Society, on the changes which the

genders of Latin words undergo in becoming Anglo-Saxon. These depend partly on the endings of the words, and partly on the gender of the words they supplant. Thus the Latin neuter *participium* is treated as a masculine, because the Anglo-Saxon noun for which it was substituted was masculine.

Two new volumes of “The Sacred Books of the East,” edited by Prof. Max Müller, will appear immediately. Vol. xiv., being part ii. of the Sacred Laws of the Āryas, contains the *Vasishtha* and *Baudhayana*, translated by Dr. George Bühler; and vol. xviii., or part ii. of Pahlavi Texts, the *Dādistan-i Dīnīk* and the *Epistles of Mānāskīhar*, translated by Dr. E. W. West.

THE new part of the “Anecdota Oxoniensia” is *Aristotle’s Physics*, Book VII.: a Transcript of the Paris MS. 1869, collated with the Paris MSS. 1861 and 2633 and a MS. in the Bodleian Library; with an Introductory Account of these MSS., by Mr. R. Shute.

IN the course of a paper on the Hittites recently read before the Académie des Inscriptions, M. Georges Perrot announced his intention of publishing the Hittite seals, eighteen in number, brought from Constantinople by M. Schlumberger, which have never yet been properly studied. M. Casati read a paper on Etruscan, in which he argued that the well-known Etruscan words “Lar” and “Lucumo” were not titles, but *praenomina*, the latter corresponding to the Latin “Lucius.” M. Desjardins exposed the forgery of a leaden plate, with an inscription, which had been sent from Sardinia. M. Oug read the first part of a paper on the Consilium principis from Augustus to Diocletian.

KONEGEN, of Vienna, announces the publication of treatises on Sanskrit Grammar, by Dr. G. Bühner; and on the structure of the Sophoclean chorus, by Dr. H. Gleditsch.

MEETINGS OF SOCIETIES.

SOCIETY OF BIBLICAL ARCHAEOLOGY.—(Tuesday, Nov. 7.)

SAMUEL BIRCH, D.O.L., President, in the Chair.—A paper was read from M. Eugène Réville on “A Demotic Papyrus containing the Malediction of an Egyptian Mother on her Son embracing Christianity.” This papyrus, belonging to Mr. Dodgson, had been placed at the disposal of M. Réville at the request of the president. It is unique of its kind, and may be considered as showing the struggle of Egyptian paganism in its decline against Christianity at its dawn. It tells of a man, Petosor, who, having been converted to Christianity, had, according to custom, changed his pagan name, which means “the gift of Osiris,” into the Christian name Peter. It appears that the zeal of the new convert carried him so far as to utter threats against paganism, then still in power. M. Réville was of opinion that he probably held a high position among the clergy. His mother reproaches him because, since he had made for himself a god that could kill, he lived with others in abundance and abandoned his pagan relatives. She speaks of his threats against the temples, and of his sacrilegious parodies of the sacred rites. She represents him always as a kind of chief of a sect. She wishes by her maledictions to avenge the cause of the gods outraged by her son; and it is for this reason that, acting in her own name, as well as for her dead husband, she wrote this solemn protestation. She refuses to call her son by the sacred name Petosor, which she had given him at his birth, and she shrinks also from accepting the profane name assumed when he was converted. Hence she calls him Petu, or Tu simply, “The Gift.” M. Réville, after giving a translation of this document so far as possible, made some remarks on the contents of another papyrus he was about to publish, detailing the discussion between the jackal Koufi and the Ethiopian cat. No positive state-

ment could be made as to the exact date of this papyrus; but he pointed out that in the character of its writings it agreed with certain Demotic receipts of the second century A.D., and was certainly posterior to the Rhind bilingual papyrus of the age of Augustus.—Mr. Theo. G. Pinches then read a paper on “Some Recent Discoveries bearing on the Ancient History and Chronology of Babylonia.” He took as his text a cylinder bearing the name of the King Nabonidus which was recently brought to light by Mr. Hormuzd Rassam in the course of his excavations on the site of Sipara, or Sepharvaim. It has chiefly to do with the building of temples, but incidentally there occurs the following passage of great historical interest:—“In the third year he [the god Marduk] caused Cyrus, King of Anzan, his young servant, to go with his little army; he overthrew the widespreading Sabmanda [the Medes], he captured Satumega [Astyages], King of Sabmanda, and took his treasures to his own land.” This is not absolutely identical with the account given by Cyrus himself, which latter agrees more closely with the story told by Herodotus. In another passage Nabonidus tells how, in restoring, at the command of the god Marduk speaking to him in a dream, the temple at Bit-hulhul, he lighted on the foundation-cylinders of the Assyrian kings Assurbanipal and Shalmaneser II., son of Assurnasirpal. But the Babylonian king’s most marvellous find of the sort was in burrowing beneath the famous temple of the sun-god at Sipara, forty-five years after Nebuchadnezzar had sought for the ancient cylinders in vain. Nabonidus probed to a depth of eighteen cubits, and then there was revealed to him, he said, “the cylinder of Narasim, son of Sargon, which for 3,200 years no king going before me had seen.” As Mr. Pinches remarked, adding to the date of Nabonidus, say, B.C. 550, these 3,200 years, we get for the date of Narasim B.C. 3750, which is two millenniums higher than the epoch assigned to these two celebrated kings of Agane by the late Mr. George Smith in his posthumous *Babylonian History*. Again, this interval of 3,200 years is nearly double the 1,635 interposed by Assurbanipal between his own reign and that of the Elamite king Kudurnakhundi, which still now was the earliest known from the onefield inscriptions.—M. Oppert opened the discussion, and took occasion to call attention to the recent discovery at Tello, near Hillah, by the French archaeologist, M. Salzer, of the inscribed statues of two of the very earliest Chaldean kings. M. Oppert’s renderings of the inscriptions made it clear that in the time of Gudea, one of the two sculptured monarchs, there was already lively intercourse between Chaldees and Egypt.—Communications were also received from Mr. Le Page Renouf, questioning, on grounds of textual interpretation, Dr. Brugsch’s identification of Pihahiroth, in his theory of the Exodus; from M. G. Bertin on “The Character and Influence of the Accent in Akkadian and Assyrian;” and by Mr. Pinches on “Assyrian Grammar,” the last being the first instalment of a series of papers.

FINE ART.

Demv 4to. 296 pp. 250 copies, each numbered. £1 2s. THE LIFE AND WORKS OF THOMAS HEWICK. By D. C. THOMSON. A few copies of this volume still remain for sale, and may be had from the AUTHOR, 10, White-road, N.W.

GREAT SALE of PICTURES, at reduced prices (Engravings, Chromo., and Oeographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—Geo. REES, 115, Strand, near Waterloo-bridge.

JEAN COUSIN’S “LIVRE DE FORTUNE.”

IT has before been stated (ACADEMY, October 7) that a curious work of early French wood-engraving is now being published in *L’Art*. It is a so-called Book of Fortune—*Emblemata Fortunae*—the text being written by a certain Imbert d’Anlezy, Seigneur de Dunflun, who states that he undertook this work in his old age, after a life of war and turmoil. He evidently considers his own part in the work of the greatest importance; but he says he has employed an excellent artist, to whom he gave

"a very rich salary." This artist M. Lalanne considers to be none other than Jean Cousin, who has supplied as many as two hundred emblematical designs of Fortune under various aspects. Here we see the goddess flying on the back of an eagle, or standing at the turning point of two roads, or balancing a beam; sometimes blind, sometimes far-seeing; as Father Time, turning round on a wheel; as "Inconstant," resting one arm on a ball, and holding forth the other with a chalice in her hand; as "Misfortune," driving in a triumphal car over human woes. The Book of Fortune was discovered by M. Lalanne in the Bibliothèque nationale, where it had not been much regarded, because the designs were supposed to have been by the same hand as the text, although the writer expressly explains that they are only his in the sense of his having paid for them.

It is curious to compare this early French rendering of the subject with the many representations we have of it in early German art. The ideas expressed are often the same, though the French master is freer and more ornate in his style. The confusion of the classic conception of Nemesis with the goddess Fortuna which is seen in Dürer's print commonly known as the "Great Fortune" is also to be found here. Jean Cousin does not, it is true, endeavour to express both ideas in one figure; but amid his various Fortunes is one styled *Nemesis Triumphas*, in which the goddess is represented driving a car drawn by eagles in the clouds. She holds in one hand a ball, or apple, and in the other a cornucopia of flowers. A city lies beneath.

MARY M. HEATON.

THE BOTTICELLI "PETRARCH" IN THE SUNDERLAND SALE.

At the Sunderland sale last Saturday a book was sold of which little has been said in the Catalogue, but on which the attention of a few connoisseurs was directed with intense eagerness. The volume itself was of slender value—a Petrarch printed at Venice in 1488, in folio, with six wood-cuts—but it contained six leaves of illustrations to the *Trionfi*, of which only three other copies appear to be known, and one of them imperfect. These are copper-plate (or silver-plate) engravings which Ottley, Passavant, and Nagler, correcting by conjecture the erroneous description of Bartsch, ascribed to the hand presumably of Sandro Botticelli. The superb MS. of Dante which passed away with the rest of the Hamilton collection into German hands lately was said to have been illustrated with his drawings; but the evidence originally relied upon (apart from the artistic likelihood) was a mere mistake, the so-called inscription of the name of "Sandro" being simply the words "*Laudi di Maria*" (Hymns to the Virgin) on the outside of a book borne by an angel in one of the pictures. As for the six engravings to Petrarch, the judgment of the critics harmonises with the probability that Botticelli, after having furnished the designs engraved by Baccio Baldini in the 1481 Dante, would, when he took the graver in his own hand (according to Vasari) a year or two later, choose the text of the other great Italian poet for illustration. There is a copy of this series in the British Museum, but it has lost its margins, and is of considerably later impression, being probably taken from the yet extant plates in the sixteenth century. On the contrary, the Sunderland copy is large, fine, and wholly in its original state. We have to congratulate Mr. Quaritch as the fortunate acquirer of the precious volume, even at the startling price of £1,950, at which it fell to him; and we are glad to know that it has not been carried out of the country.

"VENICE" IN PICTORIAL ART.

If only the Fine Art Society could have obtained a larger and yet more varied representation of Venice as she has been seen by the painters, an exhibition might have been complete which is now interesting. It has been, however, sufficiently pointed out elsewhere that much is wanting to the thoroughness of the present collection, and it may more properly be our province to remark on what is present. We cannot, however, forbear to observe, with regard to the contributions of Van Haanen and Miss Clara Montalba, that Van Haanens of finer colour, if not of more vivid effect or of subtler grace, than the one now exhibited might presumably have been obtained; and that one memorable picture of Miss Clara Montalba's, such as her admirable vision of St. Mark's Square in time of flood, would have been worth more than the present large enough assemblage of her drawings, with which one may become familiar in nearly every gallery nowadays. From Van Haanen we should have liked at least more work, and from Miss Montalba more exceptional work. But yet the exhibition, taken on its own merits, and not as presuming to exhaust its theme, is undeniably attractive. As it is, the Van Haanen is the most satisfactory picture. It is a bit of common life, where common life is beautiful; it is called "The First Dip." The child is about to be immersed in the somewhat turbid waters of the canal, and behind him are a group of picturesque Venetians: an elder brother, slim, brown, and nude; a young mother, with relaxed figure that yet has not lost its beauty; a couple of young gossips—grisettes, work-girls, or what-not. The colouring is not very pure or noteworthy for so great a master of colour as Van Haanen is; but, when that has been said, the only deficiency on which one can put one's finger has been sufficiently noted.

The exhibition would appear to have been held in great measure to spread the reputation of a young Russian who paints Venice very brilliantly, and to gather up what fragments of fame may be possible for an Englishman who was painting Venice half his life with no other encouragement than that which came from Mr. Ruskin's support and from his own joy in the themes of his choice. Mr. Bunney is the Englishman, M. Roussoff the Russian. By Mr. Bunney there are very numerous works. They should have been grouped more together. There is his large, glowing-hued, carefully drawn, and immensely meritorious picture of the façade of St. Mark's. In its own way—the way of faithful and obedient and reverent record—this is really triumphant. Then there are drawings by him proving not always his sense of colour—for sometimes he lacked a sense of colour, though at other times he displayed it—but his skill and patience in elaborate draughtsmanship. Gothic architecture he drew exquisitely. Mr. Wedderburn, to whom we owe the collection of Mr. Ruskin's *Arrows of the Chase*, has furnished to the Fine Art Society's Catalogue an interesting statement respecting Mr. Bunney; who was by no means too fortunate a man, and—waiting a promised statement from Mr. Ruskin himself—we commend these observations of Mr. Wedderburn to the reader. Regarding Roussoff, a few words will on the present occasion suffice. He has been painting only five or six years, and, though he is at present a water-colour painter, the influence of M. Van Haanen is to be discerned in his figures. These are vivacious and individual. By facial expression and by gesture they tell the story of the business on which they may be engaged. As a painter of pure landscape M. Roussoff is not yet on the road to eminence, but as a delineator of the picturesque interior, or of the long perspective of the narrow canal, he is already excellent. His work is not only pic-

turesque, it is easily understood; nor are we surprised that among the buyers of contemporary drawings he should already be popular. Among the works by other artists which should not go unnoticed is one excellent example of Mr. Henry Woods, a charming *genre* picture; an agreeable and harmonious transcript by Mr. Talbot of an autumn scene in Venice, when the rare foliage has become golden and russet; and several pieces of oil painting by Mr. Munger, whom we understand to be an American. Mr. Munger works with force and with some originality of observation. Over and above the Venetian pictures, the society is exhibiting a series of fresh and vigorous sketches of Egyptian life by Mr. Carl Haag. If the human subjects of Mr. Haag's choice are not invariably of general interest, there is yet some good artistic reason why they should have been portrayed. Mr. Haag knows the strange population minutely, and all his records of it have the value of faithful portraiture and of forcible painting. Here, then, is a sufficiently engaging material for a minor winter exhibition, though, concerning the "Venice," we may end, as we began, by chronicling our sense of its perhaps inevitable incompleteness.

MINOR EXHIBITIONS.

MESSRS. ARTHUR TOOTH AND SONS have on view at their gallery one of the most charming of Mr. Millais's series of impersonations of childhood. The picture, which is entitled "Pomona," is, we understand, a portrait of the sister of the little girl who sat for "Cherry Ripe;" but the treatment of the present subject seems to us greatly to surpass in interest that well-known work. A fair-haired, slightly sunburnt, and rosy-cheeked child, dressed in white, with light blue sash, and large mob cap, stands by the side of a barrow full of apples, holding an apple in her hand. The pose of the figure is graceful and natural, and it stands out wonderfully from the background of trees. The execution shows even more than Mr. Millais's usual dexterity. Mr. Samuel Cousins, R.A., has executed an admirable mezzotint of the picture.

MESSRS. SHEPHERD BROS., in their winter exhibition at 27 King Street, St. James's, show some examples of the work of the self-taught artist, Henry Dawson, sen.; an excellent Danby, entitled "Barmouth;" a picture of "A Welsh Valley," by J. Syer, interesting for the carefully drawn rocks; a work by Max Schödel, showing marvellous technical skill in the representation of an inlaid casket; and many other pictures of various degrees of merit.

CORRESPONDENCE.

PROF. JEBB ON THE RUINS OF TROY.

Queen's College, Oxford: Nov. 11, 1882.

In the ACADEMY of October 28, in the report of the meeting of the Hellenic Society, it is recorded that, in place of a paper of mine which had been announced,

"Prof. Jebb gave an account of his recent visit to Hisarlik in company with Mr. Calvert, Prof. Goodwin, and others, and stated it as the unanimous opinion of the party that no such stratification of the ruins as is implied in Dr. Schliemann's theory of successive cities exists."

I read this with astonishment, as only three years ago, when I visited the excavations, the existence of the successive cities was visible enough to everyone who had been trained in practical archaeology. I could only suppose that the section laid bare in the great trench which I explored in 1879 had been destroyed by Dr. Schliemann's recent diggings; but, even so, I could not understand how good archaeologists like Prof. Goodwin and Mr. Frank Calvert, who had both been adherents

of Dr. Schliemann's "theory," and the latter of whom was my companion in 1879, could have forgotten what had once been so plain, and have changed their views. I now find that they have not done so. Prof. Goodwin writes:

"I have read with much astonishment the notice in the ACADEMY. . . . The report misrepresents what I understood to be Mr. Calvert's opinion, and what I am sure is my own. . . . I can only say now that I think I agree perfectly with the article in the *Allgemeine Zeitung* by Dr. Dörpfeld. No such opinion as is imputed to me in the ACADEMY can be correct; and I am sure that Mr. Calvert will be of the same mind as regards what is said of him."

That Mr. Calvert is of the same mind I learn from Dr. Schliemann.

Besides Prof. Goodwin, Mr. Calvert, and Prof. Jebb, the party consisted only of Mrs. Goodwin, the two Miss Calverts, Dr. Schliemann's servant Nikóla, and two Turkish gendarmes, by whom, Dr. Schliemann states, Prof. Jebb was unable to make himself understood. As the ladies agree, not with him, but with Prof. Goodwin and Mr. Calvert, "the unanimous opinion of the party" resolves itself into that of Prof. Jebb, Nikóla, and the two gendarmes. Nikóla accompanied me over the Troad, and, with all his merits, I never discovered that he was an archaeologist; while as for the Turkish gendarmes, I can only say that my experience of them as a class does not inspire me with that confidence in their authority upon archaeological matters which Prof. Jebb seems to feel.

A. H. SAYCE.

THE FLOWER-WREATHS OF THE PHARAOHS.

Westbury-on-Trym : Nov. 8, 1882.

I beg leave to return, very briefly, to a subject upon which I addressed a note to the ACADEMY on September 23—viz., the wreaths found with certain of the royal mummies discovered at Dayr-el-Baharee. I have lately come upon a reference to the works of Athenæus, which seems to throw some light upon these curious garlands.

Writing of Naukratis, which was his birth-place, Athenæus states that the two chief manufactures of this town were porcelain and wreaths of flowers. These wreaths, described as made of myrtle, and also of "flowers entwined with filaments of papyrus," were in his time largely exported to Italy, and much patronised by the ladies of Rome. The manufacturers must, therefore, have dried, or otherwise preserved, the flowers thus made up for exportation. Now, although Athenæus is supposed to have written his *Deipnosophistæ* in the first quarter of the third century A.D. (i.e., about 1,200 years after the Her-Hor vault was finally closed), it is not unreasonable to conclude that the special industries of Naukratis may have existed as far back as the time of the XXist Dynasty, and possibly much earlier. I am not aware that the date of the Milesian settlement at Naukratis is even approximately known; but we have monumental evidence to show that there had been intercourse between the natives of the Greek isles and the Egyptians for a century before the period of the XXist Dynasty. In any case, the resemblance between the garlands described by Athenæus and those discovered with the mummies of Amenhotep I., Rameses II., and others is exceedingly curious. And when it is remembered that among the faded blossoms buried with the priest Nebamun there was found a specimen of the *Parmelia furfuracea*, a lichen indigenous to the islands of the Greek Archipelago, we seem to have something very like evidence that the Greek colonists were already established at Naukratis; and that in the funerary garlands with which the piety of Her-Hor and his

descendants adorned the remains of their illustrious predecessors we may possess actual specimens of the art of those ancient florists whose export trade is celebrated by Athenæus.

AMELIA B. EDWARDS.

NOTES ON ART AND ARCHAEOLOGY.

EVERYONE will hail with approval the appointment of Gen. Pitt-Rivers to be inspector of ancient monuments under the new Act.

THE winter exhibition of the Society of British Artists will open on Monday, November 27. The private view is fixed for this day week.

In addition to his lectures on "Early Florentine Painters" at Hampton Court, Mr. W. M. Conway has undertaken to deliver a second course, on "Mediæval Art," at Bedford Park. Both courses are in connexion with the London Society for the Extension of University Teaching.

THE large selection of their Christmas and New Year cards which Messrs. Marcus Ward and Co. have sent us—numbering more than 120—enable us to state that they still stand at the head of their many rivals in this branch of art publishing. The qualities in which these cards excel are the uniformly high standard maintained and the exquisite finish of their reproduction. By some motto or verse they are all brought into connexion with the season, though it cannot be said that all of the subjects suggest winter time. Still, there are none of those flagrant violations of congruity of which we have more than once had occasion to complain. Most of the poetry is from Miss Haver-gal, but the use of Mr. Tennyson's well-known lines from "In Memoriam" has also been permitted. The flowers are very numerous and also very good, the butterflies and moths are still better, and we have been specially pleased with a triptych illustrating Miss Keary's "A Greeting in the Three R's." Altogether, though there may be no exceptionally elaborate attempts at art or luxury, we do not recollect that Messrs. Marcus Ward have ever done better than this year.

M. LENOIRMANT has sent to the Académie des Inscriptions a report of his archaeological tour in Magna Græcia. In company with Prof. Barnabei and Sig. Luigi Viola, he traversed the two provinces of Basilicata and Calabria from Lucera to Reggio, the greater part of which country had not previously been explored by any archaeologist. Of inedited inscriptions, he has collected more than two hundred Latin and about thirty Greek. He has obtained new materials for determining the site of Terina; and he has discovered the ruins, hitherto unknown, of Medma (with a fountain mentioned by Strabo and a theatre) and of Hipponion. He has accumulated much fresh evidence in favour of the existence of an Apulian pottery, with geometrical ornaments, closely resembling that of Cyprus. He also thinks that he has succeeded in establishing that several sites of Greek colonies, such as Metapontum and Hipponium, had already been important places in the neolithic age; and that a period of black pottery, of a primitive Italic type, once extended over the entire south of the peninsula. Finally, he has observed many interesting traces of mediæval civilisation, and especially of the architecture of the Normans and the Hohenstaufen.

M. REINACH, who has spent two months in Delos this year excavating for the French School at Athens, has just returned to Paris from Constantinople, where he has compiled a Catalogue of the valuable antiquities preserved in the Imperial Museum. The Catalogue was much needed, if for no other reason, to preserve the antiquities from being destroyed or surreptitiously removed. As was to be expected, M.

Reinach has done his work well, and the Catalogue is a model of what such a guide-book ought to be. Every assistance is given to the scholar, references to the best works illustrative of the several objects described are added, and attention is drawn to the curious and unique sculptures from Tripoli contained in the museum as well as to the well-known Hittite stones from Hamath.

THE collection of Indian pictures by the Russian painter Verechagin is now being exhibited at Brussels by the electric light.

THE death is announced of two aged Continental painters—Julius Hübner, director of the Royal Gallery at Dresden, who excelled in sacred and historical subjects, and who was also something of a poet; and Emile-François Dessain, a landscapist best known in the North-east of France, who won a *grand prix* as long ago as 1827.

AN exhibition is now open, in the Berlin National Gallery, of the works of Christian Wilberg, a German painter who died suddenly in Paris last June. As usual with these exhibitions, it endeavours to show not merely the best of the artist's work, but his whole life-work—his early efforts and his late failures, if such there be—so as to give the world an opportunity of judging of his true place in art history. Such exhibitions are singularly instructive, and it is to be hoped that the forthcoming Rossetti exhibition will be of this nature; for though much of Rossetti's work may be open to scornful criticism, still the public would wish to judge the man by the whole of it, and not by any careful selection, such as we see advocated by some of his admirers.

THE *Zeitschrift für bildende Kunst* opens this month with a long article on Rimini and the Malatesta family, by Ludwig Geiger. It is based on Yriarte's work, *Un Condottiere au 15^e Siècle*, but is not exactly a review of it. A description and criticism of Peter Janssen's wall-paintings in the new Rath-haus at Erfurt; a learned discussion concerning the so-called school of Kalkar and its principal painter, Jan Joest, who, however, is not proved to have belonged to it; and some pleasant remembrances of Tunis, by Hans Fischer, make up the rest of the number as far as the text goes. But the illustrations are so good this month that they claim separate notice. As frontispiece, we have a portrait full of character of Franz Liszt, drawn and etched by W. Lining, jun. There is a bitter, defiant expression on the face; but the old man's powerful head is admirably rendered. Music does not seem to have succeeded in soothing him. A clever study of a monk reading, by J. Holzappel, and an amusing illustration of three dry old Dutchmen of the seventeenth century listening to a new book, are also given. Both are original etchings.

M. QUANTIN announces a series to be entitled "Bibliothèque de l'Enseignement des Beaux-Arts," edited by M. Jules Comte, and published under official patronage. The following eight volumes will appear immediately:—*Anatomy*, by Dr. M. Duval; *Greek Antiquities*, by M. M. Collignon; *Engraving*, by the Vicomte H. Delaborde; *English Painting*, by M. E. Cheneau; *Dutch Painting*, by M. H. Havard; *Mosaic*, by M. Gerspach; *Modern Processes of Engraving*, by M. A. de Lostalot; *Tapestry*, by M. Eugène Müntz. Twelve more volumes will be issued in the course of next year. Each volume will consist of about three hundred pages, with one hundred illustrations, and will be published at a price not exceeding four francs.

M. EUGÈNE PLOU will publish shortly a monograph upon Benvenuto Cellini, as a jeweller, medallist, and sculptor, with researches on his life and works.

M. JULES BRIVOIS' work, entitled *Biblio-*

graphie des Ouvrages illustrés du XIX^e Siècle, principalement des Livres à Gravures sur Bois, which has been long in preparation, will be published by Messrs. Conquet and Bouquette, of Paris, next week. M. Brivois is the founder of the Société des Amis des Lettres, and author of the *Bibliographie de l'Œuvre de Béranger*.

THE STAGE.

TENNYSON'S PLAY.

SEVERAL interesting questions arise out of the performance of "The Promise of May," and are independent of the success or failure of the piece. The piece, as it now stands, cannot, I fear, be successful; the ill-mannered commotion of Saturday night having been followed by a perhaps yet more fatal sign—the unmoved coolness of the audience of Monday. And yet it seemed the audience of Monday tried to be fair, tried even to be interested, and, while cool to the play, was quite cordial to the players, who indeed deserved cordiality, and something besides. To tell very briefly the story of "The Promise of May" will be the best way of getting at the points that make or mar it. It is a tale of seduction; and seduction, though not an agreeable, has been accepted as a permissible, theme through several generations of modern literature, from the *Clarissa* of Richardson to *The Inn Album* of Browning. The piece, therefore, if it fails, does not fail because it treats this theme, but because it treats it somewhat baldly and crudely, without enough of the charm of beauty or of the illumination of insight. What is the precise tale?

A remote Lincolnshire village, peopled, it appears, by men of admirable morals and of strictly Conservative opinions, is invaded by a free-thinking artist, who lounges about its meadows dressed in the garb of Bedford Park and Hampstead, and perusing as he goes the last volume of the very newest philosophy. He disbelieves in churches, priestcraft, marriage, property. His attachments are not profound, and they are exceedingly temporary. He wins the affection, and he betrays the trust, of a simple-minded young girl; and, when she tells him that he will have to marry her pretty soon if she is to retain the character of an honest woman, he says the birds pair but for a season, regrets her bondage to old-fashioned thought, and proposes to pass on to some fresh experience of elective affinities. Accordingly, she sits alone with her secret, while a Conservative peasantry, which has nothing to repent of, disports itself in the dance at the end of the first act. Six years pass. Dora, the sister of Eva, believes Eva to be dead, for she had left them with a letter telling of her shame. Edgar, the artist of revolutionary ideas, re-appears on the scene, but he comes as one Harold, a kinsman of the man whom the village had remembered too well. He has not been in the village long—has, indeed, but just made the acquaintance of Dora, who reminds him of Eva very much—when a certain Farmer Dobson, the incarnation of all that is straightforward and all that is orthodox, meets him and threatens him as the scoundrel Edgar. Edgar declines to be identified with Eva's betrayer, and departs unharmed for the moment; but the second act closes upon

Farmer Dobson's renewed declarations as to the manner of fate which shall befall the seducer when the right time comes. The right time never comes. Farmer Dobson's sword of vengeance must be put up within its sheath—his pitchfork must be laid down—for Dora is in love with the unknown betrayer of her sister; and he, warned in reality by the fate of Eva, proposes to marry her. But Eva's fate had not been exactly what they thought it was. She, after years of servitude and misery, comes back to ask her father's forgiveness. The father is old and out of heart, and understands nothing. She meets then, suddenly, her old lover; learns his new love for Dora, and falls dead at his feet. These are the pathetic passages, and they have their value. Honest Dobson, himself a lover of Dora, comes back to threaten. But again his hand is stayed. Edgar is repentant, and Dora has loved him. Spare him then. But see him safely away, "out of the last field, over the last stile." And when the curtain falls, Dora is alone, and alone to the end of her life.

I don't know whether my telling of the story has given hints of its force as well as of its weakness. That, at all events, is what I have meant to do. The want of action in the play is, one may suppose, evident. Can there possibly be the material here for a three-act piece? And, again, the improbability of much of the action that there is just as perceptible. Why does Edgar return to the village when England has so many pastures for the likes of him? Why does Eva want her father's forgiveness at precisely the moment that Edgar returns? They are brought together again only by artificial means.

But in one at least of the characters depicted there seems to me a fault not less grave than this of wholly artificial construction. What has the philosophy of Edgar got to do with his conduct? One has to enquire of oneself, from the beginning of the play to the end—Is the Laureate's conception of the characters and their behaviour an attack on modern imaginations, or only a lash, that is neither the first nor the last, administered to the betrayer of women? To decide for the second would be to attribute to a great writer almost too familiar and trite an aim. The other was probably the end, but it cannot be said that it has been attained successfully. Edgar's deeds are those of the vulgar seducer; but surely there should be no necessary connexion between the entertainment of a theory and the putting it into practice. A man may conceivably look forward to many social changes as among the possibilities of the future, and yet fairly decline to have any part in hastening their approach at the cost of another's suffering. And the modern fancies, opinions, whatever they may be, might have been ridiculed or derided more effectively if the poet had refrained from endowing the holders of them with capacities for personal cruelty and baseness. In the other faults that have been pointed out, Mr. Tennyson has betrayed nothing more than a continued misunderstanding of the conditions of theatrical success. But here, it seems to me, the mistake goes deeper—Augier and Dumas would not have been led into blackening their opponent before arguing with him. Mr.

Tennyson's mind is not, as I venture to conceive it, the mind to deal impartially with social problems on the boards of the theatre. But, differing from many who have had their say this week, I am bound to maintain that the play has elements of high value; that one recognises here and again the simplicity of pathos of which, on a score of occasions, its writer has shown himself the incomparable master; and that nothing is more profoundly, and even nobly, characteristic than that tolerant end which disappoints only the commoner playgoer, when the punishment of banishment beyond the last stile and the last field is the severest that can be granted by the poet who sung to us of the fatal savagery of the jealous, so bitterly repented of when "the boat went down that night." And, furthermore, I am convinced that "The Promise of May" might yet be successfully abridged into a single long act that should hold the attention of the audience for about an hour, the incidents of what is now the prologue, or first act, being put into narrative form, and the quite un-serviceable division between the two later acts being abolished. Under these conditions, the simplicity, the homeliness, the tenderness of "The Promise of May" might yet effectually charm.

As it is, the acting, rendered extremely difficult by insufficiency of motive and poverty of incident—by the attempt, in fine, to make a three-act piece where there is material for one act—is, for the most part, uncommonly good. One tires a little of giving the habitual praise to Mr. Hermann Vezin for the mere discretion and clearness of his speech. This should be hardly praise by rights; and, as the stage becomes more and more the profession of educated people, it is plain that it cannot long remain so. But Edgar's is a difficult part. He has apparently no emotions; and sympathy with him is manifestly impossible. One's sympathies go in a measure with the honest, backward farmer, Dobson; but, except for the fact that he is a lover of Dora—on whom, by-the-by, he makes no impression—he is practically out of the play. For a character out of the play it must be allowed that Mr. Kelly contrives to make him wonderfully effective. This capable actor has never performed better. He does not go very far, but, within his well-defined limits, he is absolutely real; a thorough craftsman, invariably successful in the concealment of his genuine art. Mr. Cameron, as the old father of the two girls, is a little weak and amateurish. He makes a good exit, however, in the last act, when, failing to recognise or failing to understand Eva's cry for forgiveness, he says to the servant who helps him in his blindness, "Take me out, little maid. This is one of my bad days." To that gentle expression of his sadness and his trouble Eva has to answer—and to answer to herself—"This is like to be the last of my bad days;" and Miss Ormsby, who plays the part generally with admirable pathos, and who is, moreover, one of the very few actresses from whom one has the right to expect forcible and passionate things because she has already done them, ought, as I conceive it, to throw into this rejoinder the whole of her strength. For Eva, that is the crisis. She came to be forgiven, and she is not to be forgiven—she is not even to be

FREDERICK WEDMORE.

MUSIC.

RECENT CONCERTS.

well contrasted. The *scherso* is rather too much in the style of Beethoven. The influence of Schumann may be traced in the *intermezzo*; but it shows very great skill and fancy. The *finale* concludes with a graceful lullaby. The serenade, we think, is likely to become popular in the best sense of that word. Its performance under the baton of Herr Richter was highly satisfactory. The applause at the end of each movement was most enthusiastic, and at the close Mr. Stanford received quite an ovation. The programme included the "Vor-spiel" to the "Meistersinger," Liszt's "Hungarian Rhapsody" in F, and the "Parsifal" prelude. The "Rhapsody" has been played at these concerts five times; it is certainly a striking and clever piece of programme music, but Herr Richter should not let us hear it too often. After all, the first impression which it gives is the best. Its position, too, in the programme was not altogether suitable, coming, as it did, immediately before the solemn "Parsifal" music. The concert concluded with a very fine performance of the "Eroica."

the splendid playing of the band in the introduction to the third act of "Die Meistersinger" and in the introduction and closing scene from "Tristan." Unfortunate indeed are those who cannot feel the beauty and power of such music. A magnificent performance of Beethoven's C minor symphony brought to a close a most successful concert.

The programme at the Crystal Palace last Saturday was one of considerable interest. It commenced with an excellent concert-overture in F (M.S.) by Mr. T. Wingham—a tone-picture with characteristic themes and clever workmanship. The next piece was a symphonic poem, “Vysehrad” (“The Visegrad Fortress”). The composer, Friederich Smetana, a Bohemian by birth, was a pupil first of Proksch and afterwards of Liszt. It may be also mentioned that he was the teacher of Dvorahák. He has produced several operas with great success at the National Theatre of Prague, where he was conductor from 1866 until 1874. In his tone-poem, the composer gives three pictures of the history of the renowned fortress Visegrad—first in its original splendour, then in its decline, and last, as a desolate monument. The work is satisfactory as abstract music, and forms also a happy specimen of music on a poetic basis. The composer has kept within reasonable limits; the tonal art is used to express emotions rather than situations. The melodies are very taking, the orchestra treated in masterly fashion, and the spirit of the whole composition pleasing and original. Miss Marie Wurm, a pupil of M^{me}. Schumann, gave an intelligent performance of Schumann's piano concerto. She has a good touch, excellent fingers, and plays with much feeling. Her reading of the work was pure and unpretentious. She also played solos by Chopin, Schumann, &c. Miss Mary Davies was the vocalist.

The lectures of December 7, January 25, February 1, March 1, and March 22 will be musically illustrated. Many other lectures will be illustrated by diagrams or experiments.

A Limited Number of Transferable season-tickets will be issued on the following terms:—

[illegible]

Terms for Yearly Subscribers.—3 guineas for personal admission for one year from any date to the use of the Circulating Library (10 vols. allowed), Reading-rooms, and Writing-room. 2½ guineas, with the addition of personal admission to all Lectures.

A few Shares are offered for Sale. Prospectus on application.

GEORGE BELL & SONS' NEW BOOKS.

THE HISTORY of WOOD ENGRAVING in AMERICA. By W. J. LINTON. With 100 finely engraved Specimens. In walnut binding, 4to, 31s. 6d.

HELEN of TROY: a Poem. By A. LANG, M.A., Author of "The Odyssey of Homer done into English," "Theocritus, Bion, and Moschus," "Ballades in Blue China." Wide fcap. 8vo, hand-made paper, 8s. 6d.

"Mr. Lang seems to have drunk deep at that neglected fountain of pure poetry (Chaucer); and both in the limpid flow of the verse, and here and there in the thought, the reader finds in these new verses a beautiful echo of the old. The author, till now known as a writer of prose and of 'ballades,' has proved himself capable of that most difficult of tasks for the modern singer—the task of making a long narrative poem that it is an unmixed pleasure to read." *Fall Mall Gazette.*

ARTHUR HUGH CLOUGH: a Monograph. By SAMUEL WADDINGTON, Editor of "English Sonnets by Living Writers." Crown 8vo, 7s. 6d.

HOW to DECORATE our CEILINGS, WALLS, and FLOORS. With Coloured Plates and numerous Diagrams. By M. E. JAMES, Author of "What Shall We Act?" Crown 8vo, in appropriate binding, 4s.

FOLK ETYMOLOGY: a Dictionary of Corrupted Words which have been Perverted in Form or Meaning by False Derivation or Mistaken Analogy. By the Rev. A. S. PALMER, Author of "A Word-Hunter's Note-Book." Demy 8vo, 21s.

SYNONYMS DISCRIMINATED: a Dictionary of Synonymous Words in the English Language. Illustrated with Quotations from Standard Writers. By the late Ven. C. J. SMITH, M.A. New Edition, with the Author's latest Corrections and Additions. Edited by the Rev. H. PERCY SMITH, M.A., of Balliol College, Oxford; Vicar of Great Barton, Suffolk. Demy 8vo, 14s.

A HISTORY of ENGLISH RHYTHMS. By the late EDWIN GUEST, M.A., D.O.L., LL.D., Master of Caius College, Cambridge. New Edition, Revised by Professor W. W. SKEAT. 1 vol., demy 8vo, 18s.

A DICTIONARY of QUOTATIONS from the ENGLISH POETS. By HENRY G. BOHN, F.R.A.S., F.L.S., &c. Third Edition. Large post 8vo, 10s. 6d.

"Mr. Bohn's volume has the rare recommendation of being entirely free from the rubbish which is commonly thrust into similar collections. His selections have been made from a long and extensive course of reading, and it everywhere bears evidence of a scholar's eye and taste. There must be, as we judge, nearly 8,000 quotations in the volume, ranging from Chaucer to Tennyson."—*Times*.

"I can only say, in conclusion, that it is as difficult for a reviewer to cease writing about Mr. Bohn's volume as it will be for the reader to shut it when he has once opened its pages."—*Academy*.

"We can confidently say it is the best Dictionary of Quotations from English Poets in existence."—*City Press*.

In Bohn's Library binding or fancy cloth.

LOCKHART'S LIFE of BURNS. Enlarged Edition, Revised and Annotated by W. S. DOUGLAS. With Portrait. 3s. 6d.

In Bohn's Library binding or fancy cloth, 5s.

PLUTARCH'S MORALS: Theosophical Essays. Translated by C. W. KING, M.A., Author of "The Gnostics and their Remains."

In Bohn's Library binding or fancy cloth, 2 vols., 7s.

BURNEY'S CECILIA; or, Memoirs of an Heiress. Edited, with Preface and Notes, by A. B. ELLIS, Author of "Sylvestra."

LONDON: 4, YORK STREET, COVENT GARDEN.

MR. JAMES THORNTON'S PUBLICATIONS.

CLASSICAL.

DEMOSTHENES on the CROWN. The Text after BAITER. With an Introduction, a New Translation, Notes, and Indices. By FRANCIS P. SIMPSON, B.A., Balliol College, Craven Scholar, 1877. Demy 8vo, cloth, 10s. 6d. [Just published.]

"It seems to me very well done, and likely to be of great use. I notice with pleasure that several mistakes of other translations and editions are tacitly corrected."—S. H. BUTCHER, Esq., Professor of Greek, University of Edinburgh.

"It seems to me likely to be very useful."—A. SIDGWICK, Esq., Fellow of Corpus Christi College, Oxford.

"Its closeness and accuracy will make it very useful for many students."—Rev. W. W. MEANY, Lincoln College, Oxford.

"This is a handsome edition of the text, with translation opposite, and notes at the foot of the page. Of the translation, Mr. Simpson says that 'it is intended to show what Demosthenes said, not how well he said it.' Its aim is 'purely commentarial,' and we believe that this aim is fully attained. It differs alike from loose paraphrase on the one hand, and on the other from those baldly literal versions which, by the seductive promise of close fidelity to the text, beguile the unhappy passman to his destruction, and make impossible a task which was at first only difficult. The general reader is supplied with a speech which can be read, and might conceivably be spoken; while the young student may get most valuable hints by observing closely how the structure of the original is dealt with. The notes, mainly grammatical, contain little that is striking, but give in short compass much help towards the appreciation of Greek idiom." *Spectator*, October 7th, 1882.

THE SPEECH of CICERO for CLUENTIUS. Translated into English, with an Introduction and Notes. By W. PETERSON, M.A., late Scholar of Corpus Christi College, Oxford, Principal and Professor of Classics, University College, Dundee. Crown 8vo, cloth, 3s. 6d. [Just published.]

"The translation is not only accurate, but it abounds in neat and scholarly renderings of awkward Latin idioms." *Glasgow Herald*, September 1st, 1882.

THE PHILIPPIC ORATIONS of CICERO. A New Translation. By the Rev. JOHN RICHARD KING, M.A., Fellow and Tutor of Oriel College, Oxford. Crown 8vo, cloth, 4s. 6d.

THE NICOMACHEAN ETHICS of ARISTOTLE. A New Translation, with an Introduction, a Marginal Analysis, and Explanatory Notes. By D. P. CHASE, M.A., Fellow of Oriel College, and Principal of St. Mary Hall, Oxford. Fourth Edition, Revised. Crown 8vo, cloth, 4s. 6d.

OXFORD STUDY GUIDES.

ENTRANCE CLASSICAL SCHOLARSHIPS. By S. H. JEVES, B.A., Classical Lecturer at University College, and late Scholar of Trinity College. Crown 8vo, cloth, 2s. 6d. [Ready.]

"Mr. Jevès has provided parents and teachers with an excellent manual by which to guide their sons or pupils in preparing for University scholarships. . . . The book is well done, and ought to be useful." *Academy*, June 18th, 1881.

HONOUR CLASSICAL MODERATIONS. By L. R. FARNELL, B.A., Fellow of Exeter College. Crown 8vo, cloth, 2s. 6d. [Ready.]

THEOLOGY. By the Rev. F. H. WOODS, B.D., Fellow of St. John's College. Crown 8vo, cloth, 2s. 6d. [Ready.]

LAW AND POLITICAL ECONOMY.

THOMAS HOBBS, of MALMESBURY, LEVIATHAN; or, the Matter, Forme, and Power of a Commonwealth. A New Reprint. Medium 8vo, cloth, 12s. 6d. A Small Edition, of 250 copies only, on Dutch hand-made paper, medium 8vo, 18s.

STUDENTS' EDITION. Crown 8vo, pp. xvi—573, cloth, 8s. 6d. [Just published.]

"We have received from Mr. James Thornton, of Oxford, an excellent reprint of Hobbes's 'Leviathan.' The book is one which is not always easy to obtain; and a satisfactory reprint at a reasonable price may do more to advance the knowledge of Hobbes's philosophy than one of the condensed handbooks which are now extensively popular." *Westminster Review*, January, 1882.

REMARKS on the USE and ABUSE of SOME POLITICAL TERMS.

By the late Right Hon. Sir GEORGE CORNEWALL LEWIS, Bart., sometime Student of Christ Church, Oxford. A New Edition, with Notes and Appendix. By Sir ROLAND KNYVET WILSON, Bart., M.A., Reader in Indian Law, and late Fellow of King's College, Cambridge. Crown 8vo, 6s.

AN ABRIDGMENT of ADAM SMITH'S "ENQUIRY into the NATURE and CAUSES of the WEALTH of NATIONS." By W. P. EMERTON, M.A., B.C.L., late Vinerian Scholar. Crown 8vo, cloth, 6s.

OUTLINES of JURISPRUDENCE. For the Use of Students. By B. R. WISE, B.A., late Scholar of Queen's College, Oxford, Oxford Cobden Prizeman, 1878. Crown 8vo, cloth, 5s.

"The student of jurisprudence will certainly find the work suggestive and helpful."—*Athenaeum*, July 15th, 1932.

OUTLINES of ENGLISH CONSTITUTIONAL HISTORY. By B. C. SKOTTOWE, B.A., late Scholar of New College, Oxford. Crown 8vo, cloth, 3s. 6d.

THE LATIN PRAYER-BOOK of CHARLES II.; or, an Account of the Liturgia of Dean Dural, together with a Reprint and Translation of the Catechism therein contained. With Collations, Annotations, and Appendices, by the Rev. CHARLES MARSHALL, M.A., and W. MARSHALL, B.A., late Scholar of Hertford College, Oxford. Demy 8vo, cloth, 10s. 6d. [Just published.]

OXFORD: JAMES THORNTON; LONDON: SIMPKIN, MARSHALL, & CO.

LITERATURE.

History of Florence. By Charles Yriarte. Translated by C. B. Pitman. (Sampson Low.)

No city, not even Athens during her greatest time, has had so large and so lasting a share in the development of art in all its branches as Florence, the city of the Divine Mary of the Flower. Among the long roll of great Italian artists and writers from the thirteenth to the sixteenth centuries, Florence can boast as children of her own a number of the most brilliant names quite out of proportion to her size or political importance. The history, in fact, of Florentine art is for a long while almost co-extensive with that of Italy; while in literature—whether poetry, history, scholarship, or philosophy—Florence has no less pre-eminence above all States or cities during that great period of revival awakened in Italy by the arrival of the Byzantine exiles, and heralded by Dante's poem—the greatest of all monuments of human genius in mediæval or modern times.

In studying the history of Italy, as of other countries, we dwell far too much on the battles and political intrigues of the time, as if these were the main and only important incidents, history, for the most part, contenting herself with chronicling "the stupid languor and the evil deeds of kings and scoundrels;" whereas, in truth, the real heart-life of the country was throbbing with quite other thoughts and aims than these; while every day brought forth some new beauty of painter, sculptor, or humbler craftsman—a mighty army, chiefly unnamed to us, before whose lasting achievements the martial successes of *condottieri* and their leaders were really quite insignificant and momentary. We are led thus to think of the age as mainly a turbulent and bloody time, when men's thoughts were given up to unscrupulous intrigues or luxurious and bestial self-indulgence, forgetting the countless peaceful homesteads and the noble and unobtrusive lives of thousands of workers labouring in some field of art to produce joy-giving objects of beauty—humble, may be, in use, but none the less a delight both to the makers and the users. Long after all faith and religious feeling had perished from the hearts of the so-called rulers of the land, love and reverence for purity and goodness were the mainspring of the life of the great bulk of the Florentine people, still happy in possessing a faith, which, whatever its faults may be, has at least been the very soul of the great art-growth of the time—a faith which supplied the noblest motives for painter and sculptor,

stories of unselfishness and willing renunciation for a noble end.

In this respect the mediæval Florentine was even happier than the ancient Greek, whose feeling for beauty, perfect as it was, went little below the surface, and mainly dealt only with the physical outside of things. The great image of the Madonna (Santa Maria del fiore)—the patron saint of the Florentines, who, more than any other people, paid her the devoutest homage,—is perhaps the noblest and most elevating conception ever attained to by humanity. The worship given to her, in fact though not in theory, was deeper and more reverential than that paid to any other member of the Christian hierarchy, not excepting Christ himself. In this supreme devotion to the noblest of all types we cannot but see the germ of some due acknowledgment of the superiority of woman over man in her greater purity and her keener sense of moral right, and of the deference due to her in her threefold character of mother, wife, and daughter. No subject was so oft repeated, and represented with such loving care in every detail, as the story of the Virgin's life—from her infant days at her mother's knee, to the mystery of the Annunciation; the sufferings of her maternal heart through her Son's anguish; and finally, pregnant with meaning above the rest, the grand scene of her Coronation, where her divine Son sets on her head the crown, and raises her to a throne equal in splendour to his own. It is impossible, I think, to overrate the softening and humanising influence of this great conception on the lives and thoughts of the people of Florence—still less its effect upon their art. The devotion paid to this high ideal gave stateliness to the female figures of Andrea Pisano, soft loveliness to the reliefs of Mino da Fiesole, and depth of feeling and expression to those of Verrocchio and Donatello. We are forced to admit that, among the many evils brought upon us by the destructive and revolutionary sides of Protestantism, none has been so great as that which we have suffered from the wilful destruction of this ennobling worship; and the injury has been many-sided, extending alike to our morality, our social virtues, and our art.

One of the noblest women and most appreciative writers on art during the present century—Mrs. Jameson—in her *Legends of the Madonna*, has set forth in most eloquent words, the great importance of this Madonna-worship:—

"These scattered, dim, mistaken—often gross and perverted—ideas which were afterwards gathered into the pure, dignified, tender image of the Madonna, were but as the voice of a mighty prophecy, sounded through all the generations of men, even from the beginning of time, of the coming moral regeneration, and complete and harmonious development of the whole human race, by the establishment, on a higher basis, of what has been called the 'feminine element' in society. . . . In the perpetual iteration of that beautiful image of THE WOMAN highly blessed—there, where others saw only pictures or statues, I have seen this great hope standing like a spirit beside the visible form: in the fervent worship once universally given to that gracious presence, I have beheld an acknowledgment of a higher, as well as gentler power

than that of the strong hand and the might that makes the right—and in every earnest votary one who, as he knelt, was in this sense pious beyond the reach of his own thought, and devout beyond the meaning of his will."

M. Yriarte's work on Florence deals but little with the general principles of the intellectual and artistic movements of the time, but consists chiefly of biographical sketches of the great Florentines, with some account of their most important works. The book begins with a good history of the Medici family—some of them treated perhaps at too great length, considering how few pages are devoted to the painters, sculptors, and writers.

The illustrations, which are among the chief merits of the book, are very numerous, and mostly well executed. The photographic representations of sculpture are altogether satisfactory, as are also many of the wood-cuts, especially the views of places and buildings. Some, however, fall far short of the general high level, such as all the cuts of pictures by Andrea del Sarto, of which there is rather an undue number; while a few, such as the Madonna by Giovanni Rosso and the Adam and Eve by Andrea del Minga, were not worth reproducing in any form; and we cannot but regret to see a wood-cut of the miserable, dull, modern façade of Santa Croce occupying a place among so many treasures of art. One of the architectural drawings is exceedingly beautiful, the view of Giotto's Campanile, drawn with wonderful brilliancy of line. It is difficult, too, to understand how so keen and appreciative a lover of mediæval art can speak thus of the destruction of Jacopo della Quercia's glorious marble fountain in Siena, the Fonte Gaya: "This monument was in such a dilapidated state that the municipality of Siena has recently had it restored, and the work, as far as it has gone, has been very conscientiously done." The truth is that not a single scrap of the priceless old fountain is left; the whole was broken up and removed, only a fragment or two being preserved in the Opera del Duomo, and a dull, worthless modern copy has been set up in its place—a most unpardonable act of vandalism. Again, one can hardly accept M. Yriarte's statement that "the fifteenth century cannot boast of any portrait-painters except Piero della Francesca and Pollaiuolo." What nobler portraits are there than those among the frescoes in the choir of Santa Maria Novella by Ghirlandaio, or by Benozzo Gozzoli in the Pisan Campo Santo and the Medici Palace in Florence, to say nothing of countless others, the work of a time when portrait-painting was not considered a branch of art beneath the dignity of any artist, however great? One of the finest wood-cuts in M. Yriarte's own book is that of the lovely girl's head, a portrait by Francesco Granacci—a perfect model of idealised truthfulness and dignified beauty.

A few oversights need correction. The magnificent silver *repoussé* work of the high altar of the Florentine baptistery is not a *retable*, but a *frontal*; and Benvenuto Cellini's large, though feeble, bust of the first Cosimo de' Medici is of *bronze* and in the *Bargello*, not of *marble* and in the *Uffizi*, as M. Yriarte states. There is a good and concise account of Michelangelo and his varied work, but the

old and very transparent error of attributing to him the "Three Fates" in the Pitti Palace should not have been repeated.

Nevertheless, M. Yriarte has in the main performed successfully a very difficult task, and he has fairly earned the right to end his book with these words:—

"But, upon the whole, I hope that I may have succeeded in conveying an adequate idea of the superiority of Florence over the other cities of Italy, and of imparting to my readers something of the enthusiasm, the respectful admiration, and the profound tenderness which I feel for Italy, 'the divine mother of us all,' and for that City of Flowers towards which all faces turn when they want to study the origin of the Renaissance of literature and art in the modern world."

J. HENRY MIDDLETON.

The Epic of Kings: Stories Retold from Firdusi. By Helen Zimmern. With Two Etchings by L. Alma Tadema, R.A., and a Prefatory Poem by E. W. Gosse. (Unwin.)

WITHOUT any knowledge of Persian, Miss Zimmern has boldly essayed to paraphrase the earlier portion of the *Shāh Nāmeh*. Stranger still, she has succeeded to admiration. For the stories themselves she is wholly indebted to Jules Mohl's excellent French version, which is very nearly as good for her purpose as the original Persian would have been, though of course a certain amount of Oriental colour is lost. This, however, is compensated by the peculiarly appropriate style in which Miss Zimmern has clothed the old legends of Persia. For her English she has gone to "Shakspeare and the English Bible;" and she has not studied Elizabethan prose for nothing. The result appears in a language at once dignified and simple, free from affectation, and at the same time sufficiently antiquated to carry one into the atmosphere of the stories themselves. The use of old words (but such as are not actually obsolete) helps one to realise old ideas; and through Miss Zimmern's skilful treatment we are able to throw ourselves to some extent into the old-world fancies and beliefs of the people to whom the legends of the *Shāh Nāmeh* were veracious history.

The choice of legends is a wise one. Miss Zimmern has selected from the enormous collection related in 60,000 couplets only the stories belonging to the heroic period of Persian mythology. She ends her volume with the death of Rustam, and entirely sets aside the various tales relating to Darius and Alexander and the later personages of the regal epic. These later histories have always an element of absurdity to us who know something of their real outlines from Greek sources; while we are unable to check the adventures of the heroic age, and are content to accept Zāl and Rustam, Sohrab and Isfendiyār, with the same uncritical homage that we pay to Achilles or Hercules or the gods of Olympus. There is also a certain connexion and completeness about the series of stories contained in Miss Zimmern's selection. The early kings, like Feriūn and the glorious Jemshid, and the later shāhs, great Kai Kubād, Kai Kāvus the feeble, the hapless Sayawush, and Kai

Khusrū the restorer, belong to one another; and their opponents, the Turanian house of Afrasiyāb, are inseparably connected with the fortunes of the line of Jemshid; while the heroic house of Sām, with its mighty warriors Zāl and Rustam and their kindred, their loves and their battles, are as much a part of the history as Achilles and Ajax are part of the expedition of the royal house of Argos and Mycenae against Troy. There is, indeed, a true Homeric ring about these ancient heroes of legendary Iran; and, as we read of the tremendous single combats, the mighty achievements of a hero among the host of little men, the terrible lonely journey of Rustam into Mazinderan to slay the White Div, and the grim sights and conflicts by the way, the strong loves of Zāl and Rudabeh, of Bizun and Manijeh, we are forcibly carried away to kindred forms in other literatures—to the heroes of the *Iliad* and the *Nibelungenlied* and the *Mahabharata*.

It is strange that these splendid old heroes of Persia should be so little known to English literature. Mr. Matthew Arnold, indeed, found out the dramatic beauty of the fate of Sohrab; but he was exceptional as usual. Miss Zimmern is really the first to introduce English readers to Persian legends in a worthy and attractive manner; and, if her fine stories and admirable way of telling them were presented in a reasonable form and at a reasonable cost, *The Epic of Kings* would enjoy a wide popularity. As it is, the book is published in the form of an *édition de luxe*, or rather of a large-paper edition, which is not quite the same thing; and preposterous margins and a clumsy shape render comfortable reading impossible. Mr. Alma Tadema's two etchings would be an excuse for the ungainly size of the volume if they were at all equal to his ordinary style; but neither as etchings nor as designs can they be allowed any extraordinary merit. Such a scene as Zāl's meeting with Rudabeh's maidens, or that first encounter between the lovers after she has offered her hair for him to climb up to her window, surely had more elements of a picture in them than Mr. Tadema has been able to convey. But, if the etchings will disappoint expectation, Mr. Gosse's poem will be enjoyed beyond anticipation; no sustained work of his comes up to this last, "*Firdusi in Exile*." Dignified as its Oriental surroundings, yet simple and natural in treatment, it is among the finest narrative poems that have appeared for some time. We have seldom enjoyed the inside of a book more thoroughly, and oburgated its exterior more emphatically, than in reading *The Epic of Kings*.

S. LANE-POOLE.

Dukes and Princesses of the Family of George III. By Percy Fitzgerald. (Tinsley Bros.)

AN adequate description of the Court and family of George III. is undoubtedly a want. For during the reign of George III. the palace exercised a political and social influence so great and so far-reaching that its consideration in detail would in no way be too trivial a subject for the serious historian. Unfortunately, Mr. Fitzgerald's *Dukes and Princesses of the Family of George III.*

does not in any real sense supply this want. Though Mr. Fitzgerald "has learned," as he himself tells us, "the knack of writing decently and respectably on any subject briefed to him," he cannot be said to have made even an approach to dealing with his subject in a true historical spirit. Perhaps, however, he does not aspire to this, but is content to have made what the patrons of the circulating libraries in country towns call "a cheerful book." This he undoubtedly has made, for his pages are full of interesting quotations from letters and diaries, and abound with good stories. His extracts, however, are a curious mixture of what is of some interest and hitherto unpublished—such as the Papers from Nuneham—and what is extremely trite and well known—such as extracts from Horace Walpole's Letters, Miss Burney's Journal, or even the Greville Memoirs. The method of arrangement adopted is bewildering for anyone who wishes to do more than read from page to page; while the treatment of dates seems actually intended in many cases to conceal the point of time at which a given event occurred. Owing to the large number of extracts, Mr. Fitzgerald has not much opportunity for fine writing, but his love of the Court does, on at least one occasion, draw forth something of his powers in this respect. A long passage is quoted from Miss Burney's journal, describing the royal family parading, with all the state and formality required by German etiquette, among the "terraces" at Windsor, but holding every now and then a few words of pleasant talk with those they passed in their walk. This proceeding was, thinks Mr. Fitzgerald, "full of warmth and heart, and the whole ceremonial was no doubt drawn from the German Courts. It certainly lends to Windsor and Weymouth a pleasingly simple and pastoral air." This is not unlike the remark, "How charmingly rural," which Byron records in one of his letters as the exclamation of an English lady tourist as she took her first look at the Mer de Glace.

But, with all deductions made as regards style, arrangement, and a general desire whenever he sees or hears of a prince in history to whitewash him, it must be acknowledged that Mr. Fitzgerald has made a very entertaining book. His account of the Princess Charlotte is particularly interesting. She seems to have had just the character which is always sure to win popularity, while her Whig principles, and the dramatic episode connected with their public expression, won her passionate admiration from many hearts. There is a charming letter from her as a child, written to her playfellow, Mr. Keppel, afterwards Lord Albemarle, sending him some money, with a lecture of a truly paternal kind. After painting the usual result of extravagance, the Princess continues:—

"Your grandmamma de Olifford allows me £10 a month. But, though I spend it, I take care never to go further than my sum will allow. Now, dear George, if you do the same, you will never want for money; say you have a guinea—well, then, never go beyond it, and in time you will save up. This is the way everybody does, and so never get into debt [*sic*]. If you call at Warwick House, my porter, Mr. Moore, will give you half-a-guinea. If you use that well, and give me an exact account how you spend it, I will give you something

more. I wish you was here. Write to me often, and believe that no one loves you better than I do, nor will be more ready to help you in all troubles than I."

There is something peculiarly delightful in the expression "This is what everybody does, and so never get into debt," coming from a daughter of George IV. "Everybody" certainly could not include her father nor any of her uncles. The story of the unfortunate sister of George III., the Queen of Denmark, and of her supposed lover, Struensee, is well told. It cannot be said, however, that much is contributed to settle the vexed question of the guilt of the Queen and Struensee. The curious and touching letter written by the Queen on her death-bed is quoted from Wraxall, but it can hardly be regarded as a proof of her innocence. Wraxall's secret negotiations concerning an attempt at a counter revolution in Denmark are related. The personal part taken by George III. in this transaction, apparently unknown to his Ministers, shows that Louis XV. was not the only Sovereign in Europe who made use of a secret diplomacy. The only other princess whose life brings out any incidents of a romantic nature is the Queen of Wurtemberg. Besides the mystery which overhangs the disappearance of the Duke of Wurtemberg's first wife, there are many circumstances connected with Napoleon's treatment of the duchy which are full of interest. The Queen was especially conspicuous for her tact in treating the Emperor, when he entered her palace as a conqueror. Perhaps the most extraordinary circumstance connected with the Wurtemberg marriage is that which made the Queen of Wurtemberg's daughter's son, Jerome Napoleon, a possible heir to the English throne. Indeed, on the death of the Princess Charlotte, "the three persons nearest the throne being married and having children were the King of Wurtemberg, Prince Paul (his brother), and the Princess Frederica Buonaparte (their sister)." Reference must be made to Mr. Fitzgerald's pages for a very curious table containing an analysis of the several claims of all the immediate heirs to the throne at the death of the Princess Charlotte.

The story of the Duke of Gloster's marriage with Lady Waldegrave is told at some length, but nothing new is brought forward; nor can Mr. Fitzgerald attempt to palliate the odious tyranny exercised by George III. in keeping the Duke in suspense as to whether he would acknowledge the marriage or allow the officers of State to attend in proper form at the Duchess's confinement. The description of George III.'s home-life is often pleasantly told; but, the more exemplary his private life is made out to be, the more detestable becomes his toleration of political and moral depravity in those whom he used as his tools in public affairs. Probably Mr. Fitzgerald is right in denying the truth of the story which he recounts of George III.'s marriage to the beautiful Quakeress, Miss Lightfoot, or even of any criminal intrigue with her. His domestic life cannot, however, be freed from blame when we remember his treatment not only of his brothers, but of all his sons. Mr. Fitzgerald's statement of their wrongs, though he in some measure

tries to defend the King's conduct, shows this amply. A good story of the personal canvass which the King conducted in Windsor against Admiral Keppel in 1780 during an election is to be found in vol. ii. :—

"A certain silk mercer, a stout Keppelite, would mimic the King's peculiar voice and manner as his Majesty entered his shop and muttered in his hurried way, 'The Queen wants a new gown—wants a gown. No Keppel—no Keppel.'"

It is pleasing to reflect that at the present day his Majesty would have almost certainly been scheduled for such conduct.

Mr. Fitzgerald tells the good story of Lord Eldon and Lord Thurlow once again. The secret marriage of the Duke of Sussex was troubling the minds of the law officers. Lord Thurlow said, somewhat out of humour, to Lord Eldon (then Attorney-General), "Sir, why have you not prosecuted, under the Act of Parliament, all the parties concerned in this abominable marriage?" and Lord Eldon answered

"that it was a very difficult business to prosecute; that the Act, it was understood, had been drawn by Lord Mansfield and Mr. Attorney-General Thurlow and Mr. Solicitor-General Wedderburne, and, unluckily, they had made all the parties present at the marriage guilty of felony; and, as nobody could prove the marriage except a person who had been present at it, there could be no prosecution, because nobody present could be compelled to be a witness." This put an end to the matter."

ST. LOE STRACHEY.

Brighter Britain! or, Settler and Maori in Northern New Zealand. By William Delisle Hay. (Bentley.)

THIS book gives a description of the life of a settler in the northern part of the north island of New Zealand. The description is amusing; the manner of living uninviting. Few, we think, will be tempted to venture on the life of continuous hardship and squalor led by the writer from the beginning to the end of his stay in New Zealand. He, with six or seven companions, inhabited a shanty thirty feet long by ten in width, with one fire-place, which smoked, and a roof which let in the rain. Of furniture there could scarcely be said to be any. They wore their clothes as long as they would hold together. They were always too busy on the farm to repair or improve, so that discomfort increased as time went on. An English labourer is surrounded with what may be called comforts in comparison, and no English labourer works so hard. He marries, and enjoys the society of his fellows. What inducement, then, does the experience of Mr. Hay and his friends offer? It is true that these gentlemen at the end of eight years had made by their life of privation and incessant toil sufficient to purchase their holding, and had cleared and stocked it; but would they not have made more at home with the same energy and self-denial? Mr. Hay seems to have a sovereign contempt for the occupation of a clerk, or, as he terms it, quill-driving, and considers any amount of privation in the New Zealand bush preferable to that mode of life. With respect to the prospects of emigrants, it is the old story—

those succeed best in a colony who are most likely to get on well at home, and there seems to be no better opening for a man seeking his fortune in New Zealand than in England. The writer considers the following advice as the best he ever heard given to a middle-class man who thought of emigrating :—

"What are your prospects here? If you have any, stop where you are. If you are strong and able-bodied, somewhere between sixteen and twenty-six years of age—for over twenty-six men are generally too old to emigrate, I think—I say, emigrate by all means, for you will have a better chance of leading a healthy, happy, and fairly comfortable life. But you must throw all ideas of gentility to the winds, banish the thought of refinement, and prepare for a rough, hard struggle, and it may be a long one too. You may please yourself with the prospect of competence, comfort, and even luxury in the distance, but you must look at it through a lengthy vista of real hard work, difficulty, and bodily hardship. Success, in a greater or less degree, *always* follows patient industry at the Antipodes; it can scarcely be said to do so in Britain."

It would seem as if the author had had some disappointment in England before emigrating from the systematic way in which he runs down everything connected with the manners, customs, and civilisation of our own country. This recalls to us the exaggerated description of the vices of London in his former popular and successful work, *The Doom of the Great City*. He considers it a great improvement in manners that people in New Zealand do not touch their hats, and that shopkeepers are less civil than at home, though this absence of civility is no indication of sturdy probity. "All the tricks of the trade are fully understood at the Antipodes; and the Aucklanders can chaffer and haggle and drive as hard a bargain as his fellow across the seas."

The second volume contains a really interesting account of the Maori and their manners and customs. That this remarkable nation is dying out, and that rapidly, is indisputable. In 1820, the missionaries estimated their numbers at 100,000. The census of 1874 gave 46,016 as the Maori population, and six years later they had diminished by 3,000. Mr. Hay dates the beginning of the decline of population from the first use of fire-arms. Previously to their introduction, Maori wars, though frequent, were attended with little loss of life; but the use of fire-arms and the ambition of a chief named Hougi caused a "carnival of blood all through the land." Still it may be asked why the population continues to diminish, now that these wars have entirely ceased, and the Maori neither drink nor suffer from any privation. Mr. Hay suggests the diseases introduced by Europeans as the cause. He ridicules the idea of another war between the colonists and the Maori. "To read," he says,

"as we did a short while ago in influential London newspapers, that war with the Maori was again imminent strikes us as excessively ludicrous. . . . Maori wars are things of the past entirely. When are the British journalists going to awake to that fact? Now, settlers outnumber Maori everywhere ten to one. There are roads and railways and steamers sufficient to convey constabulary to any riotous neigh-

bourhood pretty quickly. But the great point is that the Maori of the present day are decent, quiet, and orderly folk. They are intelligent, and possess as much civilisation as would be found in many rural districts of England, Scotland, and Wales—I will not add of Ireland, too, for fear I shall be Boycotted! Maori and settler are on perfectly equal terms, and the former know it; moreover, they are not an homogeneous people, but live scattered in small communities. . . . There is no strength among them to make a war if they wished it, which they are much too sagacious to do. Riots, or brigandage, even, in isolated localities are less to be feared than similar outbreaks in Lancashire or Staffordshire."

One of the most amusing chapters in the book consists of an account of a wild-pig hunt in which 350 head were killed. Capt. Cook, in introducing pigs into New Zealand, did not confer an unmixed benefit on the country. The Maori allowed some pigs to escape into the bush.

"Here they have bred and multiplied to such a degree that immense droves of them are now to be found in all parts of the islands. In the fern-root and other roots of the bush they find an endless supply of food, which, if it does not tend to make their meat of good quality, at any rate seems to favour an increase in their numbers."

This wild breed has reverted to the original type, lank and lean, with large heads and high shoulders, and narrow spiny backs, sloping downwards to their short hind legs. Their flesh is tough, with a strong smell and nauseous flavour, that of the old pigs, both male and female, being absolutely uneatable. The harm they do to crops is enormous, and it becomes necessary to fence strongly against them; in a single night, if they gain access to an enclosure, tons of maize, potatoes, or other crops may be destroyed; hence the settlers regard them as vermin to be exterminated. Pigs are not the only hurtful importation. In some parts of the North Island there are clearings *submerged* under furze and sweet-briar, and there are forests of thistles which march onward and devour all before them.

Mr. Hay tries hard to be funny and witty, and does not always succeed. As he has now quitted New Zealand and become "a spoiler of paper" at home, may we tell him that his style will lose nothing by being more simple and natural? And may we hope that living in England will soften those prejudices so strongly exhibited in his book?

WILLIAM WICKHAM.

DEAN VAUGHAN'S SERMONS ON THE REVISED VERSION.

Authorized or Revised? Sermons on some of the Texts in which the Revised Version differs from the Authorized. By C. J. Vaughan. (Macmillan.)

THE ACADEMY is not accustomed to deal with what the German booksellers call "erbauliche Theologie;" and the volume now before me, excellent as it may be when judged by the "edificatory" standard, would not have called for notice here had not the author expressed himself on questions connected with the new text and the new renderings offered to the English public by the Revisers of the New Testament.

A vast quantity of worthless criticism followed the appearance of the Revised Version. That this would be so must have been anticipated by those who gave any thought to the matter. The subject of revision was one of very general interest. I have seen it stated that two million copies of the Revised Version were sold in the first few weeks of its issue. Everywhere, among the laity as well as the clergy, there were those who read their Greek Testament, and everywhere there were those who, as students (though it may be of the amateurish kind), had discovered what seemed an endless variety of errors and deficiencies in the renderings of the Authorized Version. The writings of Trench, Lightfoot, and Ellicott had given an impetus to such studies. People were eager to see how each point had been dealt with, and they were very free in expressing their disappointment or delight. There were others, but few in number, who set themselves to approach the criticism with an obviously strong bias against change; and, on the other side, there were a few who, not precisely apprehending the conditions of the task undertaken by the Revisers, were ready to blame as half-hearted the treatment of the original text. But beside criticism of this kind, which may afford a pastime, not wholly uninteresting, for years to come, and of which ninety-nine-hundredths do not touch the real merits of the revision, there has also been criticism of a different order, both of the text and the translation.

In respect to the text, one cannot but regret that the labours of Drs. Westcott and Hort had not been before the world for some considerable time prior to the task undertaken by the Revisers. A thorough and sifting investigation both of their methods and results is a desideratum that cannot be supplied all at once. It is but little to the purpose that the Revisers were permitted to see the sheets of the work by anticipation. It is notorious how few of "The New Testament Company" were specialists in textual criticism; nor, so far as the public has the means of judging, were there many with any specially marked powers for the task of mastering and criticising the elaborate work of these two highly influential members of the "Company." The secrets of the Jerusalem Chamber, like those of Cabinet Councils, are not always impenetrable, and it may be suspected that some of those most competent to judge were not always found in the majority. A great work like that of Drs. Westcott and Hort will, in process of time, create for itself a competent criticism. It is not among the coevals of distinguished experts that a competent judgment of their work is ordinarily to be sought. Fresh and powerful minds among our younger scholars are sure to be drawn to it. They will thoroughly search its method and weigh its arguments. Ten or fifteen years hence we may have much help in attempting to appraise this work at its true value. In the meantime it is to be regretted that extravagances of hostile criticism, such as are to be met with in the learned and entertaining pages of the last few numbers of the *Quarterly Review*, tend to discredit more reasonable criticism of an adverse kind. Those at the present time in England competent to pronounce judgment on the work of Drs. Westcott and Hort might

perhaps be all told on the fingers of one hand, and leave two or three fingers to spare. But this does not incapacitate a much larger number who have given serious attention to the textual criticism of the New Testament from believing on reasonable grounds that the subject cannot rest till, sooner or later, it receives a really competent criticism.

On the subject of the translation more persons are entitled to be heard. But it is easy to over-estimate their number. The study of Hellenistic Greek has been carried on in a thorough way by very few. School and college studies, confined as they are almost exclusively to classic writers, need to be supplemented by extensive reading and minute examination of such later writers as Polybius, Plutarch, Lucian, Asian, Sextus Empiricus, Josephus, Philo, the LXX., and the Greek Fathers. If not so supplemented, they will often mislead. Lexical, and more especially grammatical, features of the New Testament find here frequent illustrations. Mr. Field's fascinating *Otium Norvicense*, pars iii. (which, to the regret of many, the author has not been persuaded to publish), affords some most happy instances of the aids thus afforded. Again, an acquaintance with Modern Greek and with the processes of the disintegration of the language of the ancient classics is helpful in occasionally throwing back stray gleams of light upon obscure problems. The importance of Syriac studies in the translation of the New Testament has been long acknowledged, yet has not been sufficiently recognised in a practical way. But already a very considerable body of really useful criticism of the Revisers' work exists; and it will increase. Canon Evans has done valuable service by his delicate and subtle criticisms, always most suggestive and interesting, if not always conclusive. Nor should the occasional eccentricities of Prof. Blackie's judgment cause any to close their ears to his recent expostulation in the pages of the *Contemporary Review* on the danger of riding too hard the hobby of the Greek article. With much that is unreasonable there is also much that is sound and valuable in the *critique* of Sir Edmund Beckett. And, on the whole, it may be alleged that, if much of the silly and ignorant criticism of the first few months has passed away, there is growing up a permanent body of valuable judgments by men entitled to be heard which cannot be carelessly pushed aside.

That there can be in theory no finality attaching to such a kind of work as the construction of the text of the Greek Testament and its translation is, of course, admitted on all hands; but it may, I believe, be fairly questioned whether, with all its wonderful merits and, on the whole, its distinct superiority, it is desirable that in its present form the Revised Version should even temporarily displace the Authorized Version. Let no one be in a hurry; let the years go by and the body of competent criticism grow; but let not the notion of a *revision of the Revision* drop out of sight or be pushed altogether beyond the horizon of the practicable. It has much to commend it; it has gained the approval of students like Dr. Sanday; it is

not too visionary for the vigorous common-sense of the Archbishop of York.

Dean Vaughan's new volume contains eighteen sermons upon texts from the New Testament where the Revised Version differs from the Authorized. These sermons "were designed as a practical comment upon some of the features of the recent Revision." "Changes of reading, changes of rendering, changes of punctuation involving interpretation, are illustrated by turns in these sermons."

The first sermon concerns itself with the much-disputed text 1 Tim. iii. 16. There are many, I am sure, who, while not questioning the superiority of the reading OC instead of EC, will feel surprised at the discreditable charge made by Dean Vaughan in the following words:—"In our own British Museum," he says,

"you may discern by actual examination the process by which, indisputably, the 'who' has been transubstantiated into 'God.' It is an instructive example of those 'pious frauds' which have in all manner of ways offered their objectionable aid to the cause of Divine truth."

Now, waiving the question of the original reading upon which able palaeographers have spent much time with the naked eye, with "lenses," with "microscopes," with "very powerful microscopes," without agreeing as to the result of the enquiry; and waiving, too, the question as to whether or no the process by which the present reading of Cod. A has been reached is *capable* of being "indisputably" discerned, whether by the completion of the virgula of the ϵ on the reverse of the leaf, as seen through the vellum, or by deliberate alteration, it may be distinctly stated that there is not a tittle of evidence for placing the alleged alteration in the Codex Alexandrinus among "frauds," whether "pious" or impious. To alter what was believed to be an error in a document which abounds in errors, and which, in numberless other instances, had need of correction, would have been no "fraud." And there is not a shadow of proof tending to establish that there was any intention on the part of the scribe to do more than give what he believed to be the true reading. Drs. Westcott and Hort certainly believe that the origin of the reading which has perhaps been imported into Cod. A may well have originated without any *mala fides*. It is to be much regretted that one in Dean Vaughan's position should scatter abroad unfounded charges of this kind. The processes of the work done in the Jerusalem Chamber are veiled from the public, but it is to be hoped that this utterance of Dean Vaughan is not to be taken as a specimen of the aid offered by him on questions of textual criticism.

In the great majority of the passages that form the texts of Dr. Vaughan's sermons the question "Authorized or Revised?" can be without hesitation answered by giving the preference to "Revised;" and Dr. Vaughan, in an interesting way, exhibits the grounds for this preference, and draws out the new lessons which are involved in the new text or new renderings. He successfully defends "gather up the broken pieces" as superior to "gather up the fragments" (John

vi. 12), having, no doubt, in his eye the rather hasty criticism on this point by Sir Edmund Beckett. Perhaps Dean Vaughan too confidently asserts that "the 'broken pieces' are not crumbs or leavings at all," but are "the portions dispensed by the creative hand of Christ;" but the translators, in dealing with an ambiguous phrase in the original, did well to avoid a word which determined the meaning in one direction only. "Broken pieces," on the other hand, preserves the indefiniteness of the original.

JOHN DOWDEN.

NEW NOVELS.

Mrs. Lorimer. By Lucas Malet. In 2 vols. (Macmillan.)

Kept in the Dark. By Anthony Trollope. In 2 vols. (Chatto & Windus.)

Eve Lester. By Alice Mangold Diehl. In 3 vols. (Bentley.)

Dr. Ben. "Round Robin Series." (Trübner.)

Through the Night. By Mrs. G. Linnæus Banks. (Manchester: Heywood.)

APTLY described as "A Sketch in Black and White," Mr. Malet's novel is one of the cleverest first books we ever read. It has merit, and great merit, as a study of character, of manners, and of emotion; it is fortunate and elegant in style; it abounds in delicate touches of observation and in kindly and searching criticism; it has the quality of completeness, and commands attention, not as a sheaf of brilliant pages or a string of taking scenes, but as a finished work of art; and, to a certain extent, it is successful and effective. Its defects, as it seems to me, are defects of method. The author appears to have been taken with the manner of Mr. Henry James—the manner in which, according to Mr. Henry James's last critic, all novelists who respect their art must endeavour to work; and the results of his insatiation are, on the whole, discomfiting. There is colour in the book, and there is life; emotion is not altogether suppressed in favour of conversation; and when passion is inevitable, and drama is right, Mr. Malet refrains as carefully from turning his back upon the opportunity as his model refrains from facing it. But, for all that, there is a likeness, and the likeness is, we think, a misfortune. There is not enough of daring and strength; and there is too much of restraint, of discrimination, of the fashionable habit of subtlety and refinement and would-be suggestiveness. These qualities are well enough in their way. But their way is a very narrow one, and one that leads nowhither; and we cannot help thinking that Mr. Malet would have done better to have avoided it, and to have taken the broad and beaten highroad wherein so many great and famous men have walked, and which has taken us on to so much that is worth knowing and understanding and so much that is worth recording. Another point to be noted is that the new American method is excellent as far as it goes, but that it really does not go very far. As applied to the commonplace in character and life, it is admirably effective; so that by its operation

we can be made to feel momentarily interested in such a human vulgarism as Marcia Hubbard, and to accept, for half-an-hour, such an incarnation of the ephemeral as Daisy Miller as a substitute for Hamlet himself. But, applied to the tragic, its effectiveness ceases, and its capacity is felt to be limited. In Mr. Malet's heroine there is a touch of something very much like tragedy; and we feel as we read that she ought to have been presented to us ten years ago, while romance was still possible, and before the nobodies in life had become somebodies in art. She is well imagined, and, to a certain extent, she is well presented; but there is not enough of her. The method employed in her portraiture is the wrong one. We are confronted with reticences and delicacies, with shyness and discretion and significant silence, when we are crying out for courage and free speech and the note of passion and all the majesty of truth. We are interested in Mrs. Lorimer; but we are conscious that she and we are people in society, and that it is not "good form" for people so placed to know too much of each other. She lives, and suffers, and dies; and, when all is over, she is no more to us than hundreds of others. She is with Christina Light and Dr. Breen; and she ought to be—in intention at least—with Clariessa and Hester Prynne and Maggie Tulliver. She is not of their stature, and her strength is very much inferior to theirs; but she is of the same race with them, and by her maker's fault we know her worse than purely comic personages like her sister-in-law, Mrs. Frank, or studies in what is merely respectable and commonplace like her aunt, Mrs. Mainwaring. Both these ladies are worth meeting; but they do not console us for the absence of so much in Mrs. Lorimer.

The hero and heroine of Mr. Trollope's new novel are the average man and woman of society. He is a son of Adam, She is a daughter of Eve. But refinement and respectability, and stays and the Established Church, are too much with them; and, in the interests of civilisation, they make themselves as inhuman as they can, and suffer in each other almost as much as they deserve. She, Cecilia Holt, has jilted a scamp to whom she was engaged to be married; and He, Mr. Western, has been jilted by a girl to whom he was engaged to be married; and when they meet, and are engaged to be married in their turn, She refrains from telling Him her story because it is in some sort like his own, and She fears He wouldn't altogether like it. Then they marry, and for some weeks He is the happiest of men. But in an evil hour the jilted scamp appears in their virtuous home, and being coldly received, and having a mind to avenge his wrongs, writes Him an enigmatical letter, telling the story of the engagement, but telling it in such terms as to afflict His noble mind with doubts of Her. He asks if the letter is true; and She confesses that it is. Whereupon, being crazy with suppressed delicacy and refined feeling, and the far-reaching, impertinent egoism of the modern lover, He walks out of the house, goes into retirement at Dresden, and refuses to have anything more to do with Her at any price or on any terms. She, for her

part, is excessively angry with Him, as well She might be; and for some time matters are in a very bad way. Meanwhile, however, a Baby has begun to come; and His sister, an angel of moderation and good sense, has taken to lecturing the pair of them. And when, in due course, after arguments, debates, alarms, and excursions, this lady departs for Dresden, the end is seen to be a happy and a near one. What more is there to tell? He is brought back as by the ear, and is received with showers of kisses; and She, as was to be expected of a young lady of principle and education, is rejoiced to feel that she has been asked to forgive and not commanded to ask forgiveness. This is the story of *Kept in the Dark*. It has a pleasant and amusing under-plot besides; it is told with the ease, the lucidity, the plain good sense peculiar to its author; and it is interesting from the first line to the last.

Eve Lester may be described as a kind of romance. The heroine is the daughter of a species of philanthropic misogynist, who is the founder and chief of a species of vague and unlimited Universal Brotherhood, and who has educated his child in the ways of atheism and of manliness. The hero is a certain David Ross, or David Ross Grant, who is enormously rich, but who has suffered much from poverty in his youth, and who has devoted his fortune to the foundation of an infirmary for intellectual cripples—a home for the maimed, the halt, and the blind of science and the intelligence. This institution he establishes at the very gates of the headquarters of Universal Brotherhood; and, in doing so, he becomes acquainted with Eve Lester. Ostensibly he is not David Grant, the rich man, but only David Ross, the rich man's pauper secretary; and, as a matter of course, he is snubbed by the whole neighbourhood. As a matter of course, too, he falls in love with Eve, while Eve, on her side, falls in love with him; and from the first it is evident that this mutual affection will in the end be sanctioned by society and the Episcopal Church. It need hardly be added that the end is more or less skilfully deferred, and that happiness is kept at bay until the last pages of the third volume. Mr. Lester, who is a credulous fool and withal a most ruthless egoist, contemptuously refuses David Ross his daughter's hand, and gives himself over, body and soul, to a sharper named Wellbourne, who is ostensibly one of the most successful speculators, and really one of the most heroic swindlers, of the age. At last the crash comes, and the noble humanitarian disappears into space, leaving his all to his creditors, and taking his child with him. For some time the pair exist upon hope and red herrings; but editors refuse the father's MSS. as one man, and housewives refuse the daughter admittance to their firesides, and in no great while they are reduced to beggary. Then the ex-chief of the Universal Brotherhood gives way and has a fit; and, in rushing out to clamour for assistance, Eve discovers that her faithful David has all the while been watching over her from next door, and that she is, after all, to be rich and honoured and happy as the day is long. If I add that the story of her adventures is

brightly and ambitiously written, and that the circle of her acquaintances includes a black footman, a wonderful Italian, an impressive financier, a very amusing country clergyman, and a clever and attractive country clergywoman—"Wife of the Above," as the epitaphs have it—I shall have said enough.

The anonymous author of *Doctor Ben*: the Story of a Fortunate Unfortunate, is a little fantastical and inexperienced; but his book is by no means a bad one, and the touch of amateurishness which is its chief defect is by no means offensive. The story is all of Canada and Canadians. It tells how the hero got knocked on the head on the morning of his marriage day, and from a fine energetic young mill-owner was converted into a harmless and unnecessary lunatic; how in this condition he was spirited away by a desperate young man who was in love with his sweetheart, and, being sequestered in a distant mad-house, was mourned for dead; how, just at the nick of time, when the desperate young man was on the point of taking his place in the mill and of winning his bride, fortune turned kind to him, and revealed to his sorrowing kinsmen his existence and his whereabouts at once; and how, after several quaint adventures, he was at last restored to life and liberty and reason and the mill, and thereupon authentically married. It is intelligently contrived, and fairly well written; it contains some interesting sketches of character and manners; it sets forth a careful study of lunacy; it includes some elaborately phonetic work in dialogue. And though, as I have said, it is a trifle crude, a trifle fantastical, and a trifle amateurish, it may be read with interest, and on the whole with pleasure.

In *Through the Night*, described as a collection of "Tales of Shades and Shadows," Mrs. Linneus Banks has grouped together a set of essays in the supernatural. They are lacking neither in invention nor in a certain gruesome intensity of feeling, and they are fairly well constructed and arranged. But the style in which they are written is wholly conventional—is ornate, yet commonplace and inexpressive; and the effect they produce is insignificant. The best, which is also the ghastliest, is perhaps the story called "Judgment Deferred." It is really original and curious. W. E. HENLEY.

RECENT VERSE.

Verses of Varied Life. By H. T. Mackenzie Bell. (Elliot Stock.) The name Mackenzie Bell recalls Glassford Bell, and we understand that the author of this volume is a connexion, if not an immediate relative, of that admirable Scotch poet. His characteristics as a writer are similar, the most noticeable part of his work being descriptive of external Nature in remote and unfamiliar places. Mr. Bell has obviously travelled widely, and availed himself of his opportunities to the extent of his powers. The result is a series of "Poems of Travel," interesting mainly as poetic records of scenes and events known chiefly by prose description. The verses bear witness to considerable powers of observation, a liberal education, and some capacity for original thought. Their defect is technical, being a want sometimes of freedom and force of diction,

though they have usually the merit of metrical smoothness and an occasional felicity of expression. Moreover, they are unequal, a page of close description being often succeeded by a marked exhibition of literary slipshod and meandering discursiveness. If Mr. Bell had written throughout with the reserved strength shown in his short description of "Granada" his book would have been immeasurably better. This poem is not the only one in the volume, however, displaying a certain fluency. The scenes described are chiefly Spanish, but sometimes they are Italian, and occasionally even African. The poems on miscellaneous subjects which precede the "Poems of Travel" are not so noticeable. They are certainly destitute of the contemporary euphony, though not without attractions of their own for readers brought up on the poetic food of the days of Eliza Cook, or say Mrs. Hemans. It is just possible that there is still an audience for verses such as these ("The River of Thought"), the imitators of Mr. Swinburne notwithstanding:—

"Sometimes in high joyance it glideth along
With glamour of music and gladness of song:
While borne on its boom gay pleasure-boats sail
Rejoicing awhile in the light laughing gale.
"Sometimes like the stream which has sunk
under ground,
Yet still keeps its course 'mid the darkness profound,
Unknown and alone it still holds on its way,
Till emerging at length in the full light of day.
"Sometimes like the mountain's fierce torrent it flows,
And all that can hinder its progress o'erthrows:
Possessing the power of immutable right,
And strong in the strength of invincible might."

Chronicles of Christopher Columbus: a Poem in Twelve Cantos. By M. D. O. (Kegan Paul, Trench and Co.) This is a very long poem, which must have cost its author an infinitude of toil. In details it is exceedingly commonplace, versifying intricate historical statements which are, many of them, already hazy in prose, and become unintelligible in verse. The author tells us his facts are taken solely from Prescott and Washington Irving; but it would be a calumny on these authors to suppose that they described Columbus' Genoa thus:—

"Westward the Doria gardens
. . . and the long Mole protecting half the port."

Surely they never imagined young Columbus gazed up at the palace and gardens which Andrea Doria made two centuries later outside the western gate of the city, or that the mole then existed as protecting half the port, which was a still more recent construction. But, though poets are granted a special licence for making history suit their ends, there is no reason why they should treat foreign names in the same flippant manner. It is a nuisance to find that one has to read the "i" in Pavia short; and why is the Capo del Mele spelt thus: "dell Mele"? Why, again, if proper directions for pronunciation of Spanish words are given at the beginning, must we, on p. 152, accentuate the first syllable of "Juan"? There are, nevertheless some very fine thoughts hidden away in this long poem of over three hundred pages; but they are like the proverbial needles in a bundle of hay. For instance, we cannot help feeling sorry for Columbus on the death of his wife; it is altogether a scene touchingly described; but our sorrow is of somewhat brief duration, for we soon read of an illegitimate child born to the discoverer subsequent to this sad event. The horror of the sailors on first seeing the Peak of Teneriffe and the flames which then came out of its crater recalls passages of Milton, or his prototype, Dante. But the idea which closes the poem is, perhaps, the happiest in the book,

though this might be improved by the removal of a superfluous "that":—

"Meanwhile he

Had gone on that long voyage, that all men take,
And without help or comrade, had again
By unknown waters entered a new world."

Frithjof and Ingebjorg, and other Poems. By Douglas B. W. Sladen. (Kegan Paul, Trench and Co.) This volume has a quite supreme pre-eminence among works of modern poetry in the unparalleled abundance of the bad rhymes that it contains. We have some experience of fifth- and sixth-rate poetry. We remember once having spent an evening over a curious collection of the minor poetry of Ayrshire, enshrined in odd little volumes, half books, half pamphlets, published modestly at sixpence or a shilling each, by various post-masters, farm people, and small shopkeepers of the district, emulous of the fame of the greater Ayrshire bard. These contained some extraordinary and mirth-stirring matter; but really they are beaten on their own ground by the poems now before us, the production of "An Australian Colonist," and, as the dedication informs us, a late scholar of Rugby. The book is filled with atrocious rhymes literally in hundreds. The two opening lines of the volume are meant to rhyme, and they run thus:—

"What's struck?"
"Half past ten o'clock."

The first two lines of the next verse—the second verse of the book—are also supposed to rhyme, and they are these:—

"What's that?"
"Oh! a pistol shot."

The poet is so innocent in his craft as to imagine that "North" rhymes with "earth," "once" with "passions," "philosophy" with "sovereignty," and "brought" is unblushingly offered as a rhyme for "court." We select, almost at random, a few of the gems of pregnant and harmonious thought and of finished expression in which the pages are so rich. Here is a verse from a poem (!) which the author titles "A Prayer":—

"I always have loved dogs and horses,
To guide with firm but facile rein
The uncomplaining friend that courses
Beneath one's saddle o'er the plain:
To pet the faithful, friendly collie
That eyes me every time I move;
But these would fail to soothe me—wholly—
Could I not have her whom I love."

We give the emphasis of italics to the most striking lines of the above. In our second extract Mr. Sladen is indicating which author's poetic fame he most eagerly covets.

"I think I'd choose the patriot
And patriarchal Longfellow's;
Who after labour polyglot,
Yet takes not his well-earn'd repose:
He writes not like an architect,
With compasses and measure close,
Geometrically correct;
Nor raves of scarlet thread and mouth
Of frenzy, ruth, and steed foam-flecked,

And yet where'er the English speech
Establishes its sovereignty,
There do his homely verses reach,
And lie about in every home
As well on far-east Fiji's beach,
Or where Hong-kong looks o'er the foam."

The piece from which the volume is titled is a long, tedious, and utterly unnatural poem on an old Norse subject. The heroine is Ingebjorg, and we are incidentally informed that

"Her fair face stood out very fair,
Her eyes were lovely with a tear."

She is wedded to the elderly Ruler Ring, who, in the most polite and accommodating spirit,

commits suicide that his presence may not be a bar to the amours of his wife and the fascinating and magnanimous Frithjof. His generosity is duly appreciated. Ingebjorg falls upon his dying body, catches

"his head upon her breast.
And to his intent eyes express'd
With speechless glance, her gratitude,"

and his last breath being gone, the young and noble lovers proceed directly with their endearments; Frithjof

"Rains down the kisses on her neck,
Then raised an unresisting cheek,
And mouthed the pilgrim tears away."

Nothing but the intense, though unintentional, absurdity of the scene saves it from the most utter pruriency. We can only express a hope that Mr. Sladen will defer the publication of any further poems till that "later day" of which he speaks—

"When I am not over young
And my lyre is better strung."

The Garden of Fragrance: being a Complete Translation of the Bostān of Sādi from the Original Persian into English Verse. By G. S. Davie, Surgeon, Army Medical Department. (Kegan Paul, Trench and Co.) The Bustān of Sā'di, though less famous than his Gulistān, has always enjoyed a high reputation in the East. Few authors are so popular as Sā'di still is, and has been for six hundred years. Western readers find it difficult to understand his fascination, and to us, we confess, he has always been an unmitigated bore; but the Oriental mind delights in that sententious wisdom, that mixture of prudery and priggery, of goody anecdotes and stale saws, which Sā'di offers in no grudging spirit. It is true that his verse is exquisitely smooth and elegant; but that cannot redeem it from insipidity. But insipidity is no bar to popularity. Longfellow and Tupper, if we may join two writers who, with all the wide interval that divides them, have yet some common qualities, are instances in point; and we shall not be far out if we style Sā'di (in matter, but not in manner) the Tupper of the East, though, indeed, an ideal and sublimated Tupper. Dr. Davie has done what he could to make the Bustān interesting. His verse is very much like most other rhymed translations, but certainly inferior to Mr. Eastwick's *Gulistān*. Here is an example, taken at random, of what Sā'di calls a "Story," in Dr. Davie's rendering:—

"I have heard that a man who was good and upright,
For himself built a dwelling becoming his height.
Some one said, 'I'm aware that with means
you're supplied
To house a statelier.' 'Stop!' he replied,
'What desire for arched ceilings comes into my
mind?
This same is sufficient, for leaving behind.'
In the way of a flood, oh youth, build not a
seat!
For to no one was such a house ever complete.
It's against sense and reason and knowledge of
God,
That a traveller should build up an inn on the
road" (210).

This is not exactly poetry, but it is what we are used to in metrical translations; and it is easier than many, and fairly close to the original. The most original thing about the book is Dr. Davie's notions of Oriental orthography. He puts a short mark on "Mohāmed" for some reason or other, but leaves out the second *m*, which would make the short mark needless; and he also has ideas of his own about such words as Abū-Bākār (*sic*), Kizil, Sanaa (but Sād and Kāba), Ililāh, salāmed, Arsālan, Khizir, Māmūn, Asfūndiyār. We must also observe that Duldul was Mohammed's, not Ali's beast, and that a dinār is not a "piece of silver," as

Dr. Davie makes it in recounting the story of Sā'di's wife. There is an astonishing historical confusion in the biographical notice. Sā'di's period is described as that of "the Caliph Mutāsim-Billah, youngest son of Harūn-ar-Rashid. . . . The Tartar chief, Halāku-Khān, had overrun the neighbourhood," &c. As El-Mo'tasim-billah, the son of Harūn, died in the middle of the ninth century, and Hulagu did not arrive in Persia till the thirteenth, some correction is apparently necessary. Dr. Davie means El-Musta'sim, the last Khalif of Baghdad; but such slips, and there are too many of them, ought not to occur.

NOTES AND NEWS.

An important discovery has just been made by two German travellers, Dr. Sæster and Dr. Puchstein. On a lofty cliff of the Nimrud Dagh, between Malatijeh and Samsat, where the Euphrates forces its way through the Taurus, they have found colossal blocks of stone covered with Hittite sculptures and inscriptions. The mountain rises in terraces to a considerable height, and it is upon these terraces that the new monuments have been discovered. They are stated to be in good preservation; and, like the sculptures of Boghaz Keni, to represent the deities of the Hittite race. The locality in which they are found once formed part of the kingdom of Komagene, the Kummukh of the Assyrian inscriptions.

MR. EDWIN BEDFORD, the executor of the late Dr. A. O. Burnell, and also a relative, writes to us that the statement which appeared in the ACADEMY of November 4, that Dr. Burnell's "family was of Jewish origin," is not correct as regards either his father's or his mother's side; nor is it correct that he was of Dutch descent.

M. EUGÈNE RÉVILLIOUT has left London to resume his professional duties at the Louvre. During the six weeks he spent here he copied most of the Demotic papyri in the British Museum for publication in his *Revue égyptologique*. Some are of the highest importance, and throw a fresh light on the private life of the Egyptians during the period extending from Darius to the Romans. During the last few years M. Révillout has been working at a catalogue of all Demotic papyri in Europe. This work, the importance of which it is difficult to over-estimate, is now almost completed.

At their last meeting, the Council of the Camden Society, after expressing their regret at the loss of their late colleague, Mr. Daniel Tyssen, and of their late auditor, Mr. Hill, proceeded to select the books to be issued in the following year. It had been arranged at a previous meeting that Mr. Scott's *Diary of Gabriel Harvey* should be published in the present year. As, however, Mr. Scott finds that, in order to annotate the book properly, it will be necessary to keep it back for a few months, Dr. Grosart will edit at once the account of the Cadiz expedition of 1625, which is probably the work of Glanville, and which exists in the library of the Earl of St. Germain. For next year the society will probably have, in addition to Gabriel Harvey's *Diary*, a volume of selections from the Lauderdale papers throwing great light upon the management of Scotland in the early part of the reign of Charles II., to be edited by Mr. Osmond Airy; and, unless these two books run to great length, a volume of the Miscellany, which will contain, with other interesting matter, some unpublished letters of the Earl of Strafford, and a poem, probably written by Cartwright, on Strafford's illness in 1640. The council have also in view for publication in the year 1894-95 a very interesting volume of the correspondence of

Secretary Nicholas, to be edited by Mr. Warren; and the volume of the Privy Purse expenses of Henry Earl of Derby, afterwards Henry IV., part of which was prepared for the press by Dr. Pauli before his death.

THE performances of the "Ajax" of Sophocles at Cambridge have been fixed to take place on November 29 and 30 and December 1, at 8 p.m., and on December 2, at 2 p.m. On each day special trains will be run. The incidental music has been written by Prof. Macfarren, and will be produced under the superintendence of Mr. Stanford. The scenery and proscenium have been painted by Mr. John O'Connor from original authorities. The scenery, costumes, and stage management in general are under the care of Dr. Waldstein, who is also hon. secretary to the committee of management. A translation in English prose has been prepared by Prof. Jebb.

THE "Phormio" of Terence will be acted at Bath College just before the Christmas holidays. The version of this play made for acting at Birmingham by Card. Newman two years ago will, by the permission of the Cardinal, be adopted, with one or two slight alterations. The parts will be taken entirely by boys in the school. Last year the larger part of the "Mostellaria" of Plautus was given at the same school.

COURSES of lectures are being given this term on a variety of historical, literary, and scientific subjects at over thirty centres in connexion with the Local Lectures Scheme of the University of Cambridge. The work in Northumberland and Durham was up to this summer managed by a committee appointed by the University of Durham, of which the Dean was chairman. The lectures in that district are in future to be managed jointly by the Universities of Cambridge and Durham. Courses on electricity are attracting large audiences of from three to four hundred people at the Tyneside and Teeside centres. It is an interesting fact that the university lecturers have succeeded in adapting their teaching to the requirements of exceedingly mixed audiences, including persons of various degrees of leisure and previous education. A course of lectures on mining is being delivered at three colliery centres in Northumberland to audiences composed almost exclusively of working pitmen. The testimony of those who have attended the university courses has brought out very distinctly the fact that it is the special method of instruction adopted under the Local Lectures Scheme which renders this mixture of diverse elements in the audiences possible. The printed syllabus of each lecture furnished to students has been found extremely useful; and, above all, the class in which an opportunity is given to students to get their difficulties explained has proved indispensable. It may not be out of place to add that the man to whom, more than to any other, Cambridge owes the success of this movement is now one of the candidates for her representation in Parliament. Not only academic interests, but the wider interests of education, would be helped by his return.

A PRELIMINARY meeting was held in Edinburgh last week towards the formation of an Early Scottish Text Society. Mr. Æneas J. G. Mackay was in the chair; and among those present (beside the Rev. Walter Gregor, of Pitligo, the enthusiastic originator of the movement) were Dr. Arthur Mitchell and the librarians of all the great Edinburgh libraries. It was announced that two hundred subscribers had already promised to join, and that the work of printing will be commenced as soon as one hundred more are obtained. About this there ought to be little difficulty. Mr. Furnivall, Prof. Skeat, and Dr. Murray have expressed their willingness to assist. It is

hoped that the publications of the society may begin with the works of James I., edited by Prof. Skeat, and the works of Dunbar, edited by Mr. Small, librarian of the Edinburgh University. The publishers will be Messrs. W. Blackwood and Sons.

MR. H. VAN LAUN has been long engaged on a history of the literary exiles in England—those who, from the use of their pens, had to leave their country for their country's good, as the governing powers viewed it.

MR. W. M. WOOD, of Messrs. Austin's house at Hertford, is making a transcript of the old Register of All Saints' parish in that town. It contains over seven thousand entries.

MISS PHIPSON, of the New Shakspeare Society, has finished her book on *The Animal-Lore of Shakspeare's Time*, and it will be published in the spring.

IT is generally affirmed that when Benjamin Franklin first came to England he was employed at Palmer's printing-office on the second edition of Wollaston's *Religion of Nature*, and, in fact, Franklin himself asserts as much; but Mr. Solly proves, in an article which will appear in the December number of the *Bibliographer*, that it was the third edition, published in 1725, after the author's death, upon which Franklin worked.

THE next volume in Messrs. Blackwood's series of "Philosophical Classics for English Readers" will be *Spinoza*, by Principal Caird.

MESSRS. F. V. WHITE AND Co. will publish in December two three-volume novels—*My Connaught Cousins*, by Harriett Jay, with a Preface by Robert Buchanan; and *Mollie Darling*, by Lady Constance Howard.

MESSRS. PARKER AND Co. will shortly issue *River Reeds: Verses written among Streams*, by the Rev. A. M. Morgan.

MRS. SALE LLOYD's recent novel, *Shadows of the Past* (W. H. Allen) is being translated into Russian, and will be published at St. Petersburg, early next year, in the series of translations of standard foreign novels issued under the editorship of Mme. Akhmatova.

AN association has been formed for carrying out on a larger scale in England the same scheme of tuition by correspondence the successful operation of which in Scotland was described recently in *Good Words*. The hon. secretary of these "University Correspondence Classes" is Mr. E. S. Weymouth, 28 Shirlock Road, N.W.

WE understand that Mr. A. P. Watt, of 34 Paternoster Row, has been appointed agent for conducting negotiations with English writers who may wish their works included in Asher's "Collection of English Authors."

DR. G. M. DALMAZZO is delivering a course of four lectures at Trinity College, London, on Friday evenings at 8 p.m., on "Early Italian Literature," with special reference to Petrarch and Boccaccio.

THE Société historique held its first general meeting on November 11 in its room on the Boulevard Saint-Germain, to which it has given the name of Cercle Saint-Simon. The president, M. G. Monod, announced that the society already numbers more than four hundred members, and is thinking of increasing its accommodation. A series of fortnightly "conférences" are to begin forthwith, being opened by MM. A. Sorel, G. Paris, Cordier, and Renan. In December will be published the first number of the *Bulletin*, or *Transactions*, of the society. The success of this attempt to found a literary club at Paris—for such the Société historique may be considered—is in great measure due to the liberality with which it includes students, professors, writers, and men of culture,

WHAT Prof. Maasson has already done for scholars by his *Life of Milton* and by his library edition of the *Poems*, he now does for everybody by his new edition of the *Poems*, with Memoir, Introduction, and Notes, which Messrs. Macmillan have just issued. It may be considered as an expansion of the Golden Treasury edition (now out of print) by the incorporation of great part of the library edition of 1874. Like the latter, this is in three volumes, and also has three portraits; but alas! they are not engraved by Jeans. That edition, however, cost forty-two shillings; this can be got for fifteen. The text is the same to which Prof. Maasson long ago gave his authority, and it is excellently printed on fine paper; the editor's comments, which are scrupulously separated from the text, supply in their manner no less than in their matter just that pleasing stimulus which the lazy reader requires. It is not enough to read Milton; something should also be known about the man, and about the production of his works. As Messrs. Kegan Paul, Trench and Co. gratify the taste of book-lovers by the elegant format and choice contents of their "Parchment Library," so the wider class of book-readers are indebted to Messrs. Macmillan for putting within their means good literature in a shape more useful and scarcely less attractive. We venture to say that, for many years to come, this will be accepted as the standard edition of Milton by ordinary mankind.

Correction.—We regret that, through the misreturn of a proof, an awkward misprint occurred in Epigram xxxiii., by W. W., in the *ACADEMY* of November 18. For "billyow-blossomed" read "billyow-bosom'd;" and in the heading of the same epigram "Miss Christina E. Rossetti" should, of course, be "Miss Christina G. Rossetti."

AMERICAN JOTTINGS.

AT the farewell dinner given to Mr. Herbert Spencer at New York, on November 9, about one hundred persons were present, including Sir Richard Temple. Mr. William M. Evarts was in the chair. The following were the toasts, or rather sentiments, given:—"The Science of Sociology," by Prof. W. G. Sumner, of Yale; "Evolution, first an Hypothesis, but now an Established Doctrine of the Scientific World," by Prof. C. E. Marsh; "The Progress of Science tends to International Harmony," by Mr. Carl Schurz; "Evolution and Religion—that which perfects Humanity cannot destroy Religion," by Prof. John Fiske and Mr. Henry Ward Beecher. The chairman, in welcoming Mr. Spencer, said: "We recognise in your knowledge a greater comprehensiveness than any other living man has presented to our generation."

MESSRS. ROBERTS BROS., of Boston, seem to make a speciality of publishing handsome editions of English authors, not, we believe, without some recognition of their pecuniary interests. They have just issued the collected poems of Miss Rossetti, of Dante Rossetti, and of Mr. Matthew Arnold, each in single volumes at two dollars (8s.); and an edition in ten volumes (though with only three illustrations) of all the acknowledged works of Mr. P. G. Hamerton, at fifteen dollars (£3). Many of Mr. Hamerton's English admirers would be glad to get his collected works at the same price. As we shall never weary of complaining, the absence of international copyright works almost as much injustice to the public as it does to authors themselves.

MR. CHARLES G. LELAND has been spending some months among the Quadi Indians in New Brunswick, and has obtained from the

number of quaint fairy tales. Some of these he will probably publish before long in the *Century*. The rest he will reserve for a book which he intends to bring out when his collections have been increased by the legendary stores which two Indians, a hunter and a trader, are gathering together for him in the Far North. Some of the tales are accompanied by illustrations on birch bark, by a native hand.

MESSRS. LIPPINCOTT, of Philadelphia, announce a volume of Negro-dialect papers, in prose and verse (some of which have already appeared in the *Century*), by Mr. J. A. Macon. The title of the book is to be *Uncle Gabe Tucker*.

THE International News Company, of New York, are the American publishers of *Longman's Magazine*; but we observe that the price is twenty-five cents, or just double our sixpence. It has not yet been found possible, or profitable, to pirate magazines. Hence, probably, one of the causes of the increasing success of this form of literature.

IN MEMORIAM

E. H. PALMER.

بادي قاتل زبیدا خاسته
عالم افروزي محمد اندر شداست
صد زباني بي زبان گشت است وای
از سکوتش چشم خلقی تر شداست
جاهلان بي شمار اندر جهان
مانده اند و عالم بيسر شداست
تا جهان بود است اين بیداد از اوست

باز بر پالیر زهر فن در شداست
آگه است از قیمت گوهر نشان
آنکه در دریا بی گوهر شداست
خاک باد اعرار در گوش و چشم
کو بر الفاظ نمیش کر شداست

C. E. WILSON.

OBITUARY.

THE Rev. Thomas Milner, a veteran compiler of text-books, many of which were issued by the Religious Tract Society, died on November 15 at Derby. Whenever the attention of the British public was drawn to a particular portion of the globe, his services were employed in drawing up a description of its characteristics. Among the works which he compiled in this manner were histories of the Baltic, the Crimea, Russia, and the Turkish empire. Nearly forty years ago he published a volume called *The Gallery of Nature: a Tour through the World*. This passed through three editions, and was succeeded by a companion volume called *The Gallery of Geography*. His *Historical Geography*, originally published in 1850, was revised and brought down to date by Mr. Keith Johnston (1876). A similar service was done by Mr. Edwin Dunkin to his treatise on *The Heavens and the Earth*. There is only one other work by Mr. Milner which we need mention. It was called *Our Home Islands*, and consisted of a series of handbooks on our national industries and public works.

MAGAZINES AND REVIEWS.

WHETHER the days of quarterlies are over—whether, in particular, the people of Scotland need a special magazine—are questions that perhaps time only can answer. Meanwhile, a kindly greeting is due to the first number of the *Scottish Review* (Alex. Gardner), if only on account of the courage of the publisher, whose name is associated with so many Scottish literary "revivals." The paper and type of his new venture are of the traditional quarterly excellence. It is smaller and cheaper than the *Edinburgh and Quarterly*. Like the *British Quarterly* and *Westminster*, it gives considerable space to notices of "contemporary literature;" and it presents quite a new feature in "Summaries of Foreign Reviews." It is of the two last points in the new Review that we can speak most favourably. The notices of books are careful; and the summaries of foreign Reviews, although perhaps placing too much emphasis on theology and philosophy, are scholarly and judicious. Of the six articles which compose the bulk of this number, five deal either with Scottish or with theological subjects. Of "The Progress of Theology in Scotland" and "The State of the Highlands" it does not come within our province to say more than that they are commendably moderate in tone. From the literary standpoint the best and most ambitious article is that on "The Poems of Dr. W. C. Smith," although it is somewhat too discursive and rhetorical. We could have spared an article on "Thomas Carlyle's Apprenticeship," but it is due to the writer to say that he is neither a hero-worshipper nor an iconoclast. The single extra-Scottish article, on "Letters in America," is an attempt to deal with a very large subject in too small space. But the author is fair in his critical judgments, and has a mind of his own.

THE most recent portions of the *Journal* of the Asiatic Society of Bengal which we have received are the commencement of the two divisions of the fifty-first volume, the parts of History, Literature, &c., containing an elaborate series of articles on the Religion, History, &c., of Tibet, by Baboo Sarat Chandra Das, inspector of schools at Darjiling; and on the Rise and Progress of Buddhism in China, in which the sacred literature, philosophy, and religion of Ancient China as known to the Tibetans, the life and legend of Nájáryuna, and detached notices of the different Buddhist schools of Tibet are discussed. In the preceding volume the Early History of Tibet, Tibet in the Middle Ages, the Bon (Pon) Religion, and the history of a dispute between a Buddhist and a Bonpo priest for the possession of Mount Kailása and the Lake Mánasa were described; and a series of articles on the Coins of the Sikhs and on the Coins of Charibel, King of the Homerites and Sabaeans, by Major W. F. Prideaux, well illustrated in a number of plates, together with a memoir on Ancient Persian Gold, Silver, and Copper Relics, with nine plates, by Major-Gen. A. Cunningham. The most recent memoirs published in the Natural History section of the *Journal* are of considerable interest, comprising one by Mr. V. Ball on the identification of certain diamond mines in India which were known to, and worked by, the ancients, especially those which were visited by Tavernier, with a note on the history of the Koh-i-nur and two wood-cuts; a valuable meteorological memoir on the Relations of Cloud and Rainfall in India and on the opposite Variations of Density in the Higher and Lower Atmospheric Strata, by H. F. Blandford, meteorological reporter to the Government of India; memoirs on Indian Mollusca, by W. Theobald, G. Neville, and O. F. von Mollendorff; on the Voles (*Arvicolae*) of the Himalayas, with two plates, by W. T. Blandford; also on

Indian Reptilia and Amphibia, by W. T. Blandford; numerous papers on Lepidopterous Insects of India, the Andaman Islands, Burmah, Sikkim, and the Nikobar Islands, by J. Wood Mason and L. de Nicéville; and a paper on new and little-known Mantidae, by J. W. Mason.

CORRESPONDENCE.

WHO WROTE "THE WHOLE DUTY OF MAN" ?

III. (Conclusion).

[1 Park Crescent, Oxford: Nov. 20, 1882.]

One of the minor difficulties that meet us in this investigation is due to the extraordinary similarity between the career, the views, the tastes of Fell and Allestree. Allestree was by some six years the elder—a fact of considerable importance if we remember that *The Whole Duty* was written, at latest, in 1657, when Fell was only thirty-two. Dean Samuel Fell "always lookt upon [Allestree] as a part of his family, and treated him with the same concern as his own children." Both were students of Christ Church; both bore arms for the King during the Civil War, with that zeal and self-abnegation which they afterwards carried into more congenial pursuits; both were afterwards subject to the potent influence of Hammond,¹ who left Allestree his library, and whose *Life* Fell wrote; both took orders, and became, after the Restoration, canons of Christ Church; both, not long after, were appointed to the headship of two great colleges, which they partially rebuilt and reconstituted. Neither was ever married. Both were men of affairs, and possessed of considerable legal and financial knowledge. The similarity in their literary style was noticed in their lifetime, though both were very shy of giving their writings to the world. The likeness between their political and religious views amounted to identity. Wood, in his *Life*, and other contemporaries generally mention them together. They and Dolben habitually performed the service of the Church of England under the Commonwealth in the house of Dr. Thomas Willis, the famous physician and *savant* and brother-in-law of Fell, who, after Willis' death, published part ii. of his *Pharmaceutice Rationalis*. The coincidence is striking even in minutest matters. In *The Government of the Tongue* (1674), the author remarks that the reproaches of wit "are like the Graver's burine upon copper, or the corrodings of Aqua-fortis, engrave and indent the Characters that they can never be defaced." This is one of the earliest occurrences of "burin" as an English word; and I was at first inclined to think that it must be due to Fell, who at the time was supreme at the University Press, and must have been familiar with the instrument. But Allestree became a Delegate of the Press in 1674; a kinsman of his name was a publisher; and, in his *Sermons* (ii. 42), I find the remark that "natural virtue is in man the imitation of God, is as it were the workings off of those forms of goodness that are in him, and the lines and rules of it are but the lineaments of his perfection," which seems to indicate an acquaintance with the technical vocabulary of the printing-office. Now I think a careful perusal of the anonymous works will convince the reader that in these two men—Fell and Allestree—there is a singular combination of the qualifications which were possessed by the author of *The Whole Duty of Man*. Further, it must be borne in mind that Allestree, beside being the elder, had travelled on the Continent, and that he did not, like Fell after the Restoration, to a great extent abandon learning for practical life.

The comparison of the works of Allestree and of the anonymous author requires more time

and more minute investigation than I have yet been able to devote to it. But even were I in a position to treat the subject exhaustively, this would scarcely be the place to do so; and I shall content myself for the present with a brief summary of results. The works of the author of *The Whole Duty* and those of Dr. Allestree exhibit a very copious vocabulary, and certain often-recurring peculiarities. Both avoid the use of "more" and "most" to form the degrees of comparison, and are partial to the phrases "any the least," "every the most," &c., and to uncommon formations with un-, -ness, and -ment. In addition to these general points of similarity, I have compiled a list of about one hundred and fifty words, more or less rare, but all in some way noteworthy, which are common to both authors. As specimens of these may be mentioned: to abode (= forebode); afflation; an allective; antepast; aversation; complexure; a corrosive; defailance; defecate; excision; exinanition; exprobration; gust; inclosure (= monopoly); induration; longanimity; managery; mormo (= bugbear); momentany; radiated; scantling; sulliage; to toll (entice); unitive; vacuity; wretchedness. With "tedder" in *The Whole Duty* may be compared Allestree's "pudder." The loans from Hammond are numerous in both. I suppose "to bangle" in the former is derived from the *Anatomy of Melancholy*, which, as Dr. Murray courteously informs me, seems to be the only other literary authority for its use in the sense of "to squander." This is by no means a solitary trace of Burton in the seven treatises; and Burton must have known Allestree at Christ Church, as well as Fell, to whom he bequeathed his mathematical instruments, besides various souvenirs to his father, mother, and sister. Over and above these words, which are common to the anonymous author and to Allestree (and in many cases to Fell also), I find something under a score which are common to the former and to Fell only. If allowance be made for the difference between a series of treatises carefully written and edited and intended to be read, and single sermons not originally meant for publication,¹ and in most cases not revised by the author for press, and, as Fell says, "not all of the same finess [*sic*] of spinning and closeness of texture," the vocabulary of Allestree bears a striking resemblance to that of the author of *The Whole Duty* series, including the MS. *Government of the Thought*.

To pass on to another class of internal evidence, I may mention that of metaphors, which are so numerous as to form a distinct feature in the anonymous writings. The commonest of all are derived from medical and scientific subjects, especially optics and magnetism; and I had long attributed these to the influence of Dr. Willis, Fell's brother-in-law and intimate friend, before reading Kennett's statement, quoted by Mr. Bailey in the September *Bibliographer*, that Allestree actually went through a course of chemistry with Dr. Willis. There are numerous instances of medical and scientific knowledge in Fell's and Allestree's works; and Fell bears witness to his friend's skill in mathematics. In *The Government of the Tongue*, sect. v., par. 5, there is an allusion to the telephone; and the earliest distinct reference to this instrument is said to occur in a paper by Robert Hooke, dated

1667.¹ Hooke began his distinguished career as a chorister of Christ Church, and assisted Willis and Boyle successively in their chemical researches,² so that he must have been familiarly known to both Fell and Allestree. The term *antiperistasis*, which occurs repeatedly in *The Decay of Christian Piety*, was perhaps derived from Boyle (another member of the distinguished company of which Willis was the centre), who published in 1665, as an appendix to a work on Cold, an *Examen of Antiperistasis*, and whose *Considerations touching the Style of the Scriptures* is repeatedly alluded to, and once quoted by name, by the author of *The Whole Duty*. Next to scientific metaphors in point of number come those from military affairs; and thirdly those from the administration of justice, civil and criminal, and the procedure of courts of law, evidently derived from the author's experience on the Bench. All these find their analogies in Allestree's sermons, not to mention others taken from a great variety of objects and occupations—from children and sport, from princes and beggars, mountebanks and thieves, the ostrich, the viper, and the gall-less dove. In the employment of this mode of illustration, the parallelism between the treatises and the Sermons is, I think, unmistakable. The author of *The Whole Duty* is shown by his choice of metaphors to have been pretty much of a man of science, a soldier, and a lawyer, as well as a divine and instructor of youth; and Allestree presents a remarkable combination of these characteristics.

In an examination of their views on politics, theology, and ethics, I have not lighted on a single discrepancy, or a single difficulty in the identification of Allestree with the writer of the anonymous treatises. But this subject, and that of style, is too extensive to be handled here; and I will content myself with enumerating a few of the more obvious coincidences in points of detail. Both authors insist, in season and out of season, on the sin and folly of duelling, and on the absurdity of the code of honour recognised in their day. Both dwell again and again on the paramount importance of friendship, and on the duty of mutual reproof and admonition. Both are acquainted with the Syriac, Arabic, and Chaldean versions of the Old Testament, as well as with the original Hebrew. *The Whole Duty* lays down that it is incumbent on mothers, wherever it is possible, to nurse their own children; and *The Ladies' Calling* enforces the teaching of the earlier treatise by quoting Aulus Gellius (after Burton), and likewise the Countess of Lincoln's *Nursery* (Oxford, 1628). Allestree (ii. 18) speaks incidentally of "that parent which not only, like some delicate ones, refuses her own breasts to her own infant, but provides no other to sustain it." The author of *The Ladies' Calling* mentions gaming, "as a recreation whose lawfulness I question not, whilst it keeps within the bounds of a recreation;" and Allestree, in dealing with "great gamings," is careful to add, "not that I condemn the thing in general." Both authors repeatedly express their regret that ecclesiastical censures were out of date. Both condemn the modern practice of educating children into men betimes. Both comment adversely on "an axiom of Aristotle's: Sensual pleasures are corruptive of principles;" both often allude to the alleged fact that the heathen world worshipped vice and deified disease; both (with Hammond) adapt to their own purposes, among many other texts, Hosea ii. 15, "I will give her . . . the valley of Achor for a door of hope." Both lay stress on the fact that the Christians under Diocletian parted with their lives rather than their Bibles;

¹ A very cursory inspection will show that there was good reason for submitting the sheets of *The Whole Duty* to Hammond before publication. *The Whole Duty* is largely based on Hammond's *Practical Obedience*, the coincidences in thought and expression being most remarkable. The object of *The Whole Duty* (originally called *The Practice of Christian Graces*) was evidently to supersede its Puritan predecessor, *The Practice of Piety*.

² I may here just mention the coincidence that, while Dr. Allestree bestowed on his kinsman, Mr. James Allestree, the bookseller (publisher of Fell's *Life of Hammond*), who had been ruined by the Fire of London, the copyright of eighteen of his sermons, the author of *The Whole Duty of Man* bestowed on Mr. Timothy Garthwaite, his publisher, who was a sufferer by the same calamity, the copyright of *The Causes of the Decay of Christian Piety*.

¹ Du Moncel: *The Telephone*, &c., p. 1.

² Ward: *Lives of the Gresham Professors*, p. 170.

both quote with horror various terms of depreciation applied to the Scriptures by Roman Catholic controversialists. With both, Herbert Thorndike is a learned authority. To conclude with one or two of the most striking individual coincidences which I have yet observed. In *The Christian's Birthright* (sect. vii., par. 6) the author mentions that, about eighteen years before, the Roman Missal had been translated into French with the sanction of the Gallican bishops; but that the French clergy were afterwards greatly incensed thereat, and protested to Pope Alexander VII., who anathematised the book. I was vainly searching for a mention of this incident in the ordinary works of reference, when I found that the whole story was told in detail in the first sermon in Allestree's second volume. We there find that his authority was the *Extrait du Procès Verbal de l'Assemblée générale [sic] du clergé de France, tenu à Paris en l'année 1660*, and the Index of prohibited books published at Rome in 1664. There are traces in Allestree's and the anonymous works of a knowledge of modern languages, which Fell expressly attributes to Allestree. Once more, in *The Art of Contentment* (sect. v., par. 11) the author writes: "When God bids [a man] do any of those things, which God and good men abhor, then and not before he may hope he may sever such acts from their native penal effects; for till then (*how profuse cover some Legendary stories represent him*) he will certainly never so bestow his miracles." This allusion to "legendary stories" is, at first sight, obscure; but the difficulty is cleared up by Allestree in his account of the origin of the Feast of the Immaculate Conception (vol. ii., sermon 13), which was clearly in the writer's mind.

I must not further intrude on the space of the ACADEMY. I am of opinion that, while the internal evidence, on which I have here only touched most superficially, would, taken alone, justify a strong suspicion that Allestree was the author (or one of the authors) of *The Whole Duty of Man*, of the six already published treatises, and of the MS. *Government of the Thought* in the Bodleian Library, that evidence taken in conjunction with the statements of Fell is pretty nigh conclusive. Whatever part be hereafter assigned to Fell, whether he be proved by further investigation to have been joint author or merely editor or "redactor," I think that I can scarcely be mistaken in claiming for RICHARD ALLESTREE the primary authorship of *The Whole Duty of Man*.

CHARLES H. DOBLE.

"HEROES OF SCIENCE."

London: Nov. 20, 1882.

A criticism of my book entitled *Heroes of Science* which appeared in the ACADEMY, November 18, 1882, terminates with the following sentence:—"Darwin does not have a place in Prof. Duncan's book." It is right, considering what that sentence may or may not involve, that my critic should know that the greatest naturalist of this generation was still among us when the work left my hands.

P. MARTIN DUNCAN.

"THE BABY'S MUSEUM."

London: Nov. 18, 1882.

In your notice of *The Baby's Museum* (Griffith and Farran) to-day your reviewer says, "Some of the rhymes have fared badly at the hands of the arranger." I have only altered one rhyme in the book. Instead of "Put on the Pot, says Greedy Gut," I have printed "Put on the Pan, says Greedy Nan;" and I believe there is good authority for this variation. All my "arrangement" is in the order of the pieces and the making of the Index—a

novelty, I believe, in a book of this class. This may be thought hardly a matter of sufficient literary importance on which to trouble the ACADEMY, but I am desirous that the book should be recognised as a collection of the old-fashioned nursery rhymes in the old familiar words. Of course there are variants innumerable, and it may be that some of those in the book are unfamiliar to your reviewer; but the sacrilegious hand that has dared to tamper with the old English nursery rhymes was never that of "UNCLE CHARLIE."

APPOINTMENTS FOR NEXT WEEK.

MONDAY, Nov. 27, 7 p.m. Actuarial: Presidential Address, by Mr. T. B. Sprague.
7.30 p.m. Educational: "Marking in Examinations," by Mr. H. Weston Eve.
8 p.m. Royal Academy: Demonstration, "The Figure," I., by Prof. J. Marshall.
8.30 p.m. Geographical: "M. Lescaur's Reconnaissance Survey from Sarakhs and Merv to Herat," by Sir H. Rawlinson.
TUESDAY, Nov. 28, 8 p.m. Anthropological: "The Language and People of Madagascar," by Dr. G. W. Parker.
8 p.m. Civil Engineers: "American Practice in heating Buildings by Steam," by the late Robert Briggs.
8.30 p.m. Zoological: "The Sternum of *Notornis* and its Sternal Characters," by Prof. Owen; "The Identity of *Ameglossus lephotes* (Günther) with *A. grohmanni* (Bonap.)," by Mr. F. Day; "International Colour-Scales for Scientific Purposes," by Dr. A. B. Meyer.
WEDNESDAY, Nov. 29, 8 p.m. Royal Academy: Demonstration, "The Figure," II., by Prof. J. Marshall.
8 p.m. Society of Arts: "Some Points in the Practice of the American Patent Office," by Sir F. Bramwell.
FRIDAY, Dec. 1, 8 p.m. Philological: "Initial Mutations in the Celtic, Basque, Sardinian, and Italian Dialects," I., by Prince L.-L. Bonaparte.

SCIENCE.

SOME BOOKS OF PHILOSOPHY.

Studies in Philosophy, Ancient and Modern. By W. L. Courtney. (Rivingtons.) The table of contents to Mr. Courtney's volume is of most attractive character. Studies of Idealism as it appears in Parmenides and in Berkeley, of Ethics as in Epicurus and in the most recent sociological science, of the Kantian system in its historical form and in its significance for present thinking, of the newest ideas in Psychology and of the most comprehensive philosophy of religion, have interest on their surface sufficient to secure attention for a work in which they are presented. It cannot be said, however, that Mr. Courtney's volume bears out the promise of its contents. He has not done justice either to his subjects or to himself, and one cannot but regard his work with a strong feeling of disappointment. The substance of most of the essays is very thin and unsatisfying, while in many cases the treatment is of so rudimentary a character as to suggest the reflection that the writer was hardly in a position, relatively to his subject, to warrant him in conveying the records of his work to an outside public. In particular does this reflection suggest itself in respect to the essays on the Kantian system which make up a considerable portion of the volume. These essays are very discouraging. For the point of view of the writer, so far as can be gathered from the general nature of his criticisms, would seem to be a modified Kantianism. Yet the remarks on Kant's doctrine of cause, on the historical genesis of the Kantian philosophy, and on the supposed contradictions between the results of the Kantian theory of knowledge and of the Kantian ethics are of such a character that one can hardly suppose Mr. Courtney to be thoroughly master of the work he is criticising. Even though the difficulties of the Kantian system lay exactly where Mr. Courtney has placed them—and these difficulties seem to Mr. Courtney the very central problem for present philosophy—yet his treatments is too meagre, and in some respects based on too slight knowledge, to have any high value placed upon it as a contribution

toward their solution. We regret to be able to find so little satisfaction in these essays; but it is even more matter of regret, both on account of the subjects in which Mr. Courtney is doubtless warmly interested and for his own reputation, that he should have permitted work to leave his hands in an imperfect and unfinished form.

De la Connaissance de soi-même: Essais de Psychologie analytique. Par O. Loomans. (Bruxelles: Merzbach et Falk.) Prof. Loomans' work is a fresh and clearly written exposition of psychology from somewhat the same position as that of Sir William Hamilton or M. Cousin, without, however, either the learning of the one or the brilliancy of the other. The account which Loomans gives of the different mental "faculties" seems to differ more in phraseology than in substance from the analysis of similar writers; but the remarks about the method and sources of psychology are excellent. "All psychological controversies," says the writer, "reduce themselves ultimately to a question of method;" and, as the title of the book implies, it is in self-analysis, self-observation, that the only tenable method is to be found. Observation of what happens to others is meaningless without this reference to self: "instead of basing the knowledge of man's soul upon animal psychology, we must base animal psychology upon the knowledge of the human mind," and, similarly, "the physiology of the nervous system, far from giving us psychological ideas, borrows them itself from consciousness." Consciousness, it need hardly after this be said, occupies the special attention of the writer; and he emphasises in a not altogether novel way the freedom of selection which accompanies consciousness both in our intellectual and our moral life. "It is, then," he concludes, "a paralogism to deny the existence of free-will in the name of natural science, because without it there would be no knowledge of Nature herself." The *ego* similarly is no succession of passing states of consciousness; the very change of states implies a permanent subject as the spectator of the phenomena thus in succession. Old-fashioned metaphysics of this kind will always find a number of sympathetic readers; though we suppose it is rather useless to recommend it to a generation who have been piped to by Bain, Spencer, and Mill. Those, however, who are not indisposed to listen to another way of regarding the universe may find it worth their while to look into Prof. Loomans' work. The writer has evidently kept himself *au courant* with English speculation, and his book generally shows a good deal of philosophical reading. It is to be regretted that the rather effective and appropriate quotations from Plato and Aristotle by which Loomans corroborates his views have been too frequently mangled by the printer of the volume.

PROF. MAYOR'S *Sketch of Ancient Philosophy* (Cambridge Press) is an excellent specimen of the scholarly way in which a wide subject may be treated in a little book. The work is not merely a popular summary of the views of ancient thinkers; every philosopher, from Thales to Cicero, is treated with constant reference to the Greek or Latin originals, and the more important literature on each school or subject is throughout enumerated. The real fault, in fact, which we should be inclined to find with the book is that it contains too much; and, though written by its author for undergraduates as an introduction to ancient thought, we should imagine they would find it much more useful, and appreciate it much better, if they applied themselves to it after reading some simpler and less technical, perhaps even less accurate, work, such as Ferrier's *Greek Philosophy*. At the same time, it must be added,

Mr. Mayor selects his materials with considerable skill. Thus, for instance, instead of trying to give a systematic account of Plato's philosophy (if such a thing be possible), he gives a full and lucid abstract of the *Republic* with some valuable criticism on it, and adds some examples of Plato's dialectical skill and use of allegory; and similarly, in dealing with Aristotle, he devotes some twenty or thirty pages to an analysis of the *Ethica*, leaving his *Logic* and *Metaphysics* very much in the background. An index appended to a second edition would add considerably to the value of the book.

MR. E. O. THOMAS is to be congratulated on the completion of his translation of Lange's *History of Materialism* (Tribner), of which the first volume was published so long ago as 1877. His version is not altogether what we could wish it to have been; but it will probably prove, as we said in noticing the first volume of the work (May 25, 1878), a convenient substitute for the original to those unable to read it in German. The translator has taken too little pains to reproduce in idiomatic English what Lange wrote in idiomatic German; and many a reader may be frightened by the following sentence taken from the opening page:—

"It is rather the very point which subjects the ancient ideas to the first decisive modification, from which that idea of the origin of the universe was developed, which, despite its hypothetical character, even yet has the utmost importance."

It must be said, however, that this is a decidedly unfavourable specimen of the translator's work, and many other errors which we had noted might have been avoided had some Englishman read through his proofs without reference to the original text at all. We should then probably not have heard that Fortlege "created" (*schuf*) two thick volumes, or be asked to reconcile ourselves to an "unjoyous" fact. Some other phrases are not so easily put right. We hardly understood this sentence (p. 162)—

"It is true that even able men have begun their investigations with a section 'of the nature of the soul;' but it was merely a reaction of the scholastic metaphysics when they imagined they could thus gain a firm basis for their investigations"—

till, on turning to the original, we found that "reaction" was intended to represent *Nachwirkung*. So, again, on p. 28, Lange is made to say that in science the division between experiment and criticism of experiment is perfectly "safe," where the German gives *zuletzt*. Instances of like misrenderings might be easily collected, but it is better to recall ourselves to the positive qualities of Mr. Thomas' work. Englishmen have now an opportunity of making acquaintance with a really considerable book—a book which, as we tried to show in noticing the first volume, is wanting in any clear standpoint from which to estimate Materialism, but yet remains a brilliant sketch and suggestive criticism of materialistic theories. The concluding volume of the English translation, dealing as it does with Darwinism, physiological psychology, and the moral and religious questions which they raise, is especially full of interest.

CORRESPONDENCE.

DR. BÜHLER'S SANSKRIT GRAMMAR.

Oxford: Nov. 18, 1882.

You have probably observed yourself the misprint in the announcement in to-day's ACADEMY that Dr. Bühler is bringing out some treatises on Sanskrit grammar at Vienna. "Dr. Bühler" is meant for my learned friend Dr. Bühler, C.I.E., now professor in the Imperial University at Vienna. I believe the ACADEMY has on several occasions referred to Prof. Bühler's great success as a teacher of

Sanskrit. As many as a hundred students are said to have attended his elementary grammatical course. It was for the benefit of these pupils, many of whom wished to learn so much only of Sanskrit as was necessary for a scholarly study of comparative philology and mythology, that Prof. Bühler has published his *Leitfaden für den Elementarcursus des Sanskrit* (Wien, 1883); while his colleague, Dr. Hultsch, has edited the *Glossar zum Bombay Departmental Third Book of Sanskrit* (Wien, 1882). It has been said that there is an air of Ollendorf about these grammatical treatises, and this may arouse at first a certain prejudice against them. But Prof. Bühler assures us that both in Bombay and at Vienna this system of teaching the elements of Sanskrit has proved successful; and, if so, it is to be wished that we should have an English translation of his grammatical manuals. They are in principle like Ram Krishna Gopal Bhandarkar's grammars, published at Bombay, but they contain several important improvements; and, so far as I have been able to judge, they are not disfigured by any ungrammatical forms.

F. MAX MÜLLER.

NOTES OF TRAVEL.

THE Ordnance survey of Scotland has now been completed, after thirty-seven years' work, though all the maps have not yet left the engraver's hands. The towns are done on the scale of five feet, and in some cases ten feet, to the mile; the greater part of the country on the scale of 1:2,500, or about twenty-five inches to the mile; and the uncultivated Highlands and Western Isles (together with a few of the Lowland counties where the survey was finished early) on the scale of six inches to the mile. Of all these the maps have already appeared. All that remains to issue is some sheets of the general one-inch map. The surveying staff, under Capt. Kirkwood, R.E., will now be transferred from Edinburgh to the West of England.

A RUSSIAN expedition to Central Africa is to start next spring, under the charge of M. Scholz-Ragozinski. The expedition will sail from Havre, where the ship is to winter, for Port Clarence, on the island of Fernando Po. It is proposed to acquire land near the Gulf of Cameroon, where a plantation would be established which would also serve as a meteorological station. M. Scholz-Ragozinski's object is to penetrate as far inland as Lake Liba.

SCIENCE NOTES.

THE Council of the British Association for the Advancement of Science have nominated Mr. A. G. Vernon Harcourt to the office of general secretary, in the room of the late Prof. F. M. Balfour.

M. PRÉTREMENT, who has just published (Paris: Baillière) an important work upon the horse in prehistoric and historical times, contributes to the current number of the *Revue scientifique* an article upon "The Origin of the Donkey."

PHILOLOGY NOTES.

THE Pali Text Society, the starting of which was announced last year in the ACADEMY, has had an unexpected measure of success, several donors having come forward, in addition to seventy-five subscribers from Ceylon, mostly Buddhist Bhikkhus, and an equal number of subscribers among the Orientalists and university and other libraries in Europe and America. The publications of the first year, which are due, and will be ready at Christmas, will include the Eka- and Duka-Nipātas of the

Anguttara, and the whole of the Buddhavansa, and of the Cariyā Piṭaka (edited by Dr. Morris), the Ayāraṅga Sutta (edited by Prof. Jacobi, of Münster), and a paper by Dr. Rhys Davids.

WE are glad to hear that M. Stanislas Guyard has been appointed deputy-professor of Arabic at the Collège de France.

THE *Euskal-erria* of November 10 informs us that a Chair of Catalan Grammar has lately been established at Barcelona.

AT a recent meeting of the Académie des Inscriptions, M. de Vogüé read a paper upon the Aramaean text of the bilingual inscription recently found at Palmyra by Prince Lazareff. The corresponding Greek text had been previously discussed by M. Waddington. Unfortunately, both texts are greatly mutilated, and in corresponding passages, so that one does not supply the deficiencies of the other. The inscription consists of a decree of the Senate of Palmyra, fixing a supplementary tariff of dues upon merchandise, in view of disputes that had arisen. It is dated 8 Nisan 448 (135 A.D.), and gives the names of the president and secretary of the Senate, and of the archon, with the genealogies of each.

DR. B. GÜTERBOCK will shortly publish, with Hirzel, of Leipzig, a work entitled *Irische Lehnwörter*.

UNDER the title of *Islandsk Aeventyri* (Halle: Waisenhaus) Dr. H. Gering has published the first volume of a work upon the mediæval tales and legends of Iceland preserved in MSS. in the national library at Copenhagen. This volume contains the texts only; a second will give the general results of Dr. Gering's researches and a glossary.

THE last volume of the "Altfranzösische Bibliothek" (Heilbronn: Henninger) contains the Old-French romance of *Octavian*, published for the first time from the MS. in the Bodleian (Hatton 100) by Dr. K. Vollmöller.

MEETINGS OF SOCIETIES.

NEW SHAKSPEARE SOCIETY.—(Friday, Nov. 10.)

THE REV. W. A. HARRISON in the Chair.—A paper by Miss Teena Roehfort-Smith, the editress of the society's four-text edition of "Hamlet," on "The Relation of the First Quarto of 'Hamlet' to the Second, and on Some of the Textual Difficulties of the Play," was read by Mr. Furnivall. Miss Roehfort-Smith said that, in order to form an independent opinion on the relation of the two Quartos, she had, before looking at any commentator, read first the First Quarto and afterwards the Second; had then compared the two together line by line; and, lastly, had read the commentators. Her strong opinion was that the First Quarto was Shakspeare's "first sketch" of his great play. She noted the changes of the names of Corambis and Montano to Polonius and Reynaldo; the vital ones of the anti-Clown speech, with its plainly genuine "cinkapace of iasts," "the warme Clowne cannot make a iest vaille by chance;" the confidential scene between the Queen and Horatio, not reproduced in Quarto 2—which the writer contended was Shakspeare's work misreported—and other smaller points; and then passed on to the changes in the characters of the Queen and Ophelia, which had so struck her as a woman. Comparing the characters in the two Quartos—in the course of which Miss Roehfort-Smith developed a very sharp attack on Ophelia, whose thwarted love she declared to be disappointed vanity more than anything else, and whom she termed a disgrace to her sex—the writer contended that the alterations and improvements in Quarto 2 proved a re-working of these characters by Shakspeare. The like conclusion must be drawn from the re-worked Hamlet, Laertes, &c.; and therefore, in the matter of text, Quarto 1 could be used only to show the history of any doubtful phrase or word, like "sallied fleas," and to correct any miscopying in Quarto 2. The relation of Folio 1 to Quarto 2 was, in the main, settled by Dr. Tanager in the last

part of the society's *Transactions*. Its copier had preserved several genuine passages of the play left out by the copier or printer of Quarto 2; but its text had been touched up and altered by the players, whether Heminge and Condell, or others of Burbage's company. The only safe rule for an editor was, to take Quarto 2 as his foundation-text, and not depart from it except in case of plain mistake or omission. Specially in the cases of unexpected and archaic words and phrases would players' alterations be certain, as Mr. Furnivall had shown was the case in "Troilus and Cressida" and "Much Ado." Passing, then, to "textual difficulties," Miss Rochfort-Smith dealt with (a) l. i. 116, 117, between which she proposed to insert the line "While in the Heavens above were signs beheld," or "In Heaven above were dread portents;" (b) with l. ii. 129, where she insisted on retaining "sallied" in the sense of assaulted, harassed "by the slings and arrows of outrageous fortune;" she contended that the "griev'd and sallied" of Quarto 1 proved that "solid" could not have been the original reading, as it could not have been joined with "griev'd," while the same "griev'd" showed that "flesh" stood for the whole being, and not only the materials of the body. Mr. Harrison well paralleled the phrase by the "Romeo and Juliet" "shake the yoke of inauspicious stars From this world-weary'd flesh;" (c) with l. iii. 74, "Ar of a most felect and generous chiefe in that," where she retained "chiefe" = eminence, on the strength of Prof. Taylor Thom's citation from George Ornamer's "chiefety of dominion" in Earle's *Philology*; (d) with l. iv. 36-38, "the dram of eale" lines, which she declined to alter, seeing that "devil" was twice spelt "deale" in l. ii. 628, "May be a deale, and the deale hath power," and that "doth" means "puts;" (e) with three cases of Quarto 2's archaisms modernised in Folio 1: "for to drinke," l. ii. 175, "for to prevent," l. ii. 175; "an auspicious and a dropping eye," in which she declined to follow the Folio changes; (f) with a mis-copied "foule" as "fonde" in Quarto 2, l. ii. 273, in which she gladly accepted the right copying of the Folio; (g) with the Folio change of Quarto 2's "Speake to it, Horatio," into "Question it, Horatio," l. i. 46, which she refused to adopt, on the ground that Marcellus's repetition of his first phrase was far more natural in his excited state than the *littérateur's* avoidance of the recurrence of that phrase. *Prima facie*, it was Shakspeare who had altered the "Question it" of Quarto 1 to the "Speake to it" of his recast play in Quarto 2. The change back to the Quarto 1 "Question it" was exactly such a one as an actor-emender would make. Other difficulties were dealt with.—A complimentary speech from the chairman followed, with a discussion, by a full meeting, of Miss Rochfort-Smith's main points.

ANTHROPOLOGICAL INSTITUTE.—(Tuesday, Nov. 14.)

HYDE CLARKE, Esq., V.-P., in the Chair.—Mr. R. W. Felkin introduced a Darfur boy who was rescued from slavery and brought to England by him in 1879.—Mr. Francis Galton exhibited a box like a backgammon board, containing trays of weights that he had arranged for testing the delicacy of the muscular sense in different persons. A sequence of small weights were employed, numbered in succession 1, 2, 3, &c., that differed by *equally perceptible differences* as calculated by Weber's law. Consequently, if a person, A., could just distinguish between, say, 1 and 3, he could also distinguish between any two weights two grades apart, as 2 and 4, 3 and 5, &c. Again, if another person, B., has twice the obtuseness of A., he would be able to distinguish only one grade where A. could distinguish two; therefore he would just be able to distinguish between 1 and 5, 2 and 6, and so on. Generally the number of grades between the weights that any person can distinguish has to be found by trial, and that number becomes the measure of the coarseness of his sensitivity. The weights used were blank cartridges filled with shots and wadding, care being taken that the shots were distributed equally; they were arranged in trays, each holding a sequence of three. The person who was tested had to arrange the cartridges in the tray that was handed to him, in the order of their weight. Some provisional results were mentioned—namely, that men had on the whole

more delicacy of discrimination than women, and intellectually able men more than others. Also that highly and morbidly sensitive women were not remarkable for their powers of discrimination. It is generally supposed that the blind have greater powers in this respect than other people; but Mr. Galton did not find this to be the case with a number of blind boys examined by him.—A discussion followed, in which Prof. Oroom Robertson, Dr. Camps, Mr. Sully, Dr. Mortimer Granville, Dr. Mahomed, Mr. C. Roberts, Prof. Thane, and others took part.

FINE ART.

DAVILLIER'S BEGINNINGS OF PORCELAIN IN EUROPE.

Les Origines de la Porcelaine en Europe.

Par M. le baron Davillier. (Paris: J. Rouam; London: Remington.)

To all lovers of pottery and porcelain, not less than to students of ceramic history, this handsome quarto will be very interesting. The gradual development in the art of fabricating fictile wares—from the rude hand-formed and half-baked urn of clay to the richest vases of *pâte tendre* Sèvres, and the graceful groups of Marcolini Dresden and of Chelsea, the classic elegance of Wedgwood's varied productions, or the marvels of Chinese taste and ingenuity—is a subject not merely for the specialist, but for the art student, the antiquary, and the historian. The classification of these curious and beautiful productions has become a science in its way, their grouping into classes and families assuming almost Linnæan definition. But it is difficult to define accurately even the two great divisions of pottery and porcelain and to separate them by a sharp line. The finer Persian ware of highly siliceous paste covered by a glass glaze becomes translucent under a stronger firing, and almost rises to the rank of an artificial porcelain; while a thicker vessel of the same composition, more lightly baked, remains of the earth earthy, though lovely of its kind. Between this ware of transitional character and the true hard paste kaolinic porcelain of China are to be ranged the many varieties of artificial composite pastes, the result of experiments in various countries and at various times. The stimulus to these experiments was undoubtedly consequent upon the importation from the extreme East of a few much-prized specimens of true Chinese porcelain.

In the earlier part of this volume, the author dwells upon the recorded facts of the early manufacture of true porcelain by the Chinese, and with much research enquires into the history of its introduction into Europe. He argues that it was in all probability known to the Romans, and would seem to accept M. de Laborde's (as we thought exploded) theory that it was the real Murhina mentioned by Pliny, &c. He refers to recorded pieces, publishing extracts from inventories as early as 1171. In 1487, Lorenzo de' Medici received porcelain vases as a present from the Egyptian Sultan; and, later, Pierre Belon (1553) mentions "Vaisseaux de porcelaine que l'on vend au Caire." That some true Chinese porcelain was so imported, probably through India and the Red Sea, and sold in Egypt, is probable, as we know that in that year Saladin sent forty pieces to Nur-ed-din; but

we are disposed to question whether a larger portion of this so-called "porcelain" may not rather have been of Persian or Syrian origin. Throughout Syria, Egypt, and Asia Minor, fragments of these and kindred wares are constantly unearthed at considerable depth in excavations; but Chinese porcelain is but rarely found, the small bottles from Egyptian tombs notwithstanding.

The word "porcelain" has been so variously used that a wide margin must be allowed to include all that it signifies beyond the true "china." This would apply particularly to many of the objects stated to be of that material, which are specified in the interesting and valuable inventories extending from 1363 to the seventeenth century, many of which are printed for the first time in this volume. Certain works in shell or mother-of-pearl were sometimes so designated; the finer kinds of maiolica, as we learn from Piccol Passo, and wares with pearly lustre, made in Italy, were so called; the fine and lustrous wares produced in Persia, and those which in Walpole's time seem to have been known as Gombrown ware—those lovely bowls of tender creamy white, the sides pierced with holes filled in by the rich vitreous glaze—would have a more authentic claim. The finer qualities of Damascus and Rhodian pottery were doubtless also included under that very general term. That Chinese porcelain was well known and prized by the Venetians in the fifteenth century finds additional proof from the fact that, according to Padre Guglielmo da Bologna, writing from Venice in 1470, an alchemist, one Maestro Antonio, had succeeded in making an imitation thereof, of which he sends specimens to his correspondent. At p. 15 a figure is given of the piece of blue-and-white china in the South Kensington Museum, mounted in silver, bearing the "kall mark" (*sic*) of 1585. Jugs of Rhodian or Damascus ware, similarly mounted and of approximate date, are also known.

In Italy, where the many workers in maiolica at various localities had produced enamelled pottery of the greatest artistic beauty upon a comparatively coarse material, the Chinese wares, so immeasurably superior in technical qualities of paste and glaze, were highly appreciated, and their imitation became the ambition of all who interested themselves in ceramic art. Our old friends of the "blue and white" were the models, and artists of Venice, Ferrara, and Florence were forward in the experimental search. The history of these experiments is pleasantly told by Baron Davillier, with much new documentary evidence proving that Italy was first in producing a European porcelain. In 1504 some pieces of "porcellana contrafacta" were purchased at, and forwarded from, Venice to the Esté; and in 1518 one Leonardo Peringer stated, in a petition, that he has discovered a mode of making "ogni sorte di porzelane." In May 1519 other pieces are sent to Ferrara by the ambassador Jacopo Tebaldo; and some years later, about 1565, Alfonso II. encouraged the experiments, seemingly successful, of the artists Camillo and Battista da Urbino in the same city. In 1578 a pension is recorded in favour of the widow of Battista de' Gatti, "maestro delle porcellane di sua Altezza."

It is remarkable that, notwithstanding the records of these experiments, and the statements of contemporary writers of the sixteenth century, such as Vasari and Aldrovini, the knowledge that an artificial porcelain had been produced in Italy, and particularly at Florence, has only been brought to light within the last quarter-of-a-century. The accident that a piece of an unknown ware, observed in the studio of our well-known countryman Mr. Spence, and keenly examined by the critical eye of Dr. Foresi, at Florence, in 1857 (and by prompt reference, the confirmation of the suspicions it aroused) revealed the fact that specimens still existed of those experimental pieces produced in the furnaces established by Duke Francesco de' Medici at his Casino. From time to time enquiry brought to light some few other pieces which had rested unregarded and unknown in the presses and cabinets of Florentine palaces and villas, but some thirty-four or thirty-five complete the catalogue of all hitherto discovered. A detailed descriptive list with figures of twenty-five of these pieces, and of the marks and armorials with which some are distinguished, forms one of the main features of Baron Davillier's work; but, if the present writer's memory does not deceive him, one charming example is not included in the list—viz., a small *aiguïère* of oenochœ form, about the size of that figured at p. 81, and of similar fine quality and mark, which formerly belonged to the Baron de Monville, from whom the writer vainly endeavoured to coax it years ago.

The Grand Ducal crown and *palle* of the Medici occur on but few of the examples. Some have no mark at all, and one curious trial piece is inscribed with the word *PROVA*; while the greater number bear, painted in blue, the dome of the cathedral—Brunelleschi's dome—beneath which is the letter F, the initial of Francesco or of Firenze. The decoration, in all but one rare instance, is in blue or dull lilac on the grayish white ground of more or less purity, consisting in some cases of grotesques in the Urbino manner, but, for the most part, of flowers and foliation in Persian taste, mixed with ornamentation of the Italian *cinquecento*, which strongly characterises the forms of all the pieces. One only bears a date, 1581. The recipe for the composition of the paste and glaze preserved in MSS. is given in full detail.

According to Targioni Tozzetti, the experiments at Florence were commenced by the Grand Duke Cosmo, and the production brought to perfection by "Piermaria detto il Faentino delle porcelane," working for Cosmo's son, Francesco de' Medici; but it was only continued for a short time by reason of the scarcity of material. The difficulty and consequent expense of the manufacture was probably another reason for its abandonment, for Andrea Gussoni tells us that thousands of pieces failed, and few succeeded. This is borne out by the malformation or imperfection in the colouring of the greater number of the pieces now known to us.

Of the "*porcellana contrafacta*" made at Venice, none is now known; neither do we know the results of experiments made by Bernardo Buontalenti at Pratolino; nor those

of Ciarfuglia at Pesaro, or of Jacopo del Pellicciaio, who afterwards entered the service of the Duke of Ferrara (one Francesco Guagni of Urbino also made trial at the Court of Emanuel Philliberto of Savoy); nor can we recognise any of the pieces made by Camillo at Ferrara. Two precious cups described among the exceptional pieces, which we well recollect wondering over at the loan exhibition at South Kensington in 1862 (Nos. 7901, 7902), may possibly be Ferrarese; their gilt-silver covers are of contemporary workmanship.

The production at Florence must, however, have been considerable when at its best, for in 1584 we find, by another hitherto unpublished document, an order from one of the Cornaro family of Venice to the Grand Duke's master potters for twenty pieces of porcelain, ten of which were subsequently forwarded. Further record of the Medici works at the Casino are wanting. Francesco died in 1587, and was succeeded by his nephew, Cosmo II., whose favour one Nicolò Sisti supplicates in 1620 as the Faentine artist whom Francesco had brought to make maiolica and porcelain at Florence and subsequently at Pisa. In 1613, at a *fête* given at the Pitti Palace, entrance-tickets were made of *porcellana* bearing the Medici arms. But these documents do not prove that the production of porcelain was continued at Pisa; although, after, or even prior to, the death of Francesco, pottery furnaces may have been established there, and Nicolò seems to have had a *bottega* at this city on his own account. Cosmo II. died in 1621, and with him ends the history of the Medici porcelain.

Of the interesting little bowl figured at pp. 122, 123, and dated 1638, which the Baron thinks may probably be of Pisan production, we are inclined to think, after a careful examination, that, although somewhat translucent, the body is a fine, close, and very thin *terraglia*, saturated by the glaze, rather than an artificial porcelain. In this opinion we are supported by M. E. Piot and other learned connoisseurs. To the sight, this glaze has great resemblance to that used upon the Medici ware. The style of decoration, imitating that of the Rhodian pottery, agrees rather with certain Italian maiolica of a later period, some pieces of which bear the inscription "Candiana," and one is dated 1637. These are supposed to be of Paduan or Venetian manufacture; and the cross upon the little bowl is further suggestive, as that emblem is found upon wares made at both those cities.

This quarto is an important addition to the literature of ceramics, and is amply illustrated. Some of the cuts are, however, badly printed with the text; and it is to be regretted that the admirable etching by the late Jules Jacquemart, of the grand *brocca* belonging to Baron Gustave de Rothschild (No. 28), which was published in the *Gazette des Beaux-Arts* (t. iv., liv. 23), has not been secured as a frontispiece to the volume.

C. D. E. FORNUM.

CORRESPONDENCE.

PROF. JEBB ON THE RUINS OF TROY.

The College, Glasgow: Nov. 22, 1882.

I have to-day seen a letter from Prof. A. H. Sayce in the *ACADEMY* of November 18. My friend Prof. Goodwin, who is now at Athens, might naturally express surprise at the report in the *ACADEMY*, since, as quoted by Prof. Sayce, it does not correctly represent what I said. An accurate summary of the paper was communicated by the secretary of the Hellenic Society to the *Athenæum*; and the paper itself will be published in full in the next number of the Hellenic Society's *Journal*. So far as it relates to Hissarlik, it embodies the substance of a statement which I read at Assos, on September 27, 1882, to Prof. Goodwin, Mr. Calvert, and Mr. J. T. Clarke, and in which they concurred.

The details of a personal nature relative to my tour which Prof. Sayce has endeavoured to collect are irrelevant; but they are also incorrect. The party included other members besides those whom Prof. Sayce names. There were no "Turkish gendarmes;" and Dr. Schliemann, who is quoted about them, was not in the Troad.

R. C. JEBB.

NOTES ON ART AND ARCHAEOLOGY.

MRS. MARK PATTISON hopes to have ready early next year the monograph on Claude which she is writing—in French—for the "*Bibliothèque internationale de l'Art*." It will have a considerable number of illustrations. An early number of the *Magazine of Art* will also have an illustrated article by her on "Edward Poynter, R.A.;" and not a little of her best work is given to the lives of French artists in the *Encyclopædia Britannica*, of which "François Millet" is the most lengthy, and perhaps the most important, that will appear in the next volume.

THE publication by the Fine Art Society of Mr. Frederick Wedmore's *Four Masters of Etching* has been delayed in consequence of the temporary loss of an important copper-plate destined for an illustration.

A SERIES of articles on the coins of different nations will be published in the *Antiquary* during next year. The contributors are for the most part members of the British Museum staff, including Messrs. R. Stuart Poole, Barclay V. Head, H. A. Grueber, C. F. Keary, Percy Gardner, and Stanley Lane-Poole.

THE Bursar of Brasenose College, Oxford (Mr. A. J. Butler), has just made the interesting discovery that the two chalices and their patens belonging to the college, hitherto thought to be modern, are really of pre-Reformation work. The chalices are both of the same type as the Nettlecombe chalice published by Mr. Cripps in his work on old English plate. Their hall-mark appears to be of the year 1502. These, with the chalice lately discovered by Mr. Ferguson in the diocese of Carlisle, and that at Little Farringdon, Oxon, bring the known number of existing English pre-Reformation chalices up to about sixteen. No doubt others exist, and will come to light when Mr. Ferguson's excellent example of cataloguing the church plate in each diocese is extended to all parts of England.

A PICTURE (or, more strictly speaking, perhaps, a part of a picture) of much beauty and some importance has lately been secured for the Uffizi, at the moderate price of 12,000 lire. At the bottom of a hill which occupies the background, and down the side of which winds a river or a road (more probably the latter, we think), stand a group of persons, assembled for some important event, the nature of which is at present obscure. An ecclesiastic

in richly brocaded robes is the principal figure. He appears to be guarded by soldiers, who stand on either side of him, holding halberds. About him are several figures, one of dark complexion, probably intended for a Moor; another is a veritable Negro. A personage of importance in a dark robe lined with yellow is whispering in the ear of the ecclesiastic. In front of the principal figures, and stretching across the picture, is a heavy beam of wood. As this is resting on its edge, and rises slightly towards the left, it suggests itself to be part of a cross, the transverse beam of which is not seen. On it is seated a man, whose feet are lost in a hole in the ground. He appears to be looking backward towards the ecclesiastic with an expression of malicious mirth. A possible explanation of the picture is that the ecclesiastic is about to be crucified, and the hollow in which the sitting figure's feet are lost is the hole which has been dug for the cross. This would account for the attitude and expression of this figure, who, like a Jack Ketch astride his gallows, seems to regard his victim with professional mirth. The drawing of all the figures is excellent, and the colour very rich and luminous. There seems to be little doubt that this well-preserved and beautiful work is by Carpaccio, an artist hitherto unrepresented in the famous royal gallery at Florence.

In continuation of our note last week about M. Lenormant's archaeological tour in Southern Italy, we may add that he examined the Via Aquilia along its entire length; that he ascertained that the *Ponte di Silla*, usually assigned to the Romans, has pointed arches, and is really the work of the later Normans, or perhaps of the Hohenstaufen; that he discovered the site of Consilium, hitherto absolutely unknown; and that he explored the ruins of Velia, which he describes as "the most important and the best preserved in Southern Italy—equal to those of Gnathia and only surpassed by those of Paestum."

We cannot congratulate the inhabitants of Bedford Park upon the album of chromo-lithographs illustrating their aesthetic retreat which Messrs. Harrison and Sons have published. The chromo-lithographs are nine in number, by as many different artists, under the general direction of Mr. T. Erat Harrison, who has himself contributed one to the series. As a record of architecture only can they be said to have an interest; of the trees, the horses, and the human creatures the less said the better. Mr. J. C. Dollman, however, knows how to draw donkeys and dogs.

YET more Christmas cards! Messrs. S. Hildesheimer and Co. have sent us a bountiful selection of their reproductions of those prize designs which were exhibited in the Egyptian Hall last July. They have been printed by Herr W. Hagelberg, of Berlin; and, on the whole, very well printed. Among the designs, flowers greatly predominate. Some of these are extremely handsome, being marked by more richness of colour and softness of outline than we have seen elsewhere. The figure designs, though few, are also above the average. Both the photographs and the etchings are on too small a scale, and are chiefly remarkable as *tours de force*. The characteristic of Messrs. S. Hildesheimer's cards is that they are produced in so many styles—embossed, on satin, with silken fringes, and with folding mounts. The printing on satin has been most artistically executed. We have seen nothing finer this year.

WITH the part of *Art and Letters* for October concluded, we fear, an interesting series of papers upon modern landscape, which deserves more than the passing notice which we are able to give to it here. The authorship of these

eloquent essays is placed beyond doubt by the announcement of their approaching appearance in the form of a book. They are written by Mr. J. Comyns Carr, who may be congratulated upon the successful completion of the first volume of *Art and Letters* and the vigorous commencement of the second. Even in these days of enterprise in art publications, *Art and Letters* is a marvel of cheapness and beauty.

THE distinguished French sculptor Gustave Ocranck, whose name, we see, is first in the list of candidates for the Chair of the late M. Jouffroy, has just finished his fine monument to Admiral de Coligny. It consists of a statue of Coligny supported by his Country and Religion, standing on a pedestal ornamented with bas-reliefs.

THE works employed in casting M. Bartholdi's gigantic statue of "Liberty" have been thrown open to the public on Thursdays and Sundays. Artists, students, and subscribers are admitted free, but other visitors are required either to subscribe a small sum or to purchase one of the engravings of the monument which are sold at the gates.

THE November exhibition of the Künstlerverein in Berlin is said to be unusually rich in historical or, as the Germans sometimes call them, "monumental" pictures. Anton von Werner has a painting of Luther's appearance before the Reichstag. R. Böhn exhibits a "Thrusnelda," crowded with figures, in which every detail is founded upon conscientious archaeological study of primitive German life. Hermann von Kaulbach, the son of the renowned Wilhelm von Kaulbach, sends a picture the subject of which might have been suggested by his polemical father—Lucretia Borgia dancing before her father, Alexander VI., her brother, Caesar Borgia, and a number of courtiers.

AMONG several admirable photographs recently published in the *Great Historic Galleries* are Van Dyck's portrait of Snijders from Castle Howard, and Lely's portrait of the good and lovely Elizabeth Hamilton, who married the notorious Chevalier de Grammont.

THE twelfth part of *American Etchings* contains a pretty, well-finished view of "A Roadway near Nyaack Turnpike," by J. Henry Hill. The letterpress is made unusually interesting by a characteristic letter of advice from Mr. Ruskin, dated Brantwood, March 26, 1879, which concludes with the following words:—

"Take small sketch-books, always choose subjects with some human interest in them, abbey, or castle, or village. Finish every drawing from corner to corner—don't go blotting or scrawling, and charge low prices, and you will soon make an easy, honestly useful, and pleasant living."

Mr. Ruskin is said to think highly of two of Mr. Hill's etchings after Turner—viz., "Bacharach" and "St. Maurice." Mr. Hill is now engaged in making etchings from the works of his father, Mr. J. W. Hill, who was an American follower of the "pre-Raphaelite" school. These etchings are to illustrate a biography of Mr. J. W. Hill which is about to be published in America.

THE first of the illustrated Christmas Annuals to reach us is *Yule Tide*, which is published by Messrs. Letts. The stories given seem quite up to the standard of such productions; but we cannot admire the pictures illustrating the "Seven Ages of Man." However, the presentation-plate is a first-rate example of colour-printing.

It is wonderful how *L'Art* manages to provide every week fresh subjects of interest. Last week the continuation of Ernest Chesneau's appreciative criticism of Madox Brown and a description of the monument to Victor Emmanuel occupied the text; while a very skilful etching

by Ramus, from an amusing picture of modern society by J. Beraud, supplied the large illustration. This week all has changed; and we are given one of Amand Durand's magnificent reproductions of Lucas van Leyden's print of "David playing before Saul." Lovers of Lucas van Leyden will think the number worth obtaining for this alone. It illustrates an interesting article on the master by Prof. Colvin.

THE *Gazette des Beaux-Arts* is again chiefly occupied this month with the retrospective exhibition of the Union centrale. M. Ephrussi contributes a short but appreciative notice of the late Clement de Ris; M. Blondel finishes his study of "Modellers in Wax;" M. H. Jouin describes the old brick cathedral of Albi; and M. Plon gives the history of a crucifix by Benvenuto Cellini, which is engraved by Le Rat. The other etching of the number is also by Le Rat, after Meissonnier's "La Vedette."

AMONG forthcoming Christmas books, the following are promised by the Librairie de l'Art:—*Paris pittoresque*, by M. de Champeaux, with ten etchings by Lucien Gautier; *A travers Venise*, by M. Jules Gourdault, with thirteen etchings; and *Artistes anglais contemporains*, by M. Ernest Chesneau, with thirteen etchings. The same house publishes *Le Livre de Fortune*, a collection of two hundred unpublished drawings of Jean Cousin, from MSS. in the Library of the Institute, by M. Ludovic Lalanne.

M. QUANTIN is doing for old Paris what a society is doing among us for the relics of old London. He has just published François de Belleforest's map, with an Introduction and Notes by l'abbé Valentin Dufour.

M. AMAND-DURAND has reproduced in 174 plates the complete engraved work of Lucas van Leyden. The accompanying text is by M. Georges Duplessis.

AT a recent meeting of the Académie des Inscriptions, M. Hamy, Keeper of the Trocadéro museum, read a paper upon the stone cross brought back from Teotihuacan, near the city of Mexico, by Dr. Charnay. This monument is about four feet high, being a thick-set cross, with a relief on one of its faces twisted into the shape of a blunted Greek cross; on the base are four cones in relief. This is really the emblem of Tlaloc, god of storm and rain, and the oldest of Mexican divinities. It was the large number of these crosses found by the Spanish invaders that gave rise to the notion that St. Thomas had once preached in Mexico. The saint, again, was readily identified with Quetzalcoatl, the founder of Toltec civilisation.

AN exhibition of Japanese art is now open in Berlin. It is chiefly formed of the celebrated collection of Prof. Gierke, of Breslau. We are now well used to Japanese art in England, but in Berlin it is still somewhat of a novelty; and this exhibition, the first that has been opened there, excites great interest.

THE STAGE.

WE shall speak in something of detail, on the earliest occasion, of the new play by Messrs. Jones and H. Hermann at the Princess's—a piece remarkable in its own kind, and a distinguished success. To-day we say a few words only on the new piece at the Adelphi, written by Mr. Charles Reade in collaboration with Mr. Pettitt—English dramatists, it now seems, have learned to the full, from the French, the value of collaboration. The melodramatic element is not absent from Mr. Reade's novels, and "Love and Money" is a robust melodrama. The plot is intricate, yet it is clearly set forth; and, if in the characters there is little originality, the story interests, and the manner of its exposition carries conviction to the naïve breast. Mr.

Reade's writing is forcible; his brain is fertile in the invention of hair-breadth 'scapes. Much of the responsibility of the performance rests upon Mr. Clynds, now an accepted actor of melodrama. Mr. Proctor plays well the secondary character of a revengeful miner; Mr. Ryder assumes a military rôle with discretion and dignity. The part of the heroine falls to the lot of Miss Amy Roselle, whom the theatrical world recognises as one of our most capable actresses, with gifts alike of comedy and pathos. But it is not in such a character as that of Mary Hope that the lady is really seen at her best. "Love and Money" pleases the great public, and has every prospect of a run.

At the Court Theatre, which re-opened a few days ago, Mr. Godfrey's "Parvenu," continuing its successful career of last season, remains prominently in the bill. It is supplemented, however, by a comedietta, interpreted by Mr. Arthur Cecil and Miss Carlotta Addison, and familiar already to a good many readers, albeit new to the stage. This is "Picking up the Pieces," one of the little dramas in a book by Mr. Julian Sturgis which has been well received. But "Picking up the Pieces" is somehow a fragile thing at the theatre. It has several negative virtues; few positive. Still, it is written daintily and discreetly, and is to be commended as an effort to interest the public for half-an-hour in pathos which is not maudlin, and in comedy which is not farce.

MESSRS. SAMPSON Low have lately sent us *The English Dramatists of To-day*, by William Archer. It is one of not a few books of which the appearance betrays the renewed interest which a somewhat cultivated public is now expected to take in the affairs of the theatre; and it is a volume distinctly calculated to extend and to deepen that interest. Most of what has been written lately, in book form at least, on the English stage has been written with reference to the stage of the past; but here is a book of between three and four hundred pages of by no means diffuse writing which concerns itself wholly with modern dramatists. And what a body of men they really are, and how much literature have they produced among that which is not literary at all! Modern dramatists Mr. Archer—who is a very thoughtful, if sometimes too severe, critic—divides into two classes. One of the two he calls "Playwrights of Yesterday;" and under that heading he briefly, yet carefully, discusses T. W. Robertson, and such living men as Dion Boucicault and Charles Reade, who belong to an elder school. The second class—Albery, Gilbert, Byron, Pinero, G. R. Sims, and others—he treats at much greater length, though not always more happily; but to his treatment there always attaches that interest which belongs to work in which the writer himself is clearly and undeniably interested. Mr. Archer imports into his writing the interest that comes of concentrated attention; his "eye is on the object," in the fashionable phrase; and a certain piquancy appertains to his volume by reason of the quotations he makes, whenever he can, from a series of writings which the public knows only from having heard the dialogue on the stage. We could wish that Mr. Gilbert's plays and Mr. Albery's, and some by even younger men, were more read than they are. With all the faults of contemporary dramatists, the public has little conception of how much contemporary dramatists have done that is not hopelessly ephemeral, that is not inevitably mere playwright's task instead of the work of men of literature. Why, many an accepted novel has been furnished with a far scantier supply of excellent things, with characters less sharply defined, with dialogue incomparably duller, than have gone to the making of one drama which the cultivated person mentions with indifference

or with patronising approval, or with no thought for it but that it has amused him for an hour before the footlights. But we cannot forget, on the other hand, that some of the best dramatic work of recent days is not available to the reader; it has never been published—but then it would probably be published if there were a public to ask for it. To return, however, to Mr. Archer and the matter of his book. He places Mr. Albery very high, and on the whole, and especially by certain extracts, justifies the faith that is in him. From "Two Roses" he quotes the really wonderful bit of dialogue in which Digby Grant induces Mrs. Cupps to withdraw her request for the payment of her little bill, and that yet more effective passage in which, after he has become enriched, he keeps his much-esteemed but humble friends at arm's length by the offer of "a little cheque." Another piece of comedy dialogue by Mr. Albery his critic cites approvingly from another and a less-known piece. But here, though Mr. Albery's words may be witty, we are quite unable to allow that they are appropriate. The world in which the funny conversation between Tom and Jennie takes place the very moment after an unexpected return is not a world peopled by the humanity we know. But again, from another play of Mr. Albery's, Mr. Archer cites quite admirable passages, one of which is so poetical as to remind us of the fact that we live in a day when, with the exception of Browning, Tennyson, Swinburne, and Morris, our real poets are chiefly those whose writings are not called "poetry." The most poetical English imagination—the thing that gives poetry its true value—has gone for the most part into the higher criticism and the higher prose fiction. Rarely does it find itself allied with efforts at ingenious verse. Mr. Archer's treatment of Mr. Henry J. Byron seems to us too severe. There is nothing quite so appalling in that Cockney element Mr. Archer protests against as he is disposed to believe; and a critic of larger tolerance—of tolerance even of witty vulgarity—would be a better critic of Mr. Byron. One of Mr. Archer's best chapters is that on the "Dramatists of Yesterday," to which we have briefly referred already. Considering the mass of facts he has to deal with, there is nothing remarkable in an occasional mistake, and we think we notice a mistake in his remarks on "Masks and Faces." He uses the play more than once as an illustration of the defects or the characteristics of Mr. Charles Reade, as if Mr. Charles Reade had done everything in the play, and Mr. Tom Taylor had had no share in it, and, further, as if the play had been written only after Mr. Reade's novel. Now, the play is confessedly the work of the two authors; and, furthermore, Mr. Tom Taylor told the writer of these lines that it was written before the story, and that the story arose out of it. Mr. Archer is dreadfully severe—we grant that he is likewise amusing—about "Never Too Late to Mend." On the whole, he does justice to "Drink," a remarkable piece even when considered quite apart from Mr. Charles Warner's astounding performance of the principal character. Mr. Archer's praise, both of author and player, or adapter and player, is justified. But we must also quote with approval a very penetrating remark that "the total abstinence sermons of Goujet produced the effect of mere anti-climax and bathos. They put into words, and these not very just or logical, what the whole piece put in the terrible logic of action and fact." We have taken occasion to find some fault with Mr. Archer's volume in matters of detail, and likewise for a tone once or twice unduly severe, but it is plain, we trust, that on the whole the volume is to be commended to the reader as dealing sagaciously and shrewdly with a difficult theme.

MUSIC.

RECENT CONCERTS.

On Monday, November 13, the programme at the Popular Concerts included four instrumental works: two of the composers belonging to the classical, and two to the romantic period. Respecting the quartett in D by Mozart, and the so-called "Bird Quartett" by Haydn (op. 33, No. 3), we have only to say that they were most admirably interpreted by M^{me}. Néruda and Messrs. Ries, Hollander, and Piatti. We much doubt whether any quartett novelties of the present day will sound so fresh and beautiful a hundred years hence as do now these masterpieces, written about a century ago. Haydn and Mozart not only prepared the way for Beethoven, but wrote works that will edify and please as long as music continues to be an art. M^{lle}. Janotha chose for her solo Chopin's sonata in B minor (op. 58). The Polish composer wisely kept, as a rule, to works of small form and prescribed rhythm; and in these he excelled. His three pianoforte sonatas, apart from their difficulties, have never been popular. In the sonata form, Chopin is out of his element; he has neither enough to say, nor the right way of saying it. The *scherzo* of op. 58 is, however, very graceful, and the *largo* is full of poetical inspiration. The first and last movements are less attractive, and far more difficult to play. M^{lle}. Janotha's interpretation of the work was excellent, though perhaps at times a little lacking in power. By way of *encore* she gave a most delicate performance of Chopin's "Berceuse." Mr. Harper Kearton sang songs by Mendelssohn and Weber.

On Monday, November 20, came the first important novelty of the season—a quartett in D major by Dvorak for pianoforte, violin, viola, and violoncello. Two chamber works by the Czech composer have already been introduced at these concerts—a quartett and a sextett, both for stringed instruments. The pianoforte quartett belongs to a much earlier period. The vivid nationality stamped upon the works already known to us is here also strongly manifest. The opening *allegro* is full of interest; but though, on a first hearing, by means of short phrases, striking modulations, and peculiar rhythms, the attention of the listener is absorbed, we doubt whether further acquaintance with it would reveal that depth of thought and workmanship which give to certain works their power and long life. In place of a slow movement we have a simple and plaintive melody, with five variations and a short *coda*. The theme is characteristic, and the variations delicate and effective. They are very quaint and fanciful. The composer was wise in not writing too many; there is in them a certain mannerism which, however pleasing, will not bear to be prolonged. The peculiar duel of keys in the fourth variation reminds us of a similar passage in Schubert's impromptu in E flat (op. 90, No. 2). The *finale*, in *rondo* form, is bright and sparkling. How strongly Dvorak is influenced by the songs of his native land and by Schubert's music may be seen all through this quartett. It was admirably performed by Mr. Charles Hallé, M^{me}. Néruda, Herr Straus, and Sig. Piatti. Mr. Hallé played as solo Schubert's sonata in A (posthumous op. 140), and interpreted this long but fine work in his best and most finished style. An extract from a newspaper of 1866 was given in the programme-book, in which it was stated that Mr. Hallé, in playing this sonata, omitted the "repeat" of the first movement, thus depriving his listeners of four bars. Last Monday, however, in spite of the length of the movement, he took the repeat. Some musicians propose to abolish "repeats;" others naturally hesitate, on account of the necessity sometimes incurred, as in this case, of leaving out important bars written by the composer. J. S. SHEDLOCK.

SATURDAY, DECEMBER 2, 1882.

No. 552, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

Cities of Egypt. By Reginald Stuart Poole. (Smith and Elder.)

MEMPHIS, Hanes, Thebes, Zoan, Goshen, Migdol, On, Pi-Beseth, Sin, Alexandria—the selection seems, at first sight, somewhat arbitrary; the nomenclature, somewhat incongruous. Why not Teni, eldest-born of Egyptian capitals, and cradle of the primitive monarchy? Why not Abydos, heir of Teni, and holiest of holy cities? Why not Coptos, Eileithya, Lycopolis, Tel-el-Amarna, Mendes, Saïs, Arsinoë, Syene? And if these are absent, why should Migdol, which was but a frontier-fortress, be ranked among the cities of Egypt? Again, for what reason do the majority of Mr. Poole's capitals appear in Hebrew guise? The book itself answers these questions. We discover in the course of a few pages that the selection is not so arbitrary as it looks; that the method reflects the writer's bent of mind, and fits his purpose. That purpose is not only to sketch the history of a few famous cities of ancient Egypt, but especially to sketch those which play an important part in the Bible. For Mr. Poole writes at least as much from the point of view of the Hebraist and Biblical student as from that of the Egyptologist. Personally acquainted with every site which he so vividly describes, familiar with every phase of its history, whether native, Assyrian, Persian, Greek, Roman, or Christian, the interest of each is for him focussed at that point where it comes into contact with the chronicles of the Hebrew sojourn, the Exodus-narrative, the conquest-lists of Shishak, or the growth of the early Christian Church. Lacking such contact, no capital, however prominent in the religious or civil history of the country, finds a place in his pages. The range of the book is, in fact, narrower than its title. It should have been called *Bible-Cities of Egypt*.

But, if the range of the subject is narrow, its interest is universal. To the general reader, no less than to the specialist, these same Bible-cities are among the most attractive sites in all the land of the Pharaohs. Some of them—Memphis, for instance—belong to every period of Egyptian history, and are interlinked with the annals of all the early monarchies of the East. Faithfully to sketch them in their youth, their prime, their decay, the sketcher needs to be familiar with the history, the arts, the religions, of many lands and many ages. He must be an Egyptologist, a Semitic scholar, a classical scholar, an archaeologist, a traveller. More than this, he must have an artist's eye and a poet's pen

to see and describe the infinite charm of that glowing landscape in which each subject is set. To say that the author of *Cities of Egypt* has every scholarly qualification for his task is only to repeat what all European savants know; but what neither they nor the public will have been prepared for is the picturesqueness of his treatment and the fervour of his style. Nothing in Mr. Poole's former writings indicated these literary gifts. The aridity (not of matter, but manner) and, if I may say so, the want of artistic finish which marked his learned and weighty contributions to the *Contemporary Review* have till now stood in puzzling contrast with his remarkable eloquence as a lecturer. But no trace of such discrepancy mars the pages of the present volume. For once, Mr. Poole has written as he speaks; and this is no ordinary praise.

Whether by chance or design, it so happens—Biblical limitations notwithstanding—that the local history of these selected cities touches nearly every important epoch of the great history of the nation at large. Memphis leads off with Mena and the ancient monarchy; Zoan registers the iron rule of the Hyksos; Goshen calls up the sorrowful figures of the toil-worn Hebrews; Migdol traces the path of their flight; Thebes chronicles the glories of the lines of Ahmes and Rameses; Pi-Beseth (Bubastis) brings us to Shishak, and the first positive synchronism between Egyptian and Hebrew annals; Sin (Pelusium) marks the advent of the Persian; On (Heliopolis) preserves the unbroken tradition of Egyptian learning; and Alexandria celebrates the triumph of Christianity. Graphically, and indeed delightfully, as these many places and events are sketched, Mr. Poole is nevertheless at his best when analysing the systems and creeds of which this last great capital was the centre. Egyptian, Hebrew, Greek, and Christian philosophers meet with equal justice at his hands—majestic, Raphaelian figures, boldly outlined against the splendid background of Museum and Library.

“Alexandria, with her Greek and Hebrew philosophers, early became a centre of Christian thought. Nowhere so much as here did the new religion grow and prosper. Nowhere did she receive so much from older modes of thought. The Platonist saw in Christianity a fuller and clearer embodiment of the noble ideas of his philosophy than could be seen in Judaism; the Hebrew saw in it the extension of the faith of Abraham and the promises to the whole race of man; the Egyptian saw in it the great doctrines of the divine unity and man's future condition, which had only just disappeared from his religion in the shock of its contact with philosophy. The Greek vehicle which gave the expressions of Hebrew thought a definiteness they had hitherto wanted, yet which limited that luminous vagueness which has in it the living principle of development, was of necessity accepted by the Christianity as by the Judaism of Alexandria. But Hebrew thought reacted upon Greek form; the first translations were the work of Hebrews, and the medium was deeply coloured by their use. Thus the Greek of the early Church was not purely Hellenic; rather it was an intermediate mode of expression, retaining somewhat of the old expansiveness, marked by somewhat of the new limitation. Alexandrian speculation was not without a native influence. The Egyptian contributed his love of mystery, and that strong

desire for individual holiness without reference to others, which is the root of asceticism” (pp. 195 et seq.).

This is very well put, and may be taken as a fair sample of the breadth, lucidity, and compactness with which large subjects are treated.

Strongly as I am myself in sympathy with the subject of Mr. Poole's book, there must inevitably be some points upon which our opinions diverge. It is not possible, for instance, that we should agree as to the sites of Pithom and Rameses, by him identified with Heliopolis and Zoan. But upon this question, which for some time past I have been examining in the pages of *Knowledge*, I will not again enter in the columns of the *ACADEMY* (see my letter on “The Site of Raameses,” *ACADEMY*, April 24, 1880). I may, however, venture to point out one or two errors of fact. Mr. Poole is quite wrong, for example, when he states that no ruins of any temple and no “trace of common houses” may be found on the site of Memphis. Mariette not only discovered the foundations of the great temple of Pthah, but also, down by the lake, the ruins of a small temple built by Rameses V.; while, as for the common houses, I myself observed extensive remains of crude-brick foundations, and even portions of walls, of ordinary domestic dwellings in various parts of the mounds. Again, it appears that for the last twenty years or more, Egyptologists have all been in error together as to the etymology of the names of the Bubastite family. Prof. Sayce, with whom I have lately been in correspondence on this subject, assures me that the so-called Assyrian names of the predecessors and successors of Shishak are not Assyrian at all; that no such name as Namurath, Naromath, or Nimrod has ever been found in cuneiform inscriptions; that Takeleth cannot be Tiglath, because not only is Tiglath a somewhat inexact transliteration of *Tuhulti*, but *Tuhulti* is in itself only the first part of a name, signifying “servant of,” the remainder, in the case of Tiglath-Pileser, being “*pal-earra*”—i.e., “the Son of the Firmament;” lastly, that if Osorkon were Sargon, he (Prof. Sayce) does not see how the initial O could be explained. I have Prof. Sayce's permission to quote his opinion on this important point, and for that permission I am glad to take this opportunity of thanking him. If, therefore, Mr. Poole errs in attributing an Assyrian or Babylonian etymology to the names of these Bubastite princes, he at all events errs in company with Birch, Brugsch, and other high authorities.

In *Cities of Egypt*, as in his lectures, Mr. Poole again and again lifts up his voice in earnest advocacy of the cause of Egyptian excavations—a cause of such supreme interest, Biblically, historically, archaeologically, that one marvels how it should need advocating at all. Remembering the enthusiasm excited by the discovery of the Chaldaean Deluge-tablets, one asks with wonder how that enthusiasm is compatible with our indifference to the far more momentous discoveries which await the Egyptian explorer. Of the mounds of Zoan Mr. Poole truly remarks that they “cover a storehouse of historic treasure, almost certainly containing contemporary records of

the sojourn, the oppression, and the exodus of the Hebrews." Such records are more vitally important than all the Deluge legends recently collected, from every quarter of the globe, by F. Lenormant; yet none care to seek for them. The mounds of Heracleopolis (Hanes) yet hold fast the secret of that mysterious chasm which engulfs 436 years of Egyptian history and the events of at least two dynasties. The sites of the cities of Goshen, Xoïs, Daphne, Naukratis, and many more, are perfectly well known; yet, year after year, we abandon them to that process of slow but certain demolition which awaits every ancient mound at the hands of the native agriculturist. "Below the surface," writes Mr. Poole,

"lie the lost books of history, to be taken up and read by whose will. Egypt, the land of history, hides in every mound the imperishable records of the past. To the present belongs the rich inheritance, waiting like a land of promise for the heir, who has only to go in and take possession of this stored-up wealth. Difficulties and dangers there are none to be encountered. The treasure-houses are unguarded by mighty men; no mountains have to be passed on the way. The very ease of the enterprise has discouraged those who have mettle to scale the towering Alps and seek the North Pole across its barriers of icy desert. Yet the reward is far greater than the mere sense of achievement which the other enterprises offer. The story of the oldest civilisation, the far-reaching tradition of science and art, the wanting links in the histories of ancient nations, Egyptians, Chaldeans, Assyrians, Hebrews, and Greeks—such are the buried treasures of these neglected mounds. At the touch of the pick, the people of the past rise like the mighty army of bones which the prophet saw, are clothed again with flesh, and march in their ranks along the ancient lines of primeval history. It is for us to wake them from their long sleep" (pp. 163, 164).

To this I would fain add that it is first of all needful to wake the Bible-loving, church- and chapel-going English people from their long sloth, and to make them see that now, if ever, it is a serious duty, and not a mere archaeological pastime, to contribute funds for the purpose of conducting excavations on a foreign soil. If Mr. Poole's appeal does not move them, nothing will avail. Never was cause pleaded with more eloquence, more force of scholarship, more fervour of conviction. It will be hard indeed if such a book as *Cities of Egypt*—a book which does not contain a dull line from beginning to end—should be read, like a novel, for merely the entertainment it affords, but raise no fruit for the great work which it is mainly written to promote.

AMELIA B. EDWARDS.

Memoir of Annie Keary. By her Sister. (Macmillan.)

READERS of *Castle Daly* and *A Doubting Heart* will have felt a charm about those stories which makes their writer a distinct personality, and ensures a welcome to anything that is to be known about her.

The time has come in literature when it is no longer necessary to offer excuses for the publication of uneventful lives which contain no startling incident and no arresting facts. The interest of our own day, in fiction, poetry, and biography, has extended from the

outward region of fact to the inward region of thought; and it only needs that a memoir shall truly delineate its subject, and that that subject shall have been in true relations to its human surroundings, to make it welcome. But these conditions involve rare qualities, both in those who write and those who are written about—a true gift of insight and restrained power in the writer, a certain individuality, wide sympathies and elevation of thought in the subject. Both conditions are fulfilled to a remarkable degree in the *Memoir of Annie Keary* which her sister has written.

"The task before me is rather to trace the growth of a character than to give the record of a life. I invite my readers to walk step by step with the subject of these pages, from gracious childhood, through peaceful, useful prime, up to the sudden opening of that gate through which she passed from mortal sight."

Thus the writer takes us by the hand, and leads us up to her sacred work; and it is rather by a series of living pictures, drawn from the life of her sister, than by discussion of character, motive, or purpose, that she shows us this interesting history of growth, and the hidden relationship of Annie Keary's own nature to its creations.

There is a rare charm in the description of the home of their childhood in Yorkshire, notwithstanding it was in the streets of Hull, and knew no country delights; the imagination, perhaps, became all the more vivid from this deprivation—at any rate, was whetted for the enjoyment when it did come. The "comradeship" of the Irish father, first soldier, and then clergyman, and his stories of Irish life and foreign campaigning, seem to have waked the germ of the novelist's power within Annie Keary. The imagination thus fostered began to show itself early in the childish fiction of the supposed Mrs. Calkill, the fairy genius of the world, "an endless source of bliss;" in the impersonation of Mrs. Sherwood's allegories; in the dream of the nun imprisoned by the trap-door above the housemaid's cupboard—fancies which in later years found expression in her books, notably in *Father Phim*, one of the most beautiful stories ever written for children.

A summer spent in a village at the foot of the Yorkshire moors deepened her imaginative feeling, and gave a setting to her thoughts, as well as furnished her with types of real character; and by degrees the happy childhood, enriched with tender associations and dreams, passed on into a beautiful girlhood. It is difficult to picture such a nature straitened in a narrow boarding-school where the writing out of sermons seems to have been one of the chief educational methods, and the teacher had "to pray for patience to read Annie Keary's version of the popular preacher's 'precious words.'"

But even this period of life had its value in developing sympathies and forming friendships, and step by step we are led on through the peaceful youth to the harmonious development of the beautiful womanhood—loved and giving love, sympathising with all who needed sympathy, protecting and caring for the weak.

"It was always the potential good that Annie saw; it was revealed as by a lightning flash to

her loving heart, and never faded from it again. She never saw the worst side of others chiefly, or at first, or indeed at all."

Her wonderful love to children and gift for making them happy are dwelt upon both by her sister and her nephew, who was one of the motherless children for a time made happy by her. This charge, and an episode of love which did not find its fulfilment, a move to London, and the death of her two brothers and her father are the next records of her life; and almost immediately afterwards her literary career began. Her stories for children were followed by novels which found an increasing recognition from their talent, sympathy, and freshness. *Through the Shadows*, *Oldbury*, *Janet's Home*, and *Clemency Franklyn* are all filled with delicate perceptions and harmonious thought; while *Castle Daly*, which seemed to many the most complete of Annie Keary's works, was full of the insight described by her sister in the words, "She did not try to set others right; she only listened to and loved and understood her fellow-creatures." Outward events furnished little of the basis of these fascinating stories. A winter in Egypt seems to have had its result chiefly in the production of *Early Egyptian History*; and from the published letters we cannot gather that her imagination was ever much touched or quickened by Nature or passing events; her work was the result of inward sympathies. And it was this sympathetic gift which rendered her relations to the poor so unique. No one can read this memoir without being struck by the letters which are addressed to the poor girls whom she was endeavoring to help. In these letters there is no patronage, no condescension, nor removal of herself to a different plane for the purpose of instruction. She writes with perfect fellowship of the life which is common to all. To a little servant-maid, whom she addresses as "dear little Katie," she describes in easy words the beautiful finish of a flower; to a girl in a reformatory she writes about a white hyacinth and the light which healed it when bruised. It is this same living sympathy which makes *Castle Daly* so pathetic, *Father Phim* so humorous, and throws a halo round the common life of London streets and lodgings in *A Doubting Heart*.

Her biographer shows in an interesting way how the imagination of her sister was touched by spiritualism and strongly attracted by Roman Catholicism, but also that her religious belief was passingly helped, and not limited, by either. Her faith, like her sympathy, was wide. "We have all eternity to learn God in," she writes to a friend;

"it would be a poor prospect if we could get very far into our lesson here. . . . Do not you think that, after all, it is only the heart of God that we can expect or need want to see much of here?"

Cheerfulness, and the power of spreading it, seem to have been some of her remarkable characteristics; and such qualities are greatly enhanced by the knowledge that all her life she had to contend with the physical infirmity of partial deafness.

The curtain falls on suffering which seems only to draw this beautiful life into deeper harmony. Her wonderful appreciation of

James Hinton's thoughts about pain, which she sends to comfort a fellow-sufferer, shows her selflessness. We seem to feel that the wide sympathies and loving heart had indeed done their work when her sister could write, "Any life which touched hers, in however slight a degree, interested her." In the months of ebbing life, sustained by her sister and her friend Emilia, *A Doubting Heart* was written. To the unknown which she called "home" she went with the trust of a little child.

Eliza Keary has done for the sake of others a difficult and sacred work, and has done it with exquisite grace and refinement. From no one but herself could have come such a memoir of the one she knew best. She will have her reward in knowing that the music of her sister's life will touch many hearts and waken a response to its love and joyousness.

F. M. OWEN.

BUCHHEIM'S EDITION OF "NATHAN THE WISE."

Nathan der Weise: a Dramatic Poem by Lessing. "German Classics," edited, with English Notes, &c., by C. A. Buchheim. Vol. VI. (Oxford: Clarendon Press.)

THERE is in German history no more epoch-making personality than that of Lessing. Both in literature and theology his appearance marks a new departure. If we look at him as a literary phenomenon, we find in his works a vivacity compared with which the earlier German literature looks tame, a clearness and aptness of expression compared with which the style of his predecessors seems clumsy and commonplace. These qualities have caused him to be thought Frenchified, though probably no prominent man of his day was less touched by the Gallic mania of the days of Frederick the Great; his clearness and vivacity are natural to him; he could not be otherwise than clear and lively. And in theology he represents the tendency to contemplate the religious history of man as a whole, in contrast with the tendency—often dominant in the Church—to assume that those who do not agree with us in matters of religious faith have no religion. Ritter von Lang (quoted in Mrs. Austin's *Germany from 1760 to 1814*, p. 119) tells us that in his youth—about 1770—his father, a Lutheran pastor, lived on terms of great intimacy with the Benedictine monks who inhabited a neighbouring convent, and that he also read the lessons in Hebrew in the synagogue. This was a pastor after Lessing's own heart. And we can hardly suppose that such an instance was solitary; there were doubtless others who took much the same view of their relation to those who differed from them in forms of faith, and felt that the points in which they agreed as men were much more important than those in which they differed as theologians. It was this view of life which Lessing represented as a man of genius alone can.

And no single work of Lessing's represents these two tendencies—the literary and the theological—so completely as *Nathan the Wise*. Before his time, German dramas in verse were commonly written, like the French,

in the twelve-syllable iambic, though not always in rhyme. Lessing was the first man of eminence who used in German the more graceful, flexible, and expressive metre of the English dramatists. Certainly he is neither a Shakspeare nor a Milton in his use of it; he adopted it because his subject required it, not because any strong impulse drove him to write in verse. He felt that he could not write a didactic Oriental drama either in prose or in the heavy alexandrines of preceding dramatists; therefore, with the taste and judgment which distinguished him, he chose for the vehicle of his thought verse rather than prose, and an easy and unconstrained, rather than a neat and antithetic, form of verse. This is what he seems to mean when, in a letter to his brother (Buchheim, p. xlv.), he says that his verses "would be much worse if they were much better;" not that he consciously wrote bad verses, but that he wrote verses which might seem bad, because loose and inartificial, to the admirers of polished couplets. Considered simply as a reform of poetic metre, we may perhaps say that *Nathan* occupies in German literature much the same position that Lord Surrey's translation of part of the *Aeneid* does in English. Lord Surrey is no more to be compared with Shakspeare than Lessing with Goethe, but he was before him.

And in its theological aspect, *Nathan* is probably the first really literary attempt—at least in Germany—to protest against the hasty condemnation of those religions which differ from our own. Lessing is not a scoffer of the school of Diderot and d'Holbach, but a religious-minded man who desires to point out that men of pure and noble lives are to be found among Jews and Mohammedans as well as Christians; and that even among professing Christians are to be found men who are not only narrow-minded, but false and treacherous. The wretched political condition of the Jews in many of the German States before the French invasion—of which Heine has left us so vivid a description from the sufferer's point of view—supplied a special motive for his making his central figure, his model of wisdom and disinterested virtue, a Jew—an adumbration perhaps of the Jewish Socrates, Moses Mendelssohn. The drama grew out of the ancient story of the Three Rings, which caught Lessing's fancy when he read it in Boccaccio, and of which the moral is, that, with our imperfect knowledge of abstract truth, the only test by which we can know the truth of the religions which we see around us is in the fruit which they produce in the lives of their professors. In the drama, Nathan the Jew stands above all the rest in wisdom and generosity. Less wise, but still noble and generous, are the Mohammedans, the Sultan Saladin, his sister Sittah, and the Dervish. Of the Christians, the Templar is honest and high-spirited; the Patriarch of Jerusalem, a historical character, is simply detestable—mean, false, and intriguing; Daja is a narrow-minded, gossiping woman, who has no special intention of doing wrong and no strong principle to keep her right; the lay-brother is a simple creature, whose natural goodness of heart resists the sophistry of the Patriarch. The adopted daughter of Nathan, Recha, the

child of Christian and Mohammedan parents, has no positive religion, but has been brought up simply to reverence truth and goodness. The plot is rather an uncomfortable one, a brother falling in love with a sister, while neither of them know of the relationship. So didactic a poem could hardly reach the highest artistic excellence; it is distinguished by earnest teaching, good language, and pungent allusion rather than by poetic fire or dramatic movement. Nevertheless, it contains lessons so acceptable to kindly and generous natures that it has retained its hold on the stage and has delighted successive generations. It received the form, however, in which it was successful on the stage from the skilful hands of Schiller and Goethe.

Such a play as this eminently requires annotation even for the German reader of the present day, much more for the English. The circumstance under which it arose, the reception which it encountered, its relation to Lessing's other works—all these have to be explained if we would enter fully into its meaning, to say nothing of the numerous allusions and peculiarities of language which require the help of the annotator. All that can be required in the way of introduction and notes is supplied in Prof. Buchheim's admirable edition, which puts the student in a position to read *Nathan* with ease and profit. It is not a mere school edition, or one destined simply for the use of the numerous young gentlemen who are "cramming" for examination, though to them also it will be extremely useful. It is the work of a thoughtful and cultivated man, thoroughly acquainted with Lessing literature, and writing English like an Englishman. Dr. Buchheim's edition will henceforth be indispensable to those of our countrymen who desire to study *Nathan the Wise* intelligently.

S. CHEETHAM.

Wanderings in Baluchistan By Major-Gen. Sir C. M. MacGregor. (W. H. Allen.)

FEW living travellers have a truer eye for the salient physical features, the ethnical relations, and political situation of the less-known Asiatic regions than the distinguished author of this pleasantly written volume. These useful qualities had already been turned to excellent account during his exploration of Khorasan in the year 1875. But that expedition had been brought to such a sudden and unsatisfactory conclusion by the timid and short-sighted policy of the British Foreign Office that it is not surprising the gallant officer should have resolved "never to travel in those countries again." Fortunately, the irresistible attraction of "maps with blank spaces," combined with the considerate action of Lord Salisbury, induced him to relent so far as to return to duty in India via Baluchistan, with the view of clearing up some interesting geographical problems in that comparatively little-known region.

The expedition was undertaken in company with the ill-fated Capt. R. B. Lockwood, of the 3rd Panjab Cavalry, towards the close of 1876, and brought to a successful issue in the early spring of the following year. During that comparatively brief period a wise division

of labour enabled the travellers to cover a very wide area, and thus materially diminish the extent of "blank spaces" hitherto so painfully conspicuous on the maps of Baluchistan. The first section of the journey comprised the whole of West Makrán proper, whose drainage is southwards mainly through the Dasht River to the Arabian Sea. Here MacGregor took a more easterly course, starting from the desolate telegraph station of Páni, on the coast, and proceeding through the Balgatar depression nearly due north to Mir Isa in the Panjgur district. At this place he was soon joined by Lockwood, who had started from Gwadar and followed a north-easterly course through the Dasht Valley and Kej division. The chief results of this first stage were a thorough survey of the important River Dasht and a determination of the true character of the Balgatar plain. At its mouth, which is four hundred yards wide, the Dasht has about six feet on the bar at high water, "but at low it is quite dry, with only a small channel six inches deep" (p. 76). Yet at Dumb, many miles inland, and above the reach of the tides, it is still "one hundred and fifty yards wide and thirty feet deep" (p. 79). Balgatar was found to be a true lacustrine basin, or, at all events, a natural depression flooded intermittently by the rains "for an area of several miles" (p. 49). This feature of the land seems to have escaped the attention of Col. Ross and other previous explorers, because they had crossed the country during the dry season. As the author justly remarks, it often happens that "the most careful traveller by no means exhausts the information about a country, and the best of us are apt to make mistakes" (*ibid.*).

Beyond Panjgur the travellers entered the unknown region stretching along the Persian frontier northwards to Sistan, the exploration of which formed the main object of the expedition. This tract, which had never been traversed since the days of Pottinger (1810), has continued to figure as the "Kharán Desert" on our maps, on which its main drainage appears to flow northwards through the Mashkíd (Mashkel) River to the Zirreh "Hamun," consequently to the Helmand basin. The point never having been determined by actual survey, the Mashkel was conjecturally traced by a line of dots as far north as 30° N. But our travellers have at last cleared up the mystery by following this river throughout its whole course from its head-waters in Panjgur to its mouth in the Mashkel Hamun. This swamp was found to lie under 63° E., 28° 20' N.—that is, fully seventy miles south of the Zirreh Hamun, from which it moreover proved to be separated by another depression, the Talab Hamun, and by the Band-i-Naru range of mountains. The Mashkel, which is joined by the Mashkíd from Sarhád above the romantic Tank-Zorati gorge, is thus shown to constitute an independent inland area of drainage, like those of the Helmand, Jordan, Oxus, Tarim, and so many others in Asia.

The main work of the expedition having thus been accomplished, and confirmed by a rapid but venturesome ride northwards to the Zirreh depression, nothing remained except to prosecute the journey eastwards to British India. Here, again, the division-of-

labour principle was usefully applied, the travellers separating at Shandák, and pursuing two nearly parallel routes right across North Baluchistan to the Indus Valley. In the region thus traversed there were, of course, no great geographical problems awaiting solution. But its topography was very carefully noted, and recorded both in the body of the work and in the Appendix, which contains the direction, distances, and main features of no less than twenty-two routes crossing the plateau between the Persian and Indian frontiers.

The explorers do not appear to have been so fortunate with their Baluchi *personel* as was Mr. Floyer, who was about the same time travelling in Persian Makrán (see *ACADEMY*, June 17, 1882). Complaints of their greed, moroseness, and stupidity are constant; and a somewhat unfavourable opinion was rather prematurely formed of the whole race.

"One trait of the Baluchis is their intense avariciousness. If you give them anything, they unblushingly ask for something more. Whenever you ask a Baluchi to do anything for you, he invariably says, 'What will you give me?' The other day one of my paid escort wanted payment for coming to the top of a hill with me!" (p. 122).

At the end of the expedition a characteristic scene took place with Mahmud, leader of the native escort, a man described as "shameless in his greed, without honour in his dealings, uniformly insolent in his address, the concentrated essence of all that was bad in Baluch nature." While many of the others were rewarded with presents over and above their stipulated pay, Mahmud and his equally unworthy brother, Gholam Rasul, were told they would receive nothing extra, not even the guns which had been promised them conditionally on their good behaviour, MacGregor remarking,

"I have been extremely dissatisfied with you all from beginning to end. You came to me full of high promises of service, and you have not fulfilled one of them; and, therefore, all I shall do for you is to give you the wages I promised." And I handed him over a bag of rupees. He took them very quietly and counted them, and said in a sneering tone, 'They are all right,' adding, 'Where are the guns, et cetera, you promised us?' I said, 'I promised you them if you behaved properly; but, as you have not, I shall not give you one.' He glared at me and said, 'You must.' I replied, 'I shall not.' 'We will make you,' said Mahmud. 'By G—, will you!' said I, jumping up and pulling out my revolver. On this they all seized their arms, and it looked rather as if there was going to be some fighting; but I never thought so. I knew the crew too well" (p. 196).

The affair ended even better than might have been expected, for Mahmud, on cooling down, confessed himself in the wrong and craved forgiveness. So he was not so utterly bad after all; and, as others are spoken of as "ever cheerful, ever ready, ever obedient," and one especially as "one of the most quiet, willing, indefatigable men I have ever seen," it may be surmised that the high opinion formed of the sterling qualities of the Baluchi people by Mr. Floyer, who knew them well, came, perhaps, on the whole, nearer to the truth than that of our travellers.

Anyhow, they had every reason to be satisfied with the neighbouring Brahuís, whose

linguistic and ethnical affinities still remain an unsolved puzzle. The very first Brahui chief met on entering their domain gave MacGregor a most cordial and generous reception.

"As we were going along, an elderly gentleman rushed out with a small carpet, and called out, 'Hi! where are you going? Stop here.' And, when we still kept on our way, he said, 'Hi! stop here, you are my guest; don't blacken my face,' and so on. I was so much amused that I halted; then he seized hold of my leg and said, 'Now, you are going to stop.' But I wanted to go on to be near the water. 'Water! I will give you water, and meat and milk and bread—whatever you want.' . . . And he kept on pressing me for a long time to have this and that. This, as a specimen, and a first specimen, of the Brahuís, was certainly a great improvement; I was more than a month among the Baluchis, and no man ever offered me a glass of water" (p. 213).

Both Brahuís and Baluchis seem to have generally accepted the Khan of Kalat's rule, backed as it now is by the prestige of his alliance with the Kaiser-i-Hind. The political situation is, on the whole, satisfactory, and peace might everywhere be established were the central authorities to display a little more energy in dealing with such unruly chiefs as Azad Khan and one or two others. This is evident from MacGregor's interview with Zangi, head of the fierce Narui Baluchis, from whom he obtained provisions and guides to prosecute the journey to the Zirreh Hamun:—

"He was a gentlemanly, quiet-looking man, and I became prepossessed in his favour at once. Though the chief of such a clan of ruffians, and though his dress was but mean, there were very evident signs of the chief in him. Now, my plan with all such individuals is to address them as if I took it for granted that they would not only obey, but be willing to carry out, any of my orders, and so, after the usual salutations, I began. It was really a very extraordinary thing for one Englishman to appear in the midst of the fastnesses of one of the most notoriously lawless clans of all the lawless Baluch race (of whom Pottinger has recorded, 'Bound by no laws and restrained by no feelings of humanity, the Naruis are the most savage and predatory of Baluchis'), to send for their chief, and then proceed to dictate orders to him" (p. 162).

Yet the experiment was thoroughly successful; Zangi proved most serviceable, supplied all requisites, and bided loyally by his pledged word in all things.

The work is full of such instructive scenes, while the graphic descriptions of the peculiar Baluch scenery are abundantly illustrated by numerous artistic sketches from the pencil of Gen. MacGregor, whose *Narrative of a Journey in Khorasán* had already established his reputation as an accomplished draughtsman. The accompanying sketch map is on a large scale, and gives, for the first time, a correct idea of the water-partings and drainage systems in Sistan and West Makrán. There is also a good portrait of the lamented Capt. Lockwood, who so soon fell a victim to the germs of disease contracted during his "Wanderings in Baluchistan."

A. H. KEANE.

Three Books of God: Nature, History, and Scripture. Sermons by George Dawson. (Kegan Paul, Trench & Co.)

THE principle of the *clôture* is already pretty well established in churches and chapels, and the preacher who exceeds the accustomed twenty or thirty minutes is likely to hear of it from some "aggrieved parishioner." Brevity, where there is neither eloquence nor learning, is doubtless commendable; but to suppose that any of the great theological problems can be adequately discussed in half-an-hour is absurd. The attempt is made Sunday after Sunday, and is one of the causes contributory to "the decay of modern preaching." The old-fashioned custom which Mr. Dawson adopted, of delivering a course of sermons, is far more satisfactory. The auditors then come with a certain amount of mental preparation, and the preacher is able to present consecutively the several phases of his subject without fearing that in his rapid and random utterances he has done injustice to any one of them.

The sermons comprised in the present volume were composed—or at any rate preached—near the end of Mr. Dawson's life, and they chiefly deal with the relations between Scripture and science. They are, as a matter of course, honest and bold; upon their orthodoxy we pronounce no opinion.

Mr. Dawson's main position is that Nature, History, and Scripture are three books written by the same Hand; in studying any one of them you necessarily gain some knowledge of the Author, and in studying all of them—constantly and carefully—you get the fullest knowledge. And to know the Author is to love him, for in acquiring that knowledge not only will the faculties of the mind be employed and cultivated, but also those of the soul and of the heart.

"Christ claims that God is to be loved with all our nature. They who love God, then, with the heart only do sin. You are to love God with all your mind, with all your brain and thought and power; with reason and argument, with learning and knowledge . . . Being ignorant is disservice to God: so much withdrawn from the Almighty."

In the second series of discourses, Christ is contrasted in succession with Moses, Zeno, Epicurus, and Mohammed. It scarcely need be said that even the last of these teachers meets with justice at Mr. Dawson's hands, and that he recognises all the truth that there was in the "false prophet." But he believes that Mohammedanism is doomed to early decay because it contains within it a vast amount of superfluous stuff which cannot be separated from it. The mere "law business" with which it is hopelessly entangled must shorten its life. Then there is the absence of any provision for tolerance in it, which must unfit it for resting in peace by the side of other creeds; and, lastly, the absolutely political character of the religion must ever be a source of weakness. "No man doubts," adds Mr. Dawson, "except the Roman Catholic, that the march of true religion depends upon its freedom from political connexion." It is beside our purpose to discuss these questions, but we cannot help being amused with the self-confidence Mr. Dawson displays. Elsewhere

it shows itself in refuting, to his own satisfaction, such absurd notions as an infallible Church, an infallible Pope, and an infallible Book, but in leaving for our acceptance the infallibility of Mr. Dawson himself.

There is a good deal of hard hitting in the volume, and perhaps the following is as characteristic a specimen of Mr. Dawson's style as can be found. He had no sympathy with the "revival" set on foot in Birmingham by Messrs. Moody and Sankey, and selected for his special scorn some Pecksniffian phrases which certainly invited it.

"If all the humorists that have ever lived in England had clubbed together to write the next request they could not have equalled it in unctious, foolishness, and absurdity. It is: 'Prayers are requested for a gentleman purchasing an estate, that he may not make it an idol.' I hope you won't suspect that I made this myself, for I have not genius enough to equal it. 'Prayers requested for a gentleman purchasing an estate, that he may not make it an idol!' Had I known that gentleman, I might have been of use to him. I should have said to him, 'Don't purchase it, then you won't run any risk.' I must say that a piece of more fulsome, egregious cant was never turned out before God and man than by the unctious, greasy, vulgar, ostentatious fellow who thus informed the assembled multitude that he was 'purchasing an estate.' . . . If that man had felt his danger he would have found other ways of fighting it than advertising it. If that man felt he was in peril he either would not have bought the estate, or, with the large hand of charity, he would have taken care that it did not become an idol. . . . Whether the man has purchased the estate or whether the idolatry remains, I don't know."

One may doubt whether such fierce indignation was not thrown away, but of its genuineness there can be no question, for genuineness appears to have been the key-note of George Dawson's character.

CHARLES J. ROBINSON.

NEW NOVELS.

Val Strange: a Story of the Primrose Way. By David Christie Murray. In 3 vols. (Chatto & Windus.)

Patty's Partner. By Jean Middlemass. In 3 vols. (Tinsley Bros.)

The Price She Paid. By Frank Lee Benedict. In 3 vols. (White.)

Geraldine Hawthorne: a Sketch. By the Author of "Miss Molly." (Blackwood.)

A Wayside Snowdrop. By M. E. Winchester. (Seeley.)

VALENTINE STRANGE, who treads the tempting but perilous primrose way, is only the nominal hero of Mr. Christie Murray's clever and attractive novel, the real centre of interest being found in the character of Hiram Search, a conception which, among other charms, has that great and increasingly rare charm of freshness. The citizen of the great republic has of late years been made much of by English novelists, but, so far, the Yankee of our insular fiction has revelled in an irritating monotony of prosperity; for if he have not, like the delightful hero of *The Golden Butterfly*, "struck ile," he has, by some other piece of luck or display of "cuteness," accumulated a pile which makes

him tolerably independent of fortune. There is therefore something pleasantly novel in being introduced to a Yankee who, when we make his acquaintance, is reduced to one pipeful of tobacco, one match, and two-pence in cash, and who, after a career of chair-mending, 'bus-conducting, and domestic service, vanishes from our sight as the contented possessor of a very modest competence. Hiram is admirable throughout; the combination in his character of shrewdness and tenderness—much rarer and more difficult to portray than the union of tenderness and strength—is indicated with fine vigour of realisation; and the conception, as a whole, would suffice to redeem from insignificance even a book otherwise not noteworthy. Val Strange, with his fitful impulses of striving after things lovely and of good report, and his weak will, which allows him to drift so far away from them, is a much more familiar and less original figure. He is another Arthur Donnithorne, but he lacks Arthur's charm; and, as the incidents of his progress along the flowery path to Avernus are less tragical than those which inform with profound sadness the third volume of *Adam Bede*, the lover of Constance Jolly is naturally not so interesting a personage as the lover of Hetty Sorrel. Still, there are both strength and delicacy of drawing in the delineation of Val's struggle with the passion which involved treachery to his dearest friend; and if we feel dissatisfied, it is with the nature of Mr. Murray's material, not with the quality of his craftsmanship. The remaining characters are, for the most part, of a somewhat conventional type. Mr. Jolly, the elder, with his pompous selfishness very imperfectly concealed by a thin disguise of high-mindedness, is a subordinate member of the Bliffl and Pecksniff family, of which most of us are getting tired; Garling, though forcibly conceived, is, after all, a very unreal and incredible villain; and the women of the story seem to us a little wanting in distinctness. It is, however, easy to say too much of deficiencies which would not be worth noticing in detail were *Val Strange* less good a novel than it is. The story, as a story, is deftly constructed; and Mr. Christie Murray's style is just the right style for fiction—not garish, but still full of colour and movement, neither too literary nor too free and easy. Here is a sentence which might have been written by George Eliot:—

"Here and there—after years of close and tender intercourse, broken by the rubs of life, made sweet by birth and holy by death of little children—one man learns to understand one woman; but to strive to sum the sex were a vain arithmetic, though a man had the years of Methuselah in which to prosecute it."

Here, too, is another echo of the same large utterance:—

"Fear, and Remorse, and Hate, and Rage, and Jealousy, and Love, with all the rest, live on in spite of civilisation, and make life noble as the soul guides them, or make life ignoble as they guide the soul."

Val Strange is emphatically an able and interesting book.

The merits of *Patty's Partner* are sufficiently numerous to make its one defect more than usually irritating. Miss Middlemass has a pleasant knack of narrative, a considerable

grasp of character, a conspicuous lightness of literary touch, and an unfailing command of a style which is simple, yet never bald; but the workmanship of this novel seems to indicate a serious lack of that constructive ability which is one of the essentials of complete success in fiction. The putting together of the story of *Patty's Partner* (and I cannot refrain from asking, in passing, who Patty's partner was) is decidedly clumsy; and clumsiness in imaginative work is only tolerable when it is, as sometimes happens, the accompaniment to distinguished genius. The plan by which Max Schippheim, the wealthy manufacturer, is inveigled out of England in order to prevent his marriage with Patty Urske, the pretty factory-girl, is both awkward and incredible. So clever a woman as Lady Muriel Alston is represented to be would never have involved herself in a plot so loosely arranged as to render discovery of her part in it absolutely certain, and so childishly ineffective that even its temporary success was owing to an accident upon which nobody could have counted. The muddled management of this part of the story goes a long way towards spoiling a novel which is otherwise pleasing. The sketches of factory life at Arundale are faithful and realisable, the portrait of Joe Marks being specially effective; and there is a genuine feeling of light comedy in the chapters devoted to the shabby-genteel Tramberley household. That in which Felix Elton asks Mr. Tramberley's approval of his courtship of Angela is perhaps the best in the book.

The Price She Paid is so striking and powerful a novel, so obviously the production of a man not merely of talent, but of something very like genius, that I am almost ashamed to confess my entire unfamiliarity with *Saint Simon's Niece* and *Madame*, which are named on the title-page as previous works from Mr. Benedict's pen. As the scene of the present story is laid in a rural district among the mountains of Pennsylvania, and as there are some slight internal evidences that the writer is an American, it seems possible—though I may, of course, be altogether mistaken—that this is the first book of his which has been published here, in which case he is likely to have a warm welcome from English admirers of his countrymen, Mr. W. D. Howells and Mr. Henry James, Jun. The heroine, Georgia Grosvenor, is a young lady whose innate nobility and womanliness of nature are concealed even more thoroughly from herself than from others by a crust of acquired worldliness; and the price she pays is the sacrifice—or what she supposes to be the sacrifice—of her cherished tastes and ambitions at the call of love. The motive, it will be seen, is a simple and familiar one; but its very simplicity leaves Mr. Benedict free to throw all his power as an artist into arrangement of pose and detail of portraiture. In vigour and subtlety of imaginative conception I know nothing of the same kind much finer than the composition of the central group of four figures—Georgia Grosvenor herself, her friend, Phillis French, her lover, Denis Bourke, and her half-brother, Maurice Peyton. *The Price She Paid*, like so many of the best American novels, is characterised by a certain

allusiveness of presentation which contrasts not unpleasantly with the directness of the ordinary English treatment, and enables us to apprehend a character by what may be called its aroma rather than its outline. Some people may be tired by conversations which do not seem to advance the action of the story, and may complain, like the claret-drinking farmer in *Punch*, that they "get no forrarder;" but another class of readers will find a keen intellectual enjoyment in the fineness of the touches by which the portraits gain their pliancy and lifelike variety of expression. Perhaps in the first volume the method is rather too severely dramatic, without having the broad treatment of actual drama, for even chapters of sparkling dialogue become tantalising when the development of character is so slow as it is here; but when the action really begins, and the relations of the actors to each other become more fully comprehensible, the reader's satisfaction is no longer alloyed. Some of the situations in the third volume are exceptionally strong, and the handling is never tentative, but always sure and masterly. Phillis French and Denis Bourke are very delightful studies, though one's pleasure in the former is somewhat marred by Phillis's habit of speaking of herself, and encouraging others to speak of her, as "P. French." The trick lacks humour, but seems to me not lacking in a touch of vulgarity; and in such a book as this a vulgarity is also a discord.

During the eight or nine years which have passed since the publication of *Miss Molly*, its author has gained dexterity and finish of workmanship, without losing the spontaneity, gusto, and power of unforced pathos which gave that book so great a charm. *Geraldine Hawthorne*, though modestly entitled "a sketch," would be better described as a cabinet picture, with a Meissonier-like rendering of detail and an atmosphere of pensive sentiment like that which we perceive in Mr. G. H. Boughton's most characteristic work. Here again we are taken across the Atlantic, to the time of apple-blossom in the year 1775, when the colonies are rising against George III., and Geraldine Hawthorne is living a quiet life at Endicot Farm, dreaming of the possible hero who may some day come to claim her devotion and give her life a new significance. Geraldine is a spiritual sister of Dorothea Brooke, and her Mr. Casaubon is a certain Ralph Calverley, captain of the far-famed Calverley's Horse. She, however, is never wholly disenchanted; and there is a pathetic grandeur in her unflinching faithfulness to the hero who has ceased to be heroic. The tragic elements in the story prevent one from calling it a prose idyll; but all the earlier chapters are full of pure idyllic feeling, and are instinct with a dainty gracefulness which is not lost even in the subdued sadness of the close.

A Wayside Snowdrop is a well-meant and in many respects well-written story, intended for the perusal of young people in Evangelical households. Whether the records of spiritual precocity with which the book abounds are healthy reading for children seems to us more than doubtful, and to people who share this doubt Miss Winchester's tale cannot be recommended. For the sake of those who

think differently, it may be said that the story is interesting; and that, apart from this pervading mistake, there are none of those violations of good taste which spoil so many works of religious fiction.

JAMES ASHCROFT NOBLE.

BOOKS OF TRAVEL.

Natal, a Field for Emigration. By William Kermode, of Natal. (Trübner.) This work is designed solely for persons contemplating emigration, and not for the general reader. A considerable quantity of information is given in a small compass and small print; and, if the emigrant has decided on Natal as his future home, we know of no better book to recommend to him. But whether its perusal will induce the intending emigrant to fix on Natal is doubtful. Natal has advantages which it shares with other colonies, and one disadvantage, and that of vast importance, which belongs to itself alone. The overwhelming preponderance of the native population, together with the ratio of their increase (so much larger than that of the Europeans), must, in our opinion, make the future of the colony at the very least an alarming one. Mr. Kermode denies this absolutely, and asserts that "In this preponderance of the natives there exists no cause for uneasiness whatever." We wish his arguments in support of his assertion were more convincing. Even admitting that no danger is to be feared from the increase of the native population, they form a very serious hindrance to the success of English emigrants, especially those of the lower orders. There is a risk, the author tells us, of the market for farm-labourers being overstocked, since colonial agriculturists employ native and coolie labourers almost exclusively. The natives also compete successfully with Europeans in all kinds of housework, so that there does not seem much opening for domestic servants. He also states that, "were there a large influx of British artisans and mechanics, the supply would be so much greater than the immediate demand that wages would be lowered, and many would not find employment. . . . Of butchers, bakers, grocers, drapers, warehousemen, &c., few are required beyond what the colony can supply; and it may be as well to add that the supply of professional men, such as lawyers, artists, and literary men, and all who are unaccustomed to manual labour, is in excess of the demand."

The only class which, according to the writer's showing, is fairly certain to succeed is that of farmers with both capital and experience. Of this class we fear the supply is very limited. We are obliged, unwillingly, to notice some extraordinary blunders which we feel sure a very little care in revision would have removed. Mr. Kermode tells us at p. 34 that "Natal is situated on the South-eastern coast of Africa, at a distance of about 5,000 miles, as the crow flies, from the southerly point of the continent." And in a note on the same page he states that Africa is about one-third the size of Europe. In the concluding chapter we are informed that the colony of Natal comprises 450,000 square miles, and has a population of rather more than two millions, of which about 440,000 are whites! In an earlier chapter the area and population are correctly given.

The Farm in the Karoo. By Mrs. Carey-Hobson. (Juta, Heelis and Co.) Mrs. Carey-Hobson, who has lived for twenty-five years in South Africa, throws the experience of herself and her friends into the form of a pleasant story, the scene of which is laid ten or eleven years ago. Three young men make a tour in South Africa for the benefit of the health of one of them. They go to Cape Town and

Port Elizabeth, where they fall in with a very intelligent settler, who carries them to his "farm in the Karoo" in his waggon. There and on the road they see and observe much, and meet with exactly the right amount of adventure, with a spice of danger from elephants, snakes, and panthers. All goes well; the invalid recovers; and one of the three is so taken with the life of the farm that he remains behind as a settler. Altogether, Mrs. Carey-Hobson's book may be recommended to boys as both amusing and instructive; they may learn much from it of natural history, and of the manners of the natives and the Boers. Moreover, the information is so pleasantly given that they are likely to be encouraged to seek for more elsewhere.

A Winter in India. By the Right Hon. W. E. Baxter, M.P. With Map and Illustrations. (Cassell, Petter, Galpin and Co.) In publishing his diary of a three months' tour through India, Mr. Baxter has done a bold thing, though we believe that this is by no means his first appearance in print. The peculiarity of his journey was that he took with him a family party numbering in all ten persons, of whom one was left behind. If his description of it has any peculiarity, it is that he has set down his personal impressions with uncompromising veracity. He does justice to the Taj, and to the view of the Himalayas from Darjiling (in which he seems to have been specially fortunate). But any railway company, steamship, or hotel that did not treat him as a "merchant-prince" and Privy Councillor deserves to be treated catches it hot. Of his prejudices we may give two examples. He has evidently been taught to believe that Warren Hastings was a monster, so he talks of his "evil countenance" being conspicuous on the walls of the Council Chamber at Calcutta. As a rigorous Voluntary, he would abolish the State establishment of Christianity in India; but this only as preliminary to confiscating the religious endowments of Hindus and Musalmans. We must, however, do him the justice of saying that he is capable of retailing the following story. A Johnny Atkins, when questioned why he grumbled so at the new style of barracks (which are built for sanitary reasons with two storeys), at last blurted out—"If you must know, I hate them because, when I gets drunk, I can't get up the d—d stairs." To the illustrations, which are from the sketches by Rosa Elizabeth Baxter, we have nothing but praise to give. All of them, though slight, show a real artistic gift; and not least the frontispiece, which has been reproduced by chromo-lithography.

Sketches of our Life at Sarawak. By Harriette McDougall. With Map. (S. P. O. K.) The story of Sarawak and the Rajah Brooke never loses its interest, proving, as it does so satisfactorily, that the elements of romance have not been denied to our nineteenth century. Mrs. McDougall's little volume does not profess to be a history of events; it does not deal with any controversial points, and we hear little of the chief actors in the drama. Even the exploits of her husband—the genial, unconventional, fighting bishop—do not receive undue prominence. Some important events, such as the Chinese insurrection and the destruction of the pirate fleet, are shortly described; but the writer's main purpose is with the daily course of existence, and the scenes among which it lay. For such a task, a woman's pen is the appropriate instrument. None other could describe how, on board the boat one day, the contents of the writer's handbag were all spoiled by too close contact with the bag of a friendly Dayak, which contained the newly severed head of an enemy. The author holds the balance, with evident truthfulness and good judgment, between the pleasures and interests of such a life and its

dangers, inconveniences, and discouragements. Both are simply, and often touchingly, illustrated in the glimpses which she gives us of native life and customs, of beautiful scenery, and of the effect on native character of good government and Christian teaching. The great value to the missionary of medical knowledge is conspicuously shown in the bishop's career. Although the book is not a connected narrative, we trace indirectly in these "Sketches" the progress towards good order and civilisation; and we follow with much sympathy the fortunes of the writer, after twenty years of arduous labour, to the well-earned repose of a comfortable English vicarage. The volume concludes with some practical hints to the new "North Borneo Company," whose obligations to Sarawak, both for an example how to rule and develop their territory and also for the friendly feeling already enlisted on their side as Englishmen, can hardly be over-estimated.

In the Black Forest. By Charles W. Wood. (Bentley.) Mr. Percy Fitzgerald observes, in his penultimate book, that he has never taken a journey without paying his expenses out of what he wrote about it afterwards. Mr. Charles W. Wood is not such a voluminous author as Mr. Percy Fitzgerald, but he is his equal in books of travel. After exhausting Holland and Norway, he this year tried the Black Forest; and here we have the result. Some persons may find themselves able to read these commonplace descriptions, copiously interlarded with garrulous personal reflections. We have been content with a few pages here and there, and will report some of our discoveries. Mr. Charles W. Wood is not favourable to the Queenborough and Flushing route. He visited the torture-chamber in the old castle at Baden, "where Lynch law is said to have reigned." He met some Gypsies, of whom he remarks—"It might be, had their pedigree been traced, that the blood of many successive generations ran in their veins." In conclusion, "The seasons succeed each other in due course—day and night, sunrise and sunset, have their appointed times; the sea its boundaries. You and I, dear reader, have our appointed time also. We know it not; but in a certain Record it is marked, and when the hour strikes, a call, unheard by other ears, will summon us, let us hope, to beauties of which this earth is but a faint reflection. Here we must ever have thorns with our roses; pleasure and pain attend us hand in hand." Mr. Wood cannot complain that we have not given our own "dear readers" a specimen of his quality.

A Tour in Greece, 1880, by Richard Ridley Farrer, with Twenty-seven Illustrations by Lord Windsor (Blackwood), is a book the merit of which lies in its accessories. The numerous full-page illustrations are at once graceful and truthful, and give an excellent idea of Greek scenery. The binding, paper, and type are all luxurious; and there is an admirable map. But of the letterpress the less that is said the better. Books of travel may generally be divided into three classes—viz., those that relate remarkable and interesting experiences, those that describe new or unfamiliar countries, and those that record commonplace experiences in countries already well known. We fear this book must be placed in the last of these classes. The journey which it narrates was from Athens by Thebes and Chalcis to Delphi, and in the Peloponnese by Argos and Megalopolis to Olympia. This was a good ordinary tour, such as would give the travellers a fair impression of Greece, but not affording sufficient materials for a book. Had the description of it been embellished either by wit or by keen observation, as is the case with Hettner's *Athens and the Peloponnese* and Mahaffy's *Rambles and Studies in Greece*, this would sufficiently justify its being written; but such is not the case.

A great part of the book is taken up with wearisome details of the traveller's every-day life; with continual grumbling at the petty discomforts which are inseparable from such a journey; and with expressions of dislike and contempt for the people among whom he was travelling. When the writer tells us that "British pride revolts from such a mode of locomotion" as the horses of the country, we feel that he is hardly a fit person to travel in Greece or Turkey; and when he describes the character of the modern Thebans by saying that their name is "most appropriately pronounced 'Thevans' by the natives," we can hardly regard the remark as witty. Mr. Farrer appears to be capable of better things than this, for he evidently takes an interest in classical antiquity and his references to the subject are generally accurate; but his present work is a very superficial production.

Of very different value is the new edition of Wordsworth's *Greece*, which Mr. John Murray has just published, revised by the Rev. H. F. Tozer. It is particularly pleasing to find the younger traveller thus joining with the veteran to add fresh attractions to what has been the standard book for full forty years. The Bishop of Lincoln paid his visit to Greece in the winter of 1832–33, little more than eight years after the death of Byron, and before Otho had been crowned king. The first-fruits of his impressions were published in his *Athens and Attica* (1836; fourth ed. 1869), which should always be read as a scholarly excursus to the more popular volume. The present edition is substantially a reprint; though we are informed that Mr. George Scharf has revised his *Historical Outlines of Greek Art*, and Mr. Tozer has himself incorporated notes upon recent discoveries at Olympia, Mycenae, Orchomenus, Dodona, &c. Another change is the substitution of Greek for Roman names of the Greek divinities, which all will approve. The illustrations are the old familiar ones, which have worn very well, especially the steel plates, though their margins have had to be cut down. The only one we feel sure is new is that (on p. xiv.) of the tombs in the Caramesious. Never was there a book more deserving than this to be given as a prize. So many generations of school-boys derive the same benefit and enjoyment from it that Mr. Tozer confesses to!

American Notes, 1881. By Archibald Sutter (Blackwood.) What could have induced Mr. Sutter to publish these slipshod notes of a commonplace visit to America passes our comprehension. Rarely have we suffered such a waste of time as in reading these pages. And yet we have managed to read them, for the manifest simplicity of the writer led us on to look out for the curious infelicities of his style. Such phrases as "hotel charges are very moderate in many cases, and boarding houses more so;" "in America, breakfast is a most profound meal;" "some common pipe-tile draining is now going on similar to Scotland;" "this seemingly great price being far into the future," may be found on every page. Mr. Sutter is evidently a strong Tory. His theory of emigration is that lairds should buy estates in the United States for the purpose of settling on them their discontented tenants. His unfavourable opinion of Canada is therefore the more noteworthy.

Life in India. By Major the Hon. C. Dutton. (W. H. Allen.) The contents of this book are, in themselves, hardly more original than those of the preceding; but it is redeemed by the greater interest of its subject and its straightforward style. No one need go to America unless he likes; and every one who does go will quickly learn (unless he be a fool) to adapt himself to his surroundings. But many people are constantly being sent off to India to whom

the country must be entirely strange. For these Major Dutton writes; and, though his own experience does not seem to have been very wide, he knows precisely the little hints that will be found useful. We cannot say that he has made his story attractive for persons who do not intend going to India; but those who must go there might do worse than read his advice—and follow it.

Catalogue of the York Gate Geographical and Colonial Library. (John Murray.) In this handsome volume, printed on unusually good paper, Mr. S. W. Silver gives to the public a catalogue of his geographical and colonial library. The best way of making the catalogue of a library will probably be a matter of dispute as long as libraries exist at all. Mr. Silver's catalogue appears to us to be a model of good arrangement. It is divided into subjects, and the various works in each are placed in order of date and fully described. Besides the catalogue itself, there is an index of authors, with the title of every work of each author under his name, to each of which is attached the number it occupies in the catalogue. Whether, then, the reader refers to subject or author, he finds what he wants, and is not banded from the list of subjects to the list of authors and vice versa, as so often happens. Another point in the arrangement is deserving of special praise—namely, the careful way in which each subject in large compilations such as Hakluyt, Purchas, and Churchill is set out, as well as articles in periodicals and the *Transactions* of societies. We notice also that, under the head of authors, the editors of old travels are included. Mr. Silver's collection is probably richest in books relating to the colonies. In some subjects it is remarkably poor—Iceland, for instance, and Switzerland; and such names as Niebuhr, Thunberg, Lobo, and A. de Ulloa are absent from the list of authors. He would do well to look out for many books of travel published in the last and the early part of the present century, many of them of great importance, which may be picked up at a very moderate price.

NOTES AND NEWS.

We are glad to announce that the great edition of Keats upon which Mr. Buxton Forman has been engaged for so many years is now at last passing through the press.

MESSRS. SAMPSON LOW will be the publishers of Mr. Archibald R. Colquhoun's narrative of his journey of exploration through the South China border-lands from Canton to Mandalay. The title chosen by the author is *Across Chryse*, and the book will appear as early as possible next year.

PRINCE KRAPOTKINE has prepared for an early number of the *Nineteenth Century* an article on "Russian Prisons," with the interior of which he is familiar. It may be well to state that it is not the Prince himself, as asserted by numerous foreign correspondents, but his brother-in-law, who has been lying seriously ill in Thonon; and Thonon, to make one other correction, is not in Switzerland, but in Haute Savoie, France.

UNDER the title of *Hours in a Mosque*, Messrs. W. H. Allen and Co. will publish, in January, a volume of essays on various phases of Islam by Mr. Stanley Lane-Poole, partly reprinted from the *Edinburgh Review*.

YET another collection of sonnets is announced by Messrs. Macniven and Wallace, of Edinburgh. It is to be called *C. Sonnets by C. Authors*, and will contain representative specimens of all the more prominent English sonnet-writers from Wyatt to Rossetti. The editor is Mr. Henry J. Nicoll.

MESSRS. BENTLEY will publish immediately a new edition of Bishop Thirlwall's *Letters to a Friend*, edited by Dean Stanley. Though a good deal of fresh matter will be given, the price is reduced to six shillings. It is very gratifying to have such books as this issued in cheap editions so soon after their publication in regular library form.

MESSRS. T. AND T. CLARK, of Edinburgh, announce an *Encyclopædia of Biblical, Historical, Doctrinal, and Practical Theology*. This work, though based on Herzog's well-known *Real-Encyclopædie*, is not a mere translation, but an adaptation of the most important German articles, with a number of new ones contributed by British and American scholars. The editor is Prof. Schaff. It will be completed in three handsome volumes, the first of which will be published shortly.

MESSRS. GRIFFITH AND FARRAN will publish immediately *A Wonderful Ghost Story*; or, Mr. H.'s Own Narrative, reprinted from *All the Year Round*, with hitherto unpublished letters from the late Charles Dickens respecting it. Mr. Heaphy's remarkable experiences attracted very considerable attention when they were first related; and two versions appeared, of which this is the correct one.

MESSRS. CROSBY LOCKWOOD AND Co. will shortly publish a new edition, in four volumes, of the works of the late Mrs. Mackarness, as follows:—*A Trap to Catch a Sunbeam, and other Stories*; *The Cloud with the Silver Lining, and other Stories*; *The Dream Chints, and Sibert's Wold*; or, *Cross Purposes*; *Minnie's Love, and Married and Settled*. The same publishers also announce new editions of their *Boy's Own Book*, with upwards of six hundred illustrations, and of M^{me}. de Chatelain's *Merry Tales for Little Folk*.

MR. GEORGE M. TWEDDELL, of Stokesley, author of a Popular History of Cleveland and many other local works, proposes to issue by subscription *A Hundred Masonic Sonnets*. We regret to hear that the veteran author is threatened with the loss of his eyesight.

MR. S. L. LEE, of Balliol, will contribute some articles to Cassell's *Dictionary of History*.

THE sale of the second portion of the Beckford Library (G—M) will be commenced by Messrs. Sotheby on Monday, December 11, and will be continued till Saturday, December 23. A third portion still remains to be sold, as also the Hamilton Library proper. Apart from the special interest attaching to bindings, illustrations, and previous ownership, perhaps the most interesting lot in the Catalogue of the approaching sale is the *editio princeps* of Laetantius (1465), which is the first known book with a date printed in Italy.

DURING the past fortnight the library of Mr. George B. Simpson, of Broughty Ferry, by Dundee, has been sold at Chapman's Rooms, Edinburgh. Besides many valuable books, both old and new, the collection included several MS. *Horæ*, which fetched between £20 and £30.

THE following are the lecture arrangements for the ensuing season at the Royal Institution:—The Christmas lectures will be given by Prof. Tyndall, on "Light and the Eye." Before Easter—Prof. W. O. Williamson, five lectures on "The Primæval Ancestors of Existing Vegetation, and their Bearing upon the Doctrine of Evolution;" Prof. R. S. Ball, four lectures on "The Supreme Discoveries in Astronomy;" Prof. Dewar, nine lectures on "The Spectroscope and its Applications;" Mr. R. Bosworth Smith, on "Episodes in the Life of Lord Lawrence;" Dr. W. H. Stone, three lectures on "Singing, Speaking, and Stammering;" Mr. H. H. Statham, two lectures on "Music as a Form of Artistic Expression."

After Easter, courses will be given by Prof. Tyndall, M^cKendrick, A. Geikie, and Turner, of St. Petersburg. The Friday evening discourses will probably be given by Mr. R. Bosworth Smith, Mr. G. J. Romanes, Sir Wm. Thomson, Mr. M. D. Conway, Prof. W. C. Williamson, Mr. W. H. Pollock, Prof. Tyndall, and other gentlemen.

A HOT discussion is going on among the Parsis at Bombay with reference to admitting proselytes without the ceremony of *bareham*, or purification by cow's urine. The leader of the reformers is the learned Dastur Jamsajji, the third volume of whose Pahlavi-Gujarati-English Dictionary was noticed in the ACADEMY of November 4. He has just published a pamphlet on the subject in Gujarati, in reply to one by Dastur Paah-tunji, the champion of the conservative party. A Parsi temple has just been erected at the settlement of Aden, which is to be solemnly opened next month by Firuz, a son of Dastur Jamsajji.

"LE MALADE IMAGINAIRE" has just appeared in the series of "Original Editions" of Molière published by the Librairie des Bibliophiles. This play was not printed in Molière's lifetime; and the present edition is a reprint of the first good edition published after his death—that of 1675—which differs considerably from that published by Lagrange and Vinot in 1882, and which was probably printed from Molière's own MS.

MESSRS. E. FLON AND Co. have issued a French translation of *Democracy*.

AN article in the *Deutsche Rundschau* by Herr Otto Hausner, member of the Austrian Reichsrath, upon the present condition of Polish literature gives some curious figures. During the five years ending with 1881, the total number of works of *belles-lettres* published in the Polish language was 296—namely, 191 in Poland, 80 in Galicia, and 24 elsewhere, chiefly in Posen. Now, the aggregate number of Polish-speaking people is a little over thirteen millions, which gives one book to every 2,000, which is exactly the same proportion as in Sweden. In Russia the proportion is one to 10,000; in Germany, one to 2,800; in Italy, one to 2,200; in Holland, Denmark, and Norway, one to 1,900; in England, one to 1,800; in France one to 1,600.

FERDINAND GREGOROVITUS's *Athenais*, of which an Italian translation lately appeared, has been placed in the Index.

WE have been pleased to receive from Messrs. James Blackwood and Co. a sixpenny edition of *The Adventures of Mr. Verdant Green*, with the original wood-cuts (though, we fancy, not quite all), which so many of us have laughed over during the past twenty years and more. It appears that more than 170,000 copies of this inimitable burlesque of Oxford life have been published.

THE two new volumes of the "May Fair Library" (Chatto and Windus) are old friends—*Witch Stories*, by Mrs. Lynn Linton, originally published in 1861, and now dedicated to Mr. Edward Clodd; and *Animals and their Masters*, by Arthur Helps.

MESSRS. DE LA RUE have sent us two parcels, packed with pretty little articles of use and beauty which no firm of publishers produces more abundantly. The one contains diaries and calendars, of all sorts and sizes, among which we must select for special mention a pocket-book of most convenient shape and a set of three "finger condensed diaries," as they are called, rich in russia leather, which look as serviceable as they are attractive. Excellent printing on cream-laid paper and card characterise the whole. The other parcel contains a

profusion of Christmas cards which show that Messrs. De La Rue hold their own, in the face of sharp competition, without yielding their old specialities to the new fashion. Flowers, though good, are less numerous than with other publishers, nor are there any photographs or etchings. But the figure designs are the most varied that we have seen this year. While retaining our objection to the series of half-clad young girls—not alone on the score of incongruity with the season—we would specially praise one of the Japanese faces, another with sunflowers, and the pink dress of a three-quarters length Greek figure. The printing on satin is above rivalry.

BIBLIOGRAPHICAL JOTTINGS.

In the last number of Trübner's *Oriental Record* will be found lists, which seem fairly complete, of the published works of the late Dr. Burnell, and also of the late Prof. Palmer.

MR. GARNETT has printed for private distribution the paper which he read at the Cambridge meeting of the Library Association on "The Printing of the British Museum Catalogue." It contains a summary of the causes which made the issuing of a printed Catalogue in 1841 a disastrous failure, and of the reasons which have led the trustees to obtain the sanction of the Treasury to the cataloguing in print of all accessions to the library, and to the gradual transformation from MS. to type of the contents of the two thousand volumes of catalogue which line the familiar racks of the Reading Room. The additions to the library are divided into three sections—(1) new English and foreign books, (2) old English books, (3) old foreign books; and under these heads the titles of 130,000 volumes have been set up in type. The publication of the general printed Catalogue does not at present advance quite so rapidly. Twenty-two volumes, each containing between four and five thousand entries, have by this time been placed in the Reading Room. The cost of the production of each volume has been reduced to less than a hundred pounds. An annual subscription of £6 10s. will entitle the subscriber to a copy of all the Catalogues which may be issued by the trustees. Many of the sections of the Catalogue must prove of general interest to the literary world both at home and abroad. The volume devoted to the editions of Virgil is now passing through the press, and it will be succeeded by similar Catalogues of Shakspeare, Dante, Bible, and Periodicals preserved in our national library. Although very few people will be able to afford sufficient space in their houses for the entire Catalogue, many antiquaries will no doubt desire to purchase these special volumes. It is Mr. Garnett's hope that the enterprise may be finished by the end of the century.

THE last number of *The Folk-Lore Record* (vol. v.) contains the first part (A—B) of a "Bibliography of Folk-Lore Publications in English," compiled by the hon. secretary of the society, Mr. G. Lawrence Gomme, who will be glad to receive any additions or corrections. We also notice the report of a police case in Devonshire which precisely repeats the tradition about "scratching a witch" which Dr. Jessop recently recorded in the *Nineteenth Century*.

THE last issue of the *Cornell Library* contains a list of living Icelandic authors, amplified from one drawn up by Bogi Thorarensen Melsteo in 1879. The number of authors named is 103, and some account is given of their works.

THE current number of *Polybiblion* contains a bibliography of works treating of the folk-lore and popular literature of Alsace, compiled by MM. H. Gaidoz and Paul Sébillot, on the same plan as the bibliography for Brittany which recently appeared in the *Revue celtique*.

ACKNOWLEDGMENTS.

WE have on our table:—*First Aid to the Injured*: Five Ambulance Lectures, by Dr. Friedrich Esmarch, translated from the German by H.R.H. the Princess Christian (Smith, Elder and Co.); *Plutarch's Lives*, translated from the Greek, with Notes and a Life of Plutarch, by Aubrey Stewart and the late George Long, Vol. IV., completing the work, with an Index to the whole (Bell); *Roman Cameos and Florentine Medals*: a Series of Studies, Historical, Critical, and Artistic, by Emil Gebhart, translated and edited by M. Jeaffreson (Remington); *On Duty under a Tropical Sun*: being Some Practical Suggestions for the Maintenance of Health and Bodily Comfort and the Treatment of Simple Diseases, by Major S. Leigh Hunt and Alexander S. Kenny (W. H. Allen); *Hand-railing and Staircasing*, with upwards of one hundred working drawings, by Frank O. Creswell (Cassell, Petter, Galpin and Co.); *Publications of the Folk-Lore Society*, IX.—"Researches respecting the Book of Sindibad," by Domenico Comparetti, and "Portuguese Folk-Tales," translated by Miss H. Monteiro, with an Introduction by W. R. S. Ralston (Elliot Stock); *French Proverbs with English Equivalents*, compiled by G. Belcour (Stanford); *The Student's Handbook of Philosophy*: Psychology, by Prof. B. F. Cocker (Hodder and Stoughton); *Town Gardening*: a Handbook for Amateurs, by B. C. Ravenscroft (Routledge); *The Electric Light popularly explained*, by A. Bromley Holmes (Bemrose); *The Four Rules of Arithmetic*, for Use at Home and at School, with Numerous Original and Graduated Exercises, by William Wooding (Longmans); *The Law relating to Electric Lighting*, by George Spencer Bower and Walter Webb (Sampson Low); *Hints on Practice*; or, the Recent Reforms in the Procedure of the Queen's Bench Division, by A. R. Whiteway (Waterlow Bros. and Layton); *The Laws of Life*, and their Relation to Diseases of the Skin, by J. L. Milton (Chatto and Windus); *Landmarks of English Literature*, by Henry J. Nicoll (Hogg); *The Molly Maguires of Pennsylvania*; or, Ireland in America: a True Narrative, told by Ernest W. Lucy, edited by O. E. (Bell); *Float Fishing and Spinning in the Nottingham Style*, by J. W. Martin, with illustrations (Sampson Low); *Gleanings from Western Prairies*, by the Rev. W. E. Youngman (Cambridge: Jones and Piggott); &c., &c.

OBITUARY.

THE advocates of enlarged rights and responsibilities for women have lost one of their best friends and representatives by the untimely death of Miss Rhoda Garrett, on November 22, from typhoid fever. She was born in Derbyshire in 1842. For the last ten or twelve years she had been engaged with her cousin, Miss Agnes Garrett, in carrying on a business of substantially the same kind as the well-known artistic firm of Morris and Co. She was keenly interested in all aspects of the social and political questions in which women are particularly concerned; and, while her direct influence was always exerted on the side of moderate and practical courses, a strong argument in support of her views was afforded by the example of two ladies quietly succeeding in professional life. A brilliant and original talker, a true and generous friend, neglectful of none of the common obligations of domestic life, she was much loved and honoured by all who knew her personally; and her loss will be felt as a misfortune, not only by a large circle of friends, but more especially by the younger generation of art-students, and others of her own sex, over whom she exercised a strong and stimulating influence.

FRANCOIS VILLON AND TWO LATIN HYMNS.

IN Villon's *Grand Testament* a "Ballade des Seigneurs du Temps jadis" follows the more famous "Ballade des Dames du Temps jadis." Both seem to have been suggested to the poet by monkish Latin dirges on the vanity of earthly things, and in particular by two hymns, "Our mundus militat" and "Audi Tellus." The first of these hymns was rendered into vigorous Elizabethan English, and published at the end of his Interlude, "The Disobedient Child," by Thomas Ingelend (see Hazlitt's edition of Dodsley's *Old Plays*, vol. ii., p. 319). I have ventured on the following translation of the second, "Audi Tellus," to the original of which we may, perhaps, assign a date as early as the eleventh century:—

"Hear, O thou earth, hear, thou encircling sea,
Yea, all that live beneath the sun, hear ye,
How of this world the bravery and the glory
Are but vain forms and shadows transitory;
Even as all things 'neath time's empire show
By their short durance and swift overthrow!
Nothing avails the dignity of kinge;
Nought, nought avail the strength and stuff of things;
The wisdom of the arts no succour brings:
Nought, nought avail great riches and much power;
Genus and species help not at death's hour;
No man was saved by gold in that dread stour:
The substance of things fadeth as a flower,
As ice 'neath sunshine melts into a shower.
Where is Plato, where is Porphyrius?
Where is Tullius, where is Virgilius?
Where is Thales, where is Empedocles,
Or illustrious Aristoteles?
Where's Alexander, peerless of might?
Where is Hector, Troy's stoutest knight?
Where is King David, learning's light?
Solomon where, that wisest wight?
Where is Helen, and Paris rose-bright?
They have fallen to the bottom, as a stone rolls;
Who knows if rest be granted to their souls?
But Thou, O God, of faithful men the lord,
To us Thy favour evermore afford,
When on the wicked judgments shall be poured!"

J. A. SYMONDS.

MAGAZINES AND REVIEWS.

Brain continues to be mainly a record of pathological research. In the current number these more special studies are relieved by an article which deserves the attention of biologists and psychologists generally. It is headed "On the Conditions of the Nervous Discharge," and is from the pen of Mr. C. Mercier. The writer, arguing deductively from the general principles of the evolution of the nervous centres, reaches conclusions which coincide in a remarkable manner with the observations of pathologists, more particularly Dr. Hughlings-Jackson. The line of argument runs somewhat as follows. It is assumed that "the amount of energy liberated in the nervous discharge is *cæteris paribus* proportional to the amount of energy manifested in the mechanical effect of the resulting contraction." Speaking generally, we may say that the muscles situated most centrally with reference to the mesial plane of the body are largest, while those towards the extremities are successively smaller and smaller. This scale of muscles, from the largest to the smallest, answers to the order of evolution. We find that the lowest vertebrates have large muscles disposed immediately above the mesial plane; whereas, as we ascend, the smaller muscles answering to limbs, and to segments of limbs, are successively added. The differentiation of nerve centres must correspond with this differentiation of muscles. It can be shown

* See a letter by Mr. H. Havelock Ellis in the *ACADEMY* of May 27, 1882.

on mechanical principles that the course of this evolution will be from large centres at the base to smaller centres higher up or towards the "periphery." The higher and smaller centres, having a much greater surface in proportion to their size, will be much more open to disturbing agencies than the lower centres: that is to say, they will be much more unstable. Hence small and restricted discharges will affect them without affecting the others; and, as the disturbance increases, the discharge will involve more and more of the lower centres. These deductions, which are followed out with great clearness from a few simple mechanical considerations, are found, as has been said, to correspond with the observed phenomena of convulsion.

THE page illustration of *Le Livre* for November is a reproduction of a sketch of Gravelot's for *Tom Jones* which makes a hapless subscriber to the new Fielding gnaah his teeth once more over the inanities which deface those handsome volumes. M. Collet gives an amusing little sketch of the attempts of country managers to give the public old friends with new faces by altering the titles of well-known plays. The gem of the paper is certainly this: "Les Illusions de Madame Pernelle, ou le Serpent rechauffé dans le Sein d'une honnête Famille, Comédie en 5 actes et en fort beaux vers par feu Poquelin Molière." Some unpublished letters of Voltaire (a literary periodical in French without unpublished letters of Voltaire would be quite surprising) and a paper on Benvenuto Cellini as a writer are of interest, but M. Jules Adeline's article on painted bindings is perhaps of more. M. Adeline not only gives his own ideas on the subject, but supplements them by an account of the actual practice of a rather eccentric bibliophile, who seems to have devised what may be called *reliures parlantes* to indicate the contents of a book at a hastier glance than that necessary to read lettering.

THE HISTORY OF OPIUM IN CHINA.

Peking: Sept. 2, 1892.

THE literature of China has lately been ransacked to learn what information it will yield on the history of opium in China. Dr. Bretschneider, in this city, has made it a part of his extensive botanical studies, and several others have joined in this research on account of the interest attaching at the present time to the opium question. An article lately appeared in the *St. James's Gazette* which traces the poppy back to the Han dynasty. This I believe to be an error arising out of one name for the poppy, being *yü mī*, "imperial rice." *Yü* is an honorific term, the perpetually occurring "go" of Japanese. It means here "that which is applied to the Emperor's personal use." The passage reads: "One officer of the status per annum of six hundred measures [small piculs of rice] has the duty of pounding the rice used at the palace, and the preparation of dry provision. Under him there is a second officer who assists him." The phrase *yü mī* should not be referred to the poppy, which, in fact, is noticed first in the seventh century. I am sorry to differ from the writer of that article also in his explanation of a passage in the Shui King ohu of the fifth century. Near Chung King fu, in Szechwen, there were gardens where oranges and lichees were grown for palace use. On the north of the city, in certain paddies fields, rice was grown for the Emperor's table. Here, again, it is not the poppy that is meant. My Chinese friends agree with me that rice is the proper sense.

The poppy is first described in the Tang dynasty. It came to China along with various Persian and Arabian products as the result of the establishment of the empire of the Caliphs

rendering trade possible. About A.D. 960, the seeds of the poppy are recommended for the first time in the Court pharmacopoeia to be taken in the form of soup or thick gruel for indigestion. In the twelfth century, it became known to physicians that the poppy capsule is a most valuable remedy for dysentery. In the fifteenth century opium was a common remedy used in cases of dysentery and such-like diseases, and the mode of obtaining it from the growing capsule was perfectly well understood in China. Mahomedan physicians in Persia and at Bagdad began to use opium, and their greatest author, Avicenna, died, in 1056, of an over-dose of this drug. The medical history of the poppy in China is probably a correct index to similar stages in its use among the physicians of Persia and Bagdad. Soon after opium began to grow popular among Arabs and Turks, it spread into China and India. The Arabian merchant sowed the poppy in different parts of India to obtain a drug to sell with asafoetida, oil of Benjamin, storax, and rose-water. The poppy-seeds were carried to new ports, and the poppy cultivated wherever a demand arose for opium.

Tobacco came to China early in the seventeenth century, and tobacco-smoking originated opium-smoking in the Islands of Java and Formosa. From this last island opium-smoking spread as a popular habit into China about the year 1720. The first prohibitory edict issued at Peking was in 1729. From that time the habit went on quietly as a social disease, insidiously extending itself without much attention being paid to it till the end of the eighteenth century, when viceroys began to show alarm. From that time this great scourge of China forced itself into history, and became every year an evil more uncontrollable till the present time. The use of the poppy capsules and of opium continued to be a part of practical medicine in China from the fifteenth century till the edict was issued, after which the use of opium was omitted in medical books, but that of the capsule was continued. The poppy, therefore, was still grown to supply druggists with capsules; but opium was only made surreptitiously when the imported article could not be had.

A similar light may be thrown on the history of Arabian medicine, in regard to the products of distillation, and the principles of medicine, from the Chinese side. The Chinese physicians learned from the Arabs, and the Arabs in their turn from the Chinese. China taught them alchemy and perhaps some points in medical theory. They taught China distillation, and sent her several drugs.

Dr. Dudgeon, of this city, is preparing a volume on opium which will contain the result of extensive practice among opium-smokers during his eighteen years' work as a medical missionary, and will also present a large number of new facts and views on the whole question.

Travellers in Szechwen and in Rajputana agree in stating that the men of those provinces, though addicted to the use of opium, are vigorous and tall, and do not seem to look worse on account of indulging in this vice. The fact is that three or four in ten smokers are men who smoke without losing the glow of health from their countenances. Some say that two in ten are such. They perform every duty. They look exceedingly well. When conversing with them, it may not be noticed that they smoke. Yet they may for all that have been smoking twenty years.

An examination of books of the Ming dynasty has brought to light the fact that opium was admitted to the ports of China at a duty of two taels of silver, or ten shillings, for a hundred pounds in the year 1589. Twenty-seven years afterwards this was reduced one-eighth.

CORRESPONDENCE.

THE RUINS AT HISSARLIK.

Glasgow: Nov. 24, 1892.

It may be of some interest to those whose attention has been directed to the results of Dr. Schliemann's memorable labours at Hissarlik if I attempt to mark clearly the point at which the discussion in regard to their meaning now stands.

In *Ilios* (1880) Dr. Schliemann distinguishes:—(1) Remains of the Greek Ilium, reaching to about six feet below the surface. (2) Below this, a Lydian city. Then:—(3) Fifth prehistoric city. (4) Fourth prehistoric city. (5) Third prehistoric city. (6) Second prehistoric city. (7) First prehistoric city, founded on the native rock, about 52½ feet below the surface, and about 59½ feet above the present level of the plain.

This year, the excavations at Hissarlik have been studied by two eminent architects, whose services Dr. Schliemann specially engaged for that purpose—Dr. Wilhelm Dörpfeld, who for five years was at the head of the technical works of the German excavations at Olympia—and Dr. Joseph Höfler. Dr. Dörpfeld's results as to the periods of remains which can be distinguished have been indicated by him in the *Beilage* of the *Allgemeine Zeitung* of September 29, 1882, and by Dr. Schliemann in the *North American Review* of October 1882, pp. 339 ff.

Dr. Dörpfeld distinguishes:—(1) The Greek Ilium of the latest or Roman age, down to the same depth at which, according to *Ilios*, even the earliest traces of the Greek Ilium cease. (2) Remains of a town which, like (1), was not confined to the mound of Hissarlik, but extended over the adjacent plateau. (3) Remains of a town probably confined to the mound. (4) Remains of a smaller town, or rather of a village, confined to the mound. (5) Remains of a large town, which extended over the plateau, and had only a few large buildings on the mound, its acropolis. (6) A few remains of buildings which may represent a town distinct from (5): the reasons for thinking it distinct being that some buildings of (5) are above it, and that the ground on which (5) stands appears to have been carefully levelled.

The question now is:—No. 1 being only the latest or Roman phase of the Greek Ilium, what are Nos. 2, 3, 4, 5, 6—if 6 be indeed distinct from 5?

Taking Dr. Dörpfeld's series I would explain it thus:—(1) Greek Ilium of Roman age. (2) Greek Ilium of Macedonian age, taken by Fimbria in 85 B.C. (3) Greek Ilium of earlier age, taken by Charidemus about 359 B.C. (4) Possibly the Greek Ilium in its earliest form, when the first Aeolic colonists settled on Hissarlik. The evidence of the Hellenic pottery found at Hissarlik (see M. Dumont's *Céramiques de la Grèce propre*, chap. i.) seems to favour the view that we have there traces of the oldest Hellenic life on the site. (5) A prehistoric city. (6) (if distinct from 5) A smaller prehistoric settlement.

The essence of my view on the question has all along been this:—At Hissarlik we have not a thin "topping" of the Greek Ilium, with six prehistoric cities beneath, but remains of the Greek Ilium reaching down far more than six feet, and representing several successive periods of its architectural history; then, below that, a prehistoric residuum. On the other hand, Prof. A. H. Sayce wrote in the *ACADEMY* (November 5, 1881):—

"I should have fancied that the copious illustrations given in *Ilios* would, of themselves, have prevented anyone, however inexperienced in questions of archaeology, from asserting that the remains of the Aeolic Ilium surely cannot cease at six feet below the present surface of Hissarlik."

That, however, is what I do most confidently assert. The evidence on which I rest my belief is that of *Ilios* itself, and of history, now confirmed by that of my own eyes. At Hissarlik I could see only (1) the Greek Ilium of the Roman age; (2) the earlier Greek Ilium, apparently of more than one period; (3) something older still. But this is a case in which the best opinion on the meaning of the ruins themselves must be that of a resident architect and expert, such as Dr. Dörpfeld. Now, I find that Dr.

Dörpfeld confirms me as to my (1) and (3), but has not yet said how far my (2) may be recognised in the three strata immediately below (1).

Meanwhile, let me only say that I desire to put my view on record, to be confirmed or refuted later.

I should like to add a word on a verbal ambiguity which seems to have escaped the notice of some of my learned opponents, with the result of producing some slight confusion of ideas. With reference to Hissarlik, the word *stratum* has been used as if it connoted city. Because I have denied six distinct prehistoric cities, I have been treated as if I did not recognise any succession of remains at different depths. My view is that several "strata" (since we must use that rather inconvenient word) may, and probably do, belong to the same city—viz., the historic Greek Ilium in its successive phases. The inconvenience of the term "strata" in reference to Hissarlik is that it suggests a series of regular layers approximately uniform in depth over the excavated area. What we rather wanted was a term which should denote ages or periods of buildings, without excluding the notion that some portions of buildings belonging to different periods might stand nearly on the same level, and buildings of the same age on varying levels. The force of this remark will be apparent, I think, to anyone who has seen the ruins at Hissarlik.

With regard to the perfectly distinct question as to whether the large prehistoric city (No. 5) is, or is not, the town of Troy as described in the *Iliad*, my view could be briefly summarised by saying that it may have been the historical prototype, but cannot have been the immediate original. To speak of the "ruins of Troy," meaning the actual town described by Homer, is misleading. The poet's buildings were fancy-born. This topic will be discussed more fully in the next number of the Hellenic Society's *Journal*.
B. C. JEBB.

THE "QUARTERLY," AND THE REVISED VERSION.

Edinburgh: Nov. 29, 1882.

Will you permit me to state that the remarks of mine in last Saturday's *ACADEMY* on recent articles in the *Quarterly Review*, dealing with the text of the Revised Version of the New Testament, were written before the appearance of the current number of the *Quarterly*, and were not intended to apply to the not less able and more temperate article to be found there on "The Speaker's Commentary and Canon Cook?"

JOHN DOWDEN.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, Dec. 4, 5 p.m. Royal Institution: General Monthly Meeting.

5 p.m. London Institution: "Cistercian Architecture," by Mr. Ruskin.
7.30 p.m. Aristotelian: "Hume to Kant," by Mr. J. Fenton.

8 p.m. Royal Academy: "Linseed and other Drying Oils," by Prof. A. H. Church.

8 p.m. Victoria Institute: "Assyrian Inscriptions," by the Rev. Dr. O. D. Miller.

8 p.m. Carlyle: President's Address; "The Personal Relations of Carlyle with Goethe," II., by Dr. Eugen Oswald.

TUESDAY, Dec. 5, 8 p.m. Biblical Archaeology: "Houses and Householders of Palestine at the Time of Christ," by the Rev. W. H. Sewall.

8 p.m. Civil Engineers: "American Practice in Heating Buildings by Steam," by the late Robert Briggs.

WEDNESDAY, Dec. 6, 7 p.m. Entomological.
8 p.m. Society of Arts: "The Artificial Drying of Crops," by Mr. William A. Gibbs.

8 p.m. Geological: "Some Recently Uncovered Sandstone Rocks showing Glacial Wear and Scratches at Stoneleigh-Bushall, near Tunbridge Wells," by Admiral T. A. B. Spratt; "The Mechanics of Glaciers, more especially with Relation to their Supposed Power of Excavation," by the Rev. A. Irving; "Mr. Dunn's Notes on the Diamond Fields, South Africa, 1880," by Mr. Francis Oate.

8 p.m. British Archaeological.

THURSDAY, Dec. 7, 7 p.m. London Institution: "Beethoven's Earlier Sonatas," by Mr. Ernst Pauer.

8 p.m. Royal Academy: "Turpentine and other Volatile Oils," by Prof. A. H. Church.

8 p.m. Linnean: "Tasmanian Plants in South Australia," by Mr. J. G. Otto Tepper; "New and Little-known Colembola," by Mr. G. Brook; "Lichens collected by Dr. Mainstay in Eastern Asia," by Dr. Nylander and the Rev. J. M. Crombie; "The Genera and Species of Chalcidinae," by Mr. W. F. Kirby.

8 p.m. Chemical: "The Condensation Product of Phenanthraquinone with Ethylic Acetoacetate," by Messrs. F. R. Japp and F. W. Streetfield; "The Condensation Product of Vananthol," I., and "The Condensation Products of Isobutyraldehyde obtained by Means of Alcoholic Potash," by Mr. W. H. Perkin, jun.; "The Formula of Lophin," by Mr. H. E. Armstrong; "The Molecular Weight of Basic Ferric Sulphate," by Mr. S. U. Pickering; "Certain Brominated Compounds obtained in the Manufacture of Bromine," by Mr. S. Dyson; "The Chemistry of Hay and Haylage," by Mr. F. Woodland Toms; "The Preparation of Diphenylene Ketone Oxide," by Mr. W. H. Perkin.

FRIDAY, Dec. 8, 8 p.m. New Shakespeare: "Some of the Textual Difficulties in Shakespeare's Early Comedies," by Mr. F. J. Furnivall.

SATURDAY, Dec. 9, 4 p.m. Psychological Research: Introductory Remarks by the President, Mr. H. Sidgwick; Reports by the several Committees, and Discussion.

SCIENCE.

THIELMANN ON THE LATIN "DARE."

Das Verbum "Dare" im Lateinischen als repräsentant der Indo-Europäischen Wurzel DHA. Von Philipp Thielmann. (Leipzig: Teubner.)

HEER THIELMANN gives us in this work a contribution to the lexicon of the future which, if based on such contributions, will be immeasurably superior to the lexicons of the present. His method is a truly lexicological one, and may be confidently recommended to etymologists, who would often spare themselves and the world many pains if they acquainted themselves with the meaning and usage of the words which they adventure to derive.

The book begins with an etymological Introduction—not, however, complete—giving a *résumé* of the theories which have been held on the relations of *dare* "to give" and "to put." This is followed by an exposition of the difficulties of the problem, among which the author enumerates first and foremost the interconnexion of usage between words of "giving," "putting," and "making" in other languages. Another is what he calls "Umformungen"—transformation of usages by analogy; as, for example, when *dare* "to put" is construed with a dative, the proper construction of *dare* "to give;" or, again, conversely when the late Latin *dare ad aliquem aliquid*—a use which should be reserved for "putting"—replaces the dative of "giving." He then sketches the method of his enquiry, which first examines the correspondences of usage between *dare* and *facere* in a particular phrase; and, in default of obtaining information from that, betakes itself to other indications, such as a comparison of corresponding phrases in which a different verb is used, or an examination of the compounds of the verb where they give a clue to the meaning of the simple—e.g., *ex conspectu se abdere* helping us to the meaning of *in conspectum se dare*. Especially instructive are passages like Sil. *It.* 7. 592 = Hom. *Od.* 6. 229 ff., where the author is translating from the Greek. In cases where these methods fail us, we must have recourse to the nearest analogy in which the meaning of the word is undoubted. Next, we have a brief historical sketch of the usage in Latin literature,

Poetry shows many more examples than prose, a fact which the author explains by its greater conservatism. The dramatic poets have a large number of instances, of which the large majority are found in the last foot of the iambic verse, forms like *dābo dedit*, &c., making very convenient endings. Some writers, such as Terence and Horace, frequently avoid the usage by "Umformungen." The examples from Cicero are chiefly to be found in his earlier writings and his letters, a fact to which Herr Thielmann rightly calls attention. Among prose writers, Livy has the usage most commonly. Celsus is singular in using the word freely in the sense of "putting," while avoiding that of "making." Lastly, the Vulgate translation requires special mention from the way in which *dare* is used to render the Hebrew *לָקַח*.

After this Introduction the book proceeds to details. It first treats of *dare* = *facere*, to do or make. This section begins with the periphrastic use. A simple verb is often replaced by *dare* with a verbal or quasi-verbal substantive, or by *dare* with an adjective, adverb, or participle. Thus *motus*, *cursum*, *turbas dare*, like the same nouns with *facere*, differ little from *se mouere*, *currere*, *turbare* (n.); while *uastum dare*, *exornatum d.*, *palam d.*, like the corresponding expressions with *facere*, *curare*, remind us of *uastare*, *exornare*, *ostendere*. Passing on to general uses, the author somewhat venturously explains the Plautine phrases *sic datur*, &c., where the word is followed by a blow, like *sic agam*, "That's the way we go to work," instead of "That's what you get." Then comes *dare* with an accusative in the sense of "causing, making," *fidem dare*, which is explained after Munro as "to establish, prove," *fides* being "certainty," *pausam dare*, &c., *fugam dare*, in the sense of "causing," not "taking to flight," and the like. After these come a few phrases like *dubium dare*, which would have been better placed with the other examples of periphrastic *dare*, from which they differ only through their having no corresponding active verb. The third division of *dare* = *facere* is to "produce" (*facere ex se*) of the earth, nature, &c., in phrases like *flammam dare*, and with especial frequency with words denoting sound—*plausum dare*, *sonitum dare*, *gemitum dare*, &c. The two expressions last mentioned are very common in verse, but confined generally to certain positions—viz., (1) *dat sonitum*, &c., the beginning of the hexameter; (2) *sonitum dedit*, &c., filling up the last half of the third and beginning of the fourth foot; (3) (in Virgil only) *sonitum* is divided between the third and fourth feet, and *dedere* ends the line in four places. A preference of the same kind is seen in *fit sonitus*, *fit fragor*, &c., which is regularly found at the beginning of the verse, and is rightly explained by Herr Thielmann as intended to express the suddenness of the sound. A fourth division includes *dare* = *facere*, with an acc. and inf. where the meaning is hard to distinguish from that of *dare* "to give." An Appendix on the Vulgate use and *se dare* with adverbs of manner bring us to the second set of meanings—*dare* = *ponere*, to set. After some preliminary illustrations, among which may be mentioned *foras fieri*, *proficiscor*, "I begin to make myself forth,"

"I go out," and *proficere*, to "go out," in Commodianus; *facere*, to "go," in Petronius; *facessere*, "to make off," which show the neuter side of the conception, we have *calculum dare*, to "play" a man at draughts (cf. *ψῆφον τινεύειν*), and other examples. Then *se dare* with adverbs and adverbial phrases, in *conspicuum se dedit*, &c. Next comes *dare in*, &c., in which motion to a place is indicated. The most remarkable instances are from Celsus, as already said. *Vela dare* shows the same meaning, "to set sail." Another section deals with juristic expressions in which the word is used with a place of punishment or the punishment itself; in *pistrinum dare*, *ad bestias dare*. Lastly, Herr Thielmann traces the same meaning of "placing," in a metaphorical sense, in *dare leges* and the like.

This is a brief sketch of an admirable piece of careful and thoroughgoing linguistic work, which has advanced not a little the solution of the difficult problem—what are the relations of the two roots DA "to give" and DHA "to put." It shows conclusively that the meanings of "putting" and "causing, making" existed in Latin in the simple verb *dare*. If it does this at the expense of curtailing unduly the area assigned to *dare* "to give," we must not be surprised. It is almost impossible for a writer to be an advocate and a judge of his own theories at once. This bias has led Herr Thielmann to take an erroneous view of certain phrases, such as that of Lucan, x. 377, and *dare leges*, already quoted, and the passages included in the whole section beginning with p. 124, in which the sense of "giving, granting" is obvious. But his main position remains unaffected and, if stated as I have stated it above, unassailable; and the double meaning of *dare* may now be accepted as a fact of Latin usage. His investigation has further cleared the way by showing implicitly that one of the two alternative suppositions of relationship between the Latin *dare* and the root DHA "to put," against which I argued in the *Transactions* of the Philological Society, 1880-81, p. 99 (see also ACADEMY, August 23, 1879)—the idea that the *d* in the compounds for original DH was due to their being treated as simple verbs—is untenable also from the side of the meaning. *Dare* and its compounds in Latin are in complete correspondence; and a *dare* "to put" is just as much a part of the language as a *dare* "to give." The question now narrows itself to this: Are we to suppose that an invariable phonetic law of Latin has been violated in this instance, and in this instance alone? Are we to suppose that two words like *dare* and *facere*, from the same root and with a most striking resemblance of usage, as Thielmann's book has abundantly shown—with everything, in fact, to keep them together—have been pulled apart by the unaccountable freak of language? And are we to do this in order to separate meanings which we see are found together in other cases and seem to have a natural affinity? Then farewell to the newly won stability of our science. For my own part, I cannot find anything in Thielmann's book or elsewhere which conflicts with the theory suggested in my paper already referred to, that there was a pair of roots in

Indo-European DA and DHA with much the same meaning; that in some languages the two roots were preserved with differentiated meanings (such as Greek and Sanskrit), and in other languages (such as Latin and Zend) one was lost and the survivor had to do duty for both.

J. P. POSTGATE.

CORRESPONDENCE.

THE LANGUAGE OF BIHAR.

Arrah, Bihar, Bengal: Oct. 16, 1882.

I have to thank Mr. Keane for his kind notice of my *Maithili Grammar* in the ACADEMY of August 19, which I have just seen.

The language question of Bihar, the land where Buddha preached and founded *Vihāras*, and the original home of the *Māgadhi Prakrit*, has risen to considerable prominence in India of late, and has excited no little discussion. While some (including Dr. Hoernle and myself) maintain that *Bihārī* is a language as distinct from *Hindī* as *Gujarātī* is, and entitled to as distinct recognition as the last from Government, others contend that it is a simple *congeries* of barbarous *Hindī* dialects, without a semblance of grammar, literature, or polish.

I do not propose to deal with the question here, and I only write at present to draw the attention of philologists in Europe to the points in issue.

The allegations of our opponents having at first sight an apparent amount of truth on their side, we set ourselves to work to find out whether the dialects of Bihar (formerly called Eastern *Hindī* by Dr. Hoernle, but now *Bihārī*) have a grammar and a literature or not. As the result of our enquiries, we have found three dialects, spoken by fifty to sixty millions of people, named *Bhojpūrī*, *Māgadhi*, and *Maithili*. The inter-relationship of these dialects, and their relationship to *Hindī* on the west and to *Bangālī* on the east, were the points to be solved.

With respect to grammar, Dr. Hoernle's *Gaudian Grammar* is now accepted as proving a radical difference between *Hindī* and the extreme western sub-dialect of *Bhojpūrī* spoken in and about *Banāras*. The illustration of the remaining dialects has fallen to my share, of which the *Maithili Grammar* is the first instalment. I have also completed *Grammars* on a similar plan for all the other six dialects and sub-dialects of Bihar. These are being published by the *Bangāl Government*; and the first and third parts—viz., the General Introduction and the *Grammar* of the *Māgadhi* dialect—are now awaiting the Government press order. The other dialect illustrated will be the standard *Bhojpūrī*, spoken at *Dumraon*, in the *Shāhabād* district, the town where, according to tradition, King *Bhoja* reigned, surrounded by his nine jewels. The other five are sub-dialects, which need not be detailed here.

With respect to literature, we have found an indigenous series of poets dating from the year 1400 A.D., whose works still survive, in quantity equal to the amount of *Hindī* literature in existence previous to its resuscitation by the English at the commencement of the present century. This literature is being gradually published by the Asiatic Society of Bengal; and one poem, the "Haribans" of *Manbodh Jhā*, appeared in the last number of its *Journal*. The poems of *Bidyāpat Thākur* (the oldest) and of *Harkhnāth* (the most modern of known *Bihārī* authors) are also included in my *Maithil Chrestomathy*, which will probably be published by the same society before this reaches you.

I am afraid that this letter appears rather egotistical; but my sole object in writing it is to draw the attention of European savans to

a question affecting the welfare of millions, and which they are peculiarly able to discuss. I also wish to show that ample materials will very shortly be available on which they may found their arguments.

We (i.e., Dr. Hoernle and myself) propose to do our best towards summing up and arranging all that we know in the matter, by preparing an elaborate Bihārī dictionary, with copious illustrations from Bihārī literature, and a comparison of every word with (when possible) its Prakrit original, and with its cognate form in Gipsy, and in every other Gaudian language. The prospectus and specimen pages of this dictionary are sent herewith.

While, therefore, we do our best to plead the cause of Bihārī in India, may I hope that the ACADEMY will lend it aid by opening its discussion in Europe? Discussion, we feel sure, is all that is wanted. It will not be difficult to convince scientific men; but the Indian administrator, often overwhelmed as he is with the cares of a large district, has seldom time to analyse intricate questions of philology, and only accepts their final solution after it has been brought again and again to his notice by its being repeatedly presented to him in different forms by different authorities.

GEORGE A. GRIERSON.

SCIENCE NOTES.

PROF. HALL, of Dublin, will include in his volume of *Contributions to the Physical History of the British Isles*, which Mr. Stanford is to publish immediately, a dissertation on the origin of Western Europe and of the Atlantic Ocean. Prof. Hall endeavours to prove his theory by a series of charts.

M. LÉON DE ROSNY will shortly publish at Paris the result of an ethnographical tour he made last year in the Dobruška under the authority of the French Government. He has compiled an elaborate map, showing the various elements in the population of every town and village; and he has also brought back more than three hundred photographs, which will be reproduced by heliogravure.

MR. ANDREW PRITCHARD, who died on November 24, was an indefatigable author upon subjects connected with the use of the microscope. So long ago as 1827, he delivered a lecture before the Royal Institution on "The Art of forming Diamonds into Single Lenses for Microscopes;" and in the following year he published a treatise on *Optical Instruments* in the "Library of Useful Knowledge." In 1834 appeared the first edition of his *History of Animals*, of which a fourth edition, greatly enlarged and revised, was issued in 1881. His *Microscopic Illustrations*, originally published in 1829-30, also passed through three editions.

PHILOLOGY NOTES.

THE following is the list of the courses of lectures that were begun this week at the Ecole spéciale des Langues orientales vivantes:—Literary Arabic, M. Hartwig Darenbourg; Vernacular Arabic, M. Oherbonneau; Persian, M. Ch. Schefer; Turkish, M. Barbier de Meynard; Malay and Javanese, the abbé Favre; Armenian, M. A. Carrière; Modern Greek, M. Miller; Chinese, the comte Kleczkowski; Japanese, M. Léon de Rosny; Annamite, M. Abel Desmichels; Russian, M. Louis Leger; Geography, history, and legislation of Muhammadan States, M. Gustave Dugat; Biography, history, and legislation of the States of the Extreme East, M. Henri Cordier; Hindustani and "Taboule" (? Tamil), M. Julien Vinson; Roumanian, M. Emile Picot. The interests of England in the East are cer-

tainly not smaller than those of France; but what have we to show by the side of this?

At a recent meeting of the Académie des Inscriptions, M. Renan read a paper upon two Semitic monuments, of which photographs had been sent by M. Reinach, of the Ecole d'Athènes. One was a *graffito*, in Aramaean, from Athens, of the time of Hadrian, but scarcely legible; the other was a colossal head, found at Edessa, to which the people had given the name of "Sarah's brother." On one side of it was the fragment of a Syriac inscription, of the fifth or sixth century A.D., of which only a few words remain.

A FRENCH translation of Prof. Sayce's *Principles of Comparative Philology* has been undertaken by M. E. Iow.

A FRENCH missionary, the abbé J. A. Ouog, has published (Montreal: Châteauneuf) a new and enlarged Glossary of the Iroquois Language, with notes and Appendices.

WE learn from the *Revue critique* that M. Danicic has published the first volume (A—C) of an important Serbo-Croatian dictionary.

MR. ROBERT BROWN, JUN., has reprinted from *Archæologia* (vol. xlvii.) a paper which he read before the Society of Antiquaries in March 1881 upon "A German Astronomico-astrological MS. and the Origin of the Signs of the Zodiac." The substance of the paper he has since incorporated in his *Law of Cosmic Order*; but we here have the quaint illustrations of the fifteenth century very skilfully reproduced. Mr. Brown has now satisfied himself that the group of seven human figures do represent the Pleiades, and not the days of the week, as he had at one time thought. It is curious to find the representations of signs thus passing the familiar number of 48 or 49. Pliny says that in his time the constellations were fifty-two in number.

MEETINGS OF SOCIETIES.

PHILOLOGICAL SOCIETY.—(Friday, Nov. 17.)

DR. MURRAY in the Chair.—A paper on "The Bosworth-Toller Anglo-Saxon Dictionary" was read by Mr. James Platt, jun. He pointed out the mistake of reprinting the errors of the infant Anglo-Saxon philology of Bosworth's time as food for a generation that has advanced so far beyond it. Unfortunately, as no scholar would link his name to such a work, the editing had had to be entrusted to an untried hand, and the result was that even the matter under Prof. Toller's control was almost as bad as the early part which had been "finally revised" at Bosworth's death, rendering it a work of considerable difficulty to alter it except slightly. The unscientific and chaotic basis on which the dictionary is built up, the treatment of the vowel *æ* as *ae* (between *ad* and *af*) and of the consonant *þ* as *th* (between *te* and *ti*), the jumbling together of short and long vowels, the catchwords spelt anyhow, and many of them in various ways, with full references to each, and no indication of their respective value, age, or dialect, the introduction of mere inflections and phrases as catchwords, and even of words that do not occur in Anglo-Saxon, solely in order to tell us so! the contradictions and false references—were all criticised and exemplified. The ignorance shown by the dictionary in Anglo-Saxon grammar and the cognate Germanic languages—in fact, in comparative philology generally—was illustrated by a number of amazing examples. It appeared that in some cases the dictionary assigned wrong genders to nouns, when its own quotation clearly showed their incorrectness (e.g., *andlifen* fem., given as neut.), and made numerous other blunders, such as making a nominative *cucon* for the accusative *cuconne* of the adjective *cucu*, nominatives feminine *gefe*, *húpe*, out of oblique cases *gefe*, *húpe*, an infinitive *gemiltan* from third person *gemilt*, connecting *abiuwodonum* with Sanskrit *abhi*, *éce* with German *ewig*, *grátan* with Icelandic *grautr*, &c. It was then shown that numbers of words were given with no quota-

tion or reference, and that numbers of others were omitted altogether. Other miscellaneous criticisms and remarks closed the paper, the most conspicuous being the explanation of the law of Germanic prefix accentuation (i.e., that the prefixes bore the stress before nouns and adjectives, and were unaccented before verbs), with full proofs that the prefix, as in *arisan*, was short *a* and not *á*, as often marked. Mr. Platt also noticed that Cookayne's criticisms and corrections of Bosworth's old dictionary had not had much effect on the new—which we hope will not be the case with Mr. Platt's paper.

ROYAL ASIATIC SOCIETY.—(Monday, Nov. 20.)

SIR BARTLE FRERE, BART., President, in the Chair.—A paper was read by the Rev. James Sibree, Jun., on "Malagasy Place-Names," in which he pointed out that the coast nomenclature shows, naturally, the parts taken by the Portuguese, the English, and the French in its discovery, while at the same time it retains some traces of a very early Arabian civilisation. Mr. Sibree mentioned the various names given to the island by natives and foreigners. The native names he showed to belong, as a rule, to the Malayo-Polynesian stock of languages, some of the more obscure ones being probably relics of an aboriginal race. The names applied to the various geographical features of the island were then dwelt on, particularly those referring to the mountain ranges. Many examples were given showing how strikingly descriptive these were of natural features—height, prominence, bulk—including also the ideas of mystery, dread, inaccessibility, &c., and giving, too, the appearance of various of the hills, as rocky, bare, wooded, &c. Many mountains, Mr. Sibree added, bear the names of animals and of birds; others are known by personal names. The river and lake names were then noticed in the same order of classification as that of the mountains. To these were added the names of the towns and villages.

BROWNING SOCIETY.—(Friday, Nov. 24.)

THE REV. J. LL. DAVIES in the Chair.—The first paper, by Mrs. Owen, was called "What is 'The Flight of the Duchess'?" While offering an interpretation of the poem, Mrs. Owen disclaimed any assumption of her theory being conclusive, and acknowledged that the poem was perfect as a romance. The Duke, the Huntsman, the Duchess, represent collectively the complicated and contradictory whole which we call ourselves; individually, the gross self, the better man in us, and the soul. What we tell our friend is the story of our own life, with its diverse influences, its spirit-fights, and earth-bound nature. "The great wild country" pictures the dreariness and far-stretching sadness of a self-absorbed life. In the Huntsman we have the simple human nature that may either rise with the Duchess or fall with the Duke. For ages, Self has been idolised—"I must see this fellow his sad life through." But between the Huntsman and the Duchess is more affinity; the spiritual perceptions which may be dim at first will grow keener, and in the far future he will "get safely out of the turmoil, and arrive one day at the land of the Gipsies, and find my lady." The Gipsy-deliverer is Love, which draws the soul away from the self with which it has in vain tried to be satisfied.—The second paper was by the Rev. J. Sharpe, on "The Songs in 'Pippa Passes.'" Some of the songs are simple, and their relation to the characters of the drama is easily seen; two, at least, are obscure—viz. the lines which Phene recites, and the last of Pippa's songs. Pippa's morning hymn strikes the poem's key-note. All events, even the most minute, are ordered by God's Providence. As each link in the chain of causes is necessary, each is equally important. The result of this belief is that Pippa seems herself "just as great, no doubt, useful to men and dear to God," as the four happiest in Asolo. But the old difficulty arises, How shall we reconcile the injustice of life with this belief in an all-directing Providence? Pippa herself supplies the answer; the victim of injustice; of gentle birth, yet reared as a peasant; heiress of great estates, yet doomed to unremitting toil. God has given to her, however, to effect in her single holiday a more glorious work than rank or wealth effect in a lifetime. The verses which Phene recites to Jules have a primary and secondary meaning—(1)

describing the actual relation of Lutwyche to Phene and Jules; (2) involving the theory of contraries, which found favour with many mystical philosophers. Lutwyche, determined to avenge himself on both Jules and Phene, has examined the whole subject of hate to see how he might best gratify his hatred, and has concluded that there is no such hate as that which injures the soul through its purest affections. Love, in its innermost essence, is closely connected with Hate; love finds its expression in terms of hate, as when a mother calls her child "a little rascal." The feeling is deepened by contrast. The passion of love is speedily changed to hate. Hate is never so powerfully exhibited as by love. There is no such hatred as the hatred of self that springs from love. Thus love borrows aid from hate, and hate is most fully seen in love. Lutwyche puts this philosophy into practice by (1) proposing an act of apparent love to Jules—i.e., helping him to a peerless wife; (2) by acting as though in hatred to Phene, by exposing her to the rage or even the violence of Jules, in both cases acting by contraries. Pippa's last song represents a child in a wood. Shut in by the wood, he fancies he has exhausted all knowledge when he has become acquainted with the outward form of the few things round him, wholly ignorant of the boundless universe outside. He is thoroughly familiar with the changes of the moon, and fancies he has exhausted the whole science of astronomy. But God takes him; and a whole world of knowledge of which he had never dreamed opens upon him. This song describes a mental condition similar to the Bishop's, who has little knowledge of spiritual truth, is thoroughly familiar with the moon (the Church), but has not made out the sun (God).

FINE ART.

GREAT SALE of PICTURES, at reduced prices (Engravings, Chromos, and Olegraphs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—GEO. REES, 115, Strand, near Waterloo-bridge.

Le Livre de Fortune. Recueil de deux cents Dessins inédits de Jean Cousin. (Librairie de L'Art.)

THE short notices which have already appeared in the ACADEMY regarding certain drawings by Jean Cousin now appearing in the weekly numbers of *L'Art* have not, we think, attracted sufficient attention to the very interesting discovery which was made a few years ago in Paris by M. Ludovic Lalanne.

M. Lalanne informs us that, when examining the various MSS. preserved in the Library of the Institute, he laid his hand upon an unpretentious volume which had long been unnoticed, and found, to his agreeable surprise, that it contained some two hundred drawings, chiefly in pen, belonging unquestionably to the French school, of high artistic merit, which further investigation showed to be, with very few exceptions, by the same hand, and that the hand of the celebrated Jean Cousin, who has been fitly distinguished as the originator of the French school of painting—one who, "by grandeur and purity of design, brilliancy of colour, and fertility of imagination, created a type which no one of his rivals could attain, and none after him could imitate."

And yet there are few whose influence was so great who have been really so little known. Of his works in any class, comparatively few authentic examples have been preserved to us, though one after another his biographers have spoken of them as numerous; while of his life, the facts recorded have been singularly few and occasionally contradictory. In England, at least, the meagre account of Bryan comprises nearly all that has been known, and those who have pursued their researches further have met with statements impossible to reconcile. Thus one biographer tells us (and in this he is probably right) that Cousin was born at Soucy about the year 1500, and that he died in 1590—but is

careful to add that both these statements are doubtful; another, misled by the fact of his alliances with the family at Monthard, erroneously fixes on that locality for his birthplace, and, possibly confounding him with another Jean Cousin, prior of the convent of St-Pierre-de-Blay, gives the year of his death as 1462. He marries his second wife, according to one, in 1537, and dies, as we learn from another source—this time, we hoped, finally—in 1530.

And yet Cousin's history is, or ought to be, sufficiently well known. The first account which bears evidence of any careful investigation was that presented to the Historic and Natural History Society of the Yonne, at Auxerre, in 1851. It is also the fullest and most complete which has yet appeared, though its main facts have been incorporated into the *Nouvelle Biographie* of 1855, and form the groundwork of the essay of M. Firmin-Didot in 1872.

There is, or was until quite recently, as M. Deland, the author of the account referred to, informs us, a family living near Tours bearing the English name of Bowyer. An ancestor of the name, one John Bowyer, settled in France about 1422-30, in the reign of Charles VII., and died there in 1470. His son, Henri, became possessed of the seigniorship of Monthard; Henri had a son, Estienne, born, probably, about 1500, and a daughter, Marie, born a few years later; this son, Henri, was again succeeded, first by his son, Simon; and next by his second son, Estienne, who, born somewhere about 1525, became possessed in his own right of the seigniorship of Jouancy, and held with other titles that of "Maître Apothicaire," at that time a title of honour; although, as the author quaintly remarks, it was made somewhat ludicrous in after-days by Molière. In 1552, this "Maître Apothicaire" married Christine, a daughter of Jean Cousin by his second wife.

Turn we now to Jean Cousin. Born of poor parents at Soucy, about the year 1500 (the exact date is not known, since the registers of the "bailliage" of Sens do not go back earlier than 1539), he early acquired reputation by his extraordinary talents; and, aided no doubt by high personal qualifications, at a time when social prejudices in favour of birth and family were much more powerful than in the present day, was able to form matrimonial alliances much above what his original position in life would have warranted. His first wife, Marie, was the daughter of Christopher Richer, secretary to Francis I., and sometime ambassador in Denmark; his second wife, Christine Rousseau, was the daughter of the chief magistrate of the "bailliage." By her he had one child, also named Christine, the Christine who married Estienne Bowyer, above-mentioned; and for his third wife he married the aunt of Estienne, that is, the above-named Marie Bowyer. The descendants of Estienne Bowyer and Christine were, when this account was given, settled at Petit Bois, near Tours, still retaining in their possession no less than five family portraits by the hand of Jean Cousin.

It would occupy too much space to enumerate the entire list of works which may be unhesitatingly accepted as by Jean Cousin. He was not only a painter of portraits, for there remains in the Louvre a large and important composition upon canvas—"The Last Judgment"—painted by him for the convent of the Minimes at Vincennes. It has been engraved by Pierre Jode in 1602, in twelve plates, the whole forming the largest print in existence, larger even than Dürer's "Triumphal Arch of Kaiser Max," which measures eleven feet by ten, and by the side of which Hans Burgmair's "Triumph of Maximilian" is but a little thing.

He engraved on copper. He has also left numerous wood-cuts, illustrations to Aesop's Fables and to the Poems of Ronsard, &c. His

books on perspective and on portraiture, embellished with his own drawings, still exist. To Jean Cousin, it is now believed, and with good reason, the world owes the miniatures in more than one lovely Book of Hours; and we are strongly inclined to assign to his cunning hand the designs and exquisite scroll-work in a volume the borders of which were engraved by Geoffrey Troy in 1525; the resemblance to certain authentic works on glass by Cousin can hardly be accidental. In sculpture, too, he stood pre-eminent. There is no finer example of its kind in Renaissance than the beautiful tomb of Louis de Bressé in the cathedral of Rouen, erected to the memory of her husband by Diana of Poitiers. Portrait busts and bronze medallions exist of Francis I. and Charles V. of Spain; and a statuette in ivory, nearly fifteen inches high, a figure of St. Sebastian, is yet preserved.

But Cousin's greatest renown was as a painter upon glass. In this it is not too much to say that he was unrivalled. Among his best-known works are the windows in the churches of the Jacobins and of St-Gervais at Paris, and in La Sainte Chapelle at Vincennes, which latter have been copied by M. Lasteyrie for his folio work on French glass-painting. But finer still are the celebrated windows in St-Patrice at Rouen—an allegorical representation of the "Triumph of Grace." It was M. Langlois to whom the honour must be assigned of being the first to discover here the work of Cousin; and though, as we must reluctantly admit on the authority of M. Firmin-Didot, no documentary evidence can be referred to in support, there is the stronger evidence of similarity of style, extending—for we know the windows well—even to the minutest details, such as the treatment of the hair in his male figures—and there need be no further hesitation as to whom the creation of these beautiful works in glass-painting should be attributed. There was no other artist of the time who could have drawn the naked figure so perfectly, or, in the clothed, could have so admirably disposed his draperies; while certainly he had no rival who could have designed the most interesting and spirited figure in the whole composition, the conception, so rarely met with, of Death as a female. Of this, we may add, the outline engraving after a drawing by Mdlle. Esperance Langlois gives a truthful and accurate representation.

A few words as to the drawings, especially those now in course of reproduction by M. Lalanne. It is singular that, until this recent discovery, so very few original drawings by Jean Cousin have been recognised. Twenty or twenty-five, of which two are in the British Museum (there are three catalogued, but one is manifestly spurious) and others in the Louvre or in private hands, exhaust the list; possibly some of these are questionable, though the peculiarity of his touch, which we think is clearly reproduced by M. Lalanne, is sufficiently distinctive. We anxiously await some further remarks upon this discovery. Is it not really a re-discovery? There is a passage in Lenoir's *Musée des Monuments français*, respecting a MS. volume containing, not two hundred, but sixty drawings by Jean Cousin, a "Book of Fortune," with explanations and French verses, to which he adds: "Ce manuscrit rare et précieux appartenait à M. le Boufflers. Depuis la mort de ce poète aimable, on ignore dans quelles mains il a passé." The number of the drawings, sixty and two hundred, does not agree; but Lenoir acknowledges that he himself had never seen the book, for he does not even know whether the drawings were coloured: an error, therefore, is possible, and this volume of which we write may be the same as that which disappeared a hundred years ago.

O. H. MIDDLETON-WAKE.

CORRESPONDENCE.

BEWICK'S TECHNIQUE.

Mr. J. M. Gray, in his review of Mr. Thomson's *Life and Works of Bewick* (ACADEMY, November 11), says:

"There is one point connected with Bewick's technique regarding which we should have been glad of more definite information. At p. 83, we are informed that he executed certain engravings on metal by a peculiar method, which has been fittingly styled 'wood-engraving on copper.' We might reasonably have been furnished with such details as would have enabled us to appreciate the appropriateness of the phrase: . . . judging from the example reproduced at p. 89, the results which he obtained does not materially differ from that which is yielded by a plate executed by the ordinary union of engraved and etched lines."

The nature of the experiments which Bewick made in what is better called "etching in metallic relief," or, as the Messrs. Dawson prefer, "typographic etching," is very clearly explained in chap. ix. of Chatto and Jackson's *History of Wood-Engraving* (ed. 1861), and so also is the difference between these experiments and the practice of Blake to which Mr. Gray refers:—

"The plate is first covered with an etching ground in the usual manner, and to this ground an outline of the subject is transferred by pressing the plate with a pencil drawing above it through a rolling press. The engraver then proceeds to remove with his etching point, or some other tool, as may be necessary, all such parts as are intended to be white. When this process, which may be termed *reverse etching*, is completed, the parts intended to be white are corroded by pouring aqua-fortis upon the plate in the usual manner, while the lines which represent the object remain in relief."

This method, the writer proceeds,

"was tried by Bewick, and also by the late Robert Branstetter; but they did not succeed to their satisfaction, and none of their productions executed in this manner was ever submitted to the public."

It is clear from this that the term "wood-engraving on copper" is not at all "fittingly" applied to the process. For not only is copper used in place of a block, but an acid is employed instead of the graver. The only engravings to which such a term can at all fittingly be applied are those which were executed upon *type-metal* in relief by Anderson, the first wood-engraver of America, and by one or two others in their earliest efforts. These really were cut with the graver after the manner of a wood-block, and must have been produced at great expense of labour and time. But the whole aim of the experiments of Bewick and others was, as Jackson tells us, "to save the time necessarily required to cut out all the lines in a wood-engraving."

There is some confusion upon the point, which may have arisen from the fact that Bewick did execute some works on copper. The large "Kylas Ox" and the plates for Consett's *Tour in Lapland* (1790) at least may be cited. These are of a somewhat remarkable character (the plates for the *Tour* in particular). But they are not "experiments" in metallic relief, or in what Mr. Thomson calls "wood-engraving on copper;" they are simply awkward attempts at copper-engraving by a hand accustomed to wood. Bewick himself is silent on the subject of his experiments in relief-etching, and of his work for the *Tour in Lapland* he says simply that it was done "on copper at a low rate."

I have been unable hitherto to get sight of Mr. Thomson's book. But, coupling Mr. Gray's remark, that the specimen given looks like an impression from a copper-plate (which it would not do had it been engraved in relief), with Jackson's assertion that Bewick published no results of his experiments, I am tempted to think that

the author of this new *Life* may have fallen into some confusion between these early attempts to engrave on copper and these "experiments" in "relief-etching." In that confusion he has the company of Messrs. Redgrave and Bryan, whose dictionaries, when they come to speak the one of the *Tour* and the other of the "Kylas Ox," are alike hazy and insecure. At least I may hope that this note upon Bewick's technique, following hard upon Mr. Gray's question, may not be without interest.

In correction of the foregoing remarks, I may add that Bewick gives an account of an "experiment" in engraving, which may possibly have been an "etching in metallic relief," or it may have been a veritable "wood-engraving on copper," such as Anderson cut upon type-metal.

In 1801 (*vide Monthly Magazine*, May 1822) he engraved a "five-pound note" for the Carlisle Bank; and, in doing this, hoping to prevent forgery, it was his object "to make the device look like a wood-cut." "In this," he says, "though a first attempt," he succeeded, "and the number of impressions wanted were sent to Carlisle." Possibly Mr. Thomson's work has information as to the technique of this bank-note. It can hardly be the "experiment" which Jackson tells us of, and which was "unsuccessful." ERNEST RADFORD.

P.S.—I have at last got a moment's sight of Mr. Thomson's book. It seems that the confusion which I suspected does in fact exist. The specimen engraving on p. 89 does, indeed, simulate a wood-cut, and was probably executed in the same manner as the bank-note "made to look like a wood-cut" to which I have referred. The plates to the *Tour in Lapland* which are spoken of in the same connexion are, as I have said, of a totally different character. These last were executed in 1786; and Bewick tells us himself that his first attempt to engrave copper so as to look like wood was not made till 1801.

THE SOCIETY OF BRITISH ARTISTS.

THERE is a marked improvement in the exhibition of the society which opened to the public on Monday last, as compared with its two last winter exhibitions. There is less rubbish, and a higher average of merit. In landscape, in particular, there are many works of unusual excellence. Mr. Edwin Ellis has eight pictures, all characterised by his invariable freshness and vigour. Most of them contain admirable representations of the swirl and motion of sea-waves, but not a few, to our thinking, are marred by the fantastic blackness of the cliffs or rocks in the middle distance. "Running for Shelter" (45) is a fine study of waves, and in "Penberth Cove" (136) there is a masterly piece of foreground. The sky and figures in "Pilchard Fishers" (499) also deserve notice. Mr. Haynes King has a careful "Study on the Coast" (53), and in "On Dartford Heath" (151) Mr. Alfred Glendening, jun., sends an admirable late evening or twilight effect. Mr. John Whipple's "Pebble Pickers, Bude, Cornwall" (276), is noticeable for the firm painting and excellent drawing of the rocks in the foreground and the distant cliffs. Mr. Caffieri's "Back of Hurley Lock" (294) is clever and pleasing in colour, but too "painty" and indefinite to be altogether satisfactory. There is a careful and truthful foreground in "The Ebbing Tide, Coldingham" (343), by Mr. J. W. McIntyre. Mr. Wyke Bayliss in "At the Cathedral Door, Bayeux" (352), sends a good specimen of his rather "woolly" and uncertain style of architectural painting. In figure subjects the exhibition is rather strong. Mr. W. H. Bartlett's solitary contribution, "Mia Bella" (376), is a firmly painted head; and Mr. Marsh, who also has but one picture, sends a very admirably drawn and

agreeably coloured study of a fisher girl, called "The Lass that loves a Sailor" (267). Mr. Glendonie has a capital little picture of "The Student" (62); and Mr. W. A. Breakspere seems to us to have made a great advance in his picture of "Une marchante Enfant" (615). The pose of the figure is singularly graceful and natural, the face is admirably painted, and the whole picture is very pleasing. His other work in oils, "A Little Housewife" (118), is also a good piece of colour. Mr. Haynes King's *Granny's Story* (196) deserves attention for the truthfulness of the old woman's face and figure; and we must not omit to mention Mr. Hayllar's clever heads. Some of the water-colours are of unusual merit. Foremost among them is Mr. Carl Haag's "At Thebes (Past and Present)" (751)—a masterly piece of drawing, characterised by even more than this admirable painter's ordinary power of colour. The subject is an extremely difficult one, and Mr. Haag may be congratulated on the complete success with which he has treated it. Mr. G. S. Walters has a skilful sketch entitled "In the Harbour at Littlehampton" (702); and Mr. Bernard Evans several careful and pleasing pictures of Welsh scenery, among which a large study of "The Mountain Side: near Barmouth Junction, North Wales" (663), may be specially noted for the excellent distance. Mr. W. Ayerst Ingram sends a study, "At Close of Day: Penzance" (663), which possesses many points of merit.

NOTES ON ART AND ARCHAEOLOGY.

WE hear that the "Novar Madonna" of Raphael, formerly in the Munro collection, has crossed the Atlantic and found a temporary home in the Metropolitan Museum of Art at New York. There is little chance that it will ever come back to us.

M. DE NEUVILLE, the celebrated painter of battle-scenes, has received a commission from the English Government to paint the taking of Tel-el-Kebir. He was present at the review held by the Queen, and he has already made a number of sketches for his work, including one of Sir Garnet Wolseley at the head of his troops.

THE Royal Society of Painters in Water-Colours (upon whose members the Queen has now been pleased to confer diplomas signed by her own hand) will open its twenty-first winter exhibition of sketches and studies on Monday, December 2. The private view is to-day. The Grosvenor Gallery, the exhibition of animal paintings at the Fine Art Society's, and Messrs. Gladwells' winter exhibition in Gracechurch Street will also all open next week.

A LOAN exhibition of Italian art is to be opened in the Corporation Galleries, Glasgow, on December 22. Among the contributions there will be—from the Queen, the Cellini Shield, several bronzes, and examples of Italian arms; from the Duke of Buccleuch, a fine series of prints by Marcantonio Raimondi, Agostino Veneziano, and other early Italian engravers; and from Mr. Malcolm of Poltalloch, fifty drawings by Italian masters, selected from his collection. Mr. J. O. Robinson has undertaken to illustrate fully the subject of Italian medals; and Sir Robert Hay has lent examples of decorative armour by Negrolé and that other great armourer who executed the Cellini Shield. Many other well-known collections have been laid under contribution to fill up the exhibition, the nucleus of which will be supplied by South Kensington.

THE principal drawing a year or two ago at the exhibition of the Institute of Water-Colour Painters was Mr. Gregory's "Last Touches." A dissatisfied artist was in the foreground, tilting back in his chair, bored with the failure of what

he wanted to be perfection. The "touches" would not be happy ones. Behind him, a young woman, in evening dress, and fan in hand, stood with her back to the fire, awaiting the artist's pleasure to fulfil with him some evening engagement. Mr. Gregory has lately finished a cabinet picture in oils, in which the incident of the foreground is omitted, and the whole force of the work is concentrated on that which, with slight variations, was the background of the earlier work. The quite agreeable young person who stands with her back to the fire, the pretty mantelpiece, the dignified apartment, with here its vivid illumination and its cosy gloom, now constitute the theme. It is a modern character, modern life, and a modern interior treated with frankness and skill—treated with a vigour of conception and a delicacy of hand such as cannot easily be matched in contemporary painting. Mr. Gregory has been now for some years recognised as among the most individual and best-equipped artists; and it is not possible that the high honours of the profession can be long withheld from the doer of his brilliant work. The new picture is worthy of the artist who painted "The Rehearsal" in last year's Grosvenor, and whose portrait of Miss Galloway was among the most extraordinary successes of the previous season. As long as the themes of modern life—sometimes even of the life of Bohemia—can be treated with the artistry which Mr. Gregory displays, it is idle to deny their applicability to the best purposes of contemporary painting.

M. PAUL MANTZ has resigned the post of Director of Fine Arts; and M. Falguière, the sculptor, has been elected member of the Académie des Beaux-Arts.

A COMMITTEE has been formed in Paris for the purpose of organising a series of artistic conferences to be held on Sundays in the Louvre and Luxembourg Museums. It is to be wished that something of this sort could be tried in England. Sunday lectures at the British Museum and National Gallery would be a boon to many persons who find it hard to get through an English Sabbath. But we must open our galleries first before we can have lectures in them. The first conference will be held at the Louvre next Sunday at 10 a.m.

We have received early copies of the Christmas numbers that will be published next week of the *Graphic* and the *Illustrated Sporting and Dramatic News*. With Mr. Millais' large plate of "Little Mrs. Gamp" everyone is now familiar from the shop windows. The general verdict is that it is too squat; but this is really a tribute to the artist's naturalism. In his pictured story of "Mr. Oakball's Winter in Florence," Mr. Caldecott is quite at his best. Of the letterpress, we have been most pleased with the sort of supplement which describes the process by which the *Graphic* is produced. The other Christmas number is strong in its stories, which are short and good. The coloured plate is excellently printed. Indeed, we never cease wondering at the perfection to which this art has been brought.

THE *Magazine of Art* is particularly rich both in matter and illustration this month. To begin with, we have a fine stirring ballad of Elizabethan times by Mr. Gosse, telling of the "Cruise of the Rover," and how its gallant Devonshire crew fell at last into the hellish jaws of Spain. Next, Mr. Monkhouse, while describing some interesting pre-Raphaelite pictures in the possession of Mr. Trist at Brighton, enters upon a little dissertation regarding the meaning of pre-Raphaelitism. "Few artists," he writes, "have so completely woven the actualities of life into the fabric of their fancy as D. G. Rossetti." Hogarth's house and tomb form the subject of a pleasant article by Mr. Austin Dobson. Prof. S. Colvin writes of the

wax bust of a lady at the Lille Museum attributed to Raphael; and Julia Cartwright discourses on the Nativity in art, and the many ways in which it has been represented.

In the *Revue des Arts décoratifs* M. Edouard Garnier continues his admirable "Conseils pratiques" addressed to painters on pottery and porcelain. The wall-papers at the exhibition of the Union centrale form the subject of an interesting and well-illustrated paper by MM. V. Poterlet and P. Rioux de Maillou. The illustrations of this valuable periodical, both in and out of the text, are numerous and of a high class.

M. BAUDRY publishes to-day the first part of *Les Meubles d'Art du Mobilier national*, a series of engraved folio plates of about one hundred and sixty of the finest specimens of furniture, bronze, vases, &c., preserved at the Garde-Meuble and in the chief national museums. The text is by M. E. Williamson, Conservateur du Mobilier national. The subscription price of the complete work is 200 fr.

THE STAGE.

"THE SILVER KING" AT THE PRINCESS'S.

THE London world contains people who are too exquisite to enjoy a strong drama. To them the height of comedy is Mr. Baneroff's happy fooling among Mr. Robertson's milk-jugs. By them the productions at the Princess's are readily classed with those at Drury Lane—both are realistic—but a play at Drury Lane under a régime of sensation is, in truth, a play at the Princess's with the brains left out. Drury Lane, then, does not often merit the consideration even of the most tolerant of the true students of the stage (except when pantomimes are going); but at the Princess's there is always the interest of a strongly constructed and tersely told story, and sometimes, to boot, the interest of purely literary work. We do not, to speak frankly, find the purely literary touch so evident in "The Silver King" as it has been before now; but, details apart, the true dramatic art is sufficiently shown by the closely compacted tale which holds the attention from the first rise of the curtain to its last fall.

The story counts for so very much that, even if the daily papers had not been beforehand in telling it, we should hardly tell it with fullness here. Suffice it to say that its main theme is to be found in the adventures of a single character, who is falsely suspected of having done to death an old rival of whom he was confessedly jealous. The man not only is suspected by others, he suspects himself; for, on recovering from a drunken fit that followed on an attendance at what either Lord Palmerston or Lord Beaconsfield used to call "our Isthmian games," he finds himself surrounded by the signs and the hints that no other than himself can have been the murderer of the dead man lying there beside him. Eventually, after long years, and when the despondent fugitive has become rich with all the treasure of a silver mine, evidence is forthcoming that fixes the guilt in the right place. It is then for a while a desperate struggle of proof between the man who was really guilty and the man whom the public had believed to be. But in a great drama of incident it would never be suitable that the struggle should end in the innocent party having the worst of it; and, moreover, Messrs. Jones and Herman have arranged their whole play so ingeniously that the happy end is not only pleasant to the audience but is in true accordance with the claims of probability. The work, though it is not exceptionally rich in delicacy or novelty of characterisation, abounds in *dramatis personæ* who are natural and are vividly presented; and

the writers follow Mr. Sims—though they do not prove themselves always up to him—in a useful knowledge of many kinds of life. But they have seen the society of the prosperous, and they have seen Rotherhithe.

One detail in the construction of the piece ought to be spoken of before we pass to the acting. The first scene has been said to recall the first scene of the "Ticket of Leave Man," but it recalls it "with a difference." Each scene takes place at a house or garden of public entertainment. In each there is a detective. The young man who loses his money in the present piece may recall, we think, the "Green Jones" of Tom Taylor's, and the marine store dealer of benevolent aspect but unreliable character may suggest "Melter Moss." But there the resemblance pretty well ends. The story is absolutely different; and it is very easy—if a critic's first thought is how to be ingenious in making up "a case"—to discover likenesses, to discover coincidences. But to come to the acting. The burden of it falls on Mr. Wilson Barrett, who has the most arduous and the most varied part he has yet assumed. He is, of course, the man who was wrongly suspected, and many are the variations he contrives to play on the one theme of a terrible and an unjust suspicion. He has gained greatly in power. He is often powerful—he is so especially in the scene by himself in the inn chamber; and he is often pathetic. In fact, here, in a most difficult character, is an actor of extreme capacity. Perhaps it is only because of the sharpness of the contrast his own skill has created that we like him never better than in the effective scenes in which, to detect the true criminal, the criminal who was wrongly suspected assumes the guise of an imbecile. This is a remarkable study from Nature—the imagination alone, Mr. Wilson Barrett will allow us to assume, has been drawn upon for the due expression of a murderer's remorse. But Mr. Willard plays the real villain, who at first managed to persuade Wilfrid Denver to consider himself guilty. On the stage it is Mr. Willard's mission to play villains who have no redeeming point. He plays them perfectly, but perhaps he is rather to be pitied than congratulated. Such a surfeit of wickedness in his public career must compel a man, by the force of sheer reaction, to an absolute monotony of faultlessness the moment he leaves the boards. Mr. George Barrett plays a homely part—that of a faithful retainer—with sense of pathos and sense of comedy. Mr. Clifford Cooper is excellent, and especially in his make-up, as the marine store dealer. But indeed all the parts are well played. A pretty little girl—a little Miss Olitherose—speaks and acts without any air of effort as the daughter of Denver and his devoted wife. The devoted wife is Miss Eastlake, who not only looks the part exquisitely, but has, in an unusual measure, the gift of clear and telling and pathetic utterance. The public has now accepted with heartiness the stage-work of a lady whose qualifications for the parts she at present fills have been evident from the day of her first appearance. "The Silver King" has attained, in its own kind, a distinguished success.

STAGE NOTES.

"IOLANTHE; or, the Peer and the Peri," has at last come out at the Savoy Theatre. The plums of Mr. Gilbert's dialogue are somehow apt to get into the papers almost before the piece is fully known, and by this time a good many have been published. It appears to be the general opinion that the triumph which was achieved by "Pinafore" and "Patience" will scarcely be matched by the new play. The

subject is not quite so happy as in either of these, and perhaps the music is not quite so taking. Nor has Mr. Gilbert struck any new vein which hereafter he may hope to work profitably. His reputation is not enhanced, but then it is not diminished, by the new play. His satire often takes an excellent direction. After the praises that in popular literature have not seldom been lavished on the virtues of the poor, it is very cheering to be told, to the accompaniment of Mr. Sullivan's music, that:

"Hearts as pure and fair
May beat in Belgrave Square
As in the lowly air
Of Seven Dials."

We cannot consider the new bill at the re-opened Strand Theatre worthy of a playhouse which aims to take high rank even among playhouses of the lighter entertainment. The *opéra comique*, or whatever it may be styled, has catchy music, but little that is original; while the comedy of "The Heir-at-Law" wants acting like the late Mr. Compton's to carry it off as an artistic success. Compton was one of our most admirable comedians, and his Pangloss among his best parts. Mr. J. S. Clarke, with his abounding grimaces and his ready resource, is a comic actor. There is a world of difference. The Strand should shortly give us an amended programme.

THE New York *Critic* has a most unfavourable, not to say spiteful, article on Mrs. Langtry. An elaborate comparison is drawn between her reception in America and a particular scene in "Pericles Prince of Tyre;" and allusions are made to Venus Callipyge, "the garb of Aphrodite," and "leg-pieces." The editors of the *Critic* are, we believe, both of the same sex as Mrs. Langtry.

MUSIC.

RECENT CONCERTS.

THE first concert of the Borough of Hackney Choral Association was given at the Town Hall, Shoreditch, last Monday evening. The programme included several features of interest. Gade's short cantata, "Christmas Eve," for alto solo, chorus, and orchestra, is a charming work, in which there is quality if not quantity, and simple, graceful, and original music. The orchestration is highly effective; in addition to the usual orchestra, the composer employs trombones, tuba, and harp, not to make a loud noise, but to give colour and to obtain variety of effect. The solo part was sung in a pure and sympathetic manner by Miss Damian. Her voice is of excellent quality, and has been well trained. Mendelssohn's 42nd Psalm was next performed, and this deservedly popular work was given with great delicacy and spirit. The soprano solo part was well interpreted by Miss Edith Millar, and the quintet most charmingly rendered by Miss Millar and Messrs. Beckett, Raynham, De Laey, and Tinney. Brahms' "Song of Destiny" (one of the composer's grandest inspirations) was magnificently sung by the choir, and the important orchestral accompaniments played to perfection. Brahms is not always inspired; but, when writing this work, he must have felt something of the "perfect abandonment" of which Wagner speaks in his letter to M. Villot. The programme included a novelty—Beethoven's "Sacrificial Hymn" ("Opferlied," op. 121b), for alto solo, choir, and orchestra. Fr. von Matthison's short poem evidently made a great impression on Beethoven; he set it twice to music—as above, and also as a song with piano-forte accompaniment. In his sketch-books there are many traces of these compositions, extending over a space of nearly thirty years.

The "Opferlied" is short and very simple; not such a work as the advanced *opus* number would perhaps lead us to expect. The solo part was taken by Miss Damian. We have still to notice "Voi che sapete," well sung by Miss Edith Millar; "Quando a te lieta," charmingly rendered by Miss Damian; and a fine performance of Beethoven's fourth symphony. Mr. Prout evidently likes to send his audience away in a good humour, and for this purpose could not have made a better selection than Auber's sparkling overture, "Le Dieu et la Bayadère." With the exception of a few passages in which the altos and tenors were not altogether at their best, all the performances were thoroughly good, both as regards choir and orchestra. At the second concert, January 22, 1883, Mozart's music to "King Thamos" will be performed for the first time in England.

Mr. Geaussen gave the first concert of his second season at St. James's Hall on Thursday, November 23. The choir is an excellent one, the voices are pure and bright; and, with such good material, the conductor ought to accomplish great things. Bach's cantata, "O Light Everlasting," was, however, not well rendered. With only piano and organ accompaniment, it loses much of its effect—still more when there is not an *entente cordiale* between conductor and performers, vocal and instrumental. Mendelssohn's cantata for male voices, "To the Sons of Art," went very well, and so did all the part-songs. The programme announced "the impossibility of allowing *encores*," and yet there was one. The vocalists were Miss Marian Mackenzie, Mr. E. Lloyd, and Mr. F. King. Mr. Charles Stephen's "Duo Concertant," for two pianos, was performed by the conductor and the composer. The composition is one of considerable merit, and an interesting, if not remarkable, specimen of English music. J. S. SHEDLOCK.

MESSRS. NELSON'S NEW BOOKS.

THE LAND and the BOOK—CENTRAL PALESTINE and PHOENICIA. By W. M. THOMSON, D.D. Imp. 8vo, pp. 714, with 130 Illustrations and Maps, cloth extra, richly gilt, price 21s.

This New Volume, like the previous one on Southern Palestine and Jerusalem, is complete in itself. The Pictorial Illustrations are entirely new, and prepared specially for this work.

THE CZAR: a Tale of the Time of the First Napoleon. By the AUTHOR of "THE SPANISH BROTHERS," &c., &c. Crown 8vo, cloth extra, price 5s.

RALPH'S YEAR in RUSSIA: a Story of Travel and Adventure in Eastern Europe. By ROBERT RICHARDSON, Author of "Almost a Hero," &c. With Nine Engravings. Post 8vo, cloth extra, price 3s. 6d.

IN THE POLAR REGIONS; or, Nature and Natural History in the Frozen Zone. With Anecdotes and Stories of Adventure and Travel. With Forty-six Illustrations. Post 8vo, cloth extra, price 2s. 6d.

IN THE TROPICAL REGIONS; or, Nature and Natural History in the Torrid Zone. With Anecdotes and Stories of Adventure and Travel. With Seventy-eight Illustrations. Price 2s. 6d.

RECENT EXPEDITIONS to EASTERN POLAR SEAS. With Twelve Engravings and Two Charts. Post 8vo, cloth extra, price 2s.

LITTLE FOXES that SPOIL the VINES, &c.: Loving Words for Little Folks. By the Rev. T. CHAMPNESS. With Six Illustrations. Royal 18mo, cloth, price 1s.

THE RUSSIAN EMPIRE, HISTORICAL and DESCRIPTIVE. By JOHN GEDDIE, F.R.G.S., Author of "Lake Regions of Central Africa," &c. With Two Coloured Maps. Pp. 583, crown 8vo, cloth extra, price 6s.

"The volume is useful and interesting from beginning to end."—Morning Post.

HOMER'S STORIES SIMPLY TOLD. By Charles Henry HANSON. With Ninety-seven Illustrations. Post 8vo, cloth extra, gilt edges, price 4s.

MAN on the OCEAN: a Book about Boats and Ships. Pictorial and Descriptive. By R. M. BALLANTYNE and R. RICHARDSON. With Sixty-eight Illustrations. New Edition. Post 8vo, cloth extra, price 3s.

THE CHILDREN of ABBOTSMUIR MANSE: a Tale for the Young. By the AUTHOR of "NELLY'S TEACHERS," &c. Illustrated. Post 8vo, cloth extra, price 3s. 6d.

STORIES of the DAYS of KING ARTHUR. By Charles H. HANSON, Author of "Homer's Stories Simply Told." With Illustrations by Gustave Doré. Post 8vo, cloth extra, gilt edges, price 4s.

LOST in the BACKWOODS: a Tale of the Canadian Forest. By Mrs. TRAILL, Author of "In the Forest," &c. With Thirty-two Engravings. Post 8vo, cloth extra, price 3s. 6d.

THE CHILDREN'S TREASURY of PICTURES and STORIES. By the AUTHOR of "THE KING'S HIGHWAY" and other Favourite Writers (being the Yearly Volume, 1833, of "The Children's Paper"). Profusely Illustrated. Pictorial boards, price 1s.

THE LANDSEER SERIES OF PICTURE BOOKS.

Each containing Four of LANDSEER'S PICTURES, beautifully printed in Oil Colours. With Letterpress Descriptions by Mrs. SURR. Covers ornamented with Additional Designs after Landseer. 4to, price 6d. each; or untearable, mounted on Linen, price 1s. each.

. The Set of Four Books in One Handsome Volume, cloth extra, price 3s. 6d.

LANDSEER SERIES.—No. 1. Containing: Return from the Warren—Daah, Hector, Nero, and Lorie—Shepherd's Dog in the Snow—Collie Dogs.

LITERATURE.

A History of the Papacy during the Period of the Reformation. By M. Creighton. In 2 vols. 1378-1464. (Longmans.)

MR. CREIGHTON'S volumes end twenty years before Luther was born, and resemble a certain irritating History of Philosophy since Kant which breaks off with Descartes. The disproportion comes from a view of the Reformation which subordinates the religious movement to the struggle with the Papacy. This is the simplest and most visible, if not the deepest, issue, and none can dispute its importance. A History of the Reformation constructed on these lines might become a book for all sorts of men, as the neglect of metaphysics makes it easy to be equitable in judging character apart from doctrine. Seeing that the power which had controlled the nations was one day found to have lost so much credit that men were unanimous in rejecting it who quarrelled about everything else, Mr. Creighton infers that its weakness was prepared by causes long at work, and he goes back from the breach to the sap. He might have fixed his starting-point at the expedition of Nogaret, but is content to begin three-quarters of a century later with the outbreak of the Western schism.

The French cardinals, being at Rome against their will, bestowed the tiara on an Italian who was not a member of their College, and whose character, as it came to be known, makes his elevation as strange as the attempt to depose him. They quickly repented, revoked the election, and chose one of themselves, who went back to Avignon; and then there were two rival Popes urging a plausible claim, and sometimes there were three. For such a crisis there was no legal remedy. It was proposed that every country should institute a Pope of its own, that all should declare themselves neutral, that the legitimate claimant and the usurper should be dismissed together. For the first time men began to analyse their notion of the Papacy, and turned from the canons of the Church upwards to a higher law. The decay of vital power indicated by the loss of unity manifested itself by many signs, for the Christian frontiers were receding, and a crusade preached against internal sects ended in disaster. To arrest the progress of disintegration exceeded the known and ordinary resources of ecclesiastical government. The public mind was saturated and wearied with the exposure of abuses which it was impossible to defend or to deny. When four great Councils in forty years had striven for the purification of life by religion, and had dis-

persed without achieving it, the effort died away and the evil seemed desperate. An idea had grown up, during the schism, that the Church had lost the power of recovery and repair, and this became, after the middle of the fifteenth century, the belief of thousands. The policy of the mediæval Pontiffs had come to an end at Avignon; and the modern Papacy emerged from the Council of Constance with a contracted scope and lower aims. Counting no longer on the fidelity of popular opinion, or on refined morality and superior culture in its agents, it sought the prop of temporal sovereignty, and negotiated, by exchange and compact, for the favour of States. An interval of new promise came in with the Revival of Learning, when the discoverer of Tertullian and the most flexible and expert of the humanists presided over the Church. There was a passing vision of Rome absorbing and assimilating the new research—of Rome, tolerant, enlightened, and humane, conciliating enemies, fostering enquiry, assuming a national guardianship over Italy, and combining the armies of Europe against the Turk. But the Church and the Italian Renaissance parted in anger. The Papacy, resting upon nations without religious energy and upon princes without religious scruple, held them by new developments of authority which at last turned indifference into resistance and awakened the Reformation.

This history of increasing depravity and declining faith, of reforms earnestly demanded, feebly attempted, and deferred too long, is told by Mr. Creighton with a fullness and accuracy unusual in works which are the occupation of a lifetime, and prodigious in volumes which are but the prelude to an introduction, and have been composed in the intervals of severer duty. He speaks with regret of his imperfect command of books; but it is right to expose the guile that lurks in this apology. The Northumbrian vicarage in which Bulaeus and Traversari are as familiar as Burnet must be a rare and enviable spot. Although the German learning of the author is more apparent than the Italian, and it is possible that Bueckhardt or Sugenheim or the second volume of Voigt's *Renaissance* would open some springs of additional knowledge, his use of right materials is as thorough as it can well be where completeness is unattainable; and there are no signs of such glaring inacquaintance with obvious literature as even Macaulay betrays in the conference with Rochester or at the Boyne. Every particular is taken so rigorously from the originals that he remains independent of the moderns who have trodden his path. He distrusts Hefele, and is callous to the dogma of municipal liberties which inspires Gregorovius. Almost the only precursor whose influence can be traced is Voigt, and he probably must answer for the high estimate of Enea Silvio's writings.

Without questioning the assurance of the Preface that the omissions as well as the details are intentional, the judgment that has determined them may, in some instances, be doubted. Having chosen to write as a disinterested observer, not as the exponent of private convictions inclining to a view, Mr. Creighton gives frontage to matters which admit of no subtleties or dispute, and appears

to cleave to the outer husk of fact. His suggestive brevity and dislike of emphasis, his sobriety and reserve, his carefulness to stumble over no problems, to enforce no moral and improve no text, sometimes raise a wish for deeper furrows and a closer grasp. A philosophy of the Reformation which traces its rapid victories back to the manoeuvres of *condottieri* and of cardinals in the age of Italian tyrants may not be altogether baseless; but other causes, which figure obscurely in these pages, are not less significant, and bear a richer flavour of the future. The first challenge of the Decretals by Cusanus, Valla suggesting the suspicion that the Donation of Constantine was not the only fiction in the array of Roman prerogative, the Metropolitan of Ephesus denying the Apostles' Creed at Ferrara, Gemistus founding a school of passionate enquiry and unbelief among the Florentines by the revelation of Plato, even Toscanelli's conversation with the traveller from Cathay—a hundred facts like these bear as closely on the true purpose of the volumes as Urban's appearance at his window, with book and candle, to excommunicate the enemy thundering at the gate; or the despot of Cremona dying inconsolable because, having had the Pope and the Emperor on the tower of his cathedral, he had forgotten to hurl them down. Mr. Creighton has studied the collision of forces more than the growth or descent of ideas. We see authorities crumble; what manner of crop the cleared ground yielded, whether any of the seed was sown while men slept, are topics probably less to his taste. He shows the reforming current in different channels, and distinguishes the Sorbonne from a more liberal school. The distinction is confused by uncertainty in the authorship of many pieces; and Mr. Creighton, after mentioning much, if not all, that has been discovered about it, pronounces, in regard to the book *De Ruina Ecclesias*, for Clémanges. The objections to this opinion are, if not unanswerable, so serious that a reader willing to be convinced would wish to learn from so good a critic why he prefers the arguments of Voigt and Schwab to those of Schmidt and Muntz.

Avoiding all parade of erudition and gravity, and a tone too solemn or austere for the average man, he allows extenuating circumstances, and leans to a Scotch verdict. He thinks that it would have been better not to set up throne against throne; but he disapproves the Avignonese party when they withdraw their allegiance. He affirms that the worst enemies of Boniface IX. could bring no worse charge against him than that of a worldly spirit, forgetting that he himself has admitted a much more criminal charge. He says, without note or comment, that Nicolas V. declared remission of sins to all who crusaded against the Turk; and he speaks elsewhere of certain agents who got into trouble for selling indulgences without warrant. Mr. Creighton, who has read Theodorici a Niem *De Schismate*, would find therein that the culprits in question were accused of worse than dishonesty, that they sold absolutions for indulgences, and that this was a heinous crime. He would not then have imputed the same delinquency to a Pontiff whom he is far

from stigmatising as a traitor to his trust. Nicolas V. incurred the censures of Malleolus, it is true, for his dealings in this matter, but he did not offer remission of sins for money without repentance. The nature of his offer is not only known, but notorious. His Constantinople Indulgence is renowned among all the treasures of literature, for it is the earliest printed document of which we can fix the date. Indulgences are likely to occupy a good deal of attention, and the real issue cannot be too exactly stated. If there is vagueness in some places, there is none as to the author's sentiments on the doctrine of Transsubstantiation. He considers it superstitious, materialistic, and, apparently, idolatrous; and, to clear the thoughts even of profane readers, he devotes one of his longest notes to a certain anecdote about a prelate and a partridge—an ancient anecdote borrowed from a book which suggests some curious speculation respecting the shelf to which he habitually turns for testimony in theological emergencies. This passage is not in perfect keeping with the rest of the work. He has announced that he will write from a strictly historical point of view, not as a dogmatist, and he has generally so written, with some detriment to the clearness of issues and the sharpness of outlines. He is far above the common impulses of sympathy and aversion, but his pen is here untrue to his programme, and has struck one false note. It is especially inconsistent with his solicitude to excuse the judgment of Hus. Every Catholic believes in Transsubstantiation; but nobody knows what it is to burn a heresiarch. All are involved in the indictment; none benefits by the defence.

It is observable that the striking sketch of Benedict XIII., the shrewd and sagacious churchman who continued to reign in solitude when all the world had abandoned him, makes no mention of his best supporter, St. Vincent Ferrer. Yet the writings of that famous preacher might have furnished an historian less keenly impatient of dark shades and monotonous lamentation with a key to some things not explained. St. Vincent was a Dominican, but he assured the Pope that the Dominicans were as bad as the Franciscans. He believed that not a hope was left for religion, that sin had prevailed against the Church, and that God's patience was exhausted. He was satisfied that the Day of Judgment was at hand, and that Antichrist was already nine years old. Mr. Creighton is unmoved by the fervour of ascetics, and his judgment remains uninfluenced by such evidence as the letter in which the University of Paris demanded that Joan of Arc should be delivered to her tormentors, or the passages which taint the sincerity of Gerson, and show that his zeal for institutions was warmer than his anxiety for souls. In a studied and characteristic chapter he praises Hus, and praises also the men who sent him to the stake. He represents them, indeed, as worse, collectively, than they were; and then, with much good nature, proceeds to defend them. For he says that the Council of Constance made a formal decree against keeping faith with heretics; but he adds that this involves no illogical obliquity, and that the men who did it were the wisest and the best of Christians, such principles

being universal, and a different conception of duty impossible, in the Middle Ages. It would appear that "killing no murder" was a maxim applied to religious dissent throughout those ages in which Catholicism prevailed, and down to some date yet to be ascertained between the fifteenth century and the nineteenth. Mr. Creighton warns us to understand before we judge; and the question is not so much whether the warning is right as whether it has been taken.

It is by inadvertence that the reign of an opinion which had lasted two hundred and fifty years is extended over a thousand. So good a scholar cannot mean to say that the Merovingians governed in the spirit of the Councils of Toledo; that law, civil or ecclesiastical, punished heresy with death in the days of St. Anselm; or that Hildebrand saw these things in the same light as Sinibaldo. He cannot really confound Northern with Southern Europe; Norman jurists with the Inquisitors of Carcassonne. What he describes as the idea of the indispensable unity of religion, but which was, strictly speaking, not the same thing as the idea of unity, did not prevail until the twelfth century. The phases of increasing rigour may be traced in St. Bernard and even in Innocent III. The law by which Hus suffered, the work of a sceptic, indifferent if not hostile to the State religion, was not older than 1231. Passionate intolerance might be found in almost every age. Methodical persecution on an accepted principle was established slowly.

The spirit of the age, unless it is narrowly watched and exactly gauged, is a deceitful auxiliary in historical estimates. A judge who burned a witch after Weier, or tortured a prisoner after Nicolas, might be unconvinced by their arguments, but he could not honestly plead the common consent of mankind. The unsifted sentiment of nameless multitudes might avail as a motive for the old woman of the Hussite legend; but conscientious men are, by the hypothesis, much on their guard against its influence, and, in matters of life and death, demand a higher sanction. Mr. Creighton has been careful to register the importance of Marsilius of Padua, who, he says, silenced the Papal party for a hundred and fifty years. The statement cannot be accepted without qualification, for the *Defensor Pacis*, which appeared in 1324, was almost immediately followed by some of the most celebrated treatises ever composed in defence of Rome, by Alvarez Pelayo, Triumphus, La Palud; and two men conspicuous in these pages, Turrecremata and Capistrano, took up the same cause. The blotting out of so many sturdy volumes, the oversight of placing Aegidius of Rome on the side which he opposed, and, underlying all, the belief that Gratian's *Decretum* was the recognised code of canon law, and embodied all the forgeries which had been made in the interests of the Papacy, exaggerate the depression of Ultramontanism before the schism. But, having raised Marsilius so high, it would be consistent to remember that that powerful writer distinctly opposed religious persecution, and that he did not stand alone. It is enough to allude to the story of the Three Rings, in a book which has not escaped the author's researches, and to the treatment of Wiclif,

who himself defended persecution before his enemies employed it.

The enthusiasm for slaughtering Jews was as active from the First Crusade to the Reformation as the desire to exterminate sects, and, outside of Languedoc, caused greater bloodshed. It was a popular feeling, not authorised by the Church. But Mr. Creighton refers the transaction to opinion, not to authority, and cites not Lateran canons or decrees of the Innocents, but an unchallenged and inevitable persuasion. I think he somewhere calls the Council a rule of faith, a term which may not be proof against the cavil of theologians, but which expresses the decisive fact that its members had set themselves above the positive law they made it their mission to reform, and that neither Innocent III., nor Frederic II., nor St. Thomas Aquinas compelled their adhesion. By including resistance among Church principles, they unsettled the marks of heterodoxy, and made it almost as uncertain as treason in the Wars of the Roses. Men who innovated so freely against authority could not be bound by the spell of irresponsible custom. To their spiritual earnestness these volumes render ample homage; but their originality and freshness of mind, their emancipation from influence and power of thinking for the future, have not been recognised. Before their time, down to Langenstein and Oresme, mediaeval controversy fluctuated between Guelph and Gibelline. What the Dominicans, as upholders of organisation and law, conferred on the hierarchy the revolted Franciscans transferred to the civil power. The teachers of the new philosophy, alike in high places and in mystic solitude, imagined a third alternative, apart from pope and king, and founded a doctrine which has become the strongest propeller of society and maker of later history. They taught mankind that authority is founded on contract and limited by conditions, that it is forfeited when wrongly used, and is legitimate only by consent. It is among these men, in the cloister and the school, not where Johnson found him, that we must look for the first Whig.

The case of the fagot will come on for a future hearing. The attitude of the Reformers towards religious liberty is the sharpest test of their characters; and they will have no refuge in the universal spirit of the age, for they were men who had renounced the mediaeval traditions, and had begun by condemning persecution. It will be necessary and curious to probe the several arguments which satisfied Zwingli that the appropriate place for Anabaptists was the bottom of the Lake of Zurich, which led Calvin to invoke the Inquisition, and made Knox wish that every Catholic could be killed. And it would have been just and interesting to enquire what motives more intelligent than pervading logic, what individual views on divided sovereignty, the sanction of law, the properties of sincerity, and the rights of erring conscience, led Gerson and his peers to miss the exceptional opportunity of saving life which the safe-conduct afforded.

In spite of intentional drawbacks, this will be very much the best History of the Reformation, if the execution of the central and

more difficult part corresponds with the remote beginning. There is an obvious danger in the method which, abiding by things apparent, fears to insist on dim germs, on undercurrents and elements in solution, which are only visible to a discerning eye. As the narrative is to terminate near the lowest ebb of the Papal fortunes before the Catholic reaction set in, and as it has been designed and commenced at a time when the centre of gravity has been again displaced—when Catholic nations cease to act as intellectual or political representatives of the Church, when the Protestant Powers, which in living memory mustered fewer than France alone, command a civilised population of one hundred and thirty millions—it threatens to become too exclusively a history of unchecked decline. It will be well to take account of the causes which were to curb the progress of the Reformation, which prepared the long ascendancy of Spain and France during centuries to come, before the alliance with temporal authorities proved a weakness to the hierarchy, before the churches of the Diaspora, divided among themselves, became associated with the liberal force that rules the world.

ACTON.

Notes upon Some of Shakespeare's Plays.
By Frances Anne Kemble. (Bentley.)

It was a happiness of my boyhood to hear Mrs. Kemble read "The Tempest." We lived for two or three hours between sea and sky, yet almost out of time and out of space, breathing the air of the enchanted island. Even now certain speeches in that play are charged with special meaning, and made potent for me, by the remembered tones of her voice.

"Be collected:
No more amazement: tell your piteous heart
There's no harm done."

All of Prospero's wise prevision and authority and gentleness of power seemed to be gathered in those words as interpreted by the reader on that memorable evening. It is a happiness to be again a learner from Mrs. Kemble, and to find "The Tempest" among the subjects of her lessons. Why the presence of Prospero in his opening words was so impressive in Mrs. Kemble's rendering now becomes clear.

"The Tempest" is, as I have already said, my favourite of Shakespeare's dramas. The remoteness of the scene from all known localities allows a range to the imagination such as no other of his plays afford. . . . But chiefly I delight in this play because of the image which it presents to my mind of the glorious supremacy of the righteous human soul over all things by which it is surrounded. Prospero is to me the representative of wise and virtuous manhood, in its true relation to the combined elements of existence—the physical powers of the external world, and the varieties of character with which it comes into voluntary, accidental, or enforced contact."

Mrs. Kemble distinguishes between the dramatic gift and the theatrical talent; the one is an instinctive tendency to demonstrate emotion in voice and look and gesture, or, if not this, at least it is the power to understand the passionate, emotional, humorous element in life and literature; the other—the theatrical talent—is a faculty which imi-

tates what is dramatic, and self-consciously reproduces it. The Italians are dramatic; the French theatrical; the English at the present day "are neither the one nor the other;" while the Americans, devoid of the dramatic element, "have a considerable infusion of that which is theatrical." The combination of the dramatic with the theatrical, each in the highest degree possible, alone makes a great actor.

"There is a specific comprehension of effect and the means of producing it which in some persons is a distinct capacity, and this forms what actors call the study of their profession; and in this, which is the alloy necessary to make theatrical that which is only dramatic, lies the heart of their mystery and the snare of their craft in more ways than one; and this, the actor's *business*, goes sometimes absolutely against the dramatic temperament, which is nevertheless essential to it."

Whether Mrs. Kemble inherited or not her father's theatrical talent (she thinks that she did not, and speaks of the severe verdict from one of the masters of the stage of the present day that she was "ignorant of the first rudiments of her profession"), it cannot be questioned that the dramatic gift, inherited from her mother, has made her not only a distinguished playwright, but an admirable critic.

For Mrs. Kemble's Notes are essentially those of a critic, not of an artist on or off the stage. She does not, as did Lady Martin in her very interesting studies of Shakspeare's heroines, confess the secrets of her art, and again become in imagination Juliet and Ophelia and Desdemona. The notes on "The Tempest" are indeed in the main those of a textual critic. Mrs. Kemble breaks a lance with that shadowy personage Mr. Collier's "Old Corrector;" and it appears almost certain from the evidence which she adduces that the Corrector worked at least upon "The Tempest" with a copy before him of Hanmer's neglected quarto edition of Shakspeare, 1742-46. The notes on "Romeo and Juliet" are hints for acting addressed to a gentleman studying the part of Romeo. In the notes on "Macbeth" and "Henry VIII." Mrs. Kemble does not identify herself with Lady Macbeth or Queen Katharine, but stands away from each play, and views its characters disinterestedly as a critic.

I wish to offer the reader some extracts, and find it not easy to choose where all is thoughtful, delicate, and suggestive. Here is the contrast between Queen Katharine and Cardinal Wolsey:—

"Katharine represents the pure pride of birth, and Wolsey that of power. Pride of birth, the noblest species of the vice, is not incompatible with considerable personal humility, and the proof that Shakespeare thought so may be found in the Queen's frequently modest and humble mention of herself; her infinite deference to the King, and the repeated reference by the other characters in the play to her meek and quiet spirit. . . . The pride of power, that pride which Wolsey exhibits, is, on the contrary, almost invariably arrogant, and very seldom co-exists with any personal humility; for it springs generally from a consciousness of personal merit, strength, capacity, good fortune, or achievement, and thus is necessarily grossly egotistical. . . . On the other hand, though this species of pride is so much grosser and more

vulgar and offensive, I believe it will always be found more capable of cure and eradication than the other. . . . [With disgraces Wolsey's pride is overthrown—

"O father abbot,
An old man, broken with the storms of state,
Is come to lay his weary bones among ye;
Give him a little earth for charity."

But] with disgraces grew Queen Katharine's pride; and with one dying hand stretched out to receive the heavenly crown she was about to put on, with the other she imperiously commanded homage to that earthly one which had been rudely snatched from her brows. . . . Her character is one of great simplicity, and hence in part the impression of grandeur it produces. Instead of the infinitely various motives, feelings, passions, and inclinations which make of most human characters such pieces of involved and complex moral machinery, two strongly developed elements alone compose the woman Shakespeare has copied from Nature and history—a profoundly conscientious and devout spirit, almost saint-like in its obedience to right and duty as she conceived of them, and a towering and indomitable spirit of pride, which so alloyed the more heavenly dispositions as to give harshness and narrowness to a nature otherwise noble, and stamp with its peculiarly rigid and stern image of royalty the pure gold of her high and virtuous qualities."

This is admirable, and is admirably illustrated by Mrs. Kemble in detail. It is satisfactory to find that she accepts the orthodox creed as to the double authorship of this play.

One more passage and we must have done. Intruding a moralelement into Lady Macbeth's punishment of which she is conscious, says Mrs. Kemble, is a capital error, because her punishment, in its very essence, consists in her infinite distance from all such influences:

"I think her life was destroyed by sin as by a disease of which she was unconscious, and that she died of a broken heart, while the impetuous resolution of her will remained unbowed. . . . The nature of Lady Macbeth, even when prostrated in sleep before the Supreme Avenger, whom she keeps at bay during her conscious hours by the exercise of her indomitable will and resolute power of purpose, is incapable of any salutary spasm of moral anguish or hopeful paroxysm of mental horror. The irreparable is still to her the undeplorable—'What's done cannot be undone.' . . . Never, even in her dreams, does any gracious sorrow smite from her stony heart the blessed brine of tears that wash away sin; never, even in her dreams, do the avenging furies lash her through purgatorial flames that burn away guilt."

This is forcibly put; but in that long-drawn sigh—"All the perfumes of Arabia will not sweeten this little hand. Oh, oh, oh!"—I think I hear more than the moaning of a wild beast captured and wounded to death; I think I hear in it the measureless anguish of a human soul.

EDWARD DOWDEN.

A Little Pilgrim in the Unseen. (Macmillan.)

It is not improbable that all the visions of Hades which poetry and faith in the soul's immortality have given from time to time may have sprung, as did the little allegory now before us, from those thoughts that arise in the human heart when the door of the Unseen has been suddenly opened, and our thoughts are with the dead rather than the living:

"... true vision comes
Only, it seems, with sorrow."

There is an insight, born of some such supreme moments of pain, bringing hopes and convictions, which comes with all the force of revelation, and lifts the sufferer out of and above himself. As years pass on, and the mind recovers its balance, such thoughts will force an utterance through all hindrance, whether in the form of visions or otherwise, and prove "the cup of strength in some great agony" to others likewise tried.

These visions are not so unfrequent in the history of literature as many imagine. In our own day, we have had the "Dream of Gerontius," where love and awe in the presence of the Almighty prove the very essence of the purifying process. Scott, in the vision of "Wandering Willie," has, on the other hand, given us a picture of the nether world in a passage where he has been truly said to blend something of the spirit of Dante with the power of Shakspeare. The "Divina Commedia" of Dante itself was but one of a long chain of visions, such as that of St. Fursey or St. Adamnan, or Hermas in his *Shepherd*, till we come back to the Hades of the pagan poets, scenes in the "Aeneid" and the "Odyssey," and, further still, to the beautiful poem of the Descent of the goddess Ishtar, the Assyrian Astarte or Aphrodite, into Hades in search of the Water of Life. In these great Infernos of the past we find the embodiment of the most profound religious convictions of the day, while the highest imaginative power is brought to bear upon the subject, so that it is perhaps true that history has bequeathed us no poems of deeper interest. At the same time we do not desire to see many such attempts to penetrate behind the veil as we find in the work before us now, sweet and sacred though it be.

We do not say this in any censorious spirit, but merely in warning. For, where the soul is possessed by a deep belief in immortality and future recognition, there is a danger lest the mere expression of this secret inner joy, in word or symbol, may rob it of some of its aroma; and visions such as this of the Little Pilgrim, if discussed and analysed by an unfeeling public, may tend to bring familiarity into regions of thought where speechless reverence and awe should reign undisturbed.

In the pictures of Elysium given in this little prose poem the writer follows Virgil, describing the happy spirits, each engaged on the pursuit he had loved on earth, only in undisturbed repose, and surrounded by an atmosphere of sympathy and appreciation. The poet has his revelations; the musicians, with their silver trumpets, proclaim the new order of things; while the painter works and waits, feeling

"God doth not need

Either Man's works or His own gifts;

They also serve who only stand and wait."

The mind that has given us this allegory has long been familiar with the tender and gracious forms of the old Italian painters. Memories of the angel choirs of Angelico, Benozzo Gozzoli, and Piero della Francesca rise before the mind's eye as we read of these happy singers, ankle-deep in flowers, moving in all the buoyant strength of their new life on their various paths of duty.

MARGARET STOKES.

Siberia in Asia. By Henry Seebohm. (Murray.)

HAZARDOUS as a second visit to the same field frequently proves to the literary man, there is abundant justification, even in the judgment of a mere reader of travels, for these sketches of Asiatic Siberia. Such a one remembers the freshness of Mr. Seebohm's former book on European Siberia; and although in the two years which have elapsed since its publication he may have followed the footsteps of Mr. Lansdell through the heart of Siberia, and read with breathless interest the voyage of the *Vega* from Lapland to Behring's Straits on its Northern boundary, he is by no means loth to travel once more with our author farther east to the Yenisei. Naturally a journey of fifteen thousand odd miles, much of it spent in sledges drawn successively, on approaching the north, by horses, dogs, and reindeer, ought, with an experienced companion, to yield both instruction and amusement; and its interest culminates in the land suddenly shaking off the fetters of winter when the south wind first breathes gently at the end of May, and the mighty Yenisei awakes from its eight months' slumber to send huge ice-fields and mimic bergs rolling and crashing over each other to the Kara Sea. Then, as if by magic, crowds of birds seek its banks; the monotonous carpet of snow fades away; the desert smiles; and in a brief week or two the "tundra" far up into the Arctic Circle breaks out into a brilliant Alpine flora, "like an English flower-garden run wild"—anemones, Jacob's ladders, yellow pansies, miniature roses, the fragrant *Ledum palustre* blooming among abundance of bright-hued cranberries and other Northern fruit. And yet, when the thought of the numberless mosquitoes which infest this fair prospect comes into the mind, it is doubtless much pleasanter to read of these strange scenes of beauty in Mr. Seebohm's pages than it would be to visit them in person. Among the Samoyades, Tungoosks, and Ostyaks who roam over these Elysian fields during summer the classical scholar finds himself looking for the prototypes of the blameless Hyperboreans of the old poets.

One Capt. Wiggins, who was bent on opening up the commerce of the Yenisei country by means of the Kara Sea, suggested to our author the plan of his journey. Owing to the wreck of the captain's steamer, however, on the great river, Mr. Seebohm was compelled to return, as he went, by the overland route. He brought back with him a small collection of bronze and copper celts dug out of old graves near Krasnoyarsk, several of which are figured in this volume. The fur trade also came before his eyes. Sables, we learn, are now becoming very rare. Every here and there, on his more monotonous journeys, he diverges into political reflections, but they are commonplace like the dreary character of the landscape and climate around him, and give no new information. The corruption of the Russian officials has often been dwelt on; most people knew that Nihilism, at least in one of its forms, was the outcome of military discontent; and it is probably due to more than usually inclement weather that the author brings himself to speak of the Russian habit of sending officials

to out-of-the-way places, and leaving them to pay themselves as they can, in a manner which our obliging Postal officials may well resent. It is "a wretched system," he observes,

"said to be now abolished in all civilised communities except in the British Post Office. We must, however, do the latter institution the justice to observe that its ill-paid officials are not allowed to plunder, but are only permitted to beg."

The account of the Scoopsees, a fanatical sect who have literally carried out the tenets of the ancient priests of Cybele, is much more valuable. The Russian Government has banished them to remote districts of East Siberia. They eat no animal food; all intoxicating drinks, even tea and coffee, are strictly forbidden. Tobacco is as rigidly tabooed as among the Arabian Wahabis. In one village of these *semiviri* which Mr. Seebohm visited, though the population was under a score, there were divisions even among their austerities; one-half drank milk, the other would not touch it. Yet books and a clock testified to civilisation of a certain sort; they were industrious, orderly, and lived in comparative wealth.

But Mr. Seebohm is a veteran ornithologist, and the main value of this book is that it continues those enquiries into bird life and migration which were commenced with Mr. Harvie Brown in the valley of the Petchora. Pallas and Middendorff gave the world a general notion of the ornithology of the Palaearctic region; it is the merit of Mr. Seebohm's Siberian researches to have largely deepened and widened their conclusions. Much of this book is fascinating reading when the author finds himself among his favourites on the release of the Yenisei from ice and the return of the migratory tribes. And the interest is heightened from many of these being our own familiar birds—nut-hatches, crows, jackdaws, bramblings, snow-buntings, and even the common sparrow, although side by side with these and other species occur distinctively Siberian varieties. We do not, indeed, hear of any of the *Panuridae*, which are the family of birds most characteristic of the region; nor did the author shoot the *Eurymorhynchus*, a species of snipe, which is said to be its one peculiar genus; but the pictures which he draws of the birds arriving, choosing mates, and building nests are exceedingly varied and strange to Western bird-lovers. He did not obtain so many rarities in the valley of the Yenisei as while bird-hunting on the Petchora. Indeed, he frankly states that he would in all probability have been more successful had he remained at Yeniseisk instead of pressing on farther north to Golcheeka and the regions near the mouth of the Yenisei. But he obtained authentic eggs of the Asiatic golden plover (*Charadrius fulvus*), and was able to observe the bird's habits at its breeding-grounds. Unique specimens of the eggs and nests of three species of willow-warblers were also procured, as well as of the little bunting, which had been indeed described by Middendorff, but which existed in no collection. The eggs and nesting habits of the mountain accretor and red-breasted goose, together with the

young in first plumage of the dusky ousel, the dark ousel, and the black-throated ousel, were all more or less re-discovered or described from specimens. The rock ptarmigan (*Lagopus rupestris*), previously supposed only to exist on the islands and on Arctic North America, was shot on the mainland by the Yenisei in lat. 71½°. Two birds which the author shot, also by this river, for the common house-martin, turned out on his return to be Pallas's house-martin (*Hirundo lagopoda*), a bird so rare that the British Museum did not possess a specimen, and Great Britain previously possessed but a unique skin of the bird from Japan in the Swinhoe collection. Such are the mishaps of even the practised ornithologist. Had Mr. Seebohm found out his mistake in time, there were countless thousands playing round him which he might have shot by the score at a time. It was a sore disappointment, too, that he did not find the eggs of those birds of the Far North—the knot, sanderling, and curlew sandpiper.

Most of the conclusions at which the author arrived on the disputed problems of migration, hybridism, and the like have already been given to the world in the pages of the *Ibis*. We can only notice one or two of the most interesting of these speculations. He found the hooded and carrion crow breeding together, intermixed with hybrids of all degrees of affinity (see *Ibis*, 4th ser., vol. vi., p. 546). The river valleys leading to the north are the chief lines of migration. Some very interesting remarks on this habit occur in chap. xviii. Birds, during a long land journey, he finds, simply travel slower in unfavourable weather and rest at night, but seem to wait for favourable wind and weather when the sea has to be crossed, and so come by such "rushes" at a time as were well illustrated in the author's previous volume, and shown to prevail at Heligoland. The snowy owl and willow-grouse were said by the natives to be the only birds which wintered on the "tundra" in lat. 70½°. Attention is called to the fact that paler forms of birds appear to be characteristic of Siberian ornithology. Thus the Siberian form of the well-known Northern *Picus tridactylus* has been called *Perissolencus* by Brandt; that of *Parus cinctus*, *P. griseus* by Dresser. *Motacilla alba* and *M. dukhunensis* is another case in point. The author likewise deems that there is only one species of Palaearctic white-throated dipper, of which the typical form is the Persian *Cinclus cashmiriensis* (Gould). These pages on migration and variation by colour are well worthy the attention of all scientific ornithologists.

These samples of its contents will show that Mr. Seebohm's new book is one to instruct the old and charm the young lover of birds. The juxtaposition in Siberia of our familiar species with the less-known birds of the Far East is often curious. For instance, Mr. Seebohm one day shoots our common cuckoo while uttering its familiar cry; soon afterwards, another specimen of what is apparently the same bird startles him by crying "hoo! hoo!" in a deep, hollow tone, and turns out to be an Indian cuckoo (*Ouculus himalayensis*). Ordinary men, indeed, would desire less of the shooting which seems to

be considered necessary by scientific experts. It is sad to be introduced to some bird in its native haunts, and, just as we become interested in its habits, to find Mr. Seebohm remorsefully shooting it. We are shown the little bunting flying trustfully from branch to branch within six feet of us, and are bidden to look at its nest with five eggs hidden in grass and moss at our feet. Then, alas! "it hovered about so close to me that, to avoid blowing it to pieces, I was obliged to leave the nest to get a sufficient distance off. It seemed a shame to shoot the poor little thing, but" the eggs were the only authentic ones known, and the mother was necessary for their complete identification. We think in such a case that even the most scientific bird student would have been contented to take the word of such an ornithologist as our author had he spared the little flutterer. But the tender mercies of the ornithologist, it seems, are often cruel. Who can read unmoved the following narrative? It was just when the ice on the Yenisei broke up, and an occasional burst of sunshine told of summer. Then

"the first harbinger of mosquitoes also arrived, the first insect-eating bird, a most characteristic one, no less a novelty to us than a barn swallow. Poor little bird! he must have got strangely wrong in his almanac, and curiously out of his latitude. He was the only one of his kind which I saw within 500 miles of the Arctic Circle, and at the time of his arrival I don't think there was a solitary insect upon the wing, whatever there might have been in sheltered nooks and crannies. I dropped him on the snow as he was industriously hawking in a gleam of sunshine—a much quicker and less painful death than dying of starvation."

M. G. WATKINS.

NEW NOVELS.

The Golden Shaft. By Charles Gibbon. (Chatto & Windus.)

Mary St. John. By Rosa N. Carey. (Bentley.)

Exchange no Robbery. By M. Betham-Edwards. (Hurst & Blackett.)

Messer Agnolo's Household. By Leader Scott. (Longmans.)

The Diamond Ring. By E. H. Mitchell. (Masters.)

MR. CHARLES GIBBON is a novelist whom the critic of novels is always glad to meet, because his books are always both readable and workmanlike. He does not, like some well-intentioned novices, put more into a book than it will hold, or than he has skill to manage; but he does not, on the other hand, like certain old stagers, content himself with giving the very minimum of material and of workmanship which will suffice to lure the reader through his volumes. This latter fault is a peculiarly offensive one, and it is one of which some of the best-known practitioners of the craft in England at this time are notoriously guilty. Mr. Gibbon is now a practised novelist; but it is evident that he has not got to the hack condition. In all his books there is some freshness; and freshness is certainly not wanting in *A Golden Shaft*. We do not care much for the title,

though Mr. Gibbon tells us that it had already found favour with another writer, so that, but for the kindness of that writer and his publishers, he, Mr. Gibbon, could not, according to the absurd English copyright law, have used it. Perhaps some day novelists will come to have as much sense as musicians, and content themselves with entitling their works "Op. 16" or "Tenth Love Story," and so forth. A good novel would generally be at least as good under any other title; and, as for a bad one, its badness is intensified by the sticking on it of a quotation from some poetical masterpiece, according to the fashion common nowadays. These remarks, however, are ill-tempered, and we are not in the least in an ill-temper with Mr. Gibbon; but the reverse. A more appropriate title for his book would be "It's a Wise Child that declines to know his own Father." Prodigal sons are common; but prodigal fathers, though not unknown in fiction, or, indeed, in fact, are not quite drugs in the market. John Armour, the hero of *A Golden Shaft*, has a very prodigal father, who gets him into a great deal of trouble. However, if he is unlucky in his father, his other relations of life are rather exceptionally fortunate. He has an excellent grandmother, a delightful sweetheart, a father-in-law (in prospect) who is a credit to human nature, and a mother-in-law (in prospect) who is not worse than other mothers-in-law, though rather more foolish. Thanks to her folly and to the prodigal father, the loves of Ellie Musgrave and John Armour do not run quite so smoothly as they might do; but the interruptions are not more than sufficient to fill, and work out, a three-volume novel of interest and merit much above the average. Mr. Gibbon is to be congratulated on the character of the above-mentioned father-in-law, "Fiscal" Musgrave, which is as original as it is lifelike, and as attractive as it is original. The situation which chiefly displays it is well imagined, powerfully worked out, and sufficiently striking in itself, being the commission, or all but commission, by a legal official famous for probity and good-nature of the worst offence known to the law.

In *Mary St. John* there is not a little that is good; but the author has marred her book by an undue obtrusion of the religious element, by piling up the agony too high, and by committing the fault above referred to of putting altogether too much in her three volumes. The critic feels inclined to say to her what he says to his hair-cutter, "If you please, I want it thinned." There is too much talking, too many insignificant events, too long "waits" between the acts of the drama. Moreover, it is surely an abuse of the pathetic to punish a mother for selfishly interfering with the happiness of her sister-in-law by killing off four of her children in twenty-four hours. Two, or even three, might not have been grudged to poetical justice, but four is wasteful and ridiculous excess. When these drawbacks, and the already noted obtrusion of a topic which, however legitimate, should always be kept in the background in fiction, are allowed for, there yet remains some interest in *Mary St. John*. The character sketches, though decidedly

conventional, are faithful enough to the types which they represent; the sketches of life in Belgium are amusing enough; and the contrast between the two heroines, Mary and Dollie, is very fairly kept up, though the heroes are worthless. The book is not well printed. Constant reference to a mysterious edifice described as the "Tourdes Halles" becomes fatiguing.

The new volumes of "M. Betham-Edwards" (we apologise for any apparent rudeness, but a long course of expostulations for misdescription of this lady has convinced us that the only safe way is to adopt a German habit, and simply quote her title-page) contain one story of some length and a considerable number of shorter ones. Several of the latter have merit. "A Japanese Bride"—which describes the freak of an English sculptor, who educates a beautiful Japanese girl to be his wife, with the result that she cannot forgive his devotion to his art, and leaves him after mutilating his favourite statue—would be the best if it were not marred by an apparent want of sympathy with the girl, for whom there were much to be said. "Désillusionné" is a rather funny attempt to put "the pity of it" as it appears to an unsophisticated young man. The title is not clearly applicable, and the young man is so very unsophisticated as to be rather an object of contempt. But "The Three B.A.'s" is pleasing, representing, as it does, the very latest stage of woman when she supports herself, takes professorships at the Antipodes, plays the part of Good Samaritan to the weaker vessel (and B.A.), man, and knows no greater joys than jam for tea and an invitation to stand for the London School Board.

To be delivered from Italy and books about it is the fervent prayer of many an honest Briton. We shall confess that, without exactly joining in this, we should have preferred that Miss Scott had given us another volume of actual experiences like her charming *Nook in the Apennines*, if she must write about Italy at all, rather than a story of Florence in the days of Lorenzo de Medici. But *Messer Agnolo's Household* is a pleasant book, and no one will be sorry to have read it. The heroine, Bice, daughter of the Keeper of the Lions, is a very agreeable heroine, and moves picturesquely among her father's charges and their cubs.

The Diamond Ring belongs to that debatable land of fiction which lies between the novel and the child's book. It is written with considerably more power than most of its class, but also with a good deal of naïveté. Sisterhoods, baronets, diamond rings, family traditions, school-room jokes, destroyed or semi-destroyed wills, jostle each other in its pages in a rather indigestible fashion. But every now and then there drops a phrase or two which seems to show that the author is capable of much better work than she has done here.

GEORGE SAINTSBURY.

GIFT-BOOKS.

The Book-Lover's Enchiridion: Thoughts on the Solace and Companionship of Books. Selected and Chronologically Arranged by Philobiblos. (Simpkin, Marshall and Co.) This little book deserves the name of "Enchiridion" better than many others so entitled. It may not convert the sceptic, but it will serve to confirm in his creed the devout lover of books by reminding him of what many of the literary hierarchy of various lands and ages have written concerning them. The selection is very catholic, though Pliny and Dante, and certain distinguished book-hunters, occur to us as among those who might have been called upon for a brief confession of faith. There are one or two contributors whose remarks we could have dispensed with without a sigh; and, personally, we should have preferred to see more space allotted to older authors at the expense of the moderns. But it is not everybody who is "lever have at his beddes head" Chaucer, Spenser, and the Anatomist of Melancholy than Leigh Hunt, Hazlitt, and De Quincey; and even this class of readers will admit that between this *Enchiridion* and Dr. Langford's *Praise of Books* they have not much cause to complain. "Philobiblos" has given us many jewels, and he has enclosed them in a suitable casket. The white of the cover is a little too dazzling, but time and use will remedy that. The letterpress, though minute, is very clear. There seems to be a reaction setting in against "old-faced" type; and "Philobiblos" has probably been well-advised in not making use of it here, though his *Enchiridion*, in consequence, looks less like an Elzevir than it otherwise might. Let us conclude with a motion—that somebody should give us next a book-hater's *Enchiridion*, beginning with Solomon and coming down to our own day. The cynic who came to scoff would be converted in the process of reading, and the poison would prove its own antidote.

Birds and Babies. By Ethel Coxhead. (Kegan Paul, Trench and Co.) We should have liked Miss Coxhead's pretty little book better if it had not been printed in the new-fangled brown ink, which, though appropriate enough for illustrations, is by no means appropriate for letterpress. The illustrations themselves, which are signed F. C., deserve to be very well spoken of. The artist, whoever he or she may be, is good at flowers, better at puppies and children, and best at goblins; besides which, he or she knows how to design an illustration of the head- and tail-piece kind, which is by no means a thing universally or even commonly known. Miss Coxhead's verses are also pleasing. They are not exactly humorous, but mildly quaint and fantastic. The exceedingly business-like wooing of a certain goblin, who, on discovering that a fairy habitually stole his honey, handsomely proffered marriage, is very agreeable; and the way he takes his rejection is a model for lovers:—

"'Very well,' replied the goblin,
 'I shall buy at once a key,
 And lock up the wild-bee honey
 If you will not marry me.
 "'Though I love you very dearly,
 If you will not be my wife
 Then I cannot give you supper
 Every evening of your life.'"

Perhaps Miss Coxhead pushes her simplicity of style a little too far sometimes, and comes too near to actual doggerel. But this is not often the case. Her morals are good, and her imagination both healthy and lively.

Christmas Rhymes and New Year's Chimes. By Mary D. Brins. Illustrated. (James Clarke.) No close inspection is required to ascertain that this is of American origin. It

may be that only the pick of the American market reaches us; but certainly, of all the "gift-books" that we have received this year, we should be disposed to place three or four of the Americans high in the first rank. They are not so lavish as our publishers in chromo-lithographs; but the superiority of their wood-cuts makes up for that, and there is never anything "cheap" about the general get up. In this book we know not whether to admire most the verses or the illustrations. Both are first-rate. The subjects are not so entirely seasonable as the title would imply, but run through all the gamut of children's interests. Children, indeed, are the heroes or heroines of all; and the Americans fairly beat us in children. When all is so good, we must abandon our original intention of selecting a quotation. We will merely say that mothers and aunties—who are aunties—will like this book as much as the little folks themselves.

Scottish Loch Scenery. From Drawings by A. F. Lydon. With Descriptive Notes by Thomas A. Croal. (John Walker.) This belongs to the class of what may be called "drawing-room books." It consists of a series of coloured plates, to which the letterpress is subordinate; and, in saying that the plates are coloured, we have implied that their value lies rather in their general effect than in artistic execution. The process of reproduction is not chromo-lithography but, we fancy, some kind of block-printing. The results are more successful in some cases than in others; and, on the whole, the most ambitious views have been most satisfactorily reproduced. The waterfalls, which number seven out of twenty-five, please us least; but the artist has shown much skill in catching the various aspects of eighteen Scottish lochs, without ever becoming monotonous. He also deserves praise for not neglecting some of the less-known tarns both in the Highlands and the Lowlands. The descriptive notes are sensible, and really add to the interest of a book which will be welcomed in England scarcely less warmly than in Scotland.

Abroad, by Thomas Crane and Ellen Houghton (Marcus Ward), will probably delight young folk quite as much as last year's volume, *At Home*, but we doubt whether their aesthetic elders will be entirely satisfied with it. There is a peculiar tint of cinnamon-yellow much in vogue at present that pervades the whole, and is not pleasing. When faces, ground, hair, shoes, clothing, &c., are all given the same shade, the effect is not a harmony in yellow, but a monotony. Apart from this, the pictures are full of life and interest. Some of the little landscape sketches are charming; and pictures such as the "Crèche," the "Washerwomen of Caen," in which there is really a bit of green grass, the "Lace Makers," and the "Flower Stall" are likely to please all who can be pleased with colour-printing.

Our Sketching Tour. By Two of the Artists. (Griffith and Farran.) This daintily got up and pleasantly illustrated quarto may be heartily recommended to that numerous class of readers who are always ready to welcome a book which is light but not vacuous, vivacious but not flippant, which has humour enough to be quietly amusing, sentiment enough to be emotionally soothing, and story enough to lead one pleasantly along from page to page with increasing interest but nothing like undue excitement. It recounts the travelling adventures of a sketching club composed of five most delightful young ladies, known to these pages as Ivy, Ella, Claudia, Imogen, and Myra, and of their "beloved superintendent," Miss Chester, colloquially and briefly spoken of as the B.S. Among the hundred wood-cut illustrations are five terrible things which profess to be portraits

of Ivy and her companions; but these we regard as simply grotesque libels, on which no reliance is to be placed, and prefer to draw mental likenesses of our own. With this exception, however, we accept both illustrations and letterpress with simple faith. The former bear signs of being what they profess to be, the genuine "works" of a club of clever girl-draughtsmen, and are all full of freshness and *naïveté*; while the latter is so charming that, if it be not a faithful record, it ought to be, for we are determined to believe it. Sketching is a pleasant pastime, so is love-making; and both are treated very pleasantly in the story of *Our Sketching Tour*, which is as enjoyable a book of the kind as we have seen for a long time.

Winners in Life's Race; or, the Great Back-boned Family. By Arabella B. Buckley. (Stanford.) This book is a continuation of a former one which dealt with the invertebrates; but the authoress explains that, owing to the necessity of including the geological history of the higher forms of life, the present volume is a more independent work, both in plan and execution. She has availed herself of the kindness of Kitchen Parker, Alfred Wallace, and other good men and true, and it is clear that she has taught herself to think aright on many important matters. Miss Buckley writes in her Preface:—

"I have been asked why in this and the former work I have not given genealogical tables to help the reader to follow the relations of the various groups. My reason is that it is impossible to construct tables of this kind, without giving a false idea of the fixity of natural divisions and of the extent of our knowledge."

She desires, however,

"to awaken in young minds a sense of the wonderful interweaving of life upon the earth, and a desire to trace out the ever-continuous action of the great Creator in the development of living beings."

It is a most readable book, correct in its facts and liberal in its opinions, and anyone with a very slight knowledge of natural history can follow the argument of the relation of the ancient and existing forms of life. Such books, containing good science written familiarly, are most useful. Not only do they instruct the young, but they very often lay a foundation of knowledge in the youth who is to become an advanced worker and thinker in years to come. The illustrations are very good, and the restorations of extinct animals and of sundry scenery of old extremely interesting.

Dick's Holidays, and What he Did with Them. Edited by James Weston. (Unwin.) This is precisely the book that sensible parents must often have been wanting. As we are all crowding more and more into towns, our children are suffering an irreparable loss by their ignorance of country life. A few weeks at the seaside, in mean lodgings, with sands as densely peopled as the Regent's Park, are no compensation. It will soon come about that none, except the very rich, will know the real lessons of the country—its simplicity and freedom, its wealth of animals and plants, the endless variety of its changes—which can only be learnt in childhood. All these lessons, combined with no small measure of science, are taught in this delightful book, which gives the results of *six months* away from London. The pictures are abundant, and first rate from the didactic point of view. We have only two hints to make for a second edition. One is that the letterpress runs on awkwardly when broken by a wood-cut; the other is to protest against a flagrant bit of false grammar on p. 141.

Pretty Pictures for Little Paint Brushes. With Descriptive Stories. Outline Pictures by T. Pym. (Shaw.) An excellent idea excellently carried out, and wonderfully cheap at a shilling.

The novelty consists in the hints how the pictures are to be coloured. Our only doubt is whether the drawing may not be too elaborate for its destiny.

We have received a copy of *Arrowsmith's Annual* for 1882 (Griffith and Farran), which consists of a single story by Miss May Crommeline, bearing the pleasant title of "Brown-Eyes." Merely to say that the *Annual* is a marked improvement on its predecessor (a collection of articles and tales of very unequal merit) would be to render scant justice to an exceedingly pretty novelette, in which an exciting plot is sustained throughout with great spirit, and all the characters are well drawn. The *mise-en-scène* is also very uncommon, much of the action of the story being carried on among the picturesque fishing-folk of Markur Island, a kind of marine Arcadia in the Zuyder-Zee. The illustrations to "Brown-Eyes" might certainly have more artistic merit; but the story is just what a Christmas story should be—fresh, romantic, not without a touch of the terrible, and, above all, not too long. Miss Crommeline has as yet written nothing better than "Brown-Eyes;" indeed, nothing nearly so good.

The Cruise of the "Snowbird": a Story of Arctic Adventure. By Gordon Stables, M.D., R.N. (Hodder and Stoughton.) This is a capital story of adventure of the sort that all true boys delight in; and, though hardly to be called "Arctic" in the ordinary acceptance of the term, it will not be less appreciated on that account during the coming Christmas holidays. It is well and briskly written, and, as the name of the author would lead us to expect, the tone is thoroughly wholesome and manly. McBain and his "boys" are excellent, and so are the dogs and the old trapper Seth. Every page teems with wonderful stories "Of moving accidents by flood and field, Of hair-breadth 'scapes," and perhaps the greatest charm about these "yarns" is that they are so true to nature that they read like actual experiences. There are fights with pirates, bears, whales, and savages, and "big shoots" enough for the keenest sportsman. Some of the descriptions of scenery and effects are capital pieces of portraiture, and many of the situations are so well depicted that we should feel disposed to quote freely did the space at our disposal permit. Our present purpose, however, is merely to indicate the merits of a story which is full of "go," and will, we venture to predict, be one of the most popular "boys' books" of the season.

Hiawatha, and other Legends of the Wigwams of the Red American Indians. Compiled from original sources by Cornelius Matthews. (Son-nenschein.) The delightful stories in this volume have, it seems, long had an oral circulation among the encampments of the American Indians, and we learn from the Preface that they were originally compiled from the old tales and legends by the late Mr. Henry R. Schoolcraft. They are now re-interpreted and elaborated by Mr. Matthews, who expresses a hope that they may "take a place with the popular versions of the Arabian Nights' Entertainments, Cinderella, Little Red Riding-hood, and other world-renowned tales of Europe and the East." This is, perhaps, too much to expect, for rivals of such old-established favourites are very heavily handicapped; but we can testify that these stories are most interesting specimens of a folk-lore of which little is known in England, and that they are just the kind of thing which imaginatively minded children will enjoy with a great enjoyment.

MESSRS. BICKERS AND SON have sent us new editions of Lockhart's *Life of Napoleon Buona-*

parte and Maxwell's *Life of Wellington*. They are both well adapted for presents, being handsomely bound and illustrated with photographs from pictures, as to which we have to remark that the originals ought to have been somewhere indicated. But the *Life of Wellington* deserves a few more words of notice. It has been revised throughout by one who has made a serious study of this period of history; and we have his guarantee that he has re-read many of the original works and verified every reference. Though we cannot hope (with him) that the book will take rank with Southey's *Life of Nelson*, yet we may say that it is not likely to be superseded as the standard popular authority.

Two Stories. By Berthold Auerbach. (Son-nenschein.) The choice of the two tales which in this little volume are presented in English was felicitous. Both stories exhibit some of their author's strongest points. Strictly speaking, the first piece, "Christian Gellert," is no tale; it is a fancy sketch of the pietist philosopher, Christian Fürchtegott Gellert. By a dialogue with a practical and shrewd peasant, the unworldly and dreamy thinker is brought into sharp relief. Personally, Auerbach was a man of little faith, but his marvellous faculty of sympathy enabled him to realise the Christian philosophy of Gellert. The other piece, "The Stepmother," is a story of still life. The scenery is laid in Freiburg-im-Breisgau and the neighbouring villages. The characters are the plain burghers and peasants whom the author loved to paint. There is little action, but the interest is sustained by sharp contrasts of individual character. The stepmother of this story, who brings a blessing into her home, is one of Auerbach's happiest creations. He possessed the rare gift of drawing gentle, loveable, and yet thoroughly natural female figures. The rest of the characters—the roguish beer-house keeper, the astute baker, his guileless son, and others—are one and all drawn with a firm hand. It is delightful to follow the artist as he traces the strange inconsistencies of human nature, and the evil which seems to be bound up with the good in the hearts of men and women. Neither of the tales has been quite satisfactorily rendered, but great allowance must be made for the difficulties of translating Auerbach. We doubt whether any mortal man could adequately present "Christian Gellert" in English.

Gold and Glory; or, Wild Ways of Other Days. By Grace Stebbing. (Shaw.) We can cordially recommend this book to all youthful lovers of adventure and enterprise. The tale opens with the establishment of the Inquisition in Aragon, and then gives the life-history of the son of one of its many victims—his sailing with Columbus to America, his residence for some years in Hispaniola, the capture of the Island of Cuba, the Conquest of Mexico, the return of our hero to Spain, and, finally, his restoration to the family honours and wealth. The whole is most graphically told. The volume is well bound, and is illustrated with several full-page engravings.

Little Bricks. By Darley Dale. (Nisbet.) This book takes its title from that of a "club" of young folks formed for the purpose of building a mission-room in connexion with a poor parish in the East End of London. The main idea of the story is a good one, but that is all we can say. We very much doubt if ordinary children of from nine to twelve are capable of thinking, or making speeches, in language such as that put into the mouths of the "Little Bricks." The work also bears evidence of having been printed in great haste, the punctuation being much at fault. A word of praise is due to the illustrations, of which there are four.

Two Life Stories, by Alice Weber (Walter Smith), is a model of what printing, technically speaking, should be. Both stories are good of their kind, but for ourselves we prefer the second. The only drawback is the absence of pictures; and this we consider somewhat serious in a Christmas "gift-book."

No bound volumes are more handsome, or more generally acceptable as presents, than those of *The Leisure Hour* and *The Sunday at Home*, which the Religious Tract Society have sent us. The latter is somewhat the larger; but the former undoubtedly contains more of general interest, and is by far the better printed of the two. We confess that we have often wondered at the excellence both of the letterpress and of the illustrations in *The Leisure Hour*. In our judgment, it runs a close race with *Good Words*.

In continuation of a series begun last winter with *A Boy's Ideal*, Messrs. Sonnenschein have now issued three more volumes, describing the lives of Wydlif, Sayonarola, and Luther. We like this series, which is well intended and nicely turned out. The stories are told in simple language that children will understand. But we cannot praise the illustrations, except those dealing with architecture and sculpture.

FROM the same publishers comes a new edition of Leigh Richmond's *Annals of the Poor*, with illustrations that are old-fashioned but pleasing. It is edited, with a memoir, by Mr. J. S. Stallybrass, who states that he first read "The Dairyman's Daughter" and "The Young Cottager" in a Russian translation, and in the heart of Siberia.

WE have before us two children's annuals—*Little Wide-awake* (Routledge) and *Our Darlings* (Shaw). The former has no less than 130 coloured pictures; but we miss Kate Greenaway. The latter is really the bound volume of a halfpenny weekly, edited by Dr. Barnardo. Barring a few bad blunders in natural history—and these mostly in the letterpress—its illustrations are excellent.

MESSRS. DEAN AND SON have sent us a new edition, reduced in size, of *The Children's Kettledrum*, by M. A. O.; two rather nice little books in their "Rose and Lily" series; and three of what are described as "Mr. Chas. Harrison's facial character toy books." The point of these last is caricature, and we must protest against the introduction of the burlesque type of the female figure into pictures intended for children.

NOTES AND NEWS.

MR. MARK PATTISON is engaged upon a biography of Joseph Scaliger, a companion volume to his *Isaac Casaubon*, published in 1875. Much additional information concerning Scaliger's personal life has come to light since Prof. Bernays wrote his well-known monograph. A whole series of Scaliger's letters to Claude Du Puy has been printed at Agen by M. Tamizey de Larroque—a series which illustrates that part of Scaliger's life during which he was resident in Anjou.

WE understand that the second volume of Mr. R. Bosworth Smith's *Life of Lord Lawrence* is now in the press, and that the publication of the whole work may be expected by the middle of February. It will consist of two large volumes of five or six hundred pages each; and it will be published by Messrs. Scribners in America on the same day as by Messrs. Smith, Elder and Co. here. The writer has spared no pains to make it not only a complete biography, but also an epitome of Anglo-Indian history. Many burning questions with regard to our rule in India will be fearlessly discussed.

WE have heard it rumoured that Lady Martin, who too seldom takes up her pen, has written another Shakspeare letter, which may perhaps appear in the January number of *Blackwood*. The chosen heroine is this time Imogen, a character which Lady Martin erewhile impersonated with a grace, a tenderness, a refinement, and a womanly charm never to be forgotten by those who witnessed her performance. We look forward with unusual interest to the publication of this new contribution to our knowledge of the inner life of Shakspeare's heroines.

A PROJECT is afloat to start a new magazine which shall be exclusively Conservative in colour. It would resemble the *Fortnightly* and its companions in appearing monthly, in being priced at half-a-crown, and in having signed articles. We shall now have the opportunity of finding out whether literature, science, and art are on the side of the Tories.

MR. J. CHALLONER SMITH, the learned superintendent of the Department for Literary Enquiry at the Probate Registry, Somerset House, has been lucky enough to clear up one hitherto unknown point in George Washington's pedigree. The great American's paternal grandmother, after she had remarried one George Gale, came over to England to prove the will of her first husband, L. Washington. From that time nothing was known of her. Mr. Challoner Smith, in the course of his grubbing among the dirty papers in the strong-room of the Registry, has found out when Mrs. Gale died, and where she was buried. His short paper on the subject will appear in next month's *Genealogist*.

PROF. WESTCOTT's able and sympathetic paper on Browning, which he read before the last meeting of the Cambridge University Browning Society, is to be printed forthwith. He has kindly promised copies to the Browning Society.

A VOLUME of essays in philosophical criticism, edited by Mr. Andrew Seth and Mr. B. B. Haldane, with a Preface by Prof. Edward Caird, will shortly be published by Messrs. Longmans. This work is dedicated to the memory of the late Prof. Green.

So favourable has been the reception accorded to *The History of the Year*, recently published by Messrs. Cassell, Petter, Galpin and Co., that a second edition of the work has already been called for.

MESSRS. BENTLEY announce two more novels by lady writers—*Beyond Recall*, by Adeline Sergeant; and a new book by Lady Violet Greville.

MR. W. SATCHELL has in preparation a volume supplementing and completing Anderson's *Book of British Topography*. It will contain a list of all works not in the British Museum, and also of the topographical papers in the *Transactions* of societies and in the principal publications. Elaborate Indexes, synoptical and alphabetical, will practically incorporate the two works. To ensure the utmost completeness, this volume will not be put to press until after the publication of the Topographical Catalogue promised by the Index Society. The work will be as handsomely printed as the *Book of Topography*, and be sold to subscribers, like that work, at much less than the cost of production.

THE same publisher also announces an illustrated volume of Spanish legends, by Mrs. Middlemore, entitled *Round a Posada Fire*; *In the Country*, essays by the Rev. M. G. Watkins; and a new volume of poems by Miss May Probyn.

IT is stated that Mrs. De Long is preparing an account of the ill-fated *Jeannette* expedition, in which her husband perished.

A NEW novel by Mrs. Lynn Linton, entitled "Ione Stuart," will be commenced in the January number of *Temple Bar*.

WE understand that Messrs. W. H. Allen and Co. will issue in this country an edition of *Corea: the Hermit Nation*, by Mr. Griffiths, which has been attracting some attention in America.

WE are glad to hear that Mr. John Batt's essay on "The Scope and Charm of Antiquarian Study," upon a privately printed copy of which something was said in the *ACADEMY* of October 28, will shortly be published by Mr. Redway.

THE New York *Nation* of November 16 pays a deserved compliment to two of our publishers. In noticing the new volumes of Messrs. Kegan Paul, Trench and Co.'s "Parchment Library," which are issued in America by Messrs. Appleton, it says that "any house would esteem the privilege of putting their imprint upon this captivating series." And again, with reference to the pocket edition of Mr. Howells' novels published by Mr. Douglas, of Edinburgh, it speaks of their "rare excellence of manufacture." We notice, however, that the *Critic* of November 18 affirms that the "Parchment Library" is reprinted by Messrs. Appleton. We conjecture that the truth lies between these two statements, and that the plates have been sent from England.

A NEW work by Mr. William Andrews, secretary of the Hull Literary Club, will be published by Mr. Fred B. Spark, of Leeds, under the title of *Historic Yorkshire*. It will include a series of chapters from the highways and byways of local history.

MR. WILLIAM TIREBUCK will write for a number of provincial journals a series of sketches under the title of "Uncommonplace Papers, on Uncommonplace Themes."

MR. WILLIAM DAVENPORT ADAMS, of the literary staff of the *Nottingham Daily Guardian*, has been appointed editor of the *Derby Mercury*. He will be entertained, before leaving Nottingham, at a public dinner by a number of his journalistic and literary friends. Mr. Adams is well known as the author of *The Dictionary of English Literature*, published by Messrs. Cassell, Petter and Galpin.

THE publications of the English Dialect Society for the present year will be the second part (F to Z) of the *Glossary of the Lancashire Dialect*, by J. H. Nodal and George Milner; a *Glossary of West Worcestershire Words*, by Mrs. Chamberlain; *Fitzherbert's Book of Husbandry, A.D. 1534*, edited, with Introduction, notes, and Glossarial Index, by Prof. Skeat; and *Devonshire Plant Names*, by the Rev. Hilderic Friend. The first of these was published in March last; the three others are now in course of issue to the members.

AT the meeting of the Olifton Shakspeare Society held on November 25 the following papers were read:—"Hamlet's Treatment of Polonius," by Mr. J. W. Mills; "Some Notes on Hamlet," by Mr. O. H. Waring; and "Hamlet's Mental Condition," by Messrs. J. W. Mills, Nelson L. Dobson, and L. M. Griffiths.

THE first volume has just appeared (The Hague: Nijhoff) of the complete works of Spinoza—*Benedicti de Spinoza opera quotquot reperta sunt*—which is being edited by two Leyden professors, J. van Vloten and J. P. N. Land. It contains the "Tractatus de intellectus emendatione," the "Ethica," the "Tractatus Politicus," and the "Tractatus Theologico-politicus," with the marginal notes of Spinoza upon this last. The second volume will comprise the letters of the philosopher.

FATHER MARTINOFF has edited for the Early Russian Text Society, in the Pamiat-

niki drevnei pismennosti, or "Memorials of Early Literature," a Slavonic MS. which has hitherto escaped notice in the library at Ghent. It is interesting on various grounds. It was written at Widdin in 1360, by the wife of the Bulgarian Prince John Stratsimir. Besides the Lives of several martyred saints, which are already known, it contains a description of the Holy Places at Jerusalem. Father Martinoff proposes to issue shortly a Latin translation.

THE Librairie Fischbacher, which is now the property of a company, with a capital of 420,000 frs., has just published the first volume of a History of the Establishment of Protestantism in France, by L. Aguesse (to be completed in four volumes); and the third and last volume of Comte Jules Delaborde's Life of Admiral Coligny. M. Henri Bordier is superintending for the same house a new edition of *La France protestante*, by Eugène and Emile Haag, which has long been out of print. It has now reached its third volume.

M. FÉLIX HÉMON has just published (Paris: Laplace et Sanchez) a volume entitled *Théâtre choisi de Rotrou*, with notes, and as an introduction the *éloge* which won for him the prize of eloquence from the Académie française.

THE last numbers, vii. and viii., of *El Folklore Andaluz* maintain the standard of their predecessors. The admirable sketch of artisan life in Seville, entitled "Los Corrales de Vecinos," is continued in both numbers. From the Notices we learn that the Eastern Jews still print some journals in the Spanish language, but with Hebrew characters. We trust that some more detailed account of these will be given in future numbers.

THREE prominent men have died during the past week—the Archbishop of Canterbury, Anthony Trollope, and Louis Blanc. Of the two latter we hope to have notices next week; as also of Cecil James Monro, an old contributor to the ACADEMY.

SCOTCH JOTTINGS.

THE Senate of Edinburgh University have thus awarded four fellowships of £100 a-year, placed at their disposal by an anonymous benefactor for the encouragement of study and research:—Chemistry, Mr. D. Orme Masson—subject of study, "The Decomposition of Retene at a High Temperature"; biology, Mr. John Stuart, of Glasgow and Oxford; mental philosophy, Mr. John R. Robertson—"Christian Ethics"; history, Mr. George P. McNeill—"Scottish Literary History." Owens College has some similar fellowships; Cambridge proposes to found one in memory of the late Prof. Balfour. What is Oxford doing?

HAVING founded his Celtic chair at Edinburgh, *emeritus* professor Blackie is now advocating the provision of a Celtic travelling fellowship of the value of not less than £100 a-year.

AN application was made last week to the sheriff court at Glasgow, on behalf of Prof. Edward Caird, to restrain a bookseller from publishing the lectures (or notes of lectures) delivered by the professor on moral philosophy in the University of Glasgow. It was stated that notes of the lectures had been supplied to the publisher by a student attending them. The bookseller consented to give up all the printed copies in his possession, and to try to recover the five copies he had sold. We speak under correction; but we had always thought that the statute specially excluded from copyright lectures delivered in universities and other public institutions. The morality of the student's conduct is another matter; and possibly some legal right may exist at common law. There is an incident in the life of Abernethy bearing on the point.

THE annual general meeting of the Scottish Society of Antiquaries was held on November 30, when a very satisfactory Report was presented. Fifty-six fellows had been elected, while only five had died. The number of visitors to the museum during the year was only just short of 100,000; nearly 3,000 coins and medals and 439 objects of antiquity had been presented, and 6,230 had been purchased. It is not surprising to hear that space in the museum has become quite inadequate for the exhibition and classification of its contents.

GERMAN JOTTINGS.

Rachel, Souvenirs d'un Contemporain, recently published at Berlin, though in French, which has attracted some attention, is said to be written by Prince George of Prussia.

THE third volume of the minor works of Wilhelm Grimm, containing various essays on matters connected with Old-Norse and Old-German philology and mythology, will appear at the end of the present month. The fourth volume will be published in the course of next year.

A GERMAN historian, Herr von Kalckstein, proposes to continue Lanfrey's *History of Napoleon I.* by adding two volumes to the German translation that is now being published.

THE centenary of the birth of the Swedish poet, Bishop Esaias Tegnér, who is known chiefly to English readers through the specimens of his work translated by Longfellow, was observed on November 13 both in his native land and in Germany. Eugen Peschier has published a pleasant little "festival gift," as he calls it, to the admirers of the poet of the "Frithiofsage." *Esaias Tegnér, sein Leben und Dichten* (Lahr: Schauenburg), contains a sketch of the poet's life, an account of his greater works, and a selection from his lyrical poems. We may add that Herr Peschier is highly esteemed in Sweden as an interpreter of the national Swedish poetry to Germany. The King of Sweden has sent him the gold medal for art and science as an acknowledgment of the high character of his monograph upon another Swedish poet, Johann Ludwig Runeberg, nearly all of whose works have been translated into German.

HERR SPRINGER, of Berlin, has just issued a popular work, illustrated with wood-cuts, engravings, &c., on Olympia, the Festival and its Site, based on the accounts of the ancients and the results of the German excavations, by Prof. Adolf Boetticher, the German commissioner at Olympia.

PROF. BASTIAN, of Berlin, gives the results of his recent travels in a work entitled *Völkerstämme am Brahmaputra und verwandtschaftliche Nachbarn* (Berlin: Dümmler).

HERR AUGUST REISSMANN has added a Life of Weber to his series of biographies of great composers—*Karl Maria von Weber* (Berlin: Oppenheim). This work, which is in one volume, contains two unpublished compositions by Weber.

PROF. ERNST HAECKEL's letters from India, which appeared in the *Deutsche Rundschau*, have been reprinted in one volume (Berlin: Pöpel).

THE Town Council of Vienna announce a prize competition for the best popular drama, the subject of which is to be taken from the Austro-Turkish wars, more especially from the time of the last siege of Vienna by the Turks, in 1683. The first prize is to consist of between two and three hundred ducats.

THE daily papers filed in the Library of the Reichstag at Berlin consist of fifteen

German and five foreign ones—viz., the Italian *L'Opinione*; the French *La République Française* and *L'Univers*; and two English, the *Times* and the *Daily News*.

PROF. HERMANN PAUL, of Helsingfors, has just published a second volume of German translations from Finnish poetry.

THE first number of a new monthly magazine, *Aus allen Zeiten und Landen* (Brunswick), fulfils its promise of giving "historical, biographical, and culture-historical pictures and sketches in a lively and entertaining manner." The names of Woldemar Kaden; Dr. Ludwig Nohl, of Heidelberg, the historian and biographer of music; Karl Benrath, of Bonn; and Fedor von Koppen appear among its contributors. The chief article of the present number, upon the murder of Czar Paul, prints for the first time the authentic memoranda written by the Saxon ambassador at St. Petersburg. This document is elucidated by Karl Friedrich Rosenzweig, and throws a new and clear light upon that catastrophe. The wood-cuts are admirable. The next number is to contain an article upon "Bismark as a Junker," by no less a person than Moritz Busch.

ORIGINAL VERSE.

LOVE'S DAY.

THIS is Love's house, and this Love's hour of bliss;
Through the dark grove her windows shine like stars;
List to those flute-players, mark well the bars
Of that sweet prelude, each note like a kiss
That longer grows and tenderer, till you miss
The music in the passion. Nothing jars
On soul or sense; no fateful boding mars
Joy's perfectness: what end shall be of this?
Love hath her day, but Love's day vanisheth;
Vacant her chambers now, below, above;
Her flutes no longer breathe melodious breath;
Dark are her windows now as is the grove;
And echoes of the falling feet of Death
Reverberate through the empty house of Love.
JAMES ASHROFT NOBLE.

ACKNOWLEDGMENTS.

WE have received the following new editions:—*Quain's Elements of Anatomy*, edited by Allen Thomson, Edward Albert Schäfer, and George Dancer Thane, Vol. I., illustrated with 380 engravings, of which seventy-eight are coloured, Vol. II., illustrated with nearly eight hundred engravings, of which nineteen are coloured, Ninth Edition (Longmans); *Synonyms discriminated: a Dictionary of Synonymous Words in the English Language*, illustrated with Quotations from Standard Writers, by the late O. J. Smith, New Edition, with the Author's Latest Corrections and Additions, edited by the Rev. H. Percy Smith (Bell); *Final Causes*, by Paul Janet, translated from the Second Edition of the French by W. Affleck, with Preface by Prof. Flint, Second Edition (Edinburgh: Clark); *The Hebridean Isles: Wanderings in the Land of Lorne and the Outer Hebrides*, by Robert Buchanan, a New Edition, with a frontispiece by William Small (Ohatto and Windus); *Electricity*, by Robert M. Ferguson, New Edition, revised and extended by James Blyth (Chambers); *Papers on Preaching*, by the Rev. George Jennings Davies, Third Edition, enlarged (Bell); *Life of a Scotch Naturalist, Thomas Edward, Portrait and Illustrations*, by Samuel Smiles (John Murray); *Turning Points in Life*, by the Rev. Frederick Arnold (Bentley); *Heroes of History and Legend*, by A. W. Grube, translated from the German by John Lancelot Shadwell (Griffith and Farran); *Papers on Preaching*, by the Rev. George Jennings Davies

(Bell); *Fenn on the Funds*, Thirteenth Edition, entirely rewritten and brought down to the latest date, by Robert Lucas Nash (Effingham Wilson); *The "J. E. M." Guide to Davos-Platz*, edited by J. E. Muddock (Simpkin, Marshall and Co.); *Spence's Geography*, completed and edited by Thomas Gray, Eighth Edition (Orosby Lockwood); *History of the Christian Church*, by Philip Schaff, Vol. I.—Apostolic Christianity (New York: Scribner's Sons); &c., &c.

MAGAZINES AND REVIEWS.

THE *Cornhill Magazine* for December is a little dull. Its most noticeable papers are an account of "A Festival amongst the Basques" and "In 1782: Political and Social." The only complaint we have against the first of these is its brevity. The second gives a collection of the best things from a journal of a Prussian clergyman, the Rev. O. Moritz, who, in 1782, made a pedestrian tour through some parts of England. The traveller of last century was certainly more observant and less rash than the tourist of to-day. Perhaps rapid locomotion leads to cursory inspection and ill-considered judgments.

Macmillan's Magazine has a poem of Mr. Matthew Arnold which lets us into the secret of his domestic pets even further than did "Geist's Grave," "Poor Matthias" is the canary who has recently died. The poem is one of Mr. Arnold's happiest efforts in the familiar manner. It is simple with dignity, and intimate without affectation. Otherwise the *Magazine* has instruction of every kind. Mr. Thorold Rogers recommends enilage to the English farmer. The Rev. A. T. Davidson refutes the Curates' Alliance by showing them that they do not know what "simony" means. A paper on "Hot Haste for News" points out temperately the mischief likely to be caused in modern warfare by the eager competition of newspaper correspondents for something to send to their journals. Mr. Glyde, writing on "The Topography of Intemperance," calls attention to the fact that locality rather than number of public-houses seems to determine the amount of drunkenness; if so, temperance advocates had better reconsider their position. Mr. Andrew Bradley makes some thoughtful remarks on the book *Natural Religion*.

THE fourth and fifth numbers of *La Revue de Droit International* contain articles of varied interest. The fourth number commences with an article by Prof. F. Martens, of the University of St. Petersburg, upon "La Question égyptienne et le Droit international," the purport of which is to discuss the question whether the re-establishment of the *status quo* is the best means of securing in Egypt a state of things conformable to the true interests of Egypt itself and the legitimate aspirations of the nations of Europe. The conclusion at which the learned Professor arrives is that the complete emancipation from the suzerainty of the Ottoman Porte is the condition *sine qua non* of the permanent neutrality of Egypt and the security of the Suez Canal. Prof. Brusa, of the University of Pisa, commences a study of the subject of political offences and extradition. Judge Hingst, of Amsterdam, contributes a second article on the "Jurisprudence of the Courts of the Netherlands in Matters of International Law." The fifth number commences with a very interesting notice by M. Ernest Nys, a judge of the court of Antwerp, on "Honoré Bonet and Christine de Pisan." M. Nys is the author of a treatise on *Le Droit de la Guerre et les Précurseurs de Grotius*, recently published at Brussels, in which he has treated briefly of Honoré Bonnor, the author of *L'Arbre des Batailles*, dedicated to Charles VI. of France, somewhere between

1382 and 1387. He has added in this article a notice of Christine de Pisan, the authoress of *Le Livre des Faits d'Armes et de Chevalerie*, in which are incorporated the more important doctrines of Honoré Bonet, otherwise Bonnor, which have become more generally known through the means of Christine's writings than under their original title. She is best known by a poem in honour of the maid of Orleans, written in 1429, after the coronation of the youthful King of France; but she deserves a niche in the Walhalla of the writers on public law who commenced the crusade against the right of private warfare, the successful accomplishment of which crusade was the undoubted triumph of the genius of Grotius. Prof. Orelli, of Zürich, contributes a paper on the rights of foreigners in Switzerland; and Prof. von Hamel, of Amsterdam, an article on the new penal legislation of Japan. The Professor's remarks are mainly directed to the new Codes of Criminal Law and of Criminal Procedure which Sir Travers Twiss brought to the notice of the Association for the Reform and Codification of the Law of Nations at the Frankfurt Conference of 1881. The Professor concludes with some remarks on the scheme of Sir Travers Twiss for the creation of territorial courts in Japan as a remedy for the present shortcomings of the system of consular courts. A notice of a projected maritime code for Denmark is written by Dr. Lassen, of Copenhagen; while Prof. Renault, of Paris, and Prof. Holland, of Oxford, supply notices of contemporary legislation in France and in England.

THE "AJAX" AT CAMBRIDGE.

GRATITUDE, according to Tecmessa, should abide with a man towards those who give him pleasure; and there are few who witnessed the performance of the "Ajax" who will be able, in writing of it, to free themselves from this feeling. There was something in the whole play so fresh and vigorous, and the actors showed such pleasure in their work, that anyone might easily be carried away by sympathy. The actors were amateurs, and many of them showed the faults of amateurs; but they played, as amateurs do, *con amore*, and that made up for any small defects.

On the whole, the "Ajax" was a good selection. The quarrel over the dead body of the hero which occupies the latter half of the play would be trying to the patience of some of the audience. But the first half appeals to all; and there is less in the "Ajax" than in most plays of sentiments which would alienate a modern audience. The scenery and stage appliances required are simple; and, above all, the play is peculiarly characteristic of the best period of Greek life. I shall not attempt to criticise the individual performances of the various actors—this has already been done sufficiently in the daily papers—but merely speak of the exhibition in its general features with a view to possible future performances, and consider its literary and archaeological value.

We may begin with the Chorus, which must always be a *crux* in these cases. The getting-up was, on the whole, excellent. In spite of a few drawbacks, such as the awkwardness of arrangement of the sheep-skins worn by some of the Salaminian sailors, they looked, with their black beards and brown limbs, as rough-and-ready a set of sea-rovers as a man might find between Sicily and Cyprus. Their motions consisted, it is true, of not much more than marching up and down their little orchestra; but it can scarcely be doubted that this programme was the best they could have adopted, since real characteristic dancing like that of Aeschylus' dancer, Telestes, who explained by

his dancing the whole plot of "the Seven against Thebes," could not be hoped for. The action of the Chorus was greatly aided by the simple and melodious music of Prof. Macfarren, which, being, of course, infinitely more expressive than any which could be produced on the rude pipes of the ancients, made up for the inferior mobility of the singers. In one instance, however, the action of the Chorus seemed to belie the words of the play. When Menelaüs, in haughty language, forbade Teucer to bury his brother, the Chorus uttered subdued sounds of anger, and even menaced him with their spears; but the words in which they address Menelaüs show no fury, but the wisest moderation—"Menelaüs, thou hast laid down wise precepts: take not on thee now the guilt of doing outrage to the dead." And the same inappropriateness recurred with still greater force when Agamemnon also comes forward to forbid the burial. Him, also, their commander-in-chief, the Chorus menaced in action, while their words are softer than butter—"Would that ye both could learn the wisdom of a temperate mind. No better counsel could I give you twain" (Teucer and Agamemnon).

The dresses throughout were good, at once artistically pleasing and passably near to what was usual in Greek real life. For this, credit must be given alike to Dr. Waldstein and to Messrs. Barthe and Labhart. Of course the dresses of real life were never worn on the Greek stage; but this is just one of those far-reaching differences between ancient and modern acting of which more will be said presently. Only in one case did we observe an inappropriate dress. The archer, Teucer, appeared to wear a cuirass in shape like those of the spearmen, but of some kind of stuff instead of metal. It would undoubtedly have been more correct, as well as more distinctive, to have clad him in a tight-fitting suit with long sleeves and drawers like that so usual in vases and in sculpture in the case of Greek archers. This semi-oriental dress would add fresh point to Agamemnon's taunt, "I understand not thy barbarian speech."

The painting of the backgrounds and the sliding scenes, the work of Mr. O'Connor, though displaying, of course, a knowledge of perspective and of effects of light which would have astounded a Greek painter, was so simple and pleasing that it could scarcely have seemed out of place anywhere. The tent of Ajax, surrounded by a stockade, with a curtain for a door, was a brilliant idea; but that curtain seemed to be of somewhat modern pattern. Perhaps of all the accessories the least satisfactory was the stage front, which was in form like an ordinary English stage front, though embellished with classical paintings carefully selected and skilfully arranged, and was surmounted by a pediment which looked sadly out of place. In this point, the Oxford representation of the "Agamemnon" was superior, since there the proscenium, or stage, was at all events in front of the *σκηνη* itself, the palace front, which was the invariable background at the Greek theatre, though probably sometimes covered up by the interposition of a painted background. But in the Cambridge arrangement the proscenium was apparently placed behind the *σκηνη*, which arrangement, however convenient, was out of place when a certain degree of historical accuracy was attempted.

As to the acting, we need say the less because so much has been said elsewhere. Ajax and Tecmessa acted in the modern sense of the word, and acted well too. The first appearance of Ajax as he rushed raving from his tent, and the scene where Tecmessa narrated the sad doings of the past night, were in their way very successful. The rest of the cast attempted neither the facial play of Ajax nor the strong action of Tecmessa, but contented themselves with strongly modulated recitation of their

CORRESPONDENCE.

THE RUINS AT HISSARLIK.

Athens: Nov. 27, 1882.

In the ACADEMY of October 28, in the report of Prof. Jebb's account (at the meeting of the Hellenic Society) of his visit to Hissarlik in company with Mr. Frank Calvert and myself, the opinion is attributed to me that "no such stratification of the ruins as is implied in Dr. Schliemann's theory of successive cities exists;" and in Prof. Sayce's letter in the ACADEMY of November 18 I find extracts from a private note written by me to Dr. Schliemann, in which I express an entirely different opinion. I trust, under the circumstances, I may be allowed a few words of personal explanation.

Before I visited Hissarlik in September last I accepted generally Dr. Schliemann's theory of successive cities on the hill, although I felt that we were still very far from a satisfactory explanation of the ruins. I naturally expected to see, in some one place at least, the seven strata as they are given in p. 7 of *Ilios*; but in this I was disappointed, partly because I had in mind a more distinct and regular stratification than Dr. Schliemann intended to affirm, partly because this year's excavations have greatly changed the aspect of the ruins. I was not aware then how far these latest excavations had modified Dr. Schliemann's own views, especially regarding the size and importance of the city which he believes to be the Homeric Troy. Under these circumstances, I was much perplexed by what I saw at Hissarlik, and felt unable to explain the state of the ruins either by the theory given in *Ilios* or by any other which then occurred to me. The marked distinction between Greek and Roman ruins at the top and prehistoric (or Trojan) ruins at the bottom seemed, however, perfectly plain, and different parts of each of these evidently belonged to different periods either of the same city or of different cities; but, although I felt great doubt about the true explanation of the phenomena, I never had a positive opinion that "no such stratification as Dr. Schliemann's theory implies exists." I need hardly say that I have no idea that the language actually used by Prof. Jebb in his address imputed to me any such positive opinion.

Since I have been in Athens, I have read Dr. Schliemann's Frankfurt address, and also Dr. Dörpfeld's letter to the *Allgemeine Zeitung* of September 29, of which an abstract was given in the ACADEMY of October 14. It seems to me that Dr. Dörpfeld's clear statement of the excavations on and about Hissarlik supplies what is most needed to make the ruins in their present state intelligible. This was especially welcome to me, as it tends strongly to what I have always believed would be the ultimate conclusion about Hissarlik—that the only two important settlements there have been, first, a large prehistoric city which made Hissarlik its acropolis, and extended far out on the plateau behind it; and, secondly, the historic Ilium in its three phases of a primitive Aeolic settlement on the acropolis, the Macedonian city, and the more elegant Roman Ilium. Our chief interest centres in the great prehistoric city, which may now claim to be the Homeric Troy with redoubled authority. If the existence of this is established, we shall care comparatively little whether a still older settlement of the same or another race had previously occupied the acropolis, and still less whether a "poor village" with "a small and shabby population" was built on the ruins of the great city before the first Greek settlement was made on Hissarlik.

But, as I believe that science will be fortunate if after twenty-five years she has thoroughly interpreted the wonderful book of records which Dr. Schliemann has opened within the hill

of Hissarlik, I feel that doubts and perplexity are more becoming at present than dogmatic opinions, which it is my chief object in this letter to disclaim. W. W. GOODWIN.

"THE MERMAID."

3 St. George's Square, N.W.

I do not know whether the history of this famous tavern has ever been written, but as there is a bequest of some terms of years or leases of it in the year 1428* (it being then a vintner's house if not a tavern), in a will in my forthcoming *Earliest English Wills* for the Early-English Text Society, I make the fact public now, for the benefit of all whom it may concern.

We know from Ben Jonson's lines (ed. Gifford, viii. 242, as P. Cunningham says) where "The Mermaid" was:

"At Bread-Street's Mermaid having dined, and merry,

Proposed to go to Holborn in a wherry."

Well, in 1428, John Toker, "Oitazein and Vineter of London, hool of mynde and of body," did, by his testament, bequeath to (which he or the will-copier spells "Tho") Henry Thommisone, his apprentice,

"alle the termes and possession that is comyng to me of my mancion that is cleped the Mermaid in Bred-street (beryng the charges and the rentes therof during the seide termys . . .). Also . . . during an hool yere next after myn obit day, Alle the encrease that is comyng of my wyne aboue the stok, And more ouer, alle my pecces and kappes of siluer, pender pottes, Naspr, and all the vesselmentes longyng to my kechyn, as for that forsaide 3er enduryng . . ."

As "The Mermaid" is by later authorities described as also being in Friday Street and in Cheapside, Mr. H. B. Wheatley suggests that it was the corner house of the two streets, Bread Street and Friday Street, or had an entrance from Friday Street, and fronted Cheapside: see my *Harrison's England in Shakspeare's Days*, 1577-87, part i., pp. cii., ciii.

F. J. FURNIVALL.

PS.—I find that the extract I sent you from the Philipps MS. Notes in Stow and Howes's *Chronicle* about "The End of Shakspeare's Play-houses" was printed by J. P. Collier in his second edition of *Shakspeare's Works*, from the same MS., then in the possession of Pickering the bookseller.

* This is earlier than the mention of "The Mermaid" in Larwood and Hotten's *History of Signboards* from the "Howard Household Books."

CHRISTOPHER WREN.

Hertford: Dec. 5, 1882.

In making a transcript of the earliest Register of All Saints', Hertford, the following entries were met with:—

"1532, June: Emma wife of Chr: Wren: burd: 19:"

"1533, May: Chr: Wren, weter, burd: 5:"

Christian names run in families, and it is just possible these were the ancestors of the celebrated architect. They were residents in this town, as the fact of non-residence is noted in this Register by the word "Londoner," &c. Presumably they were aged folk at the time of their death, as no children are recorded to them in the Register, which commences in 1559.

Possibly this is all "old, stale, and unprofitable" to you, but perhaps you may think it worth publication. I have no Life of Wren to refer to. W. M. WOOD.

THE LABELS IN THE SOUTH KENSINGTON MUSEUM.

London: Dec. 4, 1882.

The value of the South Kensington Museum as a help towards the study of art and archaeology is so very great that one cannot but regret the extreme want of care shown in the labelling of the various objects, and the consequent mystification of the unfortunate student, who naturally looks to them for information. This is specially the case with the labels under the very interesting specimens of mediæval mosaic which have just been set up in the Italian Court.

A large female head, with crown and veil, of glass mosaic is said to be probably "from Ravenna, of the eighth or ninth century." The attribution to Ravenna is no doubt correct, in which case the head cannot be of the eighth or ninth century, a period when no important mosaics were produced at Ravenna. It is clearly of the sixth-century, being exactly similar in style to the heads of Theodora and her ladies in the sanctuary of San Vitale. A second blunder in the same label is the statement that it has a "square nimbus." The veil over the crown is rather square in outline, but the nimbus is of the usual circular form. It is rather a peculiarity of the sixth-century mosaics at Ravenna that even living persons, such as Justinian and Theodora at San Vitale, were represented with the circular nimbus. Again, the so-called "mosaic panel inlaid with a cross in coloured stones and gilt tesserae" really is a marble panel inlaid entirely with tesserae of glass. The "head of a saint, Italian mosaic of the fourteenth century," is certainly not earlier than the fifteenth, and may be of the sixteenth century. Perhaps the most remarkable label of all is that on a fifteenth-century oak chest of obvious German work, on which is a relief of the coronation of the Virgin, treated in the usual fifteenth-century way—the Virgin being enthroned between the First and Second Persons of the Trinity, and the Dove over her head. This we are informed is "probably the coronation of Henry VI.;" and the coffin is said to be English.

It would surely be well if the museum authorities would have the labels throughout revised and corrected, the number of erroneous ones being very large in almost every department of objects belonging to an early period of art history. J. HENRY MIDDLETON.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, Dec. 11, 5 p.m. London Institution: "Thames Carlyle," by Mr. J. Otter Morrison.
7.30 p.m. Aristotelian: Discussion on the President's Address; "The Method of Philosophy."
7.50 p.m. Education: General Meeting.
8 p.m. Royal Academy: "Renas," by Prof. A. H. Church.
8 p.m. Society of Arts: Genter Lecture, "Dynamo-Electric Machinery," II., by Prof. S. P. Thompson.
8.30 p.m. Geographical.
TUESDAY, Dec. 12, 8 p.m. Anthropological: "Some Flint Instruments and Flints from Cape Bianco Mes, Calabria," by Mr. A. L. Lewis; "The Australian Glass Systems," by Mr. A. W. Howitt.
8 p.m. Civil Engineers: "The Sinking to Two Shafts at Mardun for the Whitburn Company," by Mr. John Daglish.
8 p.m. Colonial Institute: "North-west Territories of Canada," by the Bishop of Saskatchewan.
WEDNESDAY, Dec. 13, 8 p.m. Society of Arts: "Electrical Exhibitions," by Mr. W. H. Preece.
8 p.m. Microscopical.
THURSDAY, Dec. 14, 7 p.m. London Institution: "The Recent Transit of Venus," by Prof. E. S. Ball.
8 p.m. Royal Academy: "Varnishes," by Prof. A. H. Church.
8 p.m. Mathematical: "The Vibrations of a Spherical Shell," by Prof. H. Lamb; a Paper by Prof. H. Smith; "Certain Relations between Volumes of Loci of Connected Points," by Mr. E. B. Elliott; "Geometrical Proof of Griffiths' Extension of Graves' Theorem," by Mr. J. J. Walker.
8 p.m. Telegraph Engineers: "The Application and Extension of Telephonic Communication in Japan," by Mr. Thomas J. Larkin.
FRIDAY, Dec. 15, 8 p.m. Philological: "Initial Mutations in the Celtic, Basque, Sardian, and Italian Dialects," II., by Prince L.-L. Bonaparte.

SCIENCE.

Diseases of Memory: an Essay in the Positive Psychology. By Th. Ribot. "International Scientific Series." (Kegan Paul, Trench & Co.)

THIS little book is mainly a succinct account of the different kinds of loss of memory; but it is also a physiological study of the physical bases or conditions of memory, and attempts, by the methods and results of this comparatively new way of approaching psychology, to rationalise the descriptive pathology. The whole has the merit of all M. Ribot's compends. It is filled with varied and interesting facts, closely packed and well ordered; and the style, even after translation, remains direct, incisive, vivid. Occasionally something has been lost in the rendering. I have noted several instances. One, perhaps the worst, must suffice. Most of p. 36 is made quite unintelligible by loose versions which culminate in giving one and the same phrase, "in and of itself," for two contrasted phrases in the French, "*en lui-même*" and "*pour lui-même*." Even in the original the passage is obscure, because in it M. Ribot's usual perspicuity is clouded by his fixed resolve to confound consciousness, including memory, with its physical antecedents, as one event ("un événement complexe"), instead of seeing in them a train of events, each counting for one, and each one as good and real and necessary as another. This deliberate confusion goes so far as to extend the name of "memory" to all the more or less hypothetical brain and nerve states and processes that are assumed, by way of explanation, to precede or attend the act of consciousness commonly so called. There is no great harm in this, if it is distinctly understood to be figurative. The ebullient poetry of a youthful science like "the physiology of mind" commands our sympathy with its fresh enthusiasm. But the mythological danger exists in science no less than elsewhere. And it is altogether too bad to find our familiar friend "Memory" of the conscious sort made to take a secondary place, and treated as an "accident" (p. 10), a superfluity (p. 7, &c.), a shadow or halo. Yet we must not take too seriously these and other such eccentricities (pp. 17, 19); and, allowing for them, we owe thanks to M. Ribot for his summary of the best and latest known and thought by the mental physiologists about the mechanism of memory. This is given in chap. i., on "Memory as a Biological Fact." He finds the physical bases in (1) the permanently renewed modifications of nerve elements—the impressions or impressed vibrations of Hartley—the functional dispositions of Wundt; (2) in the permanently renewed groups of these, which he calls "dynamic associations." These two brain states or processes constitute "the organic memory." It is "the organisation of residua"—residual impressions or vibrations co-ordinated. Obviously the initiation and establishment of "organic memory" is identical with the formation and fixation of habits of bodily movement, the perpetuation of the constitutional changes induced by disease, and all other phases of progressive organisation. It is a registration and integration of "impressed" states and ten-

dencies, passing from less to more stability, and finding its limit in automatism. Consciousness—e.g., memory proper—attends the relatively unstable stage of this process. Only the continual accession of fresh impressions and new states prevents our becoming pure unconscious automata. But, happily or otherwise, the stream never fails, and so our evolutionary forgetfulness only subserves our remembering, and leaves room for further acquisitions. It was Lamb, I think, who said that "half our education consists in our forgetting the other half."

In explaining the last and perfect stage of recollection—namely, exact localisation of a memory in time—M. Ribot chiefly follows M. Taine, and his exposition is admirably lucid. "Each state of consciousness having its individual duration, the number of states so traversed, and the sum of these durations, will give the position of any state"—i.e., its distance from the present. I quote this fragment of it to show that, with all its lucidity, it is an extremely unsatisfactory elucidation. It involves, in fact, what the schoolmen called the sophism of *idem per idem*—assuming as a *datum* and means of explanation, and as explained or in no need of explanation, the very thing that he seeks to explain. For do not "states of consciousness having individual durations," and (p. 49) "presents" that have given durations, themselves require and presuppose a measuring memory? But all this comes of thinking that an empirical and physiological psychologist may disregard "the criticism of consciousness" (p. 48), and may lightly esteem the old-fashioned psychology of introspective observation and analysis. This disparagement and unconcern may also account for his tendency to consider the whole question of remembering cleared and settled as soon as he has explained the mechanism of localisation. Localisation = recollection = conscious memory—that is the formula. Just as if a memory adrift in the past was not a memory till brought to anchor. So, too, reflective analysis and criticism of experience might have made the long excursus on the "*Ego*" (pp. 98–116) more profitable. Here the subject of knowledge is confounded with its objects, the householder with the house, and the "*Ego*" is now a sum of conscious states, again an aggregate or consensus of vital processes, and sometimes both together; and sums, aggregates, and series are made to collapse by magic into "the unity of the ego," which is confessed to be "the natural form of consciousness." These enigmas vex and mar a passage containing much that is suggestive; especially what is said, in Rosminian fashion, about the *Coenæsthesia* or general feeling of the body in relation to the sense of personality. Again, the same despised metaphysics or *Kritik* would have forbidden M. Ribot's unreasonable modesty (p. 32) which declines to claim for "psychology as a practical science," the question of the "genesis" of consciousness. As if that genesis in the individual was not its main problem, solved too, by M. Ribot, in respect of memory, as all questions of genesis are solved in science at large, by assigning invariable and unconditional antecedents or co-existents. "Cerebration" is "latent modifi-

cation of mind," and when it is intense and lasting enough consciousness arises. That is all; and enough "genesis" for science.

It is impossible in a short space to give any idea of the wonderful array of curious cases which illustrate M. Ribot's chapters on "Amnesia" and "Hypermnnesia." But his deductions deserve to be recorded. "The loss of recollections follows an invariable path: recent events, ideas in general, feelings, and acts"—in aphasia, or forgetfulness of signs (the obliteration or insulation of vocomotor residua): "proper names, common nouns, adjectives and verbs, interjections, gestures." In every case, regression is "from the new to the old, the complex to the simple, the voluntary to the automatic, from the least organised to the best organised." Recovery or re-education takes place in inverse order. These results of the pathology confirm the conclusion of the physiology, that memory accompanies a process of organisation of brain and nerve. There is nothing in them to hinder their general and ready acceptance.

The work may be recommended to psychologists and alienists as a handy book of topics, while to the general reader it cannot but prove both entertaining and informing.

J. BURNS-GIBSON.

PROF. BUECHELER'S PETRONIUS.

Petronii Satiræ et Liber Priapeorum. Tertium edidit Franciscus Buecheler. Adiectæ sunt Varronis et Senecæ Satiræ similesque reliquiae. (Berlin.)

BUECHELER has made a solid addition to the value of his well-known edition of Petronius, the *Priapeæ*, and the fragments of Varro's *Menippean satires*, by incorporating in his cheap and excellently printed volume his edition of Seneca's *Apocolocyntosis*, the fragments of Sisenna's *Milesian Fables*, the *Leges Coniuvales* given at the end of the *Querolus*, and the *Will of a Pig*, which, on the high authority of St. Jerome, we know to have been a favourite subject for grinning recitations by the school-boys of his epoch. The name of the Bonn Professor is sufficient to guarantee the care with which the text of all these pieces is here edited; and the *apparatus criticus* shows that the latest writers on each of them have been examined and laid under contribution. The text of Petronius differs in some respects from that of the large edition of 1862, which will of course always remain the standard of reference on debatable points of reading, containing, as it does, a complete conspectus of the MSS.—in an author so fragmentary a point of the greatest moment. The one thing which every lover of veritable humour must and will increasingly desiderate is a commentary up to the standard of our times, for it is a mournful fact that the commentary of Burmann is still the only one available for most readers, and the accumulations of more than a century of philological research would indubitably clear up much that to ordinary students is obscure. Small thanks to those who, as we have heard stated on good authority, diverted Bücheler from an undertaking which he, perhaps, alone of modern philologists was adequate to execute as it should be.

R. ELLIS.

MAGAZINES AND REVIEWS.

THE *Indian Antiquary* for October gives the transcription and translation of a Kādamba inscription of the early part of the eleventh century A.D., preserved in a ruined temple of

Siva at Siddāpur. Its especial point of interest is that it records a gift made to the temple not by the Kādamba princes of that date (whose magnificent epithets, however, fill up the greater part of the inscription), but by the united private residents of Hoavaalāl. The paper is contributed by K. B. Pāthak, B.A., of Belgaum, two miles from which place the stone tablet was found. There follows a further instalment of Mr. Howorth's papers on "Chinghiz Khan and his Ancestors," and of Mrs. Steel's papers on "Folk-Lore from Kashmīr." Lieut. Temple, who contributes notes also to the last-mentioned paper, sends independently "A Panjab Legend," and an identification of the talking-bird referred to by Aelian, under the name of *Kerkion*, with the common starling now so well known as the talking Mainā, the Sanskrit name of which is *sārikā* or *kālikā*. Mr. Beal points out two or three mistakes made by Mr. Carlleyle in his Archaeological Reports in the interpretation of Fah Hian—mistakes due to his following Laidley, who has misunderstood Rémusat, in his translation into English of the latter scholar's *Poe Koue Ki*. An interesting notice of the reformed Buddhist sect in Japan, the Shin Siu, by Mr. Martin, is extracted from the *Proceedings* of the American Oriental Society, showing especially how they have lately erected a college on the Western model, at a cost of £75,000, in which physics and literature, as well as theology, are taught to numerous students. After a paper of Notes and Queries follow several reviews, the longest being devoted to the last year's issue of the *Journal* of the Royal Asiatic Society, and to Dr. Rhys Davids's "Hibbert Lectures on Buddhism."

THE *Journal* of the Ceylon branch of the Royal Asiatic Society, vol. vii., part ii., which has just come to hand, has been long delayed, but contains several interesting papers. In the first, Mr. Nevill, of the Ceylon Civil Service, adduces a number of authorities to show that the early part of Ceylon, continually referred to in the accounts of various travellers from before the Christian era to about 1000 A.D., was not, as has commonly been supposed, Point de Galle, but rather one of the islands along the North-west coast, probably near the present Calpennyn. The second and fourth papers, by Mr. Nell, the Deputy Queen's Advocate, are on certain curious beliefs as to the influence of the waxing and waning moon, and as to ancient sorcery still practised in the island. The third, by the Mahā Mudaliyār, gives us a very interesting and valuable note on the much-discussed *Veddās*, including no less than fourteen of their songs, with text and full translation. Every word except one in these songs is of Aryan origin, which is very strong evidence, though not conclusive, that these wild woodmen are our kinsmen by blood. This conclusion Mr. de Zoysa supports by a careful comparison of the traditions concerning their origin still preserved in the literature of the island. S. Jayatilaka Mudaliyār contributes a list of the meanings attached by the people to certain common appearances which they regard as omens. Annexed is the first instalment of the edition of Pāṇini now being brought out by Mr. W. Gunatilaka, of the Kandy Bar, with the assistance of the society.

SCIENCE NOTES.

MR. H. F. MORLEY has been authorised by the Council of University College, London, to give a course of advanced lectures on Organic Chemistry.

THE Royal Agricultural Society of England many years ago published in its quarterly *Journal* an elaborate series of articles written

by the late John Curtis, and illustrated with a number of very excellent plates upon the insects injurious to agriculture, which were subsequently republished by Mr. Curtis in a separate volume entitled *Farm Insects*. The same society has now issued a series of six diagrams, each measuring thirty inches by twenty-two, containing highly magnified representations of the different states of the six most injurious of the insect enemies of the farmer—viz., the turnip flea beetle, the wire worm, the large white cabbage butterfly, the daddy longlegs and its grub, the beet fly, and the green plant louse, or aphid, and its enemy, the common lady-bird, or coccinella. Of each of these the transformations from the egg, larva, pupa, or chrysalis, to the perfect state are well represented, so that they may be regarded as a very useful and instructive set of plates for schools or places used for agricultural meetings. We notice that the sucker of the aphid, by means of which it causes all the injury which it commits upon plants, is omitted; and we think the pupa of the elater, or click beetle, into which the wire worm is changed, is very incorrectly represented.

GALILEO's previous biographers have, to a considerable extent, neglected that portion of his life (1592-1610) during which he occupied the Chair of Mathematics in the University of Padua. Sig. Antonio Favaro, himself a professor in the same university, has made a careful study of this period of Galileo's career, based on documents in the public archives of Venice and Padua and in private hands, and is about to publish the results, at Florence, in two volumes, under the title of *Galileo Galilei e lo Studio di Padova*. The second volume will contain about one hundred and fifty documents, for the most part inedited.

PHILOLOGY NOTES.

WE are glad to announce that the Council of University College, London, at its meeting last Saturday resolved to invite Dr. T. W. Rhys Davids to accept the Chair of Pāli and Buddhist Literature, once held by the lamented R. C. Childers, and also to ask Mr. R. H. Gunion to take the office of Lecturer in Sanskrit. University College, almost without endowments, does as much to encourage Oriental studies as either of the great universities.

WE are informed that *The Vast of Lankurān*: a Modern Persian Play, edited, with a grammatical introduction, English translation, notes, and a glossary, by Messrs. Haggard and Le Strange, will be used as a text-book by M. Charles Schefer in his course of Persian at the École des Langues orientales vivantes. The book will be found at home, as well as in India, a most desirable one for the acquirement of modern colloquial Persian, almost all the Persian Grammars extant teaching the classical Persian of Saadi, Hafiz, &c.

AT the annual public meeting last month of the Académie des Inscriptions et Belles-Lettres, M. Jules Girard, who presided, commemorated the four members who have died during the year—MM. Dulaurier, de Longpérier, Thurot, and Guessard; and also gave an account of the work done at the schools of Athens and Rome. M. Wallon, the permanent secretary, read a paper upon the life and works of the late Paulin Paris. M. Léon Heuzey read a paper upon the beginnings of the manufacture of terra-cotta, which will appear as the introduction to his forthcoming Catalogue of the terra-cottas in the Louvre.

AT the last meeting of the Société asiatique, M. Halévy (we quote from the *Revue critique*) "signale dans la langue dite accado-sumérienne

une série d'expressions tellement empreintes du génie sémitiques qu'elles ont pu lui servir à restituer plusieurs passages altérés du Bible."

THE *Euskal-Erria* of November 20 prints from an inedited MS. of the last century—"Historia general de Vizcaya," by Juan Ramon de Iturriza—two Basque documents dated respectively A.D. 564 and A.D. 748. The falsification is evident. The day of the month and year of our Lord are written at length in Basque, "Gure Jaunaren vrte bost eun," &c., "guseure Jaungoicuaren jaijazaric zaspireun," &c., long before such an era could have been used in the Basque country. We have, besides, the Spanish forms, "Gonzalo Gonzalez," "Onsalu Onzalez," in the first document, centuries before the formation of the Spanish language; while the subject of the second is a transaction in the semi-feudal institution of *behetria*, which cannot be so old as 748.

DR. KARL VERNER, now Keeper of the University Library at Halle, has been appointed professor of the Slav Languages and Literatures at Copenhagen.

DR. JULIUS PLATZMANN, the botanist and traveller, has published at Leipzig a glossary of the language spoken in the Tierra del Fuego, with a geographical introduction and a map.

MEETINGS OF SOCIETIES.

CAMBRIDGE ANTIQUARIAN SOCIETY.—(Monday, Nov. 20.)

THE REV. R. BURN, M.A., President, in the Chair.—Mr. A. G. Wright, of Newmarket, exhibited a small terra-cotta head of Silenus in high relief, which had probably been affixed to horse-trappings as an amulet; and a bone dagger, nine inches in length, made from the metatarsal of an ox. The former had been found on Warren Hill, Icklingham, in 1877, at the depth of two feet; the latter was from Burwell Fen.—The Secretary exhibited, on the part of the Rev. O. B. Drake, Rector of Teversham, drawings of some wall-painting at the back and sides of the easternmost of the three *sedilia* in Teversham church. It appeared to have been covered up in the so-called restoration of the Church some twenty years ago; and had been brought to light again a few weeks since. The work was of the fifteenth century.—The Rev. G. F. Browne then proceeded to give a very interesting lecture (illustrated by a number of drawings and tracings) upon sculptured stones and crosses of the Saxon period in the North of England—Bewcastle, Gosforth, Hexham, Ilkley, Lastingham, Leeds, Ruthwell, Whalley, &c. He pointed out that some of these stones have sculptures evidently reminiscent of Scandinavian mythology; while another class not less clearly show Celtic ornamentation. He also dwelt upon a connexion between some of the stones and the MSS. of the same districts, such as the Rushworth Gospels at Harwood in Wharfedale and the Durham Gospels in Lindisfarne. In conclusion, he urged that something should be done to record the description of these English stones in a book, as has been done for Scotland, Ireland, Wales, and the Isle of Man.

ANTHROPOLOGICAL INSTITUTE.—(Tuesday, Nov. 23.)

GEN. PITT-RIVERS, President, in the Chair.—Dr. G. W. Parker read a paper on "The Language and People of Madagascar." The language belongs to the Malayo-Polynesian group, being most nearly allied to the Malay proper. The various dialects, numbering more than sixteen, are essentially only one language. It is soft, musical, phonetic, and easily learned by Europeans. Until the early part of the present century, it was a spoken language only; but the English missionaries reduced it to its present form, the English alphabet being adopted with the exception of the letters *c*, *q*, *x*, *z*, and *z*, which have no equivalent sounds in Malagasy. The vowels are four in number, and the consonants sixteen, pronounced as in English, with the exception of *g*, which is always hard (as in *gate*), and *j*, which has the sound of *dz* (as in *adze*). There are only two real diphthongs. In pronunciation,

every vowel or diphthong must be clearly sounded, and the accents properly placed, because often the alteration of one vowel or of the place of the accent is the only means of distinguishing similar sounding words. The author then gave the six chief rules of syntax, and explained the grammatical structure of the language. In the second part of the paper the peculiar geographical position of Madagascar was first noticed; its estimated population (from four to four and a-half millions), and its chief structural features, with special notice of the central plateau. There are a great many tribes in Madagascar; but all are divisible into two distinct classes, according to their race—origin, Malay and African. Their forms of government are—(1) petty absolute monarchies over the greater part of the island; (2) among the Hovas tribe nominally an absolute monarchy, really an oligarchy, the head of which has almost regal power. The office of Prime Minister is not peculiar to the Hovas, tribes on the north and west coasts also possessing the same institution; but only among Hovas is the Prime Minister not only the factotum, but also the "ex-officio husband," of the queen. A short sketch of the new code of Hova laws was next given, this being the only tribe which possesses a code of laws. An outline of the history of Madagascar was given, showing the origin of the present form of government among the Hovas, the tribe which seeks to possess the entire island. Lastly, reference was made to the French claims against Madagascar now being put forward, and their effect upon British interests. These claims are—(1) the demand that French subjects should be allowed to buy, sell, and own land in Madagascar; (2) the claims of private individuals; (3) the establishment of a French protectorate over a large part of the island. The French are now acting in accordance with a pre-concerted (and published) plan for invading and conquering the whole of the island. As affecting the interests of the British empire, the possession of Madagascar by France will enable that Power, if at war with us, to endanger, or even stop, our lines of communication with our Indian, Australian, and other colonies by the Red Sea and the Cape of Good Hope routes.—A discussion followed, in which the Rev. Jas. Sibree, the Rev. W. C. Pickersgill, Prof. Gustav Oppert, Mr. A. H. Keane, and others took part.

ROYAL SOCIETY OF LITERATURE.—(Wednesday, Nov. 29.)

SIR P. DE COLQUHOUN, V.-P., in the Chair.—Mr. Rendle read a paper on "The History of St. Thomas's Hospital, from circa A.D. 1200 to 1553, from Original Documents, and chiefly from a MS. formerly in the Stowe Collection and now belonging to the Earl of Ashburnham." This volume, of about six hundred pages, written in the early part of the sixteenth century, was originally incorrectly named "A Record of the Parish of St. Mary Overy." It is really a collection of charters, &c., referring to the hospital. The first hospital, Mr. Rendle said, was a portion of the priory of St. Mary Overy, and was within its precincts as early as 1200. This building was burnt in 1207, but rebuilt in far greater magnificence in 1228 by Peter de Rupibus, then Bishop of Winchester. The bishop's appeal for help in aid of this good work, probably the first charity sermon on record, is contained in the MS. Mr. Rendle then gave notices, in the words of the documents themselves, of many illustrious persons mentioned in them—as of Gower, the poet; Fastolfe, of the Boar's Head; Nicholson, the painter of the windows in King's College Chapel, Cambridge, and the printer of Nicholson's Coverdale Bible. Reference was made to the public market of Southwark temp. Richard II., to the court of Marshalsea, and the other courts held in the immediate neighbourhood. Many interesting matters relating to the Jews of Southwark temp. John and Henry II. were also noted. The hospital was rebuilt in 1507, on the site where it remained till quite recently, the ground costing £31 3s. 4d. Very nearly the same site was sold by the hospital governors to the South-Eastern Railway Company for £296,000. Mr. Rendle's paper was illustrated by a copy of a map, now in the Record Office, of the later foundation, on which

were roughly shown the palace of the French queen, the Tabard, the church of St. Mary Overy, the house of the Abbot of Hyde, Winchester House, Bermondsey Abbey, &c.

SOCIETY OF ANTIQUARIES.—(Thursday, Nov. 30.)

EDWIN FRESHFIELD, ESQ., V.-P., in the Chair.—Mr. A. J. Evans gave an account of the Roman remains in Illyria, especially at Epidaurus and Ristinum. Ragusa Vecchia is the site of the Greek colony, and Greek remains, with Boeotian coins, have been found there, but most of the buildings have been used up in the construction of the modern town. At Ristinum have been found specimens of early indigenous coinage. Mr. Evans described the construction of the aqueduct which supplied Epidaurus with water, and a Mithraic bas-relief which stands on a rock above the town, with no natural cave adjoining, as is usually the case. Probably some artificial chamber was constructed against the rock to represent a subterranean cave. Coins of Aurelian and Constantine have been found close to it. Mr. Evans exhibited a very carefully executed map showing the remains of Roman roads throughout the neighbouring country, and drawings of a few objects of special interest. One of these was a cornelian *intaglio* in the cathedral at Ragusa, engraved with the figure of an emperor on horseback, clothed in the *paludamentum* and raising his hands in adoration. On each side of his head is a cross, and in the *cæteræ* are the crescent moon and star, symbols of Byzantium. The design no doubt represents the vision of Constantine. Another, of pale sard, represents a man holding a lamb, with a ram and an amphora beside him. This may possibly be meant for Christ as the Good Shepherd. Mr. Evans also referred to the legend of the serpent destroyed by St. Hilarion as perhaps being connected with the worship of Apollo.—Mr. Day exhibited the matrices of several seals, as follow: the Abbot of Ouseburn, the Virgin in a niche, below, a demi-monk; St. Bartholomew's, Smithfield, the saint with knife and hook (*Archæologia*, xv. 401); the Commissary of Winchester diocese, fifteenth century, the Virgin crowned; and the Prioress of the Monastery of St. Katharine of Siena, St. Katharine crowned, with palm and wheel, the prioress adoring.—Mr. J. H. Parker, C.B., presented to the society a new map of Rome which he has privately printed, containing the latest discoveries in the topography of the ancient city.

FINE ART.

NOW ON VIEW.—BEAUTIFULS OF SURREY SCENERY, being an EXHIBITION OF MR. SUTTON PALMER'S SKETCHES AND DRAWINGS, now on this past Summer.—MESSRS. DOWDESWELL, 132, NEW BOND STREET (two doors from the Grosvenor Gallery).

In MARCH NEXT Messrs. DOWDESWELL will exhibit MR. BIRKET FOSTER'S DRAWINGS OF THE CATHEDRAL CITIES OF ENGLAND AND WALES, which it is proposed shall be engraved.—Particulars on application.

THE GROSVENOR GALLERY.

I.

It is seldom that one gallery has ever been devoted to the exhibition of the achievement of two such different painters as Alma-Tadema and Lawson. The consideration of each by itself is a necessity, and we are sure that the living Academician will think no apology necessary for giving the precedence to that highly gifted artist who will paint no more.

All the friends of the late Mr. Cecil Lawson, and all those who cared for his art, will be glad that his works have been brought together at the Grosvenor Gallery. It is impossible that the present collection can have any other effect than to increase his reputation. It will, or should, create universal regret at his loss. We see him for the first time. The eccentricity, the caprice, the wilfulness, which were not unnaturally attributed to the painter when detached works of his were seen in the midst of others of a more familiar type, all disappear, and in their place we find a strong personality consistently working out decided views and feelings with regard to landscape art. We do

not know whether any of his important works are missing—we think not—but we are quite sure that there is scarcely one here, from the studies of still life to the largest and most poetical landscape, which is not a link in the chain of his progress, a note of his individuality, part, however small, of the general revelation of his genius which the exhibition affords.

It is impossible, with the space at our command, to trace step by step the development of his genius, and we shall make no premature attempt to estimate it at its correct value or determine the artist's position among his peers. But there is at least no doubt that he belonged to the higher rank of landscape art; that he was not only remarkable as a painter, but as a personality; and we are glad to learn that this brilliant collection of his work is not to be scattered again before the appearance of a more permanent record of his life and work, written by one who was acquainted with both, and illustrated by brother-artists whose sympathy is assured. The trust of Lawson's reputation could not well be in safer hands than those of Mr. Gosse, Mr. Herkomer, and Mr. Whistler.

Cecil Lawson was above all a painter of skies, and the light of skies. The great panorama of clouds, with its perpetual movement and change, was evidently his most constant—his dearest—study. He painted the earth also, and painted it well, but seldom so well as the sky; sometimes, indeed, his skies are so forcible, with their white clouds shining on the deep blue, that they seem to kill the rest of the picture. It is as though, dazed with looking at the source of light, he saw the earth colder and paler than ordinary beings do who carry their eyes level with the horizon. That he loved the scenery of his country nearly every one of his pictures is a witness; more than this, the foregrounds of "The Minister's Garden" and "The Cuckoo" show us that he loved its pretty details, its flowers (wild or cultivated), even its insects. But it was the sun, and the air, and the clouds—the givers of life and beauty—that moved his deepest feeling and stimulated his noblest efforts. In other words, he was a poet of no ordinary kind, who could indulge in sweet homely sentiment, and yet enter into communion with the moods of universal Nature. He could paint the bloom of a peach or the majesty of a storm, the petals of a hollyhock or the glimpses of the moon.

But he appears to have been, above all things determined to do nothing petty or trivial. Even his studies of still life, pears and apples and peaches and grapes, though apparently as tangible and eatable as those of William Hunt, show none of those signs of elaboration which are so painfully visible in Hunt's work. They are treated with the breadth and simplicity of Chardin, and with a greater appreciation of their beauty of form than Chardin had. No one who studies these or his masterly sketches of hollyhocks can doubt that, if he seemed at times to pay too little attention to detail, it was of set purpose, and not because he shirked labour or wanted skill.

But it was always the essence of the thing presented or the emotion it caused that set him to work. He never sacrificed the greater to the less, not the peach to its down, nor the tree to its leaves, nor the light to anything. He had always something more than the mere love of the pretty or the picturesque at the bottom of his work. When standing before the "Autumn Moon" and "The Cuckoo" (those enormous landscapes which have not for the present writer an attraction in proportion to their size) it is impossible not to feel that the artist is not a mere picture-maker who thinks he has found a good subject, but a man who is giving outward form to his deep impressions of the solemnity of a warm, clear night and the joy of a spring morning. In that early but in

some respects most beautiful of his pictures, "The Hop Gardens of Kent," the effort of the painter has not been to choose the prettiest view he could find, but a characteristic one, a view that will convey the notion not only of the beauty, but of the extent, of a district stretching far beyond the frame. Beautiful it is of itself, but suggestive also of beauty around on all sides, with a sky that lights a country. As a picture of sunlight it is perhaps the finest Lawson painted. The sun not only lights, but warms, the whole picture, which is ripe as a golden apricot. There was no fear for the hops that year.

After this early work he appears to have been fascinated by the more mysterious and indefinite of the phenomena of Nature, its clouds and mists, especially at night. It was no cold meteorological report of the weather that he set his hand to; nor did he go to the other extreme, and indulge fantastic dreams at the expense of truth. He strove to paint what he saw, but with a sight that took cognizance only of what was essential to the effect which impressed him. The term *impressioniste*, if it were not just now associated with the record of commonplace impressions, would suit his art as it would that of Constable and some of the best of that of Turner. Though too distinct in personality to be said to be the follower of any particular master, his art is allied to the art of both of these great men. He had much of the robust grasp, the solidity, the richness, and the simplicity of the one, and much of the subtlety, the delicacy, and refinement of the other's earlier work. Such a picture as that called "Between Sun and Moon," which renders so exquisitely the effect of a day dead, but not yet cold, seems to combine something of the manner and the poetry of both these artists.

Nothing is more striking in this exhibition than the range of Lawson's feeling and skill, but on this and other notable characteristics of his work we must delay our remarks till next week.

COSMO MONKHOUSE.

ROYAL SOCIETY OF PAINTERS IN WATER-COLOURS.

THE student of contemporary art, who knows which way it is going, and what it really is, will find, we fear, comparatively little indication of the modern movement in the exhibition which the Royal Society of Painters in Water-Colours opened this week. We have seen many good, and several very indifferent, exhibitions in the gallery of this long-esteemed society, but never, we think, one so distinctly poor as that which is now open. The Royal Society, with its considerable number of members and associates, manages to keep up the quantity of work that is annually shown, but it is only by a too generous self-deception that the public could persuade itself of the invariable excellence of the quality. To be plain, but few of the elder exhibitors do anything to enhance, or even quite to sustain, their reputation this winter; while several of the younger men, from whom we may still expect much, have elected to defer for a while the realisation of the promise they have given. Mr. Parker, Mr. Tom Lloyd, and Mr. Thorne Waite are artists who will yet do excellent work, but, on the whole, they are not represented as they might be in the gallery on the present occasion. Even Mr. Hale, whose work is invariably refined, and sometimes truly subtle and poetical to boot, is hardly what we have hitherto found him. Against this, it must be said that Mr. Arthur Hopkins holds his own fairly; that Mr. Du Maurier, in one agreeable head, shows increased command over the material of his later choice; and that Mr. Herbert Marshall sends a landscape of refinement, power,

and beauty, a worthy rural companion to that famous urban design, "Westminster after a Shower," which was justly applauded about a year ago. Also it must be said that, among the older members, the President, Sir John Gilbert, Mr. Frederick Tayler, Mr. Carl Haag, and Mr. Boyce send excellent work. Nor does this exhaust the list of those whose contributions are welcome. Still, the list would not, if we completed it, be a very long one.

Mr. Frederick Tayler's contributions—several of them at least—are memorable for their well-considered alightness. "Over the Hills and Far Away" and "Taking Home the Kye" are instances of an art that stops almost as soon as it begins, and yet contrives to suggest in a few strokes more than mediocrity can accomplish in a thousand. Mr. Carl Haag and Mr. Boyce prefer to be elaborate, but theirs is not the elaboration of mediocrity. The President affords us the gratification of change from his habitual themes, some of which he has executed with a too dangerous facility, and some with an impressive power. This winter he turns to a pure figure subject—figures in an interior—and, in what is an illustration to *Roderick Random*, affords example of his control over marked and comic character. This is most ingenious, most skilful, and most entertaining work. Mr. Brewtnall—a comparatively young man—who is generally a figure painter, picturesque and dramatic, is this season engaged with landscape. Mr. Radford, a figure painter of the classic or Franco-classic order, exhibits a work which he entitles "Sympathy." The story is not told, but that which is evident is the pleasing union of figures who move in an ideal world, in which the colouring is agreeable, the sentiment luxurious, and in which the drawing might sometimes conceivably be better. To be plain, Mr. Radford is an artist with faults; but he is likewise an artist with qualities. It would be rather hard on Miss Olara Montalba, whose drawings are cropping up in every gallery in London—her Venice and her Thames are always with us—to reproach her for making no novel sensation in the present show. A dainty play of colour, golden and russet and rosy, gives attraction to Mr. Arthur Hopkins's "Apple Loft," in which a young girl, herself coloured like her ripest apples, kneels among the fruit. Mr. Tom Lloyd deals in rustic themes; Mr. Buckman gives picturesqueness and humour to commonplace material, and is to be reckoned, we surmise, among uncompromising realists. Mr. Herbert Marshall's most pleasurable contribution is a vision of Sonning—the little wooden foot-bridge, the still water, the pleasant English land, with garden and gable, and all this overspread by the flames of an evening sky, rose-red and cherry-colour. Mr. S. J. Hodson's "Daydream" is worthy of notice, but for its complete realisation of picturesque interior rather than for any dramatic force, which it fails to display. Indeed, the society is not generally strong in the possession of artists who can be dramatic. Mrs. Allingham's work is dainty and sweet as ever. She, too, is occupied with pretty surfaces and gentle character—hardly with a story. Mr. J. D. Watson can be dramatic; but when he is dramatic he is a little given to be independent of beauty. Now his pencil drawing from life of a reclining figure—an artist's study, and little more—is done in happy surrender of his individuality to the attractiveness of his theme. It is charming, therefore, as well as skilful. Why have we left to the last all mention of a highly vigorous and artistic drawing which the Princess Louise—a member of a family of artists—sends to the exhibition? It witnesses at least to the fact that her work need ask no indulgence. But the society generally must bestir itself, and must endeavour to add new strength to its ancient prestige.

"GRAPHIC" ANIMALS.

It is not easy to take seriously an exhibition like that now to be seen at the Fine Art Society's Gallery in Bond Street. The pictures are all the property of the proprietors of the *Graphic*, the results of commissions given to various artists for works suitable for engraving for that excellent and enterprising periodical. The collection is not large enough to illustrate the present condition of animal painting, nor are the pictures individually of sufficient importance to affect the reputation of any particular artist. If there be anything on trial here it is the ability of the *Graphic* to cater for the public taste, but, as there is no prosecutor, public or private, it is useless to make a speech for the defence. It is an exhibition at which the critic may feel himself relieved from his severer responsibilities, and may enjoy the fun of the fair without feeling that he is neglecting his duties.

If a critic may at any time indulge his personal proclivities, it is at a collection of pictures meant to be popular, and with animals for their subjects. It does not matter how cleverly and soundly they may be painted if they are not easily attractive; and if an animal be drawn or painted badly it will be without attraction for the most uncritical person. In the matter of animals the public who know and love them are good critics. Unless, for instance, Mr. Maxime Olande had drawn his beautiful deerhounds so well, neither public nor critic could admire his "Awaiting Master's Return" (5), in spite of the elegance of the grouping and the clever management of the lamp-light; and not even Mrs. Butler's reputation will gain easy credence for all the legs of all her horses. One of these, in her "Artillery Team in Action" (9), reminds us of the legend of St. Eloy, the blacksmith who cut short the objections of a horse to be shod by taking off his leg. When the shoe was on, he put the leg back again. This leg looks as if it had been put back in the wrong place. The *Graphic* has been more fortunate in the horses of Mr. Detmold (whose capital picture is uncatalogued) and in those of Mr. Caton Woodville (28) and M. de Neuville. "A Wounded Friend" (13) is an admirable example of the latter artist. A trooper is bathing the bloody fetlock of his charger in a pool on the field of battle, and the affection between horse and master is shown without any sentimentality. Indeed, with the exception of Mr. Percy Macquoid's "Empty Chair" (57), there is a healthy absence of false pathos throughout the exhibition.

Of mock and playful pathos there is, however, much, and of good quality. Mr. Briton Rivière sends one of the most tragic scenes in the history of Mother Hubbard (52). The poor dog "who had none" is in this case an Italian greyhound, and Mother Hubbard is a pretty little girl who is gazing with surprise and vexation at the empty shelves. Her arms might be less red and her hands prettier, but the picture is charming as a whole. Its "pendant," by Mr. O. Burton Barber, "The Order of the Bath" (43), is another nice little girl who is washing her terrier in a tub. The pathos here is in the dog, who is undergoing his ablutions under silent protest. They both suggest coloured engravings for next year's "holiday" or Christmas numbers. Between these two hangs another tragicomedy, by Mr. Macbeth, "The Veterinary's Shop" (47), which represents with due solemnity and much art of colour and expression the binding of a lapdog's leg. The patient is held by his beautiful and anxious mistress, and watched by the faithful and sympathising maid. Of other kinds of humour there is plenty. M. Heinrich Zügel's "Envy, Hatred, and Malice" (15) is a capital little canine comedy of the Landseer kind. In "My Lord" (16) M. Adrien Marie gives us a most important-looking monkey, in yellow robe,

seated in state on a grand chair, with a Japanese fan in his hand. Kittens (always humorous) are plentiful. Mr. Frank Paton's (34) is not quite so good as his puppy, though it is better than Mr. Coudery's (30); but the best of all are Mme. Henriette Bonner's, whose "Mischief" (41) and "Happy Family" (54) are *chefs-d'œuvre* of their kind. Very good, also, is Mr. Clough Bromley's black cat, in whom centuries of civilisation have not corrected the cruel and vulgar habit of catching live birds and eating them uncooked. Such a picture as this "Pigeon Fancier" (31) is, however, a rarity here. Most of the creatures are very social animals, given, indeed, like Mr. Otto Weber's badgerhounds (60), to much mischief, or to vulgar curiosity like Mr. Weekes' pig (36), but on the whole well-behaved and pleasant creatures. The visitor will be delighted with Mr. Benno Adam's "Donkey Family" (26), and fall in love with Mr. Burnier's cow (50). Even Mr. J. Deiker's "Young Foxes at Play" (40) are full of good humour, and Mr. Samuel Carter's "Monkeys discussing a 'Darwinian Question'" (39) look more bewildered than cunning. Among the drawings which we hope to see again are several by Mr. Caldecott; and there are also some works which we think we already recognise as old friends. Among the latter are Mr. O. Green's "Talented Troupe" of performing dogs (66) and Mr. Kozakiewicz's "Patient Model" (20).

ITALIAN JOTTINGS.

PROF. E. PAIS, Curator of the Archaeological Museum at Sassari, in Sardinia, having been entrusted by the Reale Accademia dei Lincei with supplement i. to vol. v. of the *Corpus Inscriptionum Latinarum*, has just returned from a tour in North Italy for the inspection of all inscriptions discovered since 1877, the date of issue of that volume.

THE excavations in the Forum Romanum have completely restored the arch of Septimius Severus, the column of Foca, and a cluster of monuments under the Tabularium. The work near Santa Maria Liberatrice is being carried on with energy, and has exposed many buildings underneath the palace of Caligula.

THE Kircherian Museum, in the Collegio Romano, which had long been closed, was reopened in November.

THE excavations in the Corneto-Tarquiniæ cemetery have been resumed at Le Arcatelle, where some archaic tombs were discovered in 1881 of similar type to those on Mount Albano. A further portion of this prehistoric cemetery of Tarquiniæ has now been brought to light.

BENEATH the present palisades of Santa Marta in Venice have been found others of high antiquity, and also some prehistoric relics.

THE inundations at Verona have destroyed nearly the whole collection of prehistoric antiquities gathered during Sig. de Stefani's recent excavations.

A LONG Greek inscription has been discovered at Venice on a marble block built into the church of St. Mark.

NOTES ON ART AND ARCHAEOLOGY.

SIR NOEL PATON, turning aside from the religious and symbolical art which has of late almost wholly occupied him, has just completed a charming fairy picture. It represents the meeting of Puck and the Fairy in the first scene of the second act of the "Midsummer Night's Dream"—the play which furnished the subjects of "The Quarrel" and "The Reconciliation of Oberon and Titania," paintings by which the artist won some of his earliest laurels

more than thirty years ago. The scene of the present picture is a glade in the "wood near Athens," flooded by brilliant moonlight, with the clear gleam of a star seen through the over-arching branches above, and the last radiance of the sunset tingeing the western heavens. On a foreground, rich with moss and herbage and broken boughs, the fairy is standing—her yellow hair streaming down her back, her long, delicate, white wings palpitating against the rosy sky, and her beautiful form swaying gracefully to one side as she bends to lift from the ground, with daintiest touch of finger-tips, the thin green drapery that covers her limbs. Behind, the ruddy brown figure of Puck is darting forward with eager, outspread arms, his roguish, humorous face all alive with the question—"How now, spirit! whither wander you?" Below, on either side, is a quaint little elfin form, one prostrate among the leaves of a dandelion, overthrown by the rapid flight of a stag-beetle, the other cowering close to a fragment of rock, laughing in sheer delight at the fairy apparition. The picture is full of the beauty of line and colour and the rich overflowing fancy which characterise all the artist's renderings of fairy subjects.

MR. ARTHUR LEMON, whose poetical pastorals of Italy have made their mark at the exhibitions of the Royal Academy, is engaged upon a work of sculpture which is likely to advance his reputation. It is a statuette of "Don Quixote," and will probably be finished in time for the May gathering at Burlington House. The refined human feeling and the thorough modelling of animals which have always characterised Mr. Lemon's pictures are good auguries for the success of his present undertaking. His Don is, at all events, sure to be a gentleman, and his Rosinante no caricature.

WE have seen the proof sheets of M. Octave Uzanne's new volume, the companion to his wonderful little book, *L'Eventail*, published by Quantin last Christmas. Again M. Quantin is to be the publisher, and again M. Paul Avril—whose facile and dainty genius *L'Eventail* revealed—furnishes the pictures. *L'Ombrelle*, however—if that is what it is to be called—has not so good a subject as had the earlier work; it has not, on the whole, inspired its illustrator so well; and we doubt whether, save by grace and favour of the earlier book, this will attain the great commercial success of *L'Eventail* and increase in value as pleasantly to the possessor as *L'Eventail* does. The virtues of M. Paul Avril's method of composition and design are seen better in interiors than in scenes of the street, and *L'Eventail* gave more constant opportunities for interiors than does the forthcoming volume. But one or two of the compositions in the new work are equal to any in the book of last year; and the mixed processes of photogravure and colour-printing, employed so delicately and with so high a success in *L'Eventail*, are employed again, and with just as baffling a completeness, so that the way the thing is done is quite a puzzle even to the best experts. Without making invidious distinctions between the two volumes—though we have sufficiently marked our preference—it may be said broadly of both of them that they far surpass anything of the kind which has issued from English presses. Of *L'Eventail*, or of its younger companion, it may fairly be said that, lying in the book-case or on the table for chosen favourites two or three only at a time, it is a "petit bijou," and more, "un petit meuble."

By the new arrangement at the National Portrait Gallery, the portraits from the British Museum and Serjeants' Inn, which formerly were exhibited in a large room alone, are now

incorporated into the general collection in chronological order.

WE have to record the death of Mr. Mungo Burton, A.R.S.A., which occurred at Edinburgh on December 1. Mr. Burton was the oldest associate of the Royal Scottish Academy, having been elected about 1845. He was favourably known as a figure and portrait painter. Among his subject-pictures may be mentioned "Sabbath Morning," "The Widow's Return," "The Shepherd's Tale," and "The Weary Traveller." Among his more striking portraits are those of Dr. Guthrie and the Rev. Dr. John Brown, the father of the author of *Rub and his Friends*. Mr. Burton was much respected by his brother artists for his upright character and kindly disposition.

AN interesting exhibition of water-colours, mainly by Scottish artists, is now being held in the galleries of Messrs. Dott and Son, Edinburgh. Many of the members of the Royal Scottish Academy are represented; and the display includes a few works by Sam Bough and other deceased painters, and several examples of the modern Dutch school. It is intended that this shall be the first of a series of annual water-colour exhibitions.

AMONG the many types of female beauty which look down upon us from the walls of the Royal Academy, we know of none more elevated and pure than those of Mrs. G. Koberwein-Terrel. A beautiful proof which has been sent to us by the Fine Art Society assures us that one of these (and one of the best), thoughtful, refined, and sweet, has at last been worthily engraved by Mr. E. Jossey.

THE Autotype Company have sent us handsomely mounted copies of three works which they have recently published. They are "Sir Galahad," from the picture by Mr. Herbert Schmalz exhibited at the Royal Academy last year; "Behind the Bar," described as a "character picture," by Mr. J. H. Henshall; and one of Mr. Alfred Ward's studies of female heads in red chalk, entitled "Idalia." All exhibit the marvellous excellence of reproduction to which the autotype process has been brought by this enterprising company; but we confess that the second-mentioned picture pleases us neither in its design nor in its execution.

MESSRS. GEORGE FALKNER AND SONS, of Manchester, have brought out a series of Christmas and New Year cards which have several novelties to recommend them. They are printed on rough cardboard, with decorative borders and type that may be called "old style;" they each have a motto from "Patience," taken with Mr. Gilbert's approval. The drawing is much above the average, and we have not often seen better examples of wood-cutting.

AMONG the attractions announced by the publishers of the *Portfolio* for next year are a series of papers by the editor on "Paris," treating of the characteristics of a great modern city and its growth since the Middle Ages; Prof. Sidney Colvin's articles on "Italian Sculptors," before promised; papers by Mr. Walter Armstrong on the "Authorship of Old Pictures;" &c. The illustrations, we observe, are almost all to be etchings, with the exception of a line-engraving by Mr. Saddler after the late Henry Dawson's "Durham," which is promised for the spring. The January number will have Mr. Lumb Stock's engraving of "A Souvenir of Velasquez," already published separately; and an account of the new "Royal Courts of Justice," with illustrations from the designs of the late Mr. Street.

M. DE SABUROFF, the Russian ambassador at Berlin, has long been known to possess an unrivalled collection of objects of Greek art, the authenticity of which is attested by their having all been acquired by himself on the

spot. He has now given his consent to the publication of a work containing reproductions of the choicest specimens of his collection. Among these we may mention archaic sculptures from Sparta, Aegina, and Athens; funerary stelae of the fifth century; an absolutely unique bronze statue of life size and of the best period; and the finest selection of terracotta figures from Tanagra that exists anywhere. The work will be in two volumes, the one containing sculptures and vases, the other terracottas and bronzes. The number of plates will be about 150, some being reproduced by heliogravure, others by chromo-lithography. An example of the latter that we have seen is excellent. The mode of publication is in parts, of which there will be fifteen, each with ten plates. The price of each part will be 25s. The letterpress will be issued in two editions, German and French. The publishers are Messrs. Asher, of Berlin and London, who hope to have the first part ready by Christmas; the rest will be published at intervals of two or three months.

AN Ecole de Louvre has now been established at Paris, after the model of the Ecole des Chartes, the Ecole des Langues orientales vivantes, &c. The professors appointed include M. Ravaisson, for classical art; MM. Pierret and Révillout, for Egyptian; M. Ledrain, for Semitic; and M. Bertrand, for Gaulish. The courses of lectures opened this week.

ROUEN seems to be the place for artists who wish to sell their pictures. No fewer than fifty-seven works have been bought by the municipality, the artistic societies, and a few rich amateurs of the city, from the exhibition that is now closed. Many more may have been bought by visitors; but it is creditable to Rouen that her citizens should display such generous feeling towards art.

M. LAUNETTE is publishing, in eight monthly parts, at the subscription price of 240 frs., a great art-work to which every member of the Société d'Aquarellistes français is a contributor. The text is written by (among others) MM. Ph. Burty, H. de Chennevières, Jules Claretie, René Ménard, Octulle Mendès, and Charles Yriarte.

AN instructive account of the modern Danish school of painting is contributed to the *Zeitschrift für bildende Kunst* this month by Sigurd Müller. We know next to nothing of this school in England; and even in Germany it has been felt to be too narrow and national to find favour. Within its own limits, however, Danish painting is forcible and expressive, and not without beauty to those who can get over its hardness and crudity of colour. Carl Bloch is the artist especially noticed by S. Müller, and two remarkable etchings are given in illustration of his work. The other articles of the number deal with Jan Schoreel, whose fame Dr. von Wurzbach desires to re-establish; and the painters and sculptors of the school of Kalkar, who are enumerated by L. Scheibler.

THE artists of Berlin are making grand preparations for the celebration of the silver wedding of the Crown Prince and Princess on January 25 of next year. Among other exhibitions will be a loan collection of the works of Old Masters similar to those we have so long delighted in at Burlington House. This is the first time anything of the kind has been attempted at Berlin. One-half of the pictures will be contributed from the royal castles.

MUSIC.

RECENT CONCERTS.

THE Cambridge University Musical Society gave an orchestral concert in the Guildhall, Cambridge, last Saturday evening, December 2. The programme commenced with Handel's

fine concerto in G minor for stringed instruments; and excellently well was it played. Selections from Palestrina's "Missa Papae Marcelli," followed by J. S. Bach's Church cantata, "Halt im Gedächtnisse," and this in its turn by C. P. E. Bach's symphony in D, gave to the concert somewhat of an historical character. Strangely did the fugued and complex movements of Bach sound after the simple and vocal strains of the great reformer of Church music; while the symphony spoke indeed of a new order of things. The performance of the Palestrina Mass by the Bach Society at the beginning of this year has called the attention of other choral societies to a work which may not altogether suit modern ears, but which is highly interesting as a specimen of sixteenth-century music, and as a composition which was considered "the archetype of ecclesiastical song." The selection at Cambridge included the Kyrie, the Gloria, and the Credo; the solo vocalists were Miss Amy Aylward, Mrs. Dunn, Mr. W. A. J. Ford, and Mr. Herbert Thorndike. Bach's cantata was performed for the first time in England. Some of the music is very fine, but we are not disposed to consider it one of his best efforts. The aria, "Peace be unto you," was used by Bach for the Gloria of his short Mass in A major. The first part of the latter contains new voice parts without any change whatever in the orchestral accompaniments. The solos were taken by Mrs. Dunn and Mr. Ford. The opening chorus and the two chorales were effectively rendered, although at times the voices were overpowered by the organ. The symphony in D by C. P. E. Bach was admirably played. It consists of an *allegro* movement, a very short *largo*, and a *presto*. The *allegro* is of great interest to those who wish to study the transition period between J. S. Bach and Haydn. The themes are of marked character and well contrasted; the second is allotted to the wind instruments. The form of the whole movement is remarkably clear; while the general vigour and boldness of style cannot fail to strike the attentive listener. The *presto* is full of spirit. Beethoven's "Ah! perfido" was sung by Miss Aylward. The programme concluded with a hymn, "Awake, my heart," for baritone solo (Mr. Thorndike) and chorus, by Mr. O. V. Stanford. The poem is a translation from Klopstock by Mr. H. F. Wilson. The music is bright and tuneful, and skillfully written for the voices, but it is a work of comparatively small compass and not of marked individuality. The choir naturally tried, and successfully, to do justice to the hymn; and the solo part was well rendered by Mr. Thorndike. Mr. O. V. Stanford conducted the whole of the concert with his usual ability.

Herr Joachim has come to England this season somewhat earlier than usual. He made his *rentrée* at the Popular Concerts last Monday, and all who listened to him will doubtless be of our opinion—that the great violinist plays as well as ever. The programme contained three noble works with which Herr Joachim's name has often been associated—Beethoven's Rasonoffsky's quartett in C major (op. 59, No. 3), Mendelssohn's octett, and Bach's concerto in A minor with double quartett accompaniment. A mere record of the performances is all that we need give; such magnificent *ensemble* playing as that of Messrs. Joachim, Ries, Pollitzer, Wiener, Zerbini, Straus, Zerbini, jun., Pezze, Reynolds, and Piatti can be listened to, and enjoyed, better than described. Miss Dora Schirmacher was the pianist, and gave an effective rendering of Mendelssohn's difficult *scherzo à capriccio* in F sharp minor. She has a very good touch, and plays with feeling, intelligence, and vigour. The inevitable *encore* came—a *gigue* of Handel. Miss Carlotta Elliot was heard to advantage in songs by Handel, Kjerulf, and Taubert.

J. S. SHEDLOCK.

CHRISTMAS GIFT-BOOKS

PUBLISHED BY

CROSBY LOCKWOOD & CO.

MRS. MACKARNES' CHRISTMAS STORIES.

A TRAP TO CATCH A SUNBEAM, and other Stories. By Mrs. MACKARNES. A New Edition, Illustrated. Contents:—A Trap to Catch a Sunbeam—Old Jollies—The Bequest to Old Jollies—The Star in the Desert—Only—A Merry Christmas. 3s. 6d., in a new cloth binding. "Few writers since Miss Edgeworth have been so successful as Mrs. Mackarnes in pointing out the value of domestic virtues." *Athenaeum*.

THE CLOUD with the SILVER LINING, and other Stories. By Mrs. MACKARNES. A New Edition, Illustrated. Contents:—The Cloud with the Silver Lining—Amy's Kitchen—Coming Home—The House on the Rock. 3s. 6d., in a new cloth binding.

THE DREAM CHINTZ: a Tale.—SIBBERT'S WOLD; or, Cross Purposes: a Tale. By Mrs. MACKARNES. A New Edition, Illustrated. 3s. 6d., in a new cloth binding.

MINNIE'S LOVE: a Tale—MARRIED and SETTLED: a Tale. By Mrs. MACKARNES. A New Edition, Illustrated. 3s. 6d., in a new cloth binding.

A TRAP TO CATCH A SUNBEAM is sold separately, price 1s., in a new and appropriate cloth binding.

THE BOYS OWN BOOK: a Complete Encyclopedia of Sports and Pastimes, Athletic, Scientific, and Recreative, of Boyhood and Youth. Revised and greatly enlarged. Pp. 724 with upwards of 600 Illustrations. 3s. 6d., cloth. "The Boy's Own Book" is still the book which English lads take most delight in. *Chiefs Service Gazette*. "Mr. Lockwood's 'Boy's Own Book' is the real original work which we knew in days long gone by, but in a new and much enlarged form. To name it is to praise it."—*Saturday Review*.

MERRY TALES FOR LITTLE FOLK. Edited by Madame DE CHATELAIN. Containing Forty of the old favourites, such as Jack the Giant Killer, Jack and the Beanstalk, Red Riding Hood, &c. With 200 Pictures. 3s. 6d. "A charmingly illustrated volume, which ought to be placed in every nursery."—*Aunt Judy's Magazine*.

THINGS NOT GENERALLY KNOWN. By JOHN TIMES, F.R.A. A Repository of Ancient and Modern Domestic Manners, Laws, and Customs. Old English Pastimes, Ceremonies, &c. Popular Errors, Notable Events, Curiosities of History and Science. 6s. New Edition. In 6 double vols., or 12 single vols., handsomely bound, 3s. 6d. or separately, at 2s. 6d. or 2s. per vol. (Detailed lists post-free on application). "The celebrated work of the indefatigable Mr. Timbs." *Saturday Review*.

THE MUSEUM OF SCIENCE AND ART. Edited by Dr. LARDNER. With upwards of 1,200 Woodcuts. In 6 double vols., £1 1s., cloth; or £1 1s. 6d., bound in half-morocco. "The most valuable contribution that has ever been made to the scientific instruction of every class of society."—*North British Review*.

London: CROSBY LOCKWOOD & Co., 7, Stationers' Hall-court, E.C.

Handsomely bound, price £1 1s. 6d., or gilt edges, £1 1s. **THE ART JOURNAL, 1882.**—The Yearly Volume of the ART JOURNAL is now Published, and may be had from all Booksellers.

The Volume has many new features, and specially recommends itself as a Handsome Christmas Gift-Book. It contains a splendid series of TWELVE ETCHINGS by the best-known Artists of the time. Among them may be mentioned J. A. McWhorter, J. McWhorter, A.R.A., Leopold Flanagan, Charles O. Murray, W. B. Hole, A.R.S.A., Fred. Slocombe, A. Brunet-Dubouché, and Arthur Severn.

TWELVE LINE ENGRAVINGS from the Works of J. E. Millais, R.A., C. E. Perugini, Ernest Croft, A.R.A., J. B. Burgess, A.R.A., W. W. Topham, C. Gregory, E. F. Schopin, J. P. F. Tassie, and J. H. H. H. H.

FACSIMILES from unpublished Drawings by Hubert Herkomer, A.R.A., Leonardo da Vinci, W. L. Wyllie, Michael Angelo, C. N. Henry, and Mantegna. There are also Full-Page Engravings, after works in Sculpture by J. E. Boehm, R.A., Lord Ronald Gower, and C. B. Birch, A.R.A. It is lavishly illustrated with very fine Wood-Engravings. It contains Literary Articles by G. A. H. H. H. W. Allingham, Prof. Sidney Colvin, J. M. Gray, Hubert Herkomer, A.R.A., Mrs. Alfred Hunt, G. D. Leslie, R.A., G. B. Redgrave, William Sharp, F. G. Stephens, Miss Thackeray, Henry Wallis, Frederick Wedmore, and others.

London: "ART JOURNAL" Office, 25, Try-lane, Paternoster-row, E.C.

MATTHEW PARIS'S ENGLISH CHRONICLE. In royal 8vo, pp. 564, with Two Illuminated Facsimile Pages, price 18s. half-bound.

MATTHAEI PARISIENSIS, MONACHI SANCY ALBANI, CHRONICA MAJORA, Vol. VI., "Additiones," edited by H. E. Luard, D.D., and published by the Authority of the Lords Commissioners of H.M. Treasury, under the Direction of the Master of the Rolls.

The contents of the present volume, which forms a kind of Appendix to the Chronicle of MATTHEW PARIS, are entirely derived from the Cotton MS. Nero D.I., which was written at St. Albans, the greater portion under PARIS's direction, with corrections by his hand. These documents, which are very numerous, consist principally of writs, charters, decretals, letters, and memoranda, ranging from A.D. 783 to A.D. 1284; with four editorial appendices. The set will be completed in one more volume (Vol. VII.), which will contain the final preface or historical Introduction, Index, and glossary.

London: LONGMANS & Co. and TRUBNER & Co. Oxford: PARKER & Co. Cambridge: MACMILLAN & Co. Edinburgh: A. & C. BLACK and DOUGLAS & FOUTLEY. Dublin: A. TROSBY & Co.

Just published, 8vo, cloth, price 12s.

THE EVOLUTION OF CHRISTIANITY.

The design of this work is to demonstrate the merely human origin of Judaism and Christianity. The history, morality, and religion of the Ancient Hebrews, in relation to the Christian era. The Career of the Son of Man, in absolute independence of the Supernatural. The legends of the Resurrection, and the Evolution of the Divinity of Jesus, and of the Trinitarian dogma.

WILLIAMS & NORGATE, 14, Henrietta-street, Covent-garden, London; and 30, South Frederick-street, Edinburgh.

SATURDAY, DECEMBER 16, 1882.

No. 554, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

"ENGLISH MEN OF LETTERS."

Macaulay. By J. Cotter Morison. (Macmillan.)

A CRITICAL estimate of Macaulay's contribution to historical literature was much needed till Mr. Morison appeared to supply the want. Valuable as Mr. Trevelyan's biography is in all that relates to his uncle's private life, he was restrained by reverential piety—perhaps, also, by a too great similarity of literary taste—from attempting to settle Macaulay's place among historians. Later criticism has not been very favourable, Prof. Seeley, especially, having lost no opportunity of pronouncing Macaulay a mere literary artist who had wandered from the true path of historical orthodoxy.

Of Mr. Morison's work it is difficult to speak too highly. The mere reading of it is a pleasure of that kind which results from the instinctive knowledge which the intelligent reader gains of the pains taken to produce the easily flowing pages. What is of far greater importance is that the author establishes his reputation for fair-mindedness at the outset. He has hard things to say about Macaulay in the end; but it is evident that he would not say them if his love of truth would allow him to take a more favourable view. His opinion of Macaulay as an orator and a practical politician is the highest possible; and he even goes so far as to suggest that, if circumstances had allowed him to confine his attention to politics, he might very likely have risen to the Premiership itself.

Of Macaulay's literary style Mr. Morison has necessarily much to say. Without being blind to its obvious faults, he points out that to some extent those faults may be accounted for by a not unnatural tendency to transfer the diction of oratory to that of literary composition; and he dwells with sufficient, but not too strong, emphasis on the architectonic character of his narrative. "Anyone," he says (p. 146),

"who knows by experience how difficult it is to conduct a wide complex narrative with perspicuity and ease, and then observes the success with which Macaulay has conquered the difficulty, will be apt to fall into a mute admiration almost too deep for praise. . . . Each side of the story is brought forward in its proper time and place, and leaves the stage when it has served its purpose—that of advancing by one step the main action. Each of these subordinate stories, marked by exquisite finish, leads up to a minor crisis or turn in events, when it joins the chief narrative with a certain éclat and surprise. The interweaving of these

well-nigh endless threads, the clearness with which each is kept visible and distinct, and yet is made to contribute its peculiar effect and colour to the whole texture, constitute one of the great feats in literature."

There is much more to the same effect. Even when Mr. Morison comes to deal with the historical worth of the author whom he is criticising, he is never easy unless he can give the best interpretation possible to his faults. When he shows how inaccurate Macaulay was, he is careful to add (p. 162) that

"his inaccuracy arose from hearty dislike for men of whom he honestly thought ill. Of conscious duplicity and untruth, no one who knows him can conceive him guilty."

Where Mr. Morison's condemnation is most decisive is in his enquiry how far Macaulay was an historian in the sense in which the word is understood by thoughtful persons at the present day. He shows that Macaulay's weakness arose from his want of speculative power and from his ignorance of the true object of history. "What," asks Mr. Morison (p. 170),

"is the historical point of view? Is it not this—to examine the growth of society in bygone times with a single eye for the stages of the process; to observe the evolution of one stage out of another previous stage; to watch the past as far as our means allow, as we watch any other natural phenomena, with the sole object of recording them accurately? . . . Now what does Macaulay do in his observation of the past? He compares it, to its disparagement, with the present. The whole of his famous third chapter, on the state of England, is one long paean over the superiority of the nineteenth century—as if an historian had the slightest concern with that."

What more Mr. Morison has to say on this head must be sought by his readers for themselves. Into the further question as to how far history ought to be made interesting he hardly enters. No doubt the scientific results of history are the most valuable; but, after all, the historian of the past, like the statesman of the present, has to deal with a society which is composed of living individual units, and he will fail in conveying all the lessons of which his art is capable if he reduces his teaching to a series of scientific propositions. After all, the greatest writer is the one who can most fully embody its meaning in the narrative itself. Was any prose work on the causes of the fall of kings ever more suggestive than Shakspeare's play of "Richard II."? But then Shakspeare's teaching is for those who know how to seek it with toil; whereas it is the business of the ordinary historian to be understood of all men, so that he may still have to pause from time to time to explain the meaning of his narrative.

While all that Mr. Morison has to say about Macaulay's History is admirable, it may be doubted whether his dissatisfaction with the work has not prevented him from being, in the latter part of his book, quite fair to Macaulay himself. He quotes (p. 162) Macaulay's words in a letter to a friend, to the effect that he would not be satisfied unless he could "produce something which shall for a few days supersede the last fashionable novel on the tables of young ladies," as if this were indisputable evidence that

"the chief object which the writer had in view" was to have "young ladies for readers laying down the novel of the season to take up his *History of England*." Surely this is not fair treatment. Macaulay, writing a letter, was likely to dwell on that in which he believed himself certain to excel all previous writers. He was not likely to dwell on that which he had in common with them, even though he himself might believe it to be the most important part of his task. The probability that this was the case would seem to be ignored by Mr. Morison, because he has fallen into the very error which he condemns in Macaulay. He compares Macaulay in his neglect of scientific history not with the actual historians who were his contemporaries, but with the ideal historian who is present to the minds of thinkers of to-day. Macaulay's extreme respect for industrial progress, for instance, will be found full-blown in Knight's *Popular History of England*, and may fairly be regarded as the common property of the generation which had succeeded to that which produced Brindley and Watt, and which itself produced George Stephenson. In his entire disregard of the scientific basis of history and the genesis of ideas, he was equalled by John Forster; while even the great work of Hallam continually deals with ideas in an unhistorical way. The famous argument, for instance, on the merits of the two parties in the Civil War, which is so often quoted as decisive of the whole question, starts by demanding the concession of two postulates, one of which is "that the mixed government of England by king, lords, and commons was to be maintained in preference to any other form of polity." No serious historian would now approach the subject in this fashion. But it would have been worth Mr. Morison's while to notice that in Macaulay's essay on Hallam he fairly meets that writer on this question; and, starting from the same general conception of government, he clearly gets the better of him, because he realises what Hallam, amid his abstractions, did not realise—the extreme importance of the danger of leaving the king possessed of power which would have enabled him to bring to England the army needed to crush the Irish rebellion.

Macaulay had probably more power of generalisation than Mr. Morison attributes to him, though it did not go very far; and he preferred to exhibit it through his narrative rather than to lay it didactically before the reader. He believed in the triumph of common-sense and in the sufficiency of political and individual liberty to save a nation out of all difficulties; and, though this is a very incomplete doctrine, it can hardly be denied that his History teaches it in the most impressive way.

From these high matters it may seem to be a sudden descent to point out to Mr. Morison a misprint by which, at p. 51, he converts Otfried Müller into two men, and another by which, at p. 181, he makes Macaulay to have been fifty years of age in 1859, instead of in 1850. It may also be suggested that in his next edition he should omit at p. 33 his appeal to the shade of Mr. Ruskin against Macaulay's statement that he did not find "much to admire in the architecture within" the church of Santa Croce at

Florence. Happily it is impossible to know what Mr. Ruskin's shade might have to say about the matter; but what Mr. Ruskin in the flesh thinks about it is just what Macaulay thought: "You will return home," he writes (*Mornings in Florence*, p. 11),

"with a general impression that Santa Croce is, somehow, the ugliest Gothic church you ever were in. Well—that is really so; and now will you take the pains to see why?"

No doubt the church contains priceless frescoes by Giotto; but were they not still covered with whitewash when Macaulay visited Florence? SAMUEL R. GARDINER.

Select Letters of Percy Bysshe Shelley.

Edited, with an Introduction, by Richard Garnett. "Parchment Library." (Kegan Paul, Trench & Co.)

MR. GARNETT'S Introduction to this volume is a piece of carefully considered, just, delicate, and firmly expressed criticism, in every way worthy of the classic form of the "Parchment Library." Naturally he addresses himself first to the task of justifying the inclusion of a volume of letters in this series. Have they the requisite perfection of form? How do they compare in this respect with the letters of the great letter-writers of the eighteenth century—Pope, Gray, Cowper, and Walpole? It is entirely in point of form that Mr. Garnett institutes the comparison; and, if we understand this, we can hardly dissent from his conclusion that Shelley's letters were deliberate literary compositions, as the letters of Pope and Gray were, and as the letters of Byron and Scott were not. Byron and Scott, in their letter-writing, threw off the restraint of literary form; their letters are the frank, free, unconsidered transcript of passing moods and opinions, flowing from the pen as loosely as the utterances of familiar talk. Now, most of the letters in this volume, and notably those describing Italian scenery, art, and antiquities, have an exquisite literary finish, and in this respect an affinity with the studied epistles of the eighteenth century. But if we do not confine the comparison to this point it might easily become misleading. Shelley's letters, though they are deliberate compositions, are quite as frank and unaffected as Byron's, perhaps more so, for the man himself was more candid and outspoken. The paradox is resolved as soon as we recognise Shelley's character. He was too absorbed and earnest an artist in words to be capable of writing without taking pains about the form of his language. We may call him a limited human being for this, if we like; we may complain of Shelley as falling short of our ideal of the *homo teres atque rotundus*, if we think that no man is worthy of our admiration who does not come up to that ideal; we may call his letters stilted, as letters, if our ideal of a letter is that it should be irregular, discursive, episodic, and spontaneous as unconstrained conversation. But the literary finish of Shelley's letters is no mark of reserve or affectation; it is only an index of the seriousness of the man's devotion to artistic form in language. It would have been an affectation for him to try to write otherwise than with care, although his faculties of imagination and expression were of

unsurpassed luxuriance. A certain stateliness of expression was not, as it were, a garment that he could put off and on at will. But a habitual striving after perfection in literary form is not inconsistent with candid unreserved communication. If the first requisite of letters, as enjoyable reading, is that they reveal the man, bringing us as near to him as we can be brought without personal intercourse, Shelley's letters undoubtedly possess that requisite. "The truest charm of the letters," Mr. Garnett justly says,

"is, after all, rather moral than literary. It is not so much the eloquence of the diction as the genuineness of the informing enthusiasm, the effusiveness of an opulent soul delighting in giving, and eager to impart the pleasure it has received."

Italy was a mine of thought and feeling to Shelley, and he poured out his thoughts and feelings without reserve. If there is little in his letters about personal and domestic concerns, it was because these formed an unusually insignificant portion of his actual life. The letters are a complete mirror of that life. They do not bring with them to the readers of his poetry a feeling of surprise such as we experience when we first read the letters of Gray or Byron, if we have in our minds an ideal author of the *Odes* or of *Childe Harold*—of a character befitting these compositions. The real Gray was not in the least like his Bard, and the real Byron had many moods which we should not expect to find in his *Childe*. There is thus all the charm of surprise in our first introduction to the real men as they appear in their familiar letters. But there is no such contrast between Shelley the poet and Shelley the man. We get from the letters an insight into the man such as we could not get from his poems alone; but there is no revelation of incongruity. There is no shock to preconceived ideas, if our preconceived idea has really been formed from the poems, and is not merely a vulgar prejudice against the abstract Revolutionary and Atheist. Shelley's attitude, both in politics and in religion, is clearer in his letters than in his poems, because it is expressed in plain prose form. To understand it we must remember what the Church was, and how government was conducted in his time. When he penned his most violent denunciations of established religions and established Governments, he had in his eye flagrant abuses in Church and State to which his quick sympathies and ardent zeal for humanity made him peculiarly sensitive. Shelley's whole being rose in passionate protest against injustice, and at the beginning of this century crushing combinations of bigotry and tyranny were not fictions of the overheated imagination. Poet as he was, he did not live so completely in a world of imagination as to be blind to the truth of what passed before his eyes; his perceptions were as acute as his imagination was active. His youthful enthusiasm carried him into hopeless and impracticable schemes for the regeneration of the world, but he quickly saw his error, recognised the measure of his own powers, and threw himself into courses of activity more likely to be profitable. In these letters we see him writing about public affairs as no sensible politician need have been

ashamed to write. He doubted the stability of our public credit and of our national Church, because the ruling classes in Church and State showed no sign of making and concession to common-sense popular demands. What man, with any reputation for common-sense, will venture in these days to say that, if the ruling classes had persisted in their infatuation, the visionary impractical poet's doubts would not have been justified by events? It would be rash, perhaps, to claim common-sense as one of Shelley's gifts, but he had a large share of that uncommon sense which pierces through conventional views and sees things in their true relations. He had, at least, sense enough to see, after his boyish campaign in Ireland, that he was not fitted for rough political strife; and he set himself to elevate mankind through those gifts of imaginative creation which the commonest of common-sense must acknowledge that he possessed. Casual expressions in his letters show how pertinaciously he kept this humanitarian purpose before him even in the most superficially fantastic of his productions. The passionate zeal for human welfare which was his religion suffered no diminution, though it found vent in a different channel. In his new hopes of being beneficial to mankind he was again too sanguine, so far at least as immediate effect upon the multitude was concerned. This also he was quick to see; and there are many traces in his letters of the sadness that it cast upon the last years of his short life. "I write little now," he wrote a few weeks before his death. "It is impossible to compose except under the strong excitement of an assurance of finding sympathy in what you write." At another time we find him admitting that if he continued to write he was in danger of writing for personal fame, and resolving, therefore, to give up writing altogether. There was no affectation in this; we cannot read Shelley's letters without being convinced of his transparent sincerity. He was, in the best sense of the words, a simple, high-minded English gentleman.

It ought to be added, in any review of this edition of Shelley's letters, that the editor has not been content with merely reprinting from previous editions. He has made, as will be seen from a comparison of texts, additions from the MSS., as well as omissions in conformity with his special purpose; and a few of the letters are now printed for the first time. When the time comes for a complete biography of Shelley, it is to be hoped that Mr. Garnett will be the biographer.

WILLIAM MINTO.

Max Duncker's History of Antiquity. Translated by E. Abbott. Vol. VI. (Bentley.)

TRANSLATOR and publisher are alike to be congratulated on the completion of this standard work on ancient history, the last volume of which has just appeared. There is no need of describing the fullness of detail by which it is characterised, or the interesting style in which it has been written. Those of the public who care to know what was the origin of European culture and civilisation, or what has produced the Oriental world of today, are already well acquainted with the

merits of Prof. Max Duncker's book. The translator has done full justice to both author and subject; the English is thoroughly idiomatic, and reproduces all the charms of the author's style.

Duncker is learned as an historian should be; but his learning is not confined to the old classical sources of information which alone were open to the writers of the last century. He has made full use of those marvellous discoveries in Egypt, in Assyria, in Babylonia, and in other parts of the East which have swept away the fables of Greek and Latin compilers, and brought us face to face with the every-day life and history of the ancient Oriental world. He has gone to the latest and best authorities, venturing to differ from their inferences and conclusions only where these seemed to him to conflict with the principles of historical criticism.

But the progress of discovery has been so rapid, more especially in Assyria and Babylonia, that even Prof. Duncker has been unable to keep pace with it. The sixth volume of the English translation of his work has been out but a few days; yet already, since it has been published, Mr. Pinches has announced the discovery of a cylinder of Nabonidos which gives a contemporary account of the conquest of Astyages by Kyros. The important inscriptions of Kyros himself have been made known too late for Prof. Duncker to profit by them; he alludes in a foot-note, indeed, to the first discovered of these, the cylinder inscription of Kyros, but it is only to say that he has been unable to learn anything about it. Had he been acquainted with these inscriptions he would probably have modified a good deal of what he has written in the volume now before us, which deals with the rise of the empire of Kyros and the consolidation of the Persian power by Darius Hystaspis. Readers of the *ACADEMY* already know what inferences I believe must be drawn from the newly found texts (*ACADEMY*, October 16, 1880); and M. Halévy has independently arrived at the same results. Kyros and Kambyzes were neither Persians nor Zoroastrians; Kyros calls himself and his predecessors kings of Elam, and both in Babylonia and in Egypt he and his son acted as polytheists. These conclusions, it is true, have been disputed with great ability by M. de Harlez; and those who are interested in the present state of the discussion should consult the current number of the *Muséon* to learn how it now stands. For myself, however, I must confess that I am in no way convinced by M. de Harlez's arguments. But, whatever may be the ultimate opinion held by historians as to the relation of Kyros to the Persians, the story of the siege of Babylon by Kyros, so elaborately recounted by Herodotos, must be definitely consigned to the region of exploded myths. We now know from contemporaneous documents that Kyros did not invade Babylonia from the east, but from the south, as, indeed, is stated by Isaiah (xxi. 2); that there was no siege of Babylon; and that Nabonidos, the last Babylonian king, died within a few weeks after his surrender to the Susianian conqueror. The siege of Babylon by Darius has been transferred to the age of Kyros by Herodotos and his imitators, and the storming of the Baby-

lonian camp at Sippara by Gobryas has been mixed up with the story.

But though the new sources of information derived from Babylonia have come too late for Prof. Duncker to make use of them, he has been able to utilise fully the facts furnished by the Egyptian monuments in regard to the conduct of Kambyzes. The character of Kambyzes has been cleared from the aspersions of the half-caste *ciceroni* from whom Herodotos borrowed the details of the so-called Persian invasion of Egypt. Kambyzes, we now know, pursued the same conciliatory policy towards the Egyptians as his father had done towards the Babylonians; he restored the lands that had been taken from the priests; he was initiated into their ceremonies; and the very bull Apis, which Greek legend declared he had killed, was buried at his expense with the usual honours, a portrait of Kambyzes himself, under his Egyptian title, and kneeling in humble adoration before the god, being carved upon the sepulchral column. As Prof. Duncker points out, the Ethiopian expedition, which according to Herodotos was so miserable a failure, really resulted in the establishment of the power of Kambyzes far beyond the most southern point to which the Assyrians had ever penetrated.

I am glad to find that Prof. Duncker's estimate of Ktésias is a favourable one. In spite of the meagre and often contradictory excerpts which alone we possess of his works, it is becoming more and more clear that he honestly copied those Persian parchments to which he claimed to have had access. His authorities, it is true, were not more trustworthy than the official histories of modern Persia would be, and some of them resembled the epical Shah-nameh of Firdusi; but they were at least more valuable than Greek legends or the tales of ignorant dragomen. A critical examination of Ktésias in the light of recent discoveries is much needed, and will go far towards reversing the unfavorable judgment it has of late been the fashion to pass upon him.

In one point, however, I am unable to follow Prof. Duncker. No doubt Persian and Median poems largely took the place of the history which we are slowly recovering from the cuneiform records; no doubt, also, as the opening chapters of Herodotos show, the historian of Halikarnassos made use of Greek works which embodied them; but I cannot think that they occupied so large a place in his history as Prof. Duncker believes. The fables told about Kambyzes in Egypt, for instance, seem to me as much the creation of the inventive Greek mind as the legend of the death of Kyros or the folk-tales which are substituted for earlier Egyptian history. Oriental poems may have formed the substructure of them, but, if so, they have been quite smothered under their Greek dress. On the other hand, it was unquestionably popular Persian tradition that first claimed Kyros as a national hero and transferred the foundation of the Persian empire from Darius to him. The military adventurer of Susiana was a far more brilliant and striking figure than the somewhat prosaic organiser and legislator, the son of Hystaspes. Hence it was forgotten that even the military

achievements of Darius were greater than those of Kyros; and the siege of Babylon itself, which displayed in Darius military talents of no usual order, was most unjustly ascribed to his predecessor.

By way of concluding, I would point out one or two misprints, as the publishers desire. "Kurus" should be "Kuras," p. 89; "for" is printed for "from," p. 92; "Cyreshata" for "Cyreschata," p. 103; "grandson" for "descendant," p. 128; "Hymn." for "Hdt.," pp. 161, 162; "Fayum" for "the Fayum," p. 165; "Phoenicians" for "Phoenicia," p. 167; "series" for "version," p. 192; and "sign" for "signal," p. 226.

A. H. SAYCE.

Court Life Below Stairs; or, London under the First Georges, 1714-60. By J. Fitzgerald Molloy. In 2 vols. (Hurst & Blackett.)

WHATEVER faults may be laid at the door of Mr. Fitzgerald Molloy's volumes, they certainly cannot, with any show of justice, be accused of dullness. With them in his hands, no one need despair of amusement for an hour or two. These sketches of Court life may be lacking in refinement of touch, the satire may be deficient in polish; but there is, at all events, no lack of rollicking vivacity to carry the reader along, interested in the narrative, if not edified. Into the accuracy of the names which he meets with as he passes from chapter to chapter he must not examine too closely. Should he begin to be critical, he will complain that the title itself is a misnomer. George Selwyn defined the manners of the Court—the epigram is quoted by Mr. Molloy himself—as "low life above stairs," and that expression would have formed a precise definition of the anecdotes on royalty and nobility which are retailed in these volumes. "Court Life Below Stairs" must certainly be an error, for at least three persons out of every four mentioned by Mr. Molloy are members of the upper ten thousand, and the scenes of his narrative are laid in the drawing-rooms and the "gilded saloons" of the peerage. A picture of "London under the First Georges" these volumes undoubtedly do not supply. There are but two chapters which make any attempt to deal with its life outside the precincts of the Court; and these contain nothing but slight and superficial sketches of the fashionable fribbles of the period, and of the poets and politicians who frequented such coffee-houses as Wills' and Button's. If the author replies that his sole object was to supply the casual reader with amusement, we will gladly acknowledge that he has accomplished the task which he set before himself. The memoirs of the time supply a thousand and one stories on the follies of the rulers of England, and these are duly gathered into Mr. Molloy's garner. If you open his pages he will introduce you to the choicest anecdotes in the letters of Horace Walpole, the memoirs of Lord Hervey, or the diary of Lady Cowper. These are old favourites, and have long been the recognised property of the world at large; but from the private correspondence of the Wentworth family, now happily preserved among the MSS. of the British Museum, there are printed numerous extracts which

will probably come upon most readers with a delicious feeling of novelty. Though Mr. Molloy has not been alone in recognising the value of these letters, they are, for the first time, brought by him before the notice of the general public; and his quotations cannot fail to awaken a genuine interest in the more detailed selections which have been published since these lines were written.

The authorities for the statements mentioned in these volumes are only supplied in a few instances, and a passage in the Preface asserts that this reticence is caused by a wish to spare the reader "the ungrateful task of conning notes and references." The expression is not happy, for no one is compelled against his inclination to peruse notes or references, or to consult original sources of information, while the neglect to furnish the names of authors must hinder any new work from being quoted as history. We regret the omission all the more because the manner in which Mr. Molloy has dealt with the names of some of the characters of the time does not inspire us with confidence in the correctness of the remainder of his statements. "Denis" is not the name of the well-known critic, and "Wilkes" is not the authorised spelling of the patentee of the Royal Company of Comedians. Pope's friend and publisher is erroneously called Linton on two occasions, and the name of the discoverer of the talents of Mrs. Oldfield was not George Farren. It is not correct to say that Swift aided in founding the October Club, or that Pope styled Lord Hervey "a mere cheese curd." Mallett and Lagonier are misprints which are not creditable to the author's penetration, and "one master Rigby" is a curious title for one of the best known politicians of the last century. There are other assertions which have filled us with amazement. Mrs. Howard, the friend of George II., is designated as "one of the most commonplace women." Yet, in the course of a few pages, the epithets clever and sagacious, courteous, discreet, generous, intelligent, and sprightly are applied to her qualities, and her face is said to have been remarkable for characteristics "which almost gave her a claim to beauty," while her figure is called shapely. Pope's heart was "never given to tenderness," we are told; but there is abundant evidence in his poems that, if he could hate with exceeding bitterness, he could love as well. Witness the lines to his mother, and the suppressed passage in which, while alluding to Lady Mary Wortley Montagu, he compared himself to "the struck deer" in a sequestered glade with "the arrow at his heart."

We will not quarrel with Mr. Molloy for choosing to paint only the dark side of life at the Courts of the first two Georges. This is the part which stands out most prominently before the eyes of the spectator, and the artist who desires to add another picture to the large collection which has been already formed need only borrow the colouring and re-arrange the figures of his predecessors. Even at the royal palaces, in the days of the kings of England who were not English, virtue was not altogether banished from daily life, and vice did not always flaunt in high places. If the rage for publishing books

which are confined to a description of the follies and crimes of that time should continue unabated, it will be necessary for someone to point out that in London, as well as in the country, purity of domestic life still flourished in many houses. In justice to our ancestors, such a work may become a duty for some student of the past. Such, however, is not the object of Mr. Molloy. His sole desire seems to have been to present to the public a readable description of Court life in its grosser aspects, and in that he has succeeded.

W. P. COURTNEY.

Paris in Peril. Edited by Henry Vizetelly. With Sixteen Illustrations. In 2 vols. (Tinsley Bros.)

WHEN we first heard of Mr. Vizetelly's book we thought, judging from its sensational title, that it was an account of some imminent danger from petroleum or dynamite to the French capital. We were hardly prepared for a *réchauffé* of the siege that happened twelve years ago and has passed by this time into the domain of history. Mr. Vizetelly will scarcely flatter himself that he has been inspired by the muse of historical composition. His work has few attractions in matter or in style; the latter can hardly be described as English—it is certainly not French—but a kind of third language invented to keep pace with the machinery that turns out the columns of our daily press, and sometimes nicknamed "Journalese." Mr. Vizetelly's *Journalese* is bad *Journalese*. Here is one of his descriptive efforts:—

"A German army commanded by the Crown Prince of Prussia was marching upon the capital of France, upon the city where César Postiche had held sway for so many years, which moralists had christened the modern Babylon, and which Hausmann and Alphand had beautified; the city of Cora Pearl and of Marguerite Bellanger, of the *Biche au Bois* and the *Dame aux Camélias*; whose favourite musician was Offenbach, and whose leading journalist was Villemessant, whose chief pamphleteer was Rochefort, and whose greatest criminal was Troppmann; where Hortense Schneider and Thérèse sang, and where Father Hyacinthe preached; the scene of Mirès' speculations, and of Gramont Caderousse's follies—in a word the favoured spot whither, according to a Transatlantic writer, 'Good Americans go when they die.'"

In this passage he soars; judge of those in which he trots.

As to the matter of his compilation, Mr. Vizetelly has overlooked the precept of Parisian cookery-books, "Pour faire un civet de lièvre, prenez un lièvre. . . ." He has followed instead the practice popularly attributed to the Parisian cook who is only concerned about the saucepan, and who, once provided with this necessary implement, finds his hare on the roof, in the gutter—anywhere. Apparently, Mr. Vizetelly's receipt for making a book is "Find a publisher," and, having secured him, anything will do. Have you a file of unused newspaper articles in your cupboard? Paste them, paragraph, cut them up into chapters; throw in a few coarse prints and contemporary caricatures selected at haphazard, a few extracts from other people's works to strengthen your own prose

—and dish up. Among the sources of information he refers to are personal observation—we shall see what that was worth Sarcey's *Siege of Paris*; Flourens' *Paris livré*; newspapers "of the epoch;" evidence taken by Parliamentary Committees; Dréo's *Minutes of the Government's Proceedings*; articles in the *Revue des Deux-Mondes*; Gen. Vinoy's *Campagne de 1870-71*; and Gen. Trochu's work entitled *Une Page d'Histoire contemporaine*. If he had used these materials with the slightest degree of care he would not have mentioned the seizure of the plateau d'Avron—one of the most important strategic operations of the besieged—as having taken place on November 28, when it was effected several weeks earlier; nor would he have represented Vinoy's "army, composed of 75,000 men, as having actually reached the second German line" on November 29, when in point of fact only a few battalions of it were engaged. He exaggerates the destruction of house property in the military zone immediately around the walls of Paris for the sake of introducing a paragraph in his soaring style:—

"The lofty mansions, the miniature châteaux, the charming villas, the coquettish maisonnettes of the aristocratic avenues de Neuilly and des Ternes and other fashionable thoroughfares westward of Paris were given up to the pick of the demolisher."

The avenue des Ternes fashionable and aristocratic! We shall next hear of Camden Town being the most elegant suburb of London. He blunders in grammar as ludicrously as in fact. He transcribes from the French:—

"The Place St. Pierre in face of the Butte Montmartre." . . . "An incessant exchange of gay propos." . . . "Numerous cocottes were marched off to the post" ("poste" = lock-up), &c., &c., &c.

One is reminded of the English of Continental bills of fare; but the blunders we excuse in a foreign *maitre d'hôtel* were hardly to be expected in an English author addressing the English public. We subjoin a few specimens of his grammar:—

"They were anxious to secure the support of the deputies whom they hinted however could best serve their country in the departments." . . . "Citizens whose military insignia appears to be confined to their muskets." . . . "The Post-office agent charged to *signalise* the pigeon's return." . . . "A depositer in the savings bank," &c., &c.

He misspells French and English with the same impartiality. We have "Chemin de fer du ceinture" three times repeated, "cabinets particulieres," "hair à catogan," &c., &c. Most of his book is very heavy "padding." A chapter of twenty-eight pages on "How Paris was accustomed to be fed" might have been copied from any guide-book, and reminds us of little Mr. Bouncer's method for keeping up a regular correspondence with his family. A more readable chapter is the next one, "How Paris was to be fed." Comestibles are a favourite subject with Mr. Vizetelly, and the one he deals with best. It affords him an opportunity for an accurate and graphic description of the *queues* or crowds that used to form around the butchers' shops.

"They were first formed in the more populous and poorer districts, but, before a couple of

days, had spread to the most aristocratic quarters of the capital. Originally they commenced about 5 a.m. in front of the iron railings that invariably shut in the Parisian butcher's shop; and, as the mornings were then bright and balmy, the inconvenience, although considerable, was by no means excessive. But when it was found that only half of those who had waited since five o'clock had succeeded in getting served, the queues began to collect much earlier, and the hours of waiting gradually lengthened until they extended far back into the night. In the populous quarters two o'clock was commonly the hour when the first dozen women would assemble. Some came to the rendezvous provided with chairs or stools and with *chauffepieds*; and at intervals members of their family would bring them hot bowls of soup or coffee, or they would arrange to relieve each other every hour or so. These proceedings gave rise to endless disputes. Such as found themselves constrained to wait standing objected to their neighbours sitting; frozen-footed individuals, unprovided with foot-warmers, grumbled at those who possessed them; women whose husbands were on duty at the ramparts, and had no one to bring them warm and comforting fluids, protested against refreshments being allowed; while the practice of one member of a family relieving another gave rise to constant vituperation, struggles, clawings, and blows."

There is also some interesting information about the communications between Paris and the provinces by means of balloons, carrier-pigeons, and messengers who succeeded in eluding the enemy's vigilance.

Mr. Vizetelly's appreciations of men, events, and their influences on popular feeling are simply worthless. He thinks that Paris was "not particularly affected" by the failure of the negotiations for an armistice at the beginning of November. He uses the word "treason" at random, and without qualification, in reference to Bazaine. That Bazaine did not do "all that honour and duty required" in prolonging the resistance of the army and fortress under his charge is one thing; that he deliberately betrayed them is another. Mr. Vizetelly does not perceive the difference. He sees and judges like the crowd; he never doubts, never hesitates, never qualifies. He repeats the stereotyped inanities of the populace, decides with the authority of a Caesar penning his memoirs that Gen. Trochu was "no strategist, and still less an able commander on the actual field of battle." The severity of his judgments is in direct proportion to his ignorance. He represents Gen. Trochu as demonstrating in his writings on the French army that, "with a few exceptions, every officer in the service was either a blockhead or a scoundrel." Gen. Trochu had neither the qualities nor the defects apparently requisite in the political and military autocrat whom the crisis demanded, but he possessed great virtues beyond the appreciation of the vulgar, and can only be spoken of with respect. Mr. Vizetelly is equally hard on Lord Lyons, whom he cannot forgive for having left Paris before the siege in obedience to official instructions. There is the usual amount of British grumbling against our diplomatists, and more than the usual dose of national conceit and bumptiousness in the assertion that, "had Lord Beaconsfield been in power in the autumn of 1870, Great Britain might perhaps have thrown down its wand and

stayed the conflict," and that, "had 50,000 bayonets been forthcoming at the right moment, Paris need not have capitulated, the balance of power would not have been destroyed, and Europe to-day would not have presented the aspect of a vast camp."

W. MARKHEIM.

TWO BOOKS ON THE BASQUES.

Les Basques et le Pays basque. Par Julien Vinson. (Paris.)

Corografía de Guipuzcoa. Por el R. P. Manuel de Larramendi. (Barcelona.)

Up to the present date, the only book which we could recommend for a trustworthy account of the Basques and the Basque country was Fr. Michel's *Le Pays basque*. But it is not every tourist or visitor who has the patience to read, or who is willing to encumber himself with, an octavo volume of over five hundred pages. Moreover, the work of M. Michel dates from 1857. The scientific study of the Basque language, the very sciences of ethnology, of anthropology, and of early institutions were then in their infancy. There was thus ample room for a new work; and Prof. Vinson has, to a great extent, supplied this need, in a charming little volume of 150 pages, which deals with both French and Spanish Basques, can be bought for a franc, and be carried conveniently in an outer pocket.

It is impossible that so small a work can be at all exhaustive, or that it should give the last word on the many disputed questions about the Basques, their ethnology, or their institutions. The data for this are still so scanty, or so uncertain, that it is impossible that any two independent enquirers should come to identical conclusions on all points; therefore, while we acknowledge that nothing is here stated without defensible grounds, we will mention one or two points on which the evidence seems to us to point to a different conclusion.

The account of the origin of the *Fueros* (pp. 47, 48)—viz., that they arose from the conditions imposed on the leaders of the reconquest of Spain relative to the possession of the conquered lands—seems inadequate to cover the whole of the facts. The *Fors* on the French side of the Pyrenees and the *Fueros* of the uninvaded provinces do not differ essentially from those of other provinces. It is in form only that many of the *Fueros* are a grant from the seigneur; in fact, they are merely the recognition in written legal form of long anterior customs—customs, many of which, in the general *Fueros*, are common to many countries in a like condition of society, and which arise from the necessities of pastoral and early agricultural life in a mountainous district. Many of the particular and urban *fueros* we believe to have been moulded on traditions of Roman municipal institutions, preserved more or less intact during the whole period of barbarian invasion. We agree with our author that the actual Basques are very far from being a pure race; but we see in them, though mingled, the remains of a people once far more widely spread, instead of "une tribu peu nombreuse, réfugiée depuis des siècles dans un coin des

montagnes franco-espagnoles." Nor can we regard them as the "dernier représentant de ces êtres à peine hommes qui chassaient le renne et l'ours des cavernes." Hazardous as all speculation on such a subject must be, our opinion is that, although a pre-Celtic race, they are certainly not the primitive inhabitants of Spain. Their condition of civilisation, though not high, may yet have been that of the Ligures, the Etruscan, and of the pre-Hellenic population of Greece. They are, we take it, only one of the peoples who in the great westward movement of the unknown past found their progress stopped in Spain by the impassable ocean, and thus eddied round the Peninsula and mingled, in various degrees, with anterior and posterior tribes; the remoter clans alone preserving their language, through contact both with the Celts and with the all-levelling influence of Roman civilisation.

No book can be more unlike a production of the typical Jesuit of English fiction than this *Corografía de Guipuzcoa* by Father Larramendi, S.J. It is just such a work as Addison's Sir Roger de Coverley might have written of his native county. Its easy conversational garrulity, its undisguised partiality for the Basques, and especially for Guipuzcoans, are most refreshing. The sincerity of it is evident. Larramendi does not altogether disguise the faults of his countrymen, but he speaks tenderly of them—the hardihood which degenerates into brutality, the pride which will not stoop to gratitude, but yet admits of envy. He is full of shrewd observation on the practical working of the peculiar institutions of his province. If he finds them producing good results he admits the fact, though utterly contrary to his theory of the ideal relations of Church or State. Thus, he states that the clergy chosen by election by the lay parishioners are in a better position than any others of the province. He defends the Basque public dances, even when both sexes mingle, against the denunciations of foreign missionaries, who strove to abolish them by a kind of total abstinence agitation. The vow was made, the pledge was taken by many, but the fervour of zeal soon died out. The youths of both sexes, no longer allowed to meet publicly in the dance, hung about the corners of the farms, and met in secret, "with the terrible result that there were more infants exposed in that one year without the dances than in many previous years with them." The missionaries themselves changed their opinion on a better acquaintance with the people. Vines are spoken of as of recent introduction into Guipuzcoa in 1756—cider having been previously the sole drink of the country. There are said to be schools in every parish, with a master paid by the community. Larramendi is not afraid even to speak of "las republicas" of the province. We are grateful to Padra Fita, through whom this work, which had remained over a century in MS., has at length been given to the world.

WENTWORTH WEBSTER.

GIFT-BOOKS.

Living English Poets, MDCCLXXXII. (Kegan Paul, Trench and Co.) So many thoughts are suggested by this long-expected volume that we have made up our mind to be brief. It shall not draw from us a criticism of the poetry of to-day. No doubt it is a novelty, as the editors remark in their all too short Preface, to limit an anthology to poets who may happen to be now living, even though their births are separated by the chasm of half-a-century. When we recollect that Chatterton died at seventeen, that Keats had published his third and last volume when twenty-four, and Byron the first two cantos of "Childe Harold" at the same age, that Shelley wrote both "The Cenci" and "Prometheus Unbound" in his twenty-eighth year, we may wonder that but a single "living English poet" is to be found under thirty; and, in the beginning of this century, where were the poets above seventy to compare with the nine who fill worthy places here? But we are transgressing into criticism. Concerning what is given and what not given, both of poets and of poems, we must say but a few words. The selections from Mr. Tennyson will commend themselves to everybody. As regards Mr. Browning, we should have been disposed to exchange "The Bishop orders his Tomb at St. Praxed's Church" for "A Grammarian's Funeral." Many will be glad to read, or read again, the Bishop of Derry's fine "Vision of Oxford." But where are Mr. W. B. Scott and Miss Ingelow? The format of the book may be described as the "Parchment Library" writ large. The clear type and the wide margin are very grateful to sore eyes. The wood-cut by Mr. Walter Crane that forms the frontispiece is curious rather than effective. The figures are awkwardly grouped (as if by a photographer), and we cannot approve the device of making each of the greater bards prove his identity by carrying conspicuously one of his own volumes. But, when all is said, we venture to prophesy that no book will be more sought after this season.

The Life and strange surprising Adventures of Robinson Crusoe of York, Mariner, as related by himself. By Daniel Defoe. Being a Facsimile Reprint of the First Edition, published in 1719. With an Introduction by Austin Dobson. (Elliot Stock.) The object of this publication may be briefly described. It is to give a reproduction, as accurate as can be effected by means of type, of the *editio princeps*, with all its compositors' errors, its imperfections and peculiarities of printing and press-work, and its eighteenth-century characteristics. If we are not mistaken, the title-page and Preface are reproduced by one of the mechanical processes now in vogue; but the publisher was no doubt right in not extending the same process to the text of the work. The first edition of Defoe's masterpiece is very rare, and there appears to be no copy in the Bodleian, so that a few details as to the number of copies extant, and as to the copy from which this reprint is made, would have been a useful addition to the Introduction. It need scarcely be said that Mr. Austin Dobson's contribution, short as it is, is suggestive and informing; and it may be compared with advantage with Prof. Minto's criticisms in his *Life of Defoe* in the "English Men of Letters" series. The instant popularity of *Robinson Crusoe*—the 191st work of its prolific author—is shown by the fact that it reached its fourth edition in as many months; and the writer's extraordinary fertility is attested by the appearance of the continuation within twelve days after the issue of the fourth edition. That edition is the earliest to which we have had access; but it corresponds page for page with the first, and differs from it principally in the removal of numerous typographical errors and

defects. Its type and general appearance are well represented by Mr. Stock's reprint; and, if but a fair proportion of those who have been subject to the spell of Defoe's genius are anxious to possess his masterpiece in the very shape in which it first carried the world by storm, the publisher may be congratulated on the commercial as well as on the literary result of his enterprise. Mr. Stock is certainly doing yeoman's service to bibliographers by his valuable series of reprints, which will be highly prized by the scholar and the curious.

The History of Fashion in France. From the French of M. Augustin Challamel, by Mrs. Cashel Hoey and John Lillie. (Sampson Low.) This book is a contrast to those now in vogue on the subject of women's dress. M. Challamel's object has not been to dwell on the defects of ladies' attire and preach a sermon on the folly of high-heeled shoes, heavy skirts, and tight waists, but to exhibit nearly all the changes for which fashion has been responsible, leaving the reader at liberty to draw his own conclusions. The result is an entertaining volume, charmingly bound, and illustrated with a number of plates, delicately executed, showing the various costumes which have been worn by Frenchwomen of the upper classes from Gallo-Roman times down to the present day. Some of the dresses, more especially the earlier ones, are extremely pretty; and the book may be safely recommended as a valuable one to frequenters of fancy balls, and other persons who seek novelty and variety in attire. The translators have done their work well. The letterpress, as was to be expected, consists mainly of anecdotes of Court ladies and other leaders of fashion. These are, however, amusing, and occasionally of historical significance. For instance, we are told how, in the reign of Louis-Philippe, the beautiful Mme. de Sampaio was enumerating on one occasion all the costumes she provided herself with at the beginning of each year. "I was forgetting," she said, "to mention my dress for the days on which the King or his family are fired at." Such costumes were, it seems, always kept in readiness, and were known as "costumes for days on which the king's life is attempted."

The Prince of the Hundred Soups. Edited by Vernon Lee. (Unwin.) "Vernon Lee" may be as desultory and capricious as she calls herself in her unusually colloquial Preface; but her desultory habits and love of caprice have done her good service in leading her to find and inciting her to publish this very clever burlesque. It matters little that it was written "as the practical demonstration of a theory based on an enormous amount of research;" as it mattered little that *Ten Thousand a-year* was written as a political parable. They are both amusing books, and we can laugh at them without concerning ourselves with the crotchets of the authors. If, however, we may trust "Vernon Lee," the author of *The Prince of a Hundred Soups* was so remarkable a character that his crotchets would be interesting not only for their products, but for the sake of the man. A half-crazed actor—who spent his life in riding about Rome in a cab because walking made his feet cold, who was always munching tarts and sweets out of a bag, who, moreover, was devoted to marionettes and children—was no ordinary person. What "Vernon Lee" tells us about him in her Preface is even more interesting than *The Prince of a Hundred Soups*; and that—as we hope our readers will find out for themselves—is saying a good deal.

Anyhow Stories, Moral and Otherwise. By Mrs. W. K. Clifford. (Macmillan.) There is nothing casual in this dainty little book except its title. The illustrations are as pretty as the stories, and both will please the fancy of children of all growths. We can picture to

ourselves the eyes of the little ones opening wider and wider, and the colour mounting into their cheeks, as the story of "The New Mother" is told them by the fireside. In it, at any rate, the moral is obvious and is more exalted than that of story vii., which is thus summed up:—"It is well to be neat and tidy, but it is still better to take care of the baby's legs." There is a good deal of playful humour in the book, and its poetry is not limited to the lullaby with which it concludes. It is impossible to avoid seeing that the authoress is anxious to keep before her children Prof. Clifford's example, when she puts into the dying cobbler's lips the words—

"Do you best; do it, don't dream of doing it—good work lives for ever. It may go out of sight for a time; you mayn't see it or hear of it once it leaves your hand; you may get no honour by it; but that's no matter; good work lives on; it doesn't matter what it is, it lives on."

Isabeau's Hero. By Esmé Stuart. (S. P. C. K.) Mr. Stuart's new story is an historical one, narrating the great revolt of the Camisards in the beginning of the eighteenth century, when four thousand men held the armies of Louis XIV. at bay for months. The fierce fanaticism of the mountaineers, their brave though hopeless resistance, as well as the chief incidents in the life of the man selected for the hero of the book, form excellent material for a work of fiction likely to excite the interest of young people. Mr. Stuart may be congratulated, however, not merely on his choice of a subject, but also on the way in which he has handled it, and the pains he has been at to bring out effectively the main features in Cavalier's character, his love of his hills and of his people, his courage, his ambition, and the absence of that unbending spirit which inspired his compatriots and made them prefer death to compromise. He was just enough of a fanatic, Michelet remarks, to be able to make use of the fanaticism of others, and not enough of one to let it stand in his way. With this view Mr. Stuart substantially agrees, and we are accordingly inclined to take exception to the title of his work. Isabeau surely is the true hero, and not the man who ended his days in a comfortable position in exile.

Gustavus Vasa and his Stirring Times. By Albert Alberg. (Sonnenschein.) "Scenes from history told for youthful readers" is the subtitle of this book; and, as there is on the title-page no mention of a translator, we assume that the author has himself written it in English, which perhaps accounts for the awkwardness, excusable enough in a foreigner, of speaking of "scenes" as being "told." Gustavus Vasa is just the kind of hero to appeal to the youthful readers for whom the book is intended. His story is told with an amount of care not always bestowed upon books of this kind; while its lively, picturesque style cannot but make it a welcome addition to the little library of any lad who may be fortunate enough to receive it for a Christmas present. Speaking for ourselves, we should prefer a style less highly spiced with epithet; but, alas! we are no longer youthful readers, and we have an impression that twenty years ago our taste was less severe, so perhaps the author errs on the safe side.

Stories of Old Renown. Tales of Knights and Heroes. By Ascot R. Hope. Illustrated by Gordon Browne. (Blackie.) The popular boys' writer who adopts the *nom de guerre* of "Ascot R. Hope" here breaks new ground; and he deserves as much credit for his choice of subject as for his mode of treatment. He gives us—or rather our children—a modernised version of some of the minor romances of chivalry—such as "Guy of Warwick," "Ogier the Dane," "Robert of Sicily." Some are

even less known than these, and none can be called trite. It need hardly be said that "Ascot B. Hope's" literary style is far above the average, yet we must take leave to think that it would be improved by more care. The illustrations puzzle us, and were probably meant to do so. They combine the ghastly and the grotesque in a way that we will only characterise as very modern. Their reproduction, and the general get-up of the book, are excellent.

Rock Me to Sleep, Mother. By Elizabeth Akers. Illustrated. (Sampson Low.) Though printed at Edinburgh, this is another of the American books which have formed so prominent a feature of the season. The letter-press is a poem of the sentimental order, for which we cannot profess to care much, though it will appeal to the tastes of many. The wood-cuts show, as usual, great technical skill and softness of reproduction. The best are by Mr. S. G. McOutcheon, who has been particularly successful in drawing the figure.

The Life and Letters of Elizabeth Prentiss. (Hodder and Stoughton.) This book ought to find its way into thousands of homes. It is the inner history of a woman of genius, intensely American, by which we mean fraught with feeling to excess, and yet thoroughly practical. All those who know Mrs. Prentiss's works will rejoice to become acquainted with the nature that gave them birth. Intense power of appreciation, sympathy, and love seem to have characterised her. These, with constant "streaks of fun," make the book charming reading to those who love to study human nature under varied aspects. It is good to be brought into contact with such a lovely soul, and to trace the path she trod. Suffering stands out as the nurse of joy. She says:—

"I can't think suffering is meant to be wasted, if fragments of bread created by Christ were not. . . . I suppose St. Paul, amidst the bliss of heaven, fairly laughs at the thought of what he suffered for Christ in this brief moment of time."

Her delight in the writings of Sara Coleridge, George Eliot, Faber, Manning's sermons, Fénelon, and German and English novelists and poets is instructive. Indeed, one is surprised at the capacities of such a life—authoress, artist, above all letter-writer, who yet, in early days, writes thus:—

"I suffer a good deal, and cause anxiety to my husband by it, but yet I enjoy a good deal and so does he, and our children are sources of constant felicity. It seems to me the sound of my six little feet is the pleasantest sound in the world. Often when I lie in bed racked with pain, hearing these little darlings about the house compensates for everything, and I am inexpressibly happy in the mere sense of possession."

And again, in another place—

"We should cover with our charity the faults and imperfections of those about us, as Nature hides with her mossy covering the unsightly stone."

Golden Curl, and other Fairy Stories. By F. A. E. A. (Griffith and Farran.) This is a book for the very little ones, and if the three-year-olds do not appreciate the stories of Run-away Ralph and Tabby Tail, and are not filled with eager excitement by the adventures of Master Harold Plantagenet Sardanapalus Tomkins, we confess that we are utterly incompetent to speak on their behalf. But we have submitted *Golden Curl* to the judgment of a young critic of five, and her verdict is so uncompromisingly favourable as to inspire us with perfect confidence. The adult, and therefore partially unqualified, critic may, however, be allowed to remark that the wood-cuts are far from being worthy of the stories which they illustrate. Were it not for them the little volume would be charming from cover to cover.

Bertie's Wanderings, and What Came of Them. By Ismay Thorn. (Shaw.) Bertie has a much happier fate than any little girl ought to expect who can drown the doll of her affections, and, when the unfortunate thing rises, box its ears, and put stones in its dress to compel it to sink! To become the pet of the neighbouring choleric squire, and the means of restoring his cast-off son, is a precedent of good fortune which may go far to fill the annals of doll-murder. We confess that Bertie alienated our interest by her deed in the first chapter, but we fear there are too many cruel modern children who will delight in her. The story of her wanderings is a sprightly one.

Doll Stories. By Lucy Cobbe. (Sonnen-schein.) These stories will be favourites with the children, especially that about "Noah's Ark;" but they will take a long time to find out how really clever they are, or how graceful are the fancies hidden in such a story as "Ursula's Chamber." We hope that the doll which was given to the little pantomime child may suggest to some readers how easy it would be to brighten many lonely little lives by such a gift.

The Story of a Shell: a Romance of the Sea, with Some Sea Teachings. By J. B. Macduff. (Nisbet.) We wish the very numerous small-print notes had been put into an appendix at the end. We are afraid they may frighten "the boys and girls" for whom the book is written from a really beautiful story about the wonders of the deep. Of course it is one of those wise and instructive dreams which no one ever has in real life; but the stories of the sea-creatures, of the coral-builders, the anemones, the seaweeds, the fishes, &c., are told merrily and intelligibly with all sorts of modern illumination about them.

Elsie's Adventures in Insect Land. By Gertrude P. Dyer. With Figure Illustrations by O. O. Murray. (Marcus Ward.) The didactic element is here unduly predominant. The main incident is reminiscent of the immortal "Alice;" though not a little cleverness is shown in the details. The wood-cuts are only fair; but we can cordially congratulate Mr. Murray upon the charm with which he has clothed the larger illustrations, even with the original "Alice" fresh in our memory. We prefer both the Spider and the Stag-beetle to the Privet-hawk that re-appears on the cover.

Mrs. Gander's Story. By H. A. H. Illustrated by N. H. (Macmillan.) Beast and bird stories are not so easy to write as H. A. H. seems to have thought, for the border-line between the ludicrous and the absurd is narrow. The story-teller has set his illustrator a difficult task; and we cannot profess to be satisfied with the work of either. Both, however, are probably young, and will hereafter do better in the same vein. The gray-tinted paper and the red ink are an agreeable novelty.

Hubert D'Arcy, the Young Crusader. By N. Payne Galloway. (Shaw.) This book would deserve notice if only because it takes its readers out of the beaten track. We are introduced to the Old Man of the Mountain and taken to Egypt; and the whole story is founded upon the Children's Crusade. The plot is carefully constructed; and, although some of the incidents are detailed with too great minuteness, the characters of the boys Hubert and Oswald and of their French friend, Henri, are well sketched.

Heidi's Early Experiences. By Johanna Spyri. (Sonnen-schein.) The story here is of the slightest, being simply an account of a little Swiss girl's experiences with a young companion and her return to her grandfather. But it is full of the air of the Alps, and of the thoughts congenial to that air.

The Belton Scholarship. By Bernard Heldmann. (Griffith and Farran.) Mr. Heldmann has written several books of school-boy days; but in none, we think, has he surpassed the easy flowing style of the present, which is sure to be as great a favourite as was *Dorricourt*. The title sufficiently explains the subject-matter. The illustrations are first-rate; but why should the head-master remind us of Mr. Gladstone?

Foster-sisters: a Story of the Great Revival, by L. E. Guernsey (Shaw), is the history of two English girls brought up in a French convent, who, on coming to England about the year 1744, are converted by the preaching of the Wesleys and their followers, and ultimately marry the men of their choice after sundry trials. We have found the book dull, and doubt if it will please the young readers for whom it is intended.

Won from the Waves. By W. H. G. Kingston. (Griffith and Farran.) As this book ends with the marriage of four first cousins, parents who disapprove of such marriages should pause before placing it in the hands of their children. Apart from this, the story can be recommended, as the adventures in it, if not new, are many and varied, and the interest is sustained to the last. The book is nicely bound and "got-up."

The Three Chums. By M. L. Ridley. (Shaw.) We have read this story through, but we cannot say that we have found it worth the trouble. The incidents are hackneyed, nor is there enough of school life to justify the title. We doubt also the morality of representing the father as an unmitigated brute.

Pickle and his Page-Boy. By Charlotte M. Yonge. (Walter Smith.) An admirable school-reward or present for servant-boys, telling the history of a faithful little page, and the blessing which his kindness to the dog under his charge brought to him.

NOTES AND NEWS.

PROF. MASPERO is very busy now in Cairo preparing the new *Salle historique* for exhibition, of which the principal attraction will, of course, be the royal mummies. Excavations have meanwhile been resumed at the pyramids of Lisht, near Kafr-el-Ayat, and commenced at Abou-Roash. The pyramids of Abou-Roash are three in number, two being of stone and one of crude brick. They are mere heaps of ruin, and belong apparently to some very early period. It has been conjectured that they are the most ancient of all the pyramids. Abou-Roash lies about five miles north of Gheezeh.

WE hear that a melodrama, in four acts and ten tableaux, by Messrs. Robert Louis Stevenson and William Ernest Henley, is down for production on December 21 at Pullen's Theatre, Bradford. It is called "Deacon Brodie; or, the Double Life."

MR. J. RUNCIMAN's sketches of village life on the North-east coast, which for some time past have been appearing in the *St. James's Gazette*, will presently be reproduced in volume form. It is proposed to issue the work in two separate editions, one for the general public and one for the use of junior classes in elementary schools. The publishers are Messrs. George Bell and Sons.

DR. YAVORSKY's account of the journey of the Stolietoff mission to Cabul, which has attracted so much attention in Russia on account of its disclosures, is being translated into English, with the author's permission, by Mr. Walter Marvin, brother of Mr. Charles Marvin, whose *Russian Advance towards India* and other writings on Central Asia are familiar to the public. Dr. Yavorsky was physician to the embassy, and attended Shere Ali in his last

illness. Apart from its personal attacks on Stolietoff, the work possesses interest on account of its admirable description of the country lying between Samarcand and Cabul, which is both the latest and most complete extant.

ADMIRERS of the genial author of *Friends in Council* will be glad to know that a new edition is to be published about Christmas of his *Thoughts in the Cloister and the Crowd*, a series of aphorisms on life, character, politics, and manners which Sir Arthur Helps put into shape before he left Cambridge. The book has long been out of print and very scarce. The publishers are Messrs. Wilson and McCormick, of Glasgow.

AMONG some of the articles in the forthcoming volume of the *Encyclopædia Britannica* we may mention "Manchester," by Mr. W. E. A. Axon; "Mexico," by Mr. A. H. Keane; "Metalwork," from its artistic side, by Mr. J. H. Middleton. Mrs. Mark Pattison, as usual, will contribute the lives of the French artists, the most lengthy, and, perhaps, the most important, being François Millet; and Mr. H. Morse Stephens will do the same for recent Frenchmen of note in politics and letters, his most prominent name being Mirabeau.

THE *Bibliographer* for the coming year promises a series of articles on "A Scheme for a General Catalogue of Periodical Literature," by Mr. Cornelius Walford; "Benjamin Franklin," by Mr. Edward Solly; "The Earlier Book Auctioneers;" also "Notes on Privately Printed Books," by Mr. W. P. Courtney.

A NEW work by the Rev. Dr. William Landels will be shortly published by Messrs. Cassell, Petter, Galpin and Co. It is entitled *The Marriage Ring: a Gift-Book for the Newly Married*, and for those Contemplating Marriage; and it will be produced in a style specially suitable for presentation.

A LITTLE pamphlet on the Salvation Army, by a writer who has chosen to take the *nom de guerre* of "Saladin," will be published immediately by Mr. W. Satchell. It is called *The New Crusades: a Vision and a Warning*; and the author foreshadows the state of England under Salvationist domination in the year 1900.

WE are glad to hear that the Public Librarian of Plymouth (Mr. W. H. K. Wright) is collecting materials for a bibliography of Sir Francis Drake. He is anxious to receive assistance from any persons able and willing to render it. A revival of interest in Drake and his times has of late been awakened in connexion with the movement started at Plymouth to celebrate the tercentenary of his exploits by erecting a statue to him upon the Hoe.

MR. THOMAS ARCHER will contribute to *Little Folks* magazine a series of papers on "Some Little Ones of the Street." The first one, dealing with London flower-sellers, will appear in the January number.

A NEW historical society, styling itself the Clarendon, has been founded in Scotland with the special object of publishing smaller MSS. and reprinting rare pamphlets between 1640 and 1745. The hon. secretary is Mr. Edmund Goldamid, 30 Castle Terrace, Edinburgh; and the subscription for ordinary members is fixed at twelve shillings a-year. It is proposed to issue monthly numbers, of which the first (for November) is now before us. It consists of a sheet of sixteen pages, containing a pamphlet on "The Wicked Wayes of the Cruell Cavaliers" (1644) and two extracts from the "Mercurius Caledonius" of January 8, 1661.

ON Friday last, Dr. Dalmazzo brought to a conclusion a course of lectures on "Petrarch and Boccaccio in Connexion with Early Italian Literature." Petrarch he considered as the

forerunner and founder of the period known as the Renaissance. He examined Petrarch's life, spent mostly abroad and in continual travelling, his studies and friendly intercourse with emperors, kings, popes, and literary men, which admirably fitted him to be a writer of broader views and more sympathetic feelings than others of his time. From Petrarch's writings he showed that new elements unknown to the writers of the middle ages are introduced into the ideal of culture, and a better appreciation is formed of antiquity, which Petrarch studied as a living element of civilisation. Even in poetry the originality of Petrarch's mind is clearly visible, and new ideas are clothed in a simple and delicate form. Dr. Dalmazzo's remarks upon Boccaccio were rather severe; and he laid at the door of the author of the *Decamerone* the depravation of the Italian novel-writers, in whom more or less the baneful influence of that model is still to be detected. He said that the characters are not distinctly drawn by Boccaccio; that his plot depends in many instances more upon some accidental and unnatural occurrence than upon nature; and that sensual and guilty love is almost always at the bottom. The *Decamerone* he held not to be the mirror of Boccaccio's time, but of his own private life and of the society in which he mixed too much in his early days; and that the author himself repented later of this work, which kindled so many unwholesome feelings. Dr. Dalmazzo, however, vindicated Boccaccio's work from the accusation of being prolix and obscene.

IN an article on "American Literature in Italy" in the *Critic* for December 2, Mr. G. S. Godkin writes:—"There is no educated Italian who has not read 'Evangeline' with emotion, and I have been told that 'Excelsior' has been rendered into Italian in almost a hundred different forms." When Longfellow died, Italy mourned as she had never mourned for any foreign author, save only Mrs. Browning. Bret Harte is popular in Italy, Emerson is highly respected, and Walt Whitman is regarded as the representative American poet. Hawthorne has not yet been translated, nor has Mr. Howells; but cultivated Italians read *Transformation* and *A Foregone Conclusion* in the original.

THE first number has just appeared of the *Archivio palaeografico italiano*, edited by Sig. E. Monaci, and published by Messrs. Loescher and Co., of Rome. It contains fourteen heliotype plates, reproducing in facsimile various documents of importance for the history of writing in Italy.

DR. J. STEENSTRUP, author of several works upon the history of the Normans, has been appointed Professor of History at Copenhagen.

WE had heard a good deal in advance about *Harper's Christmas*, which is published in this country by Messrs. Sampson Low; but we must confess that the reality surpasses the announcement. Whether we regard the illustrations or the letterpress, nothing so good of the kind has yet been produced in England. *Per contra*, the price is half-a-crown; and the size, almost double that of our own illustrated papers, seems very inconvenient and fatal to preservation. For ourselves, however, we shall always possess a permanent record in the artist's proof, on Japanese paper, of the drawing that forms the frontispiece. This is a half-length of a girl, drawn by Mr. Frederick Dielman, and engraved by Mr. T. Cole, who holds a first place among American wood-engravers. And this leads us to remark that the excellent custom is maintained throughout of letting the engraver put his initials on the block as well as the artist's. The double-page plate, also engraved by Mr. Cole, is by Mr. Elihu Vedder.

It represents Samson, and the design is suggestive of early Italian carving. We believe that the design on the cover is also by Mr. Vedder, though not so stated. These are not intended for hanging in the nursery. The letterpress includes stories by Mr. George D. Lathrop, "Mark Twain," "Uncle Remus," and Mr. Thomas Hardy; a farce by Mr. W. D. Howells; and a poem by Mr. Stedman. The whole is described as the work of the Tile Club and its friends.

MESSRS. CHARLES LETTS AND COMPANY—who are to be distinguished from Messrs. Letts, Son and Company (Limited)—have sent us what they style an "Olde Almanack" for 1883, which is curious rather than useful. It is printed throughout in black-letter; and the wood-blocks with which it is illustrated have the guarantee of Mr. John Ashton.

WITH reference to Arabi, a correspondent sends us—somewhat late in the day—the following passage from Juvenal (i. 129, 130):—

"inter quas usus habere
Nescio quis titulos Aegyptius atque Arabarchus."

FRENCH JOTTINGS.

THE election of M. Edouard Pailleron to the Académie française last week raises the total number of dramatists in that illustrious body to nine. The other eight are MM. Augier, Dumas, Sardou, Labiche, Doucet, Feuillet, Sandeau, and Legouvé. Some of these, no doubt, are more than dramatists; but if any curious person were to compile a list of the forty living English men of letters whom he thought most eminent, how many of our playwrights would he include?

M. ARTHUR RHONÉ, author of *L'Egypte et petites Journées*, has completed an article (illustrated) on the great discovery of royal mummies at Dayr-el-Baharee, which will appear in the January number of the *Gazette des Beaux-Arts*. M. Rhoné is at present writing a history of the Boudak Museum (which includes a short biography of the late Mariette Pasha from original documents) for the *Magasin pittoresque*.

M. E. DUOËRÉ, assistant-archivist of Bayonne, is preparing a work on "La Marine bayonnaise au Moyen-âge," in great part from inedited documents. The history will embrace the period of the English domination, will show the assistance which the English received from the ships of Bayonne, and will also deal with the voyages of adventure and discovery and with the whale-fishery of the Basques, with the mediæval maritime codes, and with other matters of interest.

M. ALBERT RÉVILLE will publish immediately (Paris: Fishbacher) the first-fruits of his appointment to a chair in the Collège de France, in a volume entitled *Religions des Peuples non civilisés*.

KATE GREENAWAY'S *Almanac* for 1883, published here by Messrs. Routledge, has gone to win new conquests in France. It is there being distributed by MM. Hachette among the subscribers to their *Journal de la Jeunesse*.

THE number of the *Revue des Deux-Mondes* for December 1 opens with the first instalment of a new novel by M. Victor Ocherbuliez, entitled "Le Ferme du Choquard."

M. CARO, whose popular lectures at the Sorbonne have been suspended this year, has just republished (Hachette) the papers on "Littérature et Positivisme" which attracted a good deal of attention on their first appearance in the *Revue des Deux-Mondes*. He has also got a paper on "Positivisme and Experimental Science" in the current number of the *Journal des Savants*, which contains, besides, articles on "Séfer Nameh" by M. Renan, and on "Alexandrian Poetry" by M. Egger.

A CERTAIN M. Deumier, who died in Paris last July, has bequeathed to the Institut a capital sum, sufficient to provide a prize of 20,000 frs. (£800), to be awarded every fifth year to the most valuable work on the comparative study of mythology, philosophy, and religion.

ORIGINAL VERSE.

THE NEWS OF LOUIS BLANC'S DEATH.

[THE news of Louis Blanc's death reached the house of Victor Hugo, his brother in exile, during a dinner party. The shock to the poet was so great that, after a word or two, he sat mute all the evening, apparently communing with the dead, while the guests sat dumb or spoke in whispers.]

What chills the room? What kills the laugh and jest?

A spectre stands with shadowy wings that smother

All joys this night, while, gazing at each other, The guests sit dumb before Life's Master-Guest.

Our poet's lips are stirred in strange unrest

As if he spake with One, saying, "My brother,

One exile shared we—wept one fettered Mother—

Remember France, where'er thy feet be blest."

Brothers elect! No accident of birth

Welds the warm bonds of noblest brothers' lives,

But some high dream of glory for the earth

And strife with God blessing the world that

strives,

Or thirst of beauty in days of drought and dearth,

Or pact with death to shatter a country's gyves.

THEODORE WATTS.

ACKNOWLEDGMENTS.

WE have on our table:—*The Charities Register and Digest*, with an Introduction by C. S. Loch, and an elaborate Index (Longmans); *The Royal Guide to the London Charities*, by Herbert Fry, twentieth annual edition (Bogue); *The British Almanac and Companion* (the Company of Stationers); *Eason's Almanac for Ireland*, tenth year (Simpkin, Marshall and Co.); *The Illustrated Catholic Family Annual*, fifteenth year (New York); *Queen's College Calendar for 1882-83* (Macmillan); a *Supplementary Catalogue of the Pathological Museum of St. George's Hospital*, by Isambard Owen (Churchill); *Catalogue of the Sheffield Free Public Library*, Lending department (Sheffield: Robertshaw); *Catalogue of Birmingham Books in the Birmingham Free Libraries*, Reference department; *Transactions of the Glasgow Archaeological Society*, Part 2, Vol. II. (Glasgow: MacLehose); *Transactions of the Second Session of the Birmingham Historical Society* (Birmingham: Watson and Ball); *Report of the Council of the Leicester Literary and Philosophical Society* (Leicester: Gibbons); *Journal of the American Geographical Society*, Vol. XIII. (New York); *Development of English Literature and Language*, by Alfred H. Welsh, in two volumes (Chicago: Griggs; London: Trübner); *Studies in Early English Literature*, by Emelyn W. Washburn (New York: Putnam's Sons); *Beowulf: an Anglo-Saxon Poem, and the Fight at Finnsburg*, translated by James M. Garnett, with facsimile of the MS. in the British Museum (Boston, U.S.: Ginn, Heath and Co.); *Aubert Dubayet*; or, the Two Sister Republics, by Charles Gayarré (Boston, U.S.: Osgood; London: Trübner); *A History of the War of 1812-15 between the United States and Great Britain*, by Rossiter Johnson, illustrated (New York: Dodd, Mead and Co.); *Anacrontics*, selected and arranged, with Notes, by Isaac Flagg (Boston, U.S.: Ginn, Heath and Co.); *Anatomical Technology*, as applied to the Domestic Cat: an Introduction to Human, Veterinary, and Comparative Anatomy, with illustrations, by Burt G. Wilder and Simon H.

Gage (New York and Chicago: Barnes); *The Elements of Physics: a Text-Book for High Schools and Academies*, by Alfred P. Gage (Boston, U.S.: Ginn, Heath and Co.); *Preparatory Greek Course in English*, by William Cleaver Wilkinson (New York: Phillips and Hunt); &c., &c.

OBITUARY.

ANTHONY TROLLOPE.

THE death of Anthony Trollope takes away not only a representative figure from contemporary English literature, but a writer who, without attaining the highest rank in the line he pursued, achieved the almost rarer distinction of becoming the object of personal interest and good-will to his uncounted readers, who feel, there is little doubt, as if they had lost not merely an indefatigable purveyor for their amusement, but an old and trusty friend.

Born in 1815, he was the second son of Mrs. Frances Trollope, a prolific and once highly popular author, from whom he inherited the double aptitude for travel and fiction which he displayed during nearly forty years of literary activity, in which his productiveness almost equalled his mother's, and surpassed that of his elder brother, Mr. Thomas Adolphus Trollope, though he too has inherited the gift of fertility. Educated at Winchester and Harrow, Anthony Trollope entered the Post Office service in 1834, and continued a diligent and highly efficient public servant in that department until 1867, being able, in virtue of his excellent constitution and methodical habits, to carry on the double work he set himself with as much apparent ease and certainty as if his attention and time had been undivided. His official duties took him for a considerable time to Ireland, and it is there that the scenes of his earliest acknowledged, though not earliest written, works are laid. And he is one of the very few non-Irish authors who have succeeded in reproducing the local colour without falling into any serious errors of misconception. But the novels of this period, *The Macdermots of Ballycloran*, *The Kellys and the O'Kellys*, and *Castle Richmond*, obtained only a *succès d'estime*; nor did the unrelieved gloom of the first-named book, which appeared in 1847, give any indication of the cheerful vein which has marked the great majority of his subsequent works. He struck, not unsuccessfully, into another path in 1850, when he issued *La Vendée*, an historical novel of some merit; but his real popularity began with the appearance of *The Warden* (1855), the first of the familiar series in which he painted clerical and county society as no one had even tried to paint it since Jane Austen's death, nearly forty years earlier. *The Warden* is a mere sketch; and, clever and fresh as it is, it might have missed its mark had it not been for one audacious episode, wherein admirably caricatured portraits of Bishops Blomfield, Philpotts, and Wilberforce were presented under the guise of Archdeacon Grantley's three school-boys sons, Charles James, Henry, and "dear little Samuel," which set all literary and clerical England laughing, and made Mr. Trollope's public sure thenceforward. *Barchester Towers*, *Doctor Thorne*, *Framley Parsonage*, and *The Last Chronicle of Barset* all belong to this series; and it is on them that their author's reputation is likely to rest in the future, not only because of his having hit on a new lode, but still more from the marked individuality and vigour of several of the characters, who are as real to us as if they had actually lived. Septimus Harding, Mrs. Proudie, Mr. Slope, Archdeacon Grantley, and perhaps, most of all, Mr. Crawley of Hogglestock, are as much part of our general consciousness as the leading personages of

Dickens or Thackeray. And there is yet another of his creations, first appearing in *Can You Forgive Her?* and carried through the political novels which form another clearly marked group, which is equally firm in its hold—viz., Lady Glenora Palliser, Duchess of Omnium. These novels, *Phineas Finn*, *Phineas Redux*, *The Prime Minister*, and *The Duke's Children*, may be said to hold the second place among his writings. There is, besides, a variety of stories less definitely to be classed, and of very unequal merit and popularity, of which *The Small House at Allington* (perhaps really part of the Barsetshire series) is one of the best, though some may prefer *The Three Clerks* or *The Bertrams*. *Orley Farm* has a place by itself, and *The Struggles of Brown, Jones, and Robinson* was, beyond all question, his least happy effort.

Trollope's strength lay in his realism, in the fluently prosaic fashion (using the adjective in no depreciatory sense) with which he set down the conventional sayings and doings of conventional society, so that his novels will be helpful in time to come to those who wish to learn what people talked about towards the close of this century. Like some greater novelists, he was not skilful in drawing love-scenes, and he is more mannered than usual when attempting them, though he achieved one success in this line, the declaration of Frank Gresham to Mary Thorne. His one happy touch of pathos is the description of Mr. Crawley, but it is a vein he did not pursue. As a writer of travels, his place is more than respectable. Less amusing than Mr. Sala, and less gifted with the accurately seeing eye than Mrs. Bishop (Miss Isabella Bird), he is nevertheless entertaining and instructive, so that his books on the West Indies, the United States, the Australian Colonies, and South Africa were not only welcome when they appeared, but will bear (especially the first-named) to be read again. He dipped a little into scholarship, too, and not uncommendably, in a *Life of Cicero* and a sketch of Julius Caesar, executed for Mr. Lucas Collins's series of "Ancient Classics;" but no more than fair literary ease can be claimed for these works, as judged by modern requirements in classical learning, though they would have gained him high reputation in the days of the Beloes and Melmoths. A monograph on Thackeray, in "English Men of Letters," is more interesting as the opinion of one literary man about another than on intrinsic grounds; nor was his reputation much enhanced by the two or three latest of his publications, save that the *Fixed Period* might have been more popular had it not almost coincided with Mr. Walter Besant's more sportive and sparkling *Revolt of Man*.

Mr. Trollope was seized with a paralytic attack about a month ago, and scarcely rallied from it thenceforward, dying on December 6 in Welbeck Street. He was projecting a book on Ireland, the outcome of a recent visit; and a novel dealing with the Land League has begun to appear in the pages of *Life*, showing that his industry and productiveness remained undiminished to the very last. He was not exactly a great writer, but few have turned out an equal quantity of work always honest, and generally of good and readable quality.

RICHARD F. LITTLEDALE.

CECIL JAMES MONRO.

Athenæum Club.

THIS distinguished scholar, who was an occasional contributor to the ACADEMY from October 1, 1872, mainly as a reviewer in the departments of philology and history, died at Hadley, on December 25, at the comparatively early age of forty-nine. He was the eldest son of the late Cecil Monro, Registrar in Chancery. He was born in London, August 24, 1833, and was first sent to a school at Hammer-

smith kept by the Rev. E. Wickham, father of the present Head-master of Wellington College. He afterwards went to Harrow, and Trinity College, Cambridge, graduating B.A. in 1855 as a wrangler, and being afterwards placed in the first class of the classical tripos. He was elected to a fellowship at Trinity, but lost it in consequence of his refusing to make the declaration then required in order to become M.A., which degree he did not take till a year or two ago. He was called to the Bar at Lincoln's Inn, but in 1860 he was compelled, by the first attacks of pulmonary disease, to relinquish the law, and to pass his winters abroad. He resided at Rome, Madeira, Pau, Algiers, Gibraltar, Mentone, Hyères, and Cimiez, and thus enjoyed great facilities for the acquisition of modern languages, of which he could read eight or nine, including Russian. Mr. Monro not only kept up his Cambridge mathematics, but added to them the elements of the higher algebra and quaternions, and thoroughly mastered the mathematical theories of logic put forth by Boole, Jevons, and Macfarlane. He was greatly interested in the philosophy and logic of the calculus of probabilities, and published an able review of Mr. Venn's *Logic of Chance*. Besides the ACADEMY, he was a contributor to the *Journal of Philology*, the *Theological Review*, *Mind*, and the *Transactions of the Cambridge Philosophical Society* and the *London Mathematical Society*. In the second appeared a noteworthy review from his pen of Prof. Birks' *Essay on the Right Estimation of Manuscript Evidence in the Text of the New Testament*, in which he convicted the learned author of such errors of calculation as to render that essay practically valueless. As one of Mr. Monro's friends, who has long worked with him, and greatly profited by his scholarship, I may be allowed to add that he possessed a critical knowledge of the text of Shakespeare, and showed great sagacity in the interpretation and elucidation of its difficult passages.

C. M. INGLEBY.

LOUIS BLANC.

LOUIS BLANC, the news of whose death has been received with equal regret in London and in Paris, will be remembered for his literary work, some of which is of permanent value, rather than for his actual exploits in government, which were but small, or his share in the June revolt, which is a matter of uncertainty. His *History of the first French Revolution*, though travelling deep in its explanations and wide in its digressions, is one of the most readable works of its class. Yet his writings have another value beside that of mere literature; they powerfully influenced opinion both in England and in France. The influence has been very different in the two countries, and exercised upon different classes, yet in the long run excellent in both. His *Lettres sur l'Angleterre*, written during his long and honourable banishment, were a revelation to English readers of the light in which our current history appeared to disinterested observers. The irritation which many, even Liberals, felt at his honest criticism soon gave place to a juster feeling of gratitude to the exile who conceived his duty to the land of his adoption in a higher spirit than his contemporaries had yet risen to; and it may fairly be thought that his letters contributed to that awakening of self-consciousness which our nation has of late so remarkably shown.

Nor again, were his studies on the organisation of labour thrown away. If he was wrong as to the method of attaining his ideal, the ideal itself was noble. Nor is it abandoned now by the classes to whom he addressed himself. Their conception of how to realise it has changed in France and in England too. The workman of Paris seems to have renounced making his

republic red in one generation. The Six Points of the Chartists have yielded place among us to Co-operative societies. But the work which they are about—the transference of capital (viewed as an instrument of production, not as a means of enjoyment) from the capitalists to the labourers—is one which Louis Blanc had always at heart. And it is not the least of his merits that he acquiesced, after his return to France in 1870, in the change of method, and forbore to embarrass his successors. In his day, he tried to organise labour from without. The English, and apparently the French, workmen of this generation are doing it from within, and by means which are likely to leave no soreness behind. And if the French people have not yet made equal progress with ourselves towards solving, or at least towards fairly grappling with, this social problem, it is due to political troubles. They have had to clear the ground first by getting rid of one royal *exploiteur* after another. To this preliminary task, too, Louis Blanc felt himself called, and even the King is said to have admitted the telling effect of the blows which the *Histoire de Dix Ans* struck at the Orleanist monarchy.

FRANKLIN T. RICHARDS.

M. JULES TARDIF, the head of the administrative section of the National Archives, died at Paris on November 30, after a short illness. He was born at Coutances in 1827, and was a pupil in the École des Chartes. M. Tardif possessed an extraordinary acquaintance with early French records; but he had published little beyond the first volume of a *History of the Political and Administrative Institutions of France*, dealing with the Merovingian period, which appeared only last year. According to a notice in the *Revue critique*, he had also studied the languages of India.

NEXT week we hope to give a notice of the late Gottfried Kinkel by one who knew him well.

MAGAZINES AND REVIEWS.

THE most important paper in this month's issue of the *Antiquary* is one by Mr. R. Davey on "The Office of Cardinal." The subject is treated with great fullness and much learning. Mr. Davey is inclined to believe that the office is older than Protestant writers have commonly believed. We doubt whether evidence can be furnished for some of the earlier passages which Mr. Davey seems to receive. Mr. Leatham's paper on "Christmas" is amusing reading, but there is little or nothing new therein. The same may be said of Mr. Hodgkin's "Paganism in Modern Christianity." Mr. Wheatley contributes a second paper on "Romeo and Juliet," of which it would not be easy to speak too highly. Now that Shakespearian criticism has reached its low-water mark, it is really pleasant to read the remarks of a student who understands his subject. Mr. Round continues his excellent series of papers on "The Domesday of Colchester."

In the current number of the *Revue historique* M. Burgeois publishes a good article on "The Carthaginian Constitution," in which he points out that the failure of Carthage was due to its want of organisation and internal economy. In a paper on "Cardinal Fleury and the Pragmatic Sanction," the Duc de Broglie examines the attitude of France towards the accession of Maria Theresa, and condemns the policy of Fleury. M. Pingaud brings forward an almost forgotten character, "Le Président de Vezet," President of the Parlement of Besançon. His long life, from 1743 to 1816, covers a momentous period of French history, and he is an interesting example of the bearing of the "noblesse de robe" before and during the period of the Revolution.

THE *Nuova Antologia* for November 15 has an article on "The Poems of Ossian and Melchior Cesarotti," which traces the influence of a passing impulse of English literature on Italy. The turgid bombast of the Ossianic poems appealed for a moment to the Italian mind. They were translated by Cesarotti, and Alfieri gave high praise to his translation; but Italian taste soon pronounced against them, and they were rapidly forgotten. The article is interesting as an account of a shortlived literary reaction. The *Antologia* is doing good service to its readers by a series of articles on "Modern Constitutions." The present number deals with the Swiss Constitution. English readers are sorely destitute of any brief accounts of the actual government of other countries.

THE *American Antiquarian* for October gives its usual valuable matter on American ethnology in papers on "The Native Races of Columbia," by E. G. Barney; on "Palaeolithic Man in America," by L. P. Gratacap, dealing very cautiously with prehistoric chronology; and on "The Antiquities of Nicaragua," by Dr. Earl Flint. "An Iowa Tradition," by J. O. Dorsey, is a pretty variant of the folk-lore tale of the sister who saves her brother, or brothers. Philology is dealt with in an excellent sketch of "The Phonetics of the Kayowe Language," by A. S. Gatschet, with useful remarks on the phonetics of other North American tribes. "The Oubit of the Ancients" is considered by C. Whittlesey, with especial reference to the alleged exact measurements of the Great Pyramid; and the editor continues his illustrated chapters on "The Origin of Architectural Orders," dealing chiefly with the origin of the arch.

THE *Theologisch Tijdschrift* for November contains an important article by Dr. H. Oort on the recent work of P. E. Lucius on the Essenes, which is pronounced less convincing than the same author's previous study on the Therapeutae (a pseudonym for Christian ascetics). Dr. Loman makes retractions and explanations called forth by recent critical essays of the veteran Scholten. Among the reviews and notices of books, Dr. Houtsma's suggestive criticism of a work on the influence of Islam by J. Hauri, and Dr. Kuenen's notice of Wickes' masterly treatise on the accentuation of the poetical books of the Old Testament and of Robertson Smith's *The Prophets of Israel*, deserve special mention. Other works criticised are Volter on the origin of the Apocalypses; Reuss's history of the Old Testament writings, vol. ii.; Breidenkamp's *The Law and the Prophets*; and Mathews' edition of the commentary on Ezra and Nehemiah by a certain Rabbi Sadiash.

CORRESPONDENCE.

CHAUCER AND WYCLIFFE'S BIBLE.

Bamf, Aylth, N.B.

I have made a pretty careful collation of the Scriptural references in *The Canterbury Tales* with the Vulgate on the one hand, and the Wycliffite Bible on the other, with a view to ascertain, if possible, from which of the two sources Chaucer took his quotations. I think that in some cases the poet must have used the English Bible; in the majority of cases the reference is rather to the Vulgate than to the English; but in a very great number of cases, especially in the Tales which appear to have been translated, the references have nothing distinctive either of the Vulgate or of the English version, and seem simply taken at second hand. The references to the English appear in Tales which have not been traced to any earlier original, as if the poet, when composing original matter, had found it more convenient sometimes to refer to the English. These references are not as numerous as I could have wished, but I think that there are some cases in which Chaucer must have referred to Wycliffe's text.

To glance at the more significant instances—"mercenary" in the general Prol. i. 99 (John x. 11) clearly answers to the "mercenarius" of the Vulgate—Wycliffe having "hired hyne." I quote the Skeat-Bell edition of 1878. In Reeves' Prol. i. 219, ll. 5, 6, "stalke" and "balke" cannot be connected with Wycliffe's "mote" and "beme."

In Oke's Prol. i. 235, l. 7, "Ne bryng nat every man into thyn hous" comes very near to "brynge thou nat eche man into thyn hous." The Vulgate is "non omnem hominem inducas," &c., which of course is not very dissimilar either. Again, in "Man of Lawe," i. 273, l. 12, "neyghbour . . . despyse" agrees exactly

with the Wycliffite "dispaith neyghbore." Here we may note that in the Vulgate there is no word at all corresponding to "neighbour," and that the passage is altogether different (Prov. xiv. 20). Again, p. 282, l. 29, "ende of oure joye" comes very near to "last thinges of joye" (Prov. xiv. 13); and the reference in the same passage to Eccl. xi. 8, "have in the mynde," comes decidedly nearer to Wycliffe's "have mynde of" than to anything in the Latin.

In "Wyf of Bath," Prol. i. 307, the last line, "Bet is to be weddid than to brynne," might well be taken from "Bettene for to be weddid than for to be brent" (1 Cor. vii. 9). At p. 308, the reference to 1 Cor. vii. 6 has nothing distinctive; but, at p. 309, ll. 20, 21, the poet's "vessel ful of gold" tallies with "vessels of gold;" and "som ben of tre" is very near to "but also of tree," the word "tre" seeming rather special (2 Tim. ii. 20). At pp. 308, 311, 317, 327 of the same Tale there are Scriptural references, but none offer anything to the point. In "Freres T." i. 364, ll. 3, 4, may be compared with "sitteth in aspise . . . to sle the innocent" (Ps. ix. 9), and l. 7 with "temptid above that that 3e moun" (1 Cor. x. 13). At p. 369, "Sompnour's T." l. 14, "for letter sleth" is identical with "for the lettre sleth" (2 Cor. iii. 6); and at p. 372, l. 15, "cloth and foode" correspond to "foodis" and "clothid" of the first edition of the English Bible. The second edition has "hilid" = *tegumur* of the Vulgate; l. 17 might be compared with "bi forty daies and bi forty nightes," but I lay no stress on this. At p. 373, l. 25, "pover in spirit" is rather nearer to "*pauperes spiritu*" than to "pore in spirit;" though "blessed be" is common to Wycliffe and Chaucer (Matt. v. 3). Again, p. 374, l. 5, "workers of Goddes word," &c., clearly corresponds to "*factores verbi non auditores*" (James i. 22); and so again, p. 375, l. 25, "Withinne thin hous be thou no lyoun" seems drawn from "*sicut leo in domo tua*" (Eccl. iv. 30); the English version having neither "lion" nor "house" in it. Yet l. 9 on the same page comes very near the English "Workman is worthi his hyre" (Luke x. 7). The same seeming mixture appears at p. 379: in l. 8, "irous man" comes nearer to "*homini iracundo*" than to the "wrath" of Wycliffe or the "wrathful" of Purvey; while in the next line we have "with no wood man" corresponding to "with a wood man," &c. (Prov. xxii. 24). The remaining five passages in the first volume run all very close in the three; Chaucer might have used either of the other two. These are, p. 382, l. 26, "Ye ben the salt of therthe" = "3e ben salt of the erthe" = "*Vos estis sal terrae*" (Matt. v. 13). Clerk Oxenforde's Prol., p. 386, l. 6, "every thing hath tyme" = "Alle thingis hau tyme" = "*omnia tempus habent*" (Eccl. iii. 1); p. 420, l. 21, "he ne temptith no man" = "he temptith no man" = "*neminem tentat*" (James i. 13). "Marchaundes T." 426, l. 29, "gret sacrament" = "this sacrament is greet" = "*sacramentum hoc magnum est*" (Eph. v. 32); p. 455, ll. 19, 20,

"Among a thousand men yit fond I oon,
 But of all women found I never noon"

= "A man of a thousand oon I fond, a womman of alle I fond not" = "*virum de mille unum reperi mulierem ex omnibus non inveni*."

Coming to vol. ii., in "Secounde Nonnes T." p. 8, l. 37, the poet's "whelpes ete some of the crummies," &c., comes very near to "whelpis eten of the crummys that fallen down;" the Vulgate has "*catelli edunt de micis*" (Matt. xv.). At p. 9, l. 3, we have "faith is deth withouten werkis" = "feith if it have not werkis is deed" (James ii. 17); p. 19, l. 3, is again doubtful, "cast al away the werkis of derknes" = "caste we awei the workis of derkneiss" = "*abjiciamus opera tenebrarum*."

Three lines lower down, the reference to 2 Tim. iv. 7 is nearer to the Vulgate than to Wycliffe. So, again, "Doctor of Phisik," p. 65, l. 11, "compleyne" points to *plangam* in the Vulgate. In "Pardoner's T." p. 74, l. 10, all three are near: "luxury is in wyn" = "with wyn in which luxury is" = "*vino in quo est luxuria*" (Eph. v. 18). But at p. 74 we have some close parallels with the English Bible. "Mete unto wombe and wombe unto mete Schol God destroyen bothe" = "Mete to the wombe and the wombe to metis and God schol distrouye bothe;" the Latin is "*esca ventri et venter escis Deus autem destruat*." Again, I would invite a comparison of ll. 26-29 with the following:—"For many walken . . . Yweping seie . . . the enemyes of Cristes cros whose ende is deth whos god is the wombe," *thirteen words in common in four lines*. But, again, p. 76, ll. 9, 10, is perhaps as near to the Latin "*quae in deliciis est vivens mortua est*" as to Wycliffe's "*ache that is lyvyng in deliciis is deed*" (1 Tim. v. 6). At p. 78, l. 5, "wyn gevyng" points to "give wine," while "han justice" points to "*judiciorum*" in the Vulgate (Prov. xxxi. 6). Again, p. 83, l. 17, "Agens an old man hoor upon his hede ye schold aryse" is like "before the hoor heed aryse;" but it might come independently from "*coram cano capite consurge*" (Lev. xix. 32).

In "Prioresses T." p. 107, l. 3, "laude . . . performed" points to "*perfecisti laudem*;" while in the next few lines we have five words agreeing closely with the English "mouth of children soukyng" and "heriyng" (Ps. viii. 1, 2); but at p. 112, l. 15, "song al newe" is nearer to the Latin "*canticum novum*" than to anything in Wycliffe.

In the "Tale of Melibaeus" there are an immense number of Scriptural quotations. I have collated these down to p. 141, and, though there are occasional resemblances both ways, I came to the conclusion that the references were certainly not taken from Wycliffe, nor apparently from the Vulgate either, but simply from the original that Chaucer translated. I did not go further with the collation, and I do not think it worth while to copy the notes I took.

In the "Monkes T." I find the strongest indications of the use of the Wycliffite Bible. This tale does not appear to have been taken directly from any older work. At p. 188, l. 11, the words "to-rent the lyoun" are common to both; and in l. 24 "*asses cheeke*" is practically the same as "*cheke of an asse*;" and "*woung-toth*" in l. 30 is again common (Judg. xiv. 6; xv. 16, 19). Still, the poet refers to "*Indicum*" at the bottom of the page; and at p. 189, l. 9, Chaucer's "siser" looks more like the "*ciceram*" of the Latin than the "*sidor*" of the English (Judg. xiii. 14). But at l. 17 we have the form *Dalida*: the foot-note says that it does not appear whence Chaucer derived the word, as in the Vulgate the name is *Dalila*. But *Dalida* appears all through the English Bible (Judg. xvi. *passim*). So at p. 192 we have the form "*Nabugodonosar*," which is Wycliffe's, the Vulgate having *Nabuchodonosor*; and at p. 193, l. 9, we have five identical words common to Chaucer and Wycliffe in "eet hay as an oxe" (Dan. iv. 1, 30). At p. 194, l. 5, I would suggest that the unusual word "arriont" is a substantive formed from, or in some way connected with, the "herieden" which occurs in the Bible (Dan. v. 4). Again, on the same page, we have *techel*, which is Wycliffe's form; while the Vulgate has *therel*; and in the last line but one "heriest" corresponds to "heriedist" in the English Bible. "Medeis and Perseis," p. 195, is also the same as in Wycliffe; and "Alisaundre," p. 209, the Vulgate having "Alexander." On the whole, I think it clear that the English Bible was used in connexion with this Tale.

The "Persones Tale," like the "Tale of

Melibaesus," is written in prose, and apparently with a moral purpose; it abounds in Scriptural references; but the time that I could give to this task was exhausted before I had done the half of it. At p. 263, in the reference to Job x. 20, we have the words "suffre," "biwayle," "derk lond," "schadow of death," "noon order," all of which occur in the Wycliffite text.

At p. 265, the reference to Deut. xxxii. 24, &c., comes very near the English Bible; the words "thay schul be wasted," "hunger," "briddes," "devoure," "bitter galle of the dragon," "venym," are common to both; but the reference to Isaiah on the same page comes nearer to the Vulgate; at p. 266, l. 16, "gruntyng of teeth" are the words of the English; the Latin being "stridor dentium" (Matt. xxv. 30). At p. 267, l. 7, we have eleven consecutive identical words, "thei schulen desire to die and deth schal fle fro hem." I give the spelling of the Wycliffe text. On the other hand, the reference to Ezekiel at p. 268 in the interrogative form used (l. 32) and in other particulars approximates more to the Vulgate. Again, at the bottom of p. 272, "thou schalt clepe his name Jesus" and other words are the same as Wycliffe's, while the reference to Acts iv. 2 at the top of p. 273 does not seem to be taken from him; nor is the reference to Ps. xxvi. 10 at the bottom of p. 274. So the reference to Rom. v. 12 early in p. 276 comes nearer to the Vulgate; while lower down we have "fige-leves breeches" and some thirty other words which are the words of Wycliffe. The last extract that I shall give is from p. 278, and it appears to me a very striking one; in the twelfth line we have twelve consecutive words which are also to be found in Wycliffe's Bible: "the fleifah coveitith agayn the spirit, and the spirit agayn the fleisch" (Gal. v. 17). It seems to me hardly possible that such an amount of verbal coincidences could be accidental. Whether passages found their way into the "Persones Tale" directly or indirectly from the Wycliffite Bible is another question. On the whole, I think we ought to conclude, either that our poet at times made use of the English Bible, or that he made use of treatises in which it was quoted. In either case, Wycliffe's work would be shown to have made its way into the general literature of the period.

J. H. RAMSAY.

THE "ΤΥΠΙΚΗ ΔΙΑΤΗΚΗ" OF NEOPHYTUS.

Larnaca, Cyprus: Nov. 27, 1882.

We are very grateful here for Mr. Warren's edition of the *Typike Diatheke* of the monk Neophytus, which appeared lately in *Archæologia* (vol. xlvii.); but it may be worth noting that it had been already printed, together with his sermons (probably those mentioned in Mr. Warren's Preface), at Venice, by N. Glykys, in 1779. The volume can be known to few besides M. Sathas, who gives the title thus (Μεσαιωνική Βιβλιοθήκη, p. 123, Venice, 1873):

"Τυπική συν Θεῷ διάταξις καὶ λόγοι εἰς τὴν Ἐξήμερον τοῦ δασίου πατρὸς ἡμῶν Νεοφύτου τοῦ Ἑγγλεῖστου, πρὸς τοὺς ἐν τῇ αὐτῇ μονῇ Ἑγγλεῖστρα πατέρας τῇ κατὰ τὴν νῆσον Κύπρον, σπουδῇ μὲν καὶ δαπάνῃ τοῦ δαιωτάτου ἱερομονάχου καὶ οἰκονόμου ἡθὲ τῆς αὐτῆς μονῆς Ἰωαννικίου, ἐπιμελεία δὲ καὶ διορθώσεϊ τοῦ πανοσιολογιστάτου κυριανοῦ ἀρχιμανδρίτου τῆς ἀγιατάτης ἀρχιεπισκοπῆς Κύπρου τοῦ ἐκ πολιτείας κοιλανίου, νῦν τὸ πρῶτον τύποις ἐκδοθέν. Ἐνετίῃσιν, 1779, παρὰ Ν. Γλυκεῖ. 8, σελ. 115."

In the monastery founded by Neophytus, the *Ἑγγλεῖστρα*, a picturesque spot near the village of Tsada, about six miles from Nea-Paphos, is still shown the rock-cut tomb of the hermit. The *Ἑγγλεῖστρα* is independent of the bishop of the diocese (Paphos) in which it is situated, a privilege it is believed to have enjoyed since its foundation in the reign of the Emperor Isaac Angelus, circ. 1185. Such a "peculiar"

is called here a *στυποστήσιον*. Is anything known of the antiquity of the word in this sense? In the *Euchologion* it means simply the erection of a cross sent by the oecumenical patriarch behind the spot chosen for the altar of a church about to be built. C. DELAVAL COBBHAM.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, Dec. 18, 4 p.m. Asiatic: "Buddhism in Ceylon," by Mr. Arthur Lillie.
5 p.m. London Institution: "Shakespeare and Lytton," by Mr. William Oreswick.
7 p.m. Actuaries: "Extra Risks, considered in Relation to a Hypothetical Table of Mortality based on Hm Table," by Mr. G. W. Ryan.
7.30 p.m. Aristotelian: "Kant's 'Critique of Pure Reason,'" by Mr. J. Fenton.
8 p.m. Royal Academy: "Gum, Glycerine, Honey, and Albumen," by Prof. A. H. Church.
8 p.m. Society of Arts: Cantor Lecture, "Dynamo-Electric Machinery," III., by Prof. S. P. Thompson.
TUESDAY, Dec. 19, 7.45 p.m. Statistical.
8 p.m. Civil Engineers: Annual General Meeting.
8.30 p.m. Zoological: "The Whales of the Genus *Hyperoodon*," by Prof. Flower; "The Characters and Habits of the Bottle-nosed Whales," by Mr. D. Gray; "The Classification of the *Comatulæ*," by Mr. F. Herbert Carpenter.
WEDNESDAY, Dec. 20, 8 p.m. Society of Arts: "The Utilization of Waste—a Quarter-of-a-Century's Progress," by Mr. F. L. Simmons.
8 p.m. Geological: "Generic Characters in the Order *Saurpterygia*," by Prof. Owen; "The Origin of Valley-Lakes, with Especial Reference to the Lakes of the Northern Alps," by the Rev. A. Irving.
THURSDAY, Dec. 21, 7 p.m. London Institution: "Some Dominant Forms of Animal Life," by Prof. F. Miall.
8 p.m. Royal Academy: "Siccatives," by Prof. A. H. Church.
8 p.m. Linnean: "Floral Development and Mode of Fertilisation of *Asclepias cornuta*," by Mr. T. H. Corry; "The Marine Fauna of the East Coast of Scotland," by Dr. F. Day; "Flora of Madagascar," II., by Mr. J. G. Baker; "*Ligula Mansonii*, a New Human Osteode," by Prof. Cobbold.
8 p.m. Chemical: "The Condensation Products of Oenanthal," II., by Dr. W. H. Perkin; "The Behaviour of the Nitrogen of Coal during Destructive Distillation, with Observations on the Estimation of Nitrogen in Coal," by Mr. W. Foster; "The Absorption of Weak Reagents by Cotton, Silk, and Wool," by Dr. E. J. Mills and Mr. Jokichi Takamine; "Nitro-benzyl Cyanide, and Some Derivatives with Diazo-bodies," by Dr. W. H. Perkin.

SCIENCE.

Homeric Grammar. By D. B. Monro. (Oxford: Clarendon Press.)

It is a great task, and one worthy of a mature and thoughtful scholar, to undertake the preparation of a Homeric Grammar. As far as *vorstudien* are concerned, no one could have a better title than the Vice-Provost (I hope, while I write, the Provost) of Oriel. For years he has devoted himself to this branch of Greek philology; and the mass of knowledge gathered and set forth in his new volume reminds one of the householder in the Bible, who brought out of his treasure things new and old. For any future commentator on the Iliad and Odyssey, this collection of careful observations from many German monographs will be invaluable. To the general reader, such a book must seem dry and uninviting; as a book of reference, it is full of interest and suggestion to every kind of scholar. But, as neither the author nor the intelligent reader will be satisfied with this general tribute of praise, I will proceed to prove its sincerity by discussing some particular points in which Mr. Monro seems not to have perfectly satisfied our lawful expectations.

At the very outset, the student who takes a real interest in Homeric controversies will miss, with some astonishment, a general Introduction giving the author's opinion on the age of the several poems, or their constituent parts, and on the general character of their composition. It was impossible to evade some decision on this point, as will be found by going through the book, where there

are endless hints on the Homeric problem gathered from various sources; but nowhere are they put in review, and a definite opinion expressed about them. This reticence or hesitation on the general question gives the whole book a curiously ambiguous and neutral flavour.

It is evidently the author's wish to show that the great body of Homeric speech is uniform, homogeneous, and very ancient, and that the evidences of later composition and of actual mistakes in epic language are few and unimportant. Yet the facts he gathers from his German authorities prove conclusively (1) that the grammatical differences between Iliad and Odyssey make a single authorship impossible; (2) that in the Iliad—(a) Books ix., x., xiii., and xxiv. have many peculiarities agreeing with the Odyssey, and not with the Iliad. Of these, book x., always suspected, shows the strongest marks of later composition. (β) The catalogue in book ii. (p. 281) and the theomachy in xxi. are also doubtful; the second Mr. Monro declares to be so (p. 137), without giving reasons. As regards the Odyssey, he tells us very little about the variations among the books, though there are wonderful forms in book xxiv. which should have been specially noted. But the Germans have apparently not yet subjected the Odyssey to searching verbal criticism, and so its homogeneity is still assumed, even in this newest and most elaborate work.

So, then, Mr. Monro's facts show that the language of "Homer" is really composite; the problem is, *How composite?* The same conclusion is forced upon us by his constant assertion that forms are *archaic*, and due to a conventional preservation of phrases from an older condition of language. Nay, he even admits *pseudo-archaic* or falsely invented epic forms; and many of the forms which he does not so classify, but calls *examples of analogy* (§§ 15, 67, 85, 158, 372), are evidently of the same kind. Who created them by analogy? No doubt the German authors from whom the facts are cited meant by both *archaism* and *pseudo-archaism* the existence of older or of invented forms in a comparatively late and literary age—say the seventh century B.C. But Mr. Monro seems to contend that the bulk of Homer came from a time when Aeolisms and Ionisms had not yet been clearly distinguished, and what was an *archaism* then must go back to prehistoric times. Is this a reasonable view? and would it be accepted by his authorities?

The case for an Aeolic Iliad earlier than, and transformed into, the Ionic Iliad which we have, has been strongly put by Fick, and is mentioned at the close of Mr. Monro's book. Surely so mature a student should have been able at once to accept or reject the theory. Mr. Monro's brief mention implies neither course. But all through the book his dread of admitting Aeolisms in Homer, and his desire to prove them mere *primitivisms*, show clearly which way his inclinations draw him.

The evidence for the antiquity of our present text he has drawn from comparisons of Homeric with Attic Greek. Even if the contrast were proved to be great, it might be explained by arguing that Attic was not a direct descendant of Homeric Greek, and

therefore not the dialect to be chosen for such a comparison. Why has Mr. Monro not chosen the later Ionic of Herodotus, and shown us what the contrasts are there? The almost total omission of this comparison seems one of the capital defects of the book, and has made the contrast of the Homeric dialect with the literary Greek of the fifth century B.C. appear far greater than it really is. There are many statements made on this matter which the Greek of Herodotus would certainly have made Mr. Monro qualify had he kept it constantly before him. Thus he speaks (p. 124) of *tnesis* as if it were peculiar to Homer. It occurs constantly in Herodotus; it also occurs in Pindar; and, for that matter, it is not unknown in Attic—cf. Thucydides, *ἐν κακῷ ποιεῖν* (iii. 13), *ἀντ' εὖ ποιεῖν* (Plat. *Gorg.*, 520), *ὅν εὖ πάσχειν* (Demosth. viii. 65). These cases show that the mental feeling of the Attic Greeks was not estranged from *tnesis*. Mr. Monro in other places forces his favourite hypothesis beyond the facts. He says that the use of *διὰ* with accus. to denote *space through which* motion takes place is distinctively Homeric (p. 145); and, what is more, he does this though the idiom is frequent in the *Odyssey*, and in x. and xxiv. (the latest books) of the *Iliad*. Thus, then, the Greek of the latest parts of the poems is, in his mind, severed in time from the classical Greek we know. But how does it differ from Hesiod's *διὰ στόματ' ὄσαν ἰέσαι*, and Sophocles' *νόμοι, δι' αἰθέρα τεκνωθέντες* (*O. T.* 867)? In fact, one of his examples is *Il. xiv. 91*:

μῦθον—διὰ στόμα πάντων ἄγοιτο.

Again, he tells us (p. 259) that "the form *μηδεῖς* is entirely post-Homeric." One rubs one's eyes, and looks up one's lexicon. Here we find a single case, *Il. xviii. 500*, *μηδὲν ἔλσθαι*; but also *Hes. O. 393*, *μηδὲν ἀνίσσας*; and in Pindar, *μηδὲν ἄγαν*. His opponents would not allow that a Hesiodic phrase was really post-Homeric. We may add one more instance. In his very interesting article on the uses of *ἄν* and *κέν*, he says that the Attic dropped two constructions common in Homer: *ὅς* (or *εἰ*) *ἔλθῃ* and *ὅς ἄν* (*ὅτ' ἄν*, *ἐὰν*) *ἔλθῃ*. No doubt he is, broadly speaking, right. But still we have Thucyd. iii. 59, *ὅτι τινι ποτ' ἄν ἀναξίω ἐμπέσοι*, and other passages cited in the grammar, showing that the law is too positively expressed.

Together with these doubtful statements of fact, we have numerous cases in which a use found in Attic is called a survival, an archaism, a recollection of Homer; and in one place we are even told that the frequent occurrence of an idiom proves it to be archaic (p. 109). Surely, when the author is arguing against people who do not admit the great antiquity he asserts, this is a flagrant case of *petitio principii*. If all the cases of unlikeness between Homer and Attic Greek are made as strong as possible, and all the cases of likeness are explained as conscious reminiscences, no wonder Mr. Monro's argument appears very conclusive. Thus (p. 132), "the occasional use of the dat. with *περὶ* in Attic is probably due to familiarity with Homer." Again (p. 178), he strains the contrast of the Homeric and Attic article, and explains the use with cardinal numerals as "a survival of the Homeric use of the article" (p. 185). "It is a further question," he adds,

"which cannot be discussed here, whether any uses found in our texts of *Il.* and *Od.* are post-Homeric, and evidence of a later origin of the books or passages where they occur." But it ought to have been discussed here. So ought also the "new departure" (p. 87) in forming nouns with a verbal stem prefixed, of which he gives us no instances, but of which *δραστηρίων* is a case which looks far from antique.

These criticisms may perhaps suggest, as a reply, that a Homeric Grammar is not a book of theory, but a practical book, and that the author was not bound to turn aside to argue such questions. What I contend is that he does argue the Homeric question all through, by hint and inference, but does not commit himself to a definite declaration. One feels no certainty, moreover, that the authors he cites for his special facts would have agreed with his conservatism as regards the text.

But the prominence of theory in the book does not lie there. When we come to the *explanations* of Homeric forms, we find that the book before us is anything but a mere practical statement of Homeric forms; it is brimful of the most obscure and doubtful theories drawn from the secrets of comparative linguistics. Out-of-the-way Sanskrit, and even Vedic, forms, which professed Sanskrit scholars cannot explain with certainty, are quoted to elucidate old Greek forms—*obscurum per obscurius* with a vengeance. Mr. Monro speaks with somewhat slighting tone of the newer school (Fick, Bezzenger, &c.), whom he will not call a school, though they are a very distinct and powerful school. But he does not hesitate constantly to admit their purely hypothetical speculations into his Grammar. Here, then, where theory is out of place, we have difficult problems, suited to learned articles in German *Zeitschriften*, appended to paradigms and descriptions of forms. If these speculations had been relegated to an appendix, and he had given us a tabular view of the grammatical results as to the lateness of various books and passages, and a careful comparison with the actual Ionic of Herodotus, Homeric studies would indeed have received a notable impulse.

But these aspirations by no means abolish the gratitude we feel to Mr. Monro for his most laborious treatise. There is an orderly method and a deliberate thoroughness in his work which makes us seldom wish for more on any particular word or form. Perhaps the absence of articles on *ὄλος* and *δάαρος* are the only serious cases to the contrary, in addition to what has already been mentioned. His arrangement of details is logical and clear. The book will no doubt tend to the credit of classical scholarship in England. J. P. MAHAFFY.

NOTES OF TRAVEL.

We take the following from the *Times*:—"Mr. Joseph Thomson left England on Wednesday for Zanzibar on his new expedition into Central Africa at the expense of the Royal Geographical Society. The whole sum granted by the society is £2,600. It is expected that Government will supply the necessary arms to equip a part of the caravan. Mr. Thomson purposes spending a week in Cairo on his way out, and will reach Zanzibar in about six weeks. Instead of,

as he originally intended, waiting at Zanzibar for four months till after the rainy season, he will set out as soon as practicable after his arrival. As he must make a journey by sea along the coast for some distance, it will probably be six weeks after he reaches Zanzibar before he is able to start—that is, about the middle of March. The immediate goal of the expedition is the east coast of Lake Victoria Nyanza, which Mr. Thomson will endeavour to lay down with approximate accuracy. He will also endeavour to gather additional information concerning the snowy Mount Kenia, though it is not necessarily in the programme that he will attempt to reach the summit. As far as his means permit, he will penetrate into the Masai country, practically unexplored, and beset with not a few dangers. No naturalist has yet been appointed to accompany Mr. Thomson; and, in the absence of such a specialist, the traveller himself will collect what natural-history specimens he can. For this, as for scientific observation all round, he is better qualified than ever. Since his return from the Tanganyika expedition, he has been diligently adding to his qualifications for scientific exploration. Mr. Thomson does not expect to come to light again much under two years after he leaves the coast. His experience, caution, and tact are likely to keep him clear of difficulties with the natives."

PHILOLOGY NOTES.

It will be remembered that the first number of an Arabic manual for the use of travellers was submitted by Prof. Oësar Nahmias to the members of the Fifth Orientalist Congress (Berlin) in 1881. Encouraged by the approbation with which this specimen number was received, Prof. Nahmias has gone on with his task, and is now himself publishing the work at Certaldo, Tuscany. It will be completed in forty parts, of which seven are already issued, and will be delivered post-free to subscribers at the moderate cost of twenty francs, of which one-half is payable at the time of subscription. Prof. Oësar Nahmias was secretary of the Arabic section of the Fourth Orientalist Congress, held at Florence.

M. BENOIST, Professor of Latin Poetry in the Faculté des Lettres de Paris, the editor of a critical edition of Catullus, which we hope to notice shortly, has recently read a series of papers before the Académie des Inscriptions upon interpolations in the text of Horace.

M. GEFFROY has resigned the post of directeur de l'École française de Rome. His successor will be selected by the Government from two candidates nominated by the Académie des Inscriptions. These are M. Le Blant and M. Homolle.

M. H. GAIDOUZ contributes to the *Revue critique* for December 4 a supplement to two previous papers on "Creole Bibliography." He includes Anglo-Indian slang, Babu-English, and Pidgin-English. As to this last, he confesses "nous ignorons à quelle variété anglaise se rapporte." It is, we believe, merely a very broken form of mixed English and slang, invented by the Chinese who had dealings with English merchants, and now adopted by these English merchants themselves in their dealings with the Chinese.

TEUBNER, of Leipzig, announces for next year the first volume of a *History of the Roman Constitution*, by Dr. E. Herzog, treating of the regal period and the Republic.

THE last quarterly number of the *Revue de Linguistique* is occupied with the conclusion of two important studies—one, by J. A. Gatteyras, on "The Languages of the Georgian Family;" the other, "Grammatical Notes on the Lan-

guage of the Lifu (Loyalty Isles)," by a missionary there. Both are excellent, but they present a singular contrast. M. Gatteyrius writes with an eye to the most recent discussions on the theory of language, and upholds in the strongest manner that language forms no exception to the general development of man from animal. The missionary analyses his materials as carefully, with absence of speculation, but with practical attention to facts, and gives as exercises in Lifu passages taken exclusively from the service-books of the Church—possibly the only material yet printed.

MEETINGS OF SOCIETIES.

SOCIETY OF BIBLICAL ARCHAEOLOGY.—(Tuesday, Dec. 5.)

DR. SAMUEL BIRCH, President, in the Chair.—A paper was read on "The Houses and Householders of Palestine in the Time of Christ" by the Rev. W. H. Sewell.—A communication was also received from Prof. Sayce on "The Kappadokian Ouneiform Inscription now at Kaisariéh." From a careful squeeze made last summer by Mr. W. M. Ramsay, Prof. Sayce has been able to satisfy himself that this inscription, hitherto uncertain, is in ouneiform characters of the Assyrian syllabary, though of a very barbarous type. The stone bears under the inscription a sculpture representing a king with captives brought before him. The captives wear the Phrygian dress; but the costume of the king and his attendants is distinctly Hittite, being that made familiar to us by the sculptures of Boghaz Keui and Eyuk, of Ibreez and Karabel, to which we must now add (thanks to Dr. Gwyther's photographs) of Carohemish also. In the inscription, Prof. Sayce thought that he could decipher "Tar" as the name of a god, thus corroborating his own previous conjecture based upon the Hittite name "Tar-kus." The form of the characters shows that they were borrowed from Nineveh before the overthrow of the Assyrian empire; while the division of the lines—found also in the Kappadokian contract tablets—is characteristic of Hittite inscriptions and foreign to Assyrian ones.

ARCHAEOLOGICAL INSTITUTE.—(Thursday, Dec. 7.)

THE REV. J. FULLER RUSSELL, V.-P., in the Chair.—Mr. W. M. Flinders Petrie read a paper on "Egyptian Bricks," and exhibited a diagram of a series of forty examples from the Eighth Dynasty down to Arab times. Their continuous decrease in size in successive periods, and their uniformity in different parts of Egypt at each epoch, prove their value in historical questions.—Mr. E. Peacock sent a paper on "The Unrestored Church of Cadney, Lincolnshire."—Precentor Venables communicated an exhaustive paper on "The Vicars' Court at Lincoln," founded by Bishop Oliver Sutton, 1280–1300, illustrated with plans and photographs. The writer showed that, notwithstanding modern alterations, the court forms a very curious and instructive architectural study, the house on the south side being one of the most perfect examples of an Edwardian house to be found in England.—Mr. F. C. J. Spurrell exhibited a collection of various palaeolithic implements and *haches* of different types from Northfleet and Crayford, both imperfect and finished, together with the flint tools or knappers by which they were shaped. Of the hammers, some were pointed at one end and some flat-headed, being "used" at the edges of the face. He showed the mode of using the peculiar hammers found with flakes at Crayford, and demonstrated by many specimens that the fine chipping frequently found at the butt-ends of the flakes was not the result of use, but a necessity of the manufacture. A number of flakes, mostly flat and thin, and hollow on one side, varying in weight from an ounce to eight pounds, were described as having been used somewhat after the manner of a bricklayer's trowel. They had the appearance of so-called hollow scrapers, but presented marks of percussion, and were not polished with use as in scrapers proper. The action of the hammers and knappers was analysed and imitated synthetically with success; and they appeared, taken altogether, to be capable of doing all the work required to make the

perfect tools with which they were found. All the specimens had been found by Mr. Spurrell in river reaches, where they had been made and used, in association with remains of elephant, rhinoceros, &c., the carving of whose carcasses was the probable cause of the spots being selected for the flint manufacture. For comparison, neolithic knappers were shown, and gun-flints with knapping hammers of the seventeenth or eighteenth century found on the mediæval camping-ground of Dartford Heath.—The Rev. W. S. Calverley sent a paper on "Goaforth Cross," and exhibited full-size drawings of this very remarkable monument. From his long study of Scandinavian mythology, Mr. Calverley has been enabled to interpret the subjects on the four sides of this cross, of which the main episodes have never been brought forward before; and it is satisfactory to know that Mr. Calverley's reading meets with the approval of Prof. Stephens, of Copenhagen—viz., that the Christian parallel of the "world-stories" is as follows: On the west side the devil is overcome and bound; on the south side the world is overcome; on the east side the flesh is overcome; and on the north side Christ rides triumphant. The cross is a monolith fourteen feet six inches high.—Capt. E. Hoare exhibited statuettes of Anubis, and of Isis nursing Horus.—The Rev. J. H. Ash laid before the meeting a brass scoring bell said to be sixteenth-century work.—Mr. W. T. Watkin sent a photograph of a Roman altar found in July at Longwood, near Huddersfield, and inscribed as follows:—

DEO S(ANCTO) BRIGANT(VM) ET
N(VMINI) AVG(VSTI) T(ITVS) AVR(ELIVS)
QVINTVS D(ECRETIO) D(ECVIVIVM)
P(OSVIT) ET S(VSCEPTVM) S(OLVIT).

This reveals for the first time the existence of a male deity supposed to preside over the tribe.

FINE ART.

NOW ON VIEW.—BEAUTIES OF SURREY SCENERY, being an EXHIBITION of Mr. SUTTON PALMER'S SKETCHES and DRAWINGS made this past Summer.—MESSRS. DOWDESWELL, 133, NEW BOND STREET (two doors from the Grosvenor Gallery).

IN MARCH NEXT MESSRS. DOWDESWELL will exhibit Mr. BIRKET FOSTER'S DRAWINGS of the CATHEDRAL CITIES of ENGLAND and WALES, which it is proposed shall be engraved.—Particulars on application.

GREAT SALE of PICTURES, at reduced prices (Engravings, Chromos, and Olographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—GEO. REES, 115, Strand, near Waterloo-bridge.

The Renaissance of Art in Italy: an Illustrated Sketch. By Leader Scott. (Sampson Low.)

THE Renaissance is a subject of perennial interest. That marvellous blooming-time of life, thought, and art that took place at the beginning of the sixteenth century still remains an enigma, however much we may have studied the influences that brought it about and the causes that contributed to its decay. At the present day especially, when the discoveries of modern science have led, as it were, to a new departure in thought, it is instructive to turn back to the period of the Renaissance and learn how much of our boasted culture we really owe to its surprising efflorescence. Nothing, therefore, can be deemed "superfluous and presumptuous" that any intelligent and careful student of that time has to tell us about it; and "Leader Scott" is emphatically such a student. Although she modestly calls her work an "illustrated sketch," it is, in truth, a remarkably clear and comprehensive history of Italian art, from its rise under Niccolò Pisano and Giotto to its culmination under Michelangelo, Raphael, and Titian. Besides the three fine arts, the decorative and industrial arts are also considered, several chapters being devoted to metal-work, engraving, pottery, gem-cutting,

needlework, tapestry, furniture, &c.; even cookery is not excluded. These chapters, indeed, are among the most instructive in the book, for they exhibit, even more than those on the fine arts, the love for the beautiful and the general taste for luxury that were developed at this period. "Leader Scott" divides her subject—as most writers find it convenient to do—into four distinct eras, comprising the Rise, Development, Culmination, and Decline; and before each era she gives a tabular list of all the great authors, architects, sculptors, and painters who belong to it. This is extremely useful; and, although I cannot quite agree with the places that some of the artists occupy in these lists, they nevertheless help considerably in the general comprehension of the subject.

From what has been said hitherto, it might be thought that this beautiful book was one for study rather than for pleasure; but in reality it is written in such an easy style, and is enriched by so large a number of excellent engravings, that the reader learns without any effort, and finds himself entranced with what, in the usual handbooks, is a weariness. Popular works such as this satisfy a great need, for all men are willing to learn something new to them, if only they can do so without trouble. Art, especially, is a subject about which everybody is keen to know at the present day; and it may safely be predicted that *The Renaissance of Art in Italy* will be among the most desired of the art-books of the season. Its illustrations, as before said, are admirable, particularly those that give an idea of the interior of buildings, such as the Campo Santo and the Sistine Chapel. The way in which some work is reproduced of almost every important master reflects much praise on the art-editor, Mr. Cundall, who is stated to be responsible for the illustrations.

MARY M. HEATON.

THE GROSVENOR GALLERY.

II.

THE range of Lawson's art was wide, as we have said, so wide that in his life—short, indeed, but yet comprising many years of work—he showed no signs of repeating himself. Some classes of phenomena, such as mist and wild skies, he studied more than others; but he never painted the same thing twice. Even his slighter efforts, little more than memoranda, like his "Fog on the Chelsea Embankment" (182), are distinct in feeling. Others, like the strange and beautiful caprice called "The Swan and the Iris" (178), are unique, showing a vein, and perhaps a rich vein, discovered but unworked. His storms, his moonlights, his sunrises and sunsets, are all separate efforts to record separate impressions. But under all this variety the individuality of the artist is seen. It cannot be fully treated here; but we may mention, as one prominent characteristic, that it was Nature as a conflict of law-producing scenes of terror, beauty, and melancholy by sublime accident—not Nature as the designer of perfection, which he sought to interpret. He painted no scenes of ideal beauty, his trees never arrive at unhindered maturity, his skies never assemble in orderly flocks. Even in his fine "Minister's Garden" (152), it is the wild tendency of the nasturtium to stray which he insists upon, the confusion which immediately results from the absence of human control, rather than the

tendency to orderly development which is inherent in all living things.

The desire for order is, however, so active in the human mind, and forms so great a part of the pleasure that we take in works of art, that even a wild landscape fails to give the satisfaction we expect from it unless this instinct is gratified by its design. The picture of the "Hop Gardens" (167), the most orderly of his landscapes, only attains unity by the equal distribution of light. The sun reconciles us to the want of form, and melts, as it were, the scattered numbers of what, for want of another word, we must call the composition. The artful arrangement of lines, the nice balance of forms, the cunning accents of colour, which will make a charming picture out of commonplace materials, were qualities not pre-eminent in Lawson's work. Their absence is least missed in those pictures of his in which the sky is most predominant. In some of these, as in "The Wet Moon" (135), the moon itself is the focus of the composition, a centre of radiation which makes interesting the farthest corners of the illuminated sky; in others, as in "The Morning after the Storm" (159), the sentiment is of wreck and confusion, and disorderliness becomes a virtue. In such works as these Lawson's genius showed, perhaps, its fullest development. He could paint clouds reflecting strongly the light of the sun; he could paint, even better, clouds and mists with the light behind them, and penetrating even their darkest films. Except a few artists like Rousseau and Diaz, of whom he often reminds us, there are no moderns who could do these things so well; and this is something to have accomplished in his short life.

When, however, we come to nearer and more definite objects, his measure of success does not seem so great. It would not have been consonant with the general effect at which he aimed that he should have painted foliage with minuteness. When he endeavoured to give the impression of the clear air of the Riviera, he could define his trees clearly enough, as we see in "On the Road to Monaco" (144); but when he wanted to produce the effect of mass in sunlight, as in his "Wharfedale" (143), or in shade, as in "In the Valleys" (172), he, of necessity, generalised, and his generalisations of foliage are often to us disagreeable and untrue. The masses in the foreground of the former picture are more like seaweed than foliage, and all the lightness and grace of the tassels of the birch are missed in the latter. There was also often a want of consistency between the finish of his trunks and the sketchiness of the leaves they bore. In colour and tone many of his pictures seem very defective; but in this and in other respects there was not only hope, but promise, of improvement. In his latest landscapes, as in "Blackdown" (136), the earth is brought up to the pitch of the sky, and the colour is throughout richer and more harmonious; and some of his pictures which were mainly concerned with trees, such as "The Pool" (145) and "Marsh Lands" (183), show a strong perception of those beautiful arrangements of curves. He was, perhaps, approaching maturity at his death—such a splendid work as "Barden Moors" (164) it would have been difficult for him to excel; but he was still learning, and his capacity for new sensations showed no signs of exhaustion. A sensibility so various, and a view of art so comprehensive, as his could not ripen early; and if we have dwelt more upon the strong points of his work than on its obvious shortcomings, it is because we feel that the former were positive qualities, and the latter signs of difficulties which he was gradually conquering.

We should be sorry even to judge the exhibition of the works of Mr. Alma Tadema as the full and complete expression of his genius.

We know all he has done, but it would be rash to say that we know all that he can do. It is not, indeed, often that a painter shows any great development after he has passed the age of five-and-forty; but there is a gulf between his earliest and latest work as shown here, and, as a rule, the later the picture the better it is. Luckily, Mr. Tadema's pictures are all, or nearly all, dated (it is a pity that Mr. Lawson's were not); and though we have not gone through the exceedingly laborious task of comparing these numerous works of his one by one, and date by date, we have arrived at a general conviction that there has been distinct progress throughout his career, from the portrait of himself at the age of sixteen, to the "Cleopatra," which has never been exhibited. (This we have seen in an unfinished state; but it is not yet, or was not a few days ago, placed in the frame that yawned for it on the wall of the Grosvenor Gallery.) Certainly his work has improved greatly in grace and perception of human beauty, and even, we think, in colour, during the last ten years. During that period he has also been gradually letting more and more direct sunlight into his pictures, and has shown more playfulness and feeling. And there is no reason why this development should stop—for this reason, that, though he generally paints scenes of ancient days he approaches his subjects from the side of personal experience in life—quite an opposite point of view from Gérôme and other painters who have essayed the same style of art. They approach it from the historical side, some, like Boulanger, from the remains of classic art, taking inspiration mainly from the wall-paintings of Pompeii. Mr. Tadema, however, student and accomplished painter though he be of the marble, the mosaics, the bronzes, the architecture, the draperies—in a word, the *mise en scène* and the properties of his stage—approaches the painting of his characters from the side of *genre*, and modern *genre*. It is a natural development, as we have said elsewhere, of his national art; and it will be seen from "A Bargain" (1860), painted when the artist was four-and-twenty, that his early desire was to follow in the footsteps of de Hooch. It will also be seen by such pictures as "The Education of the Grandchildren" (8) (1861) that the union of the historic and the domestic was a thought of his youth. This picture, academic and stiff in some of its figures, shows originality and vigour, and is more interesting as an "early work" than "Gonthram Bose" (21), painted the year after. The latter is important mainly for showing his early love for filling up every corner of his canvas. This tendency, and the practice of painting pictures with little or no sky, were fostered by his studies under Baron Leys. It is only gradually that he acquired his present mastery of filling without crowding, and learnt to desert dimly lit interiors. A picture interesting as an instance of one danger of approaching history from the *genre* side—viz., too great familiarity in treatment—is the "Agrippina with the Ashes of Germanicus" (17) (1866). He was now thirty, and had shown signs of the serious intention of his life—viz., to restore to us, as only pictures can, the social life of past civilisations. That he was not to be discouraged by difficulty is proved by his attempts to picture the realities of existence in ancient Egypt—an existence so far removed from our sympathy and experience—not only so dead, but so buried, that the imagination, getting little or no help save from those remains of formal art which are almost its only records, finds it almost as difficult to revive as a mummy. How successful Mr. Tadema's efforts were, who can judge! but he at least produced impressive pictures. No one can laugh at the impassive, Sphinx-like Pharaoh, with his dead first-born lying across his knees; nor at the "Widow"

(37), with her hidden face and ears deaf to the monotonous chant of the hired mourners.

The strangeness of these pictures affects us, but we are not moved by them much; we admire the sincerity of the artist, but we criticise; we acknowledge the ingenuity of the representation, but we do not accept it as correct. In his Egyptian scenes Mr. Tadema has for once been forced to approach history less from the living life of to-day than from the dead art of the past. COSMO MONKHOUSE.

SOME POINTS IN "LIBER STUDIORUM."

THE Burlington Fine Arts Club is displaying in its gallery a collection of various states, chiefly trial-proofs indeed, of those eleven subjects of Turner's *Liber Studiorum* which the artist not only conceived and made drawings of and etched, but actually finished in mezzotint. To the student who studies Turner minutely, and is interested in the processes of engraving by which a gradual conquest is obtained over barren matter, and an exquisite work of art takes the place of an untouched plate of metal, the show is genuinely interesting; while the merely fashionable picture-seer, who knows that *Liber Studiorum* is the thing to talk about, will have his own reasons, and they may be very virtuous ones, for seeing the exhibition. I said that the collection now got together consisted chiefly of trial-proofs, but there is always shown that first published state in which, when we are considering a picked impression, perfection is reached; and there are shown likewise those preparatory etchings which Turner was in the habit of executing, not alone for the plates he intended to finish, but for all, or nearly all, of the great series. And to such interesting material for study has been added more than one example of Turner's work with brush or pen—the sepia drawing for the "Source of the Arveron," to wit, and a sepia drawing for the "Frontispiece," drawn over the etching itself, and in subordination to its leading lines; and two pen-and-ink sketches, in which the artist was feeling his way towards that elaborate "Frontispiece" which was to be one of the most prized rarities of the whole noble sequence.

The show is accompanied by illustrative notes, due, as it appears by the initials appended to them, to Mr. Rawlinson, who wrote a few years ago the catalogue of this the most important series of Turner's engraved works. They evince, of course, much knowledge and observation, though they may contain one or two remarks with which we shall not find it easy to agree; as where, for instance, Mr. Rawlinson says that, when *Liber Studiorum* was executed, mezzotint had "hardly as yet been employed for landscape engraving, except in the broadly treated backgrounds to the figures of Reynolds and Gainsborough." It is true, of course, that one of the most successful applications of mezzotint to landscape—its application by David Lucas, under the painter's direction, to the rendering of the art of Constable—had not then been made. But the whole series of mezzotints by J. R. Smith and Ward and others after those pictures of Morland in which landscape is often a main interest had been executed years before; and, though their scale was greater (the smaller Morlands having more than once been wrought in stipple), there was in them much that could suggest the fittingness of mezzotint to convey the sense of those atmospheric effects with which the genius of Turner was engaged. This, however, is but a trifling matter. The careful visitor will study for himself, and will study generally with much advantage from the notes provided, the wonderful instances here before him of Turner's quickly acquired power over a method of engraving the mastery in which has been the sole

title to fame of many gifted men. He will wonder, perhaps, whether it was only by a happy accident that Turner's very first mezzotint—the "Severn and Wye" (for the "Frontispiece," although numbered as the first, was executed later on)—was one of his most successful. Anyhow, not only is the "Severn and Wye" seemingly one of the most facile and fortunate records in existence of the serenity and peace of Nature, but, as a plate, it stood its wear, it did its duty in yielding a fair number of fine impressions, better than almost anything else which was touched by Turner's hand alone.

I could wish that I had time to dwell a little on many more things that are in the gallery—the precious loans, for the most part of Mr. J. E. Taylor and Mr. Henry Vaughan. As it is, however, I must content myself with asking particular attention to the curious series of proofs that illustrate the subject entitled "Calm," with pointing out that, in the "Mer de Glace," the great artist who, as an engraver, was probably blessed with the designation of "amateur" reached a success in the representation of a befouled glacier which the most professional engraver somehow happens never to have attained; with pointing out, as an exceptional circumstance, that in the trial-proofs of the "Frontispiece" marked E. and F. the central subject is incomparably finer than in the first state, while the first state is likewise incomparably finer than any later state; and, finally, with saying a word or two concerning the "Interior of a Church." The "Interior of a Church" is especially worth notice. It is the only "interior" in the whole *Liber*, but that alone is not of any great consequence. It is, however, one of the most curious unions that may be discovered of Turner's weakness with Turner's strength. An eminent architect first made me conscious of Turner's often careless, faulty, one may say even sometimes absurd, drawing of Gothic architecture. That his sympathies were with the classic styles everybody knows, but surely not often did he display his indifference to that which at all events began by being Gothic so clearly as in this plate. "What is the construction of this church?" and "How account for its draughtsmanship?" are questions more easily asked than answered. But, however difficult might be the answer to them, it is not difficult at all to see how extraordinary has been Turner's triumph in dealing, as he has dealt here, with artificial light. At one time it was intended that the effect should be of daylight; then candle-light—focused here, diffused there; and nothing is more interesting than to perceive how triumphantly the change was wrought. We forgive the dull, nay, the obscure, architecture; we are tender even to the dull sermon which will presently be preached by the vicar—he must have been a pluralist, surely—when out of the homely and, in his own day, most familiar scene Turner has been able to create an interest in atmospheric effect, in pure *chiaroscuro*, and little else, of a kind as great as that which attaches to this unique performance by the painter of mountain and of sky.

FREDERICK WEDMORE.

MINOR EXHIBITIONS.

MR. BARRINGTON NASH had a "happy thought" when it occurred to him to bring together at his gallery in Savile Row a number of fine examples of Bartolozzi and his school. There is so great a rage for the pretty stippled prints which go under the general name of "Bartolozzis" that unprincipled dealers have not been slow to produce a large supply of more or less fraudulent impressions. Mr. Andrew Tuer, in his interesting Preface to the Catalogue of this exhibition, supplies a good deal of information on the subject which will be

useful to inexperienced collectors; and the collection itself should be more useful still. It is also a pretty exhibition, being rich in good examples of that colour-printing which was so suited to Bartolozzi's peculiar method of engraving and the "miniature" character of his subjects. Although the art of Cipriani and Hamilton, of Burney and Angelica Kauffmann, was not of the most virile, it had qualities of lasting value—viz., style and grace. But Bartolozzi engraved the works of greater artists than these; and his plates after Sir Joshua Reynolds, Stothard, and Coxway do not depend upon fashion for their attraction. The pupils of Bartolozzi and other engravers of his time and style are well represented here. Except to collectors, some of them are little known. The portrait of "Lady Russell Manners" (169), engraved by R. Cooper after Stroehling (printed Strockling in the catalogue), is one of the prettiest things here; but how many have ever heard of the engraver or the artist?

Messrs. GLADWELL AND SONS, of Gracechurch Street, have a little exhibition of pretty drawings and engravings by good artists, containing nothing of great importance. It has, however, one work (water-colour) of considerable promise, "The Arrival of Emigrants at Castle Gardens, New York," by S. G. McOutocheon; and an etching of unusual interest—viz., "The Head of Spring," from the celebrated Botticelli in the Academy at Florence. The head is on a scale which allows the artist (Mr. O. Martin) to reproduce faithfully its rare and delicate expression.

CORRESPONDENCE.

ASSYRIAN SCULPTURES IN THE VATICAN.

Rome: Dec. 1, 1882.

Recently a quantity of empty cases lying in one of the underground chambers of the Vatican were sold; when they were being carried away, others, full of some heavy material, were discovered beneath them. Upon being opened, these were found to contain slabs of gypsum, stone, and terra-cotta bearing Assyrian sculptures and inscriptions. On searching the archives the invoice of them was found, and it appears that they were sent by one of Mr. Layard's coadjutors in 1855 as a present to Pope Pius IX. The collection consists of sixteen pieces.

No. 1 is a most beautifully cut and perfectly preserved inscription of twenty-one lines in cuneiform or arrow-head characters. It was found at Khorsabad, and contains an account of a new palace built by a certain king.

2. Another fragment of inscription on terra-cotta, found at Kouyunjik.

3. A very fine regal figure kneeling on one knee. Both hands are stretched forth to touch the Sacred Tree, which stands before him. The king's hair and beard are elaborately plaited and curled. He wears a cap on his head, on which lie two serpents, the tails rising upwards over the forehead, and the heads reaching over the ears; they have a nut, or some small round object, in their mouths. Thus the serpents, lying side by side, form the frontal border of the headgear. Some writers, speaking of these ornaments, so frequently found on the caps of of Assyrian personages, call them *horns*. But in this piece of sculpture, the heads of the serpents, the scales on the bodies, and the tapering tails leave no room to doubt of their character. The figure has wings on his back. His dress consists of an under tunic, confined round the waist by a girdle, the cords and tassels of which fall almost to the bottom of the outer richly fringed robe. In the belt are stuck three weapons, the handles alone of which are visible. The feet are protected by sandals, the leather rising so as to cover the heel; the

straps of the sandals pass round the great toe and connect both sides of the sole. Bracelets are on the arms; and a beautifully shaped earring, consisting of a thick ring, from which is suspended a graceful amphora, hangs from his ear. The whole figure is full of force and majesty.

4. Another slab of gypsum, about three feet and a-half by two feet and a-half—the largest of the lot—bears a most spirited and well-designed standing human figure with the head of an eagle. It is robed somewhat in the same manner as the king, with weapons also in the girdle. A species of crested feathered helmet is on the head, and wings are at the back. In the raised right hand is a pine-cone; in the left a flat satchel, rather wider at the bottom than top, is held by the handle. Round the neck is a sumptuous necklace of cabochon stones encircled by metal. Also round the neck is a cord, with an object suspended from it concealed beneath the dress, and which we may presume to be an amulet. Heavy bracelets are on the arms, and the garments are elegantly fringed, as in the previous sculpture. These figures were found at Nimroud, and Mr. Layard mentions having found some precisely similar. Both these slabs are carved with remarkable artistic instinct, and with a freedom of touch and design that tells of an accustomed hand. On the upper border are some cuneiform characters partly broken away.

5. An oblong slab, a little more than three feet long by thirteen inches high, shows a couple of men asleep under their tents; another approaches and points to them. Behind him is a kneeling camel; above it the arm and leg of a man can be seen, but the remainder is obliterated.

6. On this small fragment three figures sit uncomfortably on very small round cushions upon a raft, which a man standing at the back is propelling with an oar. Herodotus mentions cargoes of date-wine being floated on rafts down to Babylon. And at this day travellers and merchandise are floated down, only at present the cargoes are sustained by inflated skins, which are sent back on camels to be ready for another journey.

7. This sculpture represents three human bodies sinking beneath the sea, with surprised fishes swimming around.

8. This fragment shows a remarkably fine figure of a warrior in full costume; on the left arm is a large round buckler and in the hand a lance, while the right hand grasps a wand or sling. Two figures are in the under compartment of the same slab; and palm-trees are figured on both.

9. Two men carry, slung across their shoulders, what may be coils of rope or nets.

10. Slaves are carrying logs of wood, while two overseers, lifting the rod to strike, are urging them forward. This is particularly interesting in connexion with the first-mentioned inscription of the king who is building a magnificent palace.

11-12. Horses held by their grooms. The heads are very spirited. Some of the horses have the mane dressed, and have great tassels hanging on their breasts. One of the men has a quiver of arrows on his back.

13. A couple of men are hurrying forward, carrying two tables, which are ornamented with animals' heads. They wear conical hats.

14. A triangular slab represents elaborately the attack on a city or castle. Warriors under the shelter of their shields are climbing ladders. A man on the rampart has thrown over one of the enemy, who falls headlong from the walls. Beneath, soldiers are creeping on under their shields, while others are displacing, with their glaives, stones from the town wall.

15. These may be fugitives. The woman carries her child straddle-legs on her shoulders. The man in front of her carries a large box on

his shoulder, and skins of wine hang over his arm.

16. A group of archers are shooting from behind an arch. The attitudes are spirited and full of movement. T. L. CONOLLY.

NOTES ON ART AND ARCHAEOLOGY.

THE Master of Dulwich College, Dr. Carver, to whom scholars owe a debt of gratitude for the great interest which he has always taken in the treasures under his care, is now preparing a catalogue of the works of art belonging to the college. Many of the portraits are of very considerable value; but the most interesting is that of Richard Burbage (said to have been painted by the actor himself), which bears a very remarkable resemblance to Shakspeare. It seemed at first impossible to identify many of the portraits; but, after much trouble and investigation, Dr. Carver has overcome nearly every difficulty.

In addition to the forthcoming exhibition at the Royal Academy of pictures and drawings by the late Dante Gabriel Rossetti, we are glad to announce that the Burlington Fine Arts Club are about to place in their gallery at the same time a supplementary collection of his works with a view to co-operate with the Academy in affording as full and comprehensive a representation of the painter as circumstances permit. Crayon, pencil, and pen-and-ink drawings, besides some of the artist's early water-colours, would find an appropriate place in such a collection. The committee will be obliged if possessors of such works by the artist, who are willing to aid in this scheme, will communicate with the secretary, at 17 Savile Row.

THE January number of the *Magazine of Art* will contain the first of Prof. Sidney Colvin's chapters on the painters represented in the Fitzwilliam Museum; it deals with the Venetians, and is illustrated with engravings after Veronese's "Hermes and Agraules" and the "Marriage of St. Catharine" of Francesco Rizo da Santa Croce. Mr. Austin Dobson contributes a "Ballade of the Thrush," and the editor a note on "Millet as an Art Critic." There are also to be articles on nursery art, on Giovanni Duprè (by Leader Scott), on the picturesque aspects of the Tyne, on Mr. Herkomer's house, and on tobacco-pipes—the last by Mr. H. V. Barnett.

It would seem that the illustrations of George Cruikshank—we mean, of course, the George Cruikshank, and not the living draughtsman who inherits his relative's name and is pleased to adopt his signature—are by no means falling in value. At the Beekford sale this week a copy of the famous *Grimm*—the *Grimm* with the illustrations printed in bronze-coloured ink—fetched £64.

LAST week took place at Edinburgh the sale of the collection of coins belonging to Mr. George B. Simpson, of Broughty Ferry, whose library had been sold a fortnight earlier. The prices obtained were very high, in some cases above all precedent. Among the gold coins we may mention a Bordeaux noble of the Black Prince (£16 16s.); a sovereign of Henry VII. (£11 11s.); a thirty-shilling piece of James I. (£12); a fifteen-shilling piece of James I. (£30 10s.); a five-pound piece of George IV. (£10). But the greatest rarities were the Scottish coins, which included a crown of James V. (£26); a twenty-shilling piece of Mary (£28); and a unicorn of James IV. (£10 10s.). The three days' sale realised nearly £1,500.

MR. ALFRED GRAY has sent us a large parcel of so-called "Egyptian and other Christmas Cards." They are not etchings, but pen-and-ink drawings, done with some skill, and handsomely reproduced. The artists are Mr. Gray

himself and Mr. W. G. Baxter. The power of the latter as a humorist is best shown in some of the Egyptian series. Mr. Gray inclines to the beautiful, but succeeds much better with his children than with his grown women. We must not omit to notice a good example of hand-painting on porcelain (*sic*), which again is not porcelain, but (we believe) some preparation of gelatine.

THE STAGE.

"IMPULSE" AT THE ST. JAMES'S.

UNDER a feeble and inadequate name, there is to be seen at the St. James's Theatre, since the re-opening on Saturday, an interesting piece. Mr. Stephenson, its author, has been, so far as we know, little heard of hitherto, though, under a pseudonym, he has written not without success. His present and most important venture—a play which Messrs. Hare and Kendal have thought so well of as to make it, in all likelihood, the principal piece of their season—is derived, it seems, in a measure from the French, the author avowing in the playbill his indebtedness to "La Maison du Mari." We do not know "La Maison du Mari." Many of our brethren do not know "La Maison du Mari," though it is not for us to say whether this proves that critics are always ill-informed, or that Mr. Stephenson is exceptionally well-read. Let us suppose the latter, as it is the pleasanter alternative. To speak, then, of the new piece briefly on its own merits, and without reference to that from which it may have been derived, "Impulse" is an interesting and sympathetic play. But it is of the order of play that does not improve when its purport is unfolded in brief narrative. It is written well, but it is written for the stage. Its characters, which would seem familiar copies rather than creations if we attempted to describe them in a dozen words, are, on the stage, crisply cut, well outlined, fully modelled. Its situations are hardly new, but they are very telling. In brief, the piece is a piece to be enjoyed on the boards. We can then and there follow, not without excitement, the fortunes of a misunderstanding husband and a misunderstanding wife, both of whom have excellent qualities; and we can laugh heartily at the comedy scenes, to which the efforts of Mr. and Mrs. Kendal are, on this occasion, reserved.

Mr. Kendal plays a well-meaning being of the Dundreary type, influential in the action of the play. Mrs. Kendal enacts a charming woman of the world, equally influential and more happily so, and—we must add—equally removed from vivid personal interest in the concern of the story. Both these very highly skilled artists—nay, this very highly skilled artist and this actress of genius—contribute immensely to the success of the piece. If it is said that Mr. Kendal's comedy power, as shown in the present piece, is unsuspected and a revelation, that is only, we venture to think, because it has not always been keenly watched. Mr. Kendal has long given evidence that he is a genuine comedian. To the greatest powers of Mrs. Kendal the new play does not, as we have already implied, give full scope. One side only of her art—and a good side enough, but not the highest and rarest—is here made visible. People who enjoy seeing Mrs. Kendal at her best only—and we are avowedly among them—may feel a little disposed to grumble because the opportunity is not here given; but, on the other hand, when so much has been written about the unwillingness of first-class English actors to appear in secondary characters, recognition is due to the assumption of a secondary character with the intention of giving completeness to the cast. No one on the stage would make as much of Mrs. Beresford—the charming widow of the new piece—as Mrs. Kendal makes

of her; and the heroine, a *femme incomprise*, and *incomprise* for a period somewhat unnecessarily prolonged, is played by Miss Linda Dietz with admirable judgment and good taste. We have not seen very much of Miss Linda Dietz in all-important parts. It is new to us, we confess, and a welcome surprise, that she has claim to play them. But her success is decided. Three other players demand particular mention. First, there is Mr. Wenman—a character-actor we suppose we may call him—who plays Colonel Macdonald, the husband, with genuine and well-restrained vigour. Mr. Wenman is clearly remembered to have done good things before now, but of his different successes this is distinctly the greatest. His military man is what we should expect him to be at the St. James's—the military man of real life—something quite other than the conventional soldier of the stage. Mrs. Gaston Murray plays a comic woman with individuality and apparent relish. Though we cannot hold of "Impulse" that it is all that its warmest admirers have already declared it to be, it is an interesting drama, with a disposition to turn to an interesting comedy; it is well written, well acted, and it will hold the stage for at least the worst of the winter.

STAGE NOTES.

THE opening of a new theatre must not be left quite without record, though the "Novelty" gives us nothing more important than "Melita, or the Parsee's Daughter." Though the story is of Hindostan, nothing is more undeniably European than the music. And it is European not of the highest kind; catchy, tuneful, and with the resources of the orchestra very slightly drawn upon. No one of great eminence appears in the piece, but few who perform perform ill; and there is some dancing that bears only the very remotest relation to the *nauch* that it calls itself. It is well that one or two arrangements "in front of the house" should be chronicled with approval. "Half-price" in the middle of the evening is a custom that, in theatres relying a good deal on purely popular support, should never have been abandoned. The man with half an evening on his hands should be encouraged to drop in. Again, there is the advantage afforded of every seat taken for the whole evening being numbered and reserved. The pit is, in this way, a place that it is possible to go to.

POOR old Miss Kelly is dead—the same week that was fatal to the *doyen* of English medicine having been fatal to the *doyenne* of the English stage. It is to be feared that to the present generation the aged actress was chiefly known in connexion with the cramped little playhouse formerly styled by all, and even now referred to by some, as "Miss Kelly's Theatre." The Royalty was built for her, and she had there not only a stage for the public, but a school for the student. What would this old, but to the last intelligent and lively, lady have said, we wonder, to the latest school of dramatic art, which, under a fair share of fashionable as well as fussy patronage, is beginning to do its work as the grave closes over one of the very earliest of our teachers of deportment, elocution, and dramatic action?

MUSIC.

RECENT CONCERTS.

MISS DORY PETERSON AND MR. RICHARD BURMEISTER, pianists from Hamburg, gave what was described as a "grand morning concert" at the Steinway Hall last Saturday. The programme was not well selected: there was far too much of Liszt's music, and—to say nothing of Chopin's *grande polonaise* (op. 22),

which was given without the introductory *andante spianato*—one of the pieces proved to be a snare and a delusion. A duet for pianoforte by Weber was announced; but what was really played was an arrangement for two pianos of Liszt's transcription for pianoforte and orchestra of Weber's *polacca* (op. 72), in which he uses as introduction (but with many additions of his own) the *largo* from the *grande polonaise* (op. 21). Liszt, or any other composer, is free to transcribe, add, or take away as he pleases; but, when such derangements of the great masters are used, they should be properly announced on the concert programme. Miss Dory Peterson played very well a short piece by Liszt entitled "Liebestraum," but she was certainly unwise in trying to perform the very difficult "Norma Fantasie" by the same composer. Mr. R. Burmeister showed much mechanical ability in the Chopin *polonaise*, and his rendering of Beethoven's sonata (op. 90) in some parts showed good feeling. The second movement was better played than the first.

Mr. Willing's first concert with the new choir was given at St. James's Hall last Tuesday evening. The orchestra, with Mr. Carrodus as leader, was an excellent one; and the same may be said of the choir, composed principally of members of the late Sacred Harmonic Society. The performance commenced with "God save the Queen," after which followed Handel's "Acis and Galatea." The solo vocalists announced were Miss Marie Rose, Mr. E. Lloyd, Mr. Albert James, and Mr. J. Bridson. Mr. Lloyd, however, was prevented from singing by sudden indisposition, and his place was taken, though only for a time, by Mr. Frank Boyle. Of course every allowance must be made for a vocalist who is called upon to sing at short notice; but Mr. Boyle, owing to a cold, proved himself so incompetent a substitute that after two attempts he had to withdraw, and some of the music in the second part was of necessity omitted. The other vocalists were very successful in their respective rôles. The chorus-singing was firm and vigorous, but not always interesting. Gade's "Psyche" was performed for the first time in London. We spoke in the ACADEMY about the music when it was produced at Birmingham under the composer's direction. We need therefore only notice the performance at St. James's Hall, but we cannot say that it was in all respects satisfactory. Mme. Marie Rose took the part of Psyche, as at Birmingham, and sang with much charm and feeling. Mr. F. King gave a capital rendering of the Eros music. The two trios for solo voices were sung in a very pleasing and refined manner by Miss Coward, Miss J. Rosse, and Mr. Albert James; while Miss Rosse declaimed in an able manner the Proserpine music in the third part. The chorus-singing was at times rough, uncertain, and especially lacking in light and shade; this may, however, be to a certain extent accounted for by the fact that the delicate orchestral accompaniments were not played in a sufficiently refined and subdued manner. Mr. Willing, as a conductor, displays a certain amount of vigour; this, however, is only one of many things required of a *chef-d'orchestre*. Beating with the foot, rapping on the desk, are certainly now and then necessary; but one should have resort to these means only in cases of extreme necessity. Such demonstrations really betoken weakness on the part of the conductor rather than on the part of the performers, or, what is perhaps as bad, insufficient rehearsal. Many of the movements were taken at a dragging rate, and, indeed, in some cases (particularly in the first and third parts) at nearly half the rate indicated by the composer. The concert, already a long one, was thus unduly lengthened. The next performance will be Mendelssohn's "Elijah," on January 30.

J. S. SHEDLOCK.

CHRISTMAS GIFT-BOOKS

PUBLISHED BY
CROSBY LOCKWOOD & CO.

MRS. MACKARNES'S CHRISTMAS STORIES.
A TRAP TO CATCH A SUNBEAM, and other Stories. By Mrs. MACKARNES. A New Edition. Illustrated. Contents:—A Trap to Catch a Sunbeam—Old Jolliffe—The Sequel to Old Jolliffe—The Star in the Desert—Only—A Merry Christmas. 3s. 6d., in a new cloth binding.
"Few writers since Miss Edgeworth have been so successful as Mrs. Mackarnes in pointing out the value of domestic virtues."
Athenaeum.

THE CLOUD with the SILVER LINING, and other Stories. By Mrs. MACKARNES. A New Edition. Illustrated. Contents:—The Cloud with the Silver Lining—Amy's Kitchen—Coming Home—The House on the Rock. 3s. 6d., in a new cloth binding.

THE DREAM CHINTZ: a Tale.—SIBERT'S WOLD; or, Cross Purposes: a Tale. By Mrs. MACKARNES. A New Edition. Illustrated. 3s. 6d., in a new cloth binding.

MINNIE'S LOVE: a Tale.—MARRIED and SETTLED: a Tale. By Mrs. MACKARNES. A New Edition. Illustrated. 3s. 6d., in a new cloth binding.

A TRAP TO CATCH A SUNBEAM is sold separately, price 1s., in a new and appropriate cloth binding.

THE BOY'S OWN BOOK: a Complete Encyclopedia of Sports and Pastimes, Athletic, Scientific, and Recreative, of Boyhood and Youth. Revised and greatly Enlarged. Pp. 734, with upwards of 600 illustrations. 3s. 6d., cloth.
"The Boy's Own Book" is still the book which English lads take most delight in.—*Old Service Gazette*.
"Mr. Lockwood's 'Boy's Own Book' is the real original work which we knew in days long gone by, but in a new and much enlarged form. To name it is to praise it."—*Saturday Review*.

MERRY TALES FOR LITTLE FOLK. Edited by Madame DE CHATELAIN. Containing Forty of the old favourites, such as Jack the Giant Killer, Jack and the Beanstalk, Red Riding Hood, &c. With 300 Pictures. 3s. 6d.
"A charmingly illustrated volume, which ought to be placed in every nursery."—*And Judy's Magazine*.

THINGS NOT GENERALLY KNOWN. By JOHN TIMBS, F.S.A. A Repository of Ancient and Modern Domestic Manners, Laws, and Customs, Old English Pastimes, Ceremonies, &c., Popular Errors, Notable Events, Curiosities of History and Science, &c. New Edition. In 2 double vols., or 12 single vols., handsomely bound, 30s.; or separately, at 2s. 6d. or 3s. per vol. (Detailed lists post-free on application.)
"The celebrated work of the indefatigable Mr. Timbs."
Saturday Review.

THE MUSEUM of SCIENCE and ART. Edited by Dr. LARDNER. With upwards of 1,200 Woodcuts. In 2 double vols., £1 1s., cloth; or £1 1s. 6d., bound in half-morocco.
"The most valuable contribution that has ever been made to the scientific instruction of every class of society."—*North British Review*.

London: CROSBY LOCKWOOD & Co., 7, Stationers' Hall-court, E.C.

J. MASTERS & CO'S
BOOKS FOR CHRISTMAS.

Just published, small 8vo, cloth, 3s. 6d.
OTHER PEOPLE: a Story of Modern Chivalry. By STELLA AUSTIN.
BY THE SAME AUTHOR.

STUMPS. Fifth Edition. 16mo, 2s. 6d.
SOMEBODY. Fourth Edition. 16mo, 2s. 6d.

Just published, crown 8vo, cloth, 5s.
THE DIAMOND RING: a Tale. By Mrs. E. H. MITCHELL.

BY THE SAME AUTHOR.
THE BEAUTIFUL FACE. Second Edition. Fcap. 8vo, cloth, 4s. 6d.

THE LITTLE BLUE LADY, and other Tales. Fcap. 8vo, cloth, 4s. 6d.

HYMNS for LITTLE CHILDREN. By Mrs. C. F. ALEXANDER. Fifty-fourth Edition, handsomely printed on thick toned paper with red border lines, 16mo, cloth, 2s. 6d.; with Twelve Photographs, extra cloth, gilt edges, 3s.; morocco, 10s.

MORAL SONGS ILLUSTRATED. By Mrs. C. F. ALEXANDER. With Eighty-six Engravings on Wood, from Drawings by Eminent Artists. The Illustrations have been arranged and engraved by J. D. Cooper. Small 4to, cloth, gilt edges, 6s.

PRESENTATION EDITION, ILLUSTRATED.
SACRED ALLEGORIES. By the late Rev. E. MONRO, M.A. Complete in 1 vol., handsomely bound in cloth, with Illustrations engraved on Wood by Mr. J. D. Cooper, crown 8vo, 7s. 6d.

THEODORA PHRANZA; or, the Fall of Constantinople. By the late Rev. J. M. NEALE, D.D. Second Edition. Crown 8vo, 6s.

HEROES of the CROSS: a Series of Biographical Studies of Saints, Martyrs, and Christian Pioneers. By W. H. DAVENPORT ADAMS. Crown 8vo, pp. 498, cloth, 7s. 6d.

London: J. MASTERS & Co., 78, New Bond-street,

MISS BRADDON'S CHRISTMAS NOVEL.

PRICE ONE SHILLING.

Illustrated with Four Whole-page Engravings, printed separately on toned paper, and with Eight Half-page Engravings worked in the Text, designed by Mr. Henry French, and engraved by Messrs. Sheares, Symonds, Cooper, Battershall, and Knight.

FLOWER AND WEED:

AN ORIGINAL NOVEL.

By the AUTHOR of "LADY AUDLEY'S SECRET," &c.
Now published as the

MISLETOE BOUGH.

Produced in the highest style of Fine-Art Printing, and admittedly the best value and the choicest.

POPULAR DRAMATIC NOVELS.

Now ready, never before published, the New Novels founded upon Lord Lytton's Dramas, price 1s.; cloth, 1s. 6d.; post-free, 2d. each.

1. THE LADY OF LYONS.

2. CARDINAL RICHELIEU.

3. MONEY.

4. THE HAPPY MAN.

By SAMUEL LOVER,
Author of "Bory O'More," "Handy Andy," &c.

Superbly Illustrated by Gustave Doré and other Artists, and thoroughly Revised by the Author of "Lady Audley's Secret," &c. Price 2s.; ornamental cover, cloth, gilt, bevelled edges, 3s. 6d.

MISS BRADDON'S ILLUSTRATED
ARABIAN NIGHTS.

STORY POEMS AND POETICAL LEGENDS.

Crown 8vo, cloth gilt, price 5s.; post-free, 5s. 6d.

HOMESPUN YARNS. By Edwin

COLLER, many years of the Essex Weekly News.

Contents.

Black Sir Ralph: an Essex Legend.	Margery's Valentine. Glenmorven.
Beesie and I.	In the Good Old Times.
An Autumn Evening's Dream.	Mrs. Jones's Lodger.
Sir Rupert.	A Rogue and a Vagabond.
Not in the Programme.	The Land of Gold.
Slain at Colchester.	Sal Parker's Ghost.
Bodgy.	Told at the Falcon.

CHEAP UNIFORM EDITION OF MR. ST. JOHN'S NOVELS.

Price 2s.; cloth, 2s. 6d.; never before published.

MY BEAUTIFUL DAUGHTER

By PERCY B. ST. JOHN.

Also ready, by same Author, uniform.
Arotio Crusoe. Sailor Crusoe.
Snow Ship. Young Buconeer.
Mr. St. John's other novels will follow in due course.

BY THE AUTHOR OF "A LUMP OF COAL," &c.
Price 1s., paper covers; 1s. 6d., cloth limp (postage 3d.).

THE CHRISTMAS HAMPER.

By ALEXANDER WATT.

"Full of the jolliest of good cheer."

ADMIRABLE GIFT-BOOKS.

THE BEST GIFT-BOOK FOR GIRLS.

Illustrated with upwards of 250 New and Original Engravings. Complete Repository of Amusements, Studies, and Employments.

Price 6s., extra cloth, richly gilt side, back, and edges.

THE GIRLS' OWN BOOK.

THE BEST GIFT-BOOK FOR BOYS.

Illustrated with 500 Descriptive and Original Engravings comprising—1. Science—2. Drawing—3. Painting—4. Constructive Wonders—5. Rural Affairs—6. Wild and Domesticated Animals—7. Outdoor Sports and Indoor Pastimes—8. Repository of Home Amusements and Healthful Recreations.

Price 5s., extra cloth, gilt edges, side, and back.

THE BOYS' OWN TREASURY.

MOST DELIGHTFUL GIFT-BOOK.

Illustrated with several hundred Engravings by eminent Artists. Written by GEORGE AUGUSTUS SALA and other Authors.

Price 3s. 6d., cloth gilt.

THE BOYS' BIRTHDAY BOOK

London: J. & R. MAXWELL, Shoe-lane, E.C.

SATURDAY, DECEMBER 23, 1882.

No. 555, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscripts.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

The Great Pyramid. By Richard A. Proctor. (Chatto & Windus.)

THAT a second eminent astronomer of our day should elect to "take up" the Great Pyramid, and that he should take it up, as Mr. Proctor does, in a practical and intelligible fashion, is both interesting and fortunate. Not ten, perhaps, in ten thousand of either Mr. Proctor's or Prof. Piazz Smyth's readers are qualified to adjudicate upon the merits of their respective theories. Yet it is something merely to know that doctors disagree; and, when doctors who disagree give us the opportunity of knowing where and why they differ, we who are neither astronomers, astrologers, nor mathematicians are distinctly benefited. It need scarcely be said that Mr. Proctor dissents from Prof. Piazz Smyth in all that regards the divinely appointed mission of the Great Pyramid.

Mr. Proctor's enquiry may be roughly divided under two principal heads, the first having for its object to discover how the Great Pyramid was built, and the second, why it was built. He treats the former as an architectural, the latter as an astrological, question, but assigns to astronomy an important part in both. To an outsider, it will probably seem that Mr. Proctor deals more conclusively with the first question than with the second. Touching the building of the pyramid, he holds that it was "certainly constructed in accordance with astronomical observations of great accuracy, and conducted with great skill;" and he shows, as it seems to me quite clearly, that, in the absence of such instruments of observation and measurement as we now possess, the exact orientation of the foundation, and the subsequent elevation of the superstructure in conformity with that foundation, could by no possibility have been as successfully achieved in any other way. That I should here reproduce the elaborate chain of reasoning which has already been so widely circulated in the pages of *Knowledge* is, of course, impossible; but Mr. Proctor's interpretation of the uses of the ascending and descending passages is too remarkable to be passed over. It was, he shows, in the first place necessary to take the altitude of the pole-star, in order to determine the elevation of the true pole of the heavens. This was an indispensable condition of the orientation of the base. Having no telescope, the architect accordingly bored an observing tube pointing northwards in the solid core of rock upon which the pyramid was to be built, and so made the base

of the structure itself serve the purpose of an observatory. Having thus secured a direct view of the pole-star, and obtained the exact points of the compass, it became necessary to devise some means of obtaining a true level. For this purpose a squared space (the subterranean chamber of the plans) was excavated at the bottom of the observing tube and precisely in the centre of the base of the intended pyramid. This chamber, when flooded with water a few inches deep, would have afforded "the only one method effective enough to give the required accuracy." (Herodotus, by the way, might have been misled by the tradition of this flooded chamber when he wrote that the underground vault was in "a sort of island surrounded by water introduced from the Nile.") Orientation and level being assured, the building would be begun; the architect meanwhile repeating these processes for each successive layer of masonry. When this masonry rose to the height of the passage-entrance on the north face of the pyramid, the builders would find themselves shut off from direct observation of the pole-star. Their obvious course would then be to obtain a reflection of its rays, which might be done by carrying up a second passage through the masonry "in such a direction as to contain the rays from the pole-star after reflection upon a horizontal surface, such as that of still water." This they actually did in constructing the passage commonly called the "ascending gallery;" and Mr. Proctor points out that, by plugging the lower part of the first passage, and then flooding it at its point of junction with the ascending gallery, a mirror-like surface would be obtained upon which the rays of the pole-star (admitted down the north aperture) would be not only reflected, but distinctly visible down the new observation-tube. The reason why the ascending passage is inclined at the same angle to the horizon as the descending passage is now for the first time explained. Nor is this all. Another, and a very remarkable, piece of corroborative proof is yet to come. It is obvious that, at the point of junction where the second water-surface was produced, the casing stones of the descending passage would need to be most perfectly fitted and cemented, in order that the water might not percolate and drain away. Just here, accordingly, the stones are not only better joined than elsewhere, but are actually made of a harder and better material. It is almost unnecessary to add that Mr. Proctor entirely disavows the theory of the "friction slope," and the views of those who maintain that the slant descending passage was meant for the sliding down of the sarcophagus.

"If the sarcophagus alone had been in question, we may be certain that the pyramid engineers would never have arranged for sliding it down to the place where the ascending passage begins, in order afterwards to raise it by the ascending passage. . . . But to say truth, moving the sarcophagus was a mere nothing compared with the lifting of the great solid blocks which formed the pyramid's mass. The engineers who moved those blocks to their places would not have wanted slant passages at the right friction slope by which to take the sarcophagus to its place; nor would they have provided for unnecessary descents or ascents either, but have taken the

sarcophagus from the outside to its proper level, and sent it along a level passage" (p. 150).

I am bound to say that Mr. Proctor's argument as to the position and purposes of these passages appears to me to prove itself; and I scarcely see how any unprejudiced reader can verify the argument by the accompanying sectional plan without being convinced.

Equally well reasoned is Mr. Proctor's argument regarding the astronomical uses of the Great Gallery, which (so long as the growth of the pyramid and the building of the King's Chamber did not block its outlook) was, in fact, a colossal stone telescope without lenses. Nothing can be more simple, or, as I take it, more conclusive, than the way in which Mr. Proctor demonstrates how the architectural peculiarities of this gallery (hitherto quite inexplicable) are one and all ingenious devices to narrow the walls at the top for the proper support of the superincumbent weight, while keeping them at the same time vertical for astronomical purposes. Now, too, we see how it is that this vast vault—being a telescope which had served its turn and could no longer be kept open—ends against a huge space of dead wall pierced only by the entrance to a comparatively small horizontal passage leading into the King's Chamber.

Thus far all seems clear. When, however, Mr. Proctor, after inviting us to view the stars through this mighty tube, volunteers to take us out upon the broad platform of the unfinished pyramid as it appeared when this end of the Great Gallery floor just reached the level of the fiftieth layer of masonry; and when he there introduces us to a whole army of observers and transit-workers, "armed, perhaps, with astrolabes, armillary spheres, direction-tubes, and ring-carrying rods," we begin to feel that we are getting a little out of our depth. Nor are we, on the whole, greatly reassured when desired to compare Mr. Proctor's diagram of the pyramid platform (fig. 9) with the scheme of an elaborate horoscope from *Raphael's Astrology*, and are hereby shown how this "carefully oriented square plane surface," built at such a woful cost of human labour some five or six thousand years ago, was neither more nor less than Khoofoo's "horoscope-platform." Mr. Proctor hence goes on to suggest—(1) that the successors of Khoofoo had each a separate pyramid because, according to astrological rule, each man needed a separate horoscope; (2) that the astrologers who superintended the building of the Great Pyramid were Chaldaean visitors who had "gained great influence" over Khoofoo; (3) that the pyramids of Khoofoo, Khafra, Menkara, and Aseska-f (Asychis) must have been all built by Khoofoo (or by Khoofoo with the co-operation of Khafra), as otherwise each successive king would inevitably have striven to make his pyramid larger than the pyramids of his ancestors; (4) that every pyramid was primarily an observatory and secondarily a tomb; (5) that, because Proclus states that each pyramid terminated in a platform from which the priests made their celestial observations, the said observations were "therefore religious in character;" (6) that no reason can be imagined why a building intended only for a tomb should be

placed with its four sides exactly facing the four cardinal points; (7) that "it seems utterly incredible that such a building as the Great Pyramid should have been erected for one man's body only."

Original and ingenious as are Mr. Proctor's conclusions on these seven points, I find myself unable to accept them; and for the following reasons:—

(1) With the single exception of the two-fold interment of King Sevek-em-saf and Queen Nubkhas, his wife, as shown in the "Amherst" papyrus, I am not aware that there is any known example of an Egyptian Pharaoh (previous to the period of the Her-Hor family) being buried otherwise than alone in his sepulchre. At Thebes, we find a Valley of the Tombs of the Kings and a Valley of the Tombs of the Queens. (2) There exists no monumental evidence of the arrival of any such Chaldaean visitors; and it is impossible, at the present stage of our knowledge, to assign the period of Abraham's journey to any particular reign, or even to any particular dynasty. Also, the shepherd Philitis, casually mentioned by Herodotus, is too shadowy a personage to be seriously accepted as the representative of a Semitic tribe. (3) If Mr. Proctor is correct in his astrological theory (and it is a theory which indeed has much in its favour), he is here sufficiently answered by a previous argument of his own, wherein he suggests that astrological precedent may have determined the proportion in which a son's horoscope-platform should be smaller than that of his father. According to this hypothesis, pyramids of the fourth generation would necessarily be of insignificant proportions. But whence does Mr. Proctor take his measurements of the pyramid of Asseka-f? The name of that pyramid—*Kheb*, the "Cool," or the "Refreshing"—is known through two sepulchral inscriptions in private tombs of the period; but its site has not yet been identified. (4) This assumption cannot, I imagine, be regarded by Egyptologists as anything but a simple inversion of the facts. (5) It may well be that each pyramid, when in process of construction, was used as a platform for astronomical observations, in which case it would inevitably have been so used by the priests. But this is no proof that their observations were "religious in character." It only shows that those important Court officials of the Ancient Empire called "the Hersehtu of the Heavens" (or, as we should say, Astronomers Royal) belonged to that sacerdotal body in whose hands was vested all the learning and science of Egypt. That astronomy as a science, and astronomers as a class, should have been in such force at this remote epoch shows, at all events, that no Chaldaean hypothesis is needed to account for the astronomical features of the Great Pyramid; nor can it be doubted that the ancient Egyptians at least equalled the ancient Chaldeans in their knowledge of the movements of the heavenly bodies. (6) To this objection may be opposed the words of Mariette:—

"Les quatre faces sont orientées parcequ'elles sont dédiées, par des raisons mythologiques, aux quatre points cardinaux, et que, dans un monument soigné comme l'est une pyramide,

une face dédiée au Nord, par exemple, ne peut pas être tournée vers un autre point que le Nord."

(7) I confess I do not see why it should be "incredible" that the Great Pyramid was nothing but the tomb of one man. For a mighty monarch who reigned sixty-three years, the Great Pyramid is not nearly so wonderful a sepulchre as that of a private individual of Thebes named Petamenap, whose subterranean tomb at Dayr-el-Baharee (consisting of courts, halls, passages, staircases, pits, and chambers) represents 23,809 square feet of excavated rock, the walls of which are in great part covered with hieroglyphic texts elaborately sculptured. The execution of this astonishing underground labyrinth must have taken nearly as many years as the building of the Great Pyramid; yet Petamenap was but a wealthy priest. Given these two essential conditions, a long life and a long purse, no tomb could be too vast or too splendid for the ambition of an Ancient Egyptian. The Great Pyramid may undoubtedly have been utilised as a "horoscope-platform" at certain stages of its growth. I fully incline to believe that it was so utilised. But I also believe that such use was purely incidental; and that, horoscope or no horoscope, the dimensions of the structure would in any case have been equally large. A pyramid, whatever its size, was a tomb, and nothing but a tomb—"l'enveloppe extérieure et à jamais impénétrable d'une momie" (Mariette).

It is interesting to note in this connexion a new pyramid-hypothesis lately advanced by a distinguished American traveller who, during the last twelve months, has submitted to various learned societies his views upon the area and volume of Lake Moeris, the site of the Labyrinth, and the origin of the Pyramids. Concerning these last, Mr. Cope Whitehouse conceives that the Gheezeh platform was once a range of rocky hills, such as are now found in the neighbouring Wady Fadhi (and, I may add, in parts of Nubia); hills "weathered" into fantastic shapes, to which "horizontal strata gave an artificial appearance and pyramidal summits." These rocks were "mined, like coal or salt;" and, when the better stone was extracted from the heart of the mass, the inferior material—left supported on natural piers—was cut into blocks, "lowered from above, and pushed into place" to build the pyramid. Such is Mr. Cope Whitehouse's argument, which is as remarkable for originality as Mr. Proctor's scheme of orientation and levelling. When, however, Mr. Cope Whitehouse goes on to maintain that the pyramids were not built till the time of the making of Moeris; and that the early kings, having been first buried in rock-cut sepulchres in these same hills, were "shifted" up into structures built by the Pharaohs of a long subsequent dynasty, I am compelled to differ from him altogether. A fusion of Mr. Proctor's and Mr. Cope Whitehouse's respective theories would perhaps bring us very near to the truth.

Meanwhile, one feels inclined to ask if astronomers, engineers, amateur theologians, and learned folk generally will, in future, trouble their heads less about the Great Pyramid when they learn that it was not

"the" Great Pyramid after all, but only one of three, all of the same dimensions? Or will the simple fact of its triplicity make it trebly occult, and so tend to multiply by three what specialists are wont to call "the literature of the subject"? We have, at all events, Prof. Maspero's authority for the fact that two ruined pyramids lying southward of the Gheezeh group—mere piles of ruin left almost unnoticed to this day—prove, on being partially cleared of debris, to have originally been of the same size as the famous pyramid of Khoofu. Neither has been opened in modern times, though both will probably prove to have been violated at some remote epoch. Ere now, the excavations begun last season will have been resumed, and we may hope soon to have news of the identification of two more royal tombs of the period of the Ancient Empire.

AMELIA B. EDWARDS.

Arthur Hugh Clough: a Monograph. By Samuel Waddington. (Bell.)

MR. WADDINGTON is a good lover of his subject; and it is undeniably one deserving a monograph of this kind. Apology, therefore, was not required for this volume; but a different handling, I think, was—certainly a different temper. Mr. Waddington seems to think it a sufficient qualification for appreciating Clough that one should noisily decry those from whom Clough differed. To have written, for instance, pp. 80–82, with their condescending censure of Mr. Keble, their urbane acceptance of Card. Newman's probable veracity, or, pp. 140, 141, with their complacent assurance that "old beliefs die hard," the rueful flippancy of coupling St. Evremond with St. Augustine, the really ludicrous argument that people who believed in antiquity and authority ought to have gone back to the Vedas and Confucius as older still, and to have preferred Lucretius to Ignatius and Basil on the same ground—these are defects of taste and insight so glaring that I prefer to indicate them merely. It would be well if Mr. Waddington put to himself this test—a test which he should, I think, welcome: "What would Clough, in a serious mood, have thought of such an attitude towards his great adversaries?" In fact, Mr. Waddington has not learned the very rudiments of that art so necessary to a biographer—self-effacement.

Biographically, the work adds but little to knowledge previously accessible. It contains, however, a somewhat fuller account of Clough's scattered prose writings and of his American experiences than Mr. Palgrave's Preface to the *Poems* or even Mr. Hutton's most interesting essays affords us. Of the greater poems Mr. Waddington speaks with that hesitation which is inevitable so long as we insist on comparing things essentially unlike. It is not very useful to balance "The Bothie" against "Dipsychus," or either against "Amours de Voyage." They have one point of contact, and, so far as I can see, one only. In all three the attitude of hesitancy is depicted with a master hand. But here they part company. In the "Bothie" we have a hero of strongly

developed opinions, but of very partially developed character; where thought touches action, he is surprised and confused; the social phenomena of the world, its rank and fashion, its sexes and affections, puzzle and distract him. The special charm of the poem—apart from its notable picturesqueness and mordant satire—

"Ah! replied Philip, alas! the noted phrase of the Prayer-book,
Doing our duty in that state of life to which God has called us,
Seems to me always to mean, when the little rich boys say it,
Standing in velvet frock by mamma's brocaded flounces,
Eyed her gold-fastened book and the watch and chain at her bosom,
Seems to me always to mean, 'Eat, drink, and never mind others!'"

its charm, one may say, for a large fraction of its readers, is its Oxonian flavour. Here, if anywhere in literature, is the *κλῆδον σωτήριος* of a Long Vacation and its happy companionships.

In "Dipsychus," on the other hand, we have a high-minded, low-spirited recluse, striving vainly against the conventional suggestions and temptations of the world. The spirit that dogs him is that of his own despairing weakness, coupled with the natural human craving to make the best—that is, the most comfortable—of a bad job. Thus Dipsychus loses the aspiration without gaining the comfort; the "little grain of conscience" has soured the whole lump, yet failed to lighten it. The attempt to serve God and Mammon ends even worse than in serving the latter—to wit, in serving neither. This is, perhaps, the saddest poem in existence. It may be, as Mr. Waddington, quoting from Mr. Symonds (p. 242), affirms, that "the problems agitated by Clough are of a more subtle and spiritual nature than those which Goethe raised." But "Dipsychus" fails where "Faust" succeeds—in giving as good a picture of the strong side as of the weak side of the two-souled man. The comparison with "Manfred" (pp. 247–51) is interesting, but unfortunately marred by Mr. Waddington's pet hobby—the non-existence of the devil. The tone in which he discusses the subject is really enough to make one an arch-Calvinist from sheer force of repulsion. Perhaps "Dipsychus" will never have its due fame as "our English Faust" (p. 242)—its framework is too plainly borrowed from its German prototype.

Mr. Waddington is apparently rather puzzled what to say of "Amours de Voyage." The adverse judgment of Clough's distinguished friend (p. 253), which so much weighed upon the poet as to retard the publication for nine years, weighs to some extent on Mr. Waddington also. Probably most great works have been "discouraged" in MS.; we know that *Sartor Resartus* was. But Clough's own distrust of the poem is readily intelligible, and in no way detracts from its merits. The presence of his own personality is clear in "The Bothie"—though most people will find him, as Mr. Hutton does, in Adam, not, as Mr. Waddington (p. 164) seems to do mainly, in Hobbes. In "Dipsychus," also, it is clear, at least to anyone who has read the minor poems. But in "Amours de

Voyage" it is startlingly conspicuous, not, of course, in the love episode, but in the experiences of the Roman siege. Clough himself doubted, Mr. Hutton tells us, "its vigour of execution"—he probably felt it to be somewhat too personal, too much of a diary. Yet the same critic (*Essays*, vol. ii., p. 246) calls it "a very original and striking poem." And such it surely is. Every one feels the reality of the heroes of "The Bothie," yet, to some at least, "Claude" is more real than they—more truly a character and less a sketch. Even Dipsychus, though a striver, is always a pleasanter object than a man *blasé*, has less flesh and blood, less in some ways of the nineteenth century about him, than the hero of the "Amours." Further, what poem, or writing of any kind, has given one so much of the unique impression of modern and ancient Rome commingled? The very boredom of Claude, and his sudden flashes into feeling and enthusiasm, are natural, one feels, to the "barbarian stranger," if not quite "a dullard and dunce." And then the beauty and the truth of the elegiac interludes deserve fully the commemoration that Mr. Waddington has given them (p. 271):—

"Therefore, farewell, far seen, ye peaks of the mythic Albano,
Seen from Montorio's height, Tibur and Aesula's hills!
Ah! could we once, ere we go, could we stand,
While to ocean descending,
Slunk o'er the yellow dark plain slowly the yellow broad sun,
Stand, from the forest emerging at sunset, at once in the champaign
Open, but studded with trees, chestnuts umbrageous and old,
E'en in these fair open fields that incurve to thy beautiful hollow,
Nemi, imbedded in wood, Nemi, inured in the hill!

"The Bothie," having more humour, will probably always have more popularity; yet may it not be urged that "Amours de Voyage" wears better, approaches life and thought more nearly, instead of receding from them?

It may well be doubted whether, in spite of the enthusiastic admiration of a few, Clough is at all adequately known for the strong and sincere poet that he is. He has been dubbed "sceptic"—a most inadequate definition of one side only of his nature—and ruled to be "unhealthy" accordingly. If Mr. Waddington's book persuades but one person to inwardly digest, I will not say the larger poems, but "Peschiera" or "The Questioning Spirit," he may well be content. It is not a good book, but it will not have been written in vain. E. D. A. MORSEHEAD.

Some Account of my Life and Writings: an Autobiography. By the late Sir Archibald Alison, Bart. Edited by his daughter-in-law, Lady Alison. In 2 vols. (Blackwood.)

THIS book does not lend itself readily to the purposes of purely literary criticism. Sir Archibald Alison was not, by his own showing, a man of letters, or a moralist, or even an historian in the popular or the scientific sense. He was a man with "a mission" akin to that of Burke and Wordsworth before his time and of Mr. Mallock in our own day. At the close of his autobiography, he says that such success as he had met with in life

was due to his having, all through the twenty volumes of his History and a course of *Blackwood* essays long as the roll of Don Giovanni's peccadilloes, kept one "great end" in view. That end was

"to oppose the erroneous opinions which, since the French Revolution, and in consequence of it, had, as I conceived, overspread the world in political, economical, and social concerns. . . . It was much the same feeling which made Rousseau say that he resolved early in life to oppose himself to all 'les préjugés de son siècle.' But there was this difference, that I embraced the unpopular side and he the popular. I rested on practice and experience, he on theory and imagination."

So much for the negative side of Alison's political creed. The positive he thus expresses with characteristic *naïveté*:—

"The order intended by nature is that the richer and more educated classes, guided by the instincts of property and enlightened by the lessons of history, should direct and rule the greater numbers of the working classes, who are impelled only by the wants of poverty, although their numbers and energy are always required to watch and control the governing powers."

Alison being, at least in his own opinion, a politician above all things, any estimate of a book dealing exclusively with him would resemble the proverbially weak cast of "Hamlet" if it did not state his political views. This very fact, however, excludes the greater part of his life and his work from the range of our criticism.

The private life of Alison, as told by himself, was singularly uneventful and more than moderately happy. Born in 1792, he was the senior of Carlyle by three years and of Macaulay by eight. His father, the Rev. Archibald Alison, a Scotch Episcopal clergyman with an Oxford training, is still remembered as the author of an elegant *Essay upon Taste*. Through his mother, Alison was also related to the "polite" and "philosophical" circles of Scotland. He received his general and legal training at Edinburgh University, the most notable of his contemporaries being Edward Irving. From an early period he showed a taste for reading and travel, which again developed into a determination to refute Malthus and write the history of the French Revolution. Until his marriage, he spent his savings from his "allowance" and his professional earnings in tours on the Continent, the descriptions of which, as they appear in his autobiography, remind one occasionally of the poetry of Lord Byron, but oftener of the prose of Señor Castelar. Called to the Scottish Bar, he made fair way both in law and literature, being industrious, eupeptic, accomplished, and self-confident. Although he hints more than once that he was not very generously treated by the chiefs of the Tory party, to which he gave an independent support—he states with all the emphasis of italics that what that party desires is *pliant ability*—he received under the Wellington Ministry the post of Advocate Depute; and he made an excellent marriage. But on his friends losing office, all at once he found his income reduced by a thousand a-year. This seems to have been the one check of his career, but, as he was young at the time, he soon recovered from it. He threw himself with increased energy into business and writing, produced a work on

Criminal Law of which he was very proud, and commenced his History. In due course his friends returned to power; and before he was forty he was established as Sheriff of Lanarkshire, and, between that office and literature, in receipt of £2,000 a-year. He left Edinburgh for Possil House, near Glasgow, consoling himself *more* *suo* for the loss of the society of the Scottish capital with an appropriate Latin quotation. There he finished his well-known History and its "Continuation," wrote his biographies of Marlborough and Castlereagh, and flooded *Blackwood* with his polite political pessimism. He was always in "good," or what he styles "respectably descended," society, both in Scotland and in London, and liked it. He took an intelligent interest in Chartist riots, strikes, bank collapses, the Crimean War, the Burns centenary, the American Civil War, and indeed in all the events of his time. He seems to have received as much literary and social recognition as he desired, and is especially proud of having beaten Lord Palmerston in a struggle for the Lord Rectorship of Glasgow University. The critics, it is true, did not always praise him. But then he had always an explanation of their conduct that satisfied himself. They were ignorant, or his opinions were unpopular—the *Quarterly* did not notice his works because Croker could never forgive him for having forestalled him with a History of the French Revolution. Of no great depth or spirituality of nature, and laying claim to none, Alison was very fortunate in his domestic relations. He seems to have been a very affectionate husband and father, and his affection was rewarded with devotion. His life, which was in many respects an enviable one, closed, after a short illness, at the ripe age of seventy-five.

In one of the happiest passages in his "study" of Macaulay, Mr. Cotter Morison emphasises the distinction between the older and the later school of historians as that between surveyors and geologists. Alison, like Macaulay, belonged to the more superficial school. But of the younger and more vigorous writer it may at least be said that he brought the whole armament of the Ordnance Survey to his work. Alison all through his twenty volumes seems like a courtly and industrious old gentleman looking at the phenomena of modern life through the gold-rimmed eye-glass of the "good society" whose dinners and conversation he enjoyed, and to whose preachings and predictions he gave literary form. In his autobiography we find him dealing with the individuals he met in private precisely as he dealt with "classes" and "masses" in his works. Speaking of Dickens, he makes a remark which, sufficiently amusing in itself, is further interesting as indicating his habitual attitude towards his fellow-men. "I never," he says (vol. i., p. 568),

"had any taste for those novels the chief object of which is to paint the manners or foibles of middle or low life. We are, unhappily, too familiar with them; if you wish to see them, you have only to go into the second class of a railway train or the cabin of a steamboat."

The persons whom Alison thinks it worth his while to give his impressions of in his

autobiography—and, after politics and personal history, they form the most important element in it—did not, of course, belong to "middle or low life." But he never seems to have got beyond a steamboat saloon, first-class carriage, or, at the best, country-house smoking-room knowledge of anyone. He certainly had not Carlyle's "terrible eyes," or his resolution to tear a man's subjective secret from him, or his power of making startling "arrangements" in dyspeptic black. There is scarcely one of these impressions that will be of permanent interest, or is worth reproducing here. The person whom Alison seems most to have admired—leaving intimate friends out of consideration—was the late Lord Lytton. After him comes, perhaps, Mrs. Norton, who, we learn, was quite able to keep Mr. Gladstone in play. Alison met Lord Byron in the course of his early travels, and seems to have been most struck with his "wretched conceit." He bewails the "republican sentiments" to which Dr. Chalmers gave way. He thought that Hallam's "defect was that he was too great a *parleur*, spoke incessantly, and followed rather the course of his own ideas and recollections than what was interesting and instructive to his auditors." In O'Connell and Disraeli he observes a habit of not looking an interlocutor straight in the face, and associates it with "a Jesuitical cast of mind." Mr. Gladstone "left on my mind the impression of his being the best discourses on imaginative topics, and the most dangerous person to be entrusted with practical ones, I had ever met with." He notices a fondness for after-dinner effects in Lord Houghton, and self-confidence in the Duke of Argyll.

So Alison prattles on through hundreds of pages, his conclusions on his contemporaries being on a par with his remarks on the monstrosities of ladies' dress, the dearth of female beauty in "elevated circles," and the increase of "pretty horsebreakers," in London by way of reaction against Exeter Hall, or with his momentous and italicised resolution *never to write after dinner*. But let it be said to Alison's credit that he was no malignant or mischievous spirit. There is in his autobiography none of the unpleasant piquancy of several recent Memoirs; it will not, like Carlyle's and Mozley's Reminiscences, lead to bitter personal controversy. He tells of an Italian *liaison* of the late Duke of Hamilton, but mainly to prove the forgiving disposition of the Duchess. He evidently thought Macaulay a bore, yet he freely allows his genius. The single reference he makes to Carlyle is complimentary. He had no reason to love the late Lord Beaconsfield; yet he does justice to his abilities—a remark which holds good of his frequent allusions to a certain John Hope, Lord Justice Clerk of Scotland, who was evidently his professional "thorn in the flesh." Altogether, Sir Archibald Alison appears to have been a kindly, well-intentioned gentleman and a diligent student, with a fair, if not a rich, mind. No student of the period covered by his historical works omits to read them, and no investigator of the social history of England during the earlier half of the present century will pass over his autobiography.

WILLIAM WALLACE.

Notes on a Visit to the Russian Church in the Years 1840, 1841. By the late William Palmer. Selected and Arranged by Card. Newman. (Kegan Paul, Trench & Co.)

EARNEST as was the late William Palmer in his desire to promote the "restoration and the peace of the Whole Church," and especially the union of the Anglican and Russo-Greek branches, it may appear somewhat strange that he did not yield to persuasion, and publish his journals during his lifetime. He left all his papers by will, with a loving confidence, to Card. Newman, who, with a full appreciation of the responsibility involved, has, with a tender and delicate care, revised and now given them to the world. The task has been judiciously performed, and the result is a perfect justification of the importunity with which the Cardinal urged upon his friend the publication of his Russian experiences.

In the first place, Mr. Palmer requested to be admitted to communion in the Russian Church "as a personal duty," "as an act of submission to a superior, as well as a right and a privilege" (p. 553). He expressed this desire as follows in a letter addressed in Latin to Count Protassoff, the Imperial "Prokuror":—

"As regards myself personally, I think it right to add that from the time I have come within the dioceses of the Russian bishops I recognise no other Church as true and legitimate in these countries, nor adhere, in will at least, to any other jurisdiction than theirs. Not as if I came from any heresy or schism, seeking to be reconciled to the Church of God which is in Russia; but being a Catholic Orthodox Christian, as I trust, and coming from a Catholic and Orthodox and Apostolic Church, I seek, from the legitimate and canonical bishops of the country, in whatever country I may be, and from each one of them in his own diocese, the common right of communion" (p. 129).

"I am," he said to the Archbishop Koutnevitch,

"no member of the Church of England in Russia, but of the Church of Russia—in wish and intention at least;"

for he added, in explanation, that he

"did not recognise any of the dozen churches and confessions in Russia (the Lutheran and the Calvinistic, the Latin, the Armenian, &c.), but only one Confession or Faith—viz., that of the Creed" (p. 168).

In the second place, Mr. Palmer urged on the Russian ecclesiastical authorities a special prayer for the Anglican Church. Neither of these requests was granted. Indeed, the questions were not formally put before the Synod; and in reference to the administration of the Eucharist and the reconciliation of the Churches, the Metropolitan of Moscow informed Mr. Palmer, by letter through the Imperial "Prokuror,"

"that he who would receive the communion must submit absolutely, and without restriction, to all the doctrines, discipline, and ritual of the Orthodox [Eastern] Church. But to make union or reconciliation, with any concession or allowance, however small, is beyond the power of a diocesan bishop, and can be done only by Synods."

Transubstantiation, the *Filioque*, or procession, the Intercession of Saints, Icons,

Miracles, and a thousand other things stood at the very threshold to bar the way to anything like a reconciliation of the Churches. Although in holy orders, Mr. Palmer was allowed to salute the relics of St. Philip (1565) only on assuring the protopope of the Church of the Assumption at Moscow that he was of the Catholic and Apostolic faith and religion (p. 437). It is true that, at parting, Mr. Palmer was

"informed that if the [English] Bishops would only write to the Synod, the Synod would show every disposition to correspond with them, and consider and examine and treat of whatever they propose ;"

and he was even invited to return to Russia in a representative capacity. But, on the other hand, he had been previously told that the Holy Governing Synod, which has usurped the position of the Patriarch, took no cognizance of the heretical Church of England, and affected even not to know its name; and that, therefore, the Synod could hold no communication with it as a body, or with any individual member of it. This was strongly emphasised when Mr. Palmer urged on the Russian ecclesiastical authorities a special prayer for the Anglican Church ("by way," Card. Newman explains, "of settling a dogmatical fact"), the reply being that it would be too great a public scandal to pray for a heretical and apostate Church. "Protassof" (the Imperial "Prokuror"), the Russian priesthood told Mr. Palmer, "is our Patriarch;" and no question affecting religious doctrine, the ritual, or the government of the Church in general can be decided without the authority of the Emperor. For this very reason, no approach by any Christian community of the West ever will bear any other fruit than the Dead Sea apples of Mr. Palmer's gathering. Fossilised as is the Russian Church in tradition and superstition, and rooted in the very hearts of a people whose knowledge is faith alone, no Russian Emperor would ever venture to sanction a religious fraternisation with the heretics of the West, for fear of the consequences of disturbing the equanimity of his "Orthodox" subjects. There is a well-authenticated story of the late Emperor Nicholas—which may or may not refer to the period of the incorporation of the Uniats into the Russian Church—that, when it was put to him by the Synod to decide whether or not a purgatory should be admitted into the Creed, he stamped his resolution on the paper in this wise: "No purgatory! Nicholas."

In his pithy Preface to this work, Card. Newman asks all

"‘men of good-will,’ who pray for peace and unity, whether here or in the North, to ponder the words of a leading Russian authority introduced into this volume, to the effect that, ‘if England would approach the Russian Church with a view to an ecclesiastical union, she must do so through the medium of her legitimate patriarch, the Bishop of Rome.’"

This, however, is, in a way, begging the question; and, so far as concerns the generality of English readers, it is as an arrow shot up into the sky, for it is quite as unlikely that the Church of England will ever veer round to Rome in order to put itself on a common footing with the Eastern Church as that

the latter will even then bate an iota of its ordinary observances to promote such an affinity. There is a passage on this subject in Mr. Mackenzie Wallace's book on Russia (vol. ii., pp. 194, 195), in which the project of the unification of the Churches is somewhat too contemptuously referred to; and it is about the only decided opinion to which Mr. Wallace commits himself. Yet there cannot be two opinions as to the feasibility or desirability of attracting a living to an inanimate body.

In the year 1874, an English translation was published of *Romanism in Russia*, by Count Tolstoi, then, and now again, Russian Minister of Public Instruction. That work and the book under review contrast very strongly, each advocating diametrically opposite principles and the attainment of a similar object by totally different means. In the late Mr. Palmer's time it did not appear to the Russian authorities that there was any likelihood of reconciling the differences between the Anglican and the Russian Churches. Mr. Palmer demonstrated that, on most essential points, there was similarity if not perfect identity between the Orthodox (Eastern) Church and that of Rome. Count Tolstoi and the late Metropolitan of Moscow considered, in 1866, that "the bishops and learned men of the two Churches might be able to reconcile the differences;" and the divergence of the Russian Church from that of Rome was expressed by the Metropolitan to the Rev. Mr. Eden, who wrote the Preface to the translation of Count Tolstoi's work, in these words: "If the people of England think that the Russian Church is like the Roman, I am not surprised that they should entertain a very strong feeling against it." Rome, as the present Minister of Public Instruction in Russia has pointed out, "had no part in the conversion of Russia to Christianity," and "the whole history of the Russian Church is a protest against the claims of Roman supremacy." These claims of the supremacy and of the infallibility super-added of the Roman Pontiff are in themselves insuperable obstacles to the realisation of the Christian dream of the intercommunion of the Churches.

Apart, however, from theological issues, the late Mr. Palmer's journals are a valuable literary acquisition, and under Card. Newman's editorship they have quickened into a living interest. ROBERT MICHELL.

NEW NOVELS, ETC.

A Story of Carnival. In 3 vols. By Mary A. M. Hoppus. (Hurst & Blackett.)

My Connaught Cousins. In 3 vols. By Harriett Jay. (White.)

A Passion Flower. In 2 vols. (Macmillan.)

Earnest Madement. By Major R. D. Gibney. (W. H. Allen.)

The Princess and Ourdie. By George MacDonald. (Chatto & Windus.)

THE spontaneous freshness and flash of genius which marked *Five-Chimney Farm* are not to be found in *A Story of Carnival*. Perhaps this is because Rome is a more hackneyed theme, and because Hawthorne, having written *Transformation*, increases the difficulty for

others. But this Carnival story leaves a dreary and incomplete impression on the mind, not so much from its own elements of tragedy as from its sketchiness. The scene is laid amid artist life in Rome; but there is nothing of art in the book. There is a great deal of description of the masquerading on the Corso, and grotesque figures and black dominoes haunt us like nightmares. There is much about Italian villany, the horror of the evil eye, the superstition which rules the actions of the people, lottery episodes, and midnight assassins; and the whole is interspersed with so many words of Italian, chiefly exclamations, that a general sense of grittiness is left by the dialogue. Very little interest is stirred until Gilbert Harvey, the hero, is engaged to Christal Grey at the end of the first volume, and then the interest is allowed to lie dormant again till towards the end of the second, when the plot thickens; and into the third volume is compressed all that can be really called the story. It has the appearance of having been made to regulation length, and is another example of the ill effects of the three-volume form of novel. We grow weary of the plotting of the assassin, Marente, and the vulgarity of the rollicking, horsey Geoffrey Harvey; and we feel so sure of the mystery of Gilbert and Geoffrey's birth being cleared up that we cannot understand why Christal should make her lover so unhappy about it, nor why she should turn to another friend for comfort, and yet be ready to make up the quarrel, and be the same as ever, because Gilbert can dance, and because, in the mazes of a waltz, "for five minutes his soul and hers so perfectly responded to each other that they were one." All the characters are shadows faintly outlined, and pass away in a Carnival roar. And yet there is thought behind the book; and there are touches, as in the fate worked out through Gilbert's want of purpose, and the description of the sad Tremayne's dead face, which make us know it is an inadequate expression of the writer's real talent, and that in this story she has not done herself justice.

There was no necessity for a prefatory note by Mr. Robert Buchanan to *My Connaught Cousins*; the book is quite pleasant and quite intelligible enough to stand on its own merits. It is written with a lively and intelligent sympathy with the Irish people by one who evidently enters into the tragic elements of the Irish character arising from the impulsive warmth of feeling and incompleteness of development, which must leave its destiny a question not to be solved in any time near our own, but still to call out the disinterested efforts and fruitful sympathy of leaders of the future. Jack Stedman, the hero, is invited to a typical Irish home, full of that joyous hospitality, that courteous kindness and perfect freedom, which make up the associations which most people have with Irish visits. Six delightful cousins vie in their efforts to spoil him; and, of course, Oona, the most beautiful, is the heroine. The prospectus of the book looked doubtful when Jack set himself to read Oona's MS.; but her story is better than anything Jack writes of his own; in fact, it becomes plain that his visit is chiefly a framework to introduce these somewhat

wild, but interesting, Irish stories. Oona's tale of the two brothers; Nora's, of "The Maid of Cruna Island;" and, best of all, Kathleen's, of "Rose Merton," are well worth reading—the last too sadly worth remembering in the light of recent Irish affairs. In addition to the stories with which he is regaled, Jack Stedman becomes interested in the characters around him, and has some admirable opportunities of studying the landlord question (which he leaves with most disheartening results, we must confess) and the customs and claims so dear to the hearts of a people who can never be rightly judged until they are seen and known in their own homes. There is little artistic effort, but there is genuine pathos and the sympathetic feeling which goes far to solving vexed questions, in *My Connaught Cousins*.

A Passion Flower has for its root the thought of "distilling the soul of goodness from things evil," and, when we are fairly launched into it, we can follow this clue; but the efforts to get into the real story are wearisome. We begin with a young Scotch minister who falls in love with the daughter of an Italian actress; and we are quite ready to take the beautiful Myrrha Zarino as a heroine, but she dies in the first fifty pages, and then we have to begin again and take her daughter Isabel instead, who is not nearly so pleasant. We think we are fairly launched this time, especially when Isabel elopes to Gretna Green with a Frenchman, after telling him that "nothing alarms her, not even the dull marriage without bridesmaids or a cake," and receiving from him a note "passionate, but to the point." But half-way through the first volume she also "ceases to breathe;" and shortly afterwards we find that it is her daughter Myra who is the passion-flower and the real heroine. And a very wild and wayward heroine she is, giving endless trouble to all her friends, loving the husband of one sister, and running away out of sheer misery with the lover of another. Being a law to herself, and minding no other, she is finally brought to the depths of shame and grief, in which she finds comfort by joining the Roman Catholic communion, and in devotion to a scapegrace father, and gradually emerges from the dream of selfish passion in which she has found herself so absorbingly interested. The story is much more concentrated and flows readily in the second volume, and the character of the pleasure-loving and unprincipled Frank Renton is cleverly sustained throughout; but we feel that Myra's guardian, Mr. Percival, and his wife, and Lilian, the much-enduring friend, are merely lay figures beside the wild Myra, and have little individuality about them.

The author of *Earnest Madement* tells us that his story has been written "for the purpose of inducing the multitude to see the evils arising from drink, and to think better of the British soldier." The last object in these days of enthusiastic reception of troops seems unnecessary; and we can only hope that the first will be accomplished, or the gallant author will be disappointed. The description of a drunkard's life and home relationships is sufficiently horrible in the opening chapters; but when Earnest's father has broken his

wife's heart, and died himself, the scene changes to India, and there is a good deal of spirited military description of the Sutlej campaign. Of course, the teetotal hero has rapid promotion through the ranks which he had been compelled to enter. We think the author is happier in describing the soldier's prowess than in his efforts for temperance, which are of the order of preaching, and will not be likely to impress "the multitude" as much as he would wish them to do, for he is very evidently in earnest, though his story is somewhat improbable and lengthy, and manifestly the work of an unpractised hand.

The readers of *Good Words for the Young* will welcome the appearance of Dr. MacDonald's serial story in a completed form. The story is full of beauty—almost too full of poetical and delicate fancies for the children to see how much out of the common is the fare which has been provided for them. And after the first few chapters we do not think Curdie has quite enough individuality. It is perhaps more in keeping with the moral teaching of the story (and there is a large amount of moral teaching, we are bound to confess) to make him subservient to his mission of rescuing the spell-bound King. Even while they are young, the children will enjoy the adventures of the boy in his search for the Princess Irene, and the wild imagining of his animal companion, Lina; but it is only life itself which can show the children the true meaning of the Lady of Light, who "takes a few thousand years to answer the questions asked her," and who flashes from all the precious stones of the earth, and yet shows herself only in her highest beauty when she is in the King's palace "as one that serves." The most charming part of the story is the magic power bestowed on Curdie of detecting the true nature by touch. It is impossible to keep from rejoicing when the hand of the traitorous physician betrays itself as the claw of a bird of prey. As a specimen of the clever fun of the book (too clever for the children, who will rejoice more keenly in the horrible elements of the story and the funny beasts that haunt it) we may quote the fate of the preacher who had preached, on the text "Honesty is the best policy,"

"that to be just and friendly was to build the warmest and safest of all nests, and to be kind and loving was to line it with the softest of all furs and feathers, for the one precious, comfort-loving self there to lie, revelling in downiest bliss. . . . At this point of the discourse the head of the leg-serpent rose from the floor of the temple, towering above the pulpit, above the priest, then curving downwards with open mouth slowly descended upon him. Horror froze the sermon-pump. He stared upwards aghast. The great teeth of the animal closed upon a mouthful of the sacred vestments, and slowly he lifted the preacher from the pulpit, like a handful of linen from a wash-tub, and, on his four solemn stumps bore him out of the temple, dangling aloft from his jaws. At the back of it he dropped him into the dust-hole among the remnants of a library whose age had destroyed its value in the eyes of the chapter. They found him burrowing in it, a lunatic henceforth—whose madness presented the peculiar feature that in its paroxysms he jabbered sense."

F. M. OWEN.

CURRENT THEOLOGY.

The Revised Version of the First Three Gospels. By F. C. Cook. (John Murray.) Canon Cook's work, dealing with the first three Gospels, will no doubt be felt to be, after the "tremendous onslaught" of the *Quarterly* (the phrase is Mr. Cook's), the most formidable criticism on the Revised text that has yet appeared. It cannot, indeed, be said that Mr. Cook has done much towards destroying, or perhaps even seriously weakening, the masterly chain of reasoning by which Drs. Westcott and Hort established the claim of the Vatican MS. to a place of exceptional, indeed almost absolute, authority in the determination of the New Testament text; but his attack on that MS., as being comparatively easy to understand, may be expected to produce a considerable effect. We have space here to notice only one point. Canon Cook's theory is that the Vatican was written in great haste, under pressure from Eusebius, who had orders from Constantine to use all despatch in preparing the copies of the New Testament. How is it, then, if the omissions are due to the haste of the scribe, that by far the most important of them, as well as the greater number, occur in the Gospels rather than in the later portions of the work, when the urgency would have become more pressing? Perhaps Canon Cook would reply that the scribe would naturally be more careless in those parts with which he might think himself most familiar, and that omissions would have been more easily noticed and corrected in St. Paul's epistles, for example. This may be true; but it only shows how unsafe it is to forsake for probabilities the sure method of inductive reasoning, based on the observation and comparison of textual facts, followed with indefatigable industry, during thirty years, by Profs. Westcott and Hort.

A Complete Concordance to the Revised Version of the New Testament. By J. S. Thoms. (W. H. Allen.) It was to be anticipated that the Revised Version would soon be followed by a Concordance of its own, and the work before us leaves little to be desired in the way of completeness. It embraces, along with the entire vocabulary of the text, not only the more important of the marginal readings, but also those of the American Committee. As the writer remarks, it could hardly be expected that a work containing more than sixty thousand references should be absolutely free from mistakes, but it will require a careful search to find them here. We may notice, however, the omission of Matt. xxvi. 63, under "God," and the absence of any indication that the American Committee preferred "demon" and "demons" to "devil" and "devils," wherever the latter word represents the Greek *δαίμων, δαίμονιον*. In some other cases, too—but perhaps they are not important—the American readings are unnoticed. It is an advantage claimed for this Concordance—and its value will not be denied—that each word of very frequent occurrence is followed by a key to the various subordinate headings under which it is distributed.

A Commentary on the Revised Version of the New Testament. By W. G. Humphry. (Cassell, Pether, Galpin and Co.) A commentary on the Revised Version by one of the Revisers might be expected to partake somewhat of the nature of a defence; but if this is the case at all with the work before us it certainly is not so to any considerable extent. The commentary, in fact, consists of notes stating very briefly and clearly the reasons for the changes that have been made in the Authorized Version; and the work will accordingly be found to be a valuable aid to those who desire to form a just estimate of the work of the Revisers. An excellent feature in Mr. Humphry's com-

mentary is the continual citation of the renderings of the earlier English versions.

A Commentary on St. Paul's Epistles to the Corinthians. By Joseph Agar Beet. (Hodder and Stoughton.) Probably it would not be easy to throw any very new light on the Epistles to the Corinthians; but Mr. Beet has succeeded in bringing together, in the Introduction to this volume and in the dissertations appended to it, in a succinct form, all the information necessary for their intelligent study. Apparently, he wishes his work to be regarded as a contribution to the evidences of Christianity; but, as the argument of the present volume is subordinate to those propounded in a previous one on the Romans, we are not called on to estimate its value. His statement that the absence of all reference to Paul's epistles in the Acts is "absolute proof" of the very early date of the latter is certainly more bold than logical, while the assumption that the passages written in the first person are by the author of the entire book is wholly uncritical. Mr. Beet's exposition, however, if characterised by a certain narrowness of view, and here and there a little dogmatic in tone, is an able and scholarly piece of work, and brings out with admirable clearness the logical sequence of the Apostle's thought. The translation by which it is accompanied proves, at any rate, that it is possible to make a still nearer approach to literal exactness than the Revisers have done; but this gain is, of course, at the expense of English grammar and style. The author's aim has been, in his own words, "simply to reproduce, as accurately and fully as he could, even sometimes by inelegant or unsmooth grammatical forms, or clumsy arguments, the sense and emphasis of Paul's Greek;" and it may be admitted that he has succeeded.

The Epistle to the Ephesians: its Doctrine and Ethics. By R. W. Dale. (Hodder and Stoughton.) Mr. Dale is already known as an able and vigorous writer, and this volume will not diminish his reputation. In a course of lectures intended for popular delivery, Mr. Dale may well be excused from entering on questions of criticism. His object is rather to bring out the spirit and significance of the epistle under discussion; and this he does in twenty-four lectures, in which he follows the Apostle's thought as it passes from such high topics as election and regeneration to the plain ethical teaching of the later chapters. Mr. Dale's theology is "Evangelical," but not Calvinistic. His lectures are pervaded throughout by a fine moral tone and great religious fervour; and if his language is often rhetorical, this will hardly be complained of by the class of readers with whom his work is most likely to find favour.

The Book of Enoch. Translated from the Ethiopic, with Introduction and Notes, by the Rev. George H. Schodde, Professor in Capital University, Columbus, Ohio. (Trübner.) The Book of Enoch is one of the oldest specimens of apocalyptic literature, and possesses besides a special interest for Christians, on account of the famous quotation in the Epistle of St. Jude. The edition before us is a handy and well-printed little volume, which we can heartily recommend to any of our readers who may wish to study a work which is no mere literary curiosity, but has positive claims upon the attention of all interested in the problems connected with the intellectual and moral conditions of the age which witnessed the birth of Christianity. After a general Introduction, tracing the existence of the book through patristic citations, from the Epistle of Barnabas down to the seventh century, and briefly relating the facts concerning its rediscovery by the traveller Bruce in 1773, and after pronouncing favourably on the fidelity of the

Ethiopic version, Prof. Schodde proceeds to explain, in a special Introduction, the character and origin of the so-called apocryphal and apocalyptic books. Then follows a luminous analysis, in which the theories of preceding critics are passed in review; and the conclusion is reached that the book consists of three distinct works, put together by an unknown author, of uncertain date. Each of these constituents is examined in turn, with the following results. The groundwork must be regarded, upon internal evidence, as the Hebrew or Aramaic production of a Palestinian Jew who wrote before the year 160 B.C., in the thick of the Maccabean struggle. "It might be called a manifesto to the Hasidim, exhorting them to steadfastness, and announcing that the long-delayed retribution would surely and speedily come." The second element (the Parables) probably belongs to the age of Herod the Great (37-34 B.C.). It echoes the leading idea of the Book of Daniel, predicting that the godless rulers of the day will soon be displaced by a Messiah, who is not of a Christian but of a purely Jewish type. The title "Son of the Woman" no more argues a Christian origin than Daniel's "Son of Man." The last accretion to the original work, commonly called "The Noachic Fragments," was added somewhat later, by way of giving an account of the first judgment—that is to say, the Flood. Its date cannot be more exactly determined, but it moves wholly within the limits of Jewish thought, and lacks "the least indication of a post-Christian origin." The translation is readable; and the notes, which are conveniently given at the end of each section, are brief, suggestive, and really helpful to a right understanding of the text.

St. Athanasius on the Incarnation. By Archibald Robertson. (Nutt.) This claims to be the first, or nearly the first, edition of the "de Incarnatione" printed separately in England. The text is not based on any fresh collation of MSS., but follows, with a few trifling exceptions, that of the Benedictines. It is preceded by a short Introduction, and accompanied by a few judiciously brief notes. The book is intended for the use of students, who will no doubt be glad to have this important work in so convenient a form.

Critical and Exegetical Commentary on the New Testament. By H. A. W. Meyer. "The Epistle to the Hebrews," by Dr. Gottlieb Lünemann. "The Epistles of James and John," by Dr. J. E. Huther. (Edinburgh: Clark.) These two important works, now added to the translation of Meyer's well-known Commentary on the New Testament, complete the series so far as the English is concerned. A note from the publishers informs us that "Dieterich on Revelation" will not be translated in the meantime, as they have not received sufficient support from the subscribers. This is certainly to be regretted, and it must only be hoped that the necessary encouragement will yet be forthcoming.

A System of Christian Doctrine. By Dr. J. A. Dorner. Translated by Revs. Alfred Carr and J. S. Banks. Vols. III and IV. (Edinburgh: Clark.) Prof. Dorner's elaborate *System of Christian Doctrine* needs no words from us to commend it to the student; but we ought, before now, to have called attention to the publication of the third and fourth volumes of the English translation. These volumes, forming part of Messrs. Clark's well-known "Foreign Theological Library," complete the work.

Handbuch der theologischen Wissenschaften in encyclopädischer Darstellung; mit besonderer Rücksicht auf die Entwicklungsgeschichte der einzelnen Disciplinen. Herausgegeben von Dr.

Otto Zöckler. (Nördlingen.) This work, which, as its name implies, is intended to embrace the entire field of theological investigation, will base itself on the fourfold division of its subject into exegetical, historical, systematic, and practical theology. The first half-volume, which is all that is at present before us, commences with a section on theological science as a whole, by the editor, whose claim for theology, however—to rest on a distinct basis from philosophy, as being theocentric, not anthropocentric—seems to us simply to remove it from the category of science altogether. In the next section, Profs. Schultz and Strack take up the subject of exegetical theology, dealing with the introduction to the Old Testament, and its history and antiquities; while they leave its theology and the whole subject of the New Testament for the second half-volume. The second volume will deal with ecclesiastical and dogmatic, and the third, completing the work, with ethical and practical, theology. The work, while Evangelical in tone, is scientific in spirit, and ungrudgingly admits what must now be considered the ascertained result of Scriptural criticism. It will, we doubt not, prove a valuable aid to the younger students of theology and the clergy, for whom it is more especially intended.

MESSRS. RIVINGTONS have sent us a parcel of devotional books which may be conveniently (and briefly) noticed together. They are all very handsomely printed with red borders, and neatly bound. First comes a series entitled "Aids to the Inner Life," consisting of five volumes. Two of these are *The Christian Year* and the *De Imitatione Christi*, translated and edited by the Rev. W. H. Hutchings, Sub-warden of Clewer. The same gentleman has also edited, but apparently not himself translated, the other three—the *Introduction to a Devout Life*, by De Sales; *The Spiritual Combat*, by Scupoli; and *The Hidden Life of the Soul*, by Grou. It is an omission not to have given a short account of Scupoli, who is certainly not the best known of the three. As to the editor's task, it is enough to quote his own words. "The process of adaptation [even in the case of the *De Imitatione Christi*] has been undertaken with the view of bringing every expression, as far as possible, into harmony with the Book of Common Prayer and Anglican Divinity." Then we have two series of "elegant extracts," collected by H. L. Sidney Lear, whom we shall probably not wrong by calling "Mrs." Lear. One is a single volume called *Precious Stones*, with the sub-titles of "Pearls—Grace," "Rubies—Nature," "Diamonds—Art." Of these sub-titles we confess that we fail to see the appropriateness. The quotations are mostly from divines of the Roman and Anglican Churches; but Mr. Ruskin is also strongly represented, and even the Koran and Lord Chesterfield are not ignored. The other of Mrs. Lear's series consists of three little pocket volumes fancifully entitled *Sunrise*, *Noon*, and *Sunset*. The contents are much the same as in the former case, though somewhat less theological.

NOTES AND NEWS.

CAPT. R. F. BURTON has returned to Trieste from his mission, which he describes as a "wild goose chase." The Government should have sent him two months earlier than they did. His own story will probably appear before long in one of the magazines.

THE Royal Academy of the Lincei at Rome has elected Prof. Max Müller one of its ten foreign members, in succession to the late Bluntschli.

MR. EDWARD MORRIS, of Lincoln College, Oxford, who has been for some years headmaster of a school at Melbourne, has been

appointed to a new Professorship of English and Moral Philosophy in the University of Adelaide.

PANDIT SHYAMAJI KRISHNAVARMA took his degree at Oxford this week under somewhat remarkable circumstances. He first came to Oxford in 1879, with no knowledge of English, and without any intention of following the university course. This he resolved to do only last year. In the summer of the present year he passed moderations; and he has now taken all the three final examinations at one time. We believe that the pandit also intends to be called to the Bar next term.

WE hear that a new edition of Liddell and Scott's Greek Lexicon will be issued almost immediately by the Clarendon Press, and simultaneously in America by Messrs. Harpers Bros., to whom duplicate plates have been sent. This edition, which is the seventh, has been carefully revised throughout, with the co-operation of many distinguished scholars, including Principal Gildersleeve, of Baltimore, and Prof. Goodwin, of Cambridge, U.S.

AMONG the many literary projects of the time which bear a cyclopaedic character, one of the most promising is that of a "Dictionary of Political Economy," to be prepared by specialists.

WE quote from the *Critic* the following extract from a letter written by Lord Lytton to an American friend:—"The forthcoming work on which I am now engaged is not a memoir, but a full and complete record of my father's life and work, written from the numerous documents bequeathed to me as biographical material for the completion of it. The book will contain an autobiography, written by himself, of his life up to the age of twenty-two. It will also contain several original compositions by him, never before published, with copious selections from his private correspondence, note-books, and journals, and sundry illustrations. For this reason, the work will be voluminous; for it will contain all the biographical material from which shorter biographies may perhaps be written hereafter, but for lack of which all existing biographical memoirs of my father are totally inadequate. I expect to have the three first volumes ready for the press early next spring, and propose to publish them separately. The rest of the work will follow later."

THE ninth part of Mr. Griggs' facsimiles of the Shakspeare quartos is at length ready, and will soon be in the hands of subscribers. By means of an additional facsimile of two leaves, and by marking two others with the variants, this part is a complete representation of the two issues of "2 Henry IV." in the original quarto of 1600, of which only that one edition was separately printed. The two issues or forms referred to resulted from the original publisher's discovery of an omission in sheet E (four leaves), which he consequently reprinted (in six leaves) in the later copies.

MESSRS. HURST AND BLACKETT will shortly publish a new novel by Mrs. Oliphant, entitled *It was a Lover and his Lass*; and *Sanguelac*, by Mr. Percy Greg, author of *Ivy*, *Cousin and Bride*, &c. Both will be in three volumes.

A RECENT number of the *Blätter für literarische Unterhaltung* contains an article by the novelist Spielhagen, defending Longfellow against Poe's celebrated accusation of plagiarism. One case brought forward is very curious. In *Graham's Magazine* for February 1843 appeared a little poem by Longfellow, purporting to be a translation from the German of Wolff. Poe discovered that the poem is substantially identical with one of Motherwell's ballads, and expressed doubts whether any German original existed. As a matter of fact, a certain O. L. B. Wolff had published his poem at Frankfort-on-Main in 1837. And the proof

that Longfellow had translated from Wolff happens to be decisive. Motherwell's two first lines are—

"High upon Hielands
And low upon Tay."

These Wolff had mistranslated—

"Hoch auf dem Hochland
Und tief an dem Tag."

And Longfellow faithfully rendered the mistranslation—

"High on the highlands
And deep in the day."

THE eleventh volume of Herzog's *Protestant Encyclopædia* (to be condensed into three volumes by the skilful hands of Prof. Schaff) will contain an article on the Pentateuch by Prof. H. L. Strack, of Berlin, with a sight of which in print we have been favoured. Its peculiar merit lies in its accurate exhibition of at least the main points on which the Pentateuch controversy is by scholars of the present day thought to depend. Dr. Strack takes up a decided position with reference to Dr. Wellhausen, who, he thinks, argues with too much positiveness from the non-observance of a law to its non-existence. But the temperateness with which he writes contrasts favourably with the vehement and irritating language, more worthy of the advocate than of the critic, still too prevalent, especially in Scotland and America. We believe we are not mistaken in stating that Dr. Wellhausen, since his removal from Greifswald to Halle, has been partly occupied in the completion of the second volume of his *Geschichte*.

RICHARD WAGNER's autobiography is almost ready.

WERNER's new novel is entitled *Der Egoist* (Stuttgart: Spemann).

WE have lately received the fifth volume of Paul von Lilienfeld's *Gedanken über die Socialwissenschaft der Zukunft*, published at Mitau, in Russia. The first volume, under the special title "Human Society as a Real Organism," appeared in 1873. The second, "Social Laws," followed in 1875; the third, "Social Psychophysics," in 1877; the fourth, "Social Physiology," in 1879. The fifth and last volume treats of Religion, considered from the standpoint of a genetic social science. The author is imperial governor of Courland. He is well read in the latest works on sociology published in England, and writes with great freedom both on social and religious problems.

THE Swiss epic poet, Pfarrer Heinrich Weber, the author of the *Lupenschlacht* and the *Albis*, has published a "national drama," as he calls it, of which the Zürich reformer, Ulrich Zwingli, is the hero. The proceeds of the book are to be given to the projected Zwingli-Denkmal.

A WORK upon the Order of St. John of Jerusalem and its archives at Malta will soon be published in the "Bibliothèque des Ecoles d'Athènes et de Rome," by M. J. Delaville le Roulx. It will consist of about a hundred documents of the eleventh and twelfth centuries relating to the history of the Hospitallers in Palestine. The editor has been occupied in special researches on the history of the Order for several years, and pointed out the importance of these inedited documents in 1879 to the Académie des Inscriptions.

THE lighting of the Bibliothèque royale at Brussels by electricity has not been successful. The flickering of the lamps was found very trying to the sight, and on one occasion the reading-room was left in sudden darkness.

AFTER a library edition of Fielding, it was to be expected that we should have a library edition of Richardson. The publication has been undertaken by Messrs. Sotheman, who

issue this month the first two volumes of an edition that will require ten more volumes to be complete. The remainder are to appear, two at a time, every alternate month of next year. The edition is to be limited to 750 copies, and we suspect that this number will exhaust the readers of the creator of the modern novel. The present instalment contains, somewhat awkwardly, two-thirds of *Pamela*, together with an Introduction substantially reprinted from Mr. Leslie Stephen's *Hours in a Library*. Prefixed to Vol. i., as a frontispiece, is a very creditable steel engraving after the portrait by Mengs. It may be assumed that there are to be no more illustrations, which we do not profess to regret. For a library edition is not the same thing as an *édition de luxe*. The end of the one is to occupy a not discreditable place on the shelves, and possibly to be read; the destiny of the other, merely to lie on the table. The type and paper of this edition entirely satisfy us, as does also the modest binding; but we could wish that the stitching had been stronger. This is a weak point with not a few English binders.

In the notice of the performance of the "Ajax," at Cambridge, in the ACADEMY of December 9, it should have been stated that the quotations, when given in English, were from the version specially made by Prof. Jebb.

FRENCH JOTTINGS.

M. RENAN, it is said, will shortly collect, in a volume of *Souvenirs*, the autobiographical papers that he has been contributing to the *Revue des Deux-Mondes*.

M. VICTOR HUGO's *Torquemada* has been translated into German with the consent of the poet, and will be represented as a drama at the Carl Theater in Vienna.

M. EDMOND DE GONCOURT is engaged upon a new novel, to be called *La petite Fille du Maréchal*.

M. PAUL LACROIX, perhaps better known as "Bibliophile Jacob," has completed a new work, which will be published immediately under the title of *Louis XII et Anne de Bretagne*. It will have an etching of the author by his friend M. Lalauze.

M. LEROY-BEAULIEU, the political economist, will appear shortly in another field of letters, as the editor of a volume containing the correspondence of a Russian maid of honour with the Emperor Paul and his wife. This correspondence, which has been placed in his hands by the Princess Lisa Trubetzkoy, will probably throw some light on a dark chapter of history.

It has been decided to collect the miscellaneous papers on historical subjects contributed to various Reviews, &c., by the late Jules Quicherat. They will form four volumes, of which the first will appear early next year.

A NOVELTY is announced at Paris which we do not recommend to our English confrères. It is a series of biographical sketches of journalists, written, not by themselves, but by one another.

M. CALMANN LÉVY has in his possession the original document signed by Lamartine, in which he sold his *Toussaint Louverture* to the predecessors of the present publishing firm. It contains the following curious proviso:—

"Il est bien entendu que, dans le cas où je deviendrais président de la République, je pourrais interdire ou suspendre la publication de *Toussaint Louverture*, en remboursant à MM. Michel Lévy frères la somme qu'ils m'ont donnée."

By the authority of the municipal council of Paris, a tablet has been placed on the house in the rue du Mont-Thabor in which Alfred de Musset died.

MM. HENRI GAIDOUZ AND PAUL SÉBILLOT have reprinted from the *Polybiblion*, and published at Strasbourg (Noiriel), a *Bibliographie des Traditions et de la Littérature populaire de l'Alsace*. It contains the titles of more than forty books and pamphlets, and about seventy articles in journals and other publications relating to the popular literature of Alsace, classified according to their subjects. Its joint authors, who lately reprinted for private circulation their bibliography of the popular literature of Brittany, are now engaged upon a work of the same nature which will deal with the whole of France.

THE *Revue politique et littéraire* for December 16 opens with a series of "Petits poèmes en prose," by M. Turgeneff, which were originally written in Russian and translated into French by the writer himself. It has also a notice of M. Sardou's "Fédora" by M. J. J. Weiss, who advises M^{me}. Sarah Bernhardt "de se défaire de ses robes;" and a very favourable review of a volume just published by a French critic, M. Paul Oursel, upon Macaulay's Essays.

ORIGINAL VERSE.

POVERTY.

In days of old she lived a worshipped saint,
Her humble, lowly men by all adored.
Men loved the maid for following their Lord,
And though their love, perchance, was cold and faint,
Not like the passions of more human birth,
It was a pure and sacred flame, they said.
And she was one whom good men vowed to wed
And thus abjure the luring snares of earth.
Alas! as time went on such love grew rare,
And with men's favour went her honoured name,
Till sneers and cold contempt became her share
And she was fain to hide her head for shame.
At length, when left by all, Crime sought her hand,
And now his sons and hers infect the land.

I. M. ELTON.

OBITUARY.

GOTTFRIED KINKEL.

FOR long years resident in England, Gottfried Kinkel has died at Zürich, where he was one of the most popular professors at the Federal Polytechnicum. German literature suffers a grievous loss in the death of a poet of considerable merit, and a justly esteemed writer on the fine arts and their history. She counts now one less in the ranks, already much thinned by death, of the men of '48.

Born at Oberkassel, near Bonn, on August 15, 1816, the son of an orthodox clergyman, Kinkel started on the career of his father. Having received his university education at Bonn and Berlin, he set up, in 1836, as a *privat dozent* for historical theology in the former university, but also turned with enthusiasm to the study of art—in the first instance, Christian art, to which he devoted a somewhat prolonged stay in Italy. In 1843 appeared his first collection of poems, which were favourably received, and from which he afterwards detached the little romantic epos, *Otto der Schütz*. It is by this poem that he is best known to the general public. It has passed through no less than fifty editions, a mark of popularity equalled or surpassed, among modern German poets, only by Uhland, Geibel, and Bodenstedt, with the two former of whom Kinkel's mind and manner had much affinity. In the same year he married; and his wife, a remarkable woman, greatly influenced his mind in a direction opposed to theology, which he formally abandoned in 1844 by taking his rank in the faculty of philosophy. In 1845 appeared the first volume of his *Geschichte der bildenden Künste bei den christ-*

lichen Völkern, and soon after he obtained his professorship. He threw himself with ardour into the political movement of 1848, and displayed rare eloquence on the side of a reconstitution of Germany in the sense of greater unity, with a democratic, nay, to some extent, socialist tendency. Tried in February 1849, at Cologne, for two press-offences, he was acquitted on one, and condemned to two months' imprisonment on the other. But he was, at the same time, elected a deputy for the Second Chamber of Prussia. After Frederick William IV. had refused the Imperial Crown offered to him by the Frankfort Parliament, Kinkel took part in the armed opposition to the Absolutists. Taken prisoner when the insurrectionary army of Baden succumbed, he was condemned to perpetual imprisonment in a fortress. But Gen. von Hirschfeld protested against the finding of the court-martial as too lenient. The King, as Commander-in-Chief, altered the judgment to death, and, by way of mercy, reduced the penalty to hard labour for life. Imprisonment in a fortress was, by Prussian law, a comparatively lenient form of punishment: there a man might be treated as a gentleman. Now the poet was reduced to wool-spinning in the felon's garb and with cropped hair; numerous engravings represent him thus. His enemies' thirst for vengeance was so little assuaged that, in April 1850, he was drawn from his cell to answer a fresh capital charge—the storming of the arsenal at Siegburg, in which he was reported to have taken part the year before. He conducted his own defence, and an eloquent speech procured his acquittal. Transported thence to the prison at Spandau, he was to see the hour of his deliverance drawing near. Amid widespread sympathy, a young and ardent pupil found means to procure Kinkel's escape from prison and flight to England in the autumn of 1850, aided by the Baroness Brünigk. Carl Schurz was then an enthusiastic and highly gifted undergraduate; he has lived to become, in America, a powerful speaker, a great helper in Lincoln's first and second canvasses for presidency, United States Minister to Madrid, a senator, and—surely a rare thing for an immigrant—Home Secretary or Minister of the Interior.

In London, Kinkel became the head of one of the two sections of German political refugees, then very numerous, Arnold Buge, who died two years ago at Brighton, being the leader of the other. The usual refugees' hopes were still entertained of a turn in the political wheel; and Kinkel went as an emissary to America, as did Kosuth about the same time, to agitate for help. The number of his speeches there was considerable. Returning to London in 1852, he found occupation as a teacher of literature, and of the theory and history of the fine arts. Some readers may recollect his activity at Bedford College; some, his heart-stirring oration at the Schiller Centenary held in the Crystal Palace in 1859. He founded in London the German journal the *Hermann*, which still exists, though no longer claiming to be inspired by his aims. He wrote a drama, "Nimrod" (1857), which has lately had some success on the stage. He also published some tales, the joint work of his gifted wife and himself, and edited her posthumous novel, *Hans Ibeles in London*, which is not without some value for contemporary portraiture. He had the grief to lose his wife by a fall from a window, and her death and burial form the subject of one of the noblest poems of their friend Freiligrath.

In 1866, Kinkel separated himself from some of his old friends by supporting the action of Prussia against Austria and the old Confederation—an action which, though far from his own youthful dreams, seemed to him, as to many others, an approach to otherwise unattainable ideals. But, unlike many

others, he never accepted or sought office under the victorious Hohenzollern. Appointed in 1866 Professor of Archaeology and History of Art at the Zürich Polytechnicum, he filled this post with credit till his death, which took place on November 14 last. He had become more and more silent on the subject of politics. Of his late works we may mention the epic poem, *Der Schmied von Antwerp* (1872), a pendant to *Otto der Schütz*; a second series of poems (1868); *Euripides und die bildende Kunst* (1872); *Peter Paul Rubens* (1874); *Mosaik zur Kunstgeschichte* (1876); and *Kunst und Kultur im alten Italien vor den Römern* (1878). Kinkel was an advocate for cremation.

EUG. OSWALD.

THE announcement of the death of Mr. Thomas Pitt Taswell-Langmead has been received with general regret. The bent of his future studies was shown during his college life at Oxford by his gaining the Stanhope Prize (1866) with an essay on the reign of Richard II. Subsequently, he edited, for one of the volumes of the Miscellanies of the Camden Society, Sir E. Lake's account of his interviews with Charles I. on being made a baronet. Mr. Taswell-Langmead's work on *English Constitutional History* was marked by great research and critical acumen. It was published in 1875, and met with such favour as to justify the issue of a second edition five years later. For some time past he has edited the *Law Magazine and Review*, contributing at the same time to its pages several articles on subjects possessing a legal and antiquarian interest. To the discreditable condition of our parish registers he drew special attention as well in that periodical as in separate publications, and he suggested many of the provisions in the Bill of Mr. Borslase, to which we referred at the time. Mr. Taswell-Langmead had only just been appointed to the Chair of English Constitutional Law and History at University College, London, when he was seized by his fatal illness, and he died at Brighton on December 8.

MR. ROBERT KEMP PHILP, one of the most industrious compilers who has ever written in the English language, died at Claremont Square, Islington, on the last day of last month. He came to London in 1845, and since then has pursued a never-ceasing round of editing and publishing. At first he contented himself with assisting such well-known Radicals as Henry Vincent and John Saunders in bringing out the journals which propagated their views on politics; but after a few years he entered upon the congenial field of compilation. In 1856 he issued in monthly parts, under the title of *Enquire Within upon Everything*, a vast miscellany of curious information, which hit the public fancy with such effect that at least four hundred thousand copies have been sold since its first appearance. A great multitude of similar works soon followed; there was *The Biblical Reason Why*, *The Historical Reason Why*, *The Denominational Reason Why*, and so on *ad infinitum*, most of which passed into their ten, if not their twenty, thousands. When this vein was exhausted, Mr. Philp struck a new lode in the *History of Progress in Great Britain*, which was published as a whole in 1861, in two volumes, while many sections obtained a wide circulation in separate parts. Within the last ten years he has compiled a series of "panoramic guides" for the chief English railways (including the Midland, the London and South-Western, the North-Western, and the Great Eastern), descriptive of the principal objects of interest on the main lines and the more important branches. The huge petition of the National Convention, which was signed by more than three million persons, and borne into the

House of Commons in May 1842 by sixteen masons, was drawn up by Mr. Philp. At the time of his death he had completed his sixty-third year.

MAGAZINES AND REVIEWS.

MR. GILES'S critique on Mr. Balfour's translation of "Chuang tse," with which the current number of the *China Review* opens, furnishes a characteristic instance of the misdirected energy which has of late years been so observable among Chinese scholars in China. Mr. Giles is not content with telling us that Mr. Balfour's translation is faulty, but must needs fill ten or more closely printed pages with instances of passages which he considers to be incorrectly rendered. When we remember the immense amount of work which lies before Sinologists, it is to be regretted that time should have been spent on the elaboration of these detailed passages which might have been far more profitably employed in original work. By every earnest worker in the field of Chinese studies the one thing to be desired is more time, and wasteful expenditure of that inestimable commodity is an offence. In this number Mr. Parker brings to a conclusion his very interesting account of his journey in Northern Sz-chuan. Though possessing neither the literary excellence nor the subjects of philological interest with which Mr. Baber's paper on his travels in the same province abounds, it contains a vast amount of information which will be valuable both to geographers and to men of commerce. Mr. Eastlake contributes an article on the "Chinese Reed Organ," the introduction of which into Europe led, according to Messrs. Stainer and Barrett, to the invention of the accordion and harmonium. In "Notes on Hainan and its Aborigines," Mr. Calder gives a description of the Li inhabitants of the island. Particular interest attaches to the Li people, since, before the advent of the Chinese into the middle kingdom, they formed one of the most powerful of the aboriginal tribes of Southern China. In the general displacement of tribes consequent upon the advance of the Chinese, the Li migrated southwards, and are now mainly located in Cochin China. The number closes with notices of new books and with some well-selected notes and queries.

In the *Revista Contemporanea*, Don Vicente Tinajero commences an interesting study on the "Moallakas," the early Arabic poems deposited in the Caaba at Mecca. Señor de Lina y Eguizabal comments on the inaugural speech of Romero y Robledo, president of the Royal Academy of Jurisprudence, as an instance of the Catholic reaction now taking place in Spain. Becerro de Bengoa reports on the progress of electricity in the exhibition at Munich. The anonymous narrative of the treatment of the Indians by the United States Government is completed; and a lecture by E. Saavedra, giving a rapid outline of early Oriental history, is reproduced in this number.

THE NEW DICTIONARY OF NATIONAL BIOGRAPHY.

THE new Dictionary of National Biography, to be published by Messrs. Smith, Elder and Co., is intended to follow the general plan of the *Biographie universelle* or the forthcoming dictionary of German biography. It will include English, Scotch, and Irish names from the earliest period; but it will not include any names of living persons. Americans will only be included for the period before the separation of the two countries.

It is proposed to include a considerably larger number of British names than has hitherto

appeared in any biographical dictionary. The scale of treatment is intended to be about the same as that adopted in the dictionary published by the Useful Knowledge Society, which unfortunately stopped at the letter A. Importance will be attached to a full reference to original authorities; and it is hoped to obtain the assistance of many writers who have made special studies of different departments of biography. Promises of co-operation have been received from many of the most competent historians of the day.

Lists of names intended for insertion will be issued in a short time, and will be furnished, on application, to anyone who is willing to read them with a view to contributing or to noting errors or omissions. Notice will be given in due time of the proposed date of publication and other particulars. All communications should be addressed to the editor, Mr. Leslie Stephen, care of Messrs. Smith, Elder and Co., 15 Waterloo Place.

AMERICAN PUBLISHERS AND ENGLISH AUTHORS.

WITH reference to a discussion started in this country, the editors of the *New York Critic* have addressed a circular letter to some of the chief firms of American publishers, and received the following replies:—

"Our reprints of English books in recent years have been almost wholly of scientific and historic works, and for these we in almost all instances pay the authors a royalty of ten per cent. on the retail price, the same that is usually paid to native authors. Herbert Spencer, Darwin, Huxley, Tyndall, Lubbock, Bastian, Carpenter, Bagehot, Bain, Tylor, Lyell, Maudsley, Jevons, Roscoe, and Miss Buckley are among those regularly paid in this way. We pay the same royalty to all the authors of the volumes in the International Scientific Series, with the exception of those works by Continental writers which have to be translated. In these cases the copyright is a little less. We also pay a royalty on all the volumes of the Science, Literary, and Historic Primers. We pay Lecky and Robertson Smith the same royalty that we pay to American authors. We paid on Beaconsfield's *Endymion* the customary ten per cent., but this went to the English publishers, who had purchased the work in full. We paid Rhoda Broughton, until her last novel, 1,000 dollars for each book, but the opposition editions now make it impossible to pay so much. *Vice-Versa* was not printed from advance sheets, and there are three opposition editions; but we sent the author, notwithstanding, an *honorarium*.

"D. APPLETON & Co."

"We publish no English material for which we have not made payment, and the amounts so paid are not dictated by ourselves, but are those proposed by the English authors, or by the English publishers who, by arrangement with such authors, have the right to speak for them. It is our belief, from our knowledge of the methods of our fellow-publishers, that all the houses in good standing in the American publishing fraternity are now following the same practice as ourselves, and that each house makes a point of respecting the foreign purchases and arrangements of the others. We also know from personal knowledge that, among houses of similar standing in Great Britain, such practice is by no means so uniform—that American material is much more frequently 'appropriated' without any recognition whatever, and that there is much less readiness on the part of one house to respect the American arrangements and purchases by another. We find that we have now upon our list nearly two hundred works which we issue in this country by arrangement with, or purchase from, British houses. O'Donovan's *Mero Oaste*, which we have just published, was offered simultaneously to several American houses, and was finally placed in our hands because our offer was the most favourable.

"G. P. PUTNAM'S SONS."

"It is, and has been, our uniform custom to pay to foreign authors an equitable share in the profits realised from the sales of our editions of their

books. The cheap reprints of such books now flooding the market have so out into the sales of the authorised editions that the profits are often, indeed usually, very small. Nevertheless, we always pay the author something. Not infrequently we have paid for the advance sheets of books that have proved a loss to ourselves. Before the advent of the Seaside and kindred 'Libraries, when what are known as the 'trade courtesy rules' (still in force with all reputable publishers, but ignored by the 'pirates') gave the authorised American publisher some protection in his ventures, we were enabled to pay large sums for the advance sheets of foreign books. For instance, we paid Outda £300 for each of her novels, and we have paid as much for some of Geo. MacDonald's books, and of Bulwer's."

"J. B. LIPPINCOTT & Co."

"The firms of which we are the successors paid very considerable amounts to English authors; but since the present firm was organised, the inducement to buy foreign productions has been reduced to a minimum by the Seaside and other libraries, which reprint immediately any book worth paying for.

"HOUGHTON, MIFFLIN & Co."

"Messrs. Charles Scribner's Sons—whose list is made up largely of important English works—state that it has always been their custom to pay trans-Atlantic authors—or publishers, as the case may be—for books which they republish here. In some instances, a per-centage has been paid; in others, payment has been made in the form of 'cash down.' They have put thousands of dollars into English pockets.

"Messrs. Dodd, Mead and Co. declare that they have always paid English authors whose works have reached a profitable sale in their hands. They paid Mrs. Charles, the author of *The Schönberg-Cotta Family*, large sums—thousands of dollars—for her earlier works, and have continued to pay her for her later and less popular writings. They have also paid Heba Stretton and Edward Garrett regularly, through a period of years, and in several cases where their own profit was seriously curtailed by opposition reprints.

"Messrs. John Wiley's Sons say that they offered Mr. Ruskin 5,000 dollars for the privilege of publishing an authorised American edition of his works; but that their offer was declined on the ground that he did not wish any but his own editions to be in circulation. The latest addition to their series of Ruskin's writings is the volume of early poems, which, by-the-way, lacks twenty-two of the fifty-one poems in the original; but the difference in price is about 198 dollars!"

CORRESPONDENCE.

"SANDIE MACPHERSON."

London: Dec. 21, 1882.

A little sketch of mine, under the above title, published in this month's *Belgravia*, has been described in several quarters as an attack on the memory of the late Mr. Thomas Carlyle. I wrote it, alas! in sheer innocence of heart, never dreaming that anyone would take it seriously, or as sheer matter of fact. But what if, after all, Carlyle had his Sandie Macpherson? Every successful man is similarly afflicted in one way or another; and it struck me as an amusing idea to fasten the unbelieving incubus on the shoulders of the most self-conscious and Philistine-compelling literary man of this generation. In future, when I attempt any other humorous sketch, I shall be inclined to print at the beginning the form of warning adopted by Transatlantic jokers: "N.B.—This is *wrote sarcastic!*" ROBERT BUCHANAN.

A CALUMNY ON MARAT DISPROVED.

1 Clarendon Villas, Oxford: Dec. 16, 1882.

There was published in the *ACADEMY* of September 23 an account of the lost medical work of Jean-Paul Marat, which contained an appeal for assistance in investigating his life in England between the years 1768 and 1777. I have received several letters on the question, showing the interest taken by students of the history of the French Revolution in clearing up the veil which lies over much of Marat's early life, very many of which, including one from a distinguished professor of chemistry, refer to what seems to be a well-known scandal with regard to Marat's life in England—to the effect that he was once a master at the Warrington Academy, that he was condemned to five years' penal servitude for robbing the Ashmolean Museum at Oxford, that he then failed as a bookseller at Bristol and became bankrupt, and that he was recognised in the National Convention at Paris by someone who had relieved him at Bristol.

This story is originally to be found in a note to a history of the Warrington Academy contained in the *Monthly Repository*, to which I found a reference in a MS. note in a copy of one of Marat's works, *The Chains of Slavery*, in the British Museum. I was convinced of its falsity from internal evidence, because Briassot, who thoroughly knew the details of Marat's life in

England, where he lived for many years, never mentioned this scandal in his *Mémoires*, which were written when he was himself in prison, and his party overthrown by Marat's attacks; but, finding the story to be generally known and many times reprinted, I determined to trace it out thoroughly, and have at last been successful. The first difficulty was the date of the theft, to which I at last found a clue in a MS. letter (dated February 19, 1776), in a collection of odd papers possessed by the Ashmolean Museum, from a silversmith of Norwich, who declares that he had bought certain medals from a foreigner of the name of Mara, who had been in Norwich, where he had worn a gold chain, formerly belonging to Elias Ashmole, and into whose antecedents he had not enquired owing to his being accompanied by "Mr. Rigby, one of the principal surgeons in this city, who had known Mara at Warrington." Having got this clue, I was enabled to trace the discovery of the theft, and the capture and trial of the thief, in the *Oxford Journal*, of which a complete series is contained in the Camera Radcliviana. It appears that a man named Le Maitre, alias Matra, alias Mara, alias Matthews, had been for some time a teacher of drawing for tambour, and a designer of tambour waistcoats in Oxford. He had been formerly a teacher in the Unitarian Academy at Warrington, and had stolen from the Ashmolean Museum at Oxford several medals and coins—and the gold chain which the Elector of Brandenburg had sent to the famous founder of the Ashmolean Museum, Elias Ashmole—in the early part of February (the indictment says between the 3rd and 5th) 1776. He was arrested, owing to the advertisement of Sir John Fielding, in Dublin, on February 26, and was convicted of the theft in Oxford on the clearest evidence, on March 6, 1777, when he was sentenced by Baron Eyre to five years' hard labour in the hulks on the Thames.

That this man was afterwards a bankrupt bookseller is very probable; but the following considerations will show that the convicted thief, John Peter le Maitre, was quite a distinct individual from Jean-Paul Marat.

We know indisputably that Jean-Paul Marat had been for some years a doctor practising in London; that he had received the degree of M.D. at St. Andrews on June 30, 1775; that he published a medical pamphlet on a disease of the eyes on January 1, 1778, dated Church Street, Soho (see *ACADEMY*, September 23), and that he was appointed physician to the Gardes du Corps of the comte d'Artois on June 24, 1777. He cannot, therefore, be identical with the thief who was condemned to the hulks on March 6, 1777. The mistake has arisen from the fact that one of the thief's aliases was Mara, and from the defective eyesight of the worthy inhabitant of Bristol who identified the "Ami du Peuple" in the Convention with the bankrupt bookseller. Such points may seem very unimportant, but it is from such stories and false identifications that the ordinary idea of Marat has been conceived, and it is on them that the belief in his worthlessness and villainy is based; and it is only by disproving the existence of the false Marat that we can hope to understand the real personality of the "Ami du Peuple." I may state, in conclusion, that there is a mention of the trial of Le Maitre, alias Matra, in the *Annual Register* for 1777, p. 184.

H. MORSE STEPHENS.

APPOINTMENTS FOR NEXT WEEK.

THURSDAY, Dec. 23, 3 p.m. Royal Institution: "Light and the Eye," I., by Prof. Tyndall.
7 p.m. London Institution: "Ether and its Functions," by Prof. O. J. Lodge.
SATURDAY, Dec. 20, 3 p.m. Royal Institution: "Light and the Eye," II., by Prof. Tyndall.

SCIENCE.

Trübner's "Collection of Simplified Grammars." Edited by E. H. Palmer. II. *The Hungarian Language*. By Ignatius Singer. (Trübner.)

THE grammar of the Hungarian language never fails to excite the admiration of those who study it. It contains so little of the arbitrary, the superfluous, the obsolete, which take up so much room in the grammars of languages more widely known. For this reason the Hungarian lends itself more readily than most others to the interesting experiment attempted in the series of "Simplified Grammars"—that of compressing the whole grammar of a language into a few short pages. Thus the second volume of the series, allowing, as it does, eighty-eight pages to Hungarian, is by no means the *tour de force* that the first was, where Prof. Palmer compressed Arabic into fifty pages, leaving only twenty-seven each for Hindustani and Persian. Indeed, it is easy to see how M. Singer might in many places have been with advantage more concise. An exaggerated distrust of his reader's intelligence often leads him to repeat rules already laid down, and his repetitions and qualifications sometimes remind us of the long letter apologised for on the ground that the writer had not time to make it shorter. The book does not come up to the high standard laid down in Prof. Palmer's Preface. The apparent discrepancies and so-called irregularities of the language are by no means clearly shown to be only natural euphonic changes, nor are the usual paradigms and tables always omitted or compressed where they might have been. Nor is this Grammar, as might be supposed from an expression in the Preface, the first Hungarian Grammar in the English language. M. Singer has probably never heard of the Grammars of M. Wékey and M. Csink. In point of handiness and practical usefulness the book before us certainly represents an advance.

It is in his treatment of the cases that we think M. Singer's method most mistaken. In the strict sense of the word, cases such as figure in the Latin grammar are unknown in Hungarian, with the doubtful exception of a form most often used to mark the direct object of the verb, which may therefore be called an accusative. The relations expressed in Latin by the dative, the accusative with, and the ablative with or without, a preposition, are in Hungarian expressed by postpositions suffixed to the bare nominal root. Since in the case of the subject of the sentence, in Latin the nominative case, there are no such relations, the Hungarian uses the bare nominal root. Thus the forms corresponding to the Latin dative, to the ablative, to the ablative and accusative with prepositions, stand in Hungarian on one and the same line. If we call *háznak*, "to a house," the dative case, we ought to call, as many grammarians have done, *házban*, "in a house," the inessive case; *házzal*, "with a house," the comitative case; and so on, until the whole stock of postpositions in the language is exhausted. As many as sixteen cases have been counted in Finnish on this system, which is at any rate consistent. What is not consistent is to describe, as M. Singer does, one postposition

as a case-ending, while denying that title to the rest; and to do so merely because the Latin expressed the dative by a special inflection, while for the inessive, the comitative, &c., it made use of prepositions. Yet in his Preface he complains that "in most Hungarian Grammars the language is forced to accommodate itself to this framework of the Latin system."

But, not content with retaining unsuitable materials from the Latin grammar, M. Singer displays a misplaced ingenuity in inventing or adopting further complications, and so contrives to darken with words a very simple matter. He first tells us that the Hungarian noun has five cases, of which the genitive is placed third in his arrangement. By this genitive is meant the form in *-é*, which is really a new noun, and can be as fully declined as any other noun in the language. As Riedl observes, "Er ersetzt den im magyarischen fehlenden genitiv." Above and below this genitive we find placed respectively the "attributive or possessive" and the "dative." Now these are really one and the same word—e.g., *háznak*. M. Singer admits that they are "the same in form," but adds that they "have no other relation than similarity of orthography." On the same principle he should maintain that *míhi* is not the same case in the sentences *míhi est domus* and *míhi dat domum*. The two cases are exactly parallel. In Latin we say *míhi est domus*; in Hungarian *míhi est domus meus—nekem van házam*. Nay, so far from indispensable is M. Singer's "attributive and possessive" that we can express the fact "I have a house" by *est domus meus—van házam*.

A good Hungarian Grammar necessarily begins by a sufficient discussion of the sounds of the Hungarian language and the laws of its euphonic changes. These once mastered, apparent irregularities disappear, or at any rate are reduced to a minimum. Now M. Singer's treatment of Hungarian sounds is neither full, nor clear, nor systematic. It would have taken up but little room to have given the correspondences between the vowels of the two classes in the manner M. Simonyi has done in his excellent *Systematic Grammar*. In the book before us, dotted *e* and undotted *e* seem strangely reversed; and the present writer must protest against the statement that any sound in received Hungarian is equivalent to the English *u* in *but*. In fact, the dotted *e* is our *e* in *bed*, and the undotted *e* is our *a* in *bad*, two sounds many Hungarians find difficult to distinguish whether in their own language or in English. In speaking of vowel harmony (p. 5) M. Singer tells us that "flats and sharps never occur in the same word," and among the sharps he includes both dotted *e* and undotted *e*. When he thus worded his rule, he must have forgotten the word *Deák*. M. Simonyi shows that M. Singer's "mediates" are sharps like the rest, and formulates the rule thus: "Of sharp (*magas*) there can occur in flat (*mély*) words only *e, é, i, í*." So, too, when M. Singer goes on to say, "the mediates occur in both, and such words are then called mixed; they take the suffixes either of the one or of the other class," he uses language that may easily be misunderstood by the beginner. Of course he means to say that each of the words in

which mediate vowels occur belongs either to one class or to the other, not that such words may be treated as if they belonged to both.

Space does not permit us to discuss at length several other points in respect of which we are obliged to disagree with M. Singer, or think his treatment inadequate. *Varni*—we have elsewhere always found it spelt with double *r*—means to *sew* with a needle and thread, not to *sow* as the husbandman does his seed. *Nincs* is certainly not a contraction of *nem* and *van* (p. 76), but a Slavonic word, slightly changed in Hungarian. To *atya, anya, bátya* (p. 19), should have been added *apa*, "father;" *ipa*, "father-in-law;" *néne*, "elder sister;" whereby the reader might have observed that they are all words denoting relationship, in frequent use and belonging doubtless to the oldest stratum of the language. They are, in fact, what Mr. Tylor calls "nursery words." *Elso* (p. 30) should have been illustrated by the similar forms *felső*, "highest;" *alsó*, "lowest;" *hátsó*, "hindmost;" and the reader told that this was the old Hungarian way of forming such superlatives as were thought wanted before the use of the prefix *leg* had been learnt from the Slavonic languages. But etymology, like phonetics, is unduly neglected in M. Singer's book.

ARTHUR J. PATTERSON.

CORRESPONDENCE.

THE LANGUAGE OF HOMER.

Oriel College, Oxford: Dec. 18, 1882.

As Prof. Mahaffy, in his flattering review of my *Homeric Grammar*, has raised some questions which do not directly fall within the subject of that book, it may not be improper that I should make some reply in the columns of the ACADEMY. In doing so I shall endeavour to avoid the "ambiguous and neutral flavour" of which he complains (perhaps with reason), and to imitate his own more definitely controversial attitude.

Regarding the general plan of the book, however, I may say that in my view a "Grammar" should give, in the first instance, only a careful analysis and register of the facts of a language. The inferences to be drawn from the language of Homer are of great interest for the "Homeric question;" but it seems to me safer and more scientific to leave them to follow when the groundwork of facts has been laid. On this method we begin without making any assumption; and if it is found possible to construct a grammar from the documents before us, that circumstance is enough to show that the language which they exhibit possesses in some degree a uniform and homogeneous character. We can then go on to trace the finer differences which may prove the distinct authorship of the *Iliad* and *Odyssey*, or of particular books in each poem. But when we begin to argue from these differences, and to use them to decide questions of date and authorship, we are leaving the province of grammar, and entering upon that of the so-called higher criticism. For then we have to consider not only whether the differences exist, but how much they prove, either by themselves or in combination with other arguments.

Prof. Mahaffy founds an important argument upon the archaic and pseudo-archaic forms which I recognise in Homer. By these, he says, "the German authors from whom the facts are cited meant the existence of older or of invented forms in a comparatively late and literary age—say the seventh century B.C." It is difficult to answer this without knowing

who the German authors in question are. The facts are of that obvious kind that does not need support from authority. If, however, there are any German authors who assign the bulk of the Homeric language to the seventh century B.C., I can only say that I should be glad to be referred to them, and to make such use as I can of the facts which they may have produced. On the other hand, Prof. Mahaffy somewhat overstates my view of the antiquity of the Homeric language when he understands me to hold that "the bulk of Homer came from a time when Aeolisms and Ionisms had not yet been clearly distinguished." I only maintain that several forms which the ancient grammarians call Aeolisms, because they are found in the historical Aeolic, may have been used in the old Ionic of Homeric times. That is to say, I believe that the distinction between the two dialects was less in Homeric times—not that it did not exist at all. This view would, I think, be accepted by my "authorities"—if their assent is necessary—and, indeed, it is tacitly assumed by nearly every writer who does not admit an arbitrary mixture of dialects in Homer.

A word may be said here on the examples of formation by analogy, many of which Prof. Mahaffy thinks should be reckoned under the head of "pseudo-archaism." This may be so in some cases; but analogy is a force that is always at work in language, quite apart from the poetical tradition or convention that leads to pseudo-archaism. When Prof. Mahaffy asks "who created them by analogy?" the answer may be, the people at large.

The main issue, however, turns upon the comparison of the Homeric language with the later stages of Greek; and, though I do not profess to have gone fully into this subject, I have certainly called attention to many points of difference, and have thus suggested inferences which Prof. Mahaffy was entitled to criticise. His objections seem to be mainly (1) that I have not compared Homeric and Herodotean grammar, and (2) that I have explained away agreements between Homer and Attic grammar as "survivals" or "reminiscences" of Homer, thus minimising the amount of likeness. A full reply on these topics would evidently demand a great deal of space. As to the former, I must content myself with the assertion that, where there is a marked difference between Homeric and Attic grammar, the usage of Herodotus is (roughly speaking) the same as that of the Attic writers. Prof. Mahaffy has certainly not proved the contrary of this proposition. By way of example, he urges that *tmēsis* is not peculiar to Homer—that it occurs constantly in Herodotus, and is not unknown in Attic. In a sense, this is true. But then, (1) the *tmēsis* of Herodotus is utterly different from the *tmēsis* of Homer, and (2) the *tmēsis* of Herodotus is closely akin to the *tmēsis* which we find not unfrequently in Attic poetry. For in Herodotus and the Attic poets *tmēsis* is not only much less common than in Homer, but it is restricted in nearly the same way—viz., by being confined to the insertion of short particles between the preposition and the verb; in both, therefore, it is a mere relic of the original freedom of collocation, such as we find in Homer. A better example might have been found in the Herodotean use of the article as a relative, a use which is Homeric, and not (broadly speaking) Attic. But, in this instance, too, Herodotean usage has departed widely from Homer, though in a different direction from that taken by Attic Greek.

With regard to the second head—the explanation of Attic uses as "survivals" of Homer—I cannot admit that this process necessarily involves a *petitio principii*. An idiom may be recognised as a survival in Attic on grounds that are quite independent of its occurrence or non-occurrence in Homer. To take Prof.

Mahaffy's instance, the use of *did* in Sophocles' *δὶ αἰθέρα τεκνυμένους* may fairly be pronounced archaic, because it is exceptional, and because it is not found in contemporary prose. When we find that the same construction is by no means exceptional in Homer, it becomes very probable, to say the least, that Sophocles in using it was influenced by recollection, conscious or unconscious, of Homer. The case of *did* *στέφω* is slightly different, because that is a fixed poetical phrase, not the coinage of a single poet. It is therefore one of the many instances of "survival" properly so called—i.e., of the isolated preservation of constructions that are no longer part of the living *usus loquendi*. To tell us that we are simply to register these as "cases of likeness" between Homeric and Attic grammar is to bid us shut our eyes to the most instructive phenomena.

I find it difficult to understand Prof. Mahaffy when he objects to my account of this use of *did* as "distinctly Homeric" that the construction is frequent in the *Odyssey* and in x. and xxiv. of the *Iliad*. "The Greek of the latest parts of the poems" is certainly, in my mind, "severed in time from the classical Greek we know." That it is so is part of the proof of the general antiquity of the poems. The peculiarities which distinguish these probably later books show the directions in which the language tended, but they carry us a very short way in those directions. Prof. Mahaffy complains that I say very little about variations among the books of the *Odyssey*, and explains this—somewhat unkindly—by supposing that "the Germans have not yet subjected the *Odyssey* to searching verbal criticism." May it not be that "the Germans," with all their mysterious power of detecting the presence of variations, have not succeeded in this case in finding any?

The last part of Prof. Mahaffy's article raises a question of method, about which I wish to add a very few words. He strongly objects to the explanations of Homeric forms in the course of the *Grammar* (but always with a difference of type), drawn, as he says, "from the secrets of comparative linguistics." I venture to think that comparative linguistics is not so abstruse and mysterious as Prof. Mahaffy imagines, and that it has reached results which are neither "doubtful" nor "purely hypothetical." I should have been sorry to banish explanation of forms, and I do not see in what sense the book would become more "practical" by its absence. Let me say further that I had no intention of speaking slightly of the more recent writers on linguistics, though I cannot call them a school. The sentence to which Prof. Mahaffy refers does not mention Fick and Bezzenger, but F. de Saussure, Brugman, and Joh. Schmidt—scholars whose merits are not enhanced, surely, by being brought together in a school. It is true that, as I have been reminded by a well-informed writer in the *ACADEMY* (October 28, p. 315), Delbrück has recognised a common element in the great advances which have been made of late years, especially in the department of phonetics. But I cannot see that these recent discoveries, with all their value and importance, involve any common principles other than the principles which lie at the foundation of all true science. Even the much-debated maxim, that "phonetic laws admit of no exceptions," when properly understood (i.e., not taken to mean that all phonetic laws are already known) is no more than the expression of an ideal to which the science of language should always seek to approximate.

D. B. MONRO.

NOTES OF TRAVEL.

WE hear that Mr. Doughty intends to publish a book describing his travels in North-western Arabia,

On December 15, F. Schulthess, of Zürich, issued the first number of the *Schweizer Alpenzeitung*, which is to take the place of the defunct *Alpenpost* as the organ of the German-speaking sections of the Swiss Alpenklub. It is edited by Pfarrer H. Lavater, of Zürich, who has obtained the support of several eminent "Alpinists," including Dr. von Tschudi, of St. Gallen; Prof. Albert Heim, of Zürich; Prof. B. Rahn, of Zürich; the topographers and engineers, F. Becker, of Lugano, and Xav. Imfeld, of Sarnen; Pfarrer Ernst Buss, of Glarus; and other familiar names. The *Alpenzeitung* will appear every alternate week.

WITH reference to a paragraph published in the *ACADEMY* of November 25, about a Russian expedition to Central Africa, M. Ferdinand Karol writes to us that in no sense is the expedition a Russian one. It was planned by a Polish gentleman who is now at the head of it, and was promoted, as an undertaking of a purely Polish character, by several noblemen of that nationality, especially by Count Tyúzkiewicz and M. Rogozinski. The five gentlemen who compose the expedition are all Poles. M. Karol adds that the statement with respect to the starting of the expedition in the spring is incorrect, as he has read a letter from one of its members dated December 11, the day of sailing from Havre to Madeira, and thence to Fernando Po.

SCIENCE NOTES.

ANOTHER attempt is to be made in the beginning of next year to start a scientific weekly paper in America, of the same standard as our *Nature*, and (like it) illustrated. The title chosen is *Science*; the editor is to be Mr. Samuel H. Scudder, who resigns his post of assistant librarian at Harvard University; and the publisher is Mr. Moses King, of Cambridge. An influential body of scientific men have united to support the venture, with Dr. A. Graham Bell at their head.

PROF. TYNDALL will, on Thursday next (December 26), at 3 o'clock, give the first of a course of six lectures, at the Royal Institution (adapted to a juvenile auditory), on "Light and the Eye."

THE Swiss list of subscriptions to the "Darwin-Denkmal" contains 139 signatures from the Aargau, 109 from St. Gallen, 82 from Basel, 75 from Neuchâtel, 67 from Zürich, 55 from Ticino, 50 from Thurgau, 37 from Geneva, and 13 from Luzern.

PHILOLOGY NOTES.

A NEW edition of Prof. Schrader's well-known work, *The Cuneiform Inscriptions and the Old Testament*, has just been published by J. Ricker, of Giessen. It forms a volume of 618 pages, and contains much new material. Prof. Kiepert, of Berlin, contributes an instructive map, and Dr. Haupt, of Göttingen, a revised translation of the Deluge Tablets. Full glossaries and indices are added.

ANOTHER inscription in an archaic Italian dialect was recently discovered in the ancient Superaequum, in the district of Sulmona. The shape of the letters and the punctuation resemble those on the stones of Oricchio and Bellante, which are now preserved in the Museo nazionale at Naples. This stone will be placed in the same collection.

MEETINGS OF SOCIETIES.

PHILOLOGICAL SOCIETY.

(Friday, Dec. 1, Dr. J. A. H. MURRAY, President, in the Chair; and Friday, Dec. 15, Mr. A. J. Ellis, V.P., in the Chair.)

PRINCE L.-L. BONAPARTE read a paper on "Initial Mutations in the Living Celtic, Basque, Sardinian,

and Italian Dialects." The Prince gave a complete survey of all the changes of a first letter in a word or its suppression, or of additions made to it, under the influence of a preceding word, which are well known to exist in Welsh and Gaelic, but which the Prince traced through all the living Celtic languages; and he then showed that exactly similar phenomena existed in Basque and the Sardinian and Italian dialects. The whole was illustrated with fifteen elaborate tables, containing complete lists of all the kinds of mutation, and a new classification of the Celtic languages. At the conclusion of the second part of the paper, the Prince read a paper on the names of "Roncesvalles and Juniper in Basque-Latin and Neo-Latin, and the successors of Latin J," in which he showed that the proper name of the place is the Basque *Orre-aga*, "a place full of junipers;" and he proceeded to trace the name juniper through fifteen classes of language and their multifarious dialects, showing that the Latin letter J assumed seventeen different forms in these derived languages, every case being illustrated by the name given to the "juniper."

ROYAL SOCIETY OF LITERATURE.—(Wednesday, Dec. 13.)

GEN. SIR COLLINGWOOD DICKSON in the Chair.—Sir P. Colquhoun read a paper on "Mohammedanism," in which he sketched briefly, but effectively, the prophet's life from his birth, A.D. 570, to his death, A.D. 632, twenty-two years after the first promulgation of his doctrine. At first Mohammed, he said, aimed merely at the bettering of the moral condition of the Arab tribes, at that time deeply steeped in lawlessness, savage violence, and the grossest superstition. The development of his doctrine of the Unity of God "without equal or companion" came afterwards. His social standing as a member of the leading tribe of the Koreish, the guardians of the Kaaba, or sacred stone, gave him an advantage, which was greatly enhanced by his marriage with a rich widow, whose commercial agent he became, and with whom, alike his first wife and first convert, he lived in monogamy until her death. His primary work was the institution of a tribal police to maintain local order. He next attacked idolatry and fetishism, to which he was from first to last the uncompromising foe; and, after many narrow escapes from assassination, he succeeded in purging his countrymen of their worst superstitions, and in rallying them round one solid faith. Mohammed thus founded an empire which in a single century built up a greater dominion than had been ever swayed even by Rome. The Jews, who were at one time evidently half inclined to welcome him as their Messiah, withdrew from him on his refusal to acknowledge their special supremacy as God's elect people. Sir Patrick then pointed out many existing vulgar errors respecting the Mohammedan faith, which, in his view, differed in no respect, save in name and outward form from that of Buddha and Christ. In advocating this view, he maintained that Mohammed enfranchised the female sex, introduced the doctrine of a future state, abolished the immolation of human beings and the lower animals as sacrificial atonements, promulgated the maxim, "Let there be no violence in religion," and ignored any priestly caste. On the other hand, Mohammed denied the divinity of Christ; but, recognising him as a prophet and divinely inspired teacher only, calling him the spirit of God, he rejected his crucifixion in his own person, as well as the dogma of the Trinity. But the moral basis of Mohammed's system agreed with that of all great preceding teachers—a basis without which no religion could succeed.

SOCIETY OF ANTIQUARIES.—(Thursday, Dec. 14.)

A. W. FRANKS, Esq., V.P., in the Chair.—Mr. Freshfield gave an account of a tour in the province of Bari, in South-east Italy, describing especially the churches which he visited there. At Bari, the church of St. Nicolas, which was built by Robert Guiscard and his son Roger, is Norman in style, with certain Byzantine features, and a crypt which much resembles some examples of Saracenic architecture in Spain. The cathedral has been greatly injured by alterations and restorations in the last century. The crypt contains the relics of St. Sabinus, with his bust in silver. At Molfetta, what

was once a Byzantine church is now a soap manufactory. The church of St. Sabinus at Canoeus (*Canusium*) is in the form of a Latin cross, with nave and transepts. It is roofed by five domes, supported by Byzantine pendentives. The arches are round, and entirely Norman in character. The capitals of some of the pillars are classical, having been taken from an earlier building. In the courtyard is the tomb of Bohemond, Prince of Antioch, son of Robert Guiscard; and his bones are exhibited almost as if they were the relics of a saint. All the churches in this district have three apses, but no distinctively Greek features in their carving.—Mr. Waller exhibited a drawing of a tempera painting of the Virgin and Child found on the wall of Great Canfield church, Essex. The church is Norman, having only nave and chancel, and but little has been altered, except the windows. The painting is not contemporary with the building of the church, but was probably executed about 1360. The Virgin is seated on a throne, clad in a tunic and mantle, and crowned. Her hair is long. The child sits on her left knee, and she offers to him the breast. His face and figure are not child-like, and his hand is raised in the attitude of benediction. Both figures are nimbed.

FINE ART.

SHOW ON VIEW.—BEAUTIES OF SURREY SCENERY, being an EXHIBITION of Mr. SUTTON PALMER'S DRAWINGS and GRAVINGS made this past Summer.—MESSRS. DOWDSEWELL, 131, NEW BOND STREET (two doors from the Grosvenor Gallery).

In MARCH NEXT MESSRS. DOWDSEWELL will exhibit Mr. BIRKET FOSTER'S DRAWINGS of the CATHEDRAL CITIES of ENGLAND and WALES, which it is proposed shall be engraved.—Particulars on application.

ART BOOKS.

Art and the Formation of Taste. Six Lectures by Lucy Crane. With Illustrations drawn by Thomas and Walter Crane. (Macmillan.) Much as we talk of it nowadays, taste still seems as difficult a thing to define as orthodoxy. Dugald Stewart wisely remarks that "the mind, when once it has felt the pleasure, has little inclination to retrace the steps by which it arrived at it." People were very learned and metaphysical about taste in Dugald Stewart's days, and a little earlier, but all their analysis reads quite comically now; and, at best, its philosophy tells us no more than Akenside's definition—

"What then is taste, but these internal powers
Active and strong, and feelingly alive
To each fine impulse?"

Our modern critics do much in the way of exemplifying taste, but they also contribute to its analysis. Perhaps it is not to be analysed; or, at best, we can only get as far as Voltaire, when he said that, in an affair of taste, "Cent plaisirs font un plaisir unique." Miss Crane, one of our latest teachers on art, is not very happy in attempts at definition, but in disquisition succeeds pleasantly. Entirely of the latest artistic school, Miss Crane, in these easy lectures on art and taste, interprets Ruskin and Morris, and appeals to Burne-Jones. Her aim, seemingly, is to preach high art, and yet show that this is not necessarily high-and-dry art. Abundant sense characterises the attempt, and Miss Crane's well-known brothers must be thanked for editing and embellishing such a useful contribution to the literature of beauty. Not that the editing and embellishing are faultless. The text could here and there have been freed, almost by a stroke of the pen, from blemishes of expression; and the illustrations, though clever in idea, do not always serve their end, for the process employed for their production is harsh. We might take exception on other grounds to the full-page picture of the front of St. Mark's, Venice, which is given as a type of Romanesque architecture, and entitled "Round Arch and Cupola." So many forms of arch are to be found on this west front of St. Mark's that the façade could be quoted as well to exemplify

Gothic as Romanesque architecture. Scarcely any arch that it contains, indeed, is peculiarly Romanesque, and perhaps the only absolutely Romanesque feature in the whole front is the grouping of the shafts between the bays, in tiers. The illustration in the book, however, seems to accentuate what there is of rounded (but not always purely rounded) arch, and so the student is apt to be a little misled by it. Mr. Thomas Crane's head-pieces and tail-pieces for the chapters of this volume are very effective; and the uppermost portion of the design on the side of the cover strikes us as one of the cleverest pieces of ornament Walter Crane has ever accomplished. Altogether, this book of art lectures forms a pleasing and instructive memorial of the writer, whose premature death has prevented her attaining the distinction her talents might have acquired for her.

An Illustrated Dictionary of Words used in Art and Archaeology. By J. W. Mollett. (Sampson Low.) The author states in his Preface that this Dictionary was originally founded on the well-known work of M. Ernest Bosc, which is chiefly devoted to architecture. In the course of compilation the larger portion of M. Bosc's definitions have disappeared, and much additional matter has been introduced. The plan includes classical and Christian antiquities, mediæval armour and heraldry, costume, ancient and modern, pottery, art workmanship of every kind, and the processes and materials of art. The definitions are generally concise and clear, the information having been gathered from the latest and best authorities. We are bound to say that this Dictionary will not be wanted by the possessors of "Smith" or "Rich," but it supplies a fairly sufficient handbook to the beginner who would master the A B C of archaeology and art. The book is well bound, is clearly printed on toned paper, and is furnished with seven hundred wood-cuts, of which more than half are borrowed from "Bosc."

Ancient Greek Female Costume. By J. Moyr Smith. (Sampson Low.) From the Preface it would appear to be the author's opinion that many persons of "fair culture" believe that the ancient Greeks wore nothing but sandals and a hair ribbon. From this we conclude (for we can find no other possible reason for the book's existence) that Mr. Smith has rushed to the rescue of the fairly cultured with the overwhelming evidence of "112 plates and numerous smaller illustrations." But, if this be really Mr. Smith's opinion, what excuse has he for limiting his book to the costume of one sex? Surely the effect of such partial illumination will be to confirm the doubts of the cultured as to the clothing of the other. Perhaps he intends to complete his revelation in another volume, with still more illustrations. We trust that the reception accorded to the present volume will at least prevent that. Culture, however imperfect, is not likely to be improved by books which throw discredit both on modern literature and ancient art.

Old Church Plate in the Diocese of Carlisle; with the Makers and Marks. Edited by R. S. Ferguson. (Carlisle: Thurnham.) Carlisle is fortunate in possessing in Mr. Ferguson an accomplished archaeologist who devotes much of his time to illustrating the past history of Cumberland. His labours have been very various, as the *Transactions* of the local archaeological society show. Here he appears before us as part author and wholly editor of an elaborate description of almost every old chalice and paten in the diocese. As far as we can make out, this is the first book of the kind that has been issued. We trust that other dioceses will follow the lead of Carlisle, and that we may soon have a descriptive list

of all the old church plate in the kingdom. No time should be lost. The misdirected zeal which has in so many places, under pretence of restoration, mutilated the old parish church and destroyed local memorials, which all thoughtful people set store by, has not been content to let the old chalices rest in peace. There can be no reason why, when the needs of congregations require it, new altar plate should not be bought; but it is surely a great mistake to consign the old Elizabethan chalices to the melting-pot or to the cabinet of the collector of old silver. They are local historical memorials which should always be retained in the places to which they belong. It is hard to find excuse for the practice of selling them, for they are usually so small and thin that their intrinsic value as metal is rarely more than a very few shillings. They have, however, in many cases contained the sacramental wine for upwards of three centuries. Whatever our views may be on matters pertaining to theology, it is natural that some interest should attach to what has been during the whole life of Protestant England a symbol of religion. We have spoken of the old chalices as being mostly Elizabethan. There are a very few examples scattered about the country that have reached us from earlier times. The chalice at Bridekirk, of which an engraving is given, seems to be of the time of Edward VI. It is a beautiful vessel, but we are not by any means sure that it was, when made, intended for ecclesiastical use. At Old Hutton the mediæval chalice has been preserved. It seems to have been in constant use from the middle of the fifteenth century until about eight years ago. It is one of the oldest and most beautiful pieces of English ecclesiastical plate in existence. So active were the authorities at the Reformation that it is believed that not more than eight or ten mediæval chalices have been spared. Careful engravings of the details of this vessel are given. It is interesting to compare them with those of the Nettlecombe cup published in the forty-second volume of *Archæologia*, p. 405.

THE GROSVENOR GALLERY.

III.

If Mr. Alma Tadema fails to take us back in imagination all the way to Ancient Egypt, he takes us some distance on the right road, and farther than any other painter. But in painting Ancient Greece and Rome he helps still more our desires to realise what is beyond our experience. We and he of course receive much help from our own life and surroundings, to say nothing of acquired knowledge. We feel ourselves to be better critics in Rome than in Egypt, and yet we find less disposition to criticise. There is no doubt that the temples and the houses he paints must have looked much as he represents them, and that the costumes and works of art, the furniture and utensils, are accurate. All these things are great aids to reconstruction, but many artists have used them without producing any illusion. Mr. Alma Tadema is the first and only artist who has dealt with such materials in so imaginative a manner as to give an appearance of reality as great as if he were painting views in the London of to-day. But he not only does that; he fills them with people who are quite at home in his imaginary world, who wear their strange costumes with the ease of long habit, and eat and dance and pipe and flirt as to the manner born. Probably some Dryasdust critic will some day discover that the tie of Mr. Alma Tadema's sandals and the folds of his togas are wrong; that he overdid the painting of the Parthenon; and that there never was a marble colossus of anything like the size of that he has represented in one of the most ingenious of his little pictures (54). But few of us care to apply

such minute criticism now, even if we could. The pictures are visions in which the past appears to us again in a form so much more credible and natural than we ever expected to see it that enjoyment and wonder leave no room for carping. Sometimes, indeed, we are not satisfied, but that is on other grounds. In his "Summer" (60), for instance, we object to the vulgarity of the figures; and his large "Siesta" (31) seems to us an unpleasant representation of an uninteresting scene. But both these objections arise from differences in taste, and not from any doubt as to the correctness of the painter's knowledge or the trustworthiness of his fancy. The only thing that shakes our faith is the appearance of English faces among the actors. But, after all, this disturbs it as little as at a theatre where the acting is good; and Mr. Alma Tadema's acting is nearly always good. He, and even Mr. Gambart, pass as more than tolerable Romans when they wear togas instead of cutaway coats. Practically, therefore, Mr. Alma Tadema succeeds in the intention of his art, which is to make us feel what life was like in the old world. No man could have succeeded as he has done in this very difficult task without an unusual variety of faculties, none of them, perhaps, of the very highest order, but all above the average, nicely balanced, and mutually helpful.

Of mere archaeological knowledge no small store was required; but still more important was the manner of using it so that it should appear faultless and inexhaustible, but yet be unparaded. Mr. Alma Tadema fills every corner of his pictures with detail; the small objects, even in such a little picture as the last, and in some respects finest, of his versions of "Claudius" (61), would almost suffice to set up a curiosity shop, and yet not one of them seems to have been introduced for show. They all belong to their places, and have been painted apparently only because they happened to be there. The sum total of the knowledge necessary for a composition of this kind is very great; but it is all used, so to speak; there is nothing wasted or superfluous. It needs not only ingenuity and skill to work up so much dead material into a living picture, but imagination of a very rare kind. As it happens, in the picture of which we are speaking, the dramatic action of the soldier, the livid terror of Claudius, and the various passions of the wild crowd show imagination of a higher order than Mr. Alma Tadema needs for his ordinary pictures of social life. But, though higher, it is not, perhaps, so rare as that remarkable constructive imagination which so puts together the broken pieces of an old world that you cannot detect a flaw.

The mere reconstructive faculty, though (as in Mr. Alma Tadema's case) fed with ample stores of knowledge, would not alone suffice to make his pictures popular; and we doubt if his genius would be so universally recognised as it is, if it were illustrated only by those compositions which show the purest imagination. Though the cultured few may reckon as his highest efforts his attempts to reproduce that part of the old life which is utterly dead—his nut-brown "Bacchante" stretched exhausted on her tiger skin (105), the strange gestures of the "Pyrrhic Dance" (30), and the liting gait of the priests in "The Vintage" (66)—it is those in which old and modern sentiment approach one another which are most pleasing to the greatest number. We all know that human nature is much the same in all ages, but there is a special delight in being reminded of it pictorially; and this Mr. Alma Tadema does for us more frequently and completely than any other artist. But there is nothing more destructive of the kind of illusion that Mr. Alma Tadema desires to produce than palpable modern sentiment. It must be used with the utmost caution

and tact. The effect of any direct appeal to the experience of to-day in shattering our faith in the sincerity and knowledge of the would-be restorers of past times is constantly seen in pictures of scenes much nearer to us in point of time, and civilisations little different from our own. Even the great technical accomplishments of men like Jimenez and Madrazo, Vinea and Conti, fail to gain credence for their representations of European life only a century or two old. The *bric-à-brac* and buff jerkins, halberds and flagons, are all true enough; but the characters are evidently models, and the compositions smack of the studio. Why it is not the same with Mr. Alma Tadema's pictures is partly by reason of his wonderful gift of arranging the most heterogeneous objects as if they had come together by accident, partly from his superior power of vision, partly from his fragmentary style of composition, which suggests that his pictures are the realisations of sketches taken on the spot—bits out of a real world of which he had been an eye-witness. But a great deal is due to his tact in not forcing modern sentiment too far. To examine more exactly the secrets of Mr. Alma Tadema's success would lead us into too great length; but his archaeological knowledge and technical skill are so often insisted upon as though they were his main, if not his only, claims to a high position among artists that we have taken advantage of the present exhibition of his work to show how little such accomplishments would have availed him without a rare combination of mental and intellectual endowments, including a vitalising imagination and extraordinary tact.

COSMO MONKHOUSE.

MESSRS. DOWDESWELL'S GALLERY.

THE little gallery at No. 133 New Bond Street is now furnished with a long series of sketches in water-colour by Mr. Sutton Palmer. This young artist, not yet a member of either of the water-colour societies, has succeeded in attracting a fair share of attention already by his agreeable and exceedingly varied transcripts from English rural scene. An exhibition of his drawings was held at the Messrs. Dowdeswell's last year, when the few wonderful drawings by George Manson were also displayed; and this year there is justification for a second exhibition by reason of the progress made by the young artist in the interval. It has been said of Mr. Palmer that much of his work has been picturesque topography, but the remark applies rather to last year's show than to the present one; and, indeed, one of the things in which Mr. Palmer has latterly advanced most conspicuously is the power of subordinating the realities of a scene to the more essential truths of its artistic beauty. Mr. Palmer is on the way, perhaps, to abandon with no little willingness a too close portraiture of Nature for that legitimate idealisation to attain which has been the continued object of research of the greatest landscape artists. In other words, the painter is now putting much of himself into the themes of his choice; he is seeing a varied world with his own eyes, and working in his own way. There is more evident than there was last season the play of the many moods of Nature in his landscape. It is in that sense more dramatic, while it is at the same time more personal. "Wisley Common, near Ripley," with cloud and darkened wood (36), and "Newland's Corner" (39), with its sunny and pearly distance, and its breeze out of a glad sky, illustrate this remark. For tone, and for a grace of form admirably suggested, if not actually realised, "A Grey Day" (10), with its gently swaying poplars, is memorable. But we cannot complete the catalogue. There are, in all, sixty-six drawings which witness to the

industry of Mr. Palmer's labour and to his really remarkable dexterity. The artist has still something to learn, but he has already learnt much; and he displays, in uncommon measure, one of the most engaging qualities of talent—flexibility.

THE COMMENDATORE DE ROSSI.

Rome.

ON December 11, a gold medal was presented to the Commendatore G. B. de Rossi as a token of regard from some learned societies of Europe and America, and to commemorate his sixtieth birthday. The presentation was made in the Lateran, in the Sarcophagi Hall of the Museum of Christian Antiquities.

Father Bruzza, president of the Società dei Cultori dell' Archeologia Sacra, made the first speech. The meeting was an evidence of the esteem in which de Rossi was held by every nation and all political parties. The Society of Christian Archaeology had been the first to propose this presentation; the proposal had been warmly seconded by the German Institute and the École française; and the date had been chosen as being the day of St. Damascus, who rendered such good service in connexion with the Christian monuments of Rome. To de Rossi belonged the honour of having found the study of Christian archaeology a mass of confused erudition, and of having raised it to the dignity of a science. The scholars of all countries who had joined in this presentation had not merely given the Commendatore a personal token of their admiration of his genius and learning; they had also placed in his hands the means of turning his experience to the yet greater profit of students. The subscriptions for the medal had been much more than sufficient, and the balance would be devoted to continuing the work of excavations in the Catacombs.

Prof. Henzen then spoke on behalf of the German Institute. He said that the Institute felt that, in co-operating with Father Bruzza, it had discharged a plain duty. De Rossi was not only the founder of the science of Christian archaeology, he was also a classical archaeologist of the greatest eminence. The speaker enumerated de Rossi's works on classical archaeology, and bore witness that he had ever found him his most energetic colleague on the committee of the Institute. He added that the Berlin Academy had also received from him invaluable assistance in the preparation of its great work, the *Corpus Inscriptionum Latinarum*.

Prof. Hensen was to have been followed by Prof. Geffroy, the late Directeur de l'École française de Rome; but this gentleman having lately resigned, his address was read by M. Dill. It dealt with de Rossi's contributions to the study of the Renaissance, and commemorated his assistance in the great works accomplished by France in the cause of science.

The Commendatore de Rossi returned thanks in well-chosen words, remarking that he accepted the medal, not as a personal tribute, but as one rendered to the science he taught. He felt no doubt that his dear friend Father Bruzza, having received a testimonial for his great works on epigraphy, had resolved not to rest until he should have procured a similar tribute for himself. He spoke with enthusiasm of Father Bruzza's work on the Latin inscriptions of Verocelli, recalling a remark by Mommsen that, if in each city a scholar had produced a book equal to that one, the *Corpus* would have been superfluous. He then, turning to Prof. Henzen, acknowledged the great services he had rendered to epigraphy. Speaking of his own humble contributions to the *Corpus*, he felt pleasure in stating that he undertook the heavy task at the instance of that eminent scholar, Card. A. Mai, who, admiring the great undertaking of the Berlin Academy, urged that

the task was beyond the unassisted powers of any one nation, that it called for the help of all, and had an especial claim on the whole soul and strength of a Roman. The Commendatore spoke warmly of the scholars of France, and gratefully acknowledged the favour with which his earlier works were received in Paris. Turning to his pupils, he made a brief reference to his own labours in Christian archaeology, and concluded by remarking that much remains to be done in Rome, which still hides the greater number of its Christian monuments in the labyrinths of its Catacombs.

F. BARNABEI.

NOTES ON ART AND ARCHAEOLOGY.

We hear that the Queen has purchased a painting of the return of the 2nd Life Guards from Egypt to Windsor, by Victor Corden, a young artist of promise.

THE mezzotint of "Pomona" by Mr. Samuel Cousins, after the picture by Mr. Millais, will be one of the most attractive offerings that may be made this season. It is published by Messrs. Tooth and Son, who have exhibited, and are perhaps still exhibiting, the original picture, and, like the original picture, it will please all tastes. The lover of romantic childhood, or of piquant childhood, as the case may be, will have his sentiment satisfied by the work; the student of painting will see in the print much that recalls the incomparable charm and vigour of Mr. Millais's handling; and the amateur of mezzotints, or of the modern engraving in a mixed method, will find that the veteran who is responsible for the plate has never wrought better than on the present, and thus far the latest, occasion for the exercise of his art. The child, Pomona, as Mr. Millais has painted her, has, it may further be observed, the fascination of ingenuous childhood. She is very simple and very young, while often the youth of Mr. Millais's children is accompanied with a knowingness that qualifies them quite prematurely as little women of the world. The new Pomona, with apron up-gathered, fruit in hand, wheelbarrow at her side, and behind her a background of trees and remote sky, is a refreshing vision.

WITH reference to various statements about the Dudley Gallery, we are requested to say that the committee of "The General Exhibition of Water-Colour Drawings" have held the exhibitions managed by them for the last seventeen years in that Gallery; that, in consequence of the intention of the Institute of Painters in Water-Colours to hold an open exhibition next spring in the new galleries in Piccadilly, they have decided to discontinue theirs; and that all the professional artists belonging to the said committee have, by invitation, joined the Institute. Any exhibition to be held in future in the Dudley Gallery will be under new management.

THE marble head of Apollo, which formerly belonged to Sir Richard Worsley, and was lately found in a shed at St. Lawrence, Ventnor, has been presented to the British Museum by Mr. Pelham. The head has been measured by Mr. A. S. Murray, and has been found to agree exactly in its measurements with the Cyrene and the Choiseul-Gouffin heads of Apollo in the British Museum, and also with the head of the statue of Apollo at Athens. They are supposed by Mr. Murray to have been all made at one time as replicas of an original which was in demand. These statues are evidently of Apollo, and not, as has been lately supposed, of an athlete. There are no instances of replicas of statues of athletes in Greek art.

AT Messrs. Howell and James's there is a small but good exhibition of tapestry-painting.

Mr. Marks, the Academician, who is one of the judges selected to award the many prizes which are offered for the encouragement of this branch of art, sends himself the best work. This, it need scarcely be said, is "not in competition." It is a scene from "As You Like It," with Touchstone, Audrey, and William drawn with his accustomed mastery and quiet humour. Mr. Herkomer, Mr. Linton, and Mr. H. B. Robertson also send characteristic works, but do not compete. The prizes for amateurs have been awarded to M. G. Doerr, Miss Samuda, Miss Lucy Cooper, Miss Holmer, Miss Kate Clarke, Miss M. E. Graham, the Countess of Lovelace, Mrs. Gordon, and Compton Warner; and the prizes for professionals to Miss Ellen Welby, Miss Chettle, Miss Alice Danyell, H. Ryland, J. Donlevy, Miss Risohgitz, Miss West, and Miss Green. Some specimens of painting on a new material called "Cordovana," from its resemblance to the bronzed and gilt Spanish leather, are also shown.

LATE—almost too late—but by no means last in merit, are the Christmas cards issued by Messrs. L. Prang and Co., of Boston, U.S. Messrs. Prang were, we believe, the inventors of the practice of prize competitions; they have certainly been more successful in the results than some of their imitators in this country. We cannot approve the joint verdict of artist judges and popular votes which agreed to give a reward of no less than £400 to a design by Miss Dora Webster. We regard this as both unsatisfactory in composition and as failing in the primary conditions of the special branch of art. Though somewhat injured by its too dark border, the design of Mr. Frederic Dielman (which won the third popular prize) commends itself to us most. But almost all are very good, and are reproduced with a sumptuousness of silken fringe, &c., that cannot be surpassed. We admire in especial the softness of colour, which has evidently been inspired by the softness of American wood-engraving. It is not beneath notice that these cards are "put up" in most acceptable envelopes. We must add, the price of a single card runs up to six shillings.

A RECENT number of *Παυσανίας* gives some further details about the newly discovered tunnel at Samos, which Mr. G. Dennis described in the ACADEMY of November 4. The tunnel has been in great part cleared out, with the object of again using it to supply the city with water from the "copious spring" mentioned by Herodotus, and now called the fountain of Hagiades. At one point the tunnel divides into two branches; but we cannot agree that this represents the ἀμφιστομον ὄρυγμα of the ancient historian.

THE Society of Artists at Munich have organised an international exhibition to be held in July next. They invite all foreign artists to send contributions. Medals will be awarded, and a lottery has been authorised for the purchase of a large number of works. The time fixed for the delivery of pictures, &c., is May 1-31.

HANS MAKART is at present exhibiting his remarkable series of pictures representing the "Five Senses" at Paris, in the rue St-Honoré. Probably they will soon be brought to England.

ON the proposal of M. Léon Renier, the Académie des Inscriptions has interested itself in the preservation of the remains of a Roman amphitheatre at Paris, in the Rue Monge, which was first brought to light in 1870, and is now threatened with destruction. One part has already been destroyed.

AN interesting but little-known work of Adolf Menzel's, to which a somewhat curious history attaches, is at present being exhibited at the Berlin National Gallery. It consists of ten drawings in *gouache*, most delicately and

carefully executed, representing various tournaments, with much decorative and fanciful design. These drawings formed what was called "The Album of the White Rose," a work designed to commemorate a visit paid in 1829 by the Empress Charlotte of Russia, known as the "White Rose," to her father, Friedrich Wilhelm III. of Prussia. On this occasion the Court of Prussia held high festivity; and twenty-five years later Menzel was commissioned by the present Emperor to illustrate the event in an art album, to be presented to the "White Rose," whose petals by that time must have somewhat faded. Ever since then the album had been lost to sight. But the Emperor of Russia, at the request of Dr. Jordan, has now lent it for exhibition, and has given permission for its reproduction, so that an art treasure, which for years has only served to amuse an occasional visitor to the Castle of Zarskoje Selo, will soon be made accessible to all.

"RETURNING TO THE FOLD," by Mr. H. W. B. Davis, of which an etching by Mr. C. O. Murray is given in the *Portfolio* this month, was one of the pictures bought by the Royal Academy this year, under the Chantrey bequest, and now exhibited at South Kensington. It is a work full of tender feeling and truth of detail, but one cannot help comparing it with similar scenes by Millet, and missing his tone of pensive poetry. The other two etchings of the number are not remarkable; and there is nothing in the letterpress to call for especial notice, except an article by Prof. Church on "Elton Ware," in which he gives some curious details regarding the difficulties of pottery manufacture.

LAST week's *L'Art* is again enriched by one of M. Lucien Gautier's magnificent etchings. This time the scene is not in Paris, but it is the "Bassin de Carenage" at Marseilles that is represented with a vivid reality that almost transports one among the ships lying about in the prosaic-looking dock. M. Cavallucci begins in the same number a study of Luca della Robbia.

THE December number of the *Gazette des Beaux-Arts* is not particularly interesting. Much of it is taken up by the interminable "Journal de Voyage du Cavalier Bernin," and much by the half-yearly bibliography. Among the few articles may be noticed one by C. Bigot, on the frescoes by Raphael in the Farnesina, illustrated with a delicate etching of the well-known "Cupid and Psyche;" and another, by H. Jonin, on Antoine Coyzevox.

THE STAGE.

THE performances at the Opéra Comique, which for a while oscillated between an "entertainment" and a play, have assumed a character more purely theatrical. Miss Lila Clay, who conducts a theatre from whose stage and orchestra the sterner sex is banished, has had recourse to an author and to a musical composer—Mr. Savile Clarke and Mr. Slaughter—and has been furnished by them with the entertaining *pièce de circonstance*, "An Adamless Eden," which her company of ladies perform sufficiently well. We cannot, however, conceal from ourselves the fact that the presence of one or two comic actors of favour and prestige would give additional vivacity to any such entertainment as the present. Mr. Slaughter's music is tuneful and light, and Mr. Savile Clarke's dialogue is witty and *à propos*; and, the piece being played intelligently, all is successful. Much of the weight of it falls on Miss Amalia, an actress of individuality, and unusually vivacious and genial if not richly inventive or actually brilliant. Miss Cicely Richards, too, does good service to the piece, though the opportunity is not afforded her of

making any such mark as on more than one occasion heretofore she has been enabled to make, in comedy, at the Vaudeville. Miss Jonghman is less to our taste. She, like Miss Amalia, is vivacious indeed, but her vivacity savours of the music-hall. Miss Emma D'Auban leads a dance that is called a "boot-dance"—a curious thing enough, yet not without grace. The orchestra deserves particular notice. It is constituted quite differently from the habitual orchestra of the theatre. It contains some instruments, such as the harp and the harmonium, which are not accustomed to figure in the orchestra at all; and it includes several performers of distinct promise and accomplishment. The three Miss Paggis are remarkable among these ladies. One of them plays a flute, another the harmonium, while to Miss Josephine Paggi—who is extremely young—is entrusted advantageously the post of "first violin." They contribute much to the satisfaction that the audience gets from the entertainment; and it is to be wished that, in addition to their present performances, it could be arranged for them to give us a taste of more classical music.

MUSIC.

HERR PACHMANN AT THE POPULAR CONCERTS.

THE performances of Herr Pachmann at the Saturday and Monday Popular Concerts deserve more than a passing notice. We remember once hearing Rossini say, "Pianists, and even good ones, are as plentiful as peas." And the saying is also true at the present moment. Herr Pachmann, however, is something more than a good player: he is a great one. For delicacy of touch and beauty of tone he reminds one of Rubinstein, but indeed exceeds him in general correctness and (so far as Chopin is concerned) in purity of style. On Saturday Herr Pachmann made his first appearance at the Popular Concerts, and performed Chopin's sonata in B minor. This the third (and not the second, as announced in the programme-book) solo sonata contributed by Chopin to the pianoforte is by no means one of his most interesting works, yet so splendidly was it interpreted by the player that it was listened to by the large audience with the utmost interest and attention. The *schërzo* was given with the touch, as it were, of a fairy; the exquisite phrasing in the long slow movement lent to it for a moment a charm which it does not really possess; while in the fiery *finale* Herr Pachmann showed the full force and originality of his playing. Of course he was encored, and played Chopin's mazurka in B minor (op. 33, No. 4). The performance of Beethoven's grand trio in B flat (op. 97) by Messrs. Pachmann, Joachim, and Piatti was very fine indeed; and the pianist gave ample proof that, although Chopin's music seems to be his speciality, he can understand and worthily interpret the works of the great masters. Before proceeding to notice the programme of Monday, we would mention the splendid playing of Messrs. Joachim and Straus in Spohr's *duo concertante* in D minor (op. 39) for two violins. In all three movements the parts are most fairly distributed, and thus an opportunity was given of admiring in turn the two performers. The composition is exceedingly interesting; one of its most striking features being the fullness of tone, produced by only two instruments, which made it at times sound almost like a quartett. Miss Santley was the vocalist, and sang with much refinement songs by Handel, Molloy, and Bennett.

On Monday evening Herr Pachmann played no less than six studies of Chopin—Nos. 4, 11, and 12 from op. 10, and Nos. 6, 8, and 9 from op. 25. Of these only two had been previously

heard at these concerts. These "Etudes" were of course written partly for technical purposes, and as such they are unrivalled. The wide-spread *arpeggio* chords of No. 11 (op. 10), the constant double notes for the right hand in No. 6 (op. 25), and the sixths of No. 8 from the same set are difficulties of no ordinary kind; and, so long as they continue to be difficulties to the player, the mechanical aims of the composer are but too prominent. When, however, any of these "Etudes" are performed, as on Monday evening last, with perfect mastery and ease, the listener forgets all about the passage writing, with its dangers and difficulties, and hears only tone-poems of exquisite charm and beauty. Herr Pachmann was obliged to repeat No. 6 (op. 25); and at the close, in answer to the enthusiastic applause, he played the study on the black keys (op. 10, No. 5). It is to be hoped that the pianist will one day favour us with a "Chopin recital;" for a portion of the spirit of the illustrious Polish composer certainly seems to have fallen on him. Wagner has said that Liszt, playing Beethoven, "was not mere reproduction, but real production," and the same may be said of Herr Pachmann as an interpreter of Chopin. The programme included Spohr's *barcarolle* and *schërzo* played by Herr Joachim, and Mozart's pianoforte quartett in G minor performed by Messrs. Pachmann, Joachim, Straus, and Piatti. Miss Santley was again the vocalist, and sang with great taste "Au Rossignol," by Gounod, and songs of Maude Valerie White, accompanied by the composer.

SPECTACLES versus BLINDNESS.—One-

fourth of those suffering from blindness, or dimness of sight, can trace their calamity to the use of common spectacles or lenses imperfectly suited to the sight. Mr. HENRY LATHAM, F.R.S., Oculist, Optician, personally adapts his IMPROVED SPECTACLES at his residence, 3, Endleigh-gardens, Euston-square, daily (Saturdays excepted), 10 to 4. Sir Julius Beucliet writes, "I have tried the principal opticians in London without success; but your spectacles suit me admirably. The clearness of your glasses, as compared with others, is really surprising." Dr. Bird, Chelmsford, late M.P. for W. Essex, writes,—"I could not have believed it possible that my sight could have been so much improved and relieved at my age, 62. I can now read the smallest print, although suffering from cataract on the right eye." Similar testimonials from John Lowe, Esq., M.D., Lynn, Physician to H.R.H. Prince of Wales; Van Ardenne, Esq., Clifton; L. C. C. Macmillan, Esq., Brompton; the Rev. Mother Abbess, F. Mary's Abbey, Hendon; and hundreds of others. Mr. Laurence's pamphlet, "Spectacles, their Use and Abuse," post-free. CAUTION.—Mr. Laurence's Improved Spectacles can only be obtained direct from him at his residence, 3, Endleigh-gardens, Euston-square.

13, Great Marlborough-street.

HURST & BLACKETT'S NEW WORKS.

WITH the CONNAUGHT

RANGERS, in QUARTERS, CAMP, and on LEAVE. By General E. H. MAXWELL, C.B., Author of "Griffin, Abey!" 1 vol., demy 8vo, with Illustrations, 15s.

"A warm welcome may be pre-ordered for General Maxwell's new work. His chatty volume carries on its story to the end of 1870. He takes the reader along with him to Turkey and the Crimea, India and the Oshawara, giving sketches of the soldier's life in travel and camp, and telling in a pleasant way stories and incidents such as Oshawara might have recorded in his love-making. It is an eminently readable book, quite apart from the special attraction it must possess for all who are, or who have been, connected with the gallant 88th."—*Daily Telegraph*.

THE FRIENDSHIPS of MARY

RUSSELL MITFORD: as Recorded in Letters from her Literary Correspondents. Edited by the Rev. A. C. LESTRANGE, Editor of the "Life of Mary Russell Mitford." 2 vols., 3 vols., 5s.

COURT LIFE BELOW STAIRS;

or, London Under the First Georges, 1714–1760. By J. FITZGERALD MOLLOY. SECOND EDITION. 3 vols., 5s.

"These volumes recall scenes and anecdotes which will long continue to amuse readers."—*St. James's Gazette*.

LODGES'S PEERAGE and

BARONETAGE for 1882. Under the special Patronage of Her Majesty Corroborated by the Nobility. Fifty-second Edition. 1 vol., with the Arms beautifully engraved, 3s. 6d., bound, gilt edges.

THE NEW NOVELS.

A STORY of CARNIVAL. By MARY A. M. HOPKINS, Author of "Five-Chimney Farm," &c. 3 vols.

EXCHANGE no ROBBERY. By Miss BETHAM-EDWARDS, Author of "Kitty," "Bridget," &c. 3 vols.

I HAVE LIVED and LOVED. By Mrs. FORRESTER, Author of "Viva." THIRD EDITION. 3 vols.

"I Have Lived and Loved" is written with extreme cleverness, and the plot is so cleverly contrived that it is really a work of genius in which the readers of novels are very generally interested. It is a transcript of what actually goes on in a good many drawing-rooms and country houses."—*World*.

A GOLDEN BAR. By the Author of "CHRISTINA NORTH," "UNDER the LIMES," &c. 3 vols.

"In 'A Golden Bar' the author attains effects which are really charming. It is a relief to turn to a work which can be inherently interesting without being wildly improbable."—*Academy*.

RED RYVINGTON. By William WESTALL, Author of "Larry Lobogrin," &c. 3 vols.

FETTERED yet FREE. By Alice KING, Author of "Queen of Herself," &c. 3 vols. [Next week.]

BOOKS at a DISCOUNT of 3d. to 9d. in

the SHILLING, or 2s. to 7s. per cent.—GILBERT & FIELD have just issued their NEW CATALOGUE of BOOKS, from the published price of which they allow the above liberal discount. Catalogues gratis and postage free.—GILBERT & FIELD, 67, Moorfields-street, and 15, Gracechurch-street, London, E.C.

TRÜBNER & CO'S LIST.

NEW WORK BY MR. EDWIN ARNOLD, Author of "The Light of Asia," &c.

Now ready, crown 8vo, cloth, 7s. 6d.

PEARLS OF THE FAITH;
Or, Islam's Rosary.

Being the Ninety-nine Beautiful Names of Allah (Asmâ-ul-Husnâ). With Comments in Verse from various Oriental sources as made by an Indian Muslim.

By EDWIN ARNOLD, M.A., C.S.I., &c.

Demy 8vo, with Seven Illustrations, cloth, 7s. 6d.

THE PEDIGREE of the DEVIL.

By Frederic T. Hall, F.R.A.S.

8vo, cloth, 12s.

TRAVELS in

SOUTH KENSINGTON.

By M. D. CONWAY. Illustrated with upwards of Eighty Wood-engravings. COVERS: The South Kensington Museum.—Decorative Art and Architecture in England.—Bedford Park.

Crown 8vo, cloth, with Map, 3s. 6d.

A BRIEF HISTORY of the

INDIAN PEOPLE.

By W. W. Hunter, C.I.E., LL.D.,

Author of "The Imperial Gazetteer of India," &c. The most perfect short History of India available for Schools and Colleges. The name of the Author is at once a guarantee, both as to the contents and style. It has been adopted in all the Government Schools in the Madras Presidency.

Crown 8vo, cloth, 10s. 6d.

THE VAZIR of LANKURAN:

a Persian Play.

A Text-Book of Modern Colloquial Persian. Edited, with Grammatical Introduction, Translation, copious Notes and Vocabulary giving the Pronunciation of all the Words, by W. H. RAGGARD, late of H.M. Legation in Tehran, and G. LE STRANGE.

8vo, cloth, 12s. 6d.

ON MR. SPENCER'S

UNIFICATION OF KNOWLEDGE.

By Malcolm Guthrie,

Author of "On Mr. Spencer's Formula of Evolution."

Post 8vo, with Portrait, 10s. 6d.

EMERSON at HOME and ABROAD.

By M. D. Conway.

This book is the work of one who was personally acquainted with Emerson for nearly thirty years, and with Hawthorne, Thoreau, and others; it reviews the history of the so-called "Transcendental" movement in America; and contains various letters by Emerson not before published, a Biographical Sketch, &c.

Ninth Edition, crown 8vo, limp parchment wrapper, 3s. 6d.

THE LIGHT of ASIA;

Or, the Great Renunciation:

Being the Life and Teaching of Gautama, Prince of India and Founder of Buddhism. Told in Verse by an Indian Buddhist. By EDWIN ARNOLD, M.A., C.S.I.

"The most sympathetic account ever published in Europe of the life and teaching of the Sakya Saint, the Lord Buddha."—*Times*.

Crown 8vo, cloth, 6s.

ATTEMPTS at TRUTH.

By St. George Stock.

4 vols., 8vo, with Steel Frontispieces, 63s.

THE HISTORICAL, POLITICAL, and DIPLOMATIC WORKS of

NICCOLO MACHIAVELLI.

Translated from the Italian by CHRISTIAN E. DETMOLD.

8vo, cloth, 14s.

THE LIFE and LETTERS of

FRANÇOIS LIEBER.

Edited by T. S. PERRY.

2 vols., post 8vo, cloth, 12s.

JUVENALIS SATIRAE.

With a Liberal English Prose Translation and Notes. By J. D. LEWIS, M.A., Trinity College, Cambridge. Second, Revised, and considerably Enlarged Edition.

Crown 8vo, cloth, 7s. 6d.

LITERATURE.

Oliver Cromwell: the Man and his Mission.
By J. Allanson Picton. (Cassell, Petter, Galpin & Co.)

WE do not remember how many Lives have been written of Oliver Cromwell. Their number, if they were catalogued, would astonish almost all persons except bibliographers. Many of them are quite worthless, and nearly the whole of the remainder are only valuable as storehouses of facts. Whatever be the view taken of the great Protector, all who have studied his career and its surroundings must admit that until Carlyle arranged his letters and speeches in order there was no adequate means of learning what manner of man he was. The theory that he was a mere vulgar ruffian with a capacity for winning battles, who assumed an exaggerated form of the popular religion as a means of imposing on mankind, can never have been widely received. It was believed, or pretended to be believed, in the unhappy days which followed the restoration of the Divine-right monarchy; but the delusion was too palpable and gross to be accepted in better times. In the eighteenth century opinions on the nature and foundations of civil government were popular which, if not scientifically correct, were in no violent antagonism with the facts that experience teaches; but it was an age with little power of looking outside itself. The faculty of conceiving of past history as anything beyond a dry chronicle was rare, and the vast superiority of the present over all other times was so well assured that a sympathetic treatment of those who had helped to make England what she then had become was almost unknown. The times but a little preceding our own are commonly held to be uninteresting. To our great-grandfathers the story of the Civil War was not old, but only old-fashioned—so near as to be well within the reach of oral tradition, yet just so far removed as to be repulsive from its quaint ways and unrefined manner of expressing itself. A steady, somewhat stolid, movement in Church and State was the idea of the men who found something to admire in the early Georges. To them, enthusiasm was not so much repulsive as incomprehensible. The treatment that Wesley and his comrades received arose, we can now see, quite as much from ignorance as from those lower motives to which it has been frequently attributed. We do no injustice to our forefathers of that era by asserting that vice, if it were but moderately decorous, was less hateful to them than the bad taste of

fiery zeal, even when accompanied by the most spotless purity in thought and action. Such men could never understand the great Puritan revolution and its leading spirit. Something, however, they did. The calumnies of the Restoration were in a great measure discarded in their grosser forms. Men ceased to credit the brazen assertion that the greatest soldier and the greatest ruler these islands have ever known was a mere monster of villany. But it was incredible to them that he could have been honest. His religious professions, made in season and out of season, in words so injudiciously different from those with which the Tillotsons, the Stanhopes, and the Smallridges were wont to soothe them, were clear evidence thus far; so the theory grew up that the Protector was in some sort a patriot—a man who at the beginning of his career had thought only of his country's good, but who, as time went on and opportunities presented themselves, gradually thought less and less of England and more and more of himself. His religious outpourings were to them mainly imposture; but such a cloak did not seem so shocking in the days of Sir Robert Walpole as it would do now. That statesman's contemporaries preferred to regard it rather as very bad taste. The whirlwind of the French Revolution caused movement in every department of thought. History, which had before been a series of annals, became now not only something which should be entered into, but also an exhaustless stimulant to the imagination. At home and abroad the great career of the Puritan captain attracted renewed attention. The Civil War, which for a time swept away the monarchy, was a hard thing to understand, but many of the best intellects of the time gave thought thereto which has indirectly been most fruitful. Sir Walter Scott had perhaps the strongest imaginative sympathy with the past of any man who ever lived, but his wide reading had been for the sake of storing his mind with pictures, not for ascertaining facts. Yet his imagination led him farther in the direction of truth than painstaking industry had conducted his contemporaries. His Oliver as he appears in *Woodstock* is a caricature, and a most unkindly one; but the man is there, not indeed acting as he did in real life, but presented as a fantastic parody. Still the parody is, in a certain grim way, a picture of the original. You see that the writer has been awed by the hero's vastness, and that, whatever he may think good to say, he feels that the imposture theory will not account for the facts. Scott had known Cameronians and others whose language was as Biblical as Oliver's. He had read the outpourings of Scottish martyrs before whose bold applications of Holy Scripture Oliver's use of Oriental imagery seems timid. He had therefore at hand means of forming an estimate of the Protector's character denied to his contemporaries, whose associations, personal and literary, had been of a narrower order. Carlyle, by ancestry and association, was a Puritan himself, though one who had broken loose from the definitions of his national theology. To him we owe the first true portrait of the Hero and Saint of English Puritanism. Carlyle's work has long passed beyond criticism. We may, however,

perhaps be permitted to say that the more lovable side of Oliver's character was not so fully brought out in those remarkable volumes as it might have been.

Next to Carlyle as an interpreter of Oliver Cromwell we must place the author of the remarkable volume before us. He tells the world honestly that he "makes no pretension to original research," that he has mainly depended on Carlyle and more recent investigators for his facts. We wish it had been otherwise, for there are some obscure periods in Oliver's career, notably that between Naseby and the execution of the King, which might be made brighter by anyone who, with the knowledge Mr. Picton has, would devote himself to the subject. To those who have mastered the lesson Oliver's letters teach, there cannot be much hesitation in forming an opinion. Two lines of rational thought, and two only, seem possible. We may maintain that Oliver was a religious enthusiast with genius, but with no clear sense of the difference between right and wrong, truth and falsehood; or we may maintain that his moral character was at least as high as his intellectual. Mr. Picton has, within the limitations he has stated, studied the Protector's character with minute care; hardly a recorded word that fell from his lips or a single letter that has come down to us has been passed over without giving some little touch to the narrative. We imagine, indeed, from slight differences of style and varieties in word selection, that his book has been written slowly, and that many of the details which careless people consider trivial have received long consideration.

Mr. Picton is not so ignorant of human nature as to represent his hero as faultless; at the same time, he knows far too much of his life and surroundings not to feel that he was throughout a thoroughly honest human soul, striving after the right, but sorely hampered, not only by the turmoil of outward forces, but by struggles within. Of his sincerity Mr. Picton says

"there can be no doubt; he had not a simple nature. Whether the cause lay in his education or in irremediable personal defect, certain it is that his vast energies and the perspectives of his brooding thought were never so entirely subordinated to one clear purpose as to be clarified into transparency. In this respect he was very far from the type of apostle or martyr. At each successive demand for exertion, he was indeed equal to the occasion. Every faculty of his mind, every emotion of his heart, nay, every fibre of his body, flashed into that white heat of energy which united watchfulness, swiftness, power, in one supreme function of his complex greatness. But, when the occasion had passed by, he never had any far-reaching policy, except to be ready for the next call upon him. . . . For much the same reason there was a great want of simplicity in his religious experience. The simplicity consisting of lack of variety he could not have, because his great brain was too busy for that. The simplicity consisting in unified variety he could not get, because no unifying idea commanding enough for the complexity of his thoughts ever possessed him."

Such writing as this deserves, and will command, attention. Mr. Picton is clearly no theorist determined to press his hero into some narrow mould of his own making, but

a careful searcher, who has weighed every fragment of evidence that has come before him. As to Cromwell's religious experiences, they must have been dependent, not for their force, but for their direction, on his surroundings—on the mental atmosphere he lived in, the sermons he heard and the books he read. As far as we remember, there is no evidence of his ever having read any books on theology except the Holy Scriptures. We may be sure, however, that, during the long years before the bustle of the political world came upon him, he had stored his mind with such Puritan divinity as was then popular. A soul so intense could not have been satisfied by the cares of farming and the duties of a Commissioner of Sewers. We know not how Mr. Picton interprets the religious side of his life. To us it does not seem to have been uniform from first to last. In the beginning we gather that he was a Puritan simply—a docile follower of the "godly" party who were bent on a reform of the English Church according to the Geneva platform. His touching letter to Mrs. Saint John seems evidence of this. It deals with those terrible inward struggles to have passed through which, and to have come out from the conflict having obtained peace, is the highest happiness that can fall to the lot of man. "I dare not say He hideth His face from me" shows that Oliver thought the victory was won. How far it was so no one, not even himself, could have told us. The terrible mental struggle seems to have gone on to the last, sometimes reaching to intense agony. It never hindered his work; but that work modified, it would seem, the opinions which influenced his inner life. Oliver could have had in his early farming days no theories about religious toleration. We cannot but believe—though there is no express testimony one way or the other—that during the Huntingdon or Ely days he would have been willing, if not anxious, that persons who held perverse opinions on matters of theology should become the victims of the civil power. As time passed away wider views occupied his soul. He came to know that "public services for which a man is born" could not be neglected, or put off on others, except at the extremest spiritual peril; and he found plain honest men doing these services with their whole hearts who by no means came up to the minimum of the recognised standard of orthodoxy. Thus, whatever his private opinions might remain, he felt it to be no part of his duty when he became a power in the land to enforce outward uniformity. Nay, further, we see that he held that the gifts of the Spirit were different in different souls, and that a man might be in the grace of God who did not think after the pattern of Westminster. Did he himself remain to the last absolutely in harmony with Calvinistic orthodoxy? The evidence is so slight that it is a question on which it is rash to speculate. We apprehend that, while he never had a doubt as to the absolute certainty and completeness of the revelation as set forth in Holy Scripture, his interpretation of words and figures was slowly modified. The inward light became more and more supreme and questions of doctrine less important. Had it

not been so, we cannot conceive how he could have reconciled his very wide views of toleration with his strong sense of duty. All Protestants, save Episcopalians, had freedom; and the stories of his oppression of these seem to have little foundation. Stringent legislation against the Book of Common Prayer found its way into the Statute Book; but evidence has not come to light that the law was enforced during his rule with anything beyond the extremest laxity. The wicked Tudor and Stuart laws against Roman Catholic priests remained in force, but their action was in a great degree suspended. In Challoner's catalogue of Catholic sufferers we meet with the names of but two priests who were put to death between 1651 and the Restoration.

Mr. Picton's account of the Eastern Association and of Oliver's own personal following of soldiers is the best part of the book. We should be glad to quote many pages of it. He seems to be really the first modern who has shown how those wonderful troops were got together, and of what materials they were made. He states a simple truth when he says that

"they are unmatched in history; for the sanguinary Hebrew warfare, which they idealised as their model, had no such grand political purpose. And they must remain unrivalled for ever now; for the time has gone by when war could be carried on as an act of worship."

Richard Baxter tells us that Oliver's troops were largely composed of "freeholders or freeholders' sons," a statement which Mr. Picton thinks will seem "almost incredible to a generation which, in rural districts, knows of scarcely any freeholders except large landowners." This passage shows that the author is more conversant with our Eastern shires as they were in the seventeenth century than as they are now. For one of the associated counties, and that the largest, though the last to join the confederacy, we can answer pretty confidently. We know that in a great part of Lincolnshire there are more freeholders now than there were when Charles I. was king. In the Isle of Axholme alone, a district having but five polling places, and hardly any industry except agriculture, the register of voters for the present year shows 1,282 freeholders. This, of course, does not include women, minors, and properties held in trust, nor a large body of copyholders who would be included in Baxter's statement.

We feel some hesitation in finding fault with the details of a book which has given us so much pleasure, and which is destined to exercise great influence, but we must protest against the idea that it was "morbid excitement" which made Oliver attach importance to a prophecy of a man who lay on his death-bed the day previous to the Battle of Preston. If any modern were to think twice about such a matter we should consider him a simpleton; but there was probably not one of Oliver's contemporaries who would not have been cheered or terrified by such an announcement. The whole literature of the time is full of portents. Laud was frightened at things which would not alarm children now, and John Vicars and the Puritan tract-writers are never weary of telling stories far more grotesque than the Preston incident. The

notion that the dying can see into the future, or, it may be, in some manner command the future, is very old. It exists still, and has influence over persons who enjoy far better means of separating folk-lore from fact than the best and wisest of the seventeenth century.

Mr. Picton has concentrated his attention so entirely on the subject of his biography that he has said little about the lesser men who stood around Oliver. This has been wise; but we should have been glad to have had his estimate of some of the notabilities of the time. The sketch given of Major-Gen. Thomas Harrison shows that if he had undertaken the task he would have done it efficiently. No man, not even the Protector himself, has been the object of more persistent slander than Harrison. It is with no little joy that we find justice at last rendered to the pure-minded Anabaptist leader who was so shamefully done to death when the Restoration had for a time obscured all that good men had worked and prayed for.

Mr. Picton's book naturally ends with the death of its hero. He does not give the details of the violation of the graves at Westminster, but it was necessary to mention the fact. With the few words he does say every true-hearted man will agree.

"There are murders told of in English history which thrill us with horror; deeds of cruelty and injustice which are a lasting pain to the historic conscience; but the most of them had some poor excuse of brutal necessity or frantic passion. Perhaps if we could rightly estimate what goes to constitute baseness, not one of these sanguinary deeds would so sicken us with moral disgust and shame for our common nature as the impotent, cowardly, and needless deed wrought on Cromwell's dead body."

EDWARD PEACOCK.

Pearls of the Faith; or, Islam's Rosary; being the Ninety-Nine Beautiful Names of Allah; with Comments in Verse from various Oriental Sources (as made by an Indian Mussulman). By E. Arnold. (Trübner.)

WHEN Mr. Edwin Arnold published his poetical version of the Buddha's life and teaching, it was evident to all that there was something much above mere translation or adaptation in it. *The Light of Asia* showed undoubted poetic power; it was full of imagination—sympathetic, graceful, and melodious. Many who would not have read a more learned book were attracted by this fine poem, and found Buddhism a fascinating study. The success of *The Light of Asia*, in its many editions, has tempted Mr. Edwin Arnold to try a somewhat similar experiment with Islam. *Pearls of the Faith* is not a poetic life of Mohammad, but a series of ninety-nine short poems upon the "Most Beautiful Names" of God. These names, gathered from the Koran, really amount to more than 550, as Mr. Redhouse has shown in a careful and accurate paper published in the *Journal of the Royal Asiatic Society*; but Mohammadans are in the habit of selecting ninety-nine of the more usual of them—not always the same ninety-nine—for the meritorious purpose of repetition at prayer; and, as each name is repeated, one of the ninety-nine beads of the Muslim's rosary is slipped. The "Most

Beautiful Names" are epithets, such as "the Most High," "the Forgiver," "the Compeller," "the Seer, Hearer, Exalter, Abaser," &c.; and Mr. Arnold makes each epithet the text, as it were, of a little sermon in verse. Sometimes it is a story taken from Sale's notes, or from the best-known traditions of the Prophet, illustrating the particular quality of the Deity specified in the title-epithet; but more often it is a paraphrase of one of the short chapters or a few verses of the longer chapters of the Korân. These little sermons run from four to over fifty verses, and each is begun and ended by a couplet forming an ejaculatory prayer. It would be difficult for the greatest of poets to make this aphoristic arrangement interesting; and it will be a severe disappointment to many who, like ourselves, were delighted with the plan of *The Light of Asia* to find its author binding himself to so unpromising a method. Still, the execution, we made sure, must be excellent within the limits thus laid down, and each aphorism would, we thought, be treated with metrical skill and finish, and here and there illumined by a flash of poetic insight, or a blaze of the glowing Eastern imagery Mr. Arnold has used so finely before. With unfeigned reluctance we must own frankly that there is neither finish nor originality in *Pearls of the Faith*. The verse is really so rough that it hardly possesses the metrical quality of doggerel. It is, indeed, merely one or other of the standard prose translations of the Korân cut up into short lines and forced into rhyme. For example, the following is, in fact, an almost literal version of the beginning of the eighty-first chapter of the Korân, with only just enough addition to bring in the rhymes:—

"When the sun is withered up,
And the stars from heaven roll;
When the mountains quake,
And ye let stray your she-camels, gone ten months
in foal;
When wild beasts flock
With the people and the cattle
In terror, in amazement,
And the seas boil and rattle;
And the dead souls
For their bodies seek;
And the child vilely slain
Is bid to speak,
Being asked, 'Who killed thee, little maid?
Tell us his name!
While the books are unsealed,
And crimson flame
Playeth the skin of the skies,
And Hell breaks ablaze
And Paradise
Opens her beautiful gates to the gaze;
Then shall each soul
Know the issues of the whole
And the balance of its scroll," &c.

None would venture to call this poetry. It is not even a good version of the chapter in question; the ordinary prose translations are infinitely preferable. In them the dignity at least of the original is maintained, while Mr. Arnold's rendering is a farcical parody. The following are from one of the stories which illustrate some of the Beautiful Names:—

"And when the hundred years were flown, God said,
'Awake, Ozair! how long hast tarried,
Thinkest thou, here?' Ozair replied, 'A day,
Perchance, or half.' The awful voice said, 'Nay,
But look upon thy camel.' Of that beast
Nought save white bones was left; no sign, the
least,
Of flesh, or hair, or hide," &c.

The story of Ozair is really a fine one, but it cannot be expected to impress people if it is told in this bald way. Mr. Arnold's version reads very much like prose divided at the eleventh syllable and printed with initial capitals.

Besides paraphrases of the Korân and didactic narratives, *Pearls of the Faith* includes some short moral poems of a very uniform type and unoriginal metre, and of these hymns one example must close our quotations: the epithet is *El-Latif*.

"Dread is His wrath, but boundless is His Grace,
Al-Latif! Lord! show us Thy 'favouring' face!
Most quick to pardon sins is He:
Who unto God draws near
One forward step, God taketh three
To meet, and quit his fear.
If ye will have of this world's show,
God grants, while Angels weep;
If ye for Paradise will sow,
Right noble crops ye reap.
Ah, Gracious One, we toil to reap:
The soil is hard, the way is steep!"

As a matter of fact the tradition saith that whoso seeketh to approach God one cubit, God will approach him two fathoms, and if one walketh towards God, He will run towards him; but the actual measurement is less important than the trite and commonplace character of the piece. As English poetry, it must reluctantly be confessed that *Pearls of the Faith* cannot take a place beside *The Light of Asia*. The extracts speak only too plainly for themselves, and it is not necessary to heap up examples of a style which, after so remarkable a predecessor, is inexplicable except on the ground (at which Mr. Arnold himself hints) of haste and insufficient leisure.

Perhaps, however, the brook which cannot be allowed poetical merits deserves a welcome as an exposition of the main doctrines of Islâm. Unfortunately, even this claim to indulgence cannot be allowed. The Islâm represented is a mixture of Persian and Buddhist ideas, grouped indeed round orthodox Muslim dogmas; but throwing over them a mystical Sûfy atmosphere which destroys their rugged simplicity. The Korân as paraphrased by Mr. Arnold is not Mohammad's Korân, but the gloss of Jelal ed-din Er-Rûmy or some other mystic. The original speeches of Mohammad had no touch of mysticism, and the introduction of this element destroys the value of Mr. Arnold's commentary so far as the major part of Mohammadanism is concerned. There is an affectionate filial tone about the references to the Deity (who, by-the-by, is always called Allah, on a principle which ought to make us speak of the Christian God as Ho Theos) which is quite foreign to genuine Islâm; and, even if the book is taken merely as a collection of Sûfy aphorisms, it is incomplete and un-Eastern.

It is a pity, therefore, that Mr. Arnold should have endeavoured to invest his volume with the external marks of scholarship, and inserted so many quite unnecessary Arabic terms. He is not, we presume, himself an Arabic scholar, and whoever has revised his Oriental words has done his work very inaccurately. The only sentence printed in Arabic type (p. 222) consists of three words, and includes four mistakes or misprints and one decided grammatical error (a tenwin vowel after the article). The Most Beautiful

Names at the head of each poem are printed in Arabic, but are frequently deficient in vowels or orthographic points, and often do not correspond with the English transliteration. El-Fâtih in the Arabic becomes "Al-Fattâ'h" in the English, and the Arabic El-'Alâ is printed in the English as "Al-'Hâh." In both of these instances the English word is correct, but is not the same "Beautiful Name" as the Arabic one. "Al-Maumin" should, of course, be "Al-Mu'min" in Arabic and English; "Al-Mutakabbir" lacks a sheddeh in the Arabic; "Al-Muwakhir" should be "Al-Mu'akkhbir;" "Al-Muzil," "Al-Muzill;" "Ar-Rawûf," "Ar-Ra'ûf," to adopt Mr. Arnold's system of transliteration, which not only includes aspiration of the 'eyn ("Al-Hathim," e.g., represents the sounds El-'Azim, and "Al-Muhizz" El-Mo'izz), but employs the same 'h for 'eyn and lâ, and even inserts it at the end of "wuzâ'h" (sic!). If Mr. Arnold thinks it adds to the grace of poetry to indite such lines as these:—

Ya Azîz! Ya Muhaimin! Ya Mûmin! (sic)
O Mighty! O Protector! Faithful ever!

he should take more pains to write them accurately. Such nonsense as "La Allah illa Allah" (p. 193) and "Illahu! Allah-il-allah" (146); such a blunder as "Ya! Rabbi'lalaminâ" (genitive, for accusative "rabba"); such words as "Alai kul shay wakîl," "Al-Akhâf" (Ahkâf), and such plurals as "Ifreet" and "Djins," are eyesores; and if it is important to give the Arabic for "Open!" it is as well to give the imperative the proper initial vowel. The old mistakes of "Aminah" for Âminah (practically pronounced Amna), the mother of Mohammad, and "Amru" for Amr, or on Mr. Arnold's system (which he fortunately forgets on occasion) 'Hamr, are repeated; and what the Blessed Prophet would have made of the word "akcha," a Turkish name for a silver coin, it is difficult to say, unless his prophetic power enabled him to foresee changes in the currency. Mr. Arnold is not only anxious to impress upon us that cups and goblets are called in Arabic "akwâb, abareek," but he eclectically uses the circumflex to denote long syllables; unfortunately, however, he seems to regard the mark as merely ornamental, and, having scrupulously indicated the pronunciation of "Al-Kabîr" (pron. Kebeer), "the Great," he arranges the line so that the word can only be accented Al-Kâbbir; and so with most of the Arabic words quoted, hardly one out of ten of which can be properly pronounced without throwing out the metre. A very slight study of the Arabic grammar would have removed some of these errors; but the introduction of so many outlandish-looking words is in any case to be deprecated, as more likely to give colour to a charge of pedantry than to add anything of value to a popular book.

Popular, however, *Pearls of the Faith* can never be; but, what is much more important, this new work is a distinct retrogression from Mr. Edwin Arnold's previous steps. He can write poetry of a high order if he chooses, and we refuse to accept the present volume as at all representative of his genius. The initial couplet of the eighty-fourth "Pearl" runs

"O Lord of awfulness and honour! we
Lack wit and words in fitly naming Thee,"

and the sentiment perfectly expresses the general weakness of the book. But Mr. Arnold has lacked neither wit nor well-ordered words in other times, and we believe the temporary failure will be redeemed by work worthier of himself and of the great subject he has treated with such scant respect.

STANLEY LANE-POOLE.

American Literature: an Historical Sketch, 1620-1880. By John Nichol. (Edinburgh: A. & C. Black.)

A HISTORY of American literature ample, exact, and highly entertaining will be in existence when Prof. Tyler, of Michigan, has brought to a close his work so admirably begun. If the scale be preserved, and the history reaches to contemporary authors, his promise of completing it in three or four volumes can hardly be fulfilled. To Prof. Tyler everyone seriously concerned about American literature must go; he is loyal to the past of his country; and even the errors of loyalty have something in them from which we may learn. But readers on this side of the Atlantic cannot be supposed to owe allegiance to every local sagamore of learning or Puritan pow-wow of the old colonial days. Still less can we choose to occupy ourselves (craving Mr. Bright's pardon) with minor American minstrels. Life is not long enough for many expositions in folio of the Covenant of Grace as it is dispensed to the elect seed, even though the expounder be "the reverend and much-desired Mr. John Cotton" or "the rhetorical Mr. Stone" or "the holy, heavenly, sweet-affecting and soul-ravishing minister Mr. Thomas Shepherd." If the brevity of life compels us to choose between Shelley and Wigglesworth, we must sadly turn from the latter. And yet the scientific student of literatures has a keen interest in the early periods of formation; nor are the most recent phenomena of American thought and feeling wholly unconnected with the earliest. By what law of variation of animals under domestication did the Puritan mastodon develop into the flying transcendentalist? By what process did the Hebraic God, a magnified non-natural Increase Mather—he who used his voice "with such a tonitruous cogency that his hearers would be struck with an awe, like what would be produced on the fall of thunderbolts"—how did that Hebraic ruler and judge dialinn and scatter and effuse himself into the Emersonian "Over-Soul"? "God holds you over the pit of hell much as one holds a spider or some loathsome insect over the fire"—so wrote Jonathan Edwards; "God is so lovely we flee as children to his arms, a refuge from all the troubles, follies, and sins of life"—so wrote Theodore Parker. What bridge, fine as a sword-edge, invisibly spans the gulf between the two?

Nor has poetry been without "development in the expression of the emotions" from the day when Michael Drayton prophesied a crown for the brows of a Virginian bard,

"as there plenty grows
Of Lawrell every where,"

to the day when a Longfellow Memorial Committee has met to do honour to the gentle

singer of both hemispheres. It is not from the gay Virginian cavaliers, as Prof. Nichol notes, that American poetry is derived, but from New England hearts of oak. "Out of the strong came forth sweetness." Even in earliest colonial days venerable divines, in all other respects beyond carnal indulgence, lapsed into the frailty of verse-making. John Cotton, who wielded the fierce Western theocracy in Cromwell's time, and whose death was heralded by "a comet giving a dim light," could not resist flirtation with the Muse, but he prudently concealed the fact by inscribing his English verses in Greek characters upon the blank leaves of his almanac. All the Gay Science of a painful preacher's lifetime would condense itself into some facetious epitaph. John Wilson, the first pastor of Boston, was incomparable in twisting puns into consolatory verses on mournful occasions, which were cherished even as were "the handkerchiefs carried from Paul to uphold the disconsolate;" and, when he departed to a world of glorified puns, his eulogist did not forget to celebrate

"His care to guide his flock and feed his lambs
By words, works, prayers, psalms, alms, and
epigrams."

The first book in English, probably, that ever issued from any printing-press in America was the famous "Bay Psalm Book," the joint production of the chief divines in the country. This is how David was stretched upon the rack, and the wheels were set a-turning by these clerical tormentors till every sinew cracked:—

"Create in me cleane heart at last
God: a right spirit in me new make.
Nor from thy presence quite me cast,
Thy holy spright not from me take."

With Anne Bradstreet—gentle Anne, exiled at sixteen from her English home, first "professional poet" of New England, "The Tenth Muse lately sprung up in America"—verse-making passed for a moment into non-clerical hands; but "a feeble little shadow of a man," pastor at Malden, won back the lyre for his sex and his profession by a memorable achievement—a poem exceeding in popularity, says Prof. Tyler, any other work in prose or verse produced in America before the Revolution. "The Day of Doom" by Michael Wigglesworth would continue to be read in New England, declared Cotton Mather, until the day of doom itself should arrive. Wigglesworth is the singer of the five points—election, original sin, imputed righteousness, invincible grace, and final perseverance. Doubtless he might have exclaimed with John Cotton, "I love to sweeten my mouth with a piece of Calvin before I go to sleep." Reprobate infants in his poem are summoned to judgment:—

"Then to the bar all they drew near
Who died in infancy,
And never had, or good or bad,
Effected personally."

The little eyases cry out on the top of question, pleading their innocence, but they are rebuked as sinners, and "every sin's a crime":—

"A crime it is; therefore in bliss
You may not hope to dwell;
But unto you I shall allow
The easiest room in hell."

For more than a hundred years after its first publication Wigglesworth's "Day of Doom" was, beyond question, says Prof. Tyler, the one supreme poem of Puritan New England.

But Prof. Tyler and the charm of early American literature must not make us unmindful of Prof. Nichol's "Historical Sketch." It is a book for which the English reader may be sincerely grateful. Americans will probably judge it more strictly than we need or ought to do. Our gratitude is earned by the fact that Prof. Nichol, knowing more than most of us, has made us partakers of his knowledge. One disadvantage which lay in his subject, could not be conquered. That part of the literature of the United States which chiefly interests our English public belongs to the last fifty years; but a writer on recent and contemporary authors can hardly be a literary historian. Oblivion has not yet scattered her poppy; part of the story is too well known. And part of the story is as yet unknown, for the true meanings of recent literary movements have not declared themselves. The writer is driven from the strong position of a historian to the comparatively weak position of an essayist, entertaining us with views instead of instructing us with facts and the interpretation of those facts as ascertained by time. Accordingly, more than half of Prof. Nichol's volume is occupied with essays on well-known writers—Longfellow, Emerson, Poe, Hawthorne, recent novelists and humorists—essays based on sufficient knowledge and containing valuable critical remarks, but lacking the solidity of history, and lacking also its authority. This was inevitable, and we state it as a fact, not as a fault. It was also inevitable, Prof. Nichol's plan being to treat in considerable detail the best-known authors, that not a few writers in the second rank should be passed over in silence, or dismissed in haste. I could wish to hear something more of George Ripley than that he is a "newspaper reviewer of distinction;" and in the chapter on Politics and Oratory to find at least the name of Rufus Choate; and in the chapter on Poets to learn why the distinction of appearing first among American authors in a monumental statue fell to Fitz-Greene Halleck; and in that on Transcendentalism to have the secret of the extraordinary influence of Margaret Fuller, and of the veneration with which many regard Mr. Alcott, revealed somewhat more fully.

By the side of Bryant and Longfellow, among "Representative Poets," Whitman here takes his place:—

"Half the 'Drum Taps' are clarions; the rest dirges or idylls, which only fall short of masterpieces because their passionate regrets are expressed in stammering speech. Few nobler laments have been written in America than 'Lincoln's Burial Hymn.'"

These sentences, however, qualify a criticism adverse on the whole to the claims made for Whitman by his admirers. It is at least evident that Whitman "cannot be skipped."

American Humorists are treated by Prof. Nichol with just severity. True, they have added a new grin to the human countenance, but it is a sudden muscular spasm better

becoming the lank and serious visage of Brother Jonathan than the full face of John Bull, across which low ripples of laughter should gather and swell, until at length they break in billows. As to Bret Harte, Prof. Nichol does not perceive how much he trades in cheap sentiment, bringing an article, not always quite genuine, as a product of the West for sale in the Eastern States.

The reader of this article may infer that good things are to be found in Prof. Nichol's volume from the following insufficient specimens:—

"Hawthorne is so fond of peering beneath the surface of existence that, in his pages, it sometimes loses its ordinary reality. He tries to look through life so constantly that he scarcely takes time to look at it. . . . One defect of Hawthorne's writings is that they hardly exhibit a single commonplace character. . . . Emerson's conclusions are isolated assertions, frequently inconsistent with each other, founded on the impulses, which he calls the intuitions, of a sanguine and pure, though in some directions a limited, mind. His combination of stern practical rectitude with an ideal standard is Mr. Emerson's point of contact with Puritanism. . . . The ideas Mr. Emerson's sentences embody are on the scale of a continent; in form, they are adapted for a cabinet of curiosities. . . . No one can pass from the perusal of Mr. Emerson's writings to any meanness. . . . It was a revolt against the reign of Commerce in practice, Calvinism in theory, and Precedent in Art that gave birth to what has been called 'Transcendentalism.'"

EDWARD DOWDEN.

NEW NOVELS.

Fair and Free. By the Author of "A Modern Greek Heroine." In 3 vols. (Smith, Elder & Co.)

Mr. Isaacs: a Tale of Modern India. By F. Marion Crawford. (Macmillan.)

Dr. Grimshaw's Secret. By Nathaniel Hawthorne. (Longmans.)

Entranced by a Dream. By Richard Rowlatt. In 3 vols. (White.)

The Tower Gardens. By Lizzie Alldridge. In 3 vols. (White.)

Weird Stories. By Mrs. J. H. Riddell. (James Hogg.)

As in the case of the author's former novel, so with *Fair and Free*, the motive of the book is the study of character rather than the development of plot, though there is a clearly defined story with no lack of movement. But the interest centres in the heroine, who is a very curious study, forcibly conceived, and worked out so as to leave a distinct impression of individuality on the reader. Marcella Cassilis is a clever, wealthy, beautiful, and highly educated girl, whose deceased father has trained her as a pure Pagan, to hold as the single article of her creed, with full consciousness of its meaning, that pleasure is the one good, and pain the one evil. It is true that her Epicureanism is not of the Cyrenaic variety; but it is no whit above the level of Epicurus himself, and indeed scarcely rises to it in respect of his occasional leaning towards Stoicism, though quite in accord with at least one of his sentiments—that which makes the pleasure of the stomach the root

and principle of happiness. The girl is described as plotted against by her own aunt, who is greedy of her wealth, to which she is heiress in remainder. Accordingly, she sets herself to destroy the girl's reputation, in order to prevent her marriage; and, when that proves impracticable, she abets an attempt to make her false to her husband so as to lessen the chance of heirs. Some of the situations evolved from this idea are strong and graphic; but the particular thought which the author seems to have had before him is not finally manifested. He had intended to make Guy Laurier, Marcella's husband, a Stoic, and then to show how the two dissimilar temperaments first clash, and then accord in deeper harmony, each having something to teach the other. But this has not been effected, since the man's character has not only been much less vividly conceived than the woman's, but because he is fundamentally not a Stoic at all, but properly only an undeveloped Epicurean, differenced from his wife chiefly by greater simplicity of habits and a rudimentary sense of duty. This is shown in the manner in which she takes a serious misunderstanding between them, wherein it is no thought of any moral or social obligations which keeps her from ruin, but only the fact that she finds that she prefers her husband to his would-be rival. They settle down to be happy at the close of the story, but the factors of cruelty (always underlying intellectual voluptuousness) and satiety would make that doubtful in real life. A more apt motto than Drayton's lines on the title-page would be those words of Rousseau, "S'abstenir pour jouir, c'est l'épicurisme de la raison." A subordinate mistake in the treatment is the entire absence of any hint not merely of the existence of Christianity (save for one not unjust criticism on pictures of the Madonna), but even of Theism, as a recognised factor in forming the moral ideal of European nations.

Mr. Isaacs is a story, or rather a romance, by an American author, of remarkable freshness and promise, displaying exceptional gifts of imagination, though with not a little youthful crudity, not of expression (for that is uniformly good), but of conception. "Mr. Isaacs" is merely the working commercial name of Abdul Hafiz ben Isâk, a wealthy jewel merchant, of Persian birth, highly educated by his father until twelve years old, then stolen and sold as a slave to the Turks, falling, however, into kindly hands in Constantinople, where his training in Oriental learning and philosophy is completed, and whence he escapes in a caravan of pilgrims to Mecca, thence making his way to India, where he accumulates a considerable fortune and earns a high character for probity and generosity. When the story (narrated by one Mr. Griggs, an American citizen born and educated in Italy as a Roman Catholic, and employed in India as editor of a newspaper at Allahabad) opens, Mr. Isaacs is described as of remarkable physical beauty, unusual abilities, perfect mastery of English and some other European languages and literatures, besides a less extraordinary familiarity with the principal tongues spoken throughout Hindostan. He is a devout and convinced Mohammedan, with three wives in his harem,

and holds the ordinary Moslem view of those parts of his establishment. His talk, which is said to be that of a "fellow of Balliol"—it is a little too definite for the Master—shows him to have a strong bent, not towards Sufism (likely enough in a Shiah), but towards the higher Buddhism; a somewhat curious blending of incompatible elements, paralleled to some extent by the Roman Catholic Mr. Griggs in habitually reading Kant. Mr. Isaacs falls in love with Katharine Westonhaugh, a beautiful English girl at Simla, who is also sought by Lord Steepleton Kildare, a young Irish cavalry officer of high breeding and manly character. But Mr. Isaacs makes all the running, entirely changes his opinions as to the position of women in this world and the next, and anticipates no difficulty whatever in clearing his house of his three wives, and installing Miss Westonhaugh in their place by such a marriage as the English community will recognise as valid. Nor does any other person concerned appear to take a less favourable view of his chances; certainly not Mr. Griggs, who abets him heartily, nor the young lady's uncle and brother, so far as they happen to know of it, while she herself is more than willing. There is another side of Mr. Isaacs's life besides the social and love-making one. He is much mixed up with Ram Lal, a Buddhist adept, possessing occult powers, whose nearest literary congener is Mejnour in *Zanoni*. Together with him he arranges for the escape of Shere Ali (the date of the tale is in 1879, in the thick of the late Afghan troubles) to some place outside the English *rāj*; and, while this scheme is on foot, he joins in getting up a tiger-hunting expedition into the Terai to please Miss Westonhaugh. It comes off successfully; but the lady imbibes the germs of jungle fever, and her lover returns to Simla from his rescue of Shere Ali only in time to see her before she dies. Ram Lal persuades him to seek future re-union with her through the path of asceticism in a Lamaist monastery; and he accordingly divests himself of all his wealth in favour of Katharine's brother, and disappears out of the story in company with Ram Lal. Such is an outline of the plot, vivified not only by clever dialogue and forcible situations, but sometimes rising to real beauty of thought and language, while great pains have been given to making the local colour correct. Nevertheless, it is just here that the author has been overcome by the difficulty of his self-imposed task. The hero is not an Oriental at all, but a European (such as might come of mingled Italian and German race) masquerading in Eastern costume. His ideas, as well as his language, are of the West; nor is it conceivable that a sudden passion, however strong, for a beautiful and amiable girl with no particular brains—a point on which the author does not leave us in doubt—could suddenly convert an adult and very much married Moslem to the sentiments of European chivalry and the higher English morality. Nor is the "higher Buddhism," of which we hear a good deal, at all like the real article; for nothing can be more remote from the accepted teaching on Nirvana and the absorption of personality in the Infinite than the Semitic ideas of mutual recognition and permanent re-union of two

human personalities in the world beyond the grave. A few slips we have noticed suggest that internal consciousness has as much to do with the opinions adduced as any Oriental studies; but much may be pardoned to a writer who begins so vigorously.

The posthumous romance by Nathaniel Hawthorne, which his son, Mr. Julian Hawthorne, has edited and equipped with a Preface and notes, is chiefly interesting as affording some insight into its author's method of planning and developing a story. It is incomplete not only as regards the conclusion (though some kind of end is reached), but in much of the detail in even the earlier portions. Of course this lack of finish detracts from the effect in no slight degree; and it cannot be doubted that, had Hawthorne lived to complete it in his own way, it would take much higher rank than is now open to it. Nevertheless, even so, it is impossible to subscribe to his own estimate of its quality, substantially accepted by his son, that it would have been the greatest of his works, and that on which his fame would most safely rest. Nothing short of such a complete recasting as to make it a wholly new book (as to which no evidence is producible) could raise it to the level of some of his former writings. There are fine passages in it which none but Hawthorne himself could have written; but there are no traces of the weird power of the *Scarlet Letter*, of the quaint inventiveness of the *House of the Seven Gables*, or of the insight into moods and characters displayed in the *Blithedale Romance*. The fact that it reads more like an inartistic attempt to blend in one narrative some two or three disconnected sketches of stories on the model of the *Twice Told Tales* than as an original whole may be fairly set down to the accidental interruption of the author's work; but the faults of primary conception and of execution, even in the most finished parts, make it certain that it would in any event have been valued rather because of its authorship than for its intrinsic merits. There is much vigour and effectiveness in the portrait of Dr. Grimshawe himself and in the description of his household, but he is killed off at a comparatively early stage of the narrative, and the scene is transferred from America to England. But far too much space is thenceforward taken up with dissertations—practically reproduced from Hawthorne's own books about England—on the impressions produced by the old-world side of English life and scenery upon a sensitive and cultured American. This topic is enlarged on so as to interfere with the movement of the story, instead of being duly subordinated to the development of character. And the central mystery is a trite and not very strong situation, lacking, too, in dramatic probability. These defects are of the very texture of the book; and, while the descriptions of English scenery are excellent, there are no characters vividly drawn except Dr. Grimshawe himself. One other, a man who in another age and under other conditions would have been an ascetic hermit, promises well, but is not adequately worked out; and the remainder are mere lay figures more or less conventional. We cannot regret

the publication of what is at least an interesting memorial of a unique writer; but we feel no such sense of personal loss in its fragmentary condition as struck us when Thackeray's *Denis Duval* came to an untimely end.

Mr. Rowlatt has much of his art to learn before venturing on so long a flight as a three-volume novel. To begin: there is no little fault to be found with his style, always slovenly, and sometimes ungrammatical, "and which" being a trap which rarely fails to catch him. Next, he does not seem to have formed a distinct notion as to the general scope of his story, so far as the title may be taken as an indication; for there is nothing which even remotely suggests any of his characters being "entranced by a dream," so that "The A Priori Argument" or "The Stellar Horizon" would be just as apt names. Then, he has not known what to do with his personages. One who is introduced early in the narrative with so much detail as to forecast an important part is shot, or shoots himself, soon after, and nothing comes of it, except a brief arrest of another person on suspicion. Two more characters who do take a leading place in the story are drowned together at the end, clearly because the author has not been able to invent a suitable way of getting rid of them. Only one of the characters—the reprobate of the book—has any individuality; and the dialogue, though so far tolerably done that it is like what people of the kind described would probably say in real life, neither helps on the plot nor amuses the reader, being nothing but small-beer chronicles of the flattest kind. Let Mr. Rowlatt try again on a much smaller scale, devoting himself to writing a short magazine tale with a definite plot and conclusion; and, when he can do so much, it will be time enough for him to test his powers of expanding a sketch of the sort to larger dimensions.

Miss Alldridge has made a very readable story out of slight materials. She has laid her scenes for the most part in Trinity Square, near the Tower of London, a nook which seems to have a strong attraction for her. She has also given us a bright and natural heroine; but the book is not an advance on her former novels. If their level is fairly sustained, that is the most a critic can say; and though she has got together a group of characters each of whom is cleverly conceived and sketched, yet she has not worked any of them out thoroughly except the heroine. She betrays several times uncertainty as to how she will end her story, all but prophesying a tragic conclusion, which, after all, is not definitely arrived at, nor yet certainly set aside, reminding one somewhat of the vague issue of *Villette*, and suggesting a like reason for the indecisive close.

Mrs. Riddell's collection of ghost stories has the merit of variety. Usually, a set of tales of the kind by a single writer have only one motive, slightly altered in the setting; but these all differ from one another. Each has merit in its way, but the last, "Old Mrs. Jones," is told with most circumstantiality, and so reads more probably than the rest.

RICHARD F. LITLEDAL.

RECENT VERSE.

Love's Martyrdom. By John Saunders. (Kegan Paul, Trench and Co.) Mr. Saunders explains in his Preface that *Love's Martyrdom* was acted some thirty years ago, and was much praised by Dickens and Landor. Landor's letter is delightful, written as it was in the Boythorn period, and with the full Boythorn spirit about it. Of one passage Landor said: "He would rather have written it than all the poems that had been written in his lifetime," that is to say, everything between the *Lyrical Ballads* and *In Memoriam*, including the works of Scott, Wordsworth, Coleridge, Shelley, Keats, Byron, with some few others. Obviously, we cannot do Mr. Saunders more justice than by quoting this famous passage:—

"After many days
Of struggle, anguish, danger, sweetly borne
She gave me birth. 'Twas nought to her, just then,
The babe's deformity. Heart-thanks to heaven
Flew up, and quick returned with blessings laden
For her own darling's head. While thus she lay,
In the deep, holy calm, the happy lull,
The ineffable relief from o'erwrought pain
That mothers only know, my father came,
And then she smiled, as mothers only smile
Who wait to see the father greet a son
And first-born."

Here is a stanza of a song which, according to Landor, is "very like the finest in Beaumont and Fletcher":—

"What say they, 'Love is blind,' my sweet?
He taught me first to see!
The very flowers beneath my feet
Were only flowers to me
Till love informed them with thy grace
Thy beauty and thy bloom,
Ah, now in all 'tis thee I trace
Thy breath in their perfume."

The delightful extravagance of Landor's praise (which it is very public-spirited of Mr. Saunders to quote) must not lead readers into the idea that the play is worthless. It really has some touches of the author of "A Woman Killed with Kindness" in it.

Strains from the Strand. By Henry S. Leigh. (Tinsley Bros.) We are glad to have read this book of Mr. Leigh's, which has the two signal merits of being very slight in pretension and very satisfactory in performance. If a shoddy-superfine person were to dismiss them all Cockney, it is probable that Mr. Leigh would not do much more than laugh. They are Cockney, and are meant to be so. But they are not imitated from anybody else, they are not vulgar, and they are readable. Perhaps they are more readable than quotable, as light verse is apt to be. But we are glad to have made acquaintance with "The Last Nightmare"—a dreadful "old stager" at a theatre—and with the complaint of the man who had never seen a ghost, and with the views of that sensible historical student "who exhausted Hume and Smollett on the line of British kings," and greatly preferred nursery tales after all, and with "the gusher" who apologises for his abominably cheerful views of existence by remarking,

"It's life to me to be alive."

"The Convalescent Cockney" is a capital poem of its kind, and the "Expostulation with my Housemaid," though as old as literature itself, is also good. But the fact is we cannot spare space to go through Mr. Leigh's book. We can only repeat that we have read it with pleasure and with laughter, the former of which falls rarely, and the latter (except laughter of a sardonic and fiendish kind) still more rarely, to the lot of the reviewer of verse.

Love in a Mist. By Keningale Cook. (Pickering.) The *Guitar Player* was so good that we are rather sorry to have to say of Dr. Keningale Cook's drama that it is not good.

The author honestly enough announces that it is "familiar blank verse." It is: and nothing shall ever make us admit that familiar blank verse is tolerable or pardonable. Here is a speech:—

"I showed the telegram, you were amazed
And whispered long with Mr. Baringer,
Who is so wise with having lived abroad
So many years and almost like a stranger."

Whether this is worth writing at all we doubt. That if it is to be written it should be written in prose we do not doubt.

In a Day. By Augusta Webster. (Kegan Paul, Trench and Co.) In the short drama of *In a Day*, the following of Mr. Browning, which is characteristic of Mrs. Webster, and which (the original having been somewhat diluted and suited for general comprehension) has won her a good deal of applause, frequently appears as here:—

"Thus, as I'd say to one whose part in life
Were basking in the sun, 'a warning, friend,
Take not that corner; there the wind gusts, spirits,
The other side's the better basking-place.'"

This is clever, and, indeed, so is the miniature play.

The Bride and the Bridegroom. By the Rev. J. Cowden-Cole. (Houlston.) Mr. Cowden-Cole has attempted a kind of new *Christian Year* not without some success. His sonnets and his blank verse are better than his strictly lyrical measures; but, on the whole, we have not seen a more successful volume of sacred verse for some time.

The Hebrew Psalter. By W. Digby Seymour, Q.C. (Longmans.) Mr. Digby Seymour anticipates that Hebrew scholars will not find fault with his version of the Psalms from the point of view of scholarship. Whether his confidence is ill or well placed we cannot pretend to say, having long forgotten the very moderate stock of Hebrew which we once took with us to a certain university, and left there. But a metrical version of the Psalms is only indirectly, and in the second place, responsible to Hebrew scholars. In the first place, it has to answer to the question put by the English critic, and this is, What have you got to set against the matchless rhythmical prose of the English Bible and the solemn and enthusiastic, if often rough and prosaic, metre of the early English and Scotch verse paraphrases? We fear that the Recorder of Newcastle has not got much to say in reply. The following, for instance, may be all right, to quote Mr. Digby Seymour himself, in regard to "roots and stemwords, vowel points and reading signs, Dagheesh lene and forte, piel and pual, hiphil and hophal;" but we cannot accept it as tolerable English verse:—

"A reproach to our neighbours we've grown,
Round about us they mock and deride;
To the heathen—a byword alone,
To the people—a head tossed aside.
These thoughts most bewildering rush
And my eyes with confusion are blind,
While my face crimsoned o'er with a blush
Only pictures the state of my mind."

These last two lines suggest what ought to be the state of a translator's face and mind who thus commits regicide and poeticide on David.

Jim Lord. By E. B. Nicholson. (Oxford: Printed for the Writer.) *Jim Lord*, Mr. Nicholson tells us, was rejected by six magazines, and so he printed it, we suppose, to "shame the fools." We have certainly seen much worse verse in magazines, if that is any consolation to Mr. Nicholson. But it does not follow that the six editors were wrong. *Jim Lord* is a tale of a cat and a steward, who jumped overboard to save that cat, for which all cat-lovers (that is to say, all the elect of the earth) will justly think much of Jim. But we are not prepared to say

that the unquestionable excellence of the deed is a reason for telling it in verse rather than prose unless the verse itself is excellent, which we fear we cannot pronounce Mr. Nicholson's to be. We disagree *in toto* with his wishes "that English versifiers on this side the Atlantic were willing more often to write of the people, for the people, and in the language of the people." For pedestrian purposes, there is the appropriate *sermo pedestris*.

Ariadne in Navos. By R. S. Ross. (Trübner.) It is really astonishing to the student of the natural history of minor poets to observe their remarkable indifference to the plainest warnings. The example of Mr. Pendennis might, one would have thought, have warned the minor bard off "Ariadne." But he is apparently of his nature proof against advice. Mr. Ross has attempted the full classical drama in Mr. Swinburne's manner. To do him justice, he has apparently some tincture of the originals in point of sentiment and thought; but no man can expect readers to hold out against the intolerable lumbering of such verse as the following, which opens one of Mr. Ross's choruses:—

"Ay! slowly and lingeringly walk by his side,
O helpful enchantress, O strange Cretan bride;
For heavy the air is with change and with sorrow,
The unwilling feet shrink from the unveiling
 tomorrow,
And ourses may fall on the dawning which bore
Great Aegides a stranger to Creta's fair shore;
Though he left it victorious with thee.
For thou gavest him a sword and a clue,
By thee Daedalus' labyrinth he knew,
By thy magic was Athens set free."

Mr. Ross's iambs are better, but not sufficient to redeem him as a practitioner of a highly artificial style which only the splendid poetry of *Atalanta* and *Erechtheus* makes tolerable in English. A Greek drama is admirable—in Greek.

The Sorrow of Simona, and Lyrical Verses. By E. J. Newell. (Kegan Paul, Trench and Co.) We are unable to say anything good or bad of Mr. Newell. His verse, the principal subject of which is, it is scarcely necessary to say, the well-known story from Boccaccio, is almost entirely colourless.

David Rizzio, and other Plays. By the Author of "Ginevra." (Kegan Paul, Trench and Co.) We cannot, without laborious calculation of volumes and dates, estimate the exact tragic output per annum of the author of "Ginevra," but we should guess it at about a play per two months. Neither "David Rizzio" nor "Bothwell" nor "The Witch Lady," which this last volume contains, is better or worse than "Ginevra," or any of its fellows. The whole production of this remarkable author (who, with the blessing of Providence, may hope to beat Heywood and rival Hardy or Lope) shows a copious faculty of writing verse which is a little above prose and a good deal below poetry, a power of throwing together the materials of tragedy in a certain loose structure which, with no artistic merit, is not altogether contemptible, and an entire lack of the power of self-criticism. The principal thing that is curious about these countless plays is that the person who has wit enough to write them should not have wit enough to burn them. In a Preface to "Bothwell" there is this odd remark: "The episode of Chastelard may be summarily dismissed as a theme for the distorted mind of the poetaster to turn into obscene verse." The inevitable suggestion of this may be accidental and erroneous. But, if it is not, the use of the word poetaster, considering the speaker and the subject, is full of humour.

In Fear and Dole. By William Beckenham. (Wade.) Mr. William Beckenham is a kind of literary Sim Tappertit. His title is, it must be admitted, disquieting enough; and, in his

Preface, he breathes other words of terror. "Some of its constituents," he tells us darkly, "may offend, but the author claims to be free;" "not far off is another matter, the author believes in good and evil;" "one thing more, the author has to confess having made a somewhat lavish use of verbal veils;" in short, Mr. Beckenham, by his own account, is a free-thinker, a courageous unmasker of social ills, and a sayer of hard sayings. The expectant reader feels that he must brace up his mind. But, alas! the preparation is quite unnecessary. Mr. Beckenham promises to tell us

"[How] a dark and awful shame
Very nearly soiled the name
Of Margaret Moir."

But nothing happens except that Margaret discovers her lover to be a married man, and very properly orders him about his business. Again, Mr. Beckenham's philosophic wrestlings go no farther than such questions as

"Ghaunt ghastly thought!
Keep far away.
Is mankind naught
But soulless clay?
Can dead stuff live
And by an aimless bootless negative
Be grandly wrought?"

We like the idea of a negative taking, not merely, like Mr. Parnell, its coat, but its boots, off in the ardour of working. Not a few such pleasant images may be picked up in the hundred pages or so of *In Fear and Dole*.

A Life's Love. By George Barlow. (Remington.) It is well known that, as the man grows older, the waistcoat has a habit of growing wider; so that, after the word "growth" has ceased to be applicable vertically, it has a horizontal bearing. Mr. George Barlow's poems appear to be subject to this same law of amplification. Each of his volumes is fatter than the last, and *A Life's Love* (in which, to do him justice, some previous volumes appear to be melted down) is the fattest of all. However, its bulk is more apparent than real. The paper is thick, and there are not three hundred and fifty pages in a volume which, by its portliness, promises about double the number, nor is there very much on a page, a sonnet or three four-lined stanzas generally occupying that space. At this rate the *Roman de la Rose*, or the *Mahabharata*, or even the *Iliad* would take a considerable number of volumes; but it must be presumed that Mr. Barlow's gold is, in his judgment, of the kind that will stand beating out thin. Moreover, neither Homer nor Guillaume de Lorris brought out a volume a-year, which Mr. Barlow must have been doing for a long time. He reminds us (and a certain mysterious Alice) of the fact thus:—

"Lo! for eleven long years I day and night,
Have laboured, Alice, for thy soul's delight;
And faced the wrath
And all the extremest ill time brings;
Fold thou me round with passionate wings."

If by this agreeable process Alice stops Mr. Barlow's mouth, and prevents him from reciting to her the whole of his eleven years' compositions, it will be well; if not, she has her repartee ready in certain words of Agamemnon to Clytemnestra. This, however, is flippancy, and not criticism. But the fact is that it is very difficult to criticise Mr. Barlow. He has, as is said somewhere in Thackeray, "the queerest aping of sense and poetry," but more of poetry than of sense. If people like to read about "purple-sundered deeps of heavenly storms" and "the high, inexorable gods," and "the clear, immeasurable blaze," and so on, we do not quite know why they should not read Mr. Barlow. It is true that we are still unable honestly to say of anything we have read of his that we would rather have read it than not, but

then there is not much verse of which we do feel inclined to say that. It is even rather interesting to discover what odd things happen to Mr. Barlow; how, for instance, "the wild hours hustle" him—conduct on the part of the hours which cannot be excused. He wishes for things even odder, as thus:—

"Let the waves
Of rapture writhe about the mouth that craves,
And choke it in fruition."

This fustian and the presence of a dear friend would go near to make a man laugh.

Summer Songs. By J. A. Hewitt. (Livingtons.) Here is a stanza taken at random from Mr. Hewitt's second page:—

"On paths of the perished past-tide
By weltering weeds o'ercrept
On sea-dripping strands where the vast-eyed
Ocean had come and wept
Sand flower, sea-bloom, and shingle,
And left but its tears behind,
The memories met to mingle
And weep with the weed and the wind."

That is not worth much certainly, and when it passes into

"The promiseless calm of the present
Was dull with the dusk of night,
And the glare of my youth's evanescence
Ovations of laughter and light,"

the reader is fain to shut the book, or, at least, turn the page. He turns it, and he comes to:

"The sea is calm, the sky serene,
The summer's broodery is on
The glowing fields, the grass is clean
And soft and sweet to rest upon.
Rest here, Gitanes."

It is an interesting literary question whether, even in the days of the sixteenth century in France, anybody was ever imitated quite in the naïve and faithful way in which our minor bards imitate Mr. Swinburne.

Songs in Sunshins. By the Rev. F. Langbridge. (Eyre and Spottiswoode.) We doubt the wisdom of self-laudatory and pugnacious Prefaces. Mr. Langbridge informs us that "in days of widespread poetical affectation" his poems "are natural," that "in days of all-prevailing obscurity they can be understood by a plain person," &c. Both statements are quite true. But might not Mr. Langbridge have left it to his critics to say so? He has the Irish knack of rattling verse which will go to music, and not a little of the fun which used, in days now long ago, to be considered also Irish. His poems, as he says, are really songs. Some of them, such as "The Passionate Pickle to his Love," are very good fun in their way, and the sentimental ones are not too provocative of laughter.

Songs of Many Days. By K. O. (Marcus Ward.) *Songs of Many Days* are songs of but few pages, and we do not pretend to be sorry for it. K. O. is not often so bad as when he speaks of

"All life, love, and knowledge,
A human may know."

But he is not often very good, or even good at all. The two best things in the book are, perhaps, two hunting songs.

The Maid of Orleans. Translated from the German of Schiller by Lewis Filmore. (Griffin.) There was once a school where the sixth form had a written examination every week in the Greek and Latin read during that week. The option was allowed of translating in verse or prose; and one young person always chose the former, "for," said he, with candour, if not with a high sense of art or duty, "one's just as easy as the other, and you needn't stick so close to the original." The perusal of Mr. Filmore's translation of the *Jungfrau* has reminded us of this early experience.

NOTES AND NEWS.

WE hear that the arrangements of *Longman's Magazine* for the coming year include a series of papers on the peasantry of various parts of the United Kingdom. Mr. Thomas Hardy is to do the Dorsetshire Labourer, Mrs. Oliphant the Skye Crofter, and Mr. Justin McCarthy the Irish Cottier.

MR. STANLEY LANE-POOLE hopes shortly to pay a visit to Egypt, with the object of adding a practical acquaintance with the country to the large knowledge he has already gained as a scholar.

MR. DONALD MACKINNON, the new Professor of Celtic Language, History, Literature, and Antiquities in the University of Edinburgh (for such is his full title), is understood to have been elected unanimously. He took his degree at Edinburgh in 1869, gaining the Hamilton fellowship in moral philosophy. Since 1872 he has been clerk to the Edinburgh School Board. He received the powerful support of Sheriff Nicolson, who, it was hoped at one time, might have consented to fill the chair himself. The income from endowments will amount to about £580 a-year.

MR. J. A. FROUDE is the author of a story that introduces the Christmas supplement of the *Rock*. It is an allegory, entitled "The Merchant and his Three Sons," enforcing Mr. Froude's well-known views about Ireland and its Roman Catholic priesthood. Mr. Froude's friends should try to confine him to such bright and picturesque subjects as his yachting and fishing tour in Norway which appeared in the second issue of *Longman's*, and kept back the continuation of Mr. Freeman's paper on "American Speech and Customs" to the January number.

PROF. J. E. THOROLD ROGERS has in preparation a book upon Ensilage and Silo, a subject upon which he has a paper in *Macmillan's* for this month. The volume will be illustrated with diagrams, and published by Messrs. W. Swan Sonnenschein and Co. early next year.

MR. E. W. GOSSE has printed for private issue a Life of Thomas Lodge, the Elizabethan. The edition is limited, we understand, to ten copies.

A FARM in Kirkcudbrightshire, but within a mile of Dumfries, has been let to the Messrs. Carlyle, of Craigenputtock, nephews of Thomas Carlyle. The area of the farm is 174 acres, nearly all arable; and the rent, £503.

THREE new volumes of the "Illustrated Library of the Fairy Tales of all Nations" (Sonnenschein) have just appeared—*Old Norse Sagas*, edited by Miss E. Cappel; *Goblin Tales of Lancashire*, collected by Mr. James Bowker; and the *Gesta Romanorum*, in a selection. *Epics and Romances of the Middle Ages* is the title of Dr. Wagner's companion volume to his *Asgard and the Gods*. It has been issued this week, and contains the romances (in prose) of the Lombard, Gothic, Nibelung, Charlemagne, and Arthurian cycles, with a rendering of Beowulf.

MESSRS. HODDER AND STOUGHTON will publish immediately *Old Testament Revision: a Handbook for English Readers*, by Prof. Alexander Roberts, author of a *Companion to the Revised New Testament*.

MESSRS. NOVELLO announce a new weekly musical journal, to be called *The Musical Review*, of which the first number will appear on Saturday next. It is stated that the paper will be devoted solely to the interests of Art, following the excellent example of Schumann's *Neue Zeitschrift für Musik*. It will not be made the

organ of any party; for this the editor, whose name is for the present withheld, makes himself personally responsible.

A NEW illustrated monthly magazine, called *Amateur Mechanics*, is to appear with the new year. The editor is Mr. Paul N. Haaluck, and the publishers are Messrs. Trübner and Co.

THE *Masonic Monthly* is discontinued.

MR. T. TINDALL WELDRIDGE is engaged on an illustrated History of Thornton Abbey, Lincolnshire.

MR. WILLIAM ANDREWS, secretary of the Hull Literary Club, will edit in the *Hull Packet* a weekly column under the title of "East Yorkshire and North Lincolnshire Notes and Queries." Mr. John H. Leggott will write for it a series of chapters on "Local Worthies;" Mr. Edward Lamplough will furnish "Echoes of Old Hull;" Mr. T. Tindall Weldridge, Mr. T. B. Trowdale, and Mr. J. P. Briscoe have promised contributions on local history, biography, archaeology, folk-lore, &c. It is intended that the matter shall be reprinted in a volume.

THERE is a curious literature growing up in India which attracts far too little attention in England. It has long been known that many of the popular books of the day which occupy society for a few years till they are superseded by others are eagerly read by natives who have received their education at English schools and colleges. But it is much less known that many of these books are not only read, but carefully criticised, by natives, and that almost every post brings us Reviews or pamphlets, written in Indian vernaculars, and containing curious examinations of the latest theories advanced by English philosophers. We have just received the first part of a work called *Tattva-nirṇaya* (i.e., Examination of the Truth), by Debonath Banerjee, published at Calcutta so long ago as 1879. It is written in Bengali, and treats of the following subjects:—(1) "Atoms and Animals" (a criticism of Prof. Tyndall's theory); (2) "Transformation of Animals and Vegetables" (a criticism of Darwin's theory); (3) "Primary Condition;" (4) "Soul and Brain;" (5) "Immortality of the Soul;" (6) "Free Will;" (7) "Automatism;" (8) "Nature and the Self-existent;" (9) "Immutable Relation between Creator and Creation" (a criticism of J. S. Mill); (10) "First Cause" (a criticism of Comte); (11) "Existence;" (12) "Creator and Constructor;" (13) "Pantheism" (a criticism of the pantheistic doctrines of the day). Though the treatment of these great questions is slight, yet as a phase of thought it is interesting; and the future historian of India will find it very difficult to write his chapter on the renaissance of Indian literature in the nineteenth century unless some of our public libraries make a great effort to collect such books as Debonath Banerjee's *Tattva-nirṇaya*, and preserve them for use, if not at present, at all events in the future.

An essay by Spielhagen on the novelist's art has just been published at Leipzig.

ON the first day of the new year Herr Sacher-Masoch, the popular editor of *Auf der Höhe* (which may fairly claim to be a cosmopolitan magazine), will celebrate the jubilee of his literary career. His friends in many countries have united to present him with an album containing their autographs.

CARL ANDERSEN, the Danish poet and novelist, whose vivid stories of Icelandic life have made a name outside Scandinavian countries, has just published another tale of Iceland, entitled *Over Skjæter og Brænding* (Copenhagen: G. Gad).

PFARRER FRIEDRICH WRUBEL, the pastor of Zell, in the Wiesenthal, who was formerly a

working miner, has just published a small collection of miners' legends—*Sammlung bergmännischer Sagen* (Freiberg-in-Sachsen). The religious character of the old German miner is proverbial; and Pfarrer Wrubel points with pride to the fact that the German Reformation was the work of a miner's son.

THE year's *Proceedings* of the Portuguese Folk-Lore Society have been issued by Clavel, of Oporto. The book is edited by Senhor J. Leite de Vasconcellos, who published not long since an interesting study of the folk-lore of his native country, called *Tradições populares de Portugal*.

A NEW shilling monthly makes its appearance at Vienna with the new year, called the *Oesterreichische Rundschau*, which bids fair to be a worthy rival of its older contemporaries. The first number opens with a charming tale by the most distinguished living novelist of South Germany—Paul Heyse. English readers will be attracted by a paper on the much discussed question of the relation of Byron to Goethe, by Dr. Brandl. History, biography, travels, poetry, science, are all represented; and the number concludes with "Parliamentary" and "Critical" retrospects, neither of them by any means confined to home affairs, and a short Bibliography. The *Rundschau* is published by Carl Graeser, of Vienna.

WE are glad to be able to contradict the statement that the *Athenaeum Belge* has ceased publication with the present year. The truth is that it will only change from a fortnightly to a monthly issue. We take this opportunity of congratulating the editor, M. Ernest Gosart, of the Bibliothèque royale, upon the manner in which he has conducted his paper during the past five years.

AMERICAN JOTTINGS.

THE new edition of Ogilvie's *Imperial Dictionary* is to be issued in America by the Century Company. In the land of Webster and Worcester no higher compliment could be paid to the enterprise of Messrs. Blackie and the labours of their editor, Dr. Annandale.

A *Little Pilgrim*, we are hardly surprised to find, seems to have attracted much more attention in America than here. It was widely reprinted there immediately after its first appearance in *Macmillan's*; and the *Literary World* says of it—"no writing of the kind has been more talked about since the publication of *Gates Ajar*."

MR. T. HARDY's new novel, *Two on a Tower* (which first appeared, by-the-way, in an American magazine), is already being issued by three different American publishers. By two of them the book is sold for twenty cents (tenpence). The only English edition is in three volumes, costing a guinea and a-half.

WE understand that *Harper's Christmas* was entirely sold out in this country in the week of its publication by Messrs. Sampson Low. The price was half-a-crown, which compares favourably with the seventy-five cents charged for it in America. Mr. T. Hall Caine's *Recollections of Rossetti* is being issued by Messrs. Roberts, of Boston, at three dollars, say twelve shillings. The English price is only seven and sixpence. Truly the public on both sides of the Atlantic are the parties most interested in the question of copyright.

THE new volume, being the fifth, of the "American Men of Letters" series (published in this country by Messrs. Sampson Low) is *Fenimore Cooper*, by Prof. Lounsbury, of Yale.

MESSRS. HOUGHTON, MIFFLIN AND CO., of Boston, have ready the *Life of Ole Bull*, written by his widow.

JOHN HOWARD PAYNE, the veritable author of "Home, Sweet Home," died at Tunis, where he had been American consul, in 1852. It is now proposed to exhume his remains and take them "home" to Washington.

THE Boston *Literary World* of November 18 has a scholarly article on "The Mazarin Bible" by Mr. Allibone, of the Lenox Library, New York, which possesses one of the few copies that have yet crossed the Atlantic. A list is given, which we believe to be complete, of all the copies known to be in existence, with the places of their deposit. Including fragmentary copies, the total number is nine printed on vellum and thirty-one on paper. It is stated that the present price of a vellum copy is about £4,000, and of a paper copy about £3,000; yet in 1825 one of the former was bought for £504, and in 1822 one of the latter for £168.

THE same number of the *Literary World* has a paper on "Longfellow's First Volumes," which, curiously enough, are all educational. These were issued by him as part of his work when Professor of Modern Languages at Bowdoin College. They are (1) a *Manuel de Proverbes dramatiques* (1832); (2) *Novelas Españolas* (1830), being two of Washington Irving's stories put into a Spanish dress by one Montgomery; and (3) a translation of L'Homond's *Elements of French Grammar* (third edition, 1834). The two first were only edited by Longfellow, the last was also translated; but each has a Preface by him.

THE Society for the Collegiate Instruction of Women in connexion with Harvard University has recently obtained a charter of incorporation, but is still much in need of money. During the third year of its operations, which has just closed, the total number of pupils was thirty-eight, who attended twenty-eight courses of lectures given by twenty-three different members of the university faculty. The courses best attended were those of English and Greek. The annual charge for tuition for the full course is as much as 200 dollars (£40), and for a single course 75 dollars (£15). It is not often realised how much endowments reduce the cost of university education to men.

AT the Convention of Librarians at Cincinnati last June, fears were expressed by some of the members who were present from Western States that their position was insecure from political causes. This fear has turned out true. As a result of the recent elections, the State Librarian of Indiana has already been dismissed; and the State Librarian of Michigan has likewise received notice. The latter, who is a woman, is described as the only good librarian Michigan ever had; but her place is wanted for another woman, who stumped the State for the victorious party.

FRENCH JOTTINGS.

THE Académie des Sciences at its last meeting appointed a committee, with M. Milne-Edwards as president, to co-operate with the English committee for raising a memorial to Charles Darwin. The proprietors of the *Revue scientifique* have given a subscription of 100 frs.

IT has been decided to collect the speeches of the great criminal lawyer, Me. Lachaud, who died in the early part of this month, and publish them in the course of next year.

M. ALPHONSE DAUDET's new novel will appear before the end of January. It is entitled *L'Évangéliste: Roman parisien*.

FIRMIN-DIDOT have just published the third part of the second volume of the French Dictionary compiled by the Académie française.

At the meeting of the Municipal Council of Paris last week, a proposal was brought forward

to grant a subsidy to the Positivist Library in the rue Réaumur. Despite the support of Dr. Robinet, who is himself a member of the municipality, the proposal was rejected by twenty-six votes to twenty-four. The minority were all Republicans; the majority consisted of six clericals and twenty autonomists. The opposition of the last party, headed by M. Yves Guyot, was partly due to a suspicion that the Positivists were on too intimate terms with M. Gambetta, but still more to the argument that "le positivisme religieux est une sorte de catholicisme."

THE eighth volume of M. Elisée Reclus' great work—*Nouvelle Géographie universelle*—which has just been published by Hachette, treats of India and Further India.

GARNIER FRÈRES have collected into a handsome volume, illustrated with engravings after Delaroche and others, a series of historical portraits by Sainte-Beuve, from Henri IV. to Guizot.

AMONG the *étrennes* issued in the "Bibliothèque de Récréation," under the editorship of Bibliophile Jacob, we notice *La Rose et l'Anneau*, "par Titmarsh."

THE *Revue politique et littéraire* for December 23, gives a further series of fifteen "Petits Poèmes en Prose" by M. Turgueneff. It is stated that he originally meant to call them "Senilia." Another instalment, of a more personal and private character, is reserved for the present.

THE fourth part of the "Bibliothèque de l'Ecole de Chartes" contains a complete bibliography of the late Jules Quicherat. It enumerates thirteen books published separately, and 350 papers distributed among thirty-five Reviews, &c.

Polybiblion for December has a review of Mr. Saintsbury's *Short History of French Literature* by M. Gustave Masson, who says:—

"J'avais eu souvent l'occasion d'apprécier l'étendue de son savoir, la sûreté de son goût, et l'impartialité de sa critique, mais je me figurais pas que dans un volume en — 12 de 600 pages il fût possible de retracer avec autant de détail le tableau complet de la littérature française."

THE death is announced at Paris of one M. Quitard, who deservedly bore the title of "doyen des gens de lettres françaises," for he had attained his ninety-fifth year, and preserved to the last his prodigious memory. He is said to have known by heart, besides other things, 25,000 lines of French poetry.

M. RENAN has been interviewed, to verify an item of literary news, by a reporter of the *Voltaire*. It had been stated in another Paris newspaper that he was editing the *Memoirs* of Mme. Cornu, the foster-sister of Napoléon III. The facts, however, are these. Mme. Cornu, who died in 1875, has left no writings whatever. But there does exist, in the Bibliothèque nationale, a bundle of letters addressed to her by Napoléon when he was confined in the fortress of Ham; and these letters are not to be published until ten years after her death—i.e. in 1885. M. Renan has seen them, and bears witness to their extreme interest as illustrating the character of Napoléon, for they were written in familiar confidence without any thought of publication. Politics proper are rarely referred to; but there are constant requests for books dealing with political economy and socialism, and comments upon them when received and read. Finally, M. Renan is reported to have said:—

"Vous avez bien fait, monsieur, de venir près de moi contrôler cette nouvelle. Il faut toujours vérifier. Le rôle du journalisme moderne est bien dessiné maintenant. L'exacritude est le premier de ses devoirs. Ce doit être aussi sa politesse."

CAMOENS' SONNETS.

Valencia: December, 1882.

In a late masterly article on this subject, in which ample justice was done to my volume of *Seventy Sonnets*, &c., I was severely called to account for having transgressed all rules, and fallen short of my own standard, by turning Sonnet xiii., pp. 8 and 9, into stanzas. But I had confessed my transgression in my Dedication Letter to Capt. Burton. I still think the stanzas pretty; but the effect of the reprimand, the force of which I acknowledge, has been to produce from me a real sonnet translation. Having written this, it has seemed to me that, as you have been lately publishing some very interesting translations of Camoens' Sonnets by Capt. Burton, and are thus aiding his and my resolution to make that standard author known in England in becoming garb, you might find room for publishing my present act of repentance; and I therefore send you the new version below. This is now strictly correct in form as well as meaning. Let me add that Camoens addresses his sonnet to a lady called *Violante*, and alludes to her name by the two words "*Viola antes*." I call my lady "*Violets*," and make my allusion by the two words "*Violet above*."

TO VIOLETA.

XIII.

Into a garden adorned with green,
Whereof bright flowers bedecked the 'enamelled'
face,
Linked with the goddess of wood and chase,
The goddess fair of love to come was seen.
Diana pulled a rose of purest mien,
Venus, red lily, brightest of the place;
But beyond all the rest of flowers in grace
And beauty, there appeared the violet's sheen.
Of Cupid they demand, who stood beside,
Which, as the purest, loveliest to love,
Of those three blossoms he the rather chose.
Then smiling, thus to them the boy replied:
They all are fair, but Violet above
The lily I prefer, and e'en the rose.

J. J. AUBERTIN.

LETTER FROM TUNIS.

Tunis: Dec. 16, 1882.

I MUST begin my letter by warning future travellers against coming to Tunis by the Italian coasting steamer from Trapani and Marsala. It is indescribably filthy, the accommodation and food are bad, and the prices are high. At the same time, there are few places in Sicily which are more worthy of a visit than Monte San Giuliano, the ancient Eryx, which rises behind Trapani. Apart from the magnificent view which the summit commands or the mediaeval castle and cathedral of the town, the Phoenician remains which still exist there possess the highest archaeological interest. On the north side of the town the mediaeval walls rest on courses of huge stones, which are bevelled and laid in the same peculiar fashion as the colossal stones at Baalbek, or the large stones in the south-eastern angle of the Harâm well at Jerusalem, and in the fragment of early wall at Tyre. No one who has seen the stones of Baalbek can doubt for a moment that they have been shaped by the same architects as the stones of Mount Eryx. That these architects were Phoenicians is made evident by a fact which I have not seen noticed elsewhere, and which may therefore have not been previously observed. At one point in the walls of San Giuliano, where the original builders erected a tower and a sort of postern gate, the lintel of which consists of a single slab of stone, the stones of the primitive wall are less weathered than elsewhere; and here upon the outer surfaces of most of them I found a mason's mark deeply engraved in the shape of a Phoenician *beth*. The letter has the same form as in the famous tariff of sacrifices found

at Marseilles. At another point in the old wall, a little farther to the west, where, again, the stones showed less weathering, I also found the same letter cut upon them. This discovery, if discovery it be, settles the origin and date of the early walls at San Giuliano, as well as of the great stones at Baalbek. In the garden of the castle at San Giuliano is an immense cistern, cut out of the rock, which forcibly reminds one of the cisterns of the Harâm at Jerusalem. The castle occupies the site of the temple of Astarte or Venus, and the walls of the Roman temple are still visible in two places. Systematic excavations on the spot would no doubt bring to light many relics of the Phoenician period; as it is, the little museum in the public library of Trapani contains several interesting Phoenician objects found there (among others, a terra-cotta image of the Phoenician Bee, and the horns of Astarte in bronze), while Prof. Salinas showed me, at Palermo, a Phoenician inscription recently brought from Trapani. It is a dedication to Baal Khammân, with the figure of the dedicatory and the usual symbols above. I may add that the collection of objects from Selinus at Trapani is far more interesting and important than that in the miserable little museum at Castelvetro, where the only thing worth noting that I saw was an archaic vase with the *swastika* upon it. At Selinus itself there is no museum at all.

On our way to Sicily, my companions and myself passed through Magna Graecia. I found that since my last visit to Taranto, three years ago, all traces of the Roman forum and amphitheatre had disappeared, new streets of houses having been built upon their site. At Metapontum, on the other hand, excavations are going on quietly among some tombs situated near the railway, and not far from the temple which was disinterred with so much care by the Government a short time ago. The ground round the tombs is covered with objects thrown away by the excavators, consisting chiefly of terra-cotta weights and broken vases. There is now a good restaurant at the railway-station, so that it is easy to spend a day on the site of the old Greek city. Nothing has been done in the way of digging near Corigliano since I was last there, though the mounds which cover the ruins of Thurii and Sybaris must contain much that is valuable. Excavations, however, would be both costly and troublesome. At Otrone, the ancient Otrona, and Torre di Gerace, the ancient Lokri Epizephyrii, it is plain that excavations would be as useless as at Castro-giovanni, the ancient Enna, in Sicily, which we passed on our way from Messina to Palermo. In all these places there is little or no deposit of soil. At Otrone, nevertheless, when we were returning from an excursion to the Lacinian promontory, one of my companions, Mr. Myers, noticed remains of ancient glass manufactories, such as I have seen at Tyre and Arsûf, in the ground through which a new road has been cut. As these manufactories must have been just outside the city walls, the site of the ancient town cannot have been far off.

By the courtesy of Dr. Bollig and the Cavalier Descomet, I was allowed to examine the cuneiform inscriptions recently discovered by the latter in a case of the Vatican Library, where they had remained unnoticed for the last forty years. Unfortunately, I was so pressed for time that I was unable even to handle two terra-cotta "olives" contained in the collection, and could take only a hurried copy of an interesting text of Nebuchadnezzar describing certain of his buildings "in the land of Babylon." I further copied the fragment of a clay cylinder containing the annals of an Assyrian king, and a seal which gives the names of an early Babylonian viceroy and his father. In the collection is also a fragment of

relief of the inscription found on the bricks of Nebuchadnezzar, as well as the fragment of an alabaster vase, with the words "of one *barsa*" upon it. I hope I may have the opportunity of examining the collection at greater length on my way home. A. H. SAYCE.

THE OLD HOUSES OF WEST YORKSHIRE.

STANDING dark and solid against the sky-line of the wild moorlands of Yorkshire, or nestling in the wooded valleys that separate them, are many mansions of the seventeenth century, of which the like can scarcely be seen elsewhere. These houses, lying in the heart of the stone district, in the midst of heathery moorlands and wastes, were made by their builders in natural accord with the scenery that surrounds them, and they were also the truthful expression of the feelings and requirements of those who lived in them. For these reasons they are entitled to the consideration of students of art, as the outcome of a particular phase of English social and domestic life. They were built during the seventeenth century—under the characteristic impulse of the successful Englishman to establish his family in its ancestral home—either by the younger sons of greater families, or by men who had attained a substantial position by commerce.

A great "house-body," occupying the middle of the building, a gable at each end, containing the retiring rooms of the mansion, and the domestic offices behind—these were the simple features of the plan. The large hall-window, occupying one side of the room, rose to its longitudinal roof, and was divided by many mullions and transoms into diamonded lights, often filled with stained glass. The gable at each end, of two stories, had likewise its mullioned windows, deeply recessed, and casting fine shadows from their curious water-tables, with the quaintly carved terminations. The porch was a remarkable feature of the house, its doorway having Ionic pillars at its jambs, and often on its arch a date and coat-of-arms, while the chamber above had frequently a rose-window of rich tracery, and was surmounted by a pinnacled gable. But these simple characteristics of the building were subjected to endless modification and change. Sometimes the hall, instead of being open to the roof, had rooms constructed above it, and then one gable or more replaced its longitudinal roof externally; and sometimes these pinnacled gables rose on every side of the building. Nevertheless, however the hall was changed, the generic features of its appearance were preserved; built of millstone grit of the hardest, its details were necessarily simple, whence its window-mullions had usually plain splay, but sometimes cavettoes, and more rarely ogee mouldings and fillets. Its stories, generally two in number, though in rare instances three, were separated by projecting string-courses of simple mouldings; and each gable had a pinnacle, often in the shape of a ball. Grim yew-trees stood around it; and quaint hedges, out to fantastic shapes and prim, led up to its doorway, where often a moral phrase or classic quotation marked the taste of its occupant. Its door was a mighty piece of oak, of iron hardness, studded with prodigious nails, that bears to-day the seams of centuries, and looks as if it yet might well defy all the blasts of time. When the wayfarer knocked thereat, he might be scrutinised, if haply he were a Puritan or Roundhead, through the window at its side; but, his credentials delivered, it swung on its hinges, and opened the wide and hospitable passage to the hall. The apartment that lay then before him, the largest in the house, with, as we have said, the great window occupying one side, was wainscoted, to the height of about six feet, in

* See ACADEMY, December 16, 1882.

square panels, whereof the upper ones were filled with flat carving. The staircase, a distinctive feature of the room, was the ascent to the gallery, which ran along three sides of it, with oaken rail and banister. The hall was paved with flags set diamond-wise, and had a great English fireplace with its chimney-nook; and, above, the royal arms and those of the King's commanders, together with a date, and many a loyal inscription, such as "Fear God, Honour the King," and the like. The room had generally an open timber roof. The furniture was in perfect accord with the house: under the window stood the immense hall-table with its thick legs; opposite, was the dresser, covered with plate; the chairs were heavy and solid; and the mantle was frequently supported by caryatides. It was here, when the great logs crackled on the fire by winter, that the gay dames and cavaliers of the neighbourhood assembled for their amusement; here, that they danced the stately minuet and sang the loud song of loyalty. For the owners of most of the houses we describe appear to have been followers of the King. Perhaps in this hall was the family assembled when news came of Naseby and Marston Moor; perhaps from that porch sallied forth the lord to take his share in the combat, from that rose-window that his lady waved her adieu; and perhaps here that his widow received tidings of the slain. The upper rooms of the house, which were approached from the gallery of the hall, were wainscoted like it, and frequently had wonderful ceilings of geometrical plaster-work. When our visitor went to rest at night, he retired to a great bed of state, magnificently carved, with a heavy canopy supported on the thickest of pillars, and a long chest standing at its foot, where, let us hope, he slept a wholesome sleep blown upon him by the fresh moorland air. Perhaps in the morning he looked through the window upon the long lines of the distant hills, and then, descending, bade farewell to the house-master and his lady, and, passing through the tall pillars at the gate, went on his way.

So, in due course of a generation or two, passed likewise through that portal the glory of the house. Its owner was dead, his children departed, his wealth perhaps confiscated, or at any rate, by some ill turn of fate, his substance done away with entirely. *Nunc meo, mox hujus, sed postea nescio cuius*, is the motto on Barkisland Hall—a fit motto, indeed, not only for that house, but for most of its fellows, for neither cavalier nor yeoman knew for whom he built. In fact, there are few of these houses that have not fallen from their old position. However, it happened that when the gentry were departed, the toilers came in—men who ploughed, perhaps, the fields by day, and plied the shuttle by night. The hall now was filled with hand-loom, and the passer-by at night might hear the weaver's song tuned to the throw of his shuttle. His cloth made, pressed, and finished, he placed it upon the back of a pack-horse, and sent it to the nearest market town to be sold. It was a hard life the hand-loom weaver led, from 5 in the morning to 8 or 9 at night, working indoor and outdoor, without a change the whole year round. But a change did come at last, whereat the hand-loom weaver was amazed, and rebelled; the power-loom was invented, and he, his trade departed, fled to the towns, there to seek in other ways his scanty livelihood. And this departure of the hand-loom weaver marked a further degradation in the house he had occupied. Out up now into miserable tenements for farm-labourers, an insecure floor placed across its hall level with the gallery, and the whole place given over to a cruel and careless vandalism, the house we have endeavoured to picture remains in many forms in West Yorkshire, some richer and many poorer than we have described; but there are none too

poor to contain much of interest to the architect. Good examples are the Howroyde, and the Halls of Barkisland, Shibden, Woodsome, and Oakwell, the latter the residence of Shirley in Miss Brontë's novel. Most of the Yorkshire hall-houses fell into decay long ago, and so they yet remain, memorials of a state of things entirely departed, of which they are the truthful interpreters. The modern improver has had a hand in their destruction, no doubt; has cut out their diamond panes to let the light in, and then shrouded them with curtains to shut it out; an agent from Wardour Street has bought up their old furniture; and their only inhabitants now are the poor peasant and his wife, whose children at the earliest dawn toil across the moorland to the nearest mill, there to labour for their daily bread.

And yet they have other inhabitants; but these are not of the flesh; old traditions of their greatness, strange stories of their owners—how they fought for the King, what kind of lives they led, and what manner of deaths they died. And then there is the "silken lady," in hoop and farthingale, who rustles through the house when the autumn winds blow; and the old gentleman, too, in tie-wig, snuff-brown coat, and knee-breeches, who stands at the hall-window when the moonlight falls through its panes upon the floor. JOHN LEYLAND.

CORRESPONDENCE.

"HOBBS" IN CLOUGH'S "BOTHIE."

Bromley, Kent: Dec. 23, 1882.

In Mr. Morshead's article on Mr. Waddington's book, he says that most people will find Clough, "as Mr. Hutton does, in Adam, not, as Mr. Waddington seems to do mainly, in Hobbes." Mr. Waddington is certainly wrong. Hobbes, "the glory of headers," is G. Ward Hunt, who was afterwards Chancellor of the Exchequer and First Lord of the Admiralty. He was a member of the reading-party on which "The Bothie" was founded; and I first saw the poem on the table of his family soon after its publication, where the identity was accepted as beyond doubt.

SAMUEL R. GARDINER.

THE GREAT PYRAMID.

Braystone House, Kew, Surrey: Dec. 23, 1882.

Miss Edwards accepts so very nearly all that I have endeavoured to establish in my treatise on the Pyramid that it seems to me desirable to state how much that she advances as apparently not agreeing with my views I fully concede. Taking Miss Edwards' numbered objections *seriatim*—

1. Unquestionably each tomb was for one occupant.

2. I attach no importance whatever (though I quote it) to the suggestion that Chaldaean visitors may have suggested the building of the pyramids of Ghizeh, still less to the idea that Abraham had anything to do with the matter. We have recently obtained evidence of intercourse between Chaldaea and Egypt across Palestine at a very remote period; but probably the Egyptian astronomers had little to learn from the Chaldaean.

3. Here Miss Edwards omits to notice the distinction between a horoscope of a king's son planned by the father and such a horoscope planned by the son when himself a king. A rule by which the linear dimensions of a son's horoscope should be less in a certain ratio than the father's would have led to very small pyramid-tombs being made in a few generations. But a king planning a series of pyramids for himself and members of his family not themselves kings would be apt to adopt some such proportions as we see in the pyramids of Ghizeh.

4. I have no opinion as to the relative im-

portance of the horoscopic and tombic uses of a pyramid, except that, as a rule, men think more of this life than of their abode in the tomb. I know Egyptologists regard the tomb as of primary importance, if not all-important, to Egyptians. Yet Egyptians were men, and I suppose this life counted for something with them. Whatever importance the Egyptians attached to their tombs, the horoscopic use of the edifice would be proportionally important, by enhancing the completeness of the dedication of each part of the building to its appropriate astronomical relation.

5. All that is known of ancient astronomy assures us that it was astrology based on star worship, which in some cases was the primary form of religion, in others was only a part of nature worship. No one who considers what astrology meant to men in old times can doubt that it was a part of their religion. Yet it would suffice for all I have sought to show that for some reason—pure zeal for science, if any one can believe it—the Egyptians were careful astronomical observers.

6. Mariette's words support my view. If a pyramid were only a tomb, its sides might face any way; but that it is more than a mere tomb is shown by the dedication of its faces, "par des raisons mythologiques," to the cardinal points. What those "raisons mythologiques" were is tolerably clear to all who know the nature of astrological superstitions.

7. Find out *why* the Egyptians—kings, rulers, princes, priests, stewards, and so forth—required each a tomb, "une enveloppe extérieure et à jamais impénétrable de la momie," and we shall have learned something much more interesting about them than the mere fact that they did require such tombs, which is obvious.

Mr. Cope Whitehouse's theory seems so extravagant that I would rather object to its fusion with mine, which simply shows that every single feature of the pyramid is such as an astronomer would be almost certain to have given to such a structure built, to begin with, on a certain astronomical plan.

No non-existent pyramids, however great they may have been, can compete in interest with the great pyramid of Khoofoo.

RICHARD A. PROCTOR.

APPOINTMENTS FOR NEXT WEEK.

- MONDAY, Jan. 1, 5 p.m. London Institution: "Tourists and Travelling in the Early Days of the Roman Empire," by Prof. J. P. Mahaffy.
8 p.m. Victoria Institute: "The Argument from Design in Nature, with Some Illustrations from Plants," by Mr. W. P. James.
- TUESDAY, Jan. 2, 3 p.m. Royal Institution: "Light and the Eye," III., by Prof. Tyndall.
- WEDNESDAY, Jan. 3, 7 p.m. Society of Arts: Juvenile Lecture, I.
8 p.m. British Archaeological: "The Myth of the Week," by Prof. Hodgkin; "Redstone Hermitage, Worcestershire," by the Rev. J. P. Hastings.
- THURSDAY, Jan. 4, 8 p.m. Royal Institution: "Light and the Eye," IV., by Prof. Tyndall.
7 p.m. London Institution: "Thought-Reading, True and False," by Prof. W. F. Barrett.
- FRIDAY, Jan. 5, 8 p.m. Library Association: "The Distribution of Public Documents to Libraries in the United States," by Mr. E. C. Thomas.
8 p.m. Carfax.
- SATURDAY, Jan. 6, 3 p.m. Royal Institution: "Light and the Eye," V., by Prof. Tyndall.

SCIENCE.

SOME WORKS ON PHONETICS.

Grundzüge der Phonetik. Von Eduard Sievers. (Leipzig: Breitkopf.) This work is a second edition of *Grundzüge der Lautphysiologie*, by the same author, which appeared in 1876 as an introduction to the series of Indo-Germanic Grammars now in progress. It has, however, undergone so much recasting and supplementing as fully to justify its appearance under a new title. The most important feature in the

new edition is the attitude of Sievers towards the English school of phonetics. He says himself, in his Preface, that he has derived but little benefit from the German reviews of his first edition: the reviewers were either too indulgent, passing over the weaker parts of the work, or else approached it with prejudices and demands which it expressly refused to meet. He professes to have learnt all the more from the works of the English-Scandinavian school of phonetics, and admits that even the first edition would have taken a very different form if he had at that time been acquainted with the two works which had laid the foundation of modern phonetics—Bell's *Visible Speech* and Ellis's *Early English Pronunciation*. One cannot but agree with the author that his original principle of giving, as far as possible, only his own results and ideas, unmodified by those of others, had many advantages; but, as he himself says, the consequence was that he sometimes overlooked outside work which had more or less anticipated his own. He instances the theory of "glides," or transition-sounds, on which only a few scanty observations are to be found in his first edition, while the whole subject had been made clear by Bell and Ellis many years before. Hence, also, his retention of the antiquated classification of the vowels by pitch, instead of according to their mode of formation. Sievers complains with reason of the inaccessibility of Bell's works, and states that he would not even now be able to utilise Bell's investigations, had they not been made accessible in Ellis's *Early English Pronunciation*, Storm's *Engelske Philologie*, and my own *Handbook of Phonetics*. He says: "The phonetician who is in earnest about the matter will have to draw mainly from these works as his sources. It is a point of honour for the German school of phonetics to acknowledge this without reserve." He reproaches German phonetic science with having too long ignored the results of "her less loftily theoretical but all the more vigorous daughter." It is hardly, perhaps, correct to say that the present school of English phonetics is the daughter of the German one, for Bell's vowel-system is entirely original; although, on the other hand, every English phonetician will hasten to acknowledge the debt he owes to those German researches (especially in laryngoscopy) which were first made accessible to English readers by Mr. Ellis. With not less readiness will he acknowledge the fitness of the designation "English-Scandinavian" school; for, although the participation of Scandinavia in the more modern phonetic investigations dates from the appearance of Storm's *Engelske Philologi* (1879), that work has contributed more than any other to the minutely accurate physiological determination of the elementary sounds of the chief literary European languages which is now the main aim of practical phonetics. But, while Storm and his young Norwegian pupils accept the English system as a whole, this is not the case in Sweden; and it is hardly correct to class Lundell, Norren, &c., with them. The only Swedish phonetician, as far as I know, who fully accepts the English vowel-system is Dr. Fr. Wulff, of Lund, from whom we may expect good work in Scandinavian and Romance phonetics. The other Swedes, in spite of the lead they have taken in systematic dialectology, still retain a very imperfect and antiquated vowel-system. Sievers states that the only general point of importance in which he differs from the newer school is his negative attitude with regard to the attempt to form a general system of sounds. In this I think he goes too far. It is quite true that the setting up of rigid schemes like Brücke's and Bell's vowel-tables has often a retarding influence; but it is also clear that a mere collection of isolated facts without any common basis of comparison can never constitute a science.

Phoneticians are now coming to recognise generally that the sounds even of a single language cannot be studied scientifically without constant comparison with those of other languages; and these comparisons cannot be carried on or made accessible to others without a general system of notation and terminology, which necessarily imply some general theory of the relation of sounds. The best general system that exists at any one period is nothing else but a stepping-stone, to be discarded for a better one when it has done its work. If the time comes when Bell's vowel-system is no longer a help but a hindrance to progress, it will then be time to seek for a better one on some other principles, and, when we have found such a one, to discard the older one. Sievers expressly disclaims any intention of providing an introduction to general phonetics. His book is an introduction to the study of the phonology of the Indo-Germanic languages; and, being written for philologists, it must necessarily be somewhat conservative in character, especially as regards nomenclature. The chapter on the general principles of sound-change will be especially welcome to this class of readers. The subject is treated in a thoroughly sound and scientific spirit, although an English reader will be apt to consider the author's style as somewhat too abstract. The chapter on the phonetic structure of syllables, words, and sentences deals with the problems of what may be called "higher phonetics," and the views laid down in it are very similar to those in my own paper, "Words, Logic, and Grammar" (*Phil. Soc. Trans.* 1875-76). Sievers adopts the term "sprach-takt" to designate what I call "stress-group." The work abounds with interesting details, into which I cannot enter here. They show such a power of observation as to make us regret that the author's limited opportunities and variety of other pursuits do not allow him to give more detailed investigations of special languages and dialects.

Engelske Philologie. Von Joh. Storm. I.—"Die lebende Sprache." (Heilbronn: Henninger.) We have here a translation (made by the author himself) of *Engelske Philologi*, which appeared in 1879, in Norwegian, and was reviewed at the time in the ACADEMY. In its present form the work has not only been made more generally accessible to English as well as foreign readers generally, but has also been considerably improved and enlarged. The object of the work is to give a guide to the scientific study of English, mainly for young students of philology, but also for wider circles. Storm, like Sievers, is at the same time a scientific philologist and an ardent phonetician, but the spirit in which he brings phonetics to bear on philology is totally different. We see, in Storm's work, how closely akin the Norwegian scientific spirit is to the English. Although the Norwegians partially resemble the Germans in possessing genuine universities and an organised system of scientific training, yet their work distinctly shows the more practical character of that of England; and this is proved most unmistakably in the way in which the results of English phonetics have been taken up by Storm and his young disciples. We can even trace the weak side of the "practical" character in a certain want of cohesion and method in Storm's book which, however, instead of detracting from its usefulness and interest, rather adds to them, for Storm's practical mastery of modern languages is such that we cannot afford to lose a single one of the details massed together in this volume. Of that dilettantism and shallow popularity-hunting which is the curse of English philology there is, it need hardly be said, no trace. Storm's introductory chapters on the general method of studying English,

and on general phonetics, are no doubt destined to exercise a most weighty influence on the practical study not only of English, but also of modern languages generally. The two main articles of his educational creed are—(1) begin with the living language, and work gradually back to the older stages, leaving historical and comparative studies till a solid foundation of facts has been laid; and (2) base the study of pronunciation on a practical mastery of general scientific phonetics. It is a great merit of the book that these principles are brought forward in a sober and cautious way. There is no attempt to sweep away the present system and to set up an ideally perfect one in its place—its general tone is, indeed, almost conservative; while leading the reader up to higher ideals and methods, it shows him how to make the best use of the existing helps. For this purpose Storm gives detailed criticisms of the chief works on general phonetics (this chapter being, in fact, a valuable contribution to the history of the science in its latest stage of development), English pronunciation, lexicography, phraseology, &c. He has chapters on colloquial and vulgar English, which will be full of interest to English readers also. He has collected the material himself for the greater part from novels and other sources, and his treatment of it shows an astonishing command of English in all its stages. The section on American-English, though less original, is equally welcome. That on the language of the eighteenth century, again, is based on original reading. Tudor English, and especially Shakspeare's English, are also treated of fully. From a purely scientific point of view, the most valuable feature of the work is the number of accurate sound comparisons and identifications it contains. Storm has long been regarded in France and Italy as a foremost authority in Romance phonetics; and his minute comparisons of the elementary sounds of English, French, Italian, Spanish, German, and the Scandinavian languages, together with those of several other languages, have contributed as much as anything to give practical phonetics that secure basis which is indispensable for any sound progress. To Storm also is due the credit of being the first foreigner to take account of the work of the English school of phonetics. It was he who first induced me to write the *Handbook of Phonetics*, which, with Storm's own book, has been the means of making Bell's discoveries known on the Continent. Now that Sievers has approximated to the English-Norwegian position, it is to be hoped that the younger generation in Germany will follow his example; and in this way we may hope to see the present isolation of phonetic investigation broken down, for phonetics can never be successfully cultivated except on an international basis.

Bidrag til dansk-norskens lyd lære. Af K. Brekke. (Christiania: Fabritius.) This carefully worked-out analysis of the phonology of Danish-Norwegian as spoken in the East of Norway (especially in Christiania itself) is by one of the most promising of Storm's pupils. It is noteworthy as being the first treatment of a living literary language on a rational phonetic basis by a native. The author got the idea of his essay from my own "Sounds and Forms of Spoken Swedish" (Phil. Soc. Trans. [1877-79], to which he frequently refers. He has completely adopted the English system, and even partially retains Bell's English terminology (with the slight modifications and additions given by me in the *Handbook of Phonetics*), at least as regards the vowels. The work begins with a full analysis of the sounds of the language, which resemble those of Swedish very closely, agreeing with Danish only in features which are common to the Scandinavian languages generally; then comes "sound-representa-

tion" (Lydbetegnelser), in which the different letters and letter-combinations are enumerated, with their various pronunciations; and, lastly, *accent*—both the stress-accent, which Norwegian has in common with other languages, and the peculiar modulative (musical) accent, which is shared only by a few other European languages, notably Swedish and Lithuanian. The pronunciation is consistently expressed throughout in a practical and convenient notation. The only fault I find in it is that the application of the dotted and the crossed o is exactly the reverse of that adopted by the Danish phoneticians, which is somewhat confusing. The author has wisely followed Mr. Ellis's plan of enclosing all phonetic writing in parentheses—a practice which saves many misunderstandings. This little work deserves the attention of all who are concerned either with Scandinavian phonology or the practical study of spoken Norwegian. For the latter class of students it is, indeed, indispensable. We hope to meet the author again on some wider field of phonetic research.

HENRY SWEET.

PHILOLOGY NOTES.

M. PAUL MARIÉTON is engaged upon an important work, entitled *La Renaissance latine et les Provençaux*, which will give a history of the dialects of Southern France since the crusade against the Albigenses.

M. DE ROSNY has almost ready the fourth and concluding part of his work upon the Decipherment of the Hieratic Writings of South America. His system of interpretation has met with a good deal of criticism.

FRENCH officers have discovered in Tunis, at a village called Henjir-ed-Duamia, several Latin inscriptions which identify it with the Roman colony of Uchitani Majores, mentioned by Pliny (v. 4). The inscriptions are dated from Severus to Constantine.

At the last meeting of the Société asiatique, M. Halévy announced that he had succeeded in deciphering the Thamudite inscriptions brought back from Arabia by M. Huber. The Thamudites are a prehistoric tribe, whose destruction by a divine intervention is recorded in the Koran.

THE École française d'Athènes has lost two of its members by death within three months. This has led to the comment that too much work is expected from the young students on their first arrival in Greece; and the Chamber has immediately voted a larger grant towards their travelling expenses.

It is proposed to found a Chair of Catalanian at the University of Barcelona.

DR. VON BÄHDER, of Leipzig, has published a new edition of Hoffmann's *Grundriss der deutschen Philologie* (Paderborn: Schöningh, xvi.—456), of which the first edition appeared in 1836. He follows, on the whole, Hoffmann's arrangement, but has made several alterations and additions. He has confined himself in "Literature" to Old-High-German and Middle-High-German; on the other hand, he has added two highly important chapters, "Volkskunde" and "Altertümer," covering nearly one hundred pages, and has included the Dutch language throughout, although the information which he gives on this branch is not very full—we miss, among others, F. C. Donders' *De Physiologie der Spraakklinken*, &c. (Utrecht; 1870). Dr. von Bähder's references to the more important articles in periodicals are especially valuable to the student; yet, to take one subject—viz., folk-etymology (p. 135)—we looked in vain for Förstemann's second paper in Kuhn's *Zeitschrift*, vol. xxiii., and O. Weise's contributions to the question in the *Zeitschrift für Völkerpsychologie*, &c., vols. xii. and xiii. A

few other books seem to have escaped his notice, such as Engelien's *Grammatik der neuhochdeutschen Sprache* in § 44, and Laubert's *Die französischen Fremdwörter in unserm heutigen Verkehr* in § 75, &c.; and No. 1849 might, with advantage, be transferred to § 52. But these are minor points. Every student of German philology will welcome this new edition.

MEETINGS OF SOCIETIES.

SOCIETY OF ANTIQUARIES OF SCOTLAND.—

(Monday, Dec. 11.)

DR. ARTHUR MITCHELL, V.-P., in the Chair.—The first paper read was "An Examination of the Newton Stone Inscription, Aberdeenshire," by the Earl of Southesk. The Newton Stone has been known to antiquaries for seventy years, and yet its double inscriptions have not been satisfactorily read. Through the kindness of Mr. Gordon, the proprietor of the estate on which it stands, the Earl of Southesk had enjoyed ample opportunities of studying the monument, and he had also had the advantage of photographs taken from new points of view. After an elaborate investigation of both inscriptions, letter by letter, he came to the conclusion that the Ogham inscription answered to the first part of the literal inscription only; that both these were renderings in a Celtic dialect of a brief sepulchral formula; but that the concluding part of the literal inscription was mythological—a religious invocation. The characters in which it was written were analogous to the Greek letters written by Irish scribes in such early Irish MSS. as the Book of Kells. The rendering of the inscription which was the result of his investigation in some respects closely agreed with that of the late Mr. Brash, and made it commemorative of "Eddi, daughter of Forrar, of the race of Jose," the last word being equivalent to Huan, the solar god, who was the same as Dionysus and Bacchus. The Ogham part of the inscription, he thought, was for the priests, and the other part for those initiated in the mysteries.—The second paper, by Dr. Daniel Wilson, was "A Notice of the Runic Inscriptions in St. Mollo's Cave, Holy Island, Argyleshire." After referring to the interest excited by the discovery of the remarkable series of Runic inscriptions carved on the interior walls of Maeshow, in Orkney, Dr. Wilson remarked that the series in St. Mollo's Cave, though fewer in number, were specially interesting as being, in his opinion, memorials of some of those who were engaged in the memorable Battle of Largs. The roof and sides of the cave are covered with rude marks, crosses, monograms, and other carvings of different periods, and among these are several inscriptions in Runes, which were copied and deciphered by Dr. Wilson in 1850 and 1863. They consist chiefly of the names of individuals, with the addition of the formula "carried this," but one seems to be of a satirical description. Dr. Wilson devoted part of his paper to a critical examination of the style and lettering of the inscriptions, and concluded with a description of St. Mollo's chair, or stone bench, a projection in the cave thus named, which recalls many other memorials of early Celtic saints of a like kind, which he instanced and described. He also called attention to the fact that the cave has attracted the attention of visitors, and that some of its interesting inscriptions have already been defaced.—The third paper was "A Notice of the Battle of Glenshiel, June 10, 1719," by Mr. Alex. H. Millar. While collecting materials for his history of Rob Roy, Mr. Millar had discovered among the MSS. of the Duke of Marlborough a plan of the battle by Lieut. John Bastide, which gave not only the disposition of the Jacobite and Hanoverian forces, but also detailed with great fullness the different movements of the troops on both sides. A tracing from this plan was exhibited, and by reference to it Mr. Millar was enabled to present a clear and detailed account of the conflict, of which so little was known that the most recent accounts given by the historians are brief and imperfect.

ROYAL ASIATIC SOCIETY.—(Monday, Dec. 18.)

SIR BARTLE FRERE, BART., President, in the Chair.—Mr. Arthur Lillie read a paper on "The Buddhism

of Ceylon," in which he combated the ideas advanced by a section of writers, headed by Dr. Rhys Davids, that the ancient books of Ceylon teach nothing but annihilation, non-existence of the soul, and Atheism. He cited the *Tevigga Sutta*, in which Buddha is questioned on the subject of that union with Brahma which it was the great object of the Brahmin ascetic, in Buddha's day, to gain. Buddha, instead of answering that the Supreme Brahma is non-existent, and that those who sought union with him were unwise, proclaimed distinctly the contrary proposition. Mr. Lillie then urged that the charges of annihilation, &c., brought against Buddha by Dr. Rhys Davids were founded on an erroneous reading of the Buddhist ideas about *Karma* and the *Skandas*; these, he stated, cease not on the death of the individual, but on his attaining spiritual awakening. A passage in the Brahma jala Sutta much relied on by Dr. Davids was then compared with its context, and it was shown that the doctrine of the annihilation of human beings was pronounced no less heretical than that of future conscious existence. Mr. Lillie, in conclusion, expressed the opinion that the Northern and Southern systems should be compared together, as by these means alone could the archaic and true Buddhism be detached from its later accretions.

FINE ART.

NOW ON VIEW.—BEAUTIFULS OF SURREY SCENERY, being an EXHIBITION of Mr. SUTTON PALMER'S SKETCHES and DRAWINGS made this past Summer.—MESSRS. DOWDRAWELL, 133, NEW BOND STREET (two doors from the Grosvenor Gallery).

In MARCH NEXT Messrs. DOWDRAWELL will exhibit Mr. STREET FOSTER'S DRAWINGS of the CATHEDRAL CITIES OF ENGLAND and WALES, which it is proposed shall be engraved.—Particulars on application.

GREAT SALE of PICTURES, at reduced prices (Engravings, Chromos, and Olographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—GEO. REES, 115, Strand, near Waterloo-bridge.

Japan: its Architecture, Art, and Art Manufactures. By Christopher Dresser. (Longmans.)

THIS book is a notable instance of the danger of delay in publishing. Had it appeared some two or three years ago, it would have been a much more substantial addition to our knowledge of Japan and its art. Dr. Dresser arrived in Japan on December 26, 1876, and might easily have expanded and published his notes of travel before the world had read what Miss Bird, Sir E. J. Reed, Mr. Dixon, and many more had to say on the subject. He might have had the start of the second edition of Audsley and Bowes; of the native report on Japanese pottery edited by Mr. Franks; of Mr. Cutler's splendid volume; not to mention many another work by which our knowledge of Japan and its arts has been largely increased of late years. As it is, though his volume is not without interest, it contains very little that is new.

Moreover, the book is not without signs that the delay has been injurious to its literary quality. It seems to be written rather as a task than a pleasure, as though the responsibility of the author's exceptional advantages compelled him to throw his materials into book form when he would rather have let them slumber in his notebook. We fear that this sense of effort is partly due to the "long and painful illness" of which he speaks in his Preface; but it is impossible not to feel that the book would have been much more lively if he had written it while his memory was warm.

The first portion is occupied with an account of four months spent by him in Japan; the second deals with arts and art manufactures. As the bearer of presents

from some leading firms in England to the Japanese Government, he was very well received, and had exceptional opportunities afforded him for studying both ancient and modern Japanese art. He had the honour of a reception by the Mikado, and had two Japanese gentlemen told off to conduct him about the country. He enjoyed unusual experiences of real Japanese hospitality, and was even privileged on one occasion to eat slices of a live fish that was still gasping on the table. He saw strange dances and stranger processions. He was not only allowed to see, but to examine and handle, the Mikado's famous collection of curiosities at Nara. Sacred precincts forbidden to foreigners were open to him; he was allowed to partake of what he calls the "Shinto sacrament," and was a guest at one of the celebrated select tea-ceremonies. An entertainment was arranged for his benefit at which some of the most skilful Japanese artists made drawings in the presence of himself and other illustrious guests. He saw, and evidently studied, workmen of various kinds while employed at their labour; and of potteries he visited no less than sixty-eight.

Dr. Dresser is well known as a gentleman of considerable experience both artistic and commercial, and as an ardent and successful collector, so that altogether we had a fair reason to expect a volume of no ordinary interest. It may be that our expectations were too high, or that Dr. Dresser has not done justice to himself; but in either case the result of his some years' gestation and some months' production is disappointing. Dr. Dresser himself seems to have little confidence in his power of description, for he evades as often as he can the task of putting into words his impressions of the scenery he passed through and the sights he saw. He tells us of his wonder and delight, how such a thing exceeded even his dreams, and how he never saw anything like something else; and often, after arousing our curiosity, he puts us off by saying that a view reminds him of one he saw at Salt Lake City or some other place where comparatively few persons have ever been. Of details which we should not miss he is prodigal. When, for instance, he takes us to Nikkô, we learn how he turned to the right or the left, followed the course of a stream and went up a hill and had a glorious walk. But when we get to the temple we are told that, "in dealing with a shrine like that of Nikkô, words are altogether inadequate;" and the famous carvings are thus described:—

"Birds, flowers, clouds, water, and animals are out with a boldness which the finest of European carvers could scarcely equal. I doubt, indeed, whether we have in Europe any artists who could arrange such compositions with half the vigour exhibited in these panels."

In describing the temple at Shiba he is still more indefinite and still more enthusiastic. But even a panegyric like that we are about to quote only tantalises our sight while it raises very serious doubts as to the soundness of the author's taste and judgment in matters of art.

"The impression which I now receive upon first beholding the magnificent temples and shrines standing before me as we step from our carriage is most delightful. Buildings so rich in colour,

so beautiful in detail, so striking in symbolism, I have never before seen, or even dreamt of. Had a Gibbons been employed on the wood-carving, had the colourist of the Alhambra done his utmost to add to forms, which in themselves are almost perfect, a new charm through the addition of pigments, and were the whole of such details subordinated to fitting places in a vast architectural edifice by the architects of the Parthenon, no more worthy effect could be produced than that of the buildings on which my eyes now rest."

It must not, however, be supposed that Dr. Dresser never attempts to give positive information about the temples of Japan. He is, for instance, very anxious that we should know not only the buildings that at present constitute the temple at Nara, but the changes that have been caused by fire and reconstruction; and this is what he tells us:—

"Originally the garan or complete temple (or, as we should say, group of temples) consisted of a number of buildings, one of which was the main temple or kon-do, one a pagoda or tō, one the eating-house or shioku-do, one the lecture-room or saidono, and one the bath-house or yuya. Some of these have been destroyed by fire, while one, the southern round temple or nanyen-do, has been rebuilt. From time to time buildings have been added, and if the whole were now standing they would consist of a pagoda or tō, a southern round temple or nanyen-do, an eastern golden temple or tokin-do, a western golden temple or saikin-do, a chief temple or kon-do, a lecture-room or ko-do, a northern round temple or hokuyen-do, a bath-house or yuya, a building termed an anteroom or hosodono, and a refreshment-house called shioku-do; but of these all that now remain are the pagoda, the eastern golden temple, the northern round temple, and the southern round temple which has been rebuilt, but the three old buildings which still remain have been in existence about twelve hundred years."

Dr. Dresser was commissioned by the Japanese Government to make a report on Japanese commerce with Europe, and he devotes a chapter to the mistakes made in translating it into Japanese. If his report was written in the same style as his travels, these blunders are not extraordinary. At the same time, it would not be fair to condemn Dr. Dresser's book on account of its style or its failure in picturesque narrative. When he is describing processes of manufacture or specimens of art, he has often something to tell us, and tells it intelligibly, if not with much literary skill. Perhaps the freshest and best-written passages in the book are those which contain an account of that meeting of Japanese artists which we have already mentioned. How a young man made a drawing of a flying duck, and a middle-aged man another of a train of rats, is very clearly described, and with much graphic power, as the following extract will show:—

"A brush of considerable breadth was dipped in water, and drawn between the fingers of the artist till nearly dry. It was then dipped in a thin wash of Indian ink, the central portion of the brush being bent outwards, so that the hairs of the brush assumed a crescent-like form. The convex or centre portion was now hastily dipped into dark Indian ink, and the brush allowed to straighten itself. Two or three hairs were now separated from one side, and dipped into dark ink, but these remained detached from the other part of the brush. By a dexterous movement the artist produced with one stroke the shaded body of the duck and an outline,

the few separate hairs making the latter, while the shading resulted from the darker ink of the centre not having fully spread to the sides of the brush. A bill is now drawn, then feet, and then tail-feathers. An eye is added, then follow a neck, legs, and a few finishing touches, when an admirable sketch of a flying duck is before us."

A few nuggets like these may here and there be picked out of the book, especially in the latter half, which is devoted to the arts and manufactures. The description of the way fabrics are figured is so good and interesting that we should like to quote it, but the relative proportions of good and bad writing in Dr. Dresser's book are, we think, generously represented by the extracts we have already given. Even in regard to arts and manufactures we are as frequently surprised by the *naïveté* of his discoveries as we are by the poverty of his reflections. The profound consideration which he gives to the connexion between the religion and art of the country results in nothing more than tracing excellence of work to Shinto and love of Nature to Buddhism. And we are expected to be surprised at the fact that hardness is a test of the quality of lacquer. The mention of "storks" as a favourite object of Japanese art and some other little mistakes of the kind seem to prove that Dr. Dresser's knowledge of Japan and its arts is discursive rather than thorough.

The book is well printed and prettily bound, and the illustrations are excellent; some of them, especially those of the temples and their complicated bracketings, are not only beautiful, but give us a better idea of the general appearance and peculiar structure of Japanese architecture than any we have seen.

COSMO MONKHOUSE.

THE BOOLAK MUSEUM.

MOST of the old rooms, now entirely re-arranged, and one of the large new *salles* containing upwards of five hundred stelæ and statues, are now open to the public of Cairo; and there is every reason to hope that the whole building will be ready by the beginning of next year. The new rooms will contain only new objects, including, of course, some thousands of relics from the famous tomb at Dayr-el-Baharee. One hall, devoted entirely to masterpieces of art of the Græco-Roman and Byzantine periods, is so nearly completed that by this time it is probably already on view. The "Salle funéraire" will contain more than forty sarcophagi and mummy cases. The Hall of the Royal Mummies is painted, panelled, and so far advanced that the last touches of varnish are being laid on. In a day or two it will be ready for exhibition. Meanwhile, carpenters and glaziers are busy finishing glass cases, putting up shelves, and arranging hangings; while Prof. Maspero, hard at work from morning till night, is cataloguing, ticketing, designing, superintending, and putting his hand to everything with an energy that knows neither rest nor fatigue. The additions which (despite difficulties, dangers, rebellion, and war) have been made to the building since the great discovery of 1881 are equal in extent to the whole of the former structure; so that the amount of exhibition space is actually doubled, and the warehouses, wherein for years have been stored thousands of objects which it was found impossible to display to the public, are now emptied of their contents.

AMELIA B. EDWARDS.

GLASGOW LOAN EXHIBITION OF ITALIAN ART.

A VERY interesting loan collection has been brought together by the Parks and Galleries Committee of the Corporation of Glasgow, with the liberal co-operation of many private owners. This committee has already done much by exhibitions like the present and in other ways to foster a love of art in the West of Scotland; and it has recently decided upon a scheme which will result in extended usefulness—the acquisition, namely, of property adjacent to its present premises, for the erection thereon, at a cost of about £200,000, of commodious buildings for a museum, library, galleries, and school of art.

No doubt some incitement towards this worthy undertaking is due to the recent report of Mr. J. O. Robinson, which pronounced so authoritatively on the great artistic value of the works by ancient masters contained in the Graham-Gilbert and McLellan bequest collections, which have for years been under the charge of the committee. The walls of the galleries that contain the present exhibition are hung with a selection from these paintings, which, supplemented by a series of Braun's excellent photographs and some thirty water-colours executed by Herr Stohl for the late Empress of Russia, represent Italian art on its purely pictorial side; while the work of the Southern engravers is displayed in selections from the portfolios of the Duke of Buccleuch and in reproductions presented by the British Museum. The department of graphic art is completed by a noble series of fifty drawings, lent by Mr. Malcolm of Poltalloch, including such well-known examples as the "Abundance" of Botticelli and the splendidly passionate profile "Bust of a Warrior" by Leonardo.

When opening the exhibition, Lord Balfour of Burleigh made some excellent remarks as to the good influence which the examples of decorative art contained in the rooms might have on the craftsmen of our time. But perhaps the most obvious and immediate effect of the display will be to impress on the picture-buyers of Glasgow a sense of the unity and completeness of the art-life of old Italy, and to lead them to consider that, if art is to be real and vital, it must not be a local thing—the culture of a mere corner of our nature; that we must look for and recognise beauty, not only in squares of coloured canvas, but in every adjunct of our daily life. Turning from the paintings to the examples of art more or less strictly decorative, we find that here, too, "love is still at work with the artificer. Throughout his quaint devising;" that the men who designed the garments and armour which the Italians wore, the coffers that held their household linen, the plates and cups from which they ate and drank, were artists no less truly than those who embodied their dreams of heaven and recorded the faces of their heroes. The collection is rich in examples of arms and armour, including the so-called "Orellini" shield sent from Windsor, and a singularly fine helmet with oreillettes attached, the property of Sir Robert Hay. From an educative point of view—educative so far as art is concerned—the preponderance of late Renaissance examples is to be regretted. With all their ornate richness, they are too often overloaded and tasteless; the production of a luxurious and decadent period, they are suggestive of foolish pageants rather than of the stress and storm of noble war, and contrast painfully with the exquisite modelling and chaste reticence of line and curvature characteristic of Gothic armour. From the collection of Mr. W. E. Gladstone comes a valuable series of ivory-carvings, and a case of brooches and pendant ornaments—lovely fantasies of the goldsmith expressed in the most delicate division of precious filigree and the fair

colours of varied enamels. In the same room are numerous examples of old bronzes, and near them—as though to prove the decay of Italian design in metal and its present pretentiousness—is placed the "Helicon Vase" of Morel-Ladenil. Among the coffers are admirable examples of ivory inlaid on wood, and a chest of brass lent by the Marquis of Lothian, with tempera-painted panels introduced on the sides, the largest representing a triumph, with the victors borne along under golden canopies and attended by dainty boy-riders, which recall the processions that Gozzoli delighted in. The specimens of lace, vestments, and majolica are all worthy of examination; and the musical instruments sent from South Kensington include a most curious and *bizarre* spinnet, with blue and white keys and decorated with many-coloured adornments of the spun and moulded glass-work of Murano—said to have been made for the Queen of Bohemia who was daughter of James I. Finally, we have to mention that Mr. J. O. Robinson has lent his superb and well-known collection of Italian medals—some of them, we observe, such as the "Malatesta Novello" of Pisano, being finer and better preserved impressions than those in the national collection. They will for the first time introduce the public of Glasgow to the noble medallio art of Italy, while the smaller, but very interesting, collection of Sir Wm. Fettes Douglas is doing a similar service at the Science and Art Museum in Edinburgh.

The exhibition may be pronounced to be the finest yet held out of London, and one whose educative influence it is almost impossible to over-estimate.

J. M. GRAY.

NOTES ON ART AND ARCHAEOLOGY.

PROF. C. T. NEWTON will begin on Friday next, January 5, a course of five lectures at University College, London, on "Greek Myths as illustrated by Ancient Paintings and Other Monuments." This first lecture will be open to the public without payment or ticket. Prof. Newton also purposes to give a third course next term on "The Useful and Decorative Arts of the Greeks and Romans."

The *Great Historic Galleries* will, to the regret of many, not appear in January or February 1883, but the reasons are good. In the first place it is now to be published quarterly instead of monthly; and, in the second, delay has been caused by the perfection of a new process of photography, which is to be used in future. It is said to be like *photogravure*—only better. The prints will be pressed off on thick drawing-paper in sepia or Indian ink. If the new illustrations are only as good as the old ones, this will be a great improvement, for mounted photographs always warp and cockle when bound, even when they do not peel off their cards.

THE Messrs. Blackwood have just issued *The Gladstone A B C*, a political squib, with illustrations apparently designed by Mr. G. B. Halkett, the draughtsman of the previously published and singularly popular *Gleanings from Gladstone*. It is with the art, not with the politics, of the brochure that we are concerned; and in this respect such of the subjects as "Independence" and "Reform" show a marked advance on the artist's previous work, while the "Nemesis" and the "Revolution" are marked by a touch of tragic power such as is not infrequent with caricaturists—as witness some work by both Leech and Cruikshank—and which might find a more worthy field for its display than the dusty and disturbed one of party politics.

For some months past the Athenian Archaeo-

logical Society, with the support of the Greek Government, have been excavating on the site of Eleusis. Up to the present the results have been disappointing, consisting only of a few statues, vases, and coins of little value, and about forty inscriptions, mostly mutilated.

THE second number of the *Journal* of the National Society for Preserving the Memorials of the Dead (W. Reeves) contains details about many monuments in churches which are almost past preservation. The secretary of this most deserving society is Mr. W. Vincent, Belle Vue Rise, Norwich.

MR. MORAN is one of the most original and thoroughly national artists that America has produced, and his etchings are characterised no less by suggestiveness of light and space than by ready seizure of landscape character. That given in the thirteenth number of *American Etchings* is quite representative, and gives that interest to the meagre country at "Three Mile Harbour, L.I.," which can only be seen by an artist, and expressed by rare skill in selection of line.

THE Japanese collection of Dr. Gierke, which we have before noticed as forming the greater portion of the recent Japanese exhibition in Berlin, has been purchased by the Berlin Museum for the sum of £1,800.

THE *Revue critique* does not altogether welcome the newly founded Ecole du Louvre. It complains—and with some appearance of justice—first, that the new courses of lectures will be to some extent rivals of those already delivered at the Collège de France and the Ecole des Hautes Etudes; second, that the money at the disposal of the Department of Fine Art would have been better expended in rendering more efficient the regular work of the museums; and last, that what is really wanted in the cause of learning is the consolidation of all the schools scattered about Paris into one organised university. In London, despite the good work done by University College, we have not yet got even the scattered schools.

DR. SCHLEMMANN has published, with Brockhaus, of Leipzig, a catalogue of the contents of the Polytechnic Museum at Athens. These consist of the treasures from Mycenae (numbering 701 objects), and what has more recently been found on the site of the Heraion at Argos, at Spata, Nauplia, Menidi, and a few other places.

THE Swiss are not a little proud of boasting that two of the best masters of modern line-engraving, Friedrich Weber, of Basel, and Johannes Burger, of Burg, in Aargau, though popularly reckoned as Germans, are really Switzers. Weber died last spring, but Burger is still living in Munich. Both artists have devoted themselves to the reproduction of the works of Raphael. Weber's noble rendering of the "Vierge au Linge" is well known in England. Burger has completed an engraving of the still more famous "Madonna della Sedia" of Florence. Prof. W. Lubke, in a notice of Weber's work, gives it the preference over the previous reproductions by R. Marpen, Calamatta, Schäffer, Mandel, and others. "It will doubtless be asked," says Dr. Lubke,

"whether a new copy of this Madonna was not an artistic superfluity. But the very first glance at Burger's work will convince the expert that he has before him one of the very noblest products of the modern graver, which will not merely endure comparison with all its foregoers, but carry away the palm from them all."

Burger has chosen a larger size for his reproduction than his predecessors, not excluding Schäffer, whose engraving is thirty-seven centimetres in diameter. The new "Madonna della Sedia," says Dr. Lubke,

"is without doubt the masterpiece of Burger, and

will secure him a place of honour among the very first engravers of our time. The fidelity and force of his drawing, the sovereign freedom with which he uses and governs all the technical aids of his art, and the power with which he has transferred to his plate the effects of enamel and colour unite to produce a completeness such as is rarely attained."

HERR E. A. SEHMANN, of Leipzig, has published "A Poem in Six Songs" by R. Hamerling, called *Cupid and Psyche*. This is charmingly illustrated with fanciful designs by P. Thumann, and forms one of the prettiest German gift-book of the season.

THE new volume in the series of the "Grands Maitres de l'Art" (published by Quantin) is *Jean Bologne*. This great sculptor of the sixteenth century, though better known by his Italian name of Giovanni da Bologna, was born at Douai, in France. The writer of the present book is M. Abel Desjardins, dean of the faculty of letters at Douai; and the materials upon which it is mainly based were collected by the late Fouques de Vagnonville, a rich amateur of Douai, who bequeathed his gallery of pictures to his native town.

M. HENRY HOUSSAYE has collected into a volume—*L'Art français depuis Dix Ans*—the articles on the Salon which he contributed to the *Revue des Deux-Mondes*, with an Introduction dealing generally with the most notable of the painters and sculptors.

THE STAGE.

THE PERFORMANCE OF "THE RIVALS."

IF the present revival of "The Rivals" at the Vaudeville were an attraction of a moment it might be necessary to apologise to the readers of the ACADEMY for being a week or two late in noticing it; but it is one of the most complete things done recently on the stage, and it will be an attraction for a long time to come. Indeed, it is likely to attain little short of that share of public favour which fell to the lot of the famous revival of "The School for Scandal" at the same theatre about eleven years ago, when Mr. Farren, now an incomparable Sir Anthony Absolute, was an incomparable Sir Peter Teazle, and when one of the most delightful and unassuming personalities of the modern theatre—Miss Amy Fawcett—revealed for the first time a talent fated to charm, but never destined to mature. The present revival of "The Rivals" is a quite worthy companion to that other revival of which I have spoken, though it may be that in the future history of the stage its place will be less distinguished; but this will only be because, during the last half-score years, the conditions and circumstances of the English theatre have changed—we have grown more exacting, we have grown more accustomed to have things decently and in order. We have passed from the upholstery of the Tottenham Court Road to the upholstery of the *bric-à-brac* shops, and from the upholstery of the *bric-à-brac* shops we have gone on to demand some completeness in the cast.

One of the most remarkable features of the present performance is the Mrs. Malaprop of Mrs. Stirling. Enacted with the authority with which Mrs. Stirling endows it, the part becomes not only a leading character as far as the women are concerned, but one of the principal personages of the play. Nothing can be sunnier or more genial, more accomplished or more shrewd, than the char-

acter as Mrs. Stirling portrays it. You feel so distinctly the cleverness of the character and its charm that the "derangement of epithets" which has become proverbial is accounted an accident, and Mrs. Malaprop's is a case in which pure brain power supplies the deficiencies of a wretched education. If Mrs. Malaprop was not born to be correct, she was born to be a lady, and nothing on earth can prevent such a woman from being influential in her world, wherever that world may be. Mr. William Farren's Sir Anthony is as thorough as an old-world picture, and Gainsborough's brush might have been fittingly employed in recording a bearing so dignified and emotions so profoundly natural. Mr. Henry Neville, too, adapts himself most skilfully to the part of Captain Absolute. An unwonted air of lightness—an air of genial comedy—attends upon his performance. Mr. Frank Archer, quiet, studious, painstaking actor as he is, was not made for Falkland—but was anybody ever made for Falkland since sentimentality ceased to be the fashion? Mr. Thorne is perfectly good as Bob Acres. Without being farcical he is funny, and something of an eighteenth-century squire while yet not wholly a boor. There is accomplishment in his roughness, and in his grotesqueness finish. The performance of Sir Lucius O'Trigger brings very much to the front a capable actor often relegated to the second rank. I am speaking of Mr. John Maclean, the wide range of whose artistic intelligence does not place within his control the sources of deep emotion or of exuberant merriment. Thus Mr. Maclean is very much accustomed to contribute his full share to the perfection of an *ensemble*, while but little adapted, apparently, to be the sole or chief occasion for one's visit to the theatre. Sir Lucius O'Trigger, however, gives him a somewhat rare opportunity of prominent display in a part wholly within his means—a part full of Irish humour and mild and engaging cynicism—a part that he acts with a completeness, a neatness, a discretion, and, to be brief, a success which it would be impossible to surpass. The smaller male characters are in their way well played. It was Sheridan, and not John Leech, who first discovered the impertinent self-importance of the pampered English menial; and Fag in "The Rivals" is a proof of the discovery.

As yet nothing has been said of the ladies, save of Mrs. Stirling, whose Mrs. Malaprop is so remarkable. Yet the ladies all deserve well of the public; and a wise selection has fitted each part with its proper representative. It may be dull for the reader, but it must be pleasant for the intending spectator, that we are reduced to a monotony of praise. Everyone knows that the strength of "The Rivals" is no in its female parts; but, that being allowed, it must be admitted that little could be better than the present performance of those parts, whose deficiency in absorbing interest is yet of course sufficiently apparent. Miss Winifred Emery is as elegant and as bright as could be desired in Lydia Languish; nor is the girlish wilfulness of the character suffered to be overlooked. Miss Alma Murray, aided by excisions of a very liberal kind, makes it possible to believe in the reality of Julia. That something of her sentimental

utterance is cut out is indeed an advantage. The unconscious pertness of the confidential waiting-maid, and the low standard of her facile morality, are appreciated at their proper value by Miss Kate Phillips, almost the only *soubrette* of authority now on the English stage. The performance, then, is satisfactory from beginning to end. Of course "The Rivals" does not demand—nay, can hardly permit—the exhibition of genius. It calls, however, for an abundant display of the often more agreeable quality of charm.

FREDERICK WEDMORE.

STAGE NOTES.

AMONG the theatrical events of the present week, the production of the Pantomimes may stand first, even though at the Globe Theatre Mrs. Bernard Beere has given us nothing less important than an adaptation of "Jane Eyre" (admirably performed by herself and Mrs. Kelly, and other actors), the result of the literary labours of an elegant playwright, Mr. W. G. Wills. For the moment, however, Pantomime invites attention. Pending the opening of the Pandora in Leicester Square, the management of that playhouse has taken Her Majesty's, and produced the "Yellow Dwarf." At the Avenue, where light operatic music, and the exertions of M. Marius and Miss St. John, assume a subordinate place during the Christmas season, there is a Pantomime for children by children—several scores of little people being engaged in the piece, in all parts, from those of principals to those of supers. But it is at Drury Lane that Pantomime asserts itself with the greatest success. It is firmly housed there, and will be housed there till March. Mr. Augustus Harris is a model manager, when it is a question of producing the Christmas annual. He is equally lavish of labour and of money; and well-directed labour and well-spent money ensure the triumph of Pantomime. This year the piece is "Sindbad the Sailor;" and the author, we are glad to say, is again Mr. E. L. Blanchard, who has written Drury Lane Pantomimes all through one generation. Probably no one in London knows the business quite so well, or does it so adroitly. As familiar with the stage as with the palms of his own hands—if the French phrase be allowed us—he knows how to accommodate his literature to the exigencies of theatre and company, and, while doing so, still to be literary. Generally, too, Mr. Blanchard sets to such of his brethren as write Pantomimes the excellent example of keeping pretty close to the original story. This year, it is true, the demands of the varied show may have led him farther afield than has been his wont. Still, Sindbad's tale is, in the main, told. Of the characters, and their performers, we must speak but briefly. Mr. Harry Parker plays the Old Man of the Sea; Mr. Harry Jackson the Uncle of Fatinitza, and, in the great procession, which is the chief of the interpolated scenes, he represents Napoleon Bonaparte, with no speech, but with appropriate action—his extraordinary likeness to that strategist having doubtless prompted the impersonation. Mr. Fawn appears as a "female cook." The only cook quite welcome on the stage would be the cook of Molière in "L'Avare"—unless it be the cook of Disraeli in *Tancred*. Arthur Roberts plays Sindbad's Servant, and Mr. H. Nicholls the Father of a Young Khedive. Sindbad is represented by Miss Nelly Power, with infinite *bonhomie*, and all the old vivacity. Miss Constance Loseby, a vocalist of position, plays Fatinitza; and the other women's parts are well filled. But now, of the show proper. Nothing

better has been done, even under the recent experience of a management extraordinarily enterprising in spectacle. The scenery, painted by some of the best English scene-painters, and by at least one of the best in Vienna, is not only striking and ingenious, it is often sufficiently artistic. There is, in particular, a panorama of changes of hour, as well as of scene, at sea, while Sindbad is on the waters, which is quite a unique thing. The ill-fated Alhambra was famous for its dances, but we never saw a prettier dance in that popular resort than the Rose-dance now at Drury Lane. Mdlle. Zanfretta is a good principal, and in "Luna" and "Stella" there is real grace. But it is not so much in the single dances as in the action and costume of the *corps de ballet* that the success is most marked. Very dignified people, indeed, will no doubt find that the Transformation scene is a trivial affair; but it is surprisingly ingenious and well contrived, and welcome enough to those of us who are not too exalted to enjoy the pleasures of the eye in line and hue. No doubt the comic business is funny as well as noisy, for "Sindbad" from beginning to end is a success, and into this one establishment, Drury Lane, there are concentrated the resources that used to be scattered over half-a-dozen.

MR. REECE's long after-piece, "Valentine and Orson"—an after-piece with which, on the first night of its production, the evening was begun and ended—is, save for the unlimited occasion it affords for the display of the attractions peculiar to the theatre, much less worth seeing than the recent performances of "The Critic" at the same house. No one would pretend that "The Critic" has been done at the Gaiety as "The Rivals" has been done at the Vaudeville, but then "The Critic" is itself in great measure a burlesque, in which the lines of true comedy are over-past, and Mr. Hollingshead doubtless felt free to go farther in the path of burlesque than even the author had intended. His company, who do not know how to be serious, knew how to be diverting; Mr. E. J. Henley gave an observant study of character as Sir Fretful Plagiary—there was more of comedy in his performance than in anybody else's in the cast; Mr. Edward Terry made the accustomed and acceptable show of his quaint humour in Don Whiskerandos; Miss Gilechrist was the First Niece; and Miss Farren was as spirited as ever in the part of Tilburina. To the frequenters of the Gaiety, old comedy may be a pill which would be resented in comparison with the toothsome draught that can be concocted by the producers of modern burlesque, but they must do Mr. Hollingshead the justice to admit that when he gives the pill he gives it silvered. The recent performances of "The Critic" cannot have put too severe a mental strain upon even the limpest of loungers in that theatre where the audience is the idlest if, as we have so often been assured, the company is the very busiest in London.

WE hear that M. Sardou's newest play, despite the marvellous acting of Mdlle. Sarah Bernhardt and the excellent performance of M. Berton, is not found so attractive as it was expected to be. "Le Roi s'amuse" of Victor Hugo, again, though it may have been a political success, was an artistic failure. Altogether the French stage is not exactly "looking up." The greatest living writers who write for it, Emile Augier, Sardou, and Dumas, have, of course, already done the greater part of their work. Sardou, the youngest of them, is a fully middle-aged man, and there is not one of the three whose literary position is better to-day than it was ten years ago. And who is to succeed these three to-morrow? Where are the young French dramatists of serious talent—the men with the capacity for a career?

MUSIC.

RECENT CONCERTS.

AT the last Saturday Popular Concert before Christmas Mdlle. Haas made her second appearance, and performed Chopin's *barcarolle* in F sharp (op. 60). On December 11 she chose this composer's impromptu in the same key. Her mechanism is excellent, her style unaffected; and the pieces were interpreted in a clear and intelligent manner. Yet she scarcely rendered full justice to the tender beauty, poetry, and passion of the Polish pianist's music. We must, however, state that on both occasions she was well received, and, according to "Popular Concert" custom, encored. The programme last Saturday included Beethoven's septett, which was magnificently played by Messrs. Joachim, Hollander, Lazarus, Wendtland, Wotton, Reynolds, and Piatti. A thirty-sixth performance at these concerts says much for the undiminished popularity of this work. Mendelssohn's beautiful *andante* and *scherzo* (fragments from an unfinished quartett) were admirably performed. Herr Joachim and Mdlle. Haas played with much finish and brilliancy four numbers from the Joachim and Brahms "Hungarian Dances." They were originally composed as pianoforte duets by Brahms, but arranged, with the author's consent, for piano and violin by Herr Joachim. Herr Paschmann will be the pianist on January 8, and Mdlle. Sophie Menter on Saturday, January 13.

The fourth and last of Mr. E. Dannreuther's concerts took place on Thursday, December 21. Eight *Novelletten* by Kirchner, for piano, violin, and violoncello, were played by Herr Ludwig, M. B. Albert, and Mr. Dannreuther. The various numbers are short, graceful, and pleasing; from first to last we trace the hand of the accomplished musician. It is well known how strongly either Mendelssohn or Schumann has influenced the composers of the present day such as Bargiel, Gernsheim, Reinecke, Gade, and many others of less note. Kirchner forms, indeed, no exception to this general rule; his music has the name of Schumann written in large letters over its pages. No charge of plagiarism can be brought against the composer; but there is often a lack of originality or individuality of style—in fact, no sign-manual. Nos. 5 and 6, in D and D minor, two very short numbers, pleased us best. Mr. Dannreuther played Beethoven's sonata in O minor (op. 111). His reading of the first movement was not altogether satisfactory; but in the difficult variations his fine *technique* was displayed to great advantage. The programme contained three interesting songs by Mr. C. H. H. Parry and one by Mr. O. V. Stanford. Brahms' pianoforte quintett concluded the concert. We have not been able to notice the three previous evenings. The programmes were all well chosen; of novelties announced and performed we may mention a pianoforte trio in E minor by Goldmark, six vocal duets by Tschaiakowsky, and the Kirchner pieces noticed above. The next series, consisting of four evenings, will commence on February 8.

We may also add a few words about the autumn series of "Musical Evenings" under the directorship of Mr. Henry Holmes, which has just been brought to a close. The last concert was given at the Royal Academy of Music on Wednesday, December 20. The programmes, selected principally from the standard works of the great masters, are of uniform excellence; while the performances are such as naturally result from careful and continuous rehearsal. Mdlle. Haas has been sole pianist at all the concerts, and deserves great praise for the ability and intelligence which she displayed in the concerted music. Her rendering of the Bach concerto in D minor at the first concert (November 1) was very successful; and

in the quintetts of Raff and Algernon Ashton on other evenings her playing made a most favourable impression. Mr. Holmes' associates throughout the series have been Messrs. Parker, Gibson, Hill, Howell, and Ould.
J. S. SHEDLOCK.

BOOKS ON MUSIO.

The Life and Letters of Berlioz. Translated from the French by H. Mainwaring Dunstan. (Remington.) Berlioz was not only a great musician, but a literary writer of considerable merit and originality; and his letters, like his fascinating *Mémoires*, give us a wonderful insight into the man's character. He was vain, and of an excitable nature, but withal a keen-visioned and honest man. In these two volumes we learn much of the musical history of the last fifty years from one who played no unimportant part therein. We have always to take into consideration the ebb and flow of opposing feelings which were constantly agitating the heart of Berlioz. The first volume contains a short biographical notice of the composer, and 146 letters. The translation of this notice is very free and not always correct. Whole sentences, portions of sentences, and even single words have been omitted from the French without any particular reason, and without any indication of the fact. Gluck's "Orfeo" is spoken of, whereas, in the French, "Orphée" is mentioned. The first name refers to the opera written at Vienna in 1782; the second, to the opera adapted from "Orfeo," and produced at the Paris Académie in 1774. The list of names and style of the letters show that Berlioz was on very friendly terms with the greatest musicians of his time; thus we find him writing to Glinka, Schumann, Hiller, Bulow, Liszt, and even Wagner. In a letter to the last-named he says: "If we live a hundred years longer I imagine we shall know many things and many men. Old Demourgus must laugh from behind his gray beard at the farce he makes us play." The second volume contains the private letters to his friend M. Humbert Ferrand, with an interesting Preface by Charles Gounod.

Wagnerism: a Protest. By Major H. W. L. Hime. (Kegan Paul, Trench and Co.) "Every time an author touches upon the subject of music," says Major Hime, "he runs a considerable risk of losing his head." The Major, we fear, forms no exception to his own rule. He informs us that, having had Handel, Haydn, Mozart, Beethoven, and Schubert, he is thankful and satisfied. Then, again, he astonishes us with the piece of information that Wagner owes his success to a "clique of critics;" we had always thought that Wagner had made his way in spite of the critics. He does not hesitate to declare that Wagner has announced himself as "The Musician of the Future," although this is utterly untrue. He says that Wagner has been at no pains to express or imply censure of the conduct of Siegmund and Siegrude. Surely he cannot have read the scene between Fricka and Wotan. Again, Major Hime has a most unfortunate habit of misquoting. He is very hard on Mr. Hueffer, but he need not misrepresent his words as he has done on p. 35. Mr. Prout is also quoted, and we are led to believe that he considers Wagner's music "uproar." Mr. Prout, however, in his writings, entertains no such opinion of Wagner's orchestration. "The real point of attack by Herr Wagner and his friends is Mozart," says Major Hime. Space will not permit us to quote several sentences of Wagner in praise of the author of "Don Giovanni." He has criticised certain passages in his writings, but he has acknowledged, in the clearest terms possible, Mozart's transcendent genius. Major Hime translates a passage from Berlioz, and makes nonsense of it. Lastly, what faith can we place in a writer who speaks

of the third epoch of Beethoven as that of a "poverty-stricken old man, broken in mind and body"?

Richard Wagner et son Œuvre poétique. Par Judith Gautier. (Paris: Charavay Frères.) The authoress of this interesting little book has for many years been an ardent admirer of Wagner and of his works. The French public before all seek amusement in art; the masterpieces of Calderon, Goethe, Schiller, and Shakspeare, are rarely given in France, and, when performed, excite but little enthusiasm. Mme. Gautier, therefore, sees but little hope for Wagner's great music-dramas there. The success of "Lohengrin" she thinks probable, but adds, "The great Scandinavian epic poem, the metaphysical loves of Tristan and Isolde, the mysticism of Parsifal, will never reach us." The account given of Wagner is very graphic; and the peep into the private life of the composer at Lucerne and at Baireuth, and the conversations between Wagner, his wife, and our authoress, will prove attractive to many readers. In Paris it was reported that Wagner had a seraglio filled with women from all parts of the world, and dressed in magnificent costumes; but Mme. Gautier found him living at Lucerne in a simple house near to the lake, spending his time on books, musical composition, his garden, and his great black dog, Rus. The description of Wahnfried (Wagner's house at Baireuth) in September 1881 is full of interesting and minute detail. Mme. Gautier carries hero-worship somewhat to excess, but she writes with lively talent and genuine enthusiasm.

Böhm on the Flute. (Rudall, Carte and Co.) This pamphlet was written in English in 1847 by Böhm, the celebrated flute-player. He died last year at the advanced age of eighty-six. After his death, certain public attacks were made upon his character, and the originality of his alterations and improvements in the construction of the flute denied. Mr. Carte, representative of the firm of Rudall and Rose, gave Böhm's MS. to W. S. Broadwood, by whom it is published. It shows conclusively that he had been unjustly attacked, by thoroughly explaining the facts relating to Böhm's connexion with Mr. Gordon, whose inventions the former was said to have appropriated. The book will also be read with interest by flute-players, professional or amateur, for it gives a clear and succinct summary of those principles of acoustics which are applicable to the construction of all wind instruments.

The Proceedings of the Musical Association during the eighth session (1881-82) have just been published by Messrs. Stanley Lucas and Co. This society, founded in 1874 for the investigation and discussion of subjects connected with music, counts among its members some of our principal musicians and writers both on the art and science of music. The volume before us gives the papers read at each meeting, with the ensuing discussions. As we cannot here enter into any detail, we propose to give a list of the contents. The papers read from November 7, 1881, to July 3, 1882, were as follows:—"On the Arrangement of the Stops, Pedals, and Swell in the Organ," by R. H. M. Bosanquet; "On the Beats of Mistuned Harmonic Consonances," by R. H. M. Bosanquet; "The Cultivation of Church Music," by W. H. Monk; "Songs and Song-Writers," by E. J. Brakespeare; "On Some Italian and Spanish Treatises on Music of the Seventeenth Century," by Rev. Sir F. A. Gore-Ouseley; "Consecutive Fifths," by F. E. Gladstone; "Sir W. Sterndale Bennett," by A. O'Leary; "Some Remarks on 'Tristan und Isolde,'" by H. F. Frost; "From Rhythmic Pulsation to Classical Outline," by H. Hiles; and on "Extemporaneous Playing," by T. L. Southgate.
J. S. SHEDLOCK.

CHATTO & WINDUS'S NEW BOOKS.

One Shilling Monthly, Illustrated.

BELGRAVIA.

CONTENTS FOR JANUARY, 1883.

MAID OF ATHENS. By JUSTIN MCCARTHY, M.P. Illustrated by FRED. BARNARD.
IRISH SONG. By A. PERCEVAL GRAVES.
FRESQUES: a Story. By OUIDA.
THE LAST EXTREMITY.
HEART AND SCIENCE: a Story of the Present Day. By WILLIAM COLLINS.
A PUMA RUG. By FREDERICK BOYLE.
THE ADMIRAL'S WARD. By MRS. ALEXANDER.
AFTERWARDS. By EVA ROSE-INNES.

One Shilling Monthly.

THE GENTLEMAN'S MAGAZINE.

CONTENTS FOR JANUARY, 1883.

THE NEW ABELARD: a Romance. By ROBERT BUCHANAN.
LOCH-FISHING. By the Rev. M. G. WATKINS, M.A.
PERSONAL NICKNAMES. By W. H. OLDING, LL.B.
REJECTED ADDRESSES. By ALEX. CHARLES EWALD, F.R.S.
HERBERT SPENCER'S PHILOSOPHY. By RICHARD A. PROCTOR.
"FROM MURDER AND SUDDEN DEATH." By HENRY BROWN.
DUST: a Novel. By JULIAN HAWTHORNE.
SCIENCE NOTES. By W. MATTIEU WILLIAMS, F.R.S.
Atmosphere versus Ether—A Neglected Disinfectant—Another Disinfectant—Enslilage—The Fracture of Comets—The Origin of Comets.
TABLE TALK. By SYLVANUS URBAN.
Editions of Rabelais in the Sunderland Sale—Relation of Scenic Illustrations to the Drama—Readings—A Literary Parallel—Lamentation in Renaissance Literature—A Lost Custom—Publishers and Authors.

VAL STRANGE: a Story of the Primrose Way. By DAVID CHRISTIE MURRAY, Author of "Joseph's Coat," &c. 3 vols., crown 8vo. At every Library.
"Emphatically an able and interesting book."—*Academy*.

THE GOLDEN SHAFT. By Charles GIBBON. 3 vols. At every Library.

"Excellent in every important respect. The story is interesting, the plot is most ingeniously devised, the characters are cleverly conceived and consistently drawn."—*Saturday Review*.

REGIMENTAL LEGENDS. By J. S. WINTER, Author of "Cavalry Life," &c. 3 vols., crown 8vo. At every Library.

GIDEON FLEYCE. By Henry W. Lucy. 3 vols., crown 8vo. At every Library.

KIT: a Memory. By James Payn. 3 vols., crown 8vo. At every Library. [Immediately.]

IN MAREMMA. By OUIDA. New and Cheaper Edition. Crown 8vo, cloth extra 5s.

TO THE GOLD COAST FOR GOLD: a Personal Narrative. By RICHARD BURTON and VERNEY LOVETT CAMERON. With Frontispiece and Maps. 3 vols., crown 8vo, cloth extra, 7s.

SOCIAL LIFE in the REIGN of QUEEN ANNE. By JOHN ASHTON, Author of "Chap-Books of the Eighteenth Century," &c. With nearly 100 Illustrations in Facsimile. 2 vols., demy 8vo, cloth extra, 3s.

THE ART ANNUAL for 1882-3. Edited by F. G. DUMAS. With Illustrations. Demy 8vo, 2s. 6d.

THE THOUSAND and ONE NIGHTS. Commonly called "The Arabian Nights Entertainments." A New Edition, with copious Notes, by EDWARD WILLIAM LANE. Illustrated by many hundred Engravings from Designs by William Harvey. With Preface by STANLEY LANE-POOLE. 3 vols., 8vo, cloth extra, 7s. 6d. each.

THE PRINCESS and CURDIE. By George MACDONALD, LL.D. With Eleven Illustrations by James Allen. Small crown 8vo, cloth extra, 5s.

GUTTA-PERCHA WILLIE, the WORKING GENIUS. By GEORGE MACDONALD, LL.D. With Nine Illustrations by Arthur Hughes. Square 8vo, cloth extra, 2s. 6d.

CHAPTERS on EVOLUTION: a Popular History of the Darwinian and Allied Theories of Development. By A. DICKINSON, Ph.D. F.R.S. Edin., &c. Second Edition. Crown 8vo, cloth extra, with 239 Illustrations, 7s. 6d.

SCIENCE in SHORT CHAPTERS. By W. MATTIEU WILLIAMS, F.R.S., F.G.S., Author of "The Fuel of the Sun," &c. Crown 8vo, cloth extra, 7s. 6d.

THE GREAT PYRAMID: Observatory, Tomb, and Temple. By RICHARD A. PROCTOR. With Illustrations. Crown 8vo, cloth extra, 6s.

FLOWERS of the SKY. By Richard A. PROCTOR. A New Edition, with Fifty-five Illustrations. Crown 8vo, cloth extra, 4s. 6d.

COLIN CLOUT'S CALENDAR. By Grant ALLEN, Author of "The Evolutionist at Large," &c. Crown 8vo, cloth extra, 6s.

SHORT SAYINGS of GREAT MEN. With Historical and Explanatory Notes. By SAMUEL A. BENT, M.A. Crown 8vo, cloth extra, 7s. 6d.

London: CHATTO & WINDUS, Piccadilly, W.
